Dr., Doctor.				

HILL, ROWLAND (1744-1833). English preacher. Born at Hawkstone Park, Aug. 12, 1744, the son of Sir Rowland Hill, Bart. (d. 1783), he was educated at Eton and S. John's College, Cambridge. In 1773 he became curate at Kingston, Somersetshire, being then in deacon's orders. Rejected for the priesthood owing to his eccentricity, he continued to preach about the country as one of the numerous chaplains to Selina, countess of Huntingdon (q.v.). In 1783 he commenced a ministry at Surrey Chapel, Blackfriars Road, London, built by himself, where his preaching attracted huge congregations. He died April 11, 1833.

HILL 60. A low, almost invisible eminence, 2½ m. S.E. of Ypres, near Zillebeke, Belgium. It was of tactical importance in the Great War, as the summit gave the Germans good observation of the British movements. In April, 1915, six mines were exploded under it, and the British seized the top. The British retained their hold, and it remained in their hands without challenge until May 5, when the Germans seized it. Until June, 1917, the crest remained in German hands. It was recovered by the British in the operations for the capture of the Messines Ridge, but it once more passed to the Germans in April 1918. It was recovered in Sept., 1918.

HILL 70. Hill of France, overlooking Loos on the S.E. and dominating Lens. It was an important British objective in the battle of Loos (q.v.), Sept., 1915.

HILLSBOROUGH. Town of co. Down, Northern Ireland. It is 12 m. from Belfast, and is served by the Great Northern of Ireland Rly. and the Lagan Canal. The town arose around Hillsborough Castle, the residence of the Hills, marquesses of Downshire. Pop. 540.

HIMALAYA MOUNTAINS (Sanskrit, abode of snow). Mountain system of Central Asia, stretching from the confines of Afghanistan to Upper Burma, and containing some of the loftiest peaks in the world. From the Hindu Kush and the Pamirs the mountains trend S.E. through the state of Kashmir, and along the frontiers of the United Provinces, Nepal, Sikkim, and Bhutan, forming a barrier between N. India and the high plateau land of Tibet. The extreme length is about 1,550 m., and the breadth averages 200 m. There is a marshy, wooded region known as the Terai extending about 500 m. along the N. frontier of India and Nepal, separated from the foothills by a boulder-strewn and scrubby belt called the Bhabar.

The average alt. of the Himalayas has been estimated at between 16,500 ft. and 18,000 ft., but there are many summits over 24,000 ft. The highest known point on the globe, Mt. Everest, reaches the immense alt. of 29,141 ft. Other high summits are Dhaulagiri, 26,795 ft., Kinchinjunga, 28,146 ft., and Chumalhari, 23,930 ft. The principal rivers taking their rise in the Himalayas are the Ganges, Indus, Jumna, Sutlej, and Brahmaputra. Sanatoria and hill stations have been established at Darjeeling, Simla, Dalhousie (alt. 7,680 ft.), Naini Tal, and elsewhere. A recent explorer of the Himalayas is C. G. Bruce. See Bruce, C. G.; Darjeeling; Everest.

HINCHINBROOK. Island off the coast of N.E. Queensland, Australia. S. of Rockingham Bay, it is separated from the shore by a narrow channel. The island contains Mt. Hinchinbrook.

HINCHINGBROOKE. Village of Huntingdonshire, just outside the town of Huntingdon. Here is Hinchingbrooke House, once the residence of the Cromwells. They kept the estate until 1627, and it now belongs to the earl of Sandwich. See illus. p. 752.

HINCKLEY. Market town and urban district of Leicestershire. It is on the L.M.S. Rly., 14 m. S.W. of Leicester. The chief

building is the restored Gothic church of S. Mary. The industries are mainly the manufacture of hosiery, boots and shoes, and bricks. Market day, Mon. Pop. 13,644.

HINDENBURG. German battle cruiser. Built at Wilhelmshaven in 1915, she was engaged in the Great War. She was 610 ft. long, 96 ft. in beam, displaced 28,000 tons, and had engines of 100,000 horse-power, giving a speed of 28 knots. She carried eight 12-in. and twelve 5.9-in. guns. Other ships of her type were the Bismarck and the Lutzow. Hindenburg was one of the ships handed over to the British, Nov. 21, 1918. Scuttled by its crew at Scapa in that month, it was salvaged in 1930.

HINDENBURG, PAUL VON (b. 1847). German soldier. A member of a Prussian Junker family, he was born Oct. 1, 1847, at Posen. He joined the Prussian army in 1865, and served throughout the Austro-Prussian War of 1866 and the Franco-Prussian War of 1870-71. Rising in rank till he became general of infantry and commander of an army corps, he retired from the army in 1911. On the Russian invasion of East Prussia in Aug., 1914, he was appointed to the command of the German forces in that province and before the month closed defeated the Russians disastrously at the battle of Tannenberg.

Paul von Hindenburg. German soldier

On Sept. 25 Hindenburg was put in chief command of the Austro-German forces which invaded Poland. He defeated the Russians at Kutno on Nov. 15-16, and for this victory was made a field-marshal. From then until Aug., 1916, he was German generalissimo on the Eastern front, and then was appointed chief of the general staff of the field army. From that time to the signing of the armistice on Nov. 11, 1918, Hindenburg was the German generalissimo. After the German Revolution he remained in command of the army until he retired into private life in June, 1919. He was elected president of the republic in 1925. Consult his *Out of My Life*, 1920.

HINDENBURG LINE. German fortified system in France in the Great War. Known to the Germans as the Siegfried line, it consisted of trenches strengthened by concrete shelters and gun emplacements. Roughly, it ran from Arras to Laon. The line included the dry bed of the Canal du Nord and the tunnels of the Schelde canal. Behind it was a fortified area called the Siegfried zone, while farther to the rear, covering Cambrai, were the Hunding and the Brunhilde lines, completed in 1918. To the N. from E. of Lens to Quéant was the Wotan line or "switch" covering Douai, and the Hermann line (Le Cateau to Ghent) guarding the German right flank. The battle of Epéhy (q.v.) was fought to clear the approaches to the Hindenburg line, which was finally stormed by the Allies in Sept.-Oct., 1918. See Arras; Cambrai.

HINDHEAD. District, hill, and common of Surrey. It is on the Portsmouth Road, 2 m. N.W. of Haslemere. On Gibbet Hill, 895 ft., was the gallows on which the murderers of an unknown sailor, Sept. 24, 1786, were hanged. Near is the glen known as the Devil's Punchbowl. Excepting only Leith Hill, Hindhead and its neighbour, Blackdown, 918 ft., are the highest points of the Greensand ridge, which here abuts upon the Wealden plain. The Wey rises to the S. on Blackdown circles around Hindhead on the W. and N., and receives eight small streams which radiate from the plateau.

HINDLEY. Urban dist. of Lancashire. It is situated 2½ m. S.E. of Wigan on the L.M.S. and L.N.E. Rlys. The chief industries

are cotton manufactures and iron founding. There are coal mines in the neighbourhood. Pop. 23,574.

HINDLIP. Village of Worcestershire, 3½ m. from Droitwich. Here is Hindlip Hall, the seat of Lord Hindlip. In 1886 Sir Henry Allsopp, Bart. (1811-87), the head of the firm of brewers at Burton-on-Trent, was made a baron and took his title from here.

HINDUISM. Term used for the new Brahmanism which came into being in India after the decline and banishment of Buddhism from that country. Two things remain as prominent in Hinduism as in original Brahmanism—the supreme position of the Brahman, and the rigid observation of caste.

The Vedas and the Brahmanas are still regarded as the ultimate authority in religion, though the former are little read and exercise but slight influence upon the religious beliefs and practices of the people. The Vedanta Sūtras, or aphorisms, belong in their present form to about A.D. 700, and may be regarded as the standard work of Hindu philosophy. The Eighteen Puranas (archaeological treatises) are very much read by the common people. They have much to say about the worship of Siva and Vishnu and the gods and goddesses who follow in their train, and constitute the principal source and authority for modern Hinduism.

The Tantras, manuals of religion.

Hinduism. Vishnu, one of the principal deities. Above, Indra, king of heaven

of magic, of counter-charms, etc., are of late date, some no older than the 18th century. They are the product of Sivaism in its most revolting form.

At least three-fourths of the population of modern India belong ostensibly to one or other of the two great sects, the Vishnuites or the Sivaites. There are two Vishnuite sects, the Krishnaites, the most

numerous though the least intellectual, who regard Krishna, and the Ramaites, who regard Rama, as the principal Avatar or Incarnation of Vishnu. They are strongest in middle India.

The Sivaites worship as their supreme deity Siva (the propitious one), the modern representative of the Vedic Rudra, the destroyer. Only that Siva is regarded as the preserver as well as the destroyer of life. The headquarters of Sivaism are the extreme north and the southern part of India. The principal subdivisions are the Sakta and the Thugites.

HINDU KUSH (anc. Paropamisus). Mountain range of Central Asia. It extends from the Pamir mountain knot in a S.W. direction, as far as lat. 34° 30' N and long. 67° 40' E. The range lies partly in Afghanistan, and separates Badakshan on the N. from Kafiristan on the S., and has many peaks exceeding 20,000 ft. It has a length of some 500 m.

The Amu Daria has its source in these mountains, from which many tributaries of the Kabul river originate.

HINDUSTANI. Name given by Europeans to one of the Aryan languages of India. Forming the general official and commercial medium of communication throughout India, Hindustani contains a large admixture of Arabic and Persian words, and is rather a corrupt form of Hindi than a separate language. The literature, which in the earliest times consisted chiefly of translations from Sanskrit, Arabic, and Persian, greatly developed during the 19th century.

HINGE. Device consisting of plates, bars, or flaps pivoted upon pins, on which they turn relatively to each other. In ordinary types there are two flaps. Hinges are usually made of cast iron, wrought iron, steel, or brass. The following are some of the principal patterns; butt hinges, as used for doors; tee hinge, with one long tapered flap and one short flap; and box hinge, with two long tapered flaps.

HINGHAM. Village of Norfolk. It is 6 m. W. of Wymondham. The 14th century church of S. Andrew has a fine tower, stained glass, and monuments, including a bust of Abraham Lincoln, an ancestor of whom was a native of this place. Pop. 1,413.

Hingham, in Massachusetts, U.S.A., is a residential district and summer resort on Massachusetts Bay, 17 m. S.E. of Boston.

HIP JOINT. Ball and socket joint in the body the ball being the rounded head of the femur, or thigh-bone, and the socket the cup-shaped hollow, or acetabulum, on the outer side of the pelvis. It is a very strong joint, being surrounded by tough ligaments, and it permits of a considerable range of movement of the thigh in every direction.

Hip-joint. Anatomical diagram of the ball and socket joint. A. Ligamentum teres. B. Acetabulum ligament. C. Capsular ligament, turned back. D. Femur or thigh-bone. E. Cotyloid ligament. F. Acetabulum removed.

The hip joint is not infrequently the seat of chronic tuberculosis in young children. There is wasting of the muscles of the thigh and the affected leg appears longer than the sound limb. If the case is treated early the outlook is hopeful.

HIPPARCHUS (fl. c. 146-120 B.C.). Greek astronomer. Born at Nicaea in Bithynia, he chiefly carried out his observations in the island of Rhodes and in Alexandria. His only extant work is a Commentary on the Phaenomena of Eudoxus and Aratus. His chief title to fame rested upon his catalogue of 1,080 stars. He invented trigonometry and originated the method of fixing terrestrial positions by means of circles of latitude and longitude. See Astronomy.

HIPPER. FRANZ VON (b. 1863). German sailor. Born Sept. 13, 1863, he entered the navy and held the rank of rear-admiral at the outbreak of the Great War. He was in charge of the German naval raid on Scarborough and the Hartlepool, Dec. 16, 1914, and commanded the cruiser squadron at the battles of the Dogger Bank, 1914, and Jutland, 1916.

HIPPERHOLME. Urban district of Yorkshire (W.R.). It is 2 m. from Halifax, of which it is practically a suburb, and has a station on the L.M.S. Rly. The industries include tanning and quarrying, while in the neighbourhood are coal mines. Pop. 4,800.

HIPPIAS. Greek sophist. A native of Elis and contemporary of Socrates, he was famous for his extensive knowledge and remarkable memory. He regarded law as opposed to nature and driving man to act contrary to his natural instincts.

HIPPO or **HIPPO REGIUS.** Ancient city of N. Africa, which occupied the site of the present Bona, Algeria. Founded by the Phoenicians, it was the favourite residence of the Numidian kings. Under Rome, Hippo Regius flourished as a trading centre, and became the see of Augustine, who died here in 430. Hippo was sacked by the Vandals and destroyed by the Moslems in the 7th century.

HIPPOCRATES (c. 460-377 B.C.). Greek physician, commonly called the Father of Medicine. One of the first scientific medical men, he was born in the island of Cos, a member of the famous family of priest-physicians, the Asclepiadæ (see Aesculapius). An acute and indefatigable observer, he practised both as physician and surgeon. More than 70 of his essays are extant.

Hippocrates, Greek physician. Bust in Brit. Mus.

HIPPODROME (Gr. hippos, horse; dromos, running, course). Course for chariot or horse racing in ancient Greece. It was oblong in shape with rounded ends.

The London Hippodrome, in Cranbourne Street, W.C., was built in 1899 with special arrangements for converting the stage into a circus arena, or a large water tank. It was reconstructed in 1909, its former arrangements being modified. See Amphitheatre; Circus.

HIPPOGRIF. Fabulous animal. It is represented in art as a winged horse with the head of a griffin, but the word is sometimes used for a winged horse.

HIPPOLYTE. In Greek legend, queen of the Amazons. She wore a famous girdle, the gift of her father Ares, to obtain which was one of the twelve labours of Hercules. Refusing to give it up, she was slain by him. According to another legend, Hippolyte invaded Attica at the head of her Amazons, but was defeated by Theseus and became his wife. See Amazon.

HIPPOLYTUS. In Greek legend, son of Theseus. He rejected the advances of his step-mother, Phaedra, who thereupon took her own life, leaving a letter in which she accused Hippolytus as the offender. Theseus called upon Poseidon to destroy his son, but he was restored to life by Aesculapius and afterwards ruled, under the name of Virbius, in the grove of Egeria near Aricia. See Phaedra.

HIPPOPHAGY (Gr. -hippos, horse; phagein, to eat). Practice of eating horseflesh. An enormous mass of fossil bones found at Solutrè in the Rhône valley supports the view that in palaeolithic Europe the wild horse was habitually hunted for food before its domestication for riding and traction. In the 8th century Pope Gregory III declared it to be unclean and execrable for human food. During the Crimean campaign of 1855, the siege of Paris in 1870-71, and throughout the Great War, horseflesh was of great dietetic importance. It is sold in Belgium, and is a primary ingredient in some forms of French sausage.

HIPPOTAMUS (Gr. hippopotamos, river-horse). Large herbivorous mammal of the family Hippopotamidae. There are two

species, both confined to tropical Africa. The body is bulky and piglike in form, with large head and gaping mouth armed with large tusks and incisor teeth. The nostrils are on the top of the muzzle. The common hippopotamus (*H. amphibius*) attains a length of 14 ft., and the height at the shoulder is about 4 ft. A fine male will weigh from four to five tons. The skin is usually blackish brown or slate colour. It is found only in Central Africa.

The smaller species (*H. liberiensis*), known as the pigmy hippopotamus, is found in Liberia, the Guinea Coast, and Sierra Leone. It is black in colour, about 6 ft. long, and weighs about 400 lb. In habits the hippopotamus is the most aquatic of all the larger land mammals. Slow and clumsy on land, it is a fairly rapid swimmer. It leaves the rivers at night to graze, and in cultivated districts does much damage to crops.

HIRE PURCHASE SYSTEM. Method of purchasing goods by instalments. The instalments are treated as payments for the hire of the goods, which remain the lender's property; but with a proviso that if all instalments are punctually paid, the ownership passes to the hirer. Meantime the latter has no right to dispose of the property.

HIROSHIMA. City of Honshu, Japan. It is picturesquely situated at the head of a bay, on the S. coast of the island, 190 m. W.S.W. of Kobe. Facing the city is the sacred islet of Itakushima (Island of Light), famous for its beautiful Shinto temple, a resort of pilgrims. Hiroshima trades in lacquered ware, bronze goods, and other objects of art. Ujina, 4 m. away, is a busy port. Pop. 195,731.

George Hirst, English cricketer.

HIRST, GEORGE HERBERT (b. 1871). English cricketer. Born Sept. 7, 1871, at Kirkheaton, he became a member of the Yorkshire county eleven in 1892. He was a fine batsman and a fast left-hand bowler, with a most deceptive swerve. His best batting season was 1904, when he scored 2,501 runs for an average of 54.36 per innings, and his best bowling season was 1906, when he took 208 wickets for an average of 16.5. He has scored 1,000 runs and taken 100 wickets on 14 occasions, and in 1906 he scored over 2,000 runs and captured over 200 wickets, the exact totals being 2,385 runs and 208 wickets. Altogether he played 60 innings of 100 and upwards. In 1920 he became cricket coach at Eton College.

Hippogriff, a fabulous animal.

Hippopotamus, the great river hog of Central Africa. Gambier Bolton, F.Z.S.

Hispaniola. Meaning little Spain, this word was used at one time for the island of Haiti (q.v.), in the W. Indies.

HISTON. Village of Cambridgeshire. It is 4 m. N.N.W. of Cambridge on the L.N.E. Rly. The cultivation of fruit and jam manufacture are the chief industries. Pop. 1,521.

HITCHIN. Urban district and market town of Hertfordshire. It is 32 m. N. of London and is a junction on the L.N.E.R. The fine old parish church contains a groined roof, an ancient font, mosaics, effigies, brasses, and other features of interest. Near is Golden Square, where Eugene Aram lived. The Priory, a seat of the Radcliffe family, is on the site of a Carmelite monastery, and almshouses include remains of a Gilbertine nunnery. Hitchin grows lavender and peppermint for distillation, and engages in malting and straw-plaiting. Pop. 13,535.

HITHER GREEN. Residential district and suburb of S.E. London. It is in the met. bor. of Lewisham, 7 m. S.E. of Charing Cross on the Southern Rly. Here is Park Hospital, a large fever hospital of the London County Council. It overlooks Mountsfield Park, a pleasure ground of 12 acres.

HITTITES. Ancient people in W. Asia. Denoting primarily a dominant tribe in the Halys plain, the name sometimes embraces the confederacies of city states whereof this tribe usually formed the head. Originating in prehistoric times in Cappadocia, they subjugated Eastern Asia Minor, aided by a knowledge of implements and weapons of the early copper-age culture. They also bred and harnessed the horse, which long afterwards was imported from them by Solomon (1 Kings 10).

Well established by the end of the 3rd millennium B.C., they overturned the first dynasty of Babylon about 1925 B.C. About 1400, a dynasty was founded by Subbiluliuma, who welded his neighbours into a close-knit kingdom, organized into principedoms and prefectures. This kingdom made treaties on equal terms with Egypt, maintained relations with Babylon, and lasted until overthrown in 1200 by the Mushki. By 1000 Hittite activities had revived under the spur of an early iron-age culture until Carchemish, in 717, and Marash in 709, were overthrown. Examples of their distinctive sculptural art are seen at Boghazkeui, Carchemish, Hamath, Marash, Sakjegeuzi, Sinjerli, Karabel, and elsewhere.

HIVITES. One of the tribes driven out of their territory by the Hebrews on their invasion of Palestine. Gibeon and Shechem were two of their chief centres. See Palestine.

HOAR CROSS. Village of Staffordshire. On the edge of Needwood Forest, 4 m. E.S.E. of Abbots Bromley, it is noted for its magnificent church, built by Mrs. Meynell-Ingram in 1892, from the design of G. F. Bodley. Hoar Cross Hall is the seat of the Meynells.

HOARE, SIR SAMUEL JOHN GURNEX (b. 1880). British politician. Born Feb. 24, 1880, the eldest son of Sir Samuel Hoare. Bt., he was educated at Harrow and Oxford. In 1910 he was elected M.P. for Chelsea as a Unionist, and in 1915 he

Sir Samuel Hoare, British politician
Russell

for Chelsea as a Unionist, and in 1915 he

father's baronetcy. He was secretary for air in the Unionist Ministry of 1922-24 and again occupied that position 1924-29.

HOARFROST (A.S. har, white). Deposition of ice particles on surfaces when the dew point is below 32° F. The ice particles or crystals readily form on the branches of trees, leaves of grass, etc., and the heaviest hoar frosts are formed when the heaviest dews occur, on clear, calm nights. See Dew; Frost.

HOATZIN (Opisthocomus cristatus). South American bird. It is about the size of a pigeon, and resembles a small, broad-tailed pheasant with an erectile crest on its head. The plumage is olive with white markings above and reddish below, and there is a naked patch on the breast.

HOBART. Capital of Tasmania. It lies on the S. side of the island at the foot of Mt. Wellington, on the Derwent, 12 m. from its mouth. It is a port of call for European mail steamers and for Australian interstate steamship liners. Its beautiful harbour gives a fine setting to the city and its government house, parliament, university, and other fine public buildings. The industries include tanneries, foundries, saw-mills, breweries, flour mills, and fruit-preserving factories. Its climate and scenery attract many visitors from the mainland. Pop. 52,600.

HOBBEMA, MEINDEERT (1638-1709). Dutch painter. The friend and possibly the pupil of Salomon and Jacob Ruysdael, he was born and died in Amsterdam. Little appreciated by the patrons of his day, he had many artistic friends, Philip Wouverman, Lingelbach, and the van de Velde collaborating in his productions. Typical of his work is The Avenue, Middel-harnis, with six other paintings, in the National Gallery.

Hobbes, JOHN OLIVER (d. 1906). Pen-name of the British novelist, Pearl Mary Teresa Craigie (q.v.).

HOBBES, THOMAS (1588-1679). English philosopher. Born at Malmesbury, April 5, 1588, and educated at Magdalen Hall, Oxford, he became in 1610 tutor to the grandson of the duke of Devonshire, thus forming his longstanding connexion with the Cavendish family.

His first objects of study were classics and mathematics, but he is chiefly remembered as a political philosopher. In 1640 he wrote a defence of monarchy, published later as two separate treatises entitled Human Nature and De Corpore Politico (On The Body Politic). In 1651 his greatest work, The Leviathan, appeared, and though the political theories were acceptable to the

Thomas Hobbes, English philosopher
After Dobson

restored monarchy, the Church accused him of atheism. He died Dec. 4, 1679.

HOBBES, JOHN BERRY (b. 1882). English cricketer. Born at Cambridge, Dec. 16, 1882, he first played county cricket for Cambridgeshire in 1903, but qualified by residence to play for Surrey, for which county he first appeared in 1905. In 1920 he aggregated 2,827 runs for the season. He has several times represented his country against the Australians, and played for the M.C.C. team in Australia, 1920-21 and 1928-29. He also played for England against Australia in 1930.

John B. Hobbs, English cricketer

HOBBY HORSE. Old-time feature at fairs, pageants, and other popular festivities. It consisted of a gaudily coloured pasteboard of a caparisoned horse girt round the waist of a performer, who imitated the curvettings of the animal. See Bicycle.

Hobart, Tasmania. Sandy Bay, showing the low wooded hills rising behind the capital
Courtesy of the Commonwealth of Australia

HOBGOBLIN. Traditional elf or goblin, generally of terrifying appearance. The prefix Hob is probably a corruption of Robin, and the name may have originally represented only the Robin Goodfellow who was widely noted in English folklore.

HOBOKEN.

City of New Jersey. It stands on the W. side of the Hudson river, adjoining Jersey City, and is served by the Lehigh Valley and other rlys. On the opposite shore is New York, with which Hoboken is connected by ferries and tunnels. Hoboken is an important port for the shipment of coal. Pop. 68,166.

HOESON, THOMAS (c. 1544-1631). Cambridge carrier and livery-stable keeper. His refusal to allow any horse to be taken from his stables except in its proper turn is said to have given rise to the proverb Hobson's choice, i.e. take it or leave it. A street and conduit in Cambridge are named after him.

HOCHE, LAZARE (1768-97). French soldier. Born June 25, 1768, he became a soldier in the Guard before the Revolution. In 1793 he was made a general, and in the winter of 1793-94 he won several brilliant victories over the Austrians and Russians, but was soon imprisoned as a traitor. Speedily released, he was successful against the royalists

Hobby Horse. Popular figure at old English fairs
From a print published by T. Fagg, 1839

who were in arms in La Vendée, but his expedition to invade Ireland in 1796 failed. He was later in a command on the Rhine. Hoche died Sept. 18, 1797. Pron. Ohsh.

HOCHELAGA. Name of a suburb of Montreal and of a county in the island of Montreal. It preserves the name of a native village inhabited by the Hochelaga or Beaver Indians, which stood where is now the city of Montreal. This was seen by Jacques Cartier when he visited the place in 1532, but it had disappeared 80 years later. See Montreal.

HOCK. Gorman white wine. Grown in the Rhine district and locally known as Hochheimer, from Hochheim, on the Main, the anglicised name hock is now applied to all Rhine white wines, either still or sparkling.

HOCKEY (Eng. hook; Fr. hoquet, crook). Outdoor game that has been played for centuries in various countries under various names. In Ireland a similar game is known as hurley, in Scotland as shinty, in Wales as bandy.

As now played, hockey became a recognized game about 1883, when a standard set of rules was framed by the Wimbledon Club. It is played between two teams of eleven players, each player having a stick

with a curved blade with which a ball is driven, the object being to force the ball into the opponents' goal. The ball is a leather cricket ball, the case painted white or made of white leather. The sticks are made of ash, and may not weigh more than 28 oz. The correct formation of a team is five forwards, three half-backs, two backs, and a goalkeeper. The game is of 70 mins duration, the teams changing ends after 35 mins. play. The dimensions of the ground are: length, 100 yds.; breadth, from 55 yds. to 60 yds. The goals are 4 yds. wide and 7 ft. high.

HOCKING, SILAS KITTO (b. 1850). British novelist. Born in Cornwall, March 24, 1850, he was ordained minister of the United Methodist Church in 1870, retiring in 1896. In 1879 he published *Her Benny*, this being the first of a long sequence of novels, chiefly of a religious tendency, many of which have enjoyed wide popularity. Hocking's *My Book of Memory* appeared in 1923.

His brother Joseph (b. 1855) became a Methodist minister in 1884. He also is the author of many popular novels.

HOCKTIDE. Old English holiday observed on the second Monday and Tuesday after Easter. Formerly celebrated by various rough games and forfeits, the festival was popularly supposed to commemorate Saxon victories over the Danes. The custom apparently originated about the 12th century, and died out early in the 18th. It is still, however, observed at Hungerford, Berks.

HODDESDON. Urban dist. and market town of Hertfordshire. It is on the river Lea, 4 m. S.E. of Hertford, on the L.N.E.R., and was a fishing resort of Izaak Walton. Market day, Wed. Pop. 5,410.

HODGE. Character in William Stevenson's comedy, *Gammer Gurton's Needle*, 1575. He is Gammer Gurton's servant, and his name, a nickname for Roger, has since served as a conventional designation for an English farm labourer or countryman.

HODGE, JOHN (b. 1855). British politician. Born at Muirkirk, Ayrshire, Oct. 29, 1855, he became a leading trade unionist. He formed a society of workers in the steel, iron and tinplate trades, of which he became secretary. In 1892 he was president of the Trade Union Congress. In 1906 he entered Parliament as Labour M.P. for Gorton, retaining his seat until 1923. In 1916 he was made minister of labour in the coalition ministry, and from 1917-19 he was minister of pensions.

HODGES, FRANK (b. 1887). British Labour politician. Born at Woolaston, Glos., April 30, 1887, he worked as a collier until the age of twenty-one. He was general secretary of the Miners' Federation of Great Britain, 1918-24, and of the Miners' International Federation, 1925-27. He took a leading part in negotiations connected with mining disputes, and was M.P. for the Lichfield div., 1923-24. He became a member of the Central Electricity Board in 1927.

HODSON, WILLIAM STEPHEN RAKES (1821-58). British soldier. Born at Maisemore Court, near Gloucester, March 19, 1821, he entered the army and proceeded to India. During the Indian Mutiny, Hodson distinguished himself as commander of a body of irregular cavalry, known as Hodson's Horse, and as chief of the intelligence department. He died March 12, 1858.

HOENIR. One of the three gods in Norse mythology, the long-logged one, the lord of the ooze, synonymous with stork. After Midgard, the abode of mankind, was formed, Odin, Hoenir, and Lodur made man and woman from an ash and an elm, Hoenir's gift being speech.

HOER, ANDREAS (1767-1810). Tiroler patriot. Born at St. Leonard in the Passer valley, Tirol, Nov. 22, 1767, he inherited his father's business as an innkeeper. Hoer was devoted to Austria, and violently opposed to the treaty of Pressburg, 1805, whereby Tirol passed into the power of France and was joined to Bavaria. He raised troops and headed several risings against Bavarian rule, being finally captured and shot by the French at Mantua, Feb. 20, 1810.

HOFFMANN, ERNST THEODOR AMADEUS (1776-1822). German author. Born at Königsberg, Jan. 24, 1776, he studied law, and eventually, in 1816, became chancellor of the court of appeal at Berlin. During his early life music was his main interest, and it was not till 1814 that the short stories and essays in *Phantasiestücke* appeared. His works occupy a prominent place in the romantic literature of the period. Hoffmann died June 25, 1822.

HOFMANN, JOSEF CASIMIR (b. 1876). Polish pianist. Born at Cracow, Jan. 20, 1876, he studied under Rubenstein, and as a youthful prodigy went on tour in Europe and America. In 1888 he retired for six years from public life, but after a further period of study

reappeared and took a high place among contemporary musicians.

HOFMEYER, JAN HENDRIK (1845-1909). S. African politician. Born in Cape Town, July 4, 1845, he took up journalism, and in 1879 was elected M.P. for Stellenbosch in the Cape parliament, where his strong Dutch sympathies brought him into notice. In 1878 he organized the Dutch farmers and, by means of the Afrikaner bond, welded the Dutch element into a strong political entity. He dissociated himself from Kruger's anti-British policy, and took no part in the struggle of 1899-1902, but when it was over he returned to S. Africa and was again an influential personage until his death, Oct. 16, 1909.

J. H. Hofmeyr,
S. African politician

HOGARTH, WILLIAM (1697-1764). English painter, engraver, chronicler, and moralist. Born in Bartholomew Close, City of London, Nov. 10, 1697, he began his career as apprentice to a silversmith in Leicester Fields, but amused himself with painting, and paid some attention to engraving. In 1726 he became known by some copper-plates, for Butler's Hudibras. In 1733 he commenced his long series of didactic chronicles in pictorial art, beginning with *The Harlot's Progress*. This group of works, which includes *The Rake's Progress*, *The Enraged Musician*, *Marriage à la Mode*, *Beer Street and Gin Lane*, *The Lady's Last Stake*, *Industry and Idleness*, and others, takes high position as an exposition of the life of the day.

As a portrait painter Hogarth had few rivals. He became serjeant painter to the king in 1757. He died Oct. 26, 1764. Several of his best pictures are at the Soane Museum, in Lincoln's Inn Fields; others are at the National Portrait Gallery, Windsor Castle, and Lambeth Palace. In his house at Chiswick, which has been in some measure restored to its original condition, is a collection of his engravings. See illus. pp. 428, 594.

HOGG, JAMES (1770-1835). Scottish poet, known as the Ettrick Shepherd. Born at Ettrick, Selkirkshire, the son of a shepherd, he was inspired with the desire to write poetry at the age of sixteen by a reading of Ramsay's *Gentle Shepherd*. He obtained his first success in 1807, with a volume of poems entitled *The Mountain Bard*. *The Queen's Wake*, 1813, is a work of real merit, with a strong vein of imagination. Hogg died at Altrive in Yarrow, Nov. 21, 1835.

HOGG, QUINTIN (1845-1903). British philanthropist. A son of Sir James Weir Hogg,

he was born in London, Feb. 14, 1845, and educated at Eton. In 1882 he purchased the lease of the Royal Polytechnic Institution, Regent Street, London, and opened it on Sept. 25. His object was to provide young men with instruction, recreation, and social intercourse, and under his direction it developed into a great organization. Hogg died Jan. 17, 1903. His son Douglas was a noted lawyer who in 1929 was made a viscount. See Hailsbam, Viscount.

William Hogarth,
English painter

Self-portrait in National Portrait Gallery

HOGHTON. Village of Lancashire. It lies between Preston and Blackburn, on the L.M.S. Rly., and is notable for the seat of the De Hoghton family, Hoghton Tower, originally built in 1565. On his visit here in 1617 James I is said by popular tradition to have "knighted" the loin of beef (sirloin). Pop. 913. Pron. Howton.

HOGMANAY or **CAKE DAY.** Name used in Scotland and the N. of England for New Year's Eve, and the gifts then bestowed. The word is probably of early French origin.

HOG PLUM (Spondias). Genus of trees of the natural order Anacardiaceae, natives of the tropics of both hemispheres. The leaves are divided into long, opposite leaflets, and the flowers are small with four or five each of sepals and petals. The fleshy fruit is plumlike and contains four or five seeds. These fruits vary in flavour, according to species.

Hog Plum. Leaf, flowers and fruit of *Spondias dulcis*

HOG'S BACK. Western termination of the North Downs in Surrey. It is so called on account of its outline. It runs from Guildford to Farnham, about 10 m.; the height of the chalk elevation is from 350 to 500 ft., and its breadth at the top about 500 yds. See Downs.

HOGSHEAD. English measure of liquid capacity. In 1483 it was fixed at 63 wine galls., equal to 52½ impl. galls., but now it equals 54 galls. for beer, cider, etc. As a large cask, its capacity varies according to commodity and locality, as for molasses, sugar, etc.

Hogue. British cruiser, one of the three torpedoed by the German submarine U 9 off the Dutch coast, Sept. 22, 1914. See Cressy.

Hog-weed. Variant name of the cow-parsnip (q.v.), *Heracleum sphondylium*.

HOHENLINDEN, BATTLE OF. French victory over the Austrians, Dec. 3, 1800. While attempting to cut off the French army under Moreau, the Austrians were themselves caught between Ney and Grouchy in the van and Richempanse in the rear. They lost heavily, suffering 10,000 casualties.

HOHENSTAUFEN. Name of a famous German family, members of which were rulers of the medieval empire from 1138-1254. Frederick and Conrad of Hohenstaufen were nephews of the emperor Henry V; and when he died, in 1125, Frederick, his heir, just failed to secure his throne. In 1138, however, Conrad was chosen German king. Frederick I, Barbarossa, succeeded him in 1152, and then came Henry VI in 1190. After a period of decline the position of the Hohenstaufens was restored by Frederick II, but the male line became extinct in 1268. See Empire; Frederick I; Frederick II.

HOHENZOLLERN. Name of the family that supplied kings to Prussia from 1701 to 1918 and German emperors from 1871 to 1918. The family was first heard of in S. Germany, its earliest members being nobles who called themselves counts of Zollern, the hill in Swabia on which their castle stood. In 1227 the family lands were divided, and two main branches of the Hohenzollerns came into existence. The elder kept Zollern and the lands there, and was known as the Swabian; the younger supplied burgraves to Nuremberg, and was known as the Franconian.

The European importance of the Hohenzollerns began in 1415. Brandenburg was without a ruler, and the emperor Sigismund gave it to Frederick of Hohenzollern, who

became its margrave and one of the seven electors. Henceforward the Hohenzollerns were identified closely with Brandenburg, which under the great elector Frederick William became a European power. In 1701 his son Frederick became king of Prussia. A later king, William I, was crowned German emperor in 1871.

The Swabian Hohenzollerns continued to rule in comparative obscurity until, in 1848, their territories became the property of the king of Prussia. A member of this branch, Charles, became king of Rumania in 1881. See Germany; Prussia; William II.

The Hohenzollern redoubt was the name given to an intricate trench fortress in the German line at the battle of Loos (q.v.), 1915.

HOKKAIDO. Term applied to the northern section of Japan that includes Yezo and the Kurile Islands (q.v.). Yezo, to which the name Hokkaido is frequently restricted, has an area of 30,500 sq. m., and is separated from Sakhalin (Karafuto) by Soya Strait, and from Honshu, the Japanese mainland, by Tsugaru Strait. The country is mountainous. The chief rivers are the Teshio and Ishikari. Sapporo is the capital, and Hakodate the chief port. Fishing, lumbering, and mining are the principal industries. There is very little agriculture, as the soil is unsuitable. The chief exports are canned salmon, dried fish roe, salt, sulphur, and fish oil. Pop. 1,500,000. See Japan.

HOLBEACH. Urban dist. and market town of Lincolnshire. It is 3 m. E. of Spalding, on the L.M.S. and L.N.E. Rlys. All Saints' Church is a fine example of the Late Decorated style. Roman remains have been excavated. Holbeach Marsh, between the town and the Wash, has been reclaimed from the sea. Market day, Thurs. Pop. 5,381.

HOLBEIN, HANS (c. 1497-1543). German painter and engraver. Born at Augsburg, he was the son of Hans Holbein the elder (c. 1460-1524). After working at Basel, where he decorated the Rathaus, Holbein came to London with letters of introduction to Sir Thomas More in 1526. Except for visits abroad, he settled in England for the remainder of his life, becoming principal painter to Henry VIII. He died in London, probably of the plague, Oct.-Nov., 1543.

Hans Holbein, German painter. After a self-portrait

Holbein's chief fame rests on his portraits, where he excels in simplicity and in accuracy. His greatest paintings in England are those in the National Gallery, at Windsor Castle, Longford Castle, and Lambeth Palace, but some of his finest portraits can be seen at The Hague, in Berlin, Vienna, Paris, Munich, and Basel. See illus. pp. 92, 202, 391, 546, 558, etc.

HOLBORN. Borough and district of London. The bor. covers 405 acres and extends from Tottenham Court Road on the W. to Farringdon Road, E., mainly N. of New Oxford Street and High Holborn. Near Staple Inn two obelisks mark the site of Holborn Bars, destroyed in 1867, indicating the W. boundary of the city. The district includes the British and Soano Museums, Lincoln's Inn, Gray's Inn, Staple Inn, the churches of S. Alban (1858), S. Andrew (1686), S. George, Bloomsbury (1731), S. Giles-in-the-Fields (1731-33), the Hospital for Sick Children; Bedford, Russell, Queen, and Red Lion Squares; Hatton Garden and Saffron Hill.

Holborn Viaduct, 1,400 ft. long and 80 ft. wide, was constructed in 1867-68, at a cost of £1,571,000, to carry the roadway over the valley of the Hobbourn. Pop. 43,200.

HOLBROOK, NORMAN DOUGLAS (b. 1884). British sailor. In the submarine branch he

served in the Mediterranean in the early days of the Great War, and on Dec. 13, 1914, commanding submarine B 11, he dived beneath five rows of mines in the Dardanelles and torpedoed the Turkish battleship *Messudiyeh*. Pursued by torpedo boats, he returned safely, having on one occasion been submerged nine hours. He was awarded the V.C., the first awarded to the Navy in the Great War.

HOLBROOKE, JOSEF CHARLES (b. 1878). British pianist and composer. Born at Croydon July 6, 1878, he studied at the Royal Academy of Music. In 1901 he produced his tone poem *The Raven*, and has since written several operas, more than a hundred songs, and much chamber and orchestral music.

HOLCROFT, THOMAS (1745-1809). English dramatist. He was born in London, Dec. 10, 1745. After a chequered early life, he became connected with the stage, and his first novel, *Alwyn, or the Gentleman Comedian*, 1780, embodies many of his own experiences. In the following year appeared his first play, *Duplicity*. He wrote four novels in all, and wrote, translated, or adapted some 30 plays. The most notable of the latter is *The Road to Ruin*, 1792. He died in London, March 23, 1809.

Thomas Holcroft, English dramatist

HOLDA. Goddess of Teutonic mythology. Represented as benignant and merciful, she is regarded as a being of the sky, and when it snows is said to be making her bed. She is the goddess of spinning and agriculture.

HOLDEN, SIR EDWARD HOPKINSON (1848-1919). British banker. Born in Manchester, May 11, 1848, he entered the Manchester County Bank in 1866. Later he became accountant, and then general manager of the Birmingham and Midland Bank, which in 1891 took over the Central Bank of London. In 1898 the City Bank was absorbed, and the London, City and Midland Bank was formed. Of this Holden was made managing director, and later chairman. From 1906 to 1910 Holden was M.P. for the Heywood division of Lancashire. In 1909 he was made a baronet. He died July 23, 1919.

HOLDEN, SIR ISAAC (1807-97). British manufacturer. Born at Hurler, near Paisley, May 7, 1807, he invented a wool-combing machine which proved the foundation of his fortune. He founded the firm of Isaac Holden & Sons, a wool-combing concern at Bradford with a factory in France. He was Liberal M.P. for Knaresborough, 1865-68; for the W.R., Yorkshire, 1882-85; and for Keighley, 1885-95. He was made a baronet in 1893, and died Aug. 13, 1897. His son, Sir Angus Holden, was made Baron Holden of Alston in 1908.

Holborn, London. Old houses at Staple Inn, dating from Elizabethan days, restored in 1886

HOLDERNESS. District of Yorkshire (E.R.). In the S.E. portion of the county, it contains Beverley, Hedon, Hornsea, and

Pattingham. The division returns one member to Parliament. The family of Daroy were earls of Holderness from 1682 to 1778, when the estate passed to the duke of Leeds.

HOLE SAMUEL REYNOLDS (1819-1904) British divine. Born Dec. 5, 1819, the son of a brewer at Newark, he went to Oxford and was ordained. For many years he was vicar of Cauntton, near Newark. In 1887 he was made dean of Rochester, and he was there until he died, Aug. 27, 1904. Dean Hole was a sportsman of the old school, a famous grower of roses, and a great friend of John Leech and other members of the Punch staff. His books include *A Book about Roses*, 1869, *Memories*, 1892, and *More Memories*, 1894.

HOLE, WILLIAM (1846-1917). British painter and etcher. Born at Salisbury, Nov. 7, 1846, he executed important mural paintings in the National Gallery and Municipal Buildings, Edinburgh. He became A.R.S.A., 1878, and full member, 1889. He died Oct. 24, 1917.

HOLFORD, SIR GEORGE LINDSAY (1860-1926). British art collector. Born June 2, 1860, the son of Robert S. Holford, he inherited from his father in 1892 the art collections at Weston Birt, Gloucestershire, and Dorchester House, London. In 1923 the prints and drawings were sold for £28,000; in 1927 the Italian pictures for £156,000; and in 1928, in one day, Dutch and Flemish pictures fetched £364,000. These included a Rembrandt which fetched 44,000 guineas. The chief books were sold to an American for £200,000.

HOLINSHED, RAPHAEL (c. 1520-80). English chronicler. He was employed as translator by Reginald Wolfe, printer to Queen Elizabeth. Wolfe planned a universal cosmography, and Holinshed became responsible for the form in which it appeared (in two folio volumes), in 1577, as *The Chronicles of England, Scotland, and Ireland*. A second edition, in three folio volumes, appeared in 1587, and there was a reprint in six volumes in 1807-8. The work, known as Holinshed's *Chronicles*, was used by Shakespeare for his historical plays.

HOLKHAM HALL. Seat of the earl of Leicester. In Norfolk, near the coast, it is a great 18th century Palladian house of white brick. Kent was the architect, and it was erected by Thomas Coke, 1st earl of Leicester. It contains some fine rooms, especially the picture gallery. The estate was bought in 1659 by John Coke, a son of Sir Edward Coke. Here Coke's nephew and successor, the earl known as Coke of Norfolk, carried out his agricultural experiments. Pron. Ho-kum.

HOLL, WILLIAM (1771-1838). British engraver. Taught his trade by Benjamin Smith, he made a speciality of portrait work, and was largely employed by Lodge in his *Portraits*, 1821. His son William (1807-71) was a steel engraver of considerable merit. He worked for Lodge and engraved pictures by Frith, Baxter, Faed, Richmond, Goodall, and others. He died in London, Jan. 30, 1871. See illus. pp 291, 463, 465, 579.

HOLLAND. District of Lincolnshire, the region around the Wash. It is an administrative co. with its own county council, which meets at Boston.

HOLLAND. Country of Europe, the nucleus of the kingdom of the Netherlands. The name means lowland and was first given in 1064 to a county which grew from a small district round Dordrecht till it included all the land between the Texel and the Maas. It had its own rulers from about 920. In the 15th century Holland and Zeeland were ceded to Philip the Good of Burgundy. They then passed with the rest of the Burgundian lands to Mary, daughter of Charles the Bold, and next to her son Philip, a Hapsburg. Philip's successor was his son, Charles V, and then came Philip II of Spain. Holland

and the northern provinces of the Netherlands threw off the sovereignty of Spain and were later recognized as the Dutch republic. The name is now borne by two provinces of the kingdom of the Netherlands (q.v.).

HOLLAND, BARON English title borne 1763-1859 by the family of Fox. Its founder was Sir Stephen Fox (1627-1716). In 1763 his younger son, Henry (1705-74), the politician, was made Baron Holland. In 1767 Lord Holland bought the residence he named Holland House. His eldest son, Stephen, succeeded to the title, and in 1774 Stephen's son, Henry Richard Fox (1773-1840), became 3rd baron Holland. A famous Whig politician, he and his wife, Elizabeth Vassall (1770-1845), made Holland House a great social centre. The title expired on the death of their son Henry Edward (1802-59).

HOLLAND, HENRY SCOTT (1847-1918). British divine. Born Jan. 27, 1847, he was

H. Scott Holland,
British divine
Elliott & Fry

educated at Eton and Oxford and for twelve years (1872-84) was an influential figure in the university. In 1872 he was ordained and in 1884 he was made canon residentiary of St. Paul's, where he remained until 1910. From 1910 until his death, March 17, 1918, he was regius professor of divinity at Oxford. Holland was

an advocate of social reform and politically an advanced Liberal.

HOLLAND, SIR THOMAS HENRY (b. 1868). British scientist. Born Nov. 22, 1868, of Canadian parentage, he was director of the geological survey of India 1903-09 and professor of geology in the university of Manchester in 1909-18. He was rector of the Imperial College of Science and Technology, 1922-29; president of the British Association, London, 1928; and was chosen principal of Edinburgh University in 1929. He was elected F.R.S. in 1904 and knighted in 1908.

HOLLAND HOUSE.

Historic London mansion between Kensington Road and Uxbridge Road, Kensington. A notable example of Jacobean architecture, its centre building and turrets, 1607, were built by John Thorpe for Sir Walter Cope. The house was bought by Henry Fox, 1st Baron Holland, and on the death of Lady Holland, widow of the 4th baron, in 1889, the property passed by purchase to the earl of Ilchester. Joseph Addison died in Holland House in 1719 three years after his marriage to the widow of the 3rd earl of Warwick.

Holland House, London. The Jacobean mansion seen from the garden

HOLLAND PARK. District of West London situated between Notting Hill and Kensington, with a station on the C.L.R. In Holland Park Road is Leighton House, the property of the nation.

HOLLANDS. Variety of gin sometimes called Schiedam or Schnapps. It is manufactured near Schiedam in Holland, from barley, malt, and rye. See Gin.

HOLLAR, WENCESLAUS (1607-77). Bohemian engraver. Born at Prague, July 13, 1607, he became drawing-master to the prince of Wales (afterwards Charles II), and is remembered especially for his map of London after the Great Fire and his views of Oxford, Cambridge, Hull, Richmond, Greenwich, and a number of German towns. He died March 28, 1677. See illus. p. 218.

HOLLES, DENZIL HOLLES, 1ST BARON (1599-1680). English politician. A younger son of John Holles, 1st earl of Clare, he was born Oct. 31, 1599, and, entering parliament in 1624, had a hand in most of the great events that preceded the Civil War. Holles was one of the Five Members and a member of the committee of safety. He went to The Hague to invite the king to return. In 1661 he was made a peer. From 1663 to 1666 he was ambassador in Paris; in 1667 he arranged with Holland the treaty of Breda. Later he took up an attitude of opposition to Charles II. He died Feb. 17, 1680. The title became extinct when the 3rd baron died in 1694.

1st Baron Holles,
English politician

HOLLINGSHEAD, JOHN

(1827-1904). British journalist and theatrical manager. Born in Hoxton, London, Sept. 9, 1827, he was a voluminous writer for many years, and assisted many public movements such as that for the better government of London and the agitation for copyright reform.

After three years as stage director of the Alhambra, in 1868 he became manager of the Gaiety Theatre in the Strand, where he had many successes. He died Oct. 10, 1904.

HOLLOWAY. Name of a district in the met. hor. of Islington, London, N. The district includes the Caledonian (Metropolitan Cattle) Market, 1855, enlarged 1907; Northern Polytechnic, opened 1897; and Holloway prison, a castellated structure built in 1853-54, mostly for women serving short sentences. There are stations on the L.M.S., L.N.E., and Piccadilly (Tube) Rlys.

HOLLOWAY, THOMAS (1800-83). Patent medicine maker. Born at Devonport, Sept. 22, 1800, the son of a Plymouth baker, he came to London in 1828, and nine years later concocted an ointment and a pill which he advertised extensively. He acquired a handsome fortune, and, on Lord Shaftesbury's advice, set aside a large sum of money to found a sanatorium, which was opened at Virginia Water in 1855. He also, at a cost of £600,000, founded at Mount Lee, Egham, Surrey, Holloway College for the higher education of girls, and formed a picture gallery on which he spent more than £83,000. He died at Tittenhurst, Berkshire, Dec. 26, 1883.

HOLLY. Hardy evergreen tree of the order, Aquifoliaceae, and genus *Ilex*. *Ilex aquifolium* is a native of Britain, but foreign species were introduced from N. America as far back as the year 1726. The leaves are

Holly. Leaves and berries of *Ilex Hendersoni*. Top, leaves and berries of the British species

usually spiny and dark green, though there are smooth and variegated sorts, and the red or yellow berries are borne in winter. Holly makes one of the best hedges, but needs constant care. Its branches are much used for decorations at Christmas. *Ilex paraguayensis* yields maté, or Paraguay tea.

HOLLYHOCK (*Althaea rosea*). Hardy perennial herb of the order Malvaceae. A native of China, it was introduced in 1573. The leaves are large, rough and rounded, and it bears a single spike (8 ft. to 10 ft.) of white, pink, yellow, or purple flowers, either single or double. It will thrive in any soil not too light.

Hollyhock, leaves and flowers; bottom, right, the "cheese" containing seeds, and a single seed

HOLLYWOOD. District in California, U.S.A., part of the city of Los Angeles and the headquarters of the film industry. It lies to the west of Los Angeles proper, quite near the coast, and owes its prosperity largely to its clear climate and beautiful surroundings. The town covers 26 sq. m., and here are the studios and other buildings of over 50 firms engaged in the production of motion pictures. There are other industries, and the buildings include stores, hotels, and banks. See Film.

HOLMBY HOUSE. Northamptonshire mansion. The existing Holmbury (or Holdenby) House was built in the 19th cent., its predecessor being one of the great 16th cent. domestic palaces. Here Charles I was detained after his surrender at Newark-on-Trent. There are a few remains of the earlier building.

HOLME CULTRAM. Urban dist. (Holme Abbey) of Cumberland. It is 5 m. N.W. of Wigton. The church of S. Mary occupies the site of a 12th cent. Cistercian abbey and was restored in 1885. Pop. 4,724.

HOLME LACY. Village of Herefordshire. It is 5 m. S.E. of Hereford, on the G.W.R. Holme Lacy House is a fine 17th cent. building containing a splendid collection of pictures and wood carvings. In 1929 the estate was presented to the Herefordshire County Council. In the Norman church, dedicated to S. Cuthbert, are monuments of the Scudamore family.

HOLMES, OLIVER WENDELL (1809-94). American essayist and poet. Born at Cambridge, Mass., Aug. 29, 1809, he was the son of a Unitarian minister. Educated at Andover and Harvard, he began to study law, but later turned to medicine. After 1849 he devoted himself to literature. The best of his prose and poetry is included in the series *The Autocrat of the Breakfast Table*, 1858; *The Professor at the Breakfast Table*, 1860; and *The Poet at the Breakfast Table*, 1872. In these works humour, fancy, and poetry are blent into a fascinating whole which is informed with a broad humanitarianism. His novels, *Elsie Venner*, 1861, *The Guardian Angel*, 1867, and *A Mortal Antipathy*, 1885, occupy a subsidiary position. His other works include biographies of J. L. Motley and R. W. Emerson, *Our Hundred Days in Europe*, and *Over the Teacups*. He died Oct. 7, 1894.

O. W. Holmes, American writer After A. Scholl, 1879

HOLMFIRTH. Urban dist. and market town of Yorkshire (W.R.). It is 6 m. S. of Huddersfield, on the L.M.S. Rly. Stone is quarried and woollens are manufactured. Market day, Tues. Pop. 10,500.

HOLMIUM. Rare-earth metal, symbol Ho; atomic weight 163.5, atomic number 67. With thulium it was isolated from erbium earth by Cleve in 1879, and is found in gadolinite, samarskite, and other minerals.

Holm Oak. Leaves and acorn of the evergreen tree

HOLM OAK (*Quercus ilex*). Evergreen tree of the order Amentaceae, a native of S. Europe and N. Africa. The leathery leaves, which last for two years, vary in form from oblong to lance-shape, and may be toothed or not. The underside is whitish with a downy covering. The long, slender acorns ripen in their second year.

HOLOFERNES. Personage mentioned in the apocryphal book of Judith as the chief captain of the army of Nebuchadnezzar; also a pedantic schoolmaster in Shakespeare's *Love's Labour's Lost*.

HOLSTEIN. District of Germany. Forming the S. portion of the Prussian prov. of Slesvig-Holstein, it stretches from Mecklenburg to the Eider, with the Elbe as its S.W. boundary. It contains several large lakes, and is famous for its horses and cattle. Kiel is the largest town. In the 14th century a count of Holstein became also ruler of Slesvig, and in 1460 Christian I of Denmark obtained possession of both. Severed from Germany in 1806-15, Holstein was, in 1864, occupied by Prussian and Austrian troops, and with Slesvig was formally surrendered. After the war of 1866, the two passed to Prussia. See Denmark; Slesvig-Holstein.

HOLSWORTHY. Urban district and market town of Devonshire. It is 46 m. W. by N. of Exeter, on the S.R. An agricultural trade is carried on. The annual horse fair is held in July. Market day, Wed. Pop. 1,416.

HOLY ALLIANCE, THE. Treaty concluded at Paris in 1815, after the final abdication of Napoleon, by Alexander I of Russia, Francis II of Austria, and Frederick William III of Prussia. They bound themselves to be guided by the principles of Christianity. The compact was a recrudescence of the notion of divine right, and its political motive was to maintain the settlement made in Europe after Napoleon's fall. The treaty was subscribed to by other European monarchs, but became an instrument for resisting revolutionary tendencies. See Europe.

HOLY CARPET. Popular name for the kisveh, or outer covering of the Ka'aba, a building in the centre of the Mahomedan temple at Mecca. Manufactured in Cairo, it is sent annually with the caravan of pilgrims to the holy city. It is of black brocade ornamented with inscriptions worked in gold. After having remained on the Kaaba for nearly a year, the kisveh is taken off, cut into pieces and sold to the pilgrims. After 15 days the new covering is put up. See Ka'aba; Mecca.

HOLY COAT. Relic, preserved in the cathedral at Treves (Trier). It is alleged to be the seamless coat of Christ for which the soldiers cast lots at the

Crucifixion, and to have been brought from Palestine by S. Helena when she discovered the Holy Cross. It is first mentioned in history in 1106.

HOLYHEAD. Urban dist., seaport, and market town of Anglesey, Wales. It stands on the N. side of Holy Island, a terminus of the L.M.S. Rly., and is the port of departure for steamers to Dublin. It has a fine harbour of 267 acres. Market day, Sat. Pop. 11,608.

Holy Island, or Holyhead Island, is an island to the W. of Anglesey, Wales, connected with the county by an embankment over which passes the L.M.S. Rly. See Anglesey.

HOLY ISLAND OR LINDISFARNE. Island (at certain states of the tide) off the coast of Northumberland. S. Aidan founded a monastery here in 635, and a Benedictine priory church was erected on its site in 1093. Pop. 359.

Holy Land. Name given by Christians to Palestine (q.v.) because of its association with Jesus Christ.

HOLYOAKE, GEORGE JACOB (1817-1906). British secularist. Born April 13, 1817, at Birmingham, he early identified himself with the Chartist movement. In 1842 he was imprisoned for blasphemous utterances in a lecture. He invented the word secularism. He wrote a *History of Co-operation*, *Lives of Tom Paine*, *Robert Owen* and *J. S. Mill*. Sixty Years of an Agitator's Life, and *Bygones Worth Remembering*. He died at Brighton, Jan. 22, 1906.

G. J. Holyoake, British secularist Elliott & Fry

HOLY OF HOLIES. Inner chamber of the Jewish Tabernacle (Ex. 26) and of Solomon's Temple (I Kings 6). The Holy of Holies contained the Ark of the Covenant See Tabernacle; Temple.

HOLY ORDERS. Name given to the estate or degree of those admitted to the Christian ministry by the laying on of hands of a lawfully ordained bishop. As recognized in the Church of England there are three grades: bishops, priests, and deacons. In the Roman Church, Holy Orders include bishops, priests, deacons, subdeacons, acolytes, exorcists, readers, and door-keepers.

HOLYROOD. Name of abbey ruins and palace, Edinburgh, Scotland. The abbey, founded by David I in 1128 for Augustinian canons regular, was the scene of the marriage of James II, James III, James IV, and of Mary and Darnley. Charles I was crowned, and David II, James II, James V. and Darnley were buried here. It was reduced to ruins in 1768.

The palace was built by James IV in 1498-1503, burnt by accident Nov. 13, 1650.

Holyrood, Edinburgh. The palace from the north-west, with the abbey ruins on the left and Arthur's Seat in the background

restored by Cromwell, 1651-58, and rebuilt by Charles II, 1671-79. Prince Charles Edward held his balls and levées in the picture gallery.

1745-46, and here the lord high commissioner to the general assembly of the Church of Scotland holds his levee each May, and Scottish representative peers are elected for each new Parliament. The chief features of interest are the apartments of Queen Mary, Darnley's rooms, and the audience chamber. A dark stain on the floor outside the private apartments is said to have been made by the blood of Rizzio the Italian secretary of Mary Queen of Scots, who was murdered here, Mar. 9, 1566.

Much care has been taken to keep the structure of the palace in repair. On several occasions when King George and Queen Mary have visited Scotland the Court has been transferred to Holyrood, as in 1923 and 1927, when its ancient splendour and pageantry have been revived.

Holy Rood is the ancient name for the Holy Cross. Holy Cross Day is Sept. 14.

HOLY SPIRIT. In Christian theology, the third person of the Trinity. The evolution of the doctrine goes back to the O.T., in which the term Spirit is used to denote the Divine Activity of God in Action. The term itself, both in Hebrew and Greek (ruach and πνεῦμα), originally meant "breath" or "wind," the underlying idea being that of invisible force. The governing adjective Holy, which in the O.T. is only used on two occasions (Ps. 51 11. Isaiah 63, 10) became in the N.T. an almost inseparable element in the idea. The result was that the activity of the Spirit was almost entirely restricted to the moral and spiritual sphere.

HOLY WATER (Lat. aqua benedicta). In the R.C., Greek, and Russian Churches, water blessed by bishop or priest. It is placed in a basin or stoup at church entrances. The original idea seems to have been that worshippers should wash their hands and so be able to lift up pure hands in prayer. Its modern use is symbolical. In the Anglican communion the use of holy water was abandoned at the Reformation. See Baptism.

HOLY WEEK. To Christians, the week before Easter. The application to it of the name Passion Week is incorrect, that being the week following Passion Sunday, or the 5th Sunday in Lent. See Easter.

HOLYWELL. Urban dist. and market town of Flintshire, Wales. It stands on the Dee estuary, 4 m. N.W. of Flint on the L.M.S. Rly. The water of S. Winifred's Well is said to have curative powers. The well is covered by a Gothic chapel erected by the countess of Richmond, mother of Henry VII. Market day Mon. Pop. 3,000.

HOLYWOOD. Urban dist. and seaport town of co. Down, Northern Ireland. Situated on Belfast Lough, 4 m. N.E. of Belfast, it is a favourite seaside resort. A solemn league and covenant for the defence of the kingdom was signed here in 1644. Pop. 4,035.

HOMBURG. Town of Germany. Situated 9 m. N.N.W. of Frankfurt, it is principally known as a pleasure resort and for its chalybeate and saline springs. The town gave its name to a kind of soft felt hat. Pop. 16,412.

HOME, DANIEL DUNGLAS (1833-86). Scottish spiritualist medium. He was born near Edinburgh, March 20, 1833, and inherited psychic gifts from his mother, Elizabeth McNeill. Taken to America as a child and adopted by an aunt, his first manifestations of occult influence were so disturbing to her that she turned the boy out of her house. Home came to England in 1855 and acquired a prodigious reputation, but Browning pilloried him in *Sludge the Medium* (1864). He died at Auteuil, June 21, 1886.

HOME COUNTIES. Name given to the counties round London. Their names are Middlesex, Surrey, Kent, Essex, Hertfordshire, Buckinghamshire, and Berkshire.

HOME OFFICE. The A government department in Great Britain. Through its head, the home secretary, the king issues all communications to his people, and on his advice exercises his right of pardon. The home secretary and his staff supervise all matters connected with prisons and prisoners and are responsible for the police and the administration of justice. Factories and mines are inspected by officials of this department, which also deals with immigration, licensing laws and burial laws. In many countries the corresponding department is called the ministry of the interior. The offices are situated in Whitehall, London, S.W.

HOMER. Homer (Gr. Homēros) is the reputed author of two famous Greek epics, the Iliad and the Odyssey. Some scholars regard him as a mythical figure. There seems, however, no reason to doubt that a poet named Homer existed and tradition describes him as blind. Seven cities, Smyrna, Chios, Colophon, Salamis (in Cyprus), Rhodos, Argos, and Athens, claimed to have been his birthplace. His period is variously placed between 1200 B.C. to 850 B.C. or later. The original home of the poems was the west coast of Asia Minor.

Homer, from the bust in the National Museum, Naples

wandering Odysseus (Ulysses) on his way back from the Trojan war, and the vengeance he exacted from the suitors of his wife Penelope. The first printed edition of Homer appeared in 1488. Many scholars think that the Iliad and Odyssey are not by the same author and that they belong to different periods of time.

The literature of Homer is vast. For the English reader, the Introduction to Homer, R. C. Jebb, 6th ed. 1896, and the English prose translations by A. Lang, W. Leaf, and E. Myers (Iliad), S. H. Butcher and A. Lang (Odyssey), are recommended. See Troy.

HOMERTON. Part of the met. bor. of Hackney, London, E. In the E. it borders Hackney Marsh. It has a station on the L.M.S. Rly. See Hackney.

HOME RULE. Name given to the Irish movement for self-government, on constitutional lines, between 1870 and 1920.

The Home Rulers formed a party in Parliament, led by Isaac Butt and then by C. S. Parnell. They became about 80 strong, kept themselves quite free from political alliances and office holding, and carried out steadily a policy of obstruction. In 1885 Gladstone took up their cause and split the Liberal party. His first Home Rule bill (1886) was thrown out by the Commons; the second (1893) suffered the same fate in the Lords.

The question remained suspended from 1893 till 1912, when another Home Rule Bill was introduced by H. H. Asquith's government. Passed through the Commons by 367 votes to 257 (Jan. 16, 1913), it was thrown out by the Lords by 326 to 69. Re-introduced on May 7, 1913, the bill was again rejected by the Lords on July 15. The final fight for the bill

began in the Commons on March 5, 1914, when modifications affecting Ulster were introduced. The third reading was carried by 351 against 274; and after a deadlock caused by the Lords' amendments received the royal assent on Sept. 18, 1914.

The outbreak of the Great War altered the situation and the Act was not put into operation, and for the time being Home Rule passed out of the sphere of practical politics. The Easter rising of 1916 and the growth of Sinn Féin made Home Rule as such a controversy of the past, and a new Government of Ireland Act was passed in Dec., 1920. See Ireland; Parnell, C. S.

Home Office, London. The offices in Whitehall, built in 1875

HOMICIDE (Lat. homo, man; caedere, to kill). In law, the taking of a human life. Homicide may be (1) felonious, murder, manslaughter, or suicide; (2) justifiable; or (3) excusable. Justifiable homicide is where the life is taken in execution of a legal duty. Excusable homicide is by misadventure or in self-defence. The former is where a man doing a lawful act by accident kills another; the latter covers acts in defence of wife, children, etc. See Manslaughter; Murder.

HOMINY (W. Indian). Inner part of the maize berry, coarsely ground. Porridge is made with it as well as croquettes, fritters, and puddings.

HOMOEOPATHY (Gr. homoios, like; pathos, feeling). System of curing diseases by giving drugs in minute quantities to produce in the patient symptoms similar to those the same drugs produce in a healthy person. The term homoeopathy, and the scientific investigation on which it is based are due to Samuel Hahnemann (1755-1843) who was the first to think of the possibility of using the virus of a disease as a remedy. This led to vaccination, inoculation, and serum treatment. In many ways the discoveries of Hahnemann have profoundly influenced the medical practice of the present day. Homoeopathy constitutes the acme of individualism in the use of medicine. See Medicine.

HOMOLOGY. Morphological term for an affinity of structure. All organs of animals and plants which are based upon a similar morphological or structural type are termed homologous. The trunk of an elephant is the homologue of, or homologous to, the nose of other mammals. The arms of a human being are homologous both to the wings of birds and to the fore limbs of quadrupeds. See Analogy; Embryology.

HONDURAS. Republic of Central America. It lies between lat. 13° and 16° N., and long. 83° and 89° W. Area, 44,275 sq. m. The surface is mainly mountainous, but the coastal regions are low-lying and swampy. The chief ports are Amapala on the Pacific, Puerto Cortés on the Gulf of Honduras, Trujillo, and Omoa. The capital is Tegucigalpa. The forests are extensive, the mineral wealth is great, but transport is difficult.

Among the principal products are bananas (the chief crop), lemons, oranges, corn, beans, rice, wheat, coffee, tobacco, rubber, copaiba, valuable woods, sugar, coconuts, hides, copal, ipecacuanha, vanilla, indigo, and sarsaparilla. The castor oil plant and henequen are being cultivated. Eighty per cent of the foreign trade is with the United States.

Honduras is governed by a president and a council of six. Congress consists of 43 members. A permanent commission of five meets when congress is not sitting. The religion is mainly Roman Catholic. Education is free, compulsory, and secular. There is a central

university at Tegucigalpa. The language is Spanish. The pop. is 773,000, chiefly Indians, with Spanish admixture, but there are large numbers of negroes in the N. The first settlement was established in 1524, and Honduras remained a Spanish possession for three centuries. See Central America.

HONDURAS, BRITISH. Crown colony of Central America, on the Caribbean Sea. Its area is 8,590 sq. m. The chief exports are cedar, mahogany, log-wood, bananas, sponges, and tortoiseshell. Coffee, cacao, and plantains are extensively cultivated, and stock-raising is carried on. The capital and only port is Belize. The colony is administered by a governor assisted by executive and legislative councils. The pop. (50,000) includes about 1,000 whites, the rest being negroes, half-breeds, and Indians. The colony was settled towards 1800, but it was not until 1836 that Great Britain secured its possession. See Maya.

The Gulf of Honduras is a wide inlet of the Caribbean Sea between Honduras, Guatemala, British Honduras, and Yucatan. It contains Turneffe and Bay Islands, besides a large number of small islands.

HONE, WILLIAM (1780-1842). British bookseller and author. Born at Bath, June 3, 1780, he wrote a number of successful political satires: *Ancient Mysteries Described*, 1823, dealing largely with the old miracle plays; *Every-day Book*, *Table Book*, and *Year Book*, issued serially, 1826-27; *Facetiae and Miscellanies*, 1827; and edited *Strutt's Sports and Pastimes*, 1830. He was a friend of Charles Lamb, and worked for the freedom of the press and the promotion of cheap literature. He died at Tottenham, Nov. 6, 1842.

HONESTY (*Lunaria annua*). Annual or biennial herb of the order Cruciferae. It is a native of Europe, and has heart-shaped,

Honesty. Left, stalk with foliage and flowers. Right, seed-vessels

toothed leaves, and terminal sprays of lilac flowers. The seed-vessels are flattened out to a broad oval-oblong disk, from which, when ripe, the two valves fall off, leaving the seeds attached to a thin, silvery partition. They are then dried and used for decorations, as "everlastings."

HONEY. Semi-fluid substance produced by certain species of bees for the nourishment of their larvac. In general use the word refers to honey produced by the domesticated hive or honey-bee (*Apis mellifica*), which obtains as raw material the nectar of flowers. Honey consists chiefly of levulose and dextrose, the former being the fluid portion. Fresh honey should be of a bright straw-colour, and have a pleasant, delicate flavour and aroma.

Honeycomb is the name given to the series of hexagonal waxy cells used by bees to store their honey and pollen and to contain their brood. See illus. p. 220.

HONEYCOMB MOTH. Name given to small moths of the genus *Galleria*, better known as wax moths. In the larval stage they

live in beehives and in the nests of wild bees, feeding upon the wax of the combs. They thus ruin the comb for commercial purposes.

HONEY EATER.

Name given to the various species of Australasian birds included in the family Meliphagidae. They have beautiful plumage, long, curved beaks and cleft tongues, and feed on insects and nectar. Their plumage is greatly in demand.

Honeysuckle. Flower of *Lonicera periclymenum*

HONEYSUCKLE. Graceful climbing shrub of the order Caprifoliaceae and genus *Lonicera*. It has fragrant, tubular flowers of white, yellow, and all shades from rose to crimson, with the corolla generally two-lipped. The leaves are smooth and opposite, and the fruit is a two-celled many-seeded berry. Another name for the common British species is woodbine.

HONFLEUR. Seaport of France, in the dept. of Calvados, nearly opposite Havre. Overlooking the town on the W. is the chapel of Notre Dame de Grâce, a favourite shrine of pilgrims for sailors. Pop. 8,707.

HONG KONG. Island and British Crown colony off the coast of Kwangtung prov., China. It was ceded to Great Britain in 1841 and is 11 m. long and from 2 m. to 5 m. wide.

Hong Kong. General view of the harbour from Victoria Peak

The colony also includes Kowloon, a strip of territory on the mainland ceded in 1860. To this was added in 1898, under lease for 99 years, the peninsula S. of a line drawn between Deep Bay and Mires Bay, together with the islands of Lantau and Lamma. The whole colony comprises an area of about 345 sq. m. with an estimated pop. of 1,075,000. Hong Kong is a free port and an important distributing centre, and the harbour is one of the finest in the world. The colony is administered by a governor, assisted by executive and legislative councils. Local industries include shipbuilding and engineering works. There is a university, founded in 1911.

Hong Kong. Map of the important British Crown colony on the coast of China, showing the island and the Kowloon extension on the mainland

HONITON. Borough and market town of Devonshire. It is 16 m. from Exeter on the S.R., and since Elizabethan days has been celebrated for lace-making. Honiton gives its name to a co. div. returning one member to Parliament. The grammar school of All Hallows dates from 1614. A three days' fair, dating back to 1221, is held on the feast of S. Margaret. Market day, Sat. Pop. 3,090.

HONLEY. Urb. dist. and village of Yorkshire (W.R.). It is 3½ m. S. of Huddersfield on the L.M.S. Rly. There is a large woollen industry. Pop. 4,700.

HONOLULU. City, commercial centre, seaport, and capital of the Hawaiian Islands. It stands on the S. coast of Oahu Island. Built on modern lines, with electric lighting and electric tramways, it is charmingly placed among fruit-bearing and other trees, and the climate is healthful and temperate. Several

Honolulu. The beach, looking towards Diamond Head, an extinct crater

lines of steamships call, and wireless communication has been established. The products include sugar, rice, pineapples, bananas, tobacco, coffee, sisal hemp, and rubber. Machinery is manufactured and shipbuilding carried on. The pop. of 113,000 is cosmopolitan, but largely consists of Polynesians, Japanese, and Chinese. See Hawaii.

HONORIUS, Roman emperor of the West, 395-423. He was a son of Theodosius the Great and brother of Arcadius, emperor of the East. During his reign Britain secured virtual independence, the Vandals settled in Spain, and Gaul was occupied by Visigoths, Franks, and Burgundians. In 410 Alaric king of the Visigoths took and

sacked Rome. Honorius spent most of his time in poultry-breeding in the marshes of Ravenna, where he died Aug. 27, 423.

HONORIUS. Name of four popes. Honorius I, pope 625-638, was notable for his condemnation as a heretic, 630-631. By his advice S. Birinus evangelised the West Saxons. Honorius II, pope 1124-30, while holding the office of cardinal-bishop of Ostia, concluded the concordat of Worms, 1122, with Henry V. Honorius III, pope 1216-27, was distinguished for personal learning and his zeal for the spiritual reform of Europe and the recovery of Jerusalem. Honorius IV was 75 when elected pope in 1285, and died two years later.

Honor Oak. Residential district and park in the S.E. of London. It is in the met. bor. of Lewisham, with stations on the S.R.

HONOUR. Name given in the Middle Ages to a large estate held by one lord. It consisted of two or more manors, and its owner was known as the lord of the honour. One of the largest and most famous honours in England was that of Clare. See Feudalism.

HONOURABLE. Title of honour. In the United Kingdom it is applied to the younger sons of earls and to the children of viscounts, barons, and life peers, to maids of honour, the lord provost of Glasgow, justices of the high court except lords justices and lords of appeal, the House of Commons collectively and individually, to some Indian and Colonial officials, and to the Honourable Artillery Company and the Inns of Court.

HONOURABLE ARTILLERY COMPANY. British regiment. It was founded in 1537 and since 1641 has held the training ground near Bunnhill Fields. The regiment, which includes infantry, forms part of the Royal Regt. of Artillery, but heads the list of Territorials. Four of its members who emigrated founded in 1638 the Ancient and Honourable Artillery Company of Boston, U.S.A., the oldest military unit in America. In the Great War the were 5,961. Over 4,000 were granted commissions. The orders and decorations won by the members totalled 225, including two V.C.'s.

Honourable Artillery Company badge

HONSHU or **HONDO.** Largest island of Japan. It has a coastline of over 4,700 m. Including 167 adjacent small islands, its area is 87,426 sq. m. Many of the peaks are volcanic in origin. Fuji is probably the most perfect volcanic cone in the world. In the S. is the celebrated lake of Biwa. The numerous rivers are all short. Earthquakes are prevalent. At the close of the summer typhoons occur. The capital is Tokyo; other large towns are Yokohama, Kyoto, Hiroshima, Kobe, Osaka, and Nagoya. The minerals include gold, silver, copper, lead, and iron. Pop. 59,736,822.

Honourable Artillery Company uniforms. Left, gunner; right, infantryman

HONTHORST, GERARD VAN (1590-1656). Dutch painter. Born at Utrecht, Nov. 4, 1590, his earlier work was largely inspired by Caravaggio. In his last years he virtually confined himself to portraiture. He died at Utrecht, April 27, 1656.

HOOGH, PIETER DE (c. 1632-81). Dutch painter. He was born at Rotterdam, and his composition and drawing are masterly, his colour cool and brilliant. There are fine examples of his art in the National Gallery, London, and the Rijks Museum, Amsterdam. He died at Haarlem.

HOOD (A.S. hōd; cf. Eng. hat). Originally a covering for the head, but now mainly an addition to an academic robe. In England in the Middle Ages it was worn by men and women, rich and poor alike, until, in the 15th century, its place was taken by the hat. Every minister when officiating in church, if a graduate, is required to wear the hood proper to his degree. Receivers of

H.M.S. Hood, British battle-cruiser completed in 1919
S. Cribb, Southsea

Lambeth degrees wear the hood of such degrees as are worn at the university of the archbishop who gives them. Distinctive hoods have been adopted also by various theological colleges.

HOOD. British battle cruiser. Completed in 1919, she cost approximately £6,000,000, is 860 ft. long and 104 ft. in beam, displaces 41,200 tons, and has engines of 140,000 h.p., giving a speed of 31 knots. Her armament consists of eight 15-in., twelve 5.5-in., and four 4-in. anti-aircraft guns. See diagram, p. 210.

HOOD, SAMUEL HOOD, VISCOUNT (1724-1816). British sailor. Born at Thorneombe, Dorset, Dec. 12, 1724, he entered the navy in 1741. In 1780 he was dispatched in command of a squadron to the W. Indies and N. America to reinforce Rodney. He vainly attempted to prevent De Grasse from blockading the Chesapeake, 1781, and made a futile attempt to eject the French from St. Christopher, 1782; but he outwitted De Grasse off St. Kitts and took part in the victorious action off Dominica. Made an Irish baron in 1782, he was M.P. for Westminster in 1784, and commander-in-chief in the Mediterranean in 1793, when he blockaded Toulon and reduced Bastia, 1794. Made a viscount in 1796, he became governor of Greenwich Hospital, holding this post till his death, Jan. 27, 1816.

HOOD, HORACE LAMBERT ALEXANDER (1870-1916). British sailor. Second son of 4th Viscount Hood, he was born Oct. 2, 1870, and joined the Britannia training ship in 1883. He was in command of the 3rd British battle-cruiser squadron in the battle of Jutland, and distinguished himself according to Sir D. Beatty's dispatch, "in a manner worthy of the spirit of his great ancestors." His flagship Invincible sank with all hands save six, and Hood went down with her, May 31, 1916.

Viscount Hood, British sailor
After Reynolds

H. L. A. Hood, British sailor

HOOD, SIR SAMUEL (1762-1814). British sailor. Born Nov. 27, 1762, he served in the W. Indies and the Mediterranean under his cousin, Lord Hood, and under Nelson at Santa Cruz and at the battle of the Nile, 1798. As commander-in-chief of the Leeward Islands, 1802, he distinguished himself in actions against French cruisers. Vice-admiral in 1811, in 1812 he was commander-in-chief of the East Indies. He died at Madras, Dec. 24, 1814.

HOOD, THOMAS (1799-1845). British poet. Born in London, May 23, 1799, of Scottish descent, he began life in a city office at the

Thomas Hood, British poet
Nat. Port. Gall.

age of 13. He learnt the art of engraving, but gave it up in 1821 for a post on The London Magazine, and came in contact with De Quincey, Hazlitt, and Lamb. In 1829 Hood became editor of an annual called The Gem, in which was published his poem of Eugene Aram. In 1840 he was made editor of The New Monthly Magazine, and then edited Hood's Magazine. He died in London, May 3, 1845. In some of his poems, such as The Song of the Shirt, 1843, and The Bridge of Sighs, there is a noble simplicity associated with the finest poetry.

HOOD, TOM (1835-74). British humorist. He was the only surviving son of Thomas Hood. Born at Wanstead, Essex, Jan. 19, 1835, he was educated at Pembroke College, Oxford. Taking to journalism, in 1865 he became editor of Fun, to which he contributed jokes, verse, and caricatures. He also wrote one or two novels. He died at Peckham, Nov. 20, 1874.

HOOGHE. Village of Belgium, in the prov. of W. Flanders. Situated on the Ypres-Menin road, 3 m. E. of Ypres, it was destroyed in the Great War. It was the headquarters of Sir J. French in the first battle of Ypres, and from its château he watched the temporary break in the British line at Gheluvelt and the recapture of the latter. The first and second battles of Ypres brought the Germans nearer to Hooge, which they took in the gas attack of May, 1915. It was here in the July following that the Germans for the first time used flame-throwers against British troops. The site of Hooge was retaken by the 8th division on July 31, 1917. See Flanders, Battle of; Hill 60; Ypres.

HOOGHLI, or HOOGHLY. Western arm of the Ganges delta, India. It is the most important channel by which that river flows into the Bay of Bengal. The name is given to a dist., subdivision, and town in the Burdwan division, Bengal. Of the total area of 1,188 sq. m., about half is under cultivation. Hooghli town forms a municipality with Chinsura. Pop., dist., 1,080,142; town, 29,938.

HOOK OF HOLLAND (Dutch, Hoek van Holland). Point and village of the Netherlands in the prov. of S. Holland. The passage by steamer from Harwich (Parkeston Quay), 120 m., takes about seven hours, and trains to Rotterdam, Amsterdam, Cologne, and Berlin run in connexion with the boats.

HOOK, THEODORE EDWARD (1788-1841). British wit, novelist, and dramatist. Born in London, Sept. 22, 1788, he was educated at Harrow and Oxford. In 1820 he started John Bull, a Tory journal which, conducted with astonishing vigour, overflowing wit, and incredible scurrility, brought him a substantial

Theodore E. Hook, British writer

income. His nine volumes of novels, under the title of *Sayings and Doings*, appeared in 1826-29. His other novels include *Maxwell*, 1830, perhaps his best; *Jack Brag*, 1837; and *Births, Deaths, and Marriages*, 1839. He was notorious for playing practical jokes. He died at Fulham, Aug. 24, 1841.

HOOKAH (Arab. huggah, vase, bottle). Oriental water tobacco-pipe. Its chief essential feature is a vase containing water, sometimes scented, through which the smoke is passed and cooled. The smoke is drawn from the bowl through a tube into the water, and thence by a long, flexible tube into the mouth of the smoker. Hookahs are made of porcelain, glass, or metal, etc., and are often richly decorated.

HOOKER, SIR JOSEPH DALTON (1817-1911). British scientist. Son of Sir W. J. Hooker, he was born at Halesworth, Suffolk, June 30, 1817 and educated at the university of Glasgow. He accompanied Sir James Ross to the Antarctic, took part in botanical expeditions to N. India and other places, was director of Kew, 1865-83, and president of the Royal Society. 1872-77, being knighted in the latter year. Awarded the O.M. in 1907, he died Dec. 10, 1911.

Sir Joseph Hooker,
British scientist

He published *Student's Flora of the British Islands*, 1870; and the important *Genera Plantarum* (with Bentham), 1862-83. His other writings include *Botany of the Antarctic Expedition*; *Handbook of the New Zealand Flora*; and *Himalayan Journal*.

HOOKER, RICHARD (c. 1553-1600). English theologian. Born at Heavitree, a suburb of Exeter, he was educated at Exeter and at Corpus Christi College, Oxford. His *Treatise on the Laws of Ecclesiastical Polity*, 1594, is the earliest important work of the kind in English, and won for its author the epithet "judicious." It was designed to fill eight books, but only five were printed in the author's lifetime. The treatise is a masterpiece of logical argument and a classic in respect of the beauty of its English prose. The best edition is that of Keble, revised by Dean Church and Canon Paget, 1888, including Izaak Walton's *Life of Hooker*. He died at Bishopsbourne, Nov. 2, 1600.

HOOKER, SIR WILLIAM JACKSON (1785-1865). British botanist. Born at Norwich. July 6, 1785, at 35 he had produced four important works, including *British Jungermanniac*, 1816; *Musculologia Britannica* (with T. Taylor), 1818; *Musci Exotici*, 1818-20. In 1819 he was elected prof. of botany at Glasgow. He was knighted in 1836 and in 1841 appointed director of Kew, where he died, Aug. 12, 1865.

HOOLE. Urban dist. and parish of Cheshire. It is virtually a residential suburb of Chester, from which it is 2½ m. distant. Pop. 5,990. Another Hoole is in Lancashire, being 8 m. from Preston.

HOOLEY, ERNEST TERAH (b. 1859). British financier. Born at Snettinton, Nottingham, Feb. 5, 1859, he became a stockbroker at 22, and came to London in 1896. By company promoting he acquired an immense fortune, at the height of his career commanding over £18,000,000 of capital. His success, however, was short-lived.

HOOPER, JOHN (c. 1496-1555). English divine and Protestant martyr. Born in Somerset and educated at Oxford, he was

Hookah as used in Turkey, showing the long tube through which the smoke passes

for some years a Cistercian monk at Gloucester, but became a zealous leader of the reformers. In 1552 he was given the see of Worcester to hold "in commendam" jointly with Gloucester, to which he had been nominated in 1550. Under Queen Mary he was deposed and burnt at Gloucester, Feb. 9, 1555.

HOOPOE. Genus of birds found in Europe, Asia, and Africa. The common hoopoe (*Upupa epops*) is the size of a thrush, has sandy-brown plumage with black and white bars, a crest of erectile feathers, and a long, curved, black and slender beak. It nests in hollow trees and feeds mainly on worms and insects. Its name represents its curious call.

HOORN. Town and harbour in the prov. of N. Holland. It lies on the Zuider Zee, 25 m. by rly. N. of Amsterdam, has industries in tobacco and timber, is an important agricultural centre, and possesses many beautiful 17th century houses. Hoorn gives its name to Cape Horn, first rounded by Willem Schouten, a native of the town. Pop. 11,728.

HOOVER, HERBERT CLARE (b. 1874). United States president. Born at West Branch, Iowa, Aug. 10, 1874, he was educated at the Leland Stanford University, graduating as a mining engineer. In 1897 he went out to Western Australia, and afterwards to China, as an engineer. In 1900 he was in Tientsin during its siege by the Boxers. In 1914 he was chairman of the American Relief Committee in London and commissioner for relief in Belgium. He returned to the U.S.A. as food administrator when that country entered the Great War. Later he was director of European relief, and in 1921 became secretary of commerce. Elected president June 14, 1928, he took office in March, 1929.

Herbert Hoover,
American president

HOP (*Humulus lupulus*). Perennial plant of the order Urticaceae, native of temperate Europe, Asia, and N. America. It grows

Hop. Leaves and cone-like heads of hops ready for picking

wild in English hedgerows as far N. as Yorkshire, and has a stout, branching, underground root-stock, from which arise the annual stems (hoppines or hopvines), rough with small hooks, which twine with the sun round any available support to a height of 15 ft. to 20 ft. The large, rough, heart-shaped, lobed and toothed leaves are produced in opposite pairs. Each plant is either male or female. The small green male flowers, which consist of sepals and stamens only, are clustered in

branching sprays, while the females form spikes in which the flowers are bidden by overlapping bracts. After pollination by the wind these develop into cone-like heads—the hops of commerce. At the base of each scale of the cone there are glands which exude a resinous substance known as lupulin, to which the importance of the hop is due.

The cultivation of the hop for brewing dates back in Europe to the Middle Ages, but the industry was not known in England until 1524, when it was introduced from Flanders. To-day some 40,000 acres are devoted to its cultivation in Kent, Sussex, Surrey, Hants, Hereford, and Worcestershire, while additional supplies are imported from Europe and British Columbia. In medicine hop products are regarded as tonic, stomachic, and moderately narcotic. See Beer.

Hoopoe. Specimen of the crested bird W. S. Berridge, F.Z.S.

HOPE, ANTHONY Pen-name of Sir Anthony Hope Hawkins (b. 1863). British novelist. Born in London, Feb. 9, 1863, son of the Rev. E. C. Hawkins, vicar of St. Bride's, Fleet Street, he was educated at Marlborough and at Balliol College, Oxford. He was called to the bar at the Middle Temple in 1887. Of his numerous works his romantic novel *The Prisoner of Zenda*, 1894, had an immediate success, as did *Rupert of Hentzau*, 1898, *Sophy of Kravonia*, 1906, and many others. Another successful experiment was the witty social satire *The Dolly Dialogues*. He was knighted in 1918.

Anthony Hope,
British novelist
Hoppe

HOP HORNBEAM (*Ostrya carpinifolia*). Tree of the order Amentaceae, a native of S. Europe. Its leaves resemble those of the hornbeam, but in the fruit the flower-bracts as they overlap present much the appearance of the hop. An American species (*O. virginiana*) is called ironwood and leverwood.

HOPKINS, EDWARD JOHN (1818-1901). British organist and composer. Born in London, June 30, 1818, he became a chorister in the Chapel Royal. He was organist of the Temple Church from 1843-98, raising the musical service to a high degree of perfection. He died Feb. 4, 1901. Hopkins composed anthems and much other church music.

HOPPER. Name given to the hop flea, a destructive plant-eating beetle, and the larva of the cheese fly. The name is also used in the compound grasshopper.

In engineering a hopper is an enclosed chamber or vessel with sides which slope downwards for discharging purposes to a trap-door or panel. Hopper barges and hopper dredgers work on this principle.

In brewing a hopper is the vat used for infusing hops, and hopper is also a popular name for a hop picker.

HOPPNER, JOHN (1758-1810). Portrait painter. Born at Whitechapel, of German parents, April 4, 1758, he became a boy chorister in the royal chapel. George III made the boy a small allowance to enable him to study art at the R.A. schools, 1775. In 1782 he gained the gold medal for an historical painting; he was elected A.R.A. in 1792, and R.A. in 1795. His colouring is individual and brilliant, and his landscape backgrounds are

John Hoppner,
Portrait painter
Self-portrait

specially effective; his drawing, however, is often defective. He died in London, Jan. 23, 1810. See illus. pp. 4, 152, 570, 653, etc.

HORACE (65-8 B.C.). Roman poet, whose full Latin name was Quintus Horatius Flaccus. He was born Dec. 8, 65 B.C., at Venusia in Southern Italy, and died at Rome, Nov. 27, 8 B.C. After six years' schooling in Rome he was sent to Athens to complete his studies. During the civil war he served as an officer in the Republican army, and was present at its defeat at Philippi in 42. About the year 38 he was introduced by Virgil to Maecenas, the generous patron of letters. The crowning achievement of Horace's life is found in his immortal odes. The maturity of his genius is also reflected in his epistles (including the *Ars Poetica*), which, like the satires, are cast in hexameter verse. As a literary artist he is unsurpassed, and hundreds of the phrases in which he has crystallised his thoughts have passed into the currency of the educated of all time.

The most useful edition for the general student is that by E. C. Wickham with English notes, 1903, the best English verse translation being that of J. Conington, 1863.

HORATII. In Roman legend, three brothers born at one birth, who, in the war against Alba in the reign of Tullus Hostilius, were chosen to fight three brothers of the Alban army named Curiatii, also born at one birth. After two of the Horatii had been killed, the third slew the Curiatii singly, and then in anger, slew his sister, who was betrothed to one of the Curiatii. He was pardoned on account of his valour.

HORBURY. Urban dist. of Yorksire (W.R.). It is 4 m. S.W. of Wakefield, on the L.M.S. Ry. There are manufactures of woollens, worsteds, yarns, and railway wagons, and stone is quarried. Pop. 7,940

HORDER, SIR THOMAS JEEVES (b. 1871). British physician. Born Jan. 7, 1871, the son of a Swindon resident, he was trained as a doctor at St Bartholomew's Hospital, becoming assistant physician and then physician there. He made his name as a specialist, and in 1918, having served with the R.A.M.C. in France, he was knighted. In 1923 he was made a baronet and physician to the Prince of Wales.

HOREB. Another name for Sinai. It is identified with Jehel Musa. Horeh and Musa are twin peaks of Mt. Catherine, one of the traditional heights claimed as Mt. Sinai.

HOREHOUND (*Marrubium vulgare*). Perennial herb of the order Labiatae. It is a native of Europe, N. Africa, and Asia, and has heart-shaped, leathery, wrinkled leaves with rounded teeth, and white flowers in dense whorls. The whole plant is woolly and aromatic. A bitter decoction of the leaves of the horehound herb is used in domestic medicine as a remedy for coughs.

HORIZON. Circle which bounds that part of the earth's surface visible from any given point. The higher the point is above the sea level, the more extended will be the circular horizon.

HORLEY. Market town of Surrey. It stands on the Mole, 5 m. from Reigate and has a station on the Southern Railway. Market day, Wed. Pop. 6,100.

HORMONES (Gr. *hormaein*, to excite). Substances secreted by glands, like the pituitary and the thyroid, which pass into the blood and excite secretion in other glands, thus acting as chemical messengers.

HORMUZ or **ORMUZ**. Ancient city built partly on an island and partly on the mainland, in the strait connecting the Persian Gulf with the Gulf of Oman. It was founded in the 3rd century, and soon became a great centre of commerce. The island has deposits of red ochre. The name Hormuz is now held by an inland village, some 70 m. N.W. of Bandar Abbas.

HORN or **FRENCH HORN** (Fr. *cor*; Ital. *cornò*; Ger. *Horn*). Brass instrument of tenor compass, derived from the primitive hunting-horn. When horns began to be made of metal it was found that a long tube would furnish more notes than a short one. The tubes were coiled for convenience of handling. The horn appeared in the orchestra soon after 1700. The final revolution in horn playing came with the addition of pistons on the system adopted for military brass instruments. These have given the horn a complete chromatic scale. See Clarinet; Flügel Horn.

HORN, CAPE. Southernmost point of S. America. It is the terminal point of Horn Island, in the archipelago of Tierra del Fuego, and belongs to Chile. A steep, bare, black rock, 1,390 ft. high, with pointed peaks, it was discovered by the Dutch navigator Schouten in 1616, who named it Cape Hoorn after his birthplace. Drake sighted it in 1578

Hornbeam. Specimen of a sapling of the British tree

HORNBEAM (*Carpinus betulus*). Native British tree of the natural order Amentaceae.

Hornbill. Bare-beaked variety, a native of W. Africa

Its average height is 60 ft. It is an excellent hedge plant, and forms a strong fence against horses and cattle. The timber is hard and much esteemed by the natives. **HORNBILL**. Popular name for the birds of the family Bucerotidae, which have hornlike growths at the base of their great beaks. They vary in size from about that of a rook to the dimen-

sions of a turkey, and are found especially in India and Africa. They feed chiefly on fruit and insects.

HORNBLLENDE. Mineral constituent of many igneous rocks. A greenish-black to black variety of amphibole. It is a mixture of silicate of magnesia and lime and silicate of iron and lime, and is found both in granular and crystalline masses in the Alps, Ardennes, Harz, Scottish highlands, and the lake districts of N. America. Hornblende schist is a variety of hornblende containing felspar and iron oxides. Hornblende is the name given to an igneous granite rock containing a large proportion of hornblende.

HORNBOOK. Early form of school primer used in England down to the time of George II. It was usually a flat piece of wood with a handle, on which was a sheet of paper or parchment containing the alphabet, numerals, combinations of the vowels with b, c, and d, and the text of the Lord's Prayer, protected by a layer of transparent horn. The first hornbook was made about 1450.

HORNBY, SIR GEOFFREY THOMAS PHIPPS (1825-95). British sailor. Son of Admiral Sir Phipps Hornby, he was born Feb. 20, 1825. In 1878, soon after his appointment as commander-in-chief in the Mediterranean, the Russo-Turkish War assumed so unfavourable an aspect for the Turks that Constantinople was in danger. Hornby took his fleet through the Dardanelles and anchored a few miles from Scutari. For this action he was knighted. He was commander-in-chief at Portsmouth 1882-86, and died March 3, 1895.

HORNCASTLE. Urh. dist. and market town of Lincolnshire. It is 21 m. E. of Lincoln by the L.N.E.R. and is noted for a great horse fair held annually in Aug. A Roman ditch and parts of the Roman wall are the sole reminders of the Roman station, Banovallum. Horncastle gives its name to a co. div. returning one member to Parliament. Market days, Thurs. and Sat. Pop. 3,451

HORNE, HENRY SLOAIR HORNE, BARON (1861-1929). British soldier. He was born in Caithness, Feb. 1, 1861, and was educated at Harrow and the R.M.A., Woolwich, and in 1880 obtained a commission in the Royal Artillery. He served in the S. African War, and in Aug., 1914, went to the front in charge of an artillery brigade. In Jan., 1915, he took over the 2nd division. In the following year, after commanding the 15th corps, he became leader of the 1st army and was knighted. The only artillery officer among the army commanders in the Great War, he is believed to have been the inventor, or at

Hornbook found at Middleton in 1828. The black-letter alphabet and prayer is protected by transparent horn pinned to the wood. By courtesy of the Leadenhall Press

Lord Horne, British soldier. Russell

least the improver, of the creeping barrage. Raised to the peerage, Aug., 1919, and awarded a grant of £30,000, he took the title of Baron Horne of Stirkoke, county of Caithness. He retired in 1926 and died Aug. 14, 1929.

HORNE, SIR ROBERT STEVENSON (b. 1871). British politician and lawyer. Born Feb. 28, 1871, a son of the manse, he had a brilliant university career at Glasgow, was lecturer in philosophy at Bangor, was called to the Scottish bar in 1896, and became a K.C. He did valuable work in transport and at the Admiralty during the war, and having been returned as M.P. for the Hillhead division of Glasgow, was in succession minister of labour, president of the board of trade, and chancellor of the exchequer in the coalition ministry. Knighted in 1920, he retired in 1922 to take up business appointments. He was re-elected for the Hillhead division in 1924 and 1929.

HORNED VIPER (*Cerastes cornutus*). Snake found in N.E. Africa. It frequents sandy places, where it lurks half buried, leaving only the eyes, characteristic horns, and nostrils to be seen. It is very venomous, and specimens range up to 30 inches in length.

Horned viper. Specimen of the venomous N. African snake

HORNET (*Vespa crabro*). Largest of the British wasps. It is reddish in colour and nearly an inch long. It constructs its nest on the beams of outhouses or in holes in thatch or hollow trees. Its larvae are partly fed on captured bees and wasps. See Wasp.

Hornet. 1. Male. 2. Queen. One-third natural size

HORNET MOTH (*Trochilium apiformis*). Largest British representative of the clearwing moths. The wings are transparent and the margins have a narrow border of brown scales. The stout, elongated body is a clear yellow with bands of blackish brown. The forebody is dark brown also. The large, orange-coloured hind legs are extended backward. The yellow-white, maggot-like caterpillar feeds on the wood of poplar trees. See Clearwing Moth.

HORNING, LETTERS OF. Term in Scots law applied to an instrument used in process of recovery of debt. Letters running in the king's name are issued instructing officers to call upon the debtor to pay, and if he fails to obey, a caption or warrant for his arrest is granted. The process of horning and caption is now largely superseded by a simple warrant.

HORNPIPE. Name of an obsolete reed instrument popular in the Middle Ages, and also of a lively dance, which probably derived its name from the instrument. A well-known example is the sailors' hornpipe.

HORN POPPY (*Glaucium flavum*). Large annual or perennial herb of the natural order Papaveraceae. It is a native of Europe, N. Africa and W. Asia, growing on sandy seashores. Its yellow flowers are as much as 4 ins. across, and are followed by pods about 12 ins. long.

Horn Poppy. Flower of the seaside plant

HORN REEF OR HORNS REEF. Reef in the N. Sea lying off the coast of Jutland, Denmark. The battle of Jutland was fought in the vicinity, May 31, 1916. See Jutland.

HORNSEA. Urban dist. and watering place of Yorkshire (E.R.). It stands on the North Sea, 16 m. from Hull, and has a station on the L.N.E. Rly. There is a large sheet of water called Hornsea Mere covering 400 acres, while the sea has made considerable inroads on the coast. There is an old church dedicated to S. Nicholas. Pop. 6,000.

HORNSEY. Borough of N. London. It is in the co. of Middlesex, 4 m. from King's Cross on the L.N.E.R. It includes the residential districts of Crouch End, Fortis Green, Harringay, the old name of the district, and Muswell Hill. Finchbury Park and Alexandra Palace are within its borders. In the time of Henry VI the lodge in Hornsey Great Park was a residence of the duke of Gloucester, and the scene of the alleged witchcraft referred to in Shakespeare's King Henry VI. The church of S. Mary was rebuilt, excepting the tower, in 1832-33. Pop. 89,850.

HORSE. Family of the odd-toed group of the zoological order Ungulata, or hoofed animals. The horse family (Equidae) includes the horse, ass, zebra, and quagga, all closely related anatomically. All are distinguished by the peculiarity that they stand on a single toe of each foot. Originally they had five toes, but two toes have quite disappeared and the other two are now represented by the splint bones. The horse now occurs in the wild state only in Mongolia.

The domesticated breeds chiefly met with in Great Britain consist of riding, carriage, and cart horses. Riding horses include the thoroughbred, the hackney, and the pony; carriage horses are mainly Cleveland bays and coach horses; while the Shire, Clydesdale, and Suffolk punch are the three strains used for cartage and heavy work. Of agricultural horses, the Shire horse heads the list for size and weight. It stands 17 hands high, and often attains a weight of 2,000 lb. The Clydesdale takes the place of the Shire horse in Scotland, and is similar in appearance, but smaller and of rather more slender proportions. The Suffolk punch is the agricultural horse of E. Anglia. It has a short head, deep and high-arched neck, short legs, and a generally chubby shape. It stands 16 hands high, and may weigh as much as the Shire horse.

Of carriage horses the Cleveland bay may be regarded as the foundation. Standing 16 hands high, it is notable for its fine appearance and high-stepping action. It has long been bred in Yorkshire. Of saddle horses the thoroughbred, the most graceful of the British breeds, heads the list. It stands about 16 hands. The hunter is often a thoroughbred, but is more frequently a cross between that breed and the Cleveland bay. The pony is a small breed ranging in height from the nine hands of the

Shetland to about 14 hands. The term cob is applied to a sturdy short-legged horse which is suitable for saddle work.

Among the annual horse shows are the one held at Ball's Bridge, Dublin; the International Horse Show, held generally at Olympia, London; and the Shire Horse Show at the Agricultural Hall, Islington. See Bit; Driving; Hippophagy; Reins.

HORSE CHESTNUT (*Aesculus hippocastanum*). Tree of the order Sapindaceae.

Native of Asia and E. Europe, it averages 60 ft. in height, and bears pyramidal spikes of pink or white blossoms. After blooming the resulting seed, or nut, encased in its green spine-covered case, becomes the conker, dear to schoolboys. See Chestnut.

Horse Chestnut in full bloom

Horse Fly. Enlarged specimen of this dipterous insect

HORSE FLY OR FOREST FLX (*Hippobosca equina*). Dipterous insect found mainly in the New Forest, England.

Horse Guards, London. The frontage in Whitehall, showing the guard in the gateway

It is nearly $\frac{1}{2}$ in. long, brown and marked with yellow spots. It lives by sucking the blood from horses' flanks, causing great irritation.

Horse. Diagram illustrating the points taken into consideration when judging the quality of a horse

Paraffin rubbed on the coat will keep away the pest. It is remarkable in that the female does not lay eggs, the larval state being passed in the body of the mother, and the young extruded as a pupa.

HORSE GUARDS. Government building between Whitehall and St. James's Park, London, S.W. Erected 1750-

51, it took the place of a structure built in 1641 to serve as a guard-house for the palace of Whitehall. It contains the old offices and the audience-room of the commander-in-chief, and since 1904 has been the headquarters of the commander-in-chief of the home forces. It is also the guard-house of the Household Cavalry. There are two wings, with a clock-tower over an

arch in the centre, the archway opening upon the Horse Guards Parade, a large open space, once the Old Tilt Yard, and where the ceremony of trooping the colour now takes place on the king's birthday. There is a memorial to the Guards on the west side. (See illus. p. 686.)

The mounting and dismounting of the guard (1st or 2nd Life Guards or Royal Horse Guards) at 11 a.m. (10 a.m. on Sundays) and 4 p.m. is a familiar London sight.

HORSE GUARDS, ROYAL Regiment of the British army. Known as the Blues, it is one of the three regiments of household cavalry. It originated in a royal warrant of Jan. 6, 1661.

Horse Guards.
Trooper in full
dress

ponds and streams, where it preys upon tadpoles, newts, molluscs, and its own kind. The name belongs properly to *Haemopsis vorax*, of Europe and N. Africa, which attaches itself to the pharynx of horses, cattle, and men who may drink direct from streams. See Leech.

Horse Mackerel (*Caranx trachurus*) Popular name for the scad (q.v.).

HORSE POWER. Unit of the rate for doing work. In British units one horsepower is defined as the power required to raise 33,000 lb. one foot in one minute. One horse power equals 746 watts. The actual working power of a good horse is about $\frac{2}{3}$ of a horse-power, and that of the average man is about $\frac{1}{4}$ horse-power. Brake horse-power is the power of an engine to do outside work, and is measured by a dynamometer (q.v.).

HORSE RACING. National sport of England. Racing was both a popular and a royal sport in the reigns of the early English kings. Henry VIII kept running horses. Charles I introduced the first Cup race at Newmarket, and Charles II was a constant visitor. The present thoroughbreds descend almost exclusively from three imported African horses known respectively as the Godolphin Arabian, the Darley Arabian, and the Byerly Turk.

Racing begins at Lincoln, usually in the week which includes the 25th of March, and ends in the week which includes the 22nd of November. The five classic races for three-year-olds are considered to stand alone. These start with the Two Thousand Guineas; the

One Thousand Guineas, the Derby, the Oaks, and the St. Leger. Enormous prestige attaches to winning the Derby. Other valuable races are the Ascot Gold Cup, Eclipse at Sandown, and the Princess of Wales's Stakes and the Jockey Club Stakes at Newmarket.

Two-year-old racing begins in the first week of the season and is a feature of every meeting. The Champagne Stakes at Doncaster is one of the cheap two-year-old races of the year: the National Breeders' Foal Stakes at Sandown and the Imperial Stakes at Kempton remain among the richest.

All racing is governed by the Jockey Club. Three stewards, one of whom retires annually and selects his successor, control the whole business of racing. Race meetings are generally controlled by what are called local stewards, gentlemen of position with an intimate knowledge of racing and a familiarity with the rules, of which there are in all 184. On July 2, 1929, totalisator betting began for the first time on an English racecourse.

Important race meetings in England include those held at Alexandra Park, Ascot, Bath, Beverley, Birmingham, Brighton, Carlisle, Catterick Bridge, Chepstow, Chester, Derby, Doncaster, Dunstable Park (Wolverhampton), Epsom, Gatwick, Goodwood, Gosforth Park (Newcastle), Haydock Park, Hurst Park, Kempton, Leicester, Lewes, Lincoln, Lingfield, Liverpool, Manchester, Newbury, Newmarket, Nottingham (Colwick), Pontefract, Redcar, Ripon, Salisbury, Sandown Park, Stockton, Warwick, Westernhanger Park (Folkestone), Windsor, Worcester, Yarmouth, and York. Some half dozen are held in Scotland, and there is much racing in Ireland. See Ascot. Betting: Derby: Goodwood; Jockey: Steeplechasing, etc.

HORSE RADISH (*Cochlearia armoracina*). Edible-rooted perennial of the order Cruciferae. It has flower stems about 2 ft. high surmounted by white flowers, large oblong root leaves on long stalks, and lance-shaped stem leaves. Its cylindrical white root is used as an adjunct to roast beef, and in sauces.

HORSFORTH. Urban dist. of Yorkshire (W.R.). It stands on the Aire, 5 m. N.W. of Leeds, on the L.N.E. Ry. Quarrying, bleaching, and the manufacture of woollen goods are carried on. Pop. 12,800.

HORSHAM. Urban dist. and market town of Sussex. It stands near the head of the Arun, 38 m. S.S.W. of London on the Southern Ry. The church of S. Mary, an Early English structure, contains several fine monuments, including some of the Shelley family. At Carfax, in the centre of the town, is an iron ring, a relic of the bull-baiting once carried on here. Tanning and milling are industries. At West Horsham is Christ's Hospital (q.v.). Market day, Wed. Pop. 12,220.

Horsham, a town of Victoria, Australia, stands on the Wimmera river, and on the main line between Melbourne and Adelaide, 203 m. W.N.W. of the former. It is the commercial centre of the district and has irrigation works. Pop. 4,650.

HORSLEY, SIR VICTOR ALEXANDER HADEN (1857-1916). British surgeon. Born at Kensington, April 14, 1857, he was Fullerton professor at the Royal Institution, 1891-93, and professor of pathology, University College, 1893-96. He was surgeon to the National Hospital for Paralysis and Epilepsy, 1896-1916, and consulting surgeon at University College Hospital, 1906-16. Horsley specialised in facial surgery, including the brain, and was also a pioneer in the field of scientific medicine. He was knighted in 1902. In March, 1916, he went to Mesopotamia as consultant with the British forces, and issued a strong indictment of the medical and transport organization there. He died of heart-stroke, July 16, 1916.

HORT, FENTON JOHN ANTHONY (1828-92). British theologian. Born in Dublin, April 23, 1828, he became fellow of Trinity in 1852. Having been ordained in 1854, he was vicar of S. Ippolyts, Hertfordshire, from 1857-72. In 1872 he became fellow and lecturer of Emmanuel College, Cambridge, in 1878 Hulsean professor of divinity, and in 1887 Lady Margaret lecturer in divinity. He died Nov. 30, 1892. Hort is chiefly known for his work on the New Testament, in which he was associated with Westcott and Lightfoot.

HORTHY DE NAGYBÁNYA, NICHOLAS (b. 1868). Hungarian statesman. Born June 18, 1868, at Kenderes, Hungary, of an old family, he entered the

Admiral Horthy,
Regent of Hungary

Austrian navy. In the Great War he did good work in command of some cruisers, being wounded, and in 1918 he was commander of the Austro-Hungarian fleet. Then a popular figure, he took the lead in checking the revolutionary movement led by Bela Kun, and, with a national force, he entered Buda in Nov., 1919. Having restored order in the country, he was elected regent on March 1, 1920, and he still held that office in 1930. In spite of his early friendship with the imperial family, Horthy opposed the attempts of Charles to regain his lost throne. See Hungary.

HORTICULTURE. Scientific name for gardening. It includes the more intensive cultivation of fruit and vegetables for utilitarian purposes and of flowers, shrubs, and ornamental trees for decorative ones. See Flower; Garden.

The Royal Horticultural Society is an association established in 1804 to collect information about the cultivation of plants and trees and to encourage every branch of horticulture. It was incorporated in 1809. Its offices and hall are in Greycoat Street, Westminster. The society publishes a journal, and has fellows, members, and associates.

These are in connexion with the society gardens at Wisley, Surrey, where experiments are carried out in its laboratory and research station. Noted horticultural colleges are those at Swanley, Kent, and Glynde, in Sussex, the latter founded by Viscountess Wolsley.

HORTON, ROBERT FORMAN (b. 1855). British Nonconformist. Born in London, Sept. 18, 1855, he had a brilliant career at Oxford, becoming fellow of New College. In 1880 he accepted an invitation to become minister of a new church, formed by the Congregationalists at Hampstead, where he soon won a reputation as a preacher and as an organizer of social activities among his congregation. He remained there until his retirement in 1930.

HORUS. Egyptian deity. Hawk-headed, he was perhaps the totem of a hawk clan, whose victory originated the Horus-name borne by the dynastic kings, afterwards being deemed a sun-god, the son of Hathor. As Horus the child, the Greek Harpocrates, he appears in human form. See Dendera.

HORWICH. Urban dist. and market town of Lancashire, England. It is 5 m. W. by N. of Bolton, on the L.M.S. Ry., which has large locomotive works here. Other industries include coal mining, stone quarrying, bleaching, cotton spinning, and dyeing. Near are the Rivington Reservoirs and Rivington Pike (alt. 1,545 ft.). Market day, Fri. Pop. 15,616.

HOSANNA. Word derived from the Hebrew *hoshēa* na anna, Save (us) we pray (Ps. 118). The word Hosanna, which acquired a kind of liturgical use as an exclamation of

Horse Guards'
badge

Horse Leech
amid water reeds

praise, was shouted by the assembled crowd as our Lord entered Jerusalem on Palm Sunday (Matt. 21, Mark 11, John 12)

HOSEA. One of the minor prophets. He was born in the Northern kingdom of Israel, and flourished in the reigns of Uzziah, Jotham, Ahaz, and Hezekiah, and of Jeroboam, king of Israel. The first three chapters of his book consist of a parable which symbolises the exile of Israel and its restoration. The remaining chapters contain a series of prophecies.

HOSPITAL. Institution for the treatment of the sick and injured. In A.D. 380 the first hospital in Europe was founded by a Christian patrician, Lady Fabiola; and more than 100 years later Justinian built the celebrated hospital of S. John at Jerusalem.

In medieval times, in Britain, the sick were treated and housed in monastic institutions, and the medical treatment was closely supervised by the priests. After the dissolution of the monasteries, hospital service in England was in abeyance. Before his death, Henry VIII restored S. Thomas's, founded in 1200, and determined to give back S. Bartholomew's (1108), which was refounded in 1553. Bethlem, Christ's Hospital, and Bridewell were also restored about the same date. Among those founded in the 18th century were: Guy's, 1724; S. George's, 1734; Edinburgh Royal Infirmary, 1736; and Middlesex, 1745.

In 1928 in Great Britain there were 928 voluntary hospitals with 65,831 beds. These hospitals, as a rule, receive general cases of illness and accident, but a number are provided for the treatment of special diseases and conditions. The total income for 1928 was £14,006,585, of which 88.2 per cent was derived from voluntary contributions.

Institutions controlled by public authority include fever and smallpox hospitals and asylums for the insane. By the Local Government Act of 1929 the poor law hospitals were transferred from boards of guardians to the local authorities. In addition there are naval hospitals at Haslar and elsewhere. The chief military hospitals are the Royal Victoria at Netley and that at Aldershot.

In France, Germany, the Scandinavian and other European countries a number of voluntary hospitals are provided by religious and philanthropic bodies. In the U.S.A. the general scheme is of hospitals taking in all classes of the community, the wealthy contributing a sum which with other resources helps to meet the main charges of the institution. In Canada many hospitals are maintained on the same lines as in the U.S.A., but a number receive a state grant and payments are made by municipalities towards the maintenance of patients.

King Edward's Hospital Fund for London was originated Feb. 5, 1897, by Edward VII while Prince of Wales, to commemorate the 60th anniversary of Queen Victoria's reign. In 1928 grants amounting to over £290,000 were distributed. The offices are at 7, Walbrook, London, E.C.4.

The Hospital Saturday Fund is raised from collections made annually upon a Saturday at factories, workshops, and in the streets for the support of hospitals.

The Hospital Sunday Fund is derived from the offertories collected annually at churches and chapels of all religious denominations for the benefit of all the medical charities in the district concerned. The Metropolitan Hospital Sunday Fund, founded in 1873, has its headquarters at the Mansion House. In 1928 its total receipts amounted to over £85,000. See Ambulance; Guy's Hospital; St. Bartholomew's Hospital; Red Cross; etc.

HOSPITALERS, KNIGHTS, OR KNIGHTS OF ST. JOHN OF JERUSALEM. Order founded or sanctioned by Pope Paschal II in 1113. See St. John of Jerusalem.

HOST (Lat. *hostia*, victim). Term used in the Vulgate or Latin version of the Bible for the animal offered as a sin offering, burnt offering, or peace offering. In the Roman Catholic Church the term is applied to the consecrated wafer, believed to be the Body of Christ, which in the Mass is offered as a sacrifice. It is used also of the bread before its consecration. See Communion, Holy; Eucharist; Mass; Transubstantiation.

HOST. Animal or plant upon which a parasite lives. Parasites usually produce disease in the host, either completely destroying it or impeding its growth. The mistletoe is a well-known plant parasite, its host being usually the apple tree. In the case of wheat rust, the wheat is the host the rust a parasite. See Parasite.

HOTCHKISS, BENJAMIN BERKELEY (1826-85). American inventor. Born Oct. 1, 1826, he gained his mechanical knowledge as a workman in a gun factory, and turned his attention to improvements in the manufacture of ordnance. His inventions included a magazine gun, the Hotchkiss quick-firing gun, and various forms of projectiles. He died March 14, 1885.

The Hotchkiss machine gun is an automatic gun of the "gas-engine" type, the movement of the breech mechanism being obtained by allowing a portion of the explosion gases to pass through a hole in the barrel, and so actuate a piston in a cylinder below the barrel.

Hotchkiss Gun. Type of heavy pattern gun and tripod, with loading strips and ammunition box

HOTCHPOT (Fr. *hocher*, to shake, pot. pot). Term of English law. It means the bringing of property into a common fund or account so as to entitle the person bringing it in to share in the common fund which has been increased by his addition. In wills and settlements the testator or settlor frequently directs that on a general division of the estate certain beneficiaries who have received previous benefits shall bring them into hotchpot. See Will.

HOTEL. Modern term for a superior kind of inn or tavern. The palatial hotels of today, such as the May Fair and the Ritz in London, are growths of the 20th century. Most hotels are licensed houses, but there exist temperance hotels and residential hotels which are not. The business of hotel keeping is a large one with its own organ, *The Hotel Review*, and trade organizations. See Inn.

Hôtel de Ville is the French name for a town hall. *Hôtel Dieu* is the name given in France and elsewhere to a hospital, in the older sense of the word. The most noted is the one in Paris, said to have been founded in the 7th century. There is a fine one at Beaune.

HOTSPUR. Name by which Sir Henry Percy, eldest son of the 1st earl of Northumberland, was known. He was killed at Shrewsbury in 1403. See Percy.

HOTTENTOT (Dutch, *quaeker*). Primitive people in S. Africa. They apparently represent an early intermingling of semi-

Hamite negroids with bushwomen, perhaps in Somaliland. Now mainly in the N.W. they comprise Cape Hottentots and upper Orange river Koranas, besides Namaqua in the S.W. Africa protectorate. Brownish-yellow, long-headed, 5 ft. 3 ins., with pointed ehins and matted hair, their women frequently present certain anatomical peculiarities, including steatopygia, and practise finger-joint mutilation. Their magic-religious customs, of bushman character, dominated by witch-doctors, include ceremonial dancing at the new moon.

Racial purity has been affected by Boer and Bantu contact. Much of the population ranked as Hottentot, except in Namaqualand, is half-breed, speaking a debased taal, and employed as herdsmen or wagon-drivers.

HOTTENTOT BREAD (*Testudinaria elephantipes*). Climbing herb of the order Dioscoreaceae, native of S. Africa, more usually known as Elephant's Foot (q.v.).

HOTTENTOT FIG (*Mesembryanthemum edule*). Prostrate succulent shrub, a native of S. Africa. It has three-sided fleshy leaves, pointed at each end, and large yellow solitary flowers. The fruit, shaped like a small fig, contains a pleasantly acid mucilage which forms the basis of a preserve.

HOUDAN. Domestic breed of fowls with black and white plumage, a peculiar branched comb and long red wattles. They have short, white legs like Dorkings, which they also resemble in having five toes. The birds are hardy, easily reared and managed, and begin laying early.

HOUDIN, ROBERT (1805-71). French conjuror. Born at Blois, Dec. 6, 1805 he became known in Paris as a maker of mechanical toys and automata. On July 3, 1845, he opened a Theatre of Magic at the Palais Royal, 164, Galerie de Valois, afterwards transferring it to the Boulevard des Italiens. His application of the then little-known powers of electricity attracted attention almost all over the world. He wrote *The Secrets of Conjuring and Magic*, which has been translated into English.

HOUDINI, HARRY (1873-1926). American entertainer. Born at Appleton, Wisconsin, April 6, 1873, he went on to the variety stage as an expert in escaping from bandouffes, locked chambers, etc. A keen student of psychic manifestations, he so ingeniously reproduced, by secret methods of his own, the most astonishing forms of so-called phenomena that spiritualist writers hailed him as a medium endowed with powers of dematerialising and rematerialising at will, despite his own assurance that no supernatural agency was associated with his acts. He frequently appeared in London. He died Oct. 31 1926.

HOUGHTON, ALANSON BIGELOW (b. 1868). American diplomatist. Born at Cambridge, Mass., Oct. 10, 1868, he entered Congress in 1919. From 1922-25 he was the U.S.A. ambassador in Berlin, and from 1925-29 he was ambassador in London.

Hottentot: Girl and man of this primitive South African race

HOUGHTON, RICHARD MONCKTON MILNES, 1ST BARON (1809-85). British poet and politician. Born in London, June 19, 1809, he was educated at Trinity College, Cambridge, where he became a member of the coterie known as the Apostles, and a friend of Tennyson, Hallam, and Thackeray. He travelled in Germany, Italy, and Greece 1832-36, and represented Pontefract in the House of Commons, 1837-63. He was created Baron Houghton in 1863, and died Aug. 11, 1885. He was succeeded by his son, who became later the marquis of Crew (q.v.).

1st Baron Houghton
After A. D'Orsay

Lord Houghton's works include Memorials of a Tour in Greece, chiefly Poetical, 1834; Memorials of a Residence on the Continent and Historical Poems, and Poems of Many Years, 1838; Palm Leaves, 1844; Monographs, Personal and Social, 1873; Collected Poetical Works, 1876.

HOUGHTON, WILLIAM STANLEY (1881-1913). British dramatist. Born at Manchester, he wrote dramatic criticism for The Manchester Guardian, and became associated with Miss Horniman in the repertory theatre movement. His own fame as a dramatist rests chiefly on one of several plays, Hindle Wakes, 1912, a powerful study of life in a Lancashire cotton town, which aroused much discussion. He died Dec. 10, 1913.

HOUGHTON-LE-SPRING. Urban dist. and market town of Durham. It is 6 m. from Durham with a station on the L.N.E. Ry. and is a coal mining centre. Market day Sat. Pop 11,127.

HOUSDITCH. London thoroughfare. It runs N.W. from Aldgate High Street to Bishopsgate, parallel with Duke Street, Bevis Marks, and Camomile Street. Part of what was once known as the City Ditch or Townsditch, it has the church of St. Botolph at its E. corner. When filled in, paved and built over in the 16th century it became a sort of Jewry. It is a centre for dealers in secondhand clothing.

HOUSD'S-TONGUE (Cynoglossum officinale). Biennial herb of the order Boraginaceae. A native of Europe, N. Africa, N. and W. Asia, it has a fleshy, tapering root, and the whole plant is clothed with soft hairs. The leaves are oblong-lance-shaped; the funnel-shaped flowers are dull red-purple, in short sprays from the axils of the upper leaves. The fruits are four flattened oval nutlets.

HOUNSLOW. District of Middlesex. Within the control of the Heston and Isleworth urban district council, it is 1½ m. W.S.W. of London, on the District and Southern Ry. It is the principal military depot for the county. The Royal Military School of Music, formerly Kneller Hall, Osterley Park, seat of the earl of Jersey, and Cranford Church, where Fuller, author of The Worthies of England, is buried, are in the vicinity. Hounslow Heath, which once extended W. from Hounslow for over 5 m., was in the 18th century infested with highwaymen.

HOURLY. Twenty-fourth part of a civil day, divided into 60 mins. each of 60 secs. The solar hour is the twenty-fourth part of the solar day. In ancient times the hour's length varied.

An hour glass is an instrument for measuring approximately intervals of time, more particularly an hour. It consists of a pair of glass bulbs united by a narrow tube; one of the bulbs contains dry sand, water, or mercury, which in passing through the tube into the other bulb will occupy approximately the time to be measured.

HOURI. Promised female companion for faithful Mahomedans when they reach Paradise. According to Saie, translator of The Koran, seventy-two of these houris, besides the wives he may have had in this world, await even the meanest of the faithful. Pron. boori. See Koran.

HOUSE, EDWARD MANDELL (b. 1858). American politician. Born at Houston, Texas, July 26, 1858, he exercised remarkable influence in the political affairs of that state, but his wider career was due to his friendship with President Wilson. In 1914 the president sent House to Europe to gather information about affairs in the belligerent countries. Later he was American representative at the various conferences in Paris, then at the Peace Conference in Paris and at the Mandates Commission, London, 1919. He published The Intimate Papers of Colonel House, 1926-28.

HOUSE FLY (Musca domestica). Two-winged insect of the order Diptera. The body is of a grey tint, liberally studded with curved stiff hairs. Many of the flies that haunt living rooms in summer belong to other species. The house fly has large, reddish, compound eyes that almost meet at the top of the head, short antennae, and the principal mouth-parts form a large two-lobed proboscis with many channels and perforations through which the fly sucks up its food. It is an active agent in the spread of disease germs. See Fly; Insect.

HOUSEHOLD CAVALRY. British military force consisting of three regiments—the 1st and 2nd Life Guards and the Royal Horse Guards. See Horse Guards; Life Guards.

Household Troops is the name given to regiments which have a special association with the sovereign.

HOUSELEEK (Semper vivum tectorum). Perennial succulent herb of the order Crassulaceae, native of Europe and W. Asia. The flat fleshy leaves form a dense rosette, and have a purple edge, the flat tip sharp spine. The leafy, flowering shoots rise straight to a height of 1 ft. or 2 ft., ending in a spreading cluster of red-purple flowers.

HOUSEMAID'S KNEE. Chronic inflammation of the bursa which lies over the lower half of the kneecap. This bursa is a small sac containing fluid which serves to diminish friction between the bone and the tendon of the muscles attached to the bone. As a result of frequent kneeling, or following injury or chronic gout, it becomes swollen and enlarged. The treatment usually consists in resting the limb and applying fomentations, but removal of the fluid by tapping may be necessary if other forms of treatment prove ineffective.

HOUSE SPARROW. Full name of the small bird usually known as the sparrow (q.v.).

HOUSING. In Great Britain in the 19th century the rapid rise of industries brought about a serious shortage of houses in the towns and urban areas. In 1843 a royal commission enquired into the subject and a series of Housing Acts was passed. In 1884 another royal commission sat, and the result of its labours was the Housing of the Working Classes Act, 1885, followed by the comprehensive Act of 1890, which consolidated all previous legislation, and which, together with two later amending Acts, was until 1919 the chief legislative measure for housing reform. This divided the housing problem into the three parts: the clearing and improving of slum areas; the closing or repair of insanitary houses; and the erection of new houses by local authorities.

A Housing and Town Planning Act was passed early in 1919. The outstanding feature of this was the absolute obligation cast upon local authorities to provide such new houses as were needed in their area, if no other agencies were prepared to do so.

Financial assistance was given in respect of housing schemes completed before July 31, 1922, or such later date as sanctioned by the Ministry of Health, the Government undertaking to relieve the local authority of the burden of any annual deficit on housing schemes in so far as it exceeded the produce of a penny rate. Financial assistance was also given to public utility societies, and, later, grants of from £230 to £260 per house were given to private individuals.

The important Housing Act of 1923 introduced a new principle and incidentally put a limit on the cost to the state of the various schemes. Under it a subsidy of £6 per house was paid to local authorities for 20 years, provided the houses were of a certain size and cost and were finished within a certain time. In 1924 the Labour Government, by a further Act, increased the subsidy to £9 a house for 40 years. All housing legislation was consolidated in an Act passed in 1925.

These Acts gave the Minister of Health power to revise the amount of the state subsidy at the end of each two years. Under this provision it was reduced in 1926 and a further reduction announced in 1928. This, however, did not come into force, as the Labour Government, having taken office in May, 1929, reversed the decision of its predecessors.

In 1930 it was stated that 1,459,000 new houses had been built in England and Wales since 1918.

In 1930 a new housing bill intended to deal with the slum problem was introduced into Parliament. This altered the basis of the state grants. Instead of being a certain sum per house it was made a certain sum for every person rehoused. This was fixed at 45s. per person for 40 years in urban areas; at 50s. in agricultural districts, and at 70s. in London.

HOUSMAN, LAURENCE (b. 1865). British poet, novelist, and artist. Born July 18, 1865, he first attracted attention as an artist by his illustrations to George Meredith's poem, Jump-to-Glory Jane. In 1900 his anonymous volume An Englishwoman's Love Letters had an immense vogue. His other books, beautiful, contemplative poetry and individual fanciful fiction, include A Farm in Fairyland, 1894; Prunella, 1906; Ironical Tales, 1926; and Uncle Tom Pudd, 1927.

His brother, Alfred Edward Housman, born March 26, 1859, was professor of Latin at University College, London, 1892-1911. In 1911 he was elected professor of Latin at Cambridge. He is best known, however, by his volume of verse, A Shropshire Lad, 1896. He published Last Poems in 1922.

Hour Glass. Set of glasses in Greenwich parish church

Houseleek. The plant as it appears about July

HOUSTON. City and port of Texas, U.S.A. It stands on the Houston Ship Channel, Galveston Bay, 48 m. N.W. of Galveston. Its buildings include the Houston Lyceum, a Carnegie library, the municipal auditorium, the Masonic temple, and the city high school. It has large cotton and lumber interests, as well as rly. wagon and machine shops and foundries. Pop. 250,000.

HOUSTON, SAMUEL (1793-1863). American soldier. Born in Virginia, March 2, 1793, he lived for a time among the Indians, became a lawyer and was governor of Tennessee. Later he settled in Texas, then part of Mexico, and commanded the troops of that district in the conflict with Mexico which ended in its independence. He was president of the new republic, 1836-38 and again 1841-44 and when it joined the United States was one of its representatives in Congress. In 1859 he was chosen governor, but he was deposed in 1861. Houston died July 26, 1863.

Samuel Houston,
American soldier
and politician

HOVE. Borough and watering place of Sussex. To the W. of and adjoining Brighton, it is 51 m. from London, and has a station on the Southern Rly. The attractions include the esplanade and lawns, St. Ann's Well Gardens, tennis courts, and howling greens, while here is the ground of the Sussex county cricket club. In 1928 the boundaries were extended, the area of the borough being increased to 4,100 acres. In 1921 it adopted the French village of Bournemouth. Pop. 48,000.

HOWARD. English family, now represented by the duke of Norfolk, the earl of Carlisle, the earl of Effingham, the earl of Suffolk and Berkshire, Lord Howard of Glossop, and other peers and commoners. The descent is traced to William Howard, or Haward, a lawyer and landowner in Norfolk in the 13th century. His son John became a knight, a soldier, and the owner of further Norfolk lands.

Sir Robert Howard, who lived early in the 15th century, married Margaret, daughter of Thomas Mowbray, duke of Norfolk. Their son, John, was made a baron in 1470. Having inherited the bulk of the estates of the Mowbrays, he was in 1483 created duke of Norfolk and earl marshal. From his son, the 2nd duke, the English leader at the battle of Flodden, are descended most of the existing lines. See Arundel, Earl of; Carlisle, Earl of; Norfolk, Duke of; Suffolk, Earl of; Surrey, Earl of.

Catherine Howard,
wife of Henry VIII
After Holbein

HOWARD, CATHERINE (c. 1522-42). Fifth wife of Henry VIII of England. Daughter of Lord Edmund Howard and granddaughter of the 2nd duke of Norfolk, she used her influence over the king to advance the cause of the papal party. In Nov., 1541, Cranmer adduced evidence against her, a commission of inquiry was appointed, and she was executed on Tower Green, Feb. 13, 1542.

HOWARD, SIR ESMÉ WILLIAM (b. 1863). British diplomatist. Born Sept. 15, 1863, a son of Henry Howard of Greystoke Castle, Cumberland, he was educated at Harrow. From 1885-92 he was in the diplomatic service, to which he returned in 1903. After having been consul-general in Crete and then in Hungary, Howard was minister to Sweden,

1913-19, and to Spain, 1919-24. In 1924 he went as British minister to Washington and remained there until 1929. The first of his knighthoods dates from 1916. In 1930 he was made a peer.

HOWARD, JOHN (1726-90). British philanthropist. Born in Hackney, Sept. 2, 1726, he visited, between 1773 and 1776, all the county prisons, town goals, and hridewells in Great Britain and Ireland, and many in France, Germany, Flanders, and Holland, and in 1777 published his *State of the Prisons in England and Wales, with an Account of some Foreign Prisons*. He died Jan. 20, 1790.

HOWARD DE WALDEN, BARON. English title borne with intervals since 1597 by the families of Howard and Ellis. In 1597 Lord Thomas Howard, a son of the 4th duke of Norfolk, was made a peer; his mother was the daughter and heiress of Lord Audley of Walden, hence the new title. Howard became earl of Suffolk in 1603, and when the 3rd earl died in 1688 the barony went into abeyance. It was held in 1797 by the 4th earl of Bristol, a descendant of the 1st lord. Bristol's great-grandson, Charles Augustus Ellis (1799-1868), succeeded as 6th lord in 1803. In 1899 his descendant Thomas Evelyn Scott-Ellis (b. 1880) became the 8th baron.

HOWARD OF EFFINGHAM, WILLIAM HOWARD, 1ST BARON (c. 1510-73). English diplomatist. Eldest son of Thomas Howard, 2nd duke of Norfolk, he was made a peer for crushing the Wyatt rebellion, and made a K.G., 1554. He protected the princess Elizabeth against Gardiner, and became her lord chamberlain, 1558, and was appointed

Howdah on the state elephant
of the Gaekwar of Baroda

lord privy seal, 1572; from 1554 to 1573 he was lord high admiral. He died Jan. 12, 1573. His son, Charles, the leader against the Spanish armada, was made earl of Nottingham (q.v.).

Howdah. Seat placed on the back of an elephant. It may hold two or more persons, and is sometimes covered. It is a Hindu word. **HOWDEN.** Market town of Yorkshire (E.R.). It is 21 m. by rly. W. of Hull on the L.N.E. Rly. It has an interesting 13th century church, and also an aerodrome. Roger of Hoveden, the English chronicler, was a native of Howden, and a statue of him is outside the market hall. Market day, Sat. Pop. 2,052.

HOWE, RICHARD HOWE, EARL (1726-99). British sailor. The second son of the 2nd Viscount Howe, he was born in London, March 8, 1726. Entering the navy, he

held various commands against the French. In 1758 he succeeded his brother as 4th Viscount Howe, an Irish peerage. Commander-in-chief in N. America, he saw much service there during the Revolution. In 1782 he was appointed commander-in-chief of the Channel, and carried out the relief of Gibraltar. In 1783 he was appointed first lord of the admiralty, and in 1788, on retirement, was given an earldom. He was again, 1790, made commander-in-chief of the Channel fleet, and on June 1, 1794, he engaged the French off Cape Ushant, where he won a splendid victory. He died Aug. 5, 1799.

Earl Howe,
British sailor
After Gainsborough

His daughter married Assheton Curzon, son of the 1st Viscount Curzon, and Assheton's son, Richard, was made Earl Howe in 1921. The 4th earl (1861-1929) was chamberlain to Queen Alexandra. The 5th earl (b. 1884), when Viscount Curzon, was a Unionist M.P. and a motorist. The earl's eldest son is known as Viscount Curzon.

HOWE, JULIA WARD (1819-1910). American poet. Born at New York, May 27, 1819, she married Samuel Gridley Howe (1801-76), the philanthropist. Before the outbreak of the Civil War she edited *The Boston Commonwealth*, the anti-slavery organ, and wrote the *Battle Hymn of the Republic*. Afterwards she became an advocate of votes for women and of prison reform. Her writings include *Life of Margaret Fuller*, 1883; and *Representative Women of New England*, 1905. She died Oct. 17, 1910.

HOWELLS, WILLIAM DEAN (1837-1920). American man of letters. He was born at Martin's Ferry, Ohio, March 1, 1837, and worked as a compositor in his father's printing office, 1848-58; was a journalist, 1858-61; U.S. consul at Venice, 1861-65; editor of *The Atlantic Monthly*, 1866-81; and editor of *Harper's Magazine*, 1886-91. He was associated also with *The New York Times*, *The Nation*, and *The Cosmopolitan Magazine*. He died in New York, May 11, 1920.

Howells' 70 works include poems, travel books, essays, plays, and criticism. Of his travel books, *Venetian Life*, 1866, and *Italian Journeys*, 1867, are delightful transcripts of personal experience.

HOWITT, WILLIAM (1792-1879). British writer. Born at Hecnor, Derbyshire, he was educated at the Friends' school at Ackworth, Yorkshire, and at Tamworth, near Lichfield. He married, in 1821, Mary Botham, with whom he collaborated in *The Literature and Romance of Northern Europe*, 1852, and other works.

He wrote a number of books, which were very popular in their day. Howitt died in Rome, March 3, 1879.

His wife was well known as a writer of tales for children.

HOWITZER. Gun having a comparatively short barrel, and discharging heavy projectiles at a low muzzle velocity, consequently firing at a high angle of elevation to attain the desired range (see illus.). On account of the

Howitzer. Diagram illustrating the difference between the principles of howitzer and field-gun ranging, showing higher trajectory of former

high angle the projectile strikes its target at a correspondingly steep angle of descent, and this factor is of great value in the attack of troops and armament behind earthworks or other protection, and for the demolition of buildings and fortifications. The high trajectory makes it possible for the howitzer to fire over obstacles of considerable height, as a range of hills, when indirect laying is adopted. During the Great War howitzers were used with a length of 25 calibres or more, and 8 in., 9.2 in., 12 in., 15 in., and 18 in. weapons were constructed. See Gun.

HOWRAH. District and town of India, in the Burdwan Division, Bengal. The area of the district is 510 sq. m. Rice is the most important crop. The district is a great industrial centre. Howrah city, on the Hooghli, opposite Calcutta, was a small village in the 18th century, but is now an important manufacturing town. It is the terminus of the E. Indian and the Bengal-Nagpur rlys. Pop., dist., 997,403; town, 195,301.

HOWTH. Urban district and watering-place of co. Dublin, Irish Free State. It is situated on a promontory forming the N. side of Dublin Bay. 8 m. N.E. of Dublin by the G.N.R. The Hill of Howth is 562 ft. high. Pop. 4,029. Pron. Hoath.

HOXTON. Suburb of North London, included in the borough of Shoreditch (q.v.). Aske's Haberdashers' School marks the site of almshouses and schools founded by Robert Aske, a London alderman and haberdasher, in 1688. A mansion known as Balme House in the 17th century was once the residence of Richard de Beauvoir, whose name is preserved in that of De Beauvoir Town. The Geffrye Museum (q.v.), in the Kingsland Road, occupies the site of almshouses founded in 1715 by Sir Robert Geffrye. Hoxton is a centre of the cabinet-making industry.

HOY. One of the Orkney Islands, Scotland, about 2 m. S.W. of Pomona. Its length is 13½ m., extreme breadth 8 m., and area 53 sq. m. The highest summit is Ward Hill (1,564 ft.), 2 m. from which is the Dwarfie Stone, referred to in Scott's *Pirate*, 6½ ft. high, with hollowed-out chambers. Long Hope, on the S. coast, is a good natural harbour. The Old Man of Hoy (450 ft.) is a detached pillar-shaped rock off the coast. Pop. 1,100.

HOYLAKE. Watering-place of Cheshire on the Dec. at the entrance to the estuary, on the peninsula of Wirral, it is 8 m. from Birkenhead on the L.M.S. Rly. Here are the golf links of the Royal Liverpool Club. With West Kirby, also a watering-place, it forms an urban district. Pop. 19,000.

HOYLAND, NETHER. Urban dist. of Yorkshire (W.R.). It is 5½ m. S. by E. of Barnsley on the L.M.S. Rly., and has collieries and rolling mills. Pop. 14,904.

HSUAN TSANG (c. 605-664). Chinese traveller. Born near Honan Fu, he became a Buddhist monk and undertook alone the perilous journey to India in order to visit the sacred scenes and procure Indian books of devotion. After several years spent in travel in India he passed on to Assam and thence made his way to Kabul. At the command of the emperor Tai Tsing, he wrote an account of his travels in 648.

HUBERT (656-727). Saint and bishop. A nobleman of Aquitaine, he spent his youth at the court of King Theodoric III. One day, when hunting, he saw a stag with a cross growing between his antlers, which brought about his conversion. Later he was successively bishop of Maestricht and Liège. He is regarded as the patron saint of hunters, and his festival is kept on Nov. 3.

HUCKLEBERRY. Fruits of several low shrubs of the genus *Gaylussacia*, of the order Ericaceae. Natives of N. America, the plants resemble and are nearly related to the whortleberries and cranberries (*Vaccinium*).

HUCKNALL TORKARD. Market town and urban dist. of Nottinghamshire. It is 8 m. from Nottingham, on the L.N.E. and L.M.S. Rlys. There is an aerodrome. Around are coal mines. Near is Newstead Abbey (q.v.), the home of Lord Byron (q.v.), and the poet is buried in the parish church of Hucknall. Market day, Fri. Pop. 16,835.

HUDDERSFIELD. County borough and market town of Yorkshire (W.R.). It stands on the Colne, 16½ m. S.W. of Leeds and 190 from London, on the L.M.S. and L.N.E. Rlys. It is also served by canals. The buildings include the church of S. (1904), Afoot in England (1909), and Far Peter, the town hall and municipal buildings, the cloth hall, market hall, art gallery and public library. There is a technical college.

Huddersfield. The Town Hall built in 1832
Valentine

Huddersfield's staple industry is the making of cloth and worsted. Others are the manufacture of machinery, iron founding and engineering. Here are large dye works, the production of aniline dyes for local use being an important industry. In 1920 the corporation acquired the Ramsden estate, consisting of some 4,300 acres in the heart of the town. Market days, Tues. and Fri. Pop. 112,100.

HUDSON. River of New York State, U.S.A. Rising in the Adirondack Mts., it flows S. for about 300 m., entering New York Bay by an estuary called North river. It is tidal and navigable to Troy, 150 m. from its mouth. Tributaries are the Mohawk, Sacandaga and Wallkill. It is connected by the Erie Canal with Lake Erie, by the Champlain Canal with Lake Champlain, and by the Delaware and Hudson Canal with the Delaware river. It was explored in 1609 by Henry Hudson, after whom it is named.

The city of Hudson, in New York State, stands on the left bank of the Hudson river, 28 m. S. of Albany. Pop. 11,745.

HUDSON, GEORGE (1800-71). British financier. Son of a Yorkshire farmer, on the strength of a legacy he began to interest himself in railway undertakings. More than 1,000 miles of line were under his control during the railway mania of 1844, and at this time his holdings amounted to £320,000. In 1847, when the inevitable slump followed the railway boom, various dishonest transactions on his part were brought to light. No prosecution followed, but Hudson decided to go abroad. He died in London, Dec. 14, 1871.

HUDSON, HENRY (d. 1611). English sailor. The son probably of a London merchant, he sailed in 1607 in search of a N.E.

Henry Hudson, English sailor

passage to the Spice Islands. In 1609 he crossed the Atlantic, and explored the Hudson river. In 1610 he sailed again to find a North-West passage, investigated the bay later called after him, and was there caught in the ice. Discontent caused a mutiny, and in June, 1611, Hudson was set adrift in a small boat. Nothing was ever heard of him again.

HUDSON, WILLIAM HENRY (1841-1922). British author and ornithologist. Born at Quilmes, near Buenos Aires, Aug. 4, 1841, he came to England in 1869, and for some years earned a precarious livelihood by secretarial and literary work. Among the many books which later brought him fame—romances, studies of nature and bird-life both in S. America and England, and autobiographical works—are *The Purple Land* (1885), *The Naturalist in La Plata* (1892), *El Omhu* (1902), *Green Mansions* (1904), *Afoot in England* (1909), and *Far Away and Long Ago* (1918). Hudson died in London, Aug. 18, 1922, and is commemorated by the Bird Sanctuary and Epstein's figure of Rima in Hyde Park.

William H. Hudson
British author
Elliott & Fry

HUDSON BAY. Inland sea of N.E. Canada. Named after Henry Hudson (q.v.), who explored it in 1610, it is entered from the Arctic by Fury and Hecla Strait and Fox Channel, and from the Atlantic by Hudson Strait, its southern extremity narrowing into James Bay between Ontario and Quebec. Its length (including James Bay and Fox Channel) is 1,300 m., and its breadth 590 m. The principal rivers flowing into it are the Nelson, Churchill, Albany, Severn, Nottaway, Rupert, and East Main. The rly. from Le Pas (Manitoba) to Fort Churchill, 425 miles, opened in 1929, shortens considerably the route from Edmonton (Alberta) to Liverpool. See Canada.

Hudson's Bay Company post at Chipewyan on Athabasca Lake, 500 miles north of Edmonton

HUDSON'S BAY COMPANY. Company formed for trading for furs with the Indians of British N. America. It originated in a charter granted by Charles II, in 1670, to his nephew, Prince Rupert, and other noblemen and gentlemen. It was given trading privileges over the greater part of the N. area of N. America, the district being called Rupert's Land and also the Hudson's Bay Territories.

In 1869 the Company agreed to surrender its lands to the Dominion Government. As compensation it received £300,000 and a good deal of fertile land, as well as a small piece adjoining each of its trading stations. This land, anything up to 15,000,000 acres, made the company one of the largest landholders in Canada, and since 1872 it has been engaged in developing and selling it. The company has continued its fur trading operations. From 1889 until his death Lord Strathcona (q.v.) was governor of the company. See Canada.

HUÉ (Chinese, Thua-Thien). Capital of Annam, French Indo-China. It stands on the left bank of the river Huong-giang or Hué, a

few miles from its mouth in the China Sea in the vicinity are sarcophagi of ancient Annamite rulers. Hué is connected by rly. with Tourane and with Hanoi. Pop. 41,275.

HUGGINS, SIR WILLIAM (1824-1910) British astronomer. Born Feb. 7, 1824, he early took an interest in astronomy. Taking up spectrum analysis he laid the foundation of astro-physics, and was a pioneer in spectroscopic photography. President of the Royal Astronomical Society, 1876-78, of the British Association, 1891, and of the Royal Society, 1900-5, he received many honours from scientific societies. He received the Order of Merit in 1902, and died May 10, 1910.

HUGH (c. 1135-1200). English saint, known as Hugh of Lincoln, or Hugh of Avalon. Born at Avalon, in Burgundy, he became a monk at the Grande Chartreuse, and in 1186 was made bishop of Lincoln by Henry II. He did much to reform the clergy in his diocese, while he was equally ready to stand up to the king when the rights of his office were assailed. He died in London, Nov. 16, 1200, and his festival is kept on the 17th of that month. He was canonised in 1220.

HUGHENDEN Village of Buckinghamshire. It is 1½ m. from High Wycombe, on the G.W. and L.N.E. Rlys., at the foot of the Chilterns. Hughenden Manor (see illus. p. 213) was long the home of Lord Beaconsfield (q.v.). In the parish church, where he was buried, is Queen Victoria's memorial to the statesman. To the N.W., over Nap Hill, is Bradenham, the Hurstley of Beaconsfield's last novel, where he lived in his youth. Pop. 2,130.

The town of Hughenden in Queensland, Australia, stands on the Flinders River, 236 m. inland by rly. from Townsville. It serves the cattle and sheep-rearing district W. of the Great Dividing Range. Pop. 1,460.

HUGHES, CHARLES EVANS (b. 1862). American politician. Born in Glens Falls, New York, April 11, 1862, he took a degree in law at Columbia in 1884, and began practising in New York. Governor of New York State, 1907-10, in the latter year he became a judge in the Supreme Court. In the presidential election of 1916 Hughes was the Republican candidate selected to oppose Wilson but was beaten by 31 votes. In 1921 he became secretary of state in Harding's administration, resigning in Mar. 1925. In 1926 he became a member of the Permanent Court of Arbitration at the Hague, and in 1928 a judge of the Permanent Court of International Justice there. In 1930 he succeeded Taft as chief justice of the U.S. Supreme Court.

HUGHES, DAVID EDWARD (1831-1900). Anglo-American inventor. Born in London, May 16, 1831, he settled in the United States.

David E. Hughes,
Anglo-American
inventor

He became a professor of music at Bardstown College, Kentucky, and was afterwards professor of natural philosophy at the same college. In 1855 Hughes patented the printing telegraph which bears his name. In 1878 he communicated to the Royal Society his invention of the microphone (q.v.); and in 1879 the induction balance. He died Jan. 22, 1900. See Telegraph.

HUGHES, HUGH PRICE (1847-1902). British Nonconformist. Born at Carmarthen, Feb. 8, 1847, he entered the Wesleyan ministry, and became well-known as superintendent of the wealthy London circuit of Brixton Hill. In 1887 he started the West London Mission, attracting large audiences to his services at St. James's Hall. In 1898 he was president of the Wesleyan Conference, and he edited *The Methodist Times*, which he founded in 1885, until his death, Nov. 17, 1902.

HUGHES, SIR SAMUEL (1853-1921). Canadian politician. Born in Ontario, Jan. 1, 1853, he became a lecturer and then an editor.

In 1870 he served with the Canadian militia against the Fenians and in 1900 he was with the Canadian contingent in S. Africa. In 1892 he entered the Parliament at Ottawa and in 1911 was made minister of defence. He organized the Canadian forces for the Great War and worked with them until differences with his colleagues led to his retirement in 1916, though he remained an M.P. In 1915 he was knighted, and he died Aug. 24, 1921.

Sir Samuel Hughes
Canadian politician
Russell

HUGHES, THOMAS (1822-96). British author. Born at Uffington, Berks, Oct. 20, 1822, he became a barrister, being made a Q.C. in 1869 and a county court judge in 1882. He was also prominent as a Christian Socialist and succeeded his friend F. D. Maurice as principal of the Working Men's College, London. He died March 22, 1896. Hughes is known by his book, *Tom Brown's Schooldays* (1857), based on his own at Rugby.

Thomas Hughes,
British author

HUGHES, WILLIAM MORRIS (b. 1864). Australian politician. Born in N. Wales, Sept. 25, 1864, he went in 1884 to Australia.

He settled in Sydney in 1890, and during a great strike among the waterside workers in that year he organized the wharf labourers of Sydney into a powerful union, of which he became general secretary, and took part in the campaign that, in 1891, returned for the first time four labour members to the New South Wales legislature. From 1894-1901 he represented a division of Sydney.

W. M. Hughes,
Australian politician
Vandyk

Victor Hugo,
French writer

On the formation of the Commonwealth Hughes was elected labour member for W. Sydney. In the first labour government, formed in 1904, he became minister for external affairs and then attorney-general. He was prime minister 1915-23, retaining also his legal post. In 1919 he attended the peace conference in Paris.

Hugli. Alternative spelling of the Indian river Hooghli (q.v.).

HUGO, VICTOR-MARIE (1802-85). French poet, novelist and dramatist. Born at Besançon, Feb. 26, 1802, Hugo entered on his literary career in 1822, when his fervent royalism won him a pension from Louis XVIII. He established himself as a great Romantic with his play *Hernani* (1830) and the fine medieval tale *Notre-Dame de Paris* (1831).

H. Price Hughes,
British Nonconformist;
Langlier

Volumes of verse included *Les Chants du Crépuscule* (1835) and *Les Rayons et les Ombres* (1840). In 1841 he was elected to the Académie, and in 1845 created a peer by Louis-Philippe, king of the French.

After the Revolution of 1848 Victor Hugo was a prominent member of the assembly, but his republican opinions led to his banishment by Napoleon III in 1851, when he retired to the Channel Islands. The success of *Les Contemplations* (1856) was followed by the first series of *La Légende des Siècles* (1859) and the great epic-novel *Les Misérables* (1862). In 1871 Hugo returned to Paris in triumph, and was elected senator in 1878. Among his later books were *L'Art d'être Grandpère* (1877), and the second and third series of *La Légende des Siècles* (1879 and 1883). He died in Paris, May 22, 1885, and was buried in the Panthéon.

HUGUENOT. Name given to the French Protestants who adopted the Calvinistic form of the reformed religion. Many nobles placed themselves at the head of the Reformation movement, and Huguenots multiplied also among the humbler classes. Under Francis I and Henry II, heresy was persecuted, and in the reign of Charles IX there was a series of wars of religion. In spite of the Massacre of St. Bartholomew the Huguenots were not crushed, and by the edict of Nantes, 1598, they secured freedom of conscience. This, however, was revoked in 1685. The result, in spite of the severest measures, was the flight of vast numbers of the best industrial population, who took refuge in England, Holland, Brandenburg, and elsewhere. See Protestantism; Reformation.

HULA (*Heteraloea aequirostris*). Bird of the crow family found in the forests of New Zealand, where it nests in hollow trees. The plumage is a glossy, greenish black, the tail tipped with white, and the large rounded wattles are orange-red. The beak of the male is short, straight and stout, while that of the female is long, curved, and slender. The birds work in pairs for their favourite food, the grub of a timber-boring beetle, the differing beaks enabling the birds to reach the grubs either in decayed or hard woods.

HULL. City, seaport, and county borough of Yorkshire (E.R.), its full name being Kingston-upon-Hull. It stands where the river Hull falls into the Humber, 20 m. from the open sea and 175 m. from London. It is served by the L.N.E. and L.M.S. Rlys., and is connected by steam ferry with New Holland across the Humber. Pop. 294,600.

The church of Holy Trinity is a very large building, with a massive central tower, a Perpendicular nave and a number of other features. The city hall and

Hull. 1. Courts of Justice, 2. Monument Bridge, the Wilberforce Monument and the City Hall

the exchange are modern buildings in the Italian style. Other buildings include the guildhall, law courts, and dock office. There is an old grammar school, while Hymers College is a modern public school. There is a university college, which was opened in 1928, technical

schools, art galleries, and museums. The Wilberforce Museum occupies the house in which the philanthropist was born.

The docks cover about 250 acres, and connected with them are large timber yards. Apart from shipping, the industries include shipbuilding, flour-milling, and the manufacture of cement, chemicals, starch, rope, and paint. Hull is the headquarters of a fleet of steam trawlers, and is an important centre for oil seed crushing. It is governed by a lord mayor and corporation and has a suffragan bishop. The aerodrome is at Hedon.

HULL. City of Quebec, Canada. It stands on the Ottawa river, opposite Ottawa. It is a lumbering centre, and has a number of manufactures. Pop. 35,233.

HULTON, LITTLE. Urban dist. of Lancashire. It is 4 m. S.E. of Bolton, on the L.M.S. Rly. Coal-mining is the chief industry. Pop. 8,315. Middle Hulton is 3½ m. S.W. of Bolton; at Over Hulton, 4 m. S.W. of Bolton, is Hulton Park.

HUMANISM. Name given to a phase of the intellectual movement which marked the transition from the Middle Ages to modern times during the period called the Renaissance (q.v.). It looked for an ideal system of culture and found it in the revival of classical learning. Starting in Italy, it may be said to embrace the period from Petrarch (1304-74) to Melancthon (1497-1560).

HUMBER. Estuary on the E. coast of England. Formed by the rivers Ouse and Trent, and separating the cos. of York and Lincoln, its length is 37 m. and breadth from 1 m. to 8 m. The entrance is partly enclosed on the N. by Spurn Head. Grimsby is situated on the S. shore near the entrance, Hull about midway along the N. shore, and Goole at the head of the estuary.

HUMBERT (1844-1900). King of Italy. Born at Turin, March 14, 1844, he was the eldest son of Victor Emmanuel II and Maria Adelaide, archduchess of Austria. In 1868 he married his cousin, Princess Margherita of Savoy (d. 1926), and on Jan. 9, 1878, succeeded to the throne. The great popularity which he earned by his bravery and his deeds of kindness waned towards the close of his life, and on July 29, 1900, he was assassinated at Monza by an anarchist, Bresci. His successor was his only son, Victor Emmanuel III (q.v.).

HUMBERT, CHARLES (1866-1927). French journalist and politician. He was born at Loison, May 28, 1866. Entering politics, he became a senator and vice-president of the Senate army commission. When the Great War broke out, Humbert contributed numerous articles to *Le Journal* in support of the Allied cause. Later, however, suggestions of treason were spread abroad, and Humbert's name was mentioned in the case of Paul Bolo (q.v.). In 1917 it was alleged that he had accepted money supplied from German sources to gain control of *Le Journal*. The trial, which ended on May 9, 1919, resulted in his acquittal. He died Nov. 2, 1927.

HUMBLE BEE OR BUMBLE BEE (Bombus). Genus of wild bees found in nearly all the warm and temperate regions of the world. All are heavily built, covered with thick hair often arranged in coloured bands, and social in habit, though the communities are small. The cells of the humble bee form an irregular mass, unlike the comb of the honey-bee, and the small quantity of honey stored is only for the present use of the queen. See *Bee*.

HUMBOLDT, FRIEDRICH HEINRICH ALEXANDER, BARON VON (1769-1859). German scientist. Born in Berlin, Sept. 14, 1769, in 1799 he sailed to Venezuela,

Baron von Humboldt, German scientist
After Carl Beggs

and made extensive explorations in the region of the Orinoco and the Amazon. In 1802 he ascended Chimborazo to the height of 19,000 ft., travelling thence to Peru and on to Mexico. Later he published the results of his travels in 30 volumes. His great work, *Kosmos*, an encyclopedic account of the physical universe, was published in four volumes between 1845 and 1858. Humboldt suggested the igneous origin of rocks, made a study of terrestrial magnetism and of plant distribution, and left his mark on many branches of science. He died May 6, 1859.

His elder brother, Karl Wilhelm (1767-1835), was employed in diplomatic work between 1810 and 1819, being minister at Vienna and taking part in conferences in Paris, London, Aix-la-Chapelle, and elsewhere. Most of his time, however, was devoted to literary work, especially philology. He devoted special attention to the Basque language, and began a book on that of the Kawi of Java, the introduction to which is regarded as a landmark in the study of philology. He was one of the founders of Berlin University. He died April 8, 1835.

HUME, DAVID (1711-76). Scottish philosopher and historian. Born in Edinburgh, April 26, 1711, of a good Scottish family, he was educated at Edinburgh University. In 1734 he went to France to study philosophy with the Jesuits, and in 1737 appeared his first book, *A Treatise of Human Nature*, written from the standpoint of universal scepticism which was the basis of all Hume's philosophy. His *Essays*, *Moral*, *Social*, and *Political*, published in Edinburgh in 1741-42, were well received.

In 1752 he settled in Edinburgh as librarian to the Advocates' library. Meanwhile he had published *An Enquiry Concerning the Principles of Morals*, 1751, in which he propounds a philosophy with a definite utilitarian note, and *Political Discourses*, 1751, which foreshadowed the free trade ideas of Adam Smith. In 1754 was published the first part of a *History of England*, other parts following in 1756, 1759, and 1762. The work was a great success and passed into a number of editions. Hume died in Edinburgh, Aug. 25, 1776.

HUME, JOSEPH (1777-1855). British politician. Born Jan. 22, 1777, at Montrose, he studied medicine at Edinburgh, and became an army surgeon. He entered the House of Commons in 1812 as Tory M.P. for Weymouth. In 1818, when he was again returned to Parliament, he had become very radical. He remained in Parliament until his death, representing in turn constituencies in Scotland, Ireland, and England, and made a reputation by his untiring zeal for economy and reforms. He died Feb. 20, 1855.

HUMERUS (Lat.). In anatomy, the upper arm bone. The superior extremity consists of a rounded head which forms a ball and socket joint with the glenoid cavity of the shoulder blade, while the inferior extremity forms a hinge joint with the bones of the forearm. See *Arm*; also illus. p. 81.

HUMMING BIRD. Large family of birds, Trochilidae. Mostly of very small size, they are found chiefly in central and tropical S. America. They derive their name from the sound produced by the rapid vibration of their wings as they hover before a flower. There are about 500 known species. In most cases the plumage is extremely brilliant and glistening. The effect is enhanced by the birds' crests, tufts, ruffs, and beards of feathers. Many of them have also elongated and forked tails of elaborate character. The back is long and slender. The popular idea that humming birds live on the nectar of flowers is erroneous, minute insects being their chief food.

Humming Bird (Tame) for its brilliant hue
W. S. Herridge

HUMPERDINCK, ENGLEBERT (1854-1921). German composer. Born at Siegburg, Sept. 1, 1854, he assisted Wagner to produce *Parsifal* at Bayreuth. In 1887 he became a teacher in the conservatoire of music at Frankfurt, and in 1900 was head of the Meister Schule, Berlin. Humperdinck's fairy opera, *Hänsel and Gretel*, 1893, was the cause of his sudden leap to fame. He died Sept. 27, 1921.

HUMPHRY, OZIAS (1742-1810). English painter. Born at Honiton, Sept. 8, 1742, he succeeded Samuel Collins at Bath in his practice as a miniaturist, but in 1763 came to London, where he painted miniatures with great success. He became A.R.A. in 1779, and in 1791 was elected R.A. Failing sight compelled him to abandon miniature in his last years, but he took up portraiture in crayons. He died March 9, 1810. See illus. p. 604.

HUMUS. Decomposed organic matter in soil. When vegetable matter decays the hydrogen, oxygen, nitrogen, and carbon components evaporate as water, ammonia, and carbon dioxide, etc., or sink into the earth in solution. The residue forms the compound-humus, a substance made up of crenic acid, ulmin, etc., constituting a valuable fertiliser.

HUNCHBACK OR HUMPBACK. Deformity due to curvature of the spine, which in severe cases causes an angular mass to project from the back. The condition is nearly always due to tuberculous disease of the vertebrae.

Of historic hunchbacks one of the most notable was Richard III of England, called Richard Crookback. Hunchbacks figure in fairy lore and legend. See *Punch*.

HUNDRED. Name given to a division of most of the English counties. Its origin is doubtful, one theory being that it was the area upon which, in Anglo-Saxon times, a hundred warriors lived, and another that it contained 100 hides. Hundreds varied considerably in size, and are first mentioned in England in the time of Edgar. The hundred had its own court and sent representatives to that of the shire.

HUNDRED DAYS. Name given to the period between Napoleon's return from Elba and his defeat and surrender after Waterloo. See *France*; *Napoleon*.

HUNDRED YEARS' WAR. Struggle between England and France (1338-1453). It began with the claim of Edward III to the crown of France and the English won victories at Sluys (1340); Crécy (1346); and Poitiers (1356). The second period of the war, beginning in 1369, was marked by French successes, but after 1380 French fortunes again failed.

Henry V, reviving Edward III's claims, invaded France, captured Harfleur, and won the victory of Agincourt in 1415. Recognized as heir to the French throne by the treaty of

Troyes (1420), Henry died in 1422. The appearance of Joan of Arc in 1429 revived the French cause, which continued to flourish after her capture and death. In 1453 the English were expelled, having lost all their French possessions save Calais. See Agincourt. Crécy; Joan of Arc; Poitiers; etc.

HUNGARY. Independent kingdom of central Europe, formerly part of the Austro-Hungarian Empire. The old Hungary con-

Hungarian types.
1. Cattleman of the Pustas. 2. Hungarian noble attired in national dress

sisted of a great and a minor plain astride the Danube, with the Carpathians on the N. and E., Alpine foothills on the W., an Adriatic coastline and a Karst mt. system on the S.W., and a river frontier on the S.E. By the Treaty of Trianon, June 4, 1920, Hungary lost the greater part of her forests and coal and iron fields, as well as her coastline, being reduced to little more than the great plain, the Alföld. The N. mts. were given to Czechoslovakia, the E. plateau and mts to Rumania, the W. foothills to Austria, and the S.W. prov. of Croatia-Slavonia to Yugoslavia. Parts of her great rivers, the Danube and the Tisza (Tisa or Theiss), remain to her, and also Lake Balaton. The area is now about 36,000 sq. m., as compared with 126,000 sq. m. The capital is Budapest. Pop. 8,525,725.

During the Great War Hungary's fortunes were wound up with those of Austria. On Oct. 31, 1918, a revolution broke out in Hungary which aimed at making the country independent of Austria, and on Nov. 16 an independent republic was proclaimed, Count Karolyi becoming provisional president. This government lasted until March 22, 1919, and was succeeded by a Bolshevik ministry under Bela Kun. On Aug. 7 a coup d'état resulted in the archduke Joseph being appointed governor of state, but the Supreme Council in Paris intimated that no Hapsburg must have any place in Hungary's constitution, and on Mar. 1, 1920, Admiral Horthy (q.v.) was elected regent. Charles, the ex-emperor, who had abdicated in Nov. 1918, twice attempted to regain the throne.

Since the treaty of Trianon Hungary has made protests against the mutilation of her territories, and powerful interests are at work to endeavour to obtain a revision of the treaty. In 1926 the single chamber National Assembly was replaced by

a Chamber of Deputies and an Upper Chamber. Hungary is regarded as a monarchy with a vacant throne, the regent exercising the functions of a monarch. See Austria-Hungary.

HUNGERFORD. Market town of Berkshire. On the Kennet, 26 m. from Reading, and served by the G.W. Rly. and the Kennet and Avon canal, it is a hunting and angling centre. The town is known for its annual festival, celebrated at Hocktide (q. v.). Near is Inkpen Beacon. Market day Wed. Pop. 2,784.

HUNGERFORD. English harony dating from 1426. It was held by the earls of Huntingdon from 1529 until 1789, when it passed, with other haronies, to the mother of the 1st marquess of Hastings. When the 4th marquess died in 1868 the haronies fell again into aheyance, but in 1871 they were granted to the countess of Loudoun. After another aheyance the harony was granted to Viscountess St. Davids in 1921.

Hungerford Market, London, built originally in 1669 and enlarged in 1831-33, took its name from Sir Edward Hungerford (1632-1711). It was pulled down in 1862 to make room for the Charing Cross railway terminus.

The existing Hungerford Bridge, built 1860-64, is partly supported upon the piers of the old Hungerford suspension bridge, made for foot passengers only. See Charing Cross.

HUNMANBY. Village of Yorkshire (E.R.). It is a little way from Filey, on the L.N.E. Rly. Its hall was a residence of the Wilson family. In 1928 it was bought by the Wesleys for a girls' school. Pop. 1,501.

HUNS. Name of a race of Asiatic origin who invaded Europe in the 4th century. The Huns, whose name became a hyword for merciless savagery, crossed S. Russia, subjugating or wiping out the populations, and subduing amongst other tribes the Ostrogoths, at the end of the 4th century A.D. In the second quarter of the 5th century their khan was the mighty warrior Attila (q.v.), who swept with his devastating armies across Central Europe, but was flung back at the battle of Châlons, 451. After his death the Huns probably became absorbed among the later hordes which were pressing into Europe.

London, on the L.N.E. Rly. It consists of Old Hunstanton and New Hunstanton. In the former are the fine church of S. Mary, with interesting monuments, and the hall, the residence of the Le Strange family. New Hunstanton is an urban district. Pop. 4,282. Pron. Hunston.

HUNT, JAMES HENRY LEIGH (1784-1859). British writer. Born at Southgate, near London, Oct. 19, 1784, he joined his brother John in 1808 in the conduct of a weekly newspaper, The Examiner. Leigh Hunt acted as editor of the new paper, the radical views of which brought it into conflict with the authorities; in 1813 he was sentenced to two years' imprisonment and a fine of £500 for libelling the Prince Regent. During his imprisonment he wrote the narrative poem The Story of Rimini.

Leigh Hunt, British writer
From a drawing by W. Williams

In 1822 Hunt with his wife and seven children arrived in Italy to join Byron and Shelley in establishing a new quarterly magazine. Within a week, Shelley had been drowned; Byron and Hunt proved antipathetic, and the new magazine died with the fourth number. The Hunt family returned to London in 1825; and in 1828 appeared Lord Byron and Some of his Contemporaries. For the rest of his life Hunt was engaged in journalistic and literary work. He died Aug. 28, 1859. Consult Leigh Hunt, E. Blunden, 1930.

HUNT, WILLIAM HOLMAN (1827-1910). British painter. Born April 2, 1827, he entered the Academy schools in 1844, where he made the acquaintance of Millais. The first picture

W. Holman Hunt, British painter
Barraud

Hungary. Map of the state, formed out of the Austro-Hungarian empire, as defined by treaties after the Great War

HUNSTANTON. Watery place of which Hunt exhibited at the Academy was Norfolk. It stands on the E. side of the Wash, Hark!, 1846. In 1848 he started with Millais 15 m. from King's Lynn, and 112 m. from and Rossetti the Pre-Raphaelite Brotherhood,

a protest against the work of the English school, at that time represented by Landseer, Leslie, Cope, Fribb, and others. Holman Hunt gave the fullest attachment to the original ideas of the P.R.B., and was the only one who, throughout his whole life, painted on the lines laid down by the youthful aspirants. He died in London, Sept. 7, 1910.

Hunt's greatest paintings are *The Hiring Shepherd*, *The Light of the World*, which is in Keble College, Oxford, *The Scapegoat*, *The Finding of the Saviour in the Temple*, *The Shadow of Death*, *The Triumph of the Innocents*, *Christ Among the Doctors*, *Isabella and the Pot of Basil*, *The Miracle of the Sacred Fire*, *Strayed Sheep*, and certain portraits. His work can best be studied in the picture galleries in Oxford. See Pre-Raphaelites.

HUNTER, SIR ARCHIBALD (b. 1856). British soldier. Born Sept. 6, 1856, he entered the army in 1874. In 1884 he went to Egypt, where he remained for 15 years. He was in the fighting of 1885-86, led the British division at the battle of Omdurman, and was made governor of Omdurman. In 1899 he went to S. Africa, where he was chief of staff to White and then to Buller and later commanded a division. From 1901-14 he held important commands: in Scotland 1901-03, in India 1904-9, at Gibraltar 1910-13 and at Aldershot in 1914. From 1918-22 he was Unionist M.P. for the Lancaster division. He was knighted, 1898.

HUNTER, JOHN (1728-93). British surgeon and anatomist. Born at Long Calderwood, Lanarkshire, Feb. 13, 1728, he came to London in 1748, and studied surgery at Chelsea under Cheselden, and at St. Bartholomew's under Percival Pott. He was house surgeon at St. George's, 1750, and surgeon, 1768. He began private practice in 1763; had Edward Jenner as pupil, 1770-72; was elected F.R.S., 1767; and was surgeon-extraordinary to George III, 1776. He built an anatomical museum in Leicester Square, 1784-85; began his operation for the

John Hunter,
British surgeon
Portrait by
Sir J. Reynolds

cure of aneurism, 1785, and was appointed surgeon-general, 1790. He died Oct. 16, 1793.

Besides anatomy, Hunter was distinguished in surgery, biology, physic, and pathology. His treatise on the Blood, Inflammation, and Gunshot Wounds was first published in 1794. His other works include studies on the Venereal Disease, 1786; *Observations on Certain Parts of the Animal Oeconomy*, 1786. His collection of over 10,000 specimens was bought by the nation in 1795, and presented to the Royal College of Surgeons, London, in connexion with which the annual Hunterian Oration was inaugurated in 1813. The Hunterian Society was founded in his honour in 1819. Its headquarters are 44, Harley Street, W.1.

John Hunter's elder brother William (1718-83), was first professor of anatomy, Royal Academy, 1768; and formed a museum which was acquired by Glasgow University.

HUNTINGDON. Borough, market town, and county town of Huntingdonshire. It stands on the left bank of the Ouse, 59 m. from London, on the L.N.E. and L.M.S. Rlys. Across the river is Godmanchester, connected by an old stone bridge. There is a grammar school, in which are incorporated the remains of a hospital founded by David I, king of Scotland. Other buildings include Cromwell

House, the successor of the one in which the Protector was born, and the George, an inn with galleried courtyard. Market day, Sat. Pop. 4,194.

The title of earl of Huntingdon has been borne by the family of Hastings since 1529 when George, Lord Hastings, was made earl of Huntingdon by Henry VIII. In 1789 a descendant of the 2nd earl took the title, in 1818 his nephew was declared its rightful possessor, and from him the present earl is descended. The earl's eldest son is called Viscount Hastings.

HUNTINGDON, SELINA, COUNTESS OF (1707-91). Founder of a religious organization known as the Countess of Huntingdon's Connexion. A daughter of Earl Ferrers, she married the 9th earl of Huntingdon. After the deaths of her two sons in 1743, and that of her husband in 1746, she devoted herself to the spread of evangelical religion. On Aug. 24, 1768, at Trevecca House, Talgarth, South Wales, she opened a college for the training of young ministers. In 1792 the institution was removed to Cheshunt, and in 1905 to Cambridge. The churches founded by the countess number at the present day about 38.

Selina Hastings,
Countess of Huntingdon

HUNTINGDONSHIRE or **HUNTS.** South midland county of England. The surface slopes generally from the undulating hilly edges of the Midland Plain of the W. to the valley of the Ouse, or to the low levels of the Fens. The high ground is arable; the hedgeless, dyke-bounded fields of the Fenland are devoted to wheat or roots. The Nene forms part of the county boundary in the N. and the Great Ouse crosses it in the south. More than a third of the county is permanent pasture, and a quarter of the remaining area is devoted to wheat; barley and root crops come next. The L.N.E. and L.M.S. Rlys. serve the county. Huntingdon, the county town, Godmanchester, St. Ives, and St. Neots are among the towns. Its area is 366 sq. m. Pop. 54,741.

HUNTINGTOWER. Village of Perthshire. It stands on the Almond, 3 m. N.W. of Perth. The ancient castle, formerly called Ruthven Castle, was the scene of the raid of Ruthven in which the young king James VI was kidnapped by the earl of Gowrie in 1582.

HUNTLY. Burgh of Aberdeenshire. It is 41 m. N.W. of Aberdeen on the L.N.E. Rly. At the junction of the Deveron and Bogie, Huntly is the chief town in Strathgogie.

Huntly, or Strathgogie, Castle, the seat of the Gordon family, was built in the 13th century, destroyed in 1594, and restored in 1602; it is now in ruins. George Macdonald, novelist and critic, was a native. Pop. 3,752.

The Scottish title of marquess of Huntly has been borne by the family of Gordon since 1599. George, the 2nd marquess, was a royalist during the Civil War, for which he was executed by the Scottish parliament in 1649. George, the 4th marquess (1643-1716), was made duke of Gordon in 1684, a title held by his descendants, together with that of marquess of Huntly, until its extinction in 1836. The marquessate then passed to George Gordon (1761-1853), a descendant of the 2nd marquess. The marquess's seat is Aboyne Castle, Aberdeenshire. He is the premier marquess of Scotland. The 11th marquess (b. 1847) published his reminiscences, *Milestones*, in 1926.

2nd Marquess of
Huntly,
Scottish royalist
After Van Dyck

HUNYADI, JANOS CORVINUS (d. 1456). Hungarian soldier. In 1420 he took part in the war against the Hussites and soon became an important figure in Hungary. In 1440 he had a large share in making Ladislaus of Poland its king, and in 1445, the succeeding king being a prisoner, he was himself appointed regent. Most of his time was occupied in campaigns against the Turks, and he had just driven them from Belgrade when he died of the plague, Aug. 11, 1456.

HUON PINE (*Daerydium franklinii*). Tall overgreen tree of the order Coniferae. It is a native of Tasmania, related to the yew. The scale-like leaves overlap. It attains a height of 100 ft., and the close-grained wood is beautiful and useful, with an aromatic odour.

HURLING or **HURLEY.** Irish game played with crooked sticks or with clubs and a ball. It is played in a similar manner to hockey, but is of much earlier origin. Each side consists of an equal number of players, who may knock or carry the ball with the "burlley," but may not handle it. See Hockey.

HURLINGHAM. Dist. of Fulham, Middlesex. Between the Hurlingham Road and the Thames, near Putney Bridge is Hurlingham House, since 1874 the headquarters of the Hurlingham Club.

The club was formed in 1867 for pigeon-shooting, but this sport was discontinued there in 1906. The Hurlingham Club, since its adoption of polo, has been the governing body in England for that game. See Polo.

HURON. One of the Great Lakes of N. America, forming part of the boundary between U.S.A. and Canada. Its length is 207 m., breadth 101 m., average depth 700 ft., and area 23,200 sq. m. Georgian Bay indents the

Huntingdonshire. Map of the English south midland county, chiefly agricultural and pastoral in character

Ontario coast, and Saginaw Bay the coast of Michigan. The Sault Ste. Marie ship canal connects the lake by North Channel with Lake Superior; St. Clair river and lake and Detroit river connect it with Lake Erie; and the strait of Mackinac with Lake Michigan. The Maitland and Saugeen rivers enter Huron on the E. Canadian side, and Georgian Bay receives the French, Severn, and Nottawasaga rivers, while on the U.S. side are the Saginaw, Au Sable, and Thunder Bay rivers.

Huron is the name of a confederation of Indian tribes once living in Ontario, so called in derision by the French, the word meaning lout. Of Iroquois race, their name for themselves was Wendat or islander, preserved under the form Wyandot. See American Indians; Wyandot.

HURONIAN. Name given to the upper group of the Archaean system of rocks found largely in the neighbourhood of Lake Huron. The rocks consist mainly of sandstones, grits, and igneous rocks, the ore deposits including iron, copper, nickel, and silver.

HURSLEY. Village of Hampshire, 5 m. S.W. of Winchester. At Hursley House Richard Cromwell resided, and the church contains a memorial to him. In 1836-66 John Kehle was vicar here, and he is buried in the churchyard. The house, which was the property of Cromwell's father-in-law, was rebuilt after 1800 and, known as Hursley Park, was long the seat of the Heathcote family. Pop. 950.

HURST CASTLE. Fortress in Hampshire. On a promontory, $3\frac{1}{2}$ m. from Lymington, at the W. end of the Solent, it was built by Henry VIII to guard the strait, and was for a time, in 1648, the prison of Charles I.

HURSTMONCEUX. Village of Sussex. It is 12 m. N.E. of Eastbourne. The castle was built in the 15th century, destroyed in the 18th, and restored in the 20th. The old gate house is a notable piece of architecture. A Hare became owner of the castle in 1727, and the living was held by Julius C. Hare from 1835-55. Pop. 1,500.

Hurstmonceux Sussex. Main gate house and entrance to the castle
Fifth

HURST PARK. Racecourse in Surrey, England. The property of the Hurst Park Club, it occupies a flat area of ground known as Molesey Hurst, abutting on the Thames, opposite Hampton.

HURSTPIERPOINT. Village of Sussex. It is 8 m. N. of Brighton. Here is St. John's College, a public school. To the south is Wolstonbury Beacon (677 ft.), with Roman earthworks. The station is Hassocks, $1\frac{1}{2}$ m. away on the Southern Rly. Pop. 3,099.

HUS or **HUSS**, **JOHN** (c. 1373-1415). Bohemian theologian and reformer. Born of peasant stock at Husenitz, in S. Bohemia, he was ordained priest in 1400, and in 1402 appointed rector of Prague University, where he had been teaching philosophy. Deeply influenced by the writings of John Wycliffe (q.v.), he became a formidable critic of the Church's doctrine and discipline, and in 1409 an inquiry was ordered into allegations of heresy in his preaching, notably his avowed admiration for Wycliffe. In 1410, with the authority of a bull of Pope Alexander V, the archbishop of Prague, Štěpán, ordered the

works of Wycliffe to be burnt, and in the next year Hus and his supporters were laid under interdict by Pope John XXIII. In 1412 he retired to the country districts, where he preached and wrote various theological works, the most noteworthy being his *De Ecclesia*.

John Hus,
Bohemian reformer

The affairs of Bohemia had so disturbed the unity of the church that the emperor Sigismund offered Hus a safe-conduct to attend the Council of Constance (q.v.), 1414, but on his arrival there he was arrested, tried before the council, condemned, and burnt at the stake, July 6, 1415. His death called into being the wars of the Hussites (q.v.).

HUSBAND. A married man. By English law a husband is not liable for his wife's debts unless they were contracted by her as his agent. She has power to pledge his credit for necessities for the household, for herself and her husband according to the husband's rank, station, and means. A husband can, however, prohibit his wife from pledging his credit, and, even without such a prohibition, he is not liable for debts contracted by her for the household or herself or children if he gives her an adequate allowance. A husband is, however, liable to an unlimited extent if his wife libels or slanders anyone or commits fraud or negligently injures anyone. He is liable to be sued either alone or with his wife and must pay whatever damages are awarded.

It is a husband's duty to maintain his wife. She cannot bring an action against him for maintenance, but if he does not maintain her she may apply to the poor law authorities and they will maintain her and recover the cost from the husband.

Since the passing of the Married Women's Property Acts of 1870 and 1882 the whole of a woman's property belongs to her for her separate use and her husband has no control over it. See Intestacy.

HUSKISSON, WILLIAM (1770-1830). British statesman. Born at Birch Moreton, Worcestershire, March 11, 1770, in 1793 he obtained a position under the British government, and in 1796 entered the House of Commons. He was secretary of the treasury 1804-6, and again 1807-9. In 1823 he was made president of the board of trade and the chief adviser of the ministry on economic questions. He is regarded as largely responsible for the navigation laws, for the introduction of a new sinking fund, and for considerable steps in the direction of free trade. From 1827-28 he was secretary of the colonies. He was killed at the opening of the Liverpool & Manchester Rly., Sept. 15, 1830.

HUSSAR. Name given to a certain type of light cavalry. The name is of Hungarian origin. The original hussar wore a loose jacket and a busby (q.v.).

Up to March, 1921, there were 12 hussar regiments in the British Army, namely, 3rd, 4th, 7th, 8th, 10th, 11th, 13th, 14th, 15th, 18th, 19th, and 20th, but in that month the 19th and 20th were disbanded. In 1920 certain modifications in the titles of the hussars were made, e.g. 3rd (King's Own) Hussars changed to the 3rd The King's Own Hussars.

HUSSEIN, IBN ALI. Ex-king of the Hejaz and grand shérif of Mecca. In July, 1916, at Mecca, Hussein proclaimed the independence of Arabia and the repudiation of Ottoman rule; then, organizing the Arab forces, and placing the northern army under the command of his son, the Emir Feisal, he cooperated successfully with the Allies in the campaign against the

Turks. Before the end of 1916 Hussein was formally recognized by the Allies as king of the Hejaz. As the result of the capture of Mecca by the Wahabhis, he abdicated, Oct. 1924. See Arabia; Hejaz; Nejd.

HUSSEIN KAMIL

(1853-1917). Sultan of Egypt. Born Dec. 20, 1853

the son of Ismail Pasha, Hussein finished his education in Paris, and, returning to Egypt, began to take part in its government. Always a supporter of British rule, Hussein became president of the legislative council and general assembly in 1909, but only held these posts for about a year. In 1914, when Egypt was declared a British protectorate, Hussein became its first sultan. He reigned from Dec. 1914, until his death on Oct. 9, 1917. His son, Hussein Kamil-ed-Din, was commander of the Egyptian army, but his successor was his brother Ahmed Fuad. See Egypt.

Ibn Ali Hussein,
ex-king of the Hejaz

Hussein Kamil,
Sultan of Egypt

HUSSITES. Followers of John Hus (q.v.). After the burning of their leader at Constance in 1415, his followers formed themselves into a league, which became so powerful that Wenceslaus, king of Bohemia, was forced to tolerate them. On his death, 1419, the crown passed to his brother, the emperor Sigismund, and in 1420 war broke out between the emperor and the Hussites. Pope Martin V supported the emperor, but for eight years no headway was made against the generals of the Hussites, Ziska and Prokop. In 1431 the council of Basel undertook to arrange peace, and a formal agreement was signed in 1436. See Bohemia; Protestantism; Reformation.

Hustings. A satirical picture by Hogarth representing a scene on the hustings during polling

HUSTINGS. Platform or elevated stand on which, in England, candidates for Parliament used to be nominated, and from which they addressed their constituents. Nomination on the hustings was abolished in 1872. The term was also used for the courts of hustings, which formerly existed in many cities for dealing with actions for the recovery of land within the city limits.

HUTCHESON, FRANCIS

(1694-1746). British philosopher. Born in Ireland.

Aug. 8, 1694, he became in 1729 professor of moral philosophy at Glasgow, where he had already studied, 1710-16. The remainder of his life was spent in discharging his duties there. Hutcheson is generally considered the founder

Francis Hutcheson
British philosopher

of the Scottish school of philosophy. Man possesses a moral sense of what is right or wrong, which directly approves or disapproves of any course of action. Moral goodness consists in a proper relation of man's various inclinations founded on the above moral sense. General benevolence and disinterestedness, the endeavour to secure general happiness, constitute virtue. Man also has a sense of the beautiful.

HUTCHINSON, JOHN (1615-64). English soldier. Son of Sir Thomas Hutchinson, of Owthorpe, Nottinghamshire, his mother being a Byron, he was born in Sept., 1615. When the Civil War broke out he took up arms for the Parliament, and, on account of his local standing, was made governor of Nottingham Castle, which he defended until the end of the war. He sat in Parliament as M.P. for Nottingham, was one of the king's judges, and afterwards a member of the council of state. Disagreement with Cromwell soon drove him into retirement, from which he emerged in 1659 to sit in the restored Parliament and support Monk. In 1663 he was arrested on a charge of treason, and died in prison, Sept. 11, 1664.

Col. J. Hutchinson,
English soldier

HUTH, HENRY (1815-78). British banker, and bibliophile. He was the son of a German who settled in London in 1809 and founded the financial house of Huth & Co. Henry joined his father's business, but found time to travel extensively. He was an intimate friend of H. T. Buckle, the historian, who helped him to form the library of early printed books by which his name is chiefly remembered. It was specially rich in early printed English, Spanish, and German bibles, bibliographies, voyages, travels, plays, and poetry, and included rare MSS. and prints. The library was inherited by his son, Alfred Henry Huth (1850-1910), who augmented it and completed the catalogue in 1880. The public sale of the library began in Nov., 1911, and ended June 25, 1920, realising over £300,000.

HUTTON, RICHARD HOLT (1826-97). British journalist and theologian. Born June 2, 1826, at Leeds, he edited the *Inquirer*, 1851-53; was joint editor with Walter Bagehot of the quarterly *National Review*, 1855-64; assistant editor of *The Economist*, 1858-60; and, with Meredith Townsend, joint editor and part proprietor of *The Spectator*, 1861-97. He died Sept. 9, 1897.

Hutton's writings include *Studies in Parliament*, 1866; *Essays Theological and Literary*, 1871; *Sir Walter Scott*, 1878; *Cardinal Newman*, 1891. Criticisms on Contemporary Thought and Thinkers, 1894.

HUXLEY, THOMAS HENRY (1825-95). British biologist and scientist. Born at Ealing, May 4, 1825, in 1846 he was appointed assistant-surgeon on H.M.S. *Rattlesnake*, then about to start on a surveying expedition in the Torres Straits. During the four years' voyage Huxley made valuable zoological observations, the results of which were embodied in a paper, *On the Anatomy and Affinities of the Family of the Medusae*, which marked a new epoch in comparative anatomy. In 1851 he was elected F.R.S., and in 1854 he received an appointment at the School of Mines.

Thomas H. Huxley,
British biologist

The great work of his life was as the exponent of the doctrine of evolution, first formulated by Darwin in 1859. His lectures *On the Comparative Anatomy of Man and the Higher Apes*, delivered between 1859-62, those *On the Causes of Phenomena of Organic Nature*, and his essays and addresses of the next ten years, had a lasting influence upon scientific progress and freedom of thought, particularly in the case of Man's Place in Nature and the lecture *On the Physical Basis of Life*. Huxley, who became president of the Royal Society, 1881, died June 29, 1895.

Several of Huxley's descendants were distinguished. Leonard (b. 1860), his eldest son, editor of *The Cornhill Magazine*, wrote his father's life, and the names of Leonard's two sons, Aldous Leonard (b. 1894) and Julian Sorell (b. 1887) are noted in literature and science respectively.

HUYGENS, CHRISTIAN (1629-95). Dutch scientist. Born at The Hague, April 14, 1629, he won a high reputation in mathematics and astronomy. He made a number of improve-

ments in telescope lenses, discovering with their aid, in 1655, the fourth satellite of Saturn and defining its ring. In 1660 he visited England, and to him Newton was indebted in developing his laws of motion. He discovered the polarisation of light, and in 1678 announced his wave theory of light, by which he was able to explain reflection and refraction. In 1673 was published *Horologium Oscillatorium*, the most important of his many scientific works. The first watch regulated by a spring balance was made under Huygens' direction at Paris, and presented to Louis XIV. He died June 8, 1695.

HUYSMANS, CAMILLE (b. 1871). Belgian politician. Having come to the front as an advocate of socialism, he was appointed in 1905 secretary of the international socialist bureau. During the succeeding 25 years he took an active part in most of the international conferences and congresses of its adherents. In 1910 he was elected to the Belgian chamber of representatives, and in 1925 was appointed minister of arts and sciences.

HUYSMANS, JORIS KARL (1848-1907). French author. Of Dutch descent, he was born Feb. 5, 1848, and became a civil servant. He found time, however, to write a good deal. In the best of his early novels Huysmans displayed an uncompromising realism. He then turned to studies of extreme decadence. With *En Route*, 1895, he entered his final stage, this being a mystical catholicism, which was further developed in *La Cathédrale*, 1898, and *L'Oblat*, 1903.

Huysmans also wrote volumes of art criticism. Some of his books have been translated into English. He died in Paris, May 13, 1907.

HWANG-HO OR HOANG-HO (Yellow river). River of China. Rising more than 13,000 ft. above sea level in the plateau of Tibet, it flows through China with a very tortuous course to the Pacific. Its chief tributary is the Wei-ho. The total course to the mouth in the Gulf of Chih-li is about 2,600 m.

The Hwang-ho delta extends from Kai-feng-fu to the Gulf of Chih-li and to the Yellow Sea at the old mouth in Kiang-su province. The main mouth has shifted frequently.

HYACINTH. Hardy bulbous flowering plants of the order Liliaceae. Each bulb bears a spike of bell-shaped, sweetly scented flowers in all shades of colour except a good yellow. Hyacinths are cultivated by planting in sandy soil during the month of September or October. They may be grown without soil by placing the bulbs in glasses filled with water during October and storing these glasses in darkness until they have become filled with roots. The bulb glasses should then be placed in the full sunlight. After flowering the roots and stems should be allowed to die away and the bulbs then stored in ashes until the autumn. Hyacinths that have once flowered in water are useless for any purpose except that of bedding. The bluebell (q.v.) or wild hyacinth is *Scilla non-scripta*.

Hyacinth. Flower spikes
in full bloom

HYACINTHE, PÈRE (1827-1912). French preacher. His name was Charles Jean Marie Loyson, and he was born at Orleans, March 10, 1827. He entered the Carmelite order and became the most notable preacher of his day, attracting vast crowds to S. Sulpice and Notre Dame, Paris. In 1860 he was suspended on a charge of indiscipline, and his refusal to accept papal infallibility led to his separation from the Roman Church. He associated with the Old Catholics, and married in London in 1872. For some time he preached at Geneva, and in 1879 he founded a church in Paris. He died Feb. 8, 1912.

HYAENA. Family of carnivorous mammals (Hyaenidae) confined to Asia and Africa, and placed by zoologists between the civets and the dogs. Of morose and cowardly character, they live on carrion, though they have been known to attack children, rarely men, and to carry off sheep and calves in times of stress. Three species are recognized, striped, spotted, and brown. See *illus. above*.

Hyaena. Indian species. See below
W. S. Berridge, F.Z.S.

HYBRID (Lat. *hibrida*, mongrel). Term for the offspring of parents belonging to different species or races in the animal or vegetable kingdom. Most hybrids arise from the crossing of varieties of the same species. Animal hybrids are usually sterile, or if fertile they will only breed with a pure-bred individual. See *Biology*; *Heredity*.

HYDE. Borough and market town of Cheshire. It stands on the Tame, 7½ m. from Manchester, and is served by the L.N.E. Ry. There are cotton mills, iron foundries, engineering works, and hat factories. Market day, Sat. Pop. 33,424.

HYDE PARK. London park. Covering some 360 acres, it is bounded E. by Park Lane, W. by Kensington Gardens, S. by Knightsbridge, and N. by Bayswater Road. It has a riding track called Rotten Row, and is watered by part of the Serpentine.

The N. section has been the scene of many political demonstrations, and on Sundays and weekday evenings orators of all descriptions are to be heard near the Marble Arch (q.v.). The first great international exhibition was held in the park near Knightsbridge in 1851, the original structure of glass and iron being

J. K. Huysmans,
French writer

re-erected at Sydenham as the Crystal Palace (q.v.). The park derives its name from the manor of Hyde.

HYDERABAD. Native state of India. It occupies the central portion of the Deccan plateau. In some parts it is mountainous, in others flat or undulating. The chief rivers are the Godavari and Kistna. The ruler, known as the Nizam, has a salute of 21 guns. The state dates from 1748. The ruling family is Mahomedan. The area of the state is 82,698 sq. m.

The capital, Hyderabad, comprises Andcrun (within the walls), 2 sq. m., and Berun (without the walls), 9½ sq. m. The walls are 6 m. round and the whole city area is 50 sq. m. The Jama Masjid is a copy of the mosque at Mecca. Pop., state, 12,471,770; city, 404,187.

Hyderabad is also the name of a district and municipality in the Sind division of Bomhay. The district extends E. from the Indus almost to the Thar desert, and is an alluvial plain cultivable only near the river. The city lies E. of the Indus and is a great rly. junction. The area of the district is 8,034 sq. m. Pop., dist., 573,450; town, 81,838. See India.

Hyderabad. Principal street looking towards the Four Minarets, built 1591

HYDRA (Gr. water-serpent). In Greek mythology, a nine-headed monster. It was the offspring of Typhon and Echidna, which dwelt in a swamp near Lerna, in Argos, and ravaged the country. The killing of the hydra was one of the twelve labours of Hercules (q.v.).

Hydra is the name of a southern constellation mentioned by Ptolemy. It is the longest constellation in the sky. See Constellation.

HYDRA. Small fresh-water polyp common in ponds in Great Britain, where it attaches itself to the weeds. There are three British species, of which the green hydra is the most common. It consists of a little tube, about ½ to 1 in. in length, with the mouth surrounded by tentacles which have the power of stinging and paralysing the minute animals on which it feeds. See Hydrozoa.

HYDRANGEA. Half-hardy flowering shrubs of the order Saxifragaceae. The familiar common hydrangea (*H. hortensis*) was introduced from China in 1790. The flowers grow in large heads, or corymbs, and for the most part have neither pistil nor stamens, but consist of four petaloid sepals. The flowers are naturally white and pink, but by artificial treatment blue

Hydrangea. Flower-head of the familiar *H. hortensis*

flowers may be obtained. Many species thrive in open air in favoured situations, though as a general rule hydrangeas require greenhouse treatment.

HYDRATE. Chemical compound formed by the union of molecules of water (H_2O) with other molecules or atoms, without a rearrangement of the atoms of the H_2O group. When the H_2O group is rearranged in the new molecule, the resulting compound thus formed is termed a hydroxide.

HYDRAULICS (Gr. *hydōr*, water; *aulos*, a pipe) Term by which is defined that branch of engineering science which treats of the motion of liquids, especially water, and the conveyance of power by means of water-pressure. The underlying principles are based on the laws of hydrostatics and hydrokinetics. The fundamental idea is that of a "head of water." In a long vertical pipe filled with water the pressure at any point is the atmospheric pressure, together with that due to the weight of water supported above this point. If the pipe is bent, the pressure at any point at a given depth below the top is the same as at a point on the same level in the straight pipe, and this pressure is said to be that of a head of water equal to the vertical distance below the top of the pipe.

The water from a reservoir which is situated on a hill may be used to supply the surrounding district, and the head of water at any place in the district is the vertical depth of that place below the source of supply. An artificial head of water may be created by means of an accumulator (q.v.).

A head of water is a source of energy and may be utilised for the performance of work, as the driving of turbines and hydraulic machinery of all kinds, as hydraulic presses, lifts, cranes, dock gates, etc. By means of a siphon water may be transferred by gravity from a high to a lower level, and in its passage may rise, if required, to a greater height than the head of the source of supply; theoretically such a rise in height is limited to 33 ft.; in practice it may not exceed 28 ft.

Water offers such high resistance to compression that for ordinary purposes it may be considered incompressible. It shares with all other fluids the property of transmitting in all directions pressure applied to any part of a body of it. The machines and tools which make use of the energy of water subjected to very high pressures are for the most part various applications of the hydraulic press. The first press was constructed by Bramah about 1795. See Hydro-electric Machinery; Water Power.

HYDRIDE. Term given usually to compounds of hydrogen with metals, but also including those formed with non-metals. Hydrogen combines directly with sodium and potassium to form hydrides. Hydrochloric and hydriodic acids and water are hydrides. See Hydrogen.

HYDROCARBON. Compound containing carbon and hydrogen only. Some 250-300 compounds are known. These can be arranged in a few series according to their chemical action with bromine and nitric acid. Three well-known series are: (1) Paraffins, or saturated fatty hydrocarbons; (2) Olefines, so called because olefant gas (ethylene) is the first of the series; and (3) Acetylene series, acetylene being the lowest. Marsh gas is the only hydrocarbon whose molecule contains

but a single atom of carbon. The paraffins are known as "saturated" because they are incapable of indirect combination. This series contains a larger percentage of hydrogen than any other hydrocarbons. Hydrocarbons are neutral, combustible, and by more or less heat are decomposed into carbon and hydrogen. The chief sources of hydrocarbons are (1) the dry distillation of coal, and (2) petroleum. See Chemistry.

HYDROCEPHALUS. Condition popularly known as "water on the brain," due to an accumulation of fluid within the brain. It may be the result of defects present at birth, or of inflammation causing pressure on the blood vessels in early life. The head gradually becomes enlarged, while the child is often ill-nourished and mentally defective. Convulsions may occur, and only in rare cases is operative treatment successful.

HYDROCHLORIC ACID OR **MURIATIC ACID** (HCl). Liquid prepared by dissolving hydrochloric acid gas in water. The only known compound of hydrogen and chlorine, it can be made by the direct union of these elements, and can also be made by heating common salt and sulphuric acid together and passing the gas into water. The acid is manufactured on a large scale as a by-product in the preparation of soda ash. Hydrochloric acid is a constituent of the gastric juices and plays an important part in digestive processes. Strong hydrochloric acid is a powerful poison, a teaspoonful being sufficient to cause death. See Chlorine.

HYDROCYANIC ACID (HCN). Poisonous liquid with a characteristic smell resembling that of bitter almonds, and popularly known as prussic acid. It is prepared by decomposing potassium ferrocyanide by means of sulphuric acid. It is one of the most powerful and rapid of known poisons, and even with dilute solutions fatal results rapidly follow.

HYDRODYNAMICS. Science which treats of the motions and equilibrium of fluids. The subject is treated under its separate sections hydrokinetics and hydrostatics. See Hydrokinetics; Hydrostatics.

HYDRO-ELECTRIC MACHINERY. Machinery for the generation of electricity by various forms of water power. In a great waterfall there is an immense power capable of being utilised, and most of the early hydro-electric installations used such falls. To do this, pipes are led from an artificial reservoir or forebay, fed from the river above the fall, to a power house at the foot of the fall, and the water is passed through these to turbine wheels which generate mechanical energy. The turbines in the majority of large installations are used to drive electric generators, from which electrical energy may be transmitted to wherever it may be wanted.

The greater part of the world's water power is obtained from artificial falls. All rivers and streams have a natural gradient, and in hilly countries this is fairly steep over at least a part of their course. In such a case, power may be developed by diverting the water from the rapidly sloping bed into a gently sloping artificial channel cut along the hill side above the river bed. After traversing this for some distance, the accumulated fall of the river bed can be concentrated at one point and, under favourable circumstances, a fall of many hundred feet may be obtained. An artificial fall may be created by erecting a dam across a stream and impounding the water behind the dam.

Two main forms of hydraulic turbine, the Pelton wheel and the Francis turbine, are used respectively for high, and for medium and low, falls. In the Pelton wheel the supply water issues at high velocity from a nozzle which directs it on to a series of cup-shaped

Hydraulic Press. A. metal cylinder in which ram, B, works up and down. Cylinder is connected to a force pump with a plunger of small area relative to that of ram

buckets surrounding the wheel. Where, owing to the smallness of the head or the large power desired, the volume of water to be handled is very large, the Francis turbine is generally used. This consists of a wheel or runner carrying a series of curved vanes or buckets around its periphery. Water is supplied to the runner through a series of guide vanes entirely surrounding the runner and thus giving a large area of water-way. This type of turbine is adaptable to any head from about 400 ft. to as low as one foot.

In 1929 the Shannon hydro-electric works came into operation, and will ultimately supply current for the whole of the Irish Free State. A barrage was made across the Shannon four miles below Lough Dearg, where the water is diverted to a new channel, 300 ft. wide and 37 ft. deep, leading to the power house $7\frac{1}{2}$ miles away. The head of water is 100 ft., the pipes from the headrace to the turbines being 20 ft. in diameter. When the scheme is in full operation there will be six turbines with a total of about 200,000 h.p. The current is generated at 10,000 volts, which for transmission is stepped up to 38,000 and 110,000 volts.

HYDROFLUORIC ACID. Corrosive colourless liquid usually made by the decomposition of fluorspar by strong sulphuric acid, its chief use being for etching glass.

HYDROGEN (Gr. *hydōr*, water; *gen*, to generate). Colourless, tasteless, and odourless gas, chemical symbol H; atomic weight 1.008; atomic number 1. The lightest gas known, it is fourteen times lighter than air. The boiling point is -252°C . Hydrogen is one of the most widely distributed of all gases. In the free state it occurs in the exhalations of volcanoes, in gases given off by oil wells, occluded in certain minerals, and in the atmospheres of the sun and many stars. Combined, it is a constituent of water, and almost all organic matter and acids.

The gas burns with a non-luminous flame at a very high temperature. It is used as the lifting gas for airships and balloons, and is produced commercially by separation from water gas; by the iron and steam process, in which steam is passed over incandescent iron; by the decomposition of oil into carbon and hydrogen; and by the electrolytic decomposition of water. See Chemistry; Hydrocarbon; Water.

HYDROGEN PEROXIDE (H_2O_2). Colourless or faintly bluish liquid, an unstable compound of hydrogen and oxygen. It is prepared on the commercial scale by dissolving barium peroxide in water and adding sulphuric acid. The chief use of hydrogen peroxide is as a bleaching agent. It is used as an antiseptic.

HYDROGRAPHY. Branch of physical science which deals with the surface waters of the earth. Hydrographical research consists chiefly in the obtaining and preparation of material for navigation, etc., and is an important part of the work of the navies of all nations in peace time. In 1795 was founded the British Hydrographic Office, a department

which has a counterpart in the executives of most civilized nations. At its head is the hydrographer to the Admiralty, who is the official adviser on all hydrographical survey. See Chart; Ocean; Meteorology; Navigation.

HYDROKINETICS. Science of fluids in motion. The fluids considered are understood to be "perfect fluids," in which there is no friction or viscosity between one part of the fluid and another, and the results obtained are often subject to considerable modification in their application to actual fluids, such as water, in which viscosity exists. See Hydraulics; Hydrostatics.

HYDROMEL. Beverage made of honey and water. It is usually fermented (then known as mead), and flavoured with spices or hops. It was known to the Greeks and Romans.

HYDROMETER. Instrument employed to compare the densities of liquids. A type of hydrometer commonly employed consists of a glass bulb at the upper end of which is a graduated glass rod, and at the lower end a smaller bulb which is loaded so as to keep the instrument upright. On the graduated stem the depth to which the instrument sinks in various liquids can be read off. The stem is often graduated so as to indicate directly the specific gravity of the liquid.

HYDROPATHY. The treatment of disease by water, whether by ice, water, or steam, and both internally and externally. The effect of cold baths is to contract the small blood vessels in the skin, thus bringing about a rise in the general blood pressure and stimulating the circulation. Cold baths, cold packs, or ice packs are also employed for reducing the temperature in cases of dangerously high fever. Warm baths have a soothing effect upon the nervous system. Hot fomentations are of value in relieving localised pain and in the treatment of inflammation.

As regards the internal administration of water, in some forms of dyspepsia a glass of hot water is of service, and in acute infectious diseases from four to six ounces of cold water may be taken every two hours. For special purposes, a large variety of baths and douches are used. See Baths; Spa.

HYDROPHOBIA OR RABIES. Acute disease in man and warm-blooded animals, transmitted by inoculation, usually by a bite. Dogs are most frequently affected, but rabies also occurs in cats, cows, horses, pigs, and rabbits. In man the early symptoms, which usually appear in from six to eight weeks, are pain and irritation in the neighbourhood of the bite, headache, loss of appetite, depression, irritability, sleeplessness, and some difficulty in swallowing. Excitability increases, and any slight shock or sudden noise or an attempt to swallow will cause a violent spasm, particularly affecting the muscles of the throat.

A person who has been bitten by an animal suspected of rabies should receive the inoculation treatment devised by Pasteur, either in Paris, or at St. Thomas's Hospital, London.

HYDROPHONE. Instrument invented during the Great War for detecting the presence of submarines by listening for them. The receiver of the hydrophone was dropped into the water and a trained listener stood on the ship's deck with receivers to his ears. He could hear the motion of the submarine's screws as they revolved in the water, and was able to distinguish the sound made by a German U-boat from that of one of the British underwater craft.

HYDROSTATICS. Branch of physical science which deals with the equilibrium of fluids under the application of forces. A fluid at rest exerts pressure at right angles to any surface in contact with it, and this pressure is exercised equally in all directions. Any increase of pressure at one point of a fluid, in

equilibrium, is at once transmitted without diminution to every other point of the fluid. In the case of a fluid at rest under gravity, the pressure steadily increases with the depth below the surface, this being due to the weight of supported fluid. See Hydraulics; Hydrokinetics.

HYDROZOA. Class of the zoological phylum Coelenterata (q.v.). They are commonly known as polyps, are in most cases marine, and usually of small size. While some swim freely, the majority are attached in adult life to rocks, shells, and plants. In their simplest form the body consists of a bag with a single opening, usually surrounded with tentacles that assist in the capture of the minute organisms on which the animal feeds.

HYÈRES. Watering place of France. It lies about 14 m. by rly. E. of Toulon and $2\frac{1}{2}$ m. from the sea. Salt is produced at the Salins d'Hyères, 5 m. E. The Îles d'Hyères, the Stoechades of the ancients, lie off the bay and the peninsula of Giens. Pop. 17,476.

HYGIEIA. In Greek mythology, the goddess of health. The reputed daughter of Asklepios (Aesculapius), she was worshipped in different parts of Greece. She is not to be confused with Athena Hygieia. In art Hygieia was represented wearing a long robe, sometimes feeding the serpent twined on the staff which was the attribute of Aesculapius (q.v.).

HYGIENE (Gr. *hygieinos*, healthy). Science of the preservation of health and the prevention of disease. Personal hygiene comprises sound dieting, sufficiency of exercise, adequate sleep, and maintenance of the bodily functions in a state of normal activity. Measures for the provision of sufficient and wholesome water supply, efficient drainage systems, adequate housing, inspection of food, prevention and arrest of epidemics, etc., are part of the general question of public health.

The London School of Hygiene was founded in 1921, and in 1924 was incorporated with the School of Tropical Medicine. Its new buildings, opened in 1929, are in Keppel Street, London, W.C.1. There is an Army School of Hygiene at Aldershot. See Public Health; Sanitation.

HYGROMETER. Instrument for measuring the amount of water vapour in the atmosphere. A common type consists of two thermometers placed side by side, the bulb of one being left dry, whilst that of the other is covered with fine muslin, kept constantly wet by a thread dipping into water. The water evaporates, and as some of the heat necessary to evaporate it is obtained from the thermometer, the temperature of the latter is lowered. Thus the wet bulb thermometer usually registers a lower temperature than the dry bulb thermometer. The difference between the two readings gives the means of obtaining the humidity of the air.

HYKSOS. Loose confederation of West Asian desert peoples which dominated Egypt between the XIIth and XVIIIth dynasties. Inaccurately called shepherd kings, they established a defensive line from Avaris, near Tanis; their camp at Tell el-Yehudiya was excavated in 1906. By their final expulsion Aahmes I, about 1580 B.C., inaugurated the new empire. See Egypt.

HYLAS. In Greek mythology, a beautiful youth beloved of Hercules, who took him with him on the expedition of the Argonauts. During the voyage Hylas landed on the coast of Mysia, and while attempting to draw water from a fountain was drawn into the depths of the water by the nymph of the fountain.

HYLLUS. In Greek mythology the eldest son of Hercules and Deianeira. He and his brothers fell in an unsuccessful expedition from Athens to regain a footing in the Peloponnese, from which they had been expelled.

Hydro-electric Machinery. Three of the Siemens-Schuckert generators, driven by turbines below, which furnish power for the Shannon electrification scheme

HYMANS, PAUL (b. 1865) Belgian statesman. Born and educated at Brussels, he became a barrister in 1885. Five years later he was elected for Brussels to the chamber of representatives. From 1915-17 he was Belgian minister in London. Early in 1918 he became minister of foreign affairs, and represented Belgium at the Peace Conference, 1919, but in 1920 resigned his portfolio owing to cabinet disagreements regarding the Polish question, First President of the League of Nations, 1920, he was minister of foreign affairs, 1924-25, 1927-29, and again from 1929.

HYMEN or **HYMENAEUS**. In Greek mythology, the god of marriage, son of Bacchus and Aphrodite or of Apollo and one of the Muses. He was always invoked in a bridal song at marriages, the song coming to be called Hymen.

HYMENOPTERA. Large order of the insects which includes the bees, wasps, ants, etc. Insects of this order have as a rule four transparent membranous wings, of which the front pair exceed the hind pair in size. They pass through a complete metamorphosis, and the females possess an ovipositor which may be modified into a sting. In many genera there is a distinct "waist" between the thorax and the abdomen; and the mouth parts are developed into a long proboscis or sucking instrument. See Ant: Bee; Insect; Wasp.

HYNDMAN, HENRY MAYERS (1842-1921). British socialist and economist. Born in London, March 7, 1842, he became a journalist, represented The Pall Mall Gazette in the Austro-Prussian War of 1866, and was on the staff of The Melbourne Argus in 1869. He travelled widely in Australasia and in America. Becoming a convert to the revolutionary socialism of Marx, he founded the Social Democratic Federation in 1881, and the remainder of his life was

H. M. Hyndman,
British socialist
Berkshire

devoted mainly to socialist propaganda. He died Nov. 22, 1921.

HYOSCYAMINE. Alkaloid contained in henbane (*Hyoscyamus niger*), in belladonna (*Atropa belladonna*), and in stramonium (*Datura stramonium*). It is usually associated with atropine. A trace of hyoscyamine applied to the eye produces dilation of the pupil. The alkaloid is a poison.

HYPERBOLA (Gr. hyper, beyond; balkein, to throw). One of the sections of the cone. It is defined mathematically as the locus of a point which moves so that its distance from a fixed point, the focus, bears a constant ratio which is greater than unity to its distance from a fixed straight line which is called the directrix.

HYPERIDROSIS.

Excessive sweating. It occurs as a symptom of various infective diseases, and in rickets and certain nervous diseases. Treatment consists in attention to the general health and avoiding alcohol. Frequent bathing is beneficial. For localised sweating, a dusting powder containing 3 p.c. of salicylic acid may be employed with satisfactory results.

HYPERION. In Greek mythology, one of the Titans. He was the father of Helios, the sun, Selene, the moon, and Eos, goddess of the dawn. In the poets, Hyperion is often confounded with Helios. See Titan.

HYPERMETROPIA. Long sight, the condition in which parallel rays of light do not converge to a focus upon the retina, but tend

to be brought to a focus behind that membrane. The condition results from the eyeball being too short or the cornea too much flattened. It can be corrected by the use of convex glasses. See Eye; Vision.

HYPERSTHENE. Iron-magnesium silicate found with lahoradite and other basic feldspars and forming part of many eruptive rocks. It is a dark brown, crystalline rock with a submetallic lustre, and when cut and polished is used as an ornamental stone.

HYPERTROPHY. In medicine, enlargement of an organ or tissue beyond its normal size. Usually, this occurs in response to an increased demand made upon the organ or tissue, but sometimes occurs pathologically.

HYPNOTICS (Gr. hypnos, sleep). Drugs used to procure sleep. Opium, morphine, sulphonal, paraldehyde, trional, bromides, chloral and veronal are those most frequently employed. Hypnotics may be used in acute illness, and in conditions accompanied by pain, but their frequent or long-continued employment is undesirable, as there is grave risk of a habit being formed.

HYPNOTISM. Artificially induced state resembling sleep in some respects. Persons who are under hypnotic influence readily respond to suggestions made to them by others, and since the effect of these suggestions often remains after the hypnotic influence has been removed, advantage has been taken of the fact to treat various ailments by this means, especially those known as "functional" nervous disorders. These are conditions in which the patient, as result of a shock or ill-health, has become convinced that he is paralysed or otherwise disabled.

Suggestion under hypnotism has also been found of value in the treatment of sleeplessness, lumbago, stammering, sea-sickness, drug habits, and certain mental disturbances. Alcoholism has also been successfully treated.

HYPOCAUST (Gr. hypo, under; kaiein, to burn). Shallow heating chamber or channel beneath baths and dwelling-rooms, especially in Roman Britain. From an external furnace (hypocaustis) the hot gases, in the simplest type, passed through a channel to a wall flue, usually of box tiles. In a second type they passed to a central hollow whence branches led to flues in the sides and angles of the walls. The most frequent type was a chamber beneath the living-room, supported by rows of pillars about 30 ins. high and 18 ins. apart, often bearing mosaic pavements.

HYPOCHONDRIASIS. Term for a morbid anxiety as to the state of health. Sufferers from this affection are constantly afraid that they are afflicted with some disease or are specially prone to take some disease. Often it is a manifestation of neurasthenia.

HYPOTENUSE (Gr. hypo, under; teinein, to expand). Side of a right-angled triangle opposite the right angle. By Euclid's 47th proposition the square on the hypotenuse is equal to the sum of the squares on the other sides of the triangle.

Hypotenuse. Diagram showing the hypotenuse of a right-angled triangle, i.e. one containing an angle of ninety degrees

the pressure of the air affects the temperature at which water boils, it follows that a determination of the boiling point of water indicates precisely the atmospheric pressure. Travellers and explorers therefore use a hypsometer to check their readings of an aneroid barometer. Hypsometry is the art of measuring heights on the earth's surface, e.g. by trigonometrical survey, etc. Another method is by reading of the barometer, but this method gives an approximate result only. See Surveying.

HYRAX. Group of small ungulate mammals found in Africa, Arabia, and Syria. In appearance they are not unlike rabbits without

Hyrax. The Cape Hyrax,
Procavia capensis
F. W. Bond

the long ears; but they belong to the hoofed group, and in spite of their small size come systematically between the horses and the elephants. They are the animals called conies in the Bible. There are about 20 species, and they live in holes and feed upon leaves and young shoots. Their toes are protected by broad nails or hoofs.

HYRCANUS I, JOHANNES (d. 105 B.C.). King of Judaea and high priest of the Jews. Son of Simon Maccabaeus, he withstood the opposition of Ptolemy, who murdered his father and his two brothers. He threw off the yoke of Syria, and, entering into an alliance with the Romans, founded the monarchy, which continued in his family until the time of Herod.

His grandson, Hyrcanus II (d. 30 B.C.), became high priest on the death of his father, and king of Judaea on the death of his mother.

HYSSOP (*Hyssopus officinalis*). Aromatic evergreen shrub of the order Labiatae. A native of the Mediterranean region, it has elliptic or lance-shaped leaves, and bluish-purple flowers in whorls; it was formerly used in medicine as a carminative. The hyssop of Scripture has been identified as the eaper plant (*Capparis spinosa*).

HYSTERIA. Condition in which some of the functions of the body are disordered as a result of abnormal ideas not resulting from organic disease of the brain. Hysteria most frequently develops in persons who are somewhat unstable in mind or are exceptionally emotional. The immediate cause may be a psychological shock, such as fright, disappointment in love, or losses in business. In other cases the condition arises from a physical shock such as a fall, or an explosion in the immediate neighbourhood, the last cause being responsible for a large number of cases of hysteria among soldiers during the Great War, and forming one group of cases sometimes termed shell-shock.

Hythe. Crypt beneath the parish church containing the skulls of thousands of men who are supposed to have fallen in battle many centuries ago

HYTHE. Borough and watering place of Kent, one of the Cinque Ports. It is 67 m. from London and 4 m. from Folkestone, and is served by the Southern Rly. Under the raised chancel of S. Leonard's church is a vault with a collection of human skulls and bones. Hythe's importance as a port declined as the harbour became blocked by sand. In 1854 a school of musketry, now known as the school of small arms, was established here. Pop. 7,764.

I. Ninth letter and third vowel of the English and Latin alphabets. It has two sounds, long, as in mine, which is really a diphthong; and short, as in pin. The combination *ia* represents *ya*, as in Christian, or short *i*, as in marriage. *le* represents *long e*, as in brief; the diphthongal *i*, as in pie; short *i*, as in sieve; or short *e*, as in friend. The endings *-sion*, *-tion*, have a sound midway between *-shon* and *-shun*, unless *s* precedes, when *t* keeps its normal sound, as in question. See Alphabet; Phonetics.

IACCHUS (Gr. *Iakchos*). In Greek mythology, a mystic deity who played an important part in the Eleusinia. Later, he was confused with the younger Dionysus, the son of Zeus and Demeter. See Bacchus.

IAMBIC VERSE (Gr. *iaptein*, to assail). Lines containing a number of feet, each of which is an iambus or foot of two syllables, the first unaccented or short, the second accented or long. Iambic hexameter is the form of Greek tragedy. Iambic verse is peculiarly adapted to the English language.

IANTHINA (Gr. *ianthinos*, violet-coloured). Genus of marine gastropodous molluscs. With thin violet shells, they float on the surface of the sea. They inhabit the warmer seas; but the shells of four species have been found on the coast of Cornwall.

IAPETUS. In Greek mythology, one of the Titans. When this race of giants had been defeated by Zeus, Iapetus was imprisoned in Tartarus.

Iapetus is the name of the eighth moon of Saturn counting outwards from the planet. Discovered in 1671 by J. D. Cassini, it fluctuates considerably in brightness. See Saturn.

IBERIA. Name given by the Greeks to the S.W. peninsula of Europe, called by the Romans Hispania. It is still referred to as the Iberian peninsula. The name Iberia was also borne by the region between the Caucasus on the N. and Armenia on the S., corresponding to the modern Georgia.

Iberian Mountains is the name sometimes given to the mts. of central and E. Spain, particularly the ranges which include the Sierra de Guadamarra and those S. of the Ebro. The westernmost portion of the Mediterranean, between Spain on the N., and Morocco and Algeria on the S., is sometimes called the Iberian Sea. See Spain.

IBEX. Group of wild goats including some four species, all distinguished by fine upstanding, curved horns. The Alpine ibex (*Capra ibex*), almost extinct in the wild state, has horns over 40 ins. long. The Asiatic ibex (*C. siberica*) is brown to white in colour, and sometimes has horns over 50 ins. long. The Arabian ibex is yellowish brown, with dark markings. The Abyssinian ibex is much darker, and has black horns with a curious prominence on the forehead.

IBIS. Group of wading birds, nearly related to the storks, but distinguished by their very long, curved beaks. Numerous species are found in the warm countries of both hemispheres. The Egyptian ibis (*I. aethiopica*) is now rare in Lower Egypt, but common from the Upper Nile to the Cape. Its mummified remains are often

found in ruined temples. The glossy ibis (*I. falcinellus*) breeds in S. Europe, and is occasionally found in Great Britain.

IBRAHIM PASHA (1789-1848). Egyptian soldier. Born at Kavala, in Thrace, he was adopted by Mehemet Ali, who had estab-

Ibrahim Pasha, Egyptian soldier

lished himself as a virtually independent ruler in Egypt. Brought up as a soldier, Ibrahim subjugated the Wahabis in Arabia, 1816-18. In the campaign against the rebelling Greeks, 1824-28, he captured Navarino, Tripolizza, and Missolonghi, 1826. When Mehemet decided to annex Syria in 1831, Ibrahim captured Gaza and Acre and overran the country. In 1832 the Powers stepped in, and a treaty was signed by which Mehemet received Syria. Ibrahim was appointed governor, but in 1838 Turkey renewed the war. After his victory of Nezib, June 24, 1839, the Powers again intervened, and he evacuated Syria in Feb., 1841. He died at Cairo, Nov. 10, 1848. See Mehemet Ali; Syria.

IBSEN, HENRIK (1828-1906). Norwegian dramatist and poet. Born March 20, 1828, at Skien in S. Norway, in 1849 he began to publish sentimental poems and caustic epigrams, and in 1850 his first play, *Catiline*, was printed. In 1857 Ibsen became director of the new National Theatre in Christiania. Here he produced his first really successful play, *The Warriors in Helgeland*, 1858. His *Love's Comedy*, the first work in which his gift of bitter satire was conspicuous, made him unpopular, and hastened the threatening bankruptcy of the theatre. With allowances granted by the university and by the Norwegian Government he was able to travel, and he lived abroad until 1891, when he returned to Christiania. He died May 23, 1906.

Henrik Ibsen, Norwegian dramatist

Ibsen's dramatic poems, *Brand*, 1866, and *Peer Gynt*, 1867, had established his position as a writer of genius. Of his most famous plays, *Emperor and Galilean* came first in 1873; then *Pillars of Society*, 1877; *A Doll's House*, 1879; *Ghosts*, 1881; *An Enemy of the People*, 1882; *The Wild Duck*, 1884; *Rosmersholm*, 1886; *The Lady from the Sea*, 1888; *Hedda Gabler*, 1890; *The Master Builder*, 1892; *Little Eyolf*, 1894; *John Gabriel Borkman*, 1896; and *When We Dead Awaken*, 1900.

IBSTOCK. District of Leicestershire. It is 14 m. from Loughborough, on the L.M.S. Rly. which serves also the village of Heather. The chief industries are the making of bricks and tiles. Pop. 5,211.

ICARUS. In Greek mythology, son of Daedalus. While accompanying his father in his flight from Crete, he was drowned near Samos in the sea called after him Icarian. See Daedalus.

ICE. Water in the solid state. Water in the pure state freezes at 0° C. or 32° F., at ordinary atmospheric pressure, into a crystalline solid. Water expands as its temperature is lowered below 4° C., with the result that ice is lighter than water. Impurities mixed with water have the effect of lowering the freezing point, sea-water freezing between -2.5° and -3.0° C. Ice, in melting, absorbs more heat than any other solid. Large quantities of natural ice are harvested and stored in icehouses for distribution when required. On a still larger scale artificial ice is produced for the preservation of food, etc.

Ice action is a term used for the wearing away or alteration of the shape of land, rocks, etc., by the action of ice. An icebreaker is a ship designed to force its way through ice-bound waters or seas. In some cases such vessels act as train ferries; in others they clear a passage and keep it open for other ships. See Freezing Point; Refrigeration.

ICE AGE. The earlier part of the existing geological period, the Pleistocene. It is called the Great Ice Age because various countries were then overwhelmed by ice caps or ice sheets, while the glaciers on the equatorial mountains were more extensive, and those in the subtropical regions descended to 10,000 ft. below their present limit. Ice covered large areas of north-western Europe, Canada, and the northern United States, and as it melted the included earth and stones were spread out in vast sheets of irregular deposits, which were known as the "diluvial drifts," until L. Agassiz recognized them as laid down by ice. Glacial deposits cover most of the British Isles N. of a line from the Thames to the lower Severn. Ice from Scandinavia spread S. into Germany, while the glaciers of the Alps and Pyrenees were more extensive than at present. Small glaciers existed as far S. in Europe as the Balkans. Extensive glaciers also occurred in Tasmania.

Man was contemporary with at least the later glaciations, his remains being found in England and France with the mammoth and reindeer in beds earlier than the last glacial deposits. Ice ages at very early periods of the earth's history have been proved in the Cambrian in Central China, also in the Carboniferous in S. Africa, S. America, Australia, and Central India. See Geology; Glacier.

ICEBERG. Mass of land ice which has broken away from a glacier or ice-sheet. When a glacier or ice-sheet reaches the sea, the ice is buoyed up by the water, or cut by wave motion, causing masses to break off. Only about one-ninth of an iceberg is above the water. Arctic bergs have been seen 300 ft. high, that is, 2,400 ft. below water. Ice

pack is the term used for small masses of sea ice or broken fragments of icebergs driven together by wind or currents. They form a more or less compact barrier to navigation in Polar regions. Greenland ice-sheets and glaciers form most of the Atlantic icebergs. See Antarctica; Arctic Ocean.

ICE CREAM. Flavoured frozen compound of cream, sugar, and eggs. To make ice, a freezing machine is needed, which in its simplest form consists of a pewter or zinc vessel of a capacity varying from 2 quarts to 40 quarts, and a wooden tub into which crushed ice and salt, or other freezing mixture, is placed. The ice-cream ingredients are put into the pewter vessel, and this is pushed into the freezing mixture.

Iceberg. Wave grooves on an overturned North Atlantic iceberg

Ibex. Specimen of the Grecian variety of the wild goat W. S. Berridge, F.Z.S.

Ibis. Hadadab ibis of Central Africa

ICELAND (Dan. Island) Island in the N. Atlantic Ocean, under the same sovereignty as Denmark. It lies between lat 63° 23' N. and the Arctic Circle, about 200 m. S.E. of Greenland. The capital is Reykjavik. Its area is about 40,500 sq. m. Pop. 100,000.

The island is a mountainous plateau of volcanic rocks. The lowlands, only about one-fifteenth of the total area, are chiefly in the S. and S.W. The coasts, except on the S., are high, rugged, and deeply indented by long fiords. The heights of the plateau are covered by snowfields or jökulls. The numerous rivers are unnavigable but are great sources of water power. Volcanic activity is considerable. The most famous volcanoes are Hekla (Hecula) and the crater of Askja in Dyngjufjöll. The best known of the many hot springs is the Great Geyser.

The principal occupations are sheep and cattle farming. The coastal fisheries, particularly cod, have always been important. There are some whaling stations. The minerals comprise lignite, sulphur, and Iceland spar. No rlys. have yet been built. There is a good system of telegraphs and telephones. External communications are direct with Norway, Denmark, Scotland, and the U.S.A. Exports are mainly fish, animals, butter and other dairy products, wool, and hides.

Iceland is a constitutional monarchy. The executive is vested in the king, acting on the advice of three responsible ministers. The legislative body is the Althing, composed of an upper house of 14 and a lower house of 28 members. The thousandth anniversary of this parliament was celebrated in June, 1930.

A republic founded in 1930 lasted till 1263, when Iceland acknowledged the rule of Norway, but retained its own form of government. Together with Norway, Iceland came under Danish rule in 1381, but when, by the treaty of Jan. 14, 1814, Norway was separated from Denmark, Iceland continued under the sovereignty of the king of Denmark.

By the Act of Union of 1918, Iceland became a free sovereign state united with Denmark only in having the same sovereign. Denmark takes charge of Iceland's foreign

ICELAND SPAR. Transparent, colourless variety of calcite, found in Iceland. It has a strong double refractive power and is consequently used

Iceland. 1. Washing clothes and making coffee at hot springs. 2. Bridal head-dress

glory is departed from Israel." **ICH DIEN** (Ger. I serve). Motto of the prince of Wales. It was erroneously said to have been adopted by the Black Prince, together with the three white ostrich plumes, from John, king of Bohemia, who fell at the battle of Crécy, fighting for France.

ICHNEUMON FLY.

Large group of hymenopterous insects. Most of them are minute, and the majority are in their larval stage parasitic on caterpillars. The adult insect bores through the skin of the caterpillar with her ovipositor and so introduces the egg. When this hatches out, the larva feeds on the tissues of its host. In some species the ichneumon larvae emerge from their host and pupate outside, while in others they pupate within the cocoon spun by the caterpillar, or in the chrysalis.

ICHTHYOPHAGI (Gr. fish-eaters). Primitive coast-peoples reputed by ancient geographers to subsist on sea-food. Alexander the Great's admiral Nearchus described those of the Gedrosian coast—the Baluchistan Makran—as giving fish to their domestic animals also, and occupying whalebone and conch-shell dwellings.

ICHTHYORNIS. Extinct toothed bird. It was a strong flying bird, about a foot in height, possessing a row of reptile teeth in each jaw. A sea-bird, it fed on fish and nested on the shore.

ICHTHYOSAURUS. Genus of extinct fishlike reptiles found in the Rhaetic, Jurassic, and Cretaceous strata in Europe, America, Africa, and Australia. The reptile was from 4 to 40 ft. long, and had a round and tapering body and a large head with long jaws armed with a number of sharp, conical teeth. The neck was short, the limbs like flappers or fins, and the tail a vertical fin. See Brontosaurus; Dinosaur; Fossil.

ICKNIELD WAX. Early English name for a prehistoric track from near Wantage to Dunstable. Following the Berkshire Downs and Chilterns, it may have continued N.E., crossing Ermine Street (q.v.) near Royston,

and thence to Caistor. It ranked as one of Edward the Confessor's four royal roads.

ICON or **IKON** (Gr. eikōn, image, likeness). In the Greek or Orthodox Eastern Church, a representation, in the form of painting, low-relief sculpture, or mosaic, of some sacred personage. Excepting the face and hands, the whole is often covered with a metal plaque embossed so as to represent the figure and drapery. Until recently icons were venerated by the Russian peasants, who generally carried them in the shape of folding tablets.

ICONOCLAST (Gr. eikonoklastai, image-breakers). Name applied to an opponent of the use of images and pictures in religious worship. As early as the 2nd century protests were made against a practice which appeared dangerous in view of the idolatry with which the Church was surrounded. In the 8th century the rise of a party of iconoclasts in Eastern Europe started a prolonged controversy. The emperors issued edicts forbidding the veneration of pictures or images, while the popes inclined in the opposite direction. By the year 842 the iconoclasts were completely defeated.

The name iconoclasts has also been given to the Puritan party in the 16th and 17th centuries who endeavoured to destroy every kind of pictorial or sculptural adornment in churches. See Idolatry: Image Worship.

IDA. Mountain range of Asia Minor. Called by the Turks Kaz Dag, this name was given in classical times to a range which stretched from Phrygia through Mysia into the Troad. See Crete.

IDAHO. North-western state of the U.S.A. Its area, 83,888 sq. m., comprises a tableland with a mean elevation of 4,500 ft., and many snow-capped peaks of over 12,000 ft. Lying within the Rocky Mountain region, many outlying ranges cover the N.E. section, while the S. presents a vast lava plain. The Snake river bisects the state in the S., and turns N. to form part of the western boundary.

Agriculture owes much to irrigation; good crops of wheat, oats, and barley are obtained. Sheep and other live-stock are raised, and dairying is increasing. Idaho produces lead, gold, silver, copper, and zinc. Boise is the capital. Pop. 546,000. Pron. Ida-hō.

IDDESLEIGH, STAFFORD HENRY NORTHCOTE, 1st EARL OF (1818-87). British politician. Born in London, Oct. 27, 1818, of an old Devonshire family, he succeeded in 1851 to the family baronetcy and estates, and in 1855 entered the House of Commons as M.P. for Dudley. In 1866 he was made president of the board of trade in the Conservative Cabinet, and the next year secretary for India. In 1874 Northcote became chancellor of the exchequer, and in 1876, on Disraeli's transfer to the Lords, he succeeded him as leader of the Commons. In 1885 he was made an earl and became first lord of the treasury, and he was foreign secretary in 1886. He died suddenly in Downing Street, Jan. 12, 1887.

Iddesleigh's eldest son, Stafford Northcote, Walter Stafford (1845-1927), succeeded to the titles. A younger son, Stafford Henry (1846-1911), was governor-general of Australia, 1903-8. He was created Baron Northcote in 1900.

IDENTIFICATION. Term used in English law. Identification is often a matter of legal importance. The finger print system

Iceland. Map of the North Atlantic island, which is a sovereign state under the king of Denmark

affairs, and there is provision for an advisory Dano-Icelandic committee to consider legislation of importance to both states. After 1940 the legislatures of either state may demand the revision of the Act of Union.

ICELAND MOSS (Cetraria islandica). Native lichen of the mountainous regions of Europe, Asia, and N. America. Growing erect upon the ground, it is a thick ribbon of brown colour. In Arctic regions it is used as food. It is also of value as a dye-stuff.

Ich Dien, Prince of Wales's crest and motto

Ichneumon Fly, Ophion Internm

Stafford Northcote, 1st Earl of Idesleigh

has eliminated some of the risks of mistake. Identity can be established not only by swearing to the face, but to any physical peculiarity, to the voice, or even the clothes of the person to be identified. It is, however, always a question of fact; and no one ought to be convicted of a crime unless evidence of identity is so strong as to leave no reasonable doubt. See Finger Print.

An identity disk is a token worn by soldiers on active service. The commonest form in the Great War was a little piece of light metal on which were stamped the soldier's name, number, unit, and religion. Attached to a cord, it was officially worn round the neck under the tunic, and frequently round the wrist. In 1916 two identity disks, a green and a red, were supplied to British officers and men. The first disk was issued with 6 in. of cord attached, the red disk was fastened to the green disk by the string attached to it, both being worn round the neck by a cord. In the event of death the green disk was buried with the body. Where a body could be reached and identified, but not brought back for burial, the red disk was sent home.

IDES (Lat. *idure*, to divide). In the Roman calendar, the name of the 13th day of the month, except in March, May, July and Oct., when the Ides fell on the 15th. See Calendar; Calends.

IDIOCY or **IDIOCY**. Condition of extreme feeble-mindedness present at birth or in very early childhood. The cause may be pre-natal, one or both parents having suffered from insanity, epilepsy, alcoholism, or syphilis. Sometimes the condition follows infantile convulsions. See Lunacy.

IDLE. River of Nottinghamshire. Formed by the junction of the Maun and the Modon, it flows from Sherwood forest to the Trent at W. Stockwith, Notts. Its length is about 40 m.

The district of Bradford, Yorkshire, known as Idle stands on the river Aire, 3 m. from the centre of the city, and has a station on the L.N.E.Rly. It was included in Bradford in 1899. See Bradford.

IDOLATRY (Gr. *eidōlon*, idol; *latreia*, worship). Literally the worship of idols. In Judaism, Christianity, and Islamism the word implies the worship of any but the Supreme Being. In the history of man idolatry has a place between animism or Nature worship, ancestor worship, and belief in one true God. The idol was evolved when the first attempt was made to represent the unseen spirit by an image, and the virtues of that spirit were attributed to the representation or image. See Animal Worship; Animism; Fetishism; Iconoclast; Image Worship.

IDOMENEUS. In Greek legend, king of Crete and grandson of Minos. Caught in a storm on the return journey after the Trojan War, he vowed to sacrifice to Poseidon the first thing that met him if he reached home safely. The first person to greet him on the shore of Crete was his own son, whom he was compelled to sacrifice. As a result, a plague descended upon the country, and Idomeneus was driven into exile. Pron. I-dommy-newee.

was built about 1530. It figures in Dumas' Count of Monte Cristo

IFFLEY. Village of Oxfordshire. It stands on the north side of the Thames, 2 m. from Oxford. There is a Norman church, with a

Iguana. The large S. American lizard, *Iguana tuberculata*, basking on a branch

fine doorway and west front. The picturesque mill has been burned down. Pop. 360

IGHTHAM. Village of Kent, 4½ m. from Sevenoaks. On Ightham common was a Roman camp. Ightham Mote is a manor house, dating from the 14th century, with a moat, Tudor chapel and other features. Pop. 1,596.

IGLOO. Eskimo hut. Built for temporary use in the winter season, the huts are frequently constructed of blocks of ice piled high in a dome. See Eskimo

IGNATIUS. Patriarch of Antioch and Apostolic Father. According to Eusebius, he was the second bishop of Antioch after S. Peter. About A.D. 116 he was seized during the persecution under Trajan and taken to Rome to be thrown to the lions. On the journey he wrote the important Ignatian Epistles, addressed to various churches.

Father Ignatius, Anglican preacher Elliott & Fry

IGNATIUS, FATHER (1837-1908). Anglican preacher, whose real name was Joseph Leicester Lync. Born at Barking, Nov. 23, 1837, he was ordained in 1860, and after a short time adopted the Benedictine habit and styled himself Father Ignatius. In 1870 he built Llanthony Abbey, among the mountains some miles from Abergavenny, as the home of an Anglican Benedictine order. He won a great if temporary fame as a preacher. He died Oct. 16, 1908.

IGNEOUS ROCKS. Rocks which have been formed from certain materials once in a molten condition. They are usually subdivided into three classes, (1) lavas which have been poured out from volcanoes to form sheets on the surface, effusive rocks; (2) those which have been formed by molten material being forced into veins, fissures, etc., beneath masses of other rock, intrusive rocks; and (3) those rocks which have been solidified under great pressure and at great depths, the plutonic rocks. Igneous rocks show a wide variation in chemical composition, but consist chiefly of silica, alumina, iron oxide, lime, magnesia, potash and soda, with small amounts of phosphorus, chlorine, sulphur, etc. See Geology.

IGNIS FATUUS. Flickering flame due to marsh gas, sometimes seen floating over marshes, and in places where there is decaying animal matter. The phenomenon is known by several other names, e.g. Will-o'-the-wisp and Jack-o'-Lantern.

IGNITER. Small charge of gunpowder placed in a cartridge, which conveys the flash from the firing tube or primer to the cordite. In Q.F. cartridges, which contain the charge in a brass case furnished with a primer, the igniter sometimes consists of a small cylinder of cordite sewn to a shalloon bag of gunpowder. In B.L. cartridges the igniter is enclosed in a silk or shalloon bag sewn into the end of the cartridge. See Cartridge.

IGUANA. Family of large lizards, found in the tropical regions of America and including about 300 species. The best known is *I. tuberculata*, about 5 ft. long, with a kind of fringe on its back and a very prominent dewlap. It is found in Central and S. America and in the W. Indies, and spends most of its time in the trees. It feeds mainly on fruits and leaves. It is quite inoffensive. See Lizard.

IGUANODON. Fossil land reptile. Belonging to the Dinosaurs, it is found in the Jurassic and lower Cretaceous rocks of Europe. It was 15 to 25 ft. long, with a small head, heavy jaws set with teeth like the modern iguana, and strong, flexible lips. The animal, an herbi-

Iguanodon. Reconstruction of this prehistoric reptile from remains found in Kent and Belgium

vorous feeder, supported itself on its two hind legs and powerful tail, its front limbs being comparatively small. See Dinosaur.

I.H.S., the Christian monogram

I.H.S. Monogram used in Christian worship from early times. Placed within a circle of rays, it is a device of the Society of Jesus. Probably it represents the first three letters of the Greek *IHCOCYC* (Jesus), with the third letter Latinised. There are variant forms of the monogram such as IC, IH, IHC, JHS.

ILCHESTER. Village of Somerset. It stands on the Yeol, 5 m. from Yeovil. The chief building is the restored church of S. Mary, and there are some 15th century almshouses and an old cross. A stone bridge connects the town with Northover, across the Yeol. It was the co. town of Somerset until early in the 19th century. Roger Bacon was born here. Pop. 449.

The title of earl of Ilchester has been borne since 1756 by the family of Fox-Strangways. In 1741 Stephen Fox (1704-76), a Dorset M.P., was made Baron Ilchester, and in 1756 was created an earl, Ilchester being the name of his Somerset estate. The earl owns the historic Holland House, (q.v.), Kensington, which came to him from his kinsman Lord Holland. His eldest son is called Lord Stavordale.

ÎLE DE FRANCE. Name given to a district in old France, the nucleus of the kingdom. It lay around Paris, and was an island in the sense that its boundaries were mainly rivers. From their home in the island the early kings enlarged their territory. Until the Revolution the Île was one of the country's provinces or governments. It is now covered by the departments of Seine, Seine-et-Oise, Seine-et-Marne, Oise, and Aisne.

Île de France is also an old name of Mauritius. See Mauritius.

The Île du Diable, or Devil's Isle, a penal settlement, where Dreyfus was imprisoned, is one of the Îles du Salut, three islands off the coast of French Guiana.

If, the Mediterranean island, and the château, once a famous prison

IF. Small island in the Gulf of the Lion, France. It is 2 m. from Marseilles, and its castle, the château d'If, long used as a prison,

ILEX. Genus of shrubs and trees of the order Aquifoliaceae. Natives of temperate and tropical regions, they have alternate, undivided leaves, often of a leathery or evergreen character, and small flowers clustered in the axils of the leaves. The common holly (q.v.) is the best known species in the old world, but in S. America *Ilex paraguayensis*, which yields maté (q.v.), is found.

ILFORD. County borough of Essex. Part of Greater London, it lies E. of the Roding, $7\frac{1}{2}$ m. from Liverpool Street on the L.N.E.Rly. There are several parks and recreation grounds. A garden suburb has developed on part of the Valentines estate. In 1928 it was decided to erect a large hospital, to be known as the King George, at Ilford. Pop 85,191.

ILFRACOMBE. Watering place, market town, and urban dist. of Devonshire. It stands on the Bristol Channel, 12 m. N.W. of Barnstaple and 225 m. from London on the South-coast and G.W. Rlys. Its chief attractions are the fine cliffs and beautiful scenery. Near the town is Capstone Hill. The chief building is the restored

Ilfracombe. Cliffs near this Devonshire town, famed for its scenery

church of Holy Trinity. The lighthouse which is situated on Lantern Hill was once the chapel of S. Nicholas. Market days, Wed. and Sat. Pop. 11,772.

ILIAD, THE. Epic poem in 24 books dealing with a phase of the tenth year of the siege of Ilion or Troy. The central incident is the wrath of the hero Achilles. Agamemnon, the leader of the hesieging Achaean host, had seized the Trojan maiden Chryseis, the daughter of a priest of Apollo. The god thereupon sent a plague, which the soothsayer Calchas declared could only be stayed by the restoration of Chryseis to her father. Agamemnon consents, but threatens to deprive Achilles of the captive maid Briseis.

Zeus inclines the scales of victory in favour of the Trojans until Hector has stormed the ramparts and Agamemnon promises atonement. Achilles remains in his tent and allows his friend Patroclus, equipped in his armour, to take his place. Patroclus is slain by Hector, whereupon Achilles enters the field again and avenges the death of his friend. The poem concludes with the ransoming of the body of Hector by his father Priam. It relates the events of 51 days only. See Achilles; Homer.

ILKESTON. Borough and market town of Derbyshire. It is 9 m. from Derby and about the same distance from Nottingham, and is served by the L.M.S. and L.N.E. Rlys. The river Erewash runs by it, as does a canal. The church of S. Mary is partly Norman. The development of the coalfield made the place a manufacturing centre. The making of hosiery and lace are other industries. Market day, Sat. Pop. 32,269.

ILKLEY. Urban district and watering place of Yorkshire (W.R.). On the Wharfe, 16 m. from Leeds and 12 m. from Bradford, it has stations on the L.M.S. and L.N.E. Rlys. There are three Saxon crosses in the churchyard of All Saints. The council has acquired Ilkley Moor, 1,560 acres of moorland. In the neighbourhood are Bolton Abbey and other places of interest. Pop. 10,000.

ILLAHUN or **ELLAHUN.** Village in the Fayum, Upper Egypt, 12 m. S.E. of Medina. In the vicinity is the pyramid built for Senusert II of the XII dynasty, as well as

the workmen's dwellings at Kahun. In the pyramid was found the gold serpent from the royal crown. A Coptic cemetery of about A.D. 600 yielded fine embroideries and stuffs.

ILLAMPU or **SORATA.** Mountain of Bolivia, S. America. In the Eastern Cordillera it is 60 m. N.N.W. of La Paz, E. of Lake Titicaca. It has two summits, of which Aucuhuma reaches 21,490 ft. and Illampu 21,275 ft. The name Illampu is more usually applied to the separate summit, and Sorata to the entire mountain. See Andes; Sorata.

ILLAWARRA. District of New South Wales. It comprises the coastal strip between the mountains S. of Sydney and the Pacific, and is noted for its scenery. It is rich in coal, and is a productive dairying region. Illawarra Lake joins the sea.

ILLEGITIMACY. Condition of one born out of matrimony, i.e. hasty. By English law such children are illegitimate as are not born either in lawful wedlock or within a competent time after its determination.

In England and Wales, by the Legitimacy Act, 1926, illegitimate children are made legitimate by the subsequent marriage of the parents. This procedure had long been the law in Scotland. See Bastard; Legitimacy.

In heraldry illegitimacy may be indicated by a mark of abatement, most usual on the shield being the baton, bend, or bendler, sinister, and nebuly border. Anciently other methods were also used, e.g. the marshalling of the family arms on a bend, chevron, or other ordinary. The popular term har sinister should be properly rendered as bend sinister. See Baton; Bend.

Illegitimacy. Two means of indicating illegitimacy in heraldry. 1. Nebuly Bordure, 2. Baton

ILLIMANI. Volcanic mountain mass of the Andes. It is in Bolivia, about 26 m. S.E. of La Paz. It is 21,200 ft. high, and carries glaciers and a lake at an alt. of some 16,000 ft.

ILLINIUM or **FLORENTIUM.** Rare earth metal believed to be a missing element with the atomic number 61, between neodymium and samarium. Its discovery was announced by Harris, Hopkins, and Yntema of Illinois in 1924. Professor Rolla of Florence also claimed to have made an independent discovery of the substance, which he named Florentium. Illinium was discovered in the rare earth residue from monazite sands after the extraction of thorium and cerium.

ILLINOIS. State of the U.S.A. It lies to the S.W. of Lake Michigan, which forms part of its eastern frontier, and has an area of 56,665 sq. m. The largest rivers are the Mississippi, along the western boundary, its tributary the Illinois, and the Wabash and the Ohio on the E. and S. borders respectively. Known as the prairie state, Illinois is largely agricultural. Coal is the principal mineral, and petroleum, sandstone, limestone, and fluor-spar are worked. The rivers and the Great Lakes afford excellent transport facilities, and the rly. service comprises over 12,000 m. of steam and over 2,000 m. of electric traction. Education is provided by the Chicago, Illinois, and North-western universities and many colleges. The capital is Springfield, but Chicago is the principal city. Pop. 7,396,000. Pron. Illinoy or Illinoiz.

ILLUMINATION. Decoration of written text with coloured pictures or designs. Painted hooks were the immediate precursors of printed books. They were works of art, and being portable, their preservation was easy. Their vogue lasted from the 9th to the 16th century, though some, e.g. the celebrated version of

the Gospels produced at Kells, now in Trinity College, Dublin, were written and ornamented some centuries earlier. The illuminators were either professional artists or scholarly monks who had made a special study of miniature painting and decoration. The MSS. most commonly illuminated were Bibles, Gospels, Psalters, Missals, Breviaries, Books of Hours and manuals of devotion, and, less generally, Bestiaries, certain of the Latin and Italian classics, and works of a religious and theological character.

ILLUSTRATION. In art, the pictorial elucidation of the printed word by diagrams, and more specifically its ornamentation by explanatory, interpretative, or complementary drawings or photographs.

The embellishment of manuscripts with designs and pictures wrought by hand belongs properly to the art of illumination (q.v.). Books containing illustrations, engraved on copper and wood, have existed from the 15th century, but for practical purposes the art may be divided into three periods: (1) the copper and steel plate period, middle of the 18th to the middle of the 19th century; (2) the woodcut period, the whole of the 19th century; and (3) the process period—half-tone and line or facsimile—which, beginning towards the end of the 19th century, became peculiarly the product of the 20th.

Steel plates were costliest. They were printed on thick plate paper, and were the special features of various literary Annuals such as *Forget-Me-Not* (1822-44). Wood engravings were cheaper; they could be printed with the letterpress as an integral part of the book on ordinary paper, and by taking one or more electrotypes of them and printing from these, the original wood block was preserved unimpaired. The publication of illustrated periodicals, such as *Punch*, *The Illustrated London News*, and *The Graphic*, of pictorial Bibles, histories of England, Shakespeares, and other classics would have been impossible but for woodcuts. They were eliminated by "process," the amazing cheapness of which was irresistible. See Drawing; Engraving; Half-tone; Woodcut.

ILLYRIA or **ILLYRICUM.** Term used in ancient times for the country on the Adriatic coast N. of Epirus, extending as far as the river Dravus (Drave), and bounded E. by Macedonia and Upper Moesia. It included roughly the modern Montenegro, Bosnia, Herzegovina, Dalmatia, and S.W. Hungary. The country was annexed by the Romans in 168, and in A.D. 9 the province of Illyricum was established.

In 476 Illyricum became part of the Eastern empire. In the 7th century it was occupied by Slavonic invaders, and the name disappears from history until in 1816 the Austrians revived the name, and until 1849 Illyria was one of the constituent states of the Austrian empire. See Italy.

ILMENITE. Rock-forming mineral found in grains and crystals of certain igneous rocks. It contains iron and titanium, the variable proportions giving rise to many varieties of the mineral. Brown to black, with a semi-metallic lustre, it is highly refractory, and is used for lining furnaces.

ILMINSTER. Urban dist. and market town of Somerset. On the G.W. Rly., 5 m. from Chard, it has a fine church and a grammar school. In the church are buried Nicholas and Dorothy Wadham, founders of Wadham College, Oxford. Market day, Wed. Pop. 2,367.

ILORIN or **ILLORIN.** Town of Nigeria. It is 243 m. from Lagos and 541 m. from Kano, and is a great trading centre, with manufactures of leather, pottery, and shoes. It was founded at the close of the 18th century, and became the capital of one of the Yoruba kingdoms. Pop. about 70,000.

IMAGE WORSHIP.

Adoration of statues or pictures of sacred persons or things. In the O.T., where idol worship is condemned, are many references to sculptured, graven, and molten images of clay, wood, silver, and gold. In the Christian Church the use of images grew with the development of art, and their veneration led to the rise of the iconoclasts in the 8th-9th centuries. In medieval times sacred images were often associated with miracle working.

At the Reformation, while Lutherans were comparatively indifferent on the subject so long as the images themselves were not worshipped, the Calvinists and Puritans rejected them entirely. The Roman Church forbids absolute, but permits relative homage to representations of Christ, the Virgin, and the saints. The Greek Church permits the use of the icon and of pictures. Islamism rejects all representations of living things. See Emblem; Iconoclast; Idolatry.

IMAGO.

Adult or perfect stage of an insect after it has passed the larval and pupal stages. It is generally distinguished by the possession of wings, and as a rule does not grow. Many insects do not eat in this stage, their one business then being the propagation of the species. See Insect.

IMAM OR **IMAM** (Arab. leader, president).

Mahomedan title. Among other applications, it was given to certain Mahomedan princes in the early period, e.g. the caliphs, and survives in modern times, e.g. the imam of Muscat. In modern usage the name specially indicates the minister who officiates in the mosques at public prayers.

IMARI. Name of a Japanese ware. It is a mixture of white clay and ground felspathic rock, forming a fine stoneware or porcelain.

Imari. Bowl of Japanese ware with painted design

chiefly on Korean and Chinese specimens.

IMBROS OR **IMBRO.**

Island of the Aegean Sea, near the entrance to the Dardanelles. It is about 100 sq. m. in extent. The chief town is Kastron, or Castro. Formerly Turkish, it passed to Greece in 1920. The island produces cereals, fruit, and silk. After the British evacuated Gallipoli, Dec., 1915, they used it as a military base. Pop about 10,000.

IMMACULATE CONCEPTION.

Doctrine of the Roman Catholic Church declaring that the Blessed Virgin Mary was preserved from all stain of original sin. Originating in the 6th century and a constant subject of controversy since the 12th century, the idea became an article of faith in the Roman Catholic Church on Dec. 8, 1854, when Pius IX issued a bull, *Ineffabilis Deus*, in its favour. The feast of this name was inserted in the calendar of the Catholic Church in the first half of the 14th century. See Incarnation.

IMMANUEL OR **EMMANUEL** (Heb. God is with us).

Hebrew proper name. It was the name or title of a child whose birth Isaiah (7, 14) predicted as a sign from heaven that God would preserve Judah from destruction at the hands of its foes. In Matthew (1, 23) the prophecy is applied to Christ as the Messiah and Saviour of His people.

IMMELMANN, Max (1890-1916).

German airman. Born at Dresden, Sept. 21, 1890, he was a medical student before joining the air force. In the early part of the Great War he was one of the most successful fighters on

the western front, his method being to rise to great heights and then swoop down on his opponent. He also invented the aerial manoeuvre called the Immelmann turn.

Lieut. Immelmann, German airman

IMMIGRATION (Lat. in, into; migrare, to move).

Entrance of people into another country for the purpose of settlement. In 1921 the senate of the U.S.A. passed an Immigration Restriction Act limiting the number of aliens to be admitted to the United States during the year beginning April 1 to a maximum of 355,000, divided among the various nationalities, and this restrictive policy has been maintained. See Alien; Emigration.

IMMINGHAM. Seaport of Lincolnshire.

It is 7 m. N.W. of Grimsby on the L.N.E. Rly. It was a fishing village until the 20th century, when the rly. company decided to construct extensive docks here. These were opened in 1912. Pop 2,150.

IMMORTALITY (Lat. in, not; mortalis, subject to death).

Condition of being exempt from death. Belief in life after death has been almost universal, though its character has varied greatly. It is first seen in Egyptian religion, where the other life is a replica of this. In Babylonia and Assyria resurrection of the body preceded true immortality. To the early Greeks Hades represented the abode of the dead. In the Christian Church immortality is the reward of the believer, the orthodox conception including the resurrection of the body, transformed and glorified. See Heaven; Purgatory; Survival.

IMMUNITY (Lat. immunis, exempt).

Bacteriological and pathological term signifying the resisting power which exists in all living creatures to hostile agencies. It is applied especially to resistance to disease, and may be natural or acquired. Natural immunity is a product of evolution. Acquired immunity may be the result of a recovery from an attack of the disease in question; or it may be conferred artificially by means of vaccination processes or inoculation, or injection of a serum. See Bacteriology; Disease.

IMPALING (Lat. in, on; palus, stake).

In heraldry, a method of marshalling two or more coats of arms on one shield, the arms being placed side by side. See Heraldry.

IMPEACHMENT (Fr. empêchement, from late Lat. impedicare, to fetter the feet).

In English law parliamentary prosecution by the House of Commons, before the House of Lords as judges, of a person accused of treason or any other crime or misdemeanour.

The actual procedure follows the lines of an ordinary trial, the defendant being permitted to employ counsel and call witnesses. At the conclusion the president, who is either the lord high steward or the lord chancellor, calls upon each peer individually to declare upon his honour whether the defendant is guilty or not guilty. In the event of the defendant being found guilty the Lords pronounce judgement only if the Commons demand it, the latter thus reserving the power of pardon to themselves.

IMPERIAL CONFERENCE.

Meeting of representatives of the various parts of the British Empire. In 1887 representatives of the self-governing Colonies, present in London at the jubilee of Queen Victoria, met together in conference, and from this the Imperial Conference sprang. One is now held every four years. The prime minister is president, with the secretary of state for dominion affairs as

chairman in his absence. The other members are the premiers and other ministers of Canada, Australia, New Zealand, S. Africa, Newfoundland, S. Rhodesia, the president of the Irish Free State, and the secretary of state for India.

IMPERIAL GUARD.

Name of a French military corps. It grew out of the corps of guides used by Napoleon in Italy and Egypt and took its name when he became emperor in 1804. The guard took part in many of the campaigns; in 1814 its strength was about 100,000 and it was divided into the Old and the Young Guard. It was restored by Napoleon III in 1861, but did not survive the fall of the empire in 1870.

Imperial Guard of Napoleon III

IMPERIAL INSTITUTE.

Building erected in S. Kensington, London, to commemorate the jubilee of Queen Victoria's reign, the name being also used for the society which has its headquarters therein. The structure, which is in the Renaissance style, was opened in 1893. The object was to assist

Imperial Institute, S. Kensington. The main façade and tower

the development of the resources of the empire by arranging exhibitions of its natural products and raw materials, and disseminating information about them. In 1900 the building became the property of the Government.

IMPERIALISM.

Term derived from the Latin imperium, meaning originally military authority, and then empire. It is applied in modern times to the belief in the expansion and development of an empire, and came into general use in the latter part of the 19th century to describe the policy of those who adopted this creed with regard to the British Empire. Prominent imperialists have been Lord Beaconsfield, Lord Rosebery, and Joseph Chamberlain. See British Empire.

IMPERIAL SERVICE ORDER.

Meritorious and long service decoration for members of the civil service. Instituted by Edward VII in 1902, and extended in 1909,

Imperial Service Order, ribbon and star

the companionage is confined to 700 members of the clerical and administrative branches, this number including 250 for home civil service, 250 for civil servants of colonies and protectorates, and 200 (100 Europeans and 100 natives) for the Indian civil service.

The badge for men is a silver star whereon is a gold medallion bearing the royal and imperial cipher in blue within a circlet inscribed "for faithful service." For women the plaque is surrounded by a wreath of laurel in place of the star. Ribbon, a stripe of blue between two of crimson of equal width, the woman's worn as a bow.

IMPEY, SIR ELIJAH (1732-1809).

British lawyer. Born at Hammersmith, June 13, 1732, he became recorder of Basingstoke, 1766.

and counsel to the East India Company in 1772, and was appointed chief justice to the new supreme court of Calcutta, 1774. The fall of Hastings involved Impey, against whom charges of corruption were brought. He defended himself successfully before the House of Commons but resigned his post. M.P. for New Romney, 1789-96, he died Oct. 1, 1809. See Hastings, Warren.

Imphal. Another name for the Indian town better known as Manipur (q.v.).

IMPORTS. Name given to the goods taken into a country, the opposite of exports. These are valued at the custom house or by other authorities, and all civilized countries issue periodical returns showing the nature and values. In the United Kingdom this is done monthly by the Board of Trade.

The following figures show Great Britain's imports in 1913 and from 1925 to 1929:

1913	£ 768,734,000
1925	1,320,715,000
1926	1,241,361,000
1927	1,218,341,000
1928	1,196,940,000
1929	1,221,000,000

The difference between a country's imports and its exports is known as its balance of trade, but to strike an accurate balance certain considerations must be remembered. For instance, imports are valued at prices which include the cost of carriage on shipboard, whereas exports are valued at prices which do not. See Balance of Trade; Exports.

IMPOTENCE (Lat. impotentia, incapacity). Term applied in law and medicine to inability to have sexual relations. Principal causes of impotence in males are: extremes of age; constitutional disease; particularly locomotor ataxia and other affections of the spinal cord; injury or disease of the organs of generation; and psychical influences, associated with neurasthenia or hysteria. Impotence is a ground for a suit for nullity of marriage.

IMPREGNABLE. Former naval establishment at Devonport. It consisted of four ships, namely: Impregnable No. 1, late the cruiser Powerful of 14,200 tons; Impregnable No. 2, late the cruiser Andromeda of 11,000 tons; Impregnable No. 3, late the cruiser Emerald of 9,200 tons; and Impregnable No. 4, late the light cruiser Powerful III. These four vessels formed a training establishment for boys entering the British navy.

IMPRESSIONISM. Name given to a movement in art originating with a group of French painters in the last quarter of the 19th century. Its central principle is that the hand should paint what the eye sees before it. All conventions of lighting and composition are ruled out by this formula; only the object in nature, as it appears behind its veil of atmosphere, must be set down.

It was the work of Claude Monet that brought the term Impressionist into use. In 1874 an exhibition of open-air pictures was held by Monet and his friends in the Boulevard des Capucines, Paris, which included one by him with the title *Impression: soleil levant*. Monet's associates and disciples included A. Renoir, C. Pissarro, Berthe Morisot, Mary Cassatt, and Charles Sisley. Whistler was Impressionistic in his later etchings and his nocturnes; Cézanne, Gauguin, and Van Gogh groped after Impressionist ideals before they were absorbed by Post-Impressionism (q.v.). In 1889 an English group, including Wilson Steer, Walter Sickert, and Francis Bate, held the first Impressionist exhibition in London. Sir Hugh Lane formed a valuable collection of the French group for the modern gallery, Dublin. See Art.

IMPRISONMENT. In law, any act whereby another's liberty of movement is forcibly interfered with. Apart from those who are

confined waiting trial, those suffering imprisonment may be divided into two general classes: (a) those imprisoned with hard labour; (b) those undergoing simple imprisonment, i.e. without hard labour.

Offenders who are found guilty of more serious offences are sentenced to penal servitude, which technically does not rank as imprisonment. In this the maximum sentence is 15 years, except in the case of reprieved murderers, who receive a life sentence, which in practice rarely exceeds 20 years. See Hard Labour; Penal Servitude.

IMPROVEMENT. Legal term used in connexion with land. By various statutes, a tenant for life of settled land had power to make certain improvements, e.g. drainage, irrigation, road-making, and to recoup himself by selling any of the settled land, or out of the funds of the settlement.

Improvements of land by tenants are provided for by various Agricultural Holdings Acts. The intentions of these Acts, in this respect, is that when a tenant improves the holding he shall, on the expiration of his tenancy, have the benefit of his expenditure.

The Landlord and Tenant Act of 1927 provided for the payment of compensation for improvements and goodwill to the tenants of business premises. See Landlord.

Inca civilization. Remains at Tiahuanaco, Bolivia. 1. A chullpa, more probably a habitation than a tomb. 2. Gate of the Sun. 3. Monolith idol at the south-west corner of the palace of Kala-sosai.

INCA. Name of ancient rulers of Peru. The Incas were an hereditary reigning dynasty which flourished for over 300 years under a series of chiefs or emperors. Of this dynasty, Manco Capac was the founder (c. 1240), and Atahualpa, murdered in 1533 by the Spaniards, the last. The Inca empire covered a wide area, extending from Quito southwards into N. Chile, and from the Pacific coast westward to beyond the Andes, a region over 2,000 m. long and 500 m. wide. It was governed from Cuzco, the capital.

The most noteworthy of the remains at Cuzco is the fortress of Sacsaihuaman, consisting of a series of walls 1,800 ft. long, forming terraces up the hill-side, and having 20 salients. In the same region is the fortress of Ollantaytambo, and the ruins of Intihuatana and Pisac, amid which latter still stands a portion of the stone column by which the Inca priests determined the solstices. Other numerous remains of fortresses, towers, palaces, sun temples, habitations, etc., are scattered about the uplands.

The Incas were skilful agriculturists. Their social and economic laws were remarkably complete and equitable. The land was apportioned to the needs of the people and the state; taxes were paid in manufactured goods, whose production was regulated: destitution did not exist, and colonisation was systematically carried out. Gold was mined and used only for the decoration of temples, or for the royal utensils. The Incas were sun-worshippers, but their religion embodied a belief in the Unknown God, who was creator and pervaded all. There were no human sacrifices. See Cuzco; Peru; consult also The Incas of Peru, C. R. Markham, 1915; Peru, C. R. Enock, 1915; The Incas and their Industries, H. van den Bergh, 1921.

INCARNATION. Fundamental belief of the Christian religion. The doctrine of the Incarnation affirms that in the person of Jesus of Nazareth God was made man that man might know God. To-day theologians emphasise first that, alike in the N.T. and in the main stream of Christian theology, the complete humanity of Jesus is affirmed. He was perfect man, and usually spoke of Himself as the Son of man. Though Jesus did not, until His trial, publicly claim to be more than this, it is certain that He privately admitted that He was the Christ.

But, if the conclusions of modern scholars can be trusted, Jesus did not explicitly make greater claims for Himself. The relation to God of the Christ was worked out by His followers, who gradually came to see that He was the Incarnation of God. See Jesus Christ.

INCARVILLEA. Small genus of perennial herbs of the order Bignoniaceae. Natives of China and Turkistan, they have opposite, divided leaves, and large, tubular flowers of rosy or scarlet colour. *I. olgae* (Turkistan) is frequently grown in European gardens.

INCE-IN-MAKERFIELD. Urban dist. of Lancashire. It adjoins Wigan, and has a station on the L.M.S. Rly. There are wagon works, cotton mills, and collieries. Pop. 22,865.

Another Ince is in Cheshire, 7 m. from Chester, with a station, Ince and Elton, on the L.M.S. Rly. It has an old manor house, which is now a farmhouse.

INCENSE. In religious ceremonial, an aromatic mixture burnt over live charcoal in a thurible or censer. As an accessory to public worship it was unknown in the early Church, its liturgical use dating from the 5th or the 6th century. In a mystical or symbolical sense it is held to typify zeal, virtue, and prayer; and at funerals, the communion of saints.

INCENSE CEDAR.

Genus of evergreen trees of the natural order Coniferae. Natives of Asia, Australasia, and America, they have small, scale-like, overlapping leaves and oval cones consisting of four or six flattish scales. Some of the species yield valuable timber. One that grows in Patagonia produces timber so straight and even-grained that it gives spars and boards of great length and splits so cleanly that the pieces appear to have been planed.

INCH (Lat. uncia, a twelfth part). Measure of length. It is the twelfth part of a linear foot. The British halfpenny coin is one inch in diameter.

Incense Cedar, a tree valuable for its timber

INCHBALD, ELIZABETH (1753-1821). English actress, playwright, and novelist. Born near Bury St. Edmunds, Suffolk, Oct. 15, 1753, she married an actor, Joseph Inchbald, in 1772. She acted for a time on the stage, wrote and adapted many plays and farces, and is chiefly remembered as the writer of *A Simple Story*, 1791, and *Naturo and Art*, 1796, often reprinted. She died in London, Aug. 1, 1821.

Elizabeth Inchbald, English actress and writer
After Russell

INCHCAPE, JAMES LYLE MACKAY, 1st EARL OF (b. 1852). British merchant. Born at Arbroath, Sept. 11, 1852, he became partner in a firm of merchants at Calcutta, Bombay, and elsewhere. In 1891 he became a member of the viceroy's legislative council, and from 1907-11 he was a member of the Council of India. Having settled in England, Mackay, who had been knighted in 1894, became eminent in the banking and shipping world. He was made a baron in 1911, a viscount in 1924, and an earl in 1929. He gave £500,000 in 1928 towards the National Debt, that sum having been the portion of his daughter Elsie, lost in an attempt to fly the Atlantic, 1928.

Earl of Inchcape, British merchant
Elliott & Fry

INCHCAPE ROCK. Reef off the coast of Scotland, known also as the Bell Rock. Some 12 m. S.E. of Arbroath (Aberbrothock), at the mouth of the

Inchcape Rock. The reef and lighthouse in the Firth of Tay
Valentine

Firth of Tay, it is 500 yds. long and 100 yds. wide. A lighthouse was built here in 1807. In former days a bell tolled by wave action warned the mariner; it is the subject of a ballad by Robert Southey.

INCLINOMETER. Word used in three senses. (1) Scientific instrument for measuring the vertical intensity of the earth's magnetic force as indicated by the dip of a magnetic needle. (2) Type of theodolite fitted with an adjustable base to facilitate the measurement of angles of inclination. (3) Any instrument constructed for measuring the degree of inclination or slope.

INCOME TAX. In Great Britain an income tax was first imposed in 1799, when all incomes exceeding £60 were taxed. In 1816 the exemption limit was reduced to £50, but this was restricted to earned incomes. From 1842 to 1920 the limit varied between £160 and £120, except for 20 years when £100 was the limit. Until 1907 there was only one rate of tax, small incomes being relieved by abatements.

In 1907 earned incomes not exceeding £2,000 a year were taxed at a lower rate than the normal. In 1909 the differentiation was extended and a super tax on larger incomes was introduced. To meet the cost of the war the ordinary rate of income tax was greatly increased, rising at one time to 6s. in the £. In 1920, in accordance with the suggestions made by a royal commission, the system was remodelled. A later reform was the abolition of the system of assessing incomes on the average of the past three years.

The total income having been ascertained, the tax due in the case of any individual is calculated by the following rules. The aggregate income is reduced by one-sixth of the earned portion of that income, this reduction not to exceed £250 in the case of any individual. In the case of taxpayers over 65 years of age with incomes of £500 and under, all income, whether earned or unearned, is subject to the one-sixth deduction. From the assessable income thus arrived at, the following deductions may be claimed:

A personal allowance of £225 in the case of a taxpayer whose wife lives with him, and £135 in any other case. In the case of a married man whose wife has earned income of her own a further allowance equal to five-sixths of the first £50 of the wife's earned income is granted. An allowance for children of £60 for one and £50 each for others, provided that the children are either under 16 or over 16 and receiving full-time instruction at an educational establishment. Adopted children and stepchildren are within the allowance, but no deduction can be claimed in respect of a child having income in his or her own right exceeding £40 a year. Other allowances are made for dependent relatives, and the taxpayer is allowed a certain relief on money paid for insurance premiums.

The amount remaining after all these deductions have been made is the taxable income. On the first £250 of this a lower rate is charged. At one time this was half the standard rate, but in 1930 it was left at 2s., although the standard rate was raised to 4s. 6d. In 1931 therefore a taxpayer pays 2s. in the £ on the first £250 of his taxable income and 4s. 6d. on the remainder.

There are reciprocal arrangements with the Irish Free State, Australia, S. Africa, and other parts of the Empire to lessen the burden of a double income tax.

Australia, Canada, S. Africa, India, and the Irish Free State have each an income tax, modelled more or less on that of Great Britain. The idea in all is a graduated scale, relieving the smaller incomes, wholly or in part, and putting more upon the larger ones. Super tax, or surtax, is usually treated as distinct from the income tax, although really it is but an additional income tax.

The tax is payable in two instalments, one on Jan. 1 and the other on July 1. It is collected by the Board of Inland Revenue, which has inspectors and collectors all over the country. If dissatisfied with his assessment a taxpayer can appeal to the special Commissioners of Income Tax at York House, Kingsway, London, W.C.2, or to other commissioners, and from them, but only on points of law, to the courts. The amount received from income tax in 1929 was £237,620,000. See Super Tax.

INCREMENT. Word meaning simply an increase. Its most frequent use is in the term unearned increment, meaning the wealth that comes to a landlord or other person through a rise in values to which his own efforts have contributed nothing.

An increment value duty was one of the three land value duties imposed in the United Kingdom by the Budget of 1909. With the other land taxes it was abolished in 1920.

INCUBATION (Lat. incubare, to sit upon or brood). Natural process by which birds stimulate by warmth from their bodies the activity of the germ in the eggs, and its continued development until the chick is ready for hatching. The process is not entirely restricted to birds, the duck-bill among mammals laying and incubating its eggs. In recent years chickens have been incubated largely by artificial means, the eggs being placed in a well-ventilated box and kept at the requisite temperature by means of

a current of warm air, or by radiation from a tank of hot water.

As a medical term, incubation indicates the interval between infection and the appearance of the symptoms of a disease.

INCUMBENT (Lat. incumbere, to rest on, remain in). One who holds an ecclesiastical benefice. Institution to a benefice involving the cure of souls is for life. An incumbent possesses a life freehold of the globe and other properties of the living, and he can prevent by legal process any other clergyman from officiating in his parish. He is ex-officio chairman of all vestry meetings, and he is responsible for the registers of baptisms, marriages, and burials. See Benefice.

INDEFATIGABLE. British battle-cruiser. The fourth ship of the type, and the twelfth Dreadnought, she was laid down at Devonport in 1908 and completed in 1911. Her principal dimensions were: length, 555 ft.; beam, 80 ft.; displacement, 18,750 tons. She was equipped with eight 12-in. and 16 4-in. guns, two torpedo tubes, and armour whose maximum thickness on the side was 7 ins.

In the battle of Jutland, May 31, 1916, she was destroyed by a shell which burst inside a turret and sent a spurt of flame down the ammunition hoist into the magazine. Five ships in the British navy had previously borne this name.

INDEMNITY (Lat. in, not; damnum, loss). Legally, an undertaking to make good monetary or other loss or damage. Contracts to indemnify persons against possible loss are frequently made in business circles, fire insurance policies being of this nature. An Act of Indemnity is an Act passed to relieve persons who have unwittingly broken the law from the penalties incurred. A war indemnity is the money paid by a country after the conclusion of a war to its victorious opponent or opponents, ostensibly for the damage done. See Reparations; Versailles. Treaty of.

INDENTURE. Term of English law. Formerly, when a deed was entered into between two parties it was written in duplicate upon one piece of parchment, and then the two parts were severed so as to leave an indented or wavy edge, forging being thus rendered difficult. The practice has long since ceased, but still a deed made between two or more parties always begins with the words "this indenture."

INDEPENDENCE. DECLARATION OF. Solemn act and deed by which under date July 4, 1776, the representatives of the 13 original United States, in general congress assembled, repudiated all allegiance to the British Crown and declared themselves free and independent states. The 13 signatory states were Massachusetts, Georgia, N. Carolina, S. Carolina, Maryland, Virginia, Pennsylvania, Delaware, New York, New

Incubator for hatching hens' eggs. A, water tank, heated by lamp, B. C, egg tray with, beneath, water tray to keep air moist. D, thermostatic capsule, which expands at a prearranged temperature and, by means of a rod and lever, raises damper, E, from chimney F, permitting hot air to escape. When temperature drops, capsule contracts and lowers damper
Courtesy of Spratts Patent, Ltd.

Jersey, New Hampshire, Rhode Island, and Connecticut. The date, July 4, has ever since been commemorated as Independence Day. It is a legal holiday, and the reading of the declaration often forms part of the ceremonies.

INDEPENDENT LABOUR PARTY. British labour organization. It was inaugurated at Bradford, Jan. 13, 1893, to make the trade unions of Britain a distinct organization for securing direct parliamentary representation. Its leader was J. Keir Hardie (q.v.). Its early power and influence were not maintained, and after 1914 the British Labour party became politically the central socialist body for Great Britain. The official organ of the I.L.P. is *The New Leader*. The offices are 14, Great George Street, London, S.W. 1.

INDEPENDENTS. Name given to a religious body in Britain and America, now better known as Congregationalists. They arose in the time of Elizabeth as protesters against the interference of the state in matters of church government. Independent churches existed all over the country, but in the 19th century a movement for union sprang up. See Congregationalism.

INDEX (Lat.) List, digest, or analytical analysis of a book. It should be systematically alphabetical and bring together all the items on a kindred subject mentioned in the book to which it is attached. The art of indexing is of comparatively modern growth. The initial fault to be avoided is the use of A, An, and The. Next comes the inclusion of unimportant words. Other pitfalls are repetition, the misu of cross-references, the placing of persons referred to under their Christian names, or the opening words of their titles, and the introduction of classification instead of adherence to complete alphabetisation. When the work to be indexed is in several volumes, each volume should be indicated by small Roman numerals the page in Arabic figures. For the index that is always growing a card system is the best.

INDEX NUMBER. Number found by making a certain selection of commodities in general use, ascertaining the current price of a certain quantity of a particular quality of each, and taking the total, or the average of all these prices. This is the datum number. At periodic intervals similar totals or averages are compiled and compared with this; the differences are generally represented as percentages on the datum number, and these percentages represent the price movements.

These index numbers are Sauerbeck's, published in *The Statist*, the monthly Economist numbers, and the Government numbers originally compiled by the Board of Trade, but now calculated by the Ministry of Labour and published monthly in *The Labour Gazette*. The bonus scheme in the Civil Service is based on the rise or fall in the index figure.

INDIA. India is that Asiatic continent which is hemmed in by the Himalaya and Suleiman Arabian Sea and the Bay of Bengal. It can be entered only through the mountain wall or from the sea. Its area of over 1,800,000 sq. m. and population of over 300,000,000 are both nearly the same as those of Europe excluding Russia but including Great Britain.

India has two principal divisions, the southern inverted triangle with the Narbada as its base, called the Deccan, and the northern, Hindustan, with the two great river basins of the Ganges and the Indus, with their tributaries. Its peoples are as diverse though less defined in their distribution than those of Europe, successive floods of invaders having poured through the passes of the north-west, some to establish themselves permanently as lords of the conquered peoples by force either of arms or of superior attainments, some to be absorbed, leaving no trace as a separate group. The extent of this sub-continent, as it is often called, is defined by the above-named geographical boundaries, which make it difficult of access to the rest of the world; but at no time have its peoples been homogeneous, and at no time before the 19th century did they have a political or national unity in the European sense.

India. Arms of the Empire

problem of government there is unique, the process which brought India into the Empire having been unique. Peoples who for thousands of years had known no rule save that of Oriental despotisms, generally of aliens, continue to be ruled under what is in effect an alien, but not an oriental despotism, which is nevertheless endeavouring to assimilate the governmental system by degrees to that of western democracy; a process unprecedented in the history of political evolution.

One third of the area and one fourth of the population are ruled by despotic dynasties of pre-British standing, with powers limited only by specific treaties made in the past, whereby the imperial government retains control of all foreign and inter-state relations; with other reserve powers rarely requiring to be exercised.

The bulk of the country forms British India proper, under the direct administration of the British viceroy and council, subordinate British provincial governors with councils, and the officials of the statutory public services. In these the highest posts have hitherto been reserved for Europeans, while the multitudinous lower-grade posts are filled exclusively by Indians, and Indians are being admitted in increasing numbers both to the councils, from which they were long excluded, and to the higher administrative posts. In the Indian army proper the rank and file are all Indians, while the officers are Europeans. The immediate problem agitating the Indian

India. Map of the Indian Empire, showing the boundaries of the several provinces and the railway system of the country

The whole of India, however, is in the 20th century a unity in that it does form one entirely distinctive section of the British Empire; governed by wholly different methods from any other part thereof, because the

Empire is, how the capacity for self-government may be so developed in British India that India as a whole may acquire within the Empire the same dominion status as the other self-governing Dominions united within that

Empire or Commonwealth, without detriment to her own or the Empire's prosperity.

HISTORY. The explanation of this land of paradox lies in its history. Its primitive population is classified as partly negroid,

about the middle of the 19th century all India had been absorbed into the British Empire, partly as British India as above explained, partly under its protected princes. In 1857 the peace was broken by the

INDIAN ART. Indian art was indigenous. It may have been influenced to some degree by Babylonian or Assyrian art, but the theory that it was of Greek origin is no longer tenable. It is not concerned with the real or the temporal, but with the spiritual and the eternal, being purely idealistic and symbolic. Its golden age lasted from the reign of Asoka, about 223 B.C., to the Mahomedan conquest in 1001. Art raised its head again after the Mongols had overthrown Arab rule, and under the Mogul emperors the famous school of miniaturists flourished.

As regards architecture, this became absorbed by that of the Mahomedan invaders after the Arab conquest of India; but before this it was alternately Brahminical and Buddhist. The first Brahminical period dates from the beginning of civilized life in the country and extends to the 3rd century B.C.; the Buddhist period, lasting till the 7th century A.D., followed it, and was succeeded by a later Brahminical period. The ancient architecture of India also includes certain Persian and Greek elements, but their evidence is visible in the sculpture rather than the actual building, the latter being illogical and fantastic, though richly adorned. The grotto temples excavated in the rocky sides of

mountains are the most imposing monuments. See ill. under Agra; Allahabad; Amritsar; Aurangabad; Benares; Bijapur; Calcutta; Cave Temple; Delhi; Gwalior; Hyderabad; Jaipur; Lahore; Lucknow; Madras; Madura; Mahabalipur; Mandalay; Rangoon; Sanchi; Trichinopoly; Udaipur.

INDIA, COUNCIL OF. Body concerned with the government of India. It consists of from ten to twelve members, chosen for five years, their duties being to advise the secretary of state for India. Most of them are persons who have held high positions in India; since 1907 two have been natives. The secretary for India is the president of the council, which meets in London. This council must be distinguished from that of the governor-general of India, which is composed of high officials in India and meets at Delhi or Simla.

INDIA, ORDERS OF. Three orders of knighthood. The most exalted order of the Star of India was instituted in 1861, mainly with the object of honouring native princes. It has four grades. The collar is composed of lotuses, roses—white within red—and palm branches, in saltire, linked by a chain. The badge is an oval with a bust of the crowned queen, surrounded by a light-blue circlet, inscribed Heaven's Light our Guide, and surmounted by a star of five points. The ribbon is sky-blue with a narrow white stripe near the edge.

The most eminent order of the Indian Empire was instituted in 1878 by Queen Victoria to reward services in India. Its constitution was revised in 1911. There are three grades. The collar is figured of elephants, peacocks in their pride, and lotuses, linked together by chains. The badge is a red rose with green leaves and thereon a bust of the crowned queen, within a circlet inscribed Imperatrix auspiciis. The ribbon is purple.

The imperial order of the Crown of India was instituted by Queen Victoria for ladies in 1878, the object being to mark her assumption of the imperial title. The badge is the imperial and royal cyphers in diamonds within a circlet of pearls. The ribbon is of light blue edged with white; it is worn as a bow.

INDIA HOUSE. Building in Aldwych, London, W.C. It was opened in 1930 to serve as headquarters of the high commissioner and other representatives of India in Britain. Sir Herbert Baker, A.R.A., was the architect.

Indian types. 1. High caste Brahmin, wearing the sacred thread. 2. Kol girl workers on a rice plantation, Mysore. 3. Brass worker in a bazaar. 4. Sikh. 5. Silversmith of Madras. 6. Typical Yogi, or Hindu ascetic. 7. Bengali woman.

partly Mongolian. Between 3000 and 1500 B.C. successive tides of fair peoples calling themselves Aryan poured through the N.W. passes, established their supremacy over all Hindustan, and penetrated the Deccan. Those of them who more or less preserved their racial purity became the ruling and priestly castes and established the Hindu religion; of which variants sprang up, notably Buddhism, which for a short time enjoyed a supreme position.

From time to time came other conquerors or invaders, who either retired after a time or were absorbed; till about 1000 A.D. began a series of Mahomedan raids which developed into the conquest of Hindustan. The conquerors were Afghans or Turks, of quite different race, intensely hostile to the idolatry of Hinduism; who did not blend with the conquered Hindus but ruled them as oppressive masters. The last of these established the Mogul dynasty in the 16th century. For a time the Mahomedan oppression was relaxed. The Moguls brought the whole land under nominal submission; but when the oppression was renewed there was resistance on the part of Hindu peoples, and in the eighteenth century the Mogul empire was broken up into great provinces, which were virtually independent kingdoms, though they pretended to recognize the Mogul's sovereignty.

Meanwhile English and French traders arriving by sea had rented trade stations on or near the coast. They began to take sides, in opposition to each other, in the rivalries of the Indian princes. After 15 years of fighting the British had driven the French out of the field; but they found that their intervention forced upon them the responsibility for maintaining law and order—under formal authority from the Mogul—as governors in two great provinces. Then the British government in England felt bound to share that responsibility, lest it should be misused.

The new power was viewed with natural jealousy—or was appealed to for protection—by one after another of the princes, who were constantly fighting wars of aggression among themselves; there was no other restraining authority; the British were repeatedly challenged by one or another, the resulting wars necessitating large annexations and alternative treaties of protection recognizing the paramount British authority. Hence by

Indian Mutiny. Between Jan. and May there were isolated mutinies, and on May 10 a group of regiments at Meerut murdered their officers and marched on Delhi, where the restoration of the Mogul empire was proclaimed. The British were besieged in Cawnpore, where they were massacred, and in Lucknow, which was relieved. Delhi was taken in Sept., and with the arrival of fresh troops the mutiny was suppressed. The loyalty of many of the princes and people helped to this end.

In 1858 the E India Co. was ended and the control of India formally transferred to the crown. A secretary of state was appointed for India, and the imperial system was completed when Victoria was proclaimed empress of India on Jan. 1, 1877. The two most prominent problems between 1858 and the Great War were the gradual admission of natives to political and administrative positions and the frontier policy, with its war with Afghanistan (1879-80) and various punitive expeditions. In 1884 a collision between Russian and Afghan troops at Pendjeh threatened a war with Russia.

In 1909 substantial representation on the provincial councils was given to the natives, and in 1912 it was announced that a new capital would be built at Delhi. This was completed in 1929. In the Great War Indian soldiers rendered splendid service, especially in the eastern theatres, and the aid of the princes was most valuable.

The new order in India began with the declaration of 1917. The aim of British policy was "to provide for the increasing association of Indians in every branch of the administration and the gradual development of self-governing institutions." In 1919, by the Government of India Act, the existing system was established, and in 1921 the new legislatures were opened. In 1919 there were disturbances at Amritsar and elsewhere, and, especially in 1922 and 1930, the activities of Gandhi and his followers caused much uneasiness. These outbreaks, together with much political unrest, did not deter the British Government from its declared policy, and in 1927 a royal commission under Sir John Simon was appointed to review the whole problem of India's future. The report appeared in two parts in 1930, the first portion taking the form of an exhaustive statement on the country's position.

INDIANA. East-central state of the U.S.A. It lies S. of Lake Michigan, and covers 36,354 sq. m. The surface is mainly an undulating plain. In the hills along the Ohio valley is the remarkable Wyandotte Cave. The greater portion of the state is drained by the Wabash, which forms part of the W. boundary, and its affluents, and by the Ohio, the natural S. frontier. Agriculture is the staple industry, the crops including maize, wheat, hay, rye, tobacco, and tomatoes. There are large coal areas and petroleum and natural gas resources. The state is governed by a general assembly consisting of a senate and a house of representatives. The state university is at Bloomington. The capital of the state is Indianapolis. Pop. 3,176,000.

INDIANAPOLIS. Capital of Indiana, U.S.A. On White river, it is 110 m. N.W. of Cincinnati, and is the terminus of several rlys. Indianapolis is one of the best planned cities of the United States, with broad, tree-lined streets and an excellent system of parks. Most of the public buildings are constructed of limestone quarried in the state. The capitol of the state is surmounted by a domed tower 240 ft. high. Other buildings are the Federal building, the city hall, Tomlinson Hall, the Propylaeum, and the public library. The state university consists of the Indiana Law School, the Indiana Dental School, and Butler University. A feature of the city is the Soldiers' and Sailors' Monument, commemorating its part in the wars of the Union. Slaughtering and meat packing and the making of automobiles are important interests, and the city is a distributing centre, chiefly for livestock, grain, and meats. Pop. 358,819.

INDIAN BEAN OR CATALPA (*Catalpa bignonioides*). Tree of the order Bignoniaceae. A native of N. America, it has large heart-shaped leaves in whorls of three. The bell-shaped flowers are white, spotted with yellow and purple, and borne in large, pyramidal clusters of a hundred or more. The seed capsule is long, suggesting a bean-pod, and contains many seeds with fringed wings.

INDIAN CIVIL SERVICE. The higher posts in this service are recruited by open competition held every August. Natives of India are eligible; the limits of age are between 21 and 24. Successful candidates spend a year at a university, receiving £300-£350 to defray the cost. They are then examined in Indian law and history and a native language, and in riding. The Civil Service Commission, Burlington Gardens, London, W.C., controls the examination. The initial salary is 7,200 rupees a year—say £720. In the administrative branch the prospects extend to the control of a province, and in the judicial to a judgeship in the Indian High Court. Service for 25 years ensures a pension of at least £1,000 a year.

INDIAN CRESS

(*Tropaeolum*). Genus of annual and perennial twining herbs of the order Geraniaceae, natives of S. America. The handsome, irregular flowers end backwards in a long, nectar-containing spur. The few large seeds are each separately enclosed in a thick, ultimately spongy rind. The favourite nasturtiums of gardens are *T. majus* and *T. minus*, and the canary creeper is *T. peregrinum*. The green fruits of the first two are used as substitutes for capers.

Indian Cress. Leaves and flowers of the nasturtium

INDIAN CUP (*Sarracenia purpurea*). Perennial herb of the order Sarraceniaceae, native of N. American hogs. The leaf-stalks are hollowed out to form

Indian Cnp. Hollowed leaf-stalks in which insects are trapped

erect, trumpet-shaped pitchers, and the real leaf forms an arching, but never closed, lid. Within the mouth of the pitcher a sweet fluid is excreted, below that is a band of polished surface, and lower still a fringe of downward pointing hairs. Insects enter to sip the sweet fluid, and, venturing farther, lose their foothold on the polished surface and fall into the lower part of the pitcher, which is filled with a clear fluid. The proteids dissolved out of these victims are absorbed by the plant. The large, solitary purple flower is borne on a tall leafless stalk.

INDIAN INK. Specially prepared form of black ink. It is also called China ink, in which form it is sold in cakes or sticks and moistened with water. The chief constituent is lamp-black mixed with a thin glue.

INDIAN MILLET (*Sorghum vulgare*). Grass of the order Gramineae, native of Asia. It has long flat leaves, and a much-branched panicle of flowers. The large, round and hard seeds when ground yield an excellent white flour, which, in the warmer parts of Europe and in Asia, takes the place of the oats and barley of colder regions.

INDIAN MULBERRY (*Morinda*). Genus of shrubs and trees of the order Rubiaceae, natives of tropical Asia and Australasia. The roots and bark are used for dyeing red and crimson. The small berries are edible.

Indian Millet. Left, stalk and leaves; right, flower-head

INDIAN OCEAN. One of the great oceans of the world. With an area of over 28,000,000 sq. m. and an average depth of over 2,000 fathoms, it separates Africa on the W. from the E. Indies and Australia on the E., and is bounded N. by Asia. S. a large area of less than 2,000 fathoms in depth helps to mark a distinction from the South Seas. The deepest sounding, in the Sunda Trench, near Java, is 3,828 fathoms. The most important of its islands are Madagascar and Ceylon. The E. part of the ocean is remarkable for its vast unbroken expanses of water. Among important submarine cables are those from Suez to Aden and Bombay, from Madras to Singapore, and from Seychelles to Zanzibar and Mauritius. See Monsoon; Ocean.

INDIAN SUMMER. Name given in the U.S.A. to periods of summer-like weather occurring during autumn. In England similar weather is known as S. Martin's summer. See Meteorology.

INDIA OFFICE. Department of the British government under the secretary of state for India, responsible for the government of India. The secretary is assisted by a parliamentary and a permanent under-secretary and by a council which meets in London, and is in constant communication

with the governor-general in India. The salaries and expenses of this department, formerly paid from India, are now paid by the British govt. The office is in Whitehall, London.

INDIA RUBBER PLANT (*Ficus elastica*)

Large evergreen tree of the order Urticaceae.

It is a native of the East Indies, with glossy, oblong, leathery leaves, and is the source of Bengal rubber. It is cultivated in a young condition as a decorative perennial for the warm greenhouse and as a table plant. Its product is much inferior in quality to that of Hevea (Para rubber) and other plants. See Rubber.

India Rubber Plant. Greenhouse specimen of the E. Indian tree

INDICTMENT (late Lat. *indictare*, to point out). English law term for a written statement showing the crime of which a prisoner is charged. The document is prepared by, or under the direction of, the clerk of indictments of the court, and is laid before the grand jury, together with the evidence for the prosecution. If the grand jury should find that the evidence discloses a *prima facie* case against the accused, they endorse the indictment with the words "true bill"; and the prisoner must then stand his trial. If the grand jury think there is no case at all, they write the word *ignoramus* (we do not know), and the bill is ignored.

INDIES. Name applied originally to certain regions of the East, India, Burma, Malay Archipelago, etc. It appears in such titles as the East Indies and West Indies. The extension of the term to the latter is due to the belief of early explorers that these islands formed part of the Asiatic group. See East Indies; India; West Indies.

Indigestion. Condition of being unable to digest food. The word is popularly applied to the complaint known as dyspepsia (q.v.).

INDIGO (*Indigofera tinctoria*). Subshrubby perennial of the order Leguminosae, native of the E. Indies. The long leaves are divided into oval leaflets. The red pea-like flowers are succeeded by long, narrow pods. The blue colouring matter obtained from the plant has been used as a dye from the earliest times, although in Europe the native woad was long preferred. The dye has been largely superseded by synthetic indigo.

Indigo, leaves and flowers

INDIUM. Rare elementary metal, discovered by spectrum analysis in 1863 by Reich and Richter in the zinc-blende of Freiberg, Silesia. Chemical symbol, In; atomic weight 114.8; atomic number 49; specific gravity 7.42; melting point 176°C. It is a white metal, malleable, softer than lead, and resistant to atmospheric influences at normal temperature.

INDO-CHINA, FRENCH. Group of states in Asia belonging to France. It consists

of the colony of Cochin China, the protectorates of Cambodia (including the territory around Battambang, ceded by Siam in 1907), Tong-king, Annam, and Laos, and Kanchow Wan, leased from China in 1900. The seat of government is at Hanoi, and the whole is under a governor-general. Minerals include coal, phosphates, zinc, antimony, and tin. The chief export is rice, followed by hides, coal, rubber, fish, pepper, zinc, and tin ore. There are about 1,500 m. of rly. track. The area is about 285,000 sq. m. Pop. 20,700,000, of whom 33,000 are Europeans. See Annam; Cambodia; Cochin China; Tong-king.

INDOMITABLE. British battle cruiser. One of the Invincible class, she was completed in 1908. She had a displacement of 17,250 tons and a speed of 27 knots, and was armed with eight 12-in. and sixteen 4-in. guns. In the Great War she took part in the battles of the Dogger Bank, Jan. 24, 1915, and Jutland, May 31, 1916. See Invincible.

INDORE. State and city of India, in the Central India Agency. The area of the state is 9,519 sq. m. Only about one-fifth is under cultivation, grain and cotton being among the chief crops. The ruler is a maharaja, with a salute of 19 guns. Indore, the capital, is an important trading centre. Pop., state, 1,147,896; town, 93,091.

INDUCTANCE. In electricity, the capacity of a conductor for electromagnetic induction. A current flowing through a straight wire sets up a magnetic field with lines of force in concentric circles around the conductor. If the wire is twisted into a close coil the magnetic field of each turn interlinks with those of adjacent turns, and the inductance is greatly increased. The inductance of a particular coil depends upon its length and the manner in which it is wound. The term is also used to mean a coil which possesses inductance.

The armature and field coils of a motor or a dynamo are inductances. Specially wound inductance coils are used to tune or adjust the aerial circuit of broadcast receiving apparatus. The variometer (q.v.) is a variable inductance. The unit of inductance is the henry, equivalent to an induced E.M.F. of 1 volt when the current in the conductor is changing at the rate of 1 ampere per second. Subdivisions are the millihenry—one-thousandth—and the microhenry—one-millionth of a henry respectively.

INDUCTION. The production of electrification in a body by the nearness of an electrified body. It also means the magnetising of a body by proximity of a magnetised body. Electromagnetic induction is the production of an electric current in a conductor by varying the magnetic field in the vicinity of the conductor. When any electrified body is brought near an unelectrified one the latter also becomes electrified. A magnetised body has a similar effect upon other bodies in the vicinity; this is most noticeable in the case of bodies of iron, when a strong attraction is set up. See Dynamo; Electricity; Magnetism; Transformer.

INDUCTION COIL. Form of transformer for increasing the pressure of an electric current, while reducing its volume. In its simplest form, as used in telephonic apparatus, it consists of a "primary" coil of a few layers of coarse wire wound round a bundle of soft-iron wires, and itself covered with a "secondary" coil of many layers of fine wire. When current is passed through the primary coil, a magnetic field is created in the core and surrounding ether. As the lines of force cut the turns of the secondary coil an E.M.F. is induced in every turn, its intensity being proportional to the rate of cutting. The E.M.F.'s, all added together, render the

voltage in the secondary coil much higher than that of the primary, though the ampereage is proportionately lower.

If the primary current be interrupted, diminished, or reversed, the lines move inwards towards the core, the coils are cut again, and an E.M.F. is induced in the reverse direction through the secondary circuit. The one condition essential to this method of transforming electric energy is intermittency in the primary current.

INDUCTION (Lat. *inductio*, bringing in). In logic a mental operation by which it is inferred that what is known to be true in certain cases at certain times will be true in all cases at all times. Thus, from observing that ice melts or water boils at a certain temperature, it is inferred that this will always be so.

INDULGENCE (Lat. *indulgere*, to grant, make a concession). As officially defined by the Roman Catholic Church, an indulgence is a remission, granted by the Church, of the temporal punishment which often remains due to sin after its guilt has been forgiven.

Indulgences were either plenary, granted to persons absolved from all sin, or partial, granted to those who had the burden of no mortal sin upon their soul. Forgiveness of the sin was a necessary antecedent to the granting of either, which, further, was conditioned upon the performance of certain acts of charity or the recital of certain prayers. The popes reserved the right of granting plenary indulgences. Bishops could grant only partial indulgences. The system opened the way to much abuse, pardons being granted in consideration of money payment.

The methods resorted to by Archbishop Albert of Mainz and Magdeburg, commissioner for Germany for the sale of indulgences authorised by Pope Leo X when rebuilding the church of St. Peter in Rome, and by the archbishop's sub-commissioner John Tetzel, amounted to a scandal which launched the Reformation. See Purgatory; Reformation.

INDUS (Sanskrit, Sindhu). River of Asia. It rises in the Tibetan Himalayas, at an alt. of about 18,000 ft. Flowing N.W. through Ladakh, it bends S. about 20 m. S.E. of Gilgit, and proceeds generally in a S.W. direction to its delta in the Arabian sea. Its length is about 1,800 m. It receives the Gartang 160 m. from its source, the Kabul river near Attock, and near Mithankot the Punjab, which carries the accumulated waters of the five rivers of the Punjab. The delta embraces 125 m. of coastline and covers an area of about 3,000 sq. m. The sandbanks are continually shifting, causing the channels to change their course. Hyderabad is the chief city on its banks.

The Indus basin is notable for its scanty rainfall. Throughout the lowland parts canals have been made to tap the torrential waters of the eastern tributaries and irrigate the upper plains, and to take off water from the lower river for the benefit of Sind.

INDUSTRIAL COURT. Organization for settling trade disputes. In the United Kingdom these were established by the Industrial Courts Act, 1919, to hear and decide trade disputes between employers and workpeople. The headquarters are 5, Old Palace Yard, London, S.W. See Arbitration.

INDUSTRIAL DISEASE. In general any disease which arises from and in the course of industrial processes. The term is specifically applied to certain diseases enumerated in an appendix to the Workmen's Compensation Act, 1906, or subsequently added thereto by order of the home secretary.

The more important industrial poisonings or diseases which appear in the schedule

to the Act or its additions are as follows: anthrax, resulting from the handling of wool, hair, bristles, hides, or skins; poisoning by lead, mercury, phosphorus, or arsenic, in processes involving the use or handling of these substances or their preparations or compounds; ankylostomiasis (miners' hookworm) in mines; poisoning by nitro- and amido-derivatives of benzene, carbon bisulphide, and nitrous fumes in processes involving the use or production of these substances; ulceration from chromic acid or its salts; eczematous ulceration of the skin by dust or corrosive liquids; cancer or ulceration of the skin from pitch or tar; scrotal epithelioma (chimney-sweeper's cancer) from chimney-sweeping; glanders; compressed air disease; miners' nystagmus; certain inflammatory conditions of the joints or tendons occurring in miners; telegraphists' cramp and writers' cramp. See Workmen's Compensation.

INDUSTRIAL SCHOOL. State-aided institution for the training of young children, mainly those with criminal associations. Industrial schools were the outcome of the voluntary ragged schools founded by John Pounds (1766-1839) early in the 19th century. They first received official recognition in 1837, since which date their history is closely associated with that of reformatories. Broadly speaking, however, industrial schools are for potential, and reformatories for actual, law-breakers. Detention in industrial institutions ends at 16; but the school managers may recall ex-inmates under the age of 18 who misbehave. See Borstal System.

INDY, PAUL MARIE THÉODORE VINCENT (b. 1851). French musician. He was born March 27, 1851, in Paris, where he studied at the Conservatoire. Afterwards he played in an orchestra, organized and directed concerts, and taught composition in his own school in the city. His compositions include several operas and many orchestral works, of which the trilogy *Wallenstein* is the most important.

INEBRIATE (Lat. *in*, intensive; *ebrietas*, drunkenness). Legal term for habitual drunkards. These are persons who by reason of habitual intemperate drinking of intoxicating liquors become at times dangerous to themselves, or incapable of managing their affairs, or a cause of harm or annoyance to others.

In the United Kingdom under the various Inebriates Acts in force there are three classes of institutions for the control and reformation of habitual drunkards, viz. licensed retreats, these being subject to inspection by an inspector appointed by the home secretary and to rules and regulations made by him; certified inebriate reformatories; and state inebriate reformatories for bad and refractory cases.

INERTIA (Lat.). In mechanics, the tendency of a body to keep the motion it may have. It is more closely defined by Newton's first law of motion, which states that every body continues in its state of rest or of uniform motion in a straight line, except in so far as it is compelled by force to change that state. The centre of inertia of a body is the same as its centre of gravity or of mass.

INESCUTCHEON. In heraldry, a small shield used as a charge in armorial bearings. It must not be confused with the shield of pretence or surcoat. See Heraldry.

INFANT (Lat. *in*, not; *fari*, to speak). Term used in English law for a minor, one who has not attained the age of 21. An infant is said to be "under disability." He cannot contract so as to bind himself, except for necessities. At common law any contract which can only be prejudicial to the infant is absolutely void, and cannot be ratified by him when of full age. Certain other contracts are null and void unless the infant actually

confirms them when of full age; others, again, are binding on him unless he disavows them within a reasonable time after attaining full age.

It is a misdemeanour to invite by letter, circular, etc., an infant to make bets or borrow money. An infant is liable for his torts. (*See Tort.*) He must always sue by some adult as his "next friend," and defend an action by his guardian ad litem. An infant, except a soldier, cannot make a valid will. He attains full age the day before his 21st birthday.

INFANTA (Span. child). Title of the daughters of the king of Spain. Infante is the title of the sons, except the eldest son, who is styled prince of Asturias. When Portugal was a monarchy the title was used there also.

INFANTILE PARALYSIS. Disease known also as acute anterior poliomyelitis, producing atrophy and degeneration of the nerve tissues of the brain and spinal cord. The cause is unknown. It is infectious, sometimes occurring in epidemics, but more frequently as a sporadic disease. In the epidemic form young adults are most frequently attacked. The sporadic form occurs in children. Complete recovery is rare. *See Paralysis.*

INFANTILE SCURVY OR **BARLOW'S DISEASE.** Disease often confused with rickets and other disorders. Being due to the absence of certain essential constituents from the diet, it is much more frequent in infants brought up on condensed and sterilised milks and patent foods than in those breast-fed. When moved the child cries continuously and is clearly suffering pain in the lower limbs. Later the limbs swell in the neighbourhood of the joints, bleedings take place in various parts of the body, notably under the fibrous covering of bones, and the infant also suffers from ulceration of the gums. Treatment consists in putting the child on proper diet, which includes a small teaspoonful of orange-juice two or three times a day.

INFANT MORTALITY. Term used for the deaths that occur among children under one year old. Despite the admitted improvement in social conditions, and the substantial decline in the infant death rate since 1915, much avoidable loss of infant life still occurs in the British Isles. In 1929 the rate was 74 per thousand. The highest rates of infant mortality are always found in the overcrowded slum districts of large towns, the rate sometimes rising to 140 or even more in the manufacturing towns of the N of England.

Many factors contribute towards loss of infant life. Perhaps the most important cause is vitiation of the atmosphere by smoke, and by dust blown up from dirty streets, refuse heaps, and other accumulations of filth. Parental ignorance and neglect, and adverse pre-natal conditions surrounding the mother, are also important causes of infant mortality. Provision of skilled attendance in child-bed would save a certain number of lives annually. Artificial feeding is undoubtedly very undesirable for newly-born infants, and the mortality rates in infants who are thus fed is much higher than in breast-fed infants. Among natural causes that lead to excess of infant deaths is a hot, dry summer, which is always attended in urban districts with an increase in deaths from infantile diarrhoea. *See Birth Rate; Death Rate.*

INFANTRY. General term for foot soldiers. It is one of the four main divisions or arms into which modern armies are divided, the others being cavalry, artillery, and airmen.

In modern armies the infantry unit is the battalion, with a strength of 1,000 men, divided into companies, and further into platoons. Battalions are grouped into brigades and brigades into divisions, and during the

Great War the infantry division of from about 12,000 to 16,000 men was recognized by all combatants as the most important unit on the field of battle. *See Army; Artillery; Camouflage; Cavalry; Strategy; Tactics.*

INFECTION (Lat. *inficere*, to put in, dip in, taint). Invasion of the tissues of the body by an organism which flourishes at the expense of the host. Bacteria and other infective micro-organisms may enter the body through the gastro-intestinal tract, as, for instance, typhoid and cholera; through the respiratory tract, as with pneumonia; or by inoculation through the skin or a mucous membrane, e.g. tetanus. In some diseases the infection is conveyed by some special agent, as malaria by mosquitoes.

When infection by a micro-organism occurs, the bacilli, if relatively few in number, may be quickly overcome by the phagocytic action of the blood, and the infection rapidly brought to an end. If this does not occur the micro-organisms increase rapidly. The symptoms of an infectious disease are due to the presence in the blood of poisonous substances or toxins generated by the action of the micro-organisms. *See Notification; Public Health; Sanitation.*

INFLAMMATION (Lat. *inflammare*, to set on fire). Natural reaction of living tissue to an injury. It is essentially a protective process. The most frequent causes of inflammation are infection by micro-organisms, burns, sprains, irritating substances, etc.

The familiar signs of acute inflammation are redness, heat, swelling, and pain. There is an increased supply of blood to the part, owing to dilatation of the small blood vessels. In the surrounding tissue the leucocytes, or white blood cells, attack and destroy the invading micro-organism, a process termed phagocytosis, many of them perishing themselves in the process, and forming the accumulation of white material known as pus.

Slight inflammation may terminate by complete recovery of the tissues. If, however, suppuration occurs, ulceration or necrosis of the tissues is likely to follow, permanent changes taking place and a scar being formed.

The treatment in acute inflammation consists first of all in removing the cause. A foreign body should be extracted, or if an abscess has formed it should be incised and the pus allowed to drain away freely. The part should be kept at rest. Congestion of the blood vessels may be relieved by hot fomentations. In chronic inflammation constitutional causes, such as gout, rheumatism, tuberculosis, or syphilis, may be mainly responsible for the condition.

INFLEXIBLE. British battle-cruiser. One of the *Invincible* (q.v.) class, she was completed in 1908, and displaced 17,250 tons. Her speed was 25 knots, and her guns eight 12-in. and sixteen 4-in. She took part in the battle of the Falklands, Dec. 8, 1914, was severely damaged by a mine in the bombardment of the Dardanelles, March 18, 1915, and was engaged in the battle of Jutland, May 31, 1916.

INFLORESCENCE. Botanical term to indicate the manner in which the flowers of a plant are grouped. A flower which has a shoot all to itself is said to be solitary. If it terminates a stem of the plant the inflorescence is definite. Flowering shoots produced as side branches constitute indefinite inflorescences. When the flowers are attached without footstalks to a common axis, the inflorescence is a spike; but if each flower has a short footstalk, it is a raceme. When a raceme branches it becomes a panicle. If the lower flowers have much longer footstalks than the upper ones, the inflorescence is a corymb. If at the end of a flower-stalk a number of shorter stalks radiate, each ending in a small flower, it is known as an umbel. A flowering stem may end in a flower, but send out side branches a little

below which will end in flowers and produce other side branches. Such an arrangement is known as a cyme. *See Botany; Flower.*

INFLUENZA (late Lat. *influentia*, flowing in, influence). Highly infectious epidemic disease. It has been recognized since the 16th century, and from time to time widespread epidemics have occurred. The serious epidemic of 1918 was prevalent all over Europe, the U.S.A., India, and Australia.

The disease is due to a micro-organism. The period between the entrance of the organism in the system and the beginning of the symptoms is generally not longer than 48 hours. Influenza affecting the respiratory passages is the most frequent form. There is running at the nose, with shivering and rise of temperature, which may reach 102° or 103° F. Serious complications are bronchitis, pleurisy, and pneumonia. In other cases, disorder of the heart or nervous or digestive systems may be the most prominent feature.

The great majority of persons affected recover quickly without developing complications. The patient should always remain in bed until the temperature is normal. A light diet should be given and the bowels attended to. A month at the seaside, after the acute symptoms have disappeared, is desirable.

INFORMATION (Lat. *informare*, to outline, inform). Term used in English law. The crown is entitled to proceed in the courts, not by way of writ in civil cases or by indictment in case of great public misdemeanours, but by way of information which is said to be "laid" by the attorney or solicitor-general.

This form of procedure is adopted in nearly every case where the crown sues for money, or chattels, or damages for trespass on crown lands. The trial is like that of an ordinary action. In criminal matters, the procedure is only adopted in cases of great public misdemeanours, such as seditious conspiracies.

MINISTRY OF INFORMATION. Department of the British Government in operation during the Great War. From the outbreak of war until the end of 1916 the work of disseminating information about Britain's aims and combating the efforts of the enemy in neutral countries was under the control of the foreign office. In Dec., 1916, a special department was set up which was later divided into sections, Viscount Northcliffe being made director of propaganda in enemy countries. In Feb., 1918, it passed into a ministry. Lord Beaverbrook became the minister, and two propaganda bureaux, already in existence, were brought into the department. The ministry was wound up at the end of 1918.

INFORMER. In English law a person who prosecutes or sues another for breaking a penal statute. The term is also used of a criminal who approves, i.e. comes forward to give evidence against his fellow criminals. *See King's Evidence.*

INFUSORIA. Name applied vaguely and unscientifically to minute protozoa which commonly make their appearance in infusions of vegetable matter. If hay or dead leaves are steeped in water till the liquid becomes turbid, microscopical examination will reveal the presence of hosts of active creatures moving about by means of cilia or flagella.

INGE, WILLIAM RALPH (b. 1860). British divine. Born June 6, 1860, he was educated at Eton and King's College, Cambridge, of which he became fellow, after an exceptionally brilliant academic career. For four years after 1884 he was a master at Eton, and from 1889-

William Ralph Inge,
British divine
Russell

1904 he was fellow and tutor of Hertford College, Oxford. In 1911 he was chosen dean of S. Paul's Cathedral, and during the next few years his utterances on public questions aroused much attention. His views are contained in *The Church and the Age*, 1912; *Outspoken Essays*, 1919; *Lay Thoughts of a Dean*, 1926; *Assessments and Anticipations*, 1929; and other books. He was knighted in 1930.

INGELOW, JEAN (1820-97). British poet and novelist. Born at Boston, Lincolnshire, March 17, 1820, the publication of a series of poems in 1863, containing the fine ballad *High Tide on the Lincolnshire Coast*, first established her reputation, which was enhanced by *A Story of Doom*, 1867. She also wrote stories for children, and several novels, of which the best known is *Off the Skellings*, 1872. She died July 20, 1897.

INGERSOLL. Town of Ontario, Canada. It stands on the river Thames, 19 m. N.E. of London, and is served by the C.P. and C.N. Rlys. Pop. 6,150.

INGERSOLL, ROBERT GREEN (1833-99). American politician and lecturer. Born at Dresden, New York, Aug. 11, 1833, he entered political life as a Democrat. He afterwards went over to the Republican side, became attorney-general for Illinois in 1868, and developed remarkable power as an orator, using this gift largely as an opponent of Christianity and the Bible. He died July 21, 1899. His works include *The Gods* and other lectures, 1876; *Some Mistakes of Moses*, 1879; *Great Speeches*, 1887. They were issued in 12 vols., 1900.

Robert G. Ingersoll,
American politician

Some Mistakes of Moses, 1879; Great Speeches, 1887. They were issued in 12 vols., 1900.

INGLEBOROUGH. Mountain of Yorkshire (W.R.). In the Pennine range, it is 3 m. from Settle and is 2,373 ft. high. It is best ascended from Clapham, where is a station on the L.M.S. Ry. Ingleborough Cave consists of a series of passages in the limestone about 700 yards long, filled with stalactites and stalagmites. On Ingleborough is Gaping Ghyll, a limestone cavern 400 ft. deep.

INGLETON. Market town of Yorkshire (W.R.). It is 14 m. from Sedburgh, on the L.M.S. Ry. Ingleborough is in the neighbourhood. Market day, Fri. Pop. 2,461.

INGLIS, ELSIE MAUD (1864-1917). Scottish doctor. Born in India, she graduated in medicine at Edinburgh university and practised for a time in that city. In 1915 she went to Serbia with the Scottish Women's Hospitals and did a great work there during the terrible epidemic of typhus. In 1916 she was for a time a prisoner. Soon after her release, in Aug., 1916, she went with some other doctors and assistants to Archangel to assist the Russians. There she was taken ill, and on reaching England she died, Nov. 27, 1917.

Elsie Inglis,
Scottish surgeon

INGRES, JEAN AUGUSTE DOMINIQUE (1780-1867). French painter. Born at Montauban,

J. A. D. Ingres,
French painter
Self-portrait

Aug. 29, 1780, he entered David's atelier in Paris in 1796. In 1806 he went to Rome, where he lived until 1820. He succeeded Vernet in the directorate of the French School in Rome in 1834, and was named a senator in 1862. He died Jan. 14, 1867. His most famous works were *Oedipus* and the *Sphinx*, 1808; *An Odalisque*, 1819; and

Jesus Giving the Keys to S. Peter, 1820. He was also a distinguished portrait painter.

INHAMBANE. Coastal dist. and town of Mozambique or Portuguese E. Africa. Its area is about 33,000 sq. m. and the pop. about 750,000. The port of Inhambane lies between Lourenço Marques and Beira, and possesses a spacious harbour. It is the terminus of a coastal rly. from Lourenço Marques via Chai-Chai on the Limpopo river, and has a wireless station. Pop. 3,500.

INITIATION (Lat. initium, beginning). Term signifying introduction to a society, business, or office. It is more particularly used of admission to an order of knighthood or a secret organization, as that of the Freemasons, when it is accompanied by rites and ceremonies. In primitive culture the rites concern introduction into the privileges and duties of adult life.

INITIATIVE. In politics, the power of originating legislation. In the U.K. the initiative in regard to financial bills is with the House of Commons; the initiative on all important legislation rests in practice with the government. In Switzerland if 30,000 citizens present a petition for the revision or annulment of a measure it must be submitted to a referendum (q.v.).

Diagram illustrating principle of working of injector.

INJECTION (Lat. injectio, throwing in). In medicine, substance introduced from without into an organ or tissue, either for the purpose of supplying food material or for medical reasons. Hypodermic injections are solutions of drugs introduced under the skin by a syringe terminating in a fine hollow needle. See Enema.

INJECTOR. Device in which the velocity of high-pressure steam or compressed air is used to move liquids or gases through pipes or other channels. If the apparatus is designed primarily as a feeder, it is termed an injector; if as a remover, an ejector. Injectors are commonly employed to force water into steam boilers, and are sometimes used instead of pumps to deliver water to a height. A steam ejector is used to maintain a vacuum in the cylinders of the vacuum brake used on trains. The best injectors re-start themselves.

INJUNCTION (Lat. injungere, to bid, enjoin). In English law, an order of the court prohibiting a defendant from doing something he has started to do, or threatens to do. As a rule, injunctions are negative; in rare cases the court will grant a mandatory injunction, commanding something to be done.

INK (Lat. encaustum). A liquid medium by means of which more or less permanent characters may be produced upon any material. The principal kinds are (1) writing; (2) copying; (3) drawing; (4) marking; (5) printing; (6) typewriter; and (7) inks for special purposes. The earliest writing inks consisted of lamp-black and a solution of glue or gum. Such inks have been replaced in Europe by inks made from galls and iron sulphate or copperas. A small proportion of an acid is added to prevent the ink from clanging in the bottle. In modern blue-black inks a provisional colour such as indigo or aniline blue is introduced. Carbolic acid is added to prevent mould, and in some cases a little gum is used. Red ink is usually a solution of the coal tar dye eosin. In copying inks a larger proportion of copperas, galls, and dye is used, with a small amount of glycerin. Indian ink is composed

mainly of fine lampblack and glue. The best known marking inks are preparations of silver salts or aniline salts. Printing inks are essentially a special kind of oil paint. Type-writer inks frequently consist of a solution of methyl violet with glycerin, oil, etc. Inks for secret writing consist of a colourless liquid which forms a coloured compound on treatment with another solution.

Inkhorn carried by Eastern scribes

An inkhorn is a portable receptacle for holding ink, some being also made to take pens and other writing implements. They are made of wood, horn, or metal, and are still carried by scribes in the East.

INKERMAN. Ridge overlooking Sevastopol. Here, during the Crimean War (q.v.), a battle was fought between the British and the Russians, Nov. 5, 1854. The British held the ridge, and here the Russians repeatedly attacked them in superior numbers; but after British and French reinforcements arrived the guns on Shell Hill were silenced and the Russians fell back. The British lost about 2,400 out of 8,500 engaged; the French lost over 900. The Russian losses were placed at 11,000 or 12,000 out of 42,000 engaged.

INKPEN. Village of Berkshire. Near is Inkpen Beacon, which includes Walbury Hill (959 ft.), the highest point in the south-east of England. Pop. 658.

INLAND REVENUE. Name given in the U.K. to certain items of the national revenue. It includes income tax, death duties, and stamp duties. The collection of these duties is supervised by the board of inland revenue, the chief offices of which are at Somerset House, London, with branches in Edinburgh and all over the country.

INLAND SEA. Almost entirely landlocked and generally shallow basin in Japan. It lies between S. Honshu and the island of Shikoku, and extends for 240 m. from Osaka Bay to the Strait of Shimonoseki. It communicates with the Pacific Ocean by the Straits of Akashi and Naruto, between which lies the isle of Awaji, and the Strait of Hayasui between Shikoku and Kiusiu. The sea comprises a number of basins joined by narrow, island-studded channels and is much used by steamers.

INLAYING. 1. Veneer of mahogany and, 2, of walnut, made by sawing the wood across the grain and laying the pieces to form a pattern. 3. Detail of double veneering on two sides of a panel. Left, ground work with two leaves of veneer on each side; right, the completed panel. 4. Commercial method of making chessboards and, 5. Geometrical patterns, by gluing strips of different colours into a block from which transverse sections are sawn, as shown above.

INLAYING. Insertion of ornamental designs on wood or metal or other substance by fitting the design, of thin material, into the surface. The design shows chiefly by difference in colour. It is common in veneered furniture and in some classes of ornamental metal work. It may consist of narrow lines or bands or be

an elaborate decoration. In furniture, woods of different natural colours are employed, also pearl, ivory, tortoiseshell, and metal. In wood the inlay is glued, in metal it may be retained by undercut edges. *See Furniture.*

INN. House where travellers and others are fed and lodged for gain. The earliest inns were the caravanserais and khans of the East. The Greek and Roman inns were little more than drinking shops, but the Roman posting-houses on the great roads closely resembled the later inns. In Roman Britain there were taverns for rest and refreshment. In the Middle Ages hospitality was provided chiefly at the castles, country houses, and monasteries. The old inns were usually built in the form of a hollow square surrounded by galleries, upon which the bed-rooms opened. During the coaching period inns enjoyed great prosperity, which declined with the coming of the railways.

One of the most picturesque of English inns is the half-timbered Feathers, at Ludlow. Other good examples of so-called magpie or black-and-white inns are The Old Hall at Sandbach (originally the manor house), The Bear's Head at Brereton, The Swan and Lion at Congleton, The Bear and Billet at Chester, formerly the town mansion of the earls of Shrewsbury, and The Pounds Bridge Inn between Penshurst and Speldhurst, Kent. The Luttrell Arms, at Dunster, Somerset, is a fine 15th century building. Of the few galleried inns that survive, the finest is the New Inn, Gloucester, built, 1450-57, to accommodate pilgrims to the shrine of the murdered king Edward II.

The George, Glastonbury, is a very handsome building, with the original Perpendicular stone front. The frontage of The Star at Alfriston has fine carvings, many of them ecclesiastical, and is roofed with large slabs of Horsham stone.

By law an innkeeper is bound to receive and entertain for a reasonable time at a reasonable charge any traveller who applies for admission, provided that accommodation is available and the applicant behaves properly.

The Innholders' Company is a London city livery company which, originating in the 14th century, received a charter in 1515, being incorporated at the time inns were beginning to take the place of monasteries as resting places for travellers, and every tavern keeper was compelled to belong to it.

Consult The English Inn, Past and Present, A. E. Richardson and H. D. Eherlein; The Book of the Inn, T. Burke, 1927.

INN. River of Europe. It rises in the canton of the Grisons, Switzerland, and flows through the Engadine. Having entered the Austrian Tirol, it flows by Innsbruck and, leaving Austria near Kufstein, enters Bavaria and joins the Danube at Passau. It is about 310 m. long. Its main tributaries are the Salzach and Alz. It is navigable for small vessels from below Innsbruck.

INNERLEITHEN. Burgh of Peebles-shire, Scotland. It stands on Leithen Water, 6 m. from Peebles, on the L.N.E.R. Woollens are made, and there is a mineral spring supposed to be Scott's S. Ronan's Well. Near is Horsburgh Castle. Pop. 2,403.

Innisfail or **INISFAIL.** Poetical name for Ireland. It means the isle of destiny.

INNISKILLING FUSILIERS, ROYAL. Regiment of the British army. It takes its name from Enniskillen, Ireland. For its gallant defence of the town in 1689 part of the garrison was formed into regiments of the British army, later represented by the Inniskilling Fusiliers and the Inniskillings (6th Dragoons). The former, an infantry unit, was known as the 27th Inniskillings until 1861, when its present title was granted, while at the same time the old 108th Foot was constituted the 2nd battalion. The latter was raised as the 3rd Madras Europeans in the East India Company's service in 1854. In 1915 the 1st Inniskillings formed part of the 29th division

and took part in the Gallipoli landing, April, 1915. After the war the Royal Irish Fusiliers were incorporated with the Inniskillings. The regimental depot is at Omagh, Northern Ireland.

The 6th Inniskilling Dragoons, a cavalry regiment with a distinguished record, including service at Waterloo, in the S. African War, and the Great War, is now incorporated with the 5th Dragoon Guards, which bears the name Inniskilling. *See Dragoon.*

Inniskilling Fusiliers badge

INNOCENT. Name of 13 popes. Innocent I, pope 402-417, supported John Chrysostom and was declared a saint. Innocent II, 1130-43, was disturbed by the rival claim of the anti-pope Anacletus II (d. 1138). Innocent IV, pope 1243-54, deposed the emperor Frederick II and founded the Inquisition (q.v.). Innocent V, the first Dominican pope, only reigned from Jan. to June, 1276. Innocent VI, pope 1352-62, was a Frenchman named Aubert, who reigned at Avignon.

Innocent VII was pope 1404-6, during the schism of the anti-pope Benedict XIII. Innocent IX, when 72 years old, was pope Oct.-Dec., 1691. Innocent X was pope 1644-55, and Innocent XIII was pope 1721-24.

INNOCENT III (1160-1216). Pope 1198-1216. The son of Count Trasimund of Segni and nephew of Clement III, he was born at Anagni, and was one of the greatest of the popes, using his energies specially for the restoration of the temporal power of the papacy in Italy, the reconciliation of the spiritual and temporal power in Europe, and the recovery of the Holy Land. He called the general council, Nov., 1215, which proclaimed the fifth crusade, and died at Perugia, July 16, 1216. His body was removed to the Lateran from the cathedral of Perugia by order of Pope Leo XIII in 1891.

INNOCENTS' DAY, HOLY INNOCENTS OR CHILDRENMASS. Holy day of the Christian Church. It is observed in the West on Dec. 28, in the Greek Church on Dec. 29, in memory of the children massacred by Herod (Matt. 2).

INNSBRUCK. Town of Austria, in Tirol. A tourist resort, it stands mainly on the right bank of the Inn, at a height of 1,880 ft., 60 m. S. by W. of Munich, and is the capital of Tirol. Picturesquely situated, it is sheltered on the N. by lofty peaks, and the climate is pleasantly mild during autumn and winter. The old part

contains many interesting buildings, including the Goldenes Dachl, 1500, connected with Maximilian I, and the Franciscan church, built about 1550 to contain the emperor's monument. The town has cotton, mosaic, and glass-painting industries. Pop. 56,401.

The university, founded in 1672, has a library of over 200,000 volumes. Close by is the Ferdinand museum, with various collections, mainly of Tirolese interest, including a picture gallery, in which, moreover, several of the old masters are represented. In the suburb of Wilten, to the S., is a great church in the baroque style belonging to an abbey founded, it is said, in the 12th century.

INNS OF COURT. Name of four English legal societies possessing the exclusive right of calling persons to the bar. They were so called from affording residence to members and from their ancient association with the aula regia or court of the king's palace. Originating in the 13th century, they include benchers (or senior members), barristers, and students, and are managed by the benchers, who are co-opted. They are Lincoln's Inn, Inner Temple, Middle Temple (*see Temple*), and Gray's Inn. There are inns for barristers in Dublin for the Irish Free State, and in Belfast for Northern Ireland.

INO. In Greek mythology, daughter of Cadmus, king of Thebes. She married Athamas, king of Minyae in the Boeotian Orchomenus. *See Cadmus.*

INOCULATION (Lat. *inoculare*, to insert a graft). Introduction of a virus, usually a micro-organism or the products of activity of a micro-organism, into the system through an abrasion or perforation of the skin, in order to communicate a disease. The introduction of a virus to prevent a disease is now called vaccination, inoculation, using the word in the narrower sense, being only performed upon animals for the purpose of investigating the disease. *See Vaccination.*

INQUEST (O. Fr. *enquête*, from Lat. *inquisitum*, passive part. of *inquirere*, to inquire into). Judicial inquiry. A survival of its primary purpose is seen in the inquest concerning any matter that entitles the king to the possession of lands, goods, or chattels.

The word is now mainly restricted to an inquiry held by coroner and jury to ascertain the cause of death of a person "where there is reasonable cause to suspect that such person has died either a violent or an unnatural death, or has died a sudden death of which the cause is unknown, or that such person has died in prison."

A coroner's inquest, though it may terminate in the committal of a person for trial, is not a trial, and the laws of evidence which hold good in other courts are not insisted upon. *See Coroner; Jury.*

INQUISITION or **HOLY OFFICE, THE** (Lat. *inquisitio*, inquiry). Tribunal of the

Innsbruck. Theresienstrasse, the main street

Roman Catholic Church for the suppression of heresy. Founded by Innocent IV in 1248 and chiefly directed by Dominicans since the 19th century, it has been confined to the repression

of heretical literature. The first tribunal of the Inquisition was set up at Toulouse. The system gradually extended to Italy, except Naples: to Spain, Portugal, Peru, Mexico, Goa, the Netherlands, and Germany. The first inquisitor-general to condemn heretics to the stake was a Dominican, Pedro de Verona, who was slain by the populace at Como in 1252, and later canonised as Peter Martyr. Punishments were specially severe in Spain, where, for political and other reasons, the Inquisition was reorganized by the State, with the permission of Sixtus IV, in 1478, and directed against the Jews and Moors. The statement that more than 340,000 persons were executed is disputed, but the number was large, and the tortures terrible. The Spanish Inquisition was directed against words, actions, and assumed intentions.

The tribunal sat in secret. Its sentences were proclaimed at an auto-da-fé and carried out by the civil authorities. The Spanish Inquisition was overthrown by Napoleon in 1808, abolished 1813, revived 1814, abolished again 1820, superseded 1823 by an independent Tribunal of the Faith, and finally disappeared 1834-35. The Inquisition existed in Portugal 1557-1826; was suppressed in Germany at the Reformation; in France in 1598; in Italy in 1870. See Albigenes; Auto-da-Fé; Torquemada. Consult The Inquisition in the Spanish Dependencies, H. C. Lea, 1908.

INSANITY.

Generally speaking, mental derangement due to some disease or defect of the brain. Precise definition is impossible, since disorder of the mental faculties may result from influences which can be traced and rectified. A

person may be regarded as insane who is unable to take care of himself or his affairs, or is dangerous to himself or others, or has delusions or abnormal ideas which unfit him for leading a normal social life. The chief forms of insanity are: Mania, melancholia, acute confusional insanity, paranoia, dementia praecox, secondary dementia, idiocy and imbecility, epileptic insanity, general paralysis of the insane, toxic insanity, insanity associated with reproduction (puerperal insanity).

Forms of mental disorder overlap, however, and a person may show more than one form at different times. A person of unsound mind can be placed under restraint, provided the degree of mental disorder is sufficient to justify such restraint. See Lunacy.

INSCRIPTION (Lat. in, upon: scribere, to write). Records composed of alphabetic or other conventional characters written, incised, or impressed upon durable materials. They occur upon rock surfaces and upon stone, metal, clay, wood, and other substances, including buildings, sepulchral and other monuments, pottery, and weapons. Their study is called epigraphy, and their decipherment has been of immense importance in unravelling the history of mankind.

The decipherment of the Rosetta stone, for example, furnished the key to the native history of ancient Egypt. Babylonian and Assyrian history was similarly revealed through the decipherment of the rock-cut inscriptions at Behistun. See Alphabet; Cuneiform; Graffiti; Hieroglyphs; Ogam.

INSECT. The largest class of the arthropoda or jointed-limbed animals, of which

fication of internal tubes, known as tracheae, connected with external openings on each side of the body. These features are constant and form the characteristics of the class; but individual orders differ widely in appearance, details of structure, and mode of life.

The sexes are separate, and only reach their full development in the final stage of the life cycle. Propagation takes place normally by the union of the sexes and the subsequent deposition of eggs; but in some cases the young are born alive, while parthenogenesis, or birth without the intervention of the male, is common. The life history of a typical insect is one of metamorphosis. The egg having hatched, the first stage of life is passed as a larva, the stage of growth. Next comes a quiescent or pupal stage, in which the internal organs undergo reconstruction and the various external organs of the perfect insect develop. From the chrysalis emerges the imago, or perfect insect, which in due course propagates its kind by laying a number of eggs, and soon afterwards dies.

The chief orders of insects are: Aptera, Hemiptera, Diptera, Orthoptera, Neuroptera, Odonata, Hymenoptera, Lepidoptera, Coleoptera. See the articles bearing these titles, and those dealing with specific insects, e.g. ant, bee, butterfly, etc. Consult also *Insects and Man*, C. A. Ealand, 1915; *Insect Life*, C. A. Ealand, 1921.

Insectivorous plants are plants which have adapted parts of their structure to the catching of insects, whose soft parts are dissolved out and then absorbed by the plant for its nourishment. Sundew (*Drosera*), butterwort (*Pinguicula*), bladderwort (*Utricularia*), and a few others procure the greater part of their sustenance by digesting and assimilating insects which they have captured.

INSECTICIDE. Name applied to various chemical mixtures in powder or liquid form designed to destroy insect pests in house or garden. Insecticides act in various ways, some by causing suffocation, others by direct action upon the carcasses of the pests, or by poisoning their food.

INSKIP, SIR THOMAS WALKER HOBART (b. 1876). British lawyer. The son of a Bristol solicitor, he was born there March 5, 1876. Educated at Clifton and King's College, Cambridge, he became a barrister. During the Great War, as a K.C., he worked at the Admiralty, and in 1918 he was elected M.P. for Central Bristol. In 1922 he was made solicitor-general in the Unionist Ministry and with a year's break he retained the office until 1928, when he was made attorney-general. In 1929 he resigned, and at the general election in May lost his seat at Bristol. He was chancellor of Truro diocese, 1920-22.

Sir Thomas Inskip,
British lawyer
Russell

INSOMNIA (Lat. *insomnis*, sleepless). Inability to sleep. External causes of the condition are bad ventilation of the bedroom, an uncomfortable bed, too high or too low a pillow, too many or too few bedclothes, noise, or too strong a light in the room. Other causes are taking a heavy meal, or (sometimes) drinking tea or coffee shortly before going to bed. More serious causes are conditions of ill-health, such as dyspepsia, disorders of the heart or lungs, and disturbances of the nervous system. The treatment should be directed towards removing the underlying cause; but it is exceedingly undesirable to resort to hypnotic drugs except under medical advice.

Insect. 1. Antenna of cave-beetle (*Adelops*), showing organs of smell, a, in terminal joints. 2. Nervous systems of flies, showing progressive concentration of ganglia, g, into a central mass controlling wings and legs: A, *Harlequin-eat*; B, *Hawk-fly* (*Empis*); C, *Gad-fly*; D, *Flesh-fly*. 3. Digestive system of stag-beetle: a, mouth parts; b, gullet; c, gizzard; d, stomach; e, intestines; f, rectum. 4. Ears of long-horned grasshopper in shank of front leg: a, cover of drum; b, opening to drum. 5. Section through compound eye of blow-fly, showing outer layer, a, of facets or simple eyes backed by crystalline cones, b, and rods, c, conveying images to the optic tract, d, and thence to the brain; e, air tube. 6. Head of earwig in position. 7. Muscles of abdomen of earwig: a, longitudinal muscles; b, oblique muscles; c, cercopod. 8. Head of giant water-bug: a, eyes; b, poison glands; c, beak; d, piercing lancets. All greatly enlarged.

more than a quarter of a million species are known. The body of an insect is "cut into" three divisions: the head, thorax, and abdomen. The head is furnished with a pair of antennae, which serve as organs of touch, and perhaps of smell; jaws and other mouth appendages, which may be modified into a sucking tube, as in butterflies and moths, or a piercing instrument, as in mosquitoes and fleas; and a pair of compound eyes. The thorax is always furnished with six jointed legs, and usually with two pairs of wings. The abdomen contains the bulk of the internal organs, and is without limbs, but may be provided with sting, ovipositor, or pincers.

The body of an insect is encased in chitin, which forms a kind of external skeleton. The breathing apparatus consists of a rami-

INSPIRATION (Lat. *inspirare*, to breathe into) Word commonly used to denote a supernatural influence or agency acting upon the human mind for the purpose of creating literature, especially sacred literature. Perhaps the best definition of inspiration is in accordance with the findings of modern scholarship is that of S. R. Driver: "However difficult it may be to define inspiration, or to determine the mystery of its operation, those who use the term may be supposed probably to mean by it an influence which gave to those who received it a unique spiritual insight enabling them thereby, without superseding or suppressing the human faculties, but rather using them as its instruments, to declare in different degrees and in accordance with the needs or circumstances of particular ages the mind and purpose of God." See Bible; Gospels; The Font.

INSTINCT (Lat. *instinctus*, impulse). An inborn capacity for effective behaviour which expresses itself in immediate response to a particular stimulus without requiring practice or inference. Instinctive behaviour is seen at its best in the routine work of ants, bees, and wasps. It may be that instinctive behaviour improves by practice and is modified by education, but the capacity is in its essentials ready-made. Intelligent behaviour is marked objectively by trial and error experimenting and profiting by experience; subjectively by perceptual inference. Experimenting with general ideas is apparently peculiar to man, and is called reason.

That higher animals have the power of perceptual inference cannot be directly proved; the only arguments are indirect and by analogy, and are not legitimate where the central nervous system is not closely akin to our own. The popular notion that animals have instincts, while man has intelligence, is quite inept, for man has a number of instincts (mostly of a generalised type), and many animals must be credited with intelligent behaviour. See Animal Intelligence.

INSTITUTE (Lat. *instituere*, to establish). Term used for something established. It was borrowed from France, and is used for societies of a learned character.

The Institute of France is the general title of the group of the five great learned societies of France. These are the Académie Française (q.v.); the Academy of Inscriptions and Belles-Lettres, founded by Colbert, 1663; the Academy of Science, founded by Colbert, 1666; the Academy of Fine Arts, finally constituted as such in 1816; and the Academy of Moral and Political Sciences, constituted in 1832. The Institute was established on Oct. 25, 1795.

The Institut Français is a French educational organization in London. Founded in 1910, its home is in Cromwell Gardens, S. Kensington, S.W.7.

INSTITUTES (Lat. *instituere*, to establish). Term used for certain treatises on law. The best known are those of Justinian and of Coke. The former, an exposition of Roman law, compiled about A.D. 533, is the basis of a great part of the law of Western Europe. Coke's Institutes, 1628, is a compendious treatise on the English law of his day. The first volume, on tenures, is frequently called Coke upon Littleton, as it is a commentary upon the older work of Littleton on tenures. The second deals with parliamentary acts.

INSULATION. In electricity, the resistance to the passage of electric current by a resistance insulator. Air and gases, when quite dry, are practically perfect insulators. Vulcanised rubber, gutta-percha, vulcanite, glass, shellac, resin, mica, wax, porcelain, marble, slate, silk, cotton, and paper are among the best solid insulators.

Of the qualities demanded from insulators the most important are high resistance to leakage and to sudden puncture by intense electric pressure, solidity, flexibility, mechanical strength, durability, permanence of character, non-absorption of moisture, and ability to withstand considerable changes of temperature. See Cable; Resistance.

INSULIN. A drug used in the cure of diabetes. Discovered by Dr. F. G. Banting (q.v.), and extracted from the pancreatic glands of oxen, it reduces the sugar in the blood. It is named after the cells in the pancreas known as the *insulae* or *islets*.

INSURANCE. A provision, or contract, by which the risk of pecuniary loss arising from death or personal injury, or from destruction of, or damage to, property owing to perils of any kind to which an individual, the insured, may be exposed, is undertaken by a group of persons or a corporation, called the insurers. As consideration an appropriate premium is paid to the insurers, either in a single sum or by periodical instalments.

The essence of the transaction is that losses definitely anticipated or arising, it may be, from unforeseen contingencies are transferred to the shoulders of other parties whose business is to undertake and average a large number of similar transactions and who, by reason of the broadening of the basis, are able to sustain such losses with equanimity.

A distinction has been drawn between assurance and insurance, the former term having been applied to life contracts and the latter to marine, fire, and miscellaneous risks, but there is a tendency to use both terms indiscriminately. It is important to remember, however, that whereas a life policy is concerned with an event which must happen, and in regard to which a claim must eventually fall upon the insurers, unless the premium is allowed to lapse, it is possible with practically all other forms of insurance that no claim will ever arise, and the contract may be looked upon by the policy-holder as an indemnity. Good faith must be shown on both sides. Misrepresentation or omission to state a material fact when proposing a risk voids the contract.

The operations of the ordinary British life assurance companies, whose funds in the aggregate now exceed £600,000,000, are carried on subject primarily to the provisions of the Assurance Companies Act, 1909. The Marine Insurance Act, 1906, is the standard for English marine insurance, which may be divided into two classes: the insurance of the body of the ship and of the owner's other interests; and the insurance of the cargo. As to fire insurance, the premium income of all the fire companies in Great Britain amounts annually to about £12,000,000. Accident insurance is of more recent growth, but there are approximately 100 companies and the total premium income exceeds 15 million pounds. Other classes of insurance are against burglary, housebreaking or larceny, loss of crops owing to bad weather, and so on. See Health Insurance; Unemployment, etc.

INTAGLIO. Process of illustrating known also as photogravure and rotogravure. At first it was used in the reproduction of original paintings in the form of prints, but has been put to more extended use for illustrating periodicals, magazines, and newspapers, and has gained in public favour because greater depth and richness of colour are imparted to a picture by this process than by the method known as half-tone (q.v.), to which it is in principle the exact reverse. A ruled or dotted screen is used, as in the half-tone process, but the recesses or valleys produced on the etched cylinder are of varying depths, the ink being in the valleys or between the dots, and not on

the surface. The degrees of light and shade are obtained by the quantity of ink contained in these spaces, some of which are deep and others shallow. Thus a row of deep ravines in the block will give heavy shadows in the pictures, and vales the lighter portions.

Intaglio. Exaggerated diagrams illustrating in section A, how the surface of the printing plate takes the ink in the half-tone; B, how the ink remains in the recesses of the cylinder in photogravure.

As the design is below the surface of the cylinder the ink fills up the design, and then by scraping off all the superfluous ink the surface is wiped perfectly clean. A web of paper is then passed over the cylinder and a rubber-covered roller impresses the paper into the indentations, transferring the ink therein on to the paper, thus reproducing the design.

The principle of intaglio printing is not confined to illustrations. It is largely used for printing on silk and other textiles, and for the printing of wallpapers.

INTELLIGENCE (Lat. *intellegere*, to be aware of, to understand). The ability to learn from experience and to improve one's methods accordingly. In the animal world intelligence is usually contrasted with instinct (q.v.). An instinct is an inborn predisposition to a fixed mode of behaviour. Intelligence first manifests itself as a break-away from the traditional routine of instinct, under the pressure of a change in the environment. Man has gradually learned, by trial and error, by remembering and comparing, the useful arts and practical sciences.

The Intelligence Department in British civil organization is officially known as the Department of Overseas Trade (Development and Intelligence), and, established in 1917, it took over the dept. of commercial intelligence of the board of trade, the war trade intelligence dept., the foreign trade dept., and the consular service and consular dept. of the foreign office. Intelligence departments are attached to the fighting forces of the crown.

TESTS OF INTELLIGENCE. An intelligence test is a test for the determination of the mental capacity of an individual. Such tests include ordinary examinations at schools, universities, etc., and what are known as the Binet-Simon series, by which a child of nine is expected to give the days of the week in their correct order in 10 seconds, to give the correct change in money from a small sum, etc. One such test for adults is to cross out every A in the following passage in 20 seconds:

OYKFIUDBHTAGDAACDIXAMRPAG
QZTAACVAOWLYZWABETHJJAN
EEFAAMEAACBSVKALPHANRN
PKAZFYRQAEAXJUDFOIMWZSAU
CKVAOABMYDYAAZJDAJACINE
VBGAOFHARFVJCTQZAPJLEQWNA
HRBULASSNZMWAAWHACAXHXQ
AXTPDPUTYGSGRKVLGKIMFU
OFAAKYFGTMBLYZJJAAYAACAACD
TVDACSIUFMOTXWXMQEAKHOA
FXZWSAI

INTENTION. In English law it is a maxim that the intention is to be regarded rather than the form. But in construing legal documents the court must always deduce the intention from the words of the document. If the language is clear, no one will be allowed to say that something else was intended.

INTERDICT (Lat. *interdicere*, to forbid). Term used for an ecclesiastical punishment imposed by a pope, bishop, or other prelate. A general interdict is when all public worship is forbidden. A local interdict is when a diocese or parish is similarly punished. The punishment for an individual usually takes the form of excommunication (q.v.).

In Scots law an interdict is a judicial order forbidding certain proceedings. It corresponds to the English order known as injunction (q.v.).

INTEREST (Lat. *interesse*, to be between). In finance, money paid for the loan of money, or payment for the use of capital.

Interest is calculated at so much per cent. for a year or other agreed period. Compound interest includes interest on the interest. Net interest is the payment for the money, assuming the capital to be secure; gross interest includes an additional payment for the risk that the capital may be lost, or for other disadvantages in connexion with the transaction.

Interest, as a prime factor in commercial life, came in with the industrial revolution, or perhaps a little earlier. The modern objection to it comes from certain sections of socialist and communist opinion; but it is generally agreed that under existing conditions, at all events, without the existence of interest there would be little capital. See Bank; Land; Moneylender; Usury.

INTERFERENCE. Resultant action of interlacing systems of wave motion, e.g. light, sound, or electro-magnetic waves. When alike in phase the systems tend to augment each other, when opposite in phase they cancel each other. See Light; Sound; Wave; Wireless Telegraphy.

INTERLAKEN. Town and summer resort of Switzerland. On the Aar, between Lakes Thun and Brienz.

Interlaken. View across the town to the snow-capped Jungfrau.

There is a kursaal. Pop. 3,578

INTERLOCUTOR (Lat. *inter*, between; *loqui*, to speak). Word meaning literally one who takes part in a conversation. In Scots law, an interlocutor is an interim judgement before the final decision. In English law, interlocutory proceedings are proceedings between the commencement of an action and the trial thereof.

INTERMEZZO (Ital.). In music, an interlude or entr'acte. The term is applied either (a) to an instrumental piece designed to fill up time, or (b) to an independent composition of small dimensions. Originally it designated a dramatic piece played between the acts of a more serious drama or opera. See Ballet; Opera.

INTERNAL COMBUSTION ENGINE. Engine in which the fuel, in gaseous form, is introduced as part of the working fluid along with air into the power cylinder, wherein the full heat of combustion is imparted directly to the working fluid.

As compared with the steam engine, the internal combustion engine occupies less room, is more quickly got into action and, proportionately to the total weight of engine, accessories and fuel, it can be made to give

out far more power over a long period. To these facts are due the development of the motor car and the evolution of flying machines.

Internal Combustion Engine. Galloway horizontal twin-cylinder gas engine, developing 3,000 B.H.P. Top left, Diesel oil engine, large vertical type. Right, Napier aeroplane engine (over 1,000 h.p.) as fitted to the Gloster-Napier VI racing seaplane. Courtesy of D. Napier & Son, and Galloways Ltd.

GAS ENGINES These are of two main types, those employing the Otto, or four-stroke cycle, and those in which there is a power stroke every revolution—the Clerk or two-stroke cycle. They range from small power plants of one or two h.p. up to gigantic engines with a hundred-ton fly-wheel and a rating of 3,000 h.p.

The movements in the four-stroke type are as follows. The descending piston draws in a charge of gas (suction stroke); on its return the piston compresses the charge (compression stroke); the charge is ignited, usually by an electric spark, and the resulting explosion impels the piston downwards (power stroke); the return of the piston drives out the burnt gases (exhaust stroke).

In the two-stroke engine every forward stroke of the piston is a power stroke. The engine introduced by Clerk, in 1866, employed an auxiliary cylinder, the purpose of which was to draw in and compress the charge, and to sweep out the burnt gases from the power cylinder by a blast of air. The Fullagar and Oechelhäuser gas engines of today, which utilise a modification of Clerk's principle, embody a cylinder open at each end and having two pistons.

PETROL ENGINES. Gottlieb Daimler introduced a petrol engine in 1883, ignition being effected by means of a red-hot platinum tube. In principle the petrol engine resembles the Otto cycle gas engine. A carburettor is necessary to blend the vaporised petrol with the proportion of air needed to make a suitable explosive mixture. To increase efficiency the explosive mixture may be fed to the engine under pressure, so that a greater amount enters the cylinder. This is known as supercharging.

In two-stroke petrol engines the explosive

charge enters the crank case and lower part of the cylinder, where it is compressed by the down stroke of the piston, and forced by way of a transfer port into the upper portion of the cylinder above the piston, sweeping out the burnt gases. On the up stroke the charge is compressed and, being ignited by the electric spark, impels the piston downwards. Hence, there is one power stroke every revolution. The majority of motor-car engines work on the four-stroke cycle, and include four, six, or more vertical cylinders with cranks in one plane, in line or opposed in pairs. Some designers mount 8 or 12 cylinders in two sets, at an angle of about

45°, one crank serving a cylinder in each set. Aeroplane engines have 4 to 14 four-stroke cylinders arranged in line or radially round the crank-shaft. In rotating radial engines the cylinders rotate round a fixed crankshaft. Stationary radial engines have non-rotating cylinders set radially round the crankshaft. Cylinder-in-line engines may have a row of vertical cylinders, as in a motor-car engine, two banks of cylinders in V formation, or three banks, the third mounted between the V. Engines of a similar type are used in the fast motor boats built for racing purposes.

The petrol engine has been largely adopted for open pleasure boats, life-boats, etc. For decked-in craft, engines burning paraffin or heavy fuel-oil are more general. Other applications of the petrol engine are for the many purposes where a small stationary engine is needed, e.g. for agricultural, dairy, pumping, or lighting plants.

HEAVY OIL ENGINES. In engines using heavy oils the fuel must be vaporised either in the cylinder or outside it. The oil is usually forced under pressure through a spraying nozzle, mixed with hot air, and the charge is exploded in the cylinder by an electric spark. In compression-ignition engines (e.g. the Diesel, q.v.), the oil is injected into the combustion chamber at about the end of the compression stroke, and is spontaneously ignited by the intense heat generated by compression of the air in the cylinder. See Gas Engine, etc.

INTERNATIONAL. The Socialist organization. The name, more particularly applied

Internal Combustion Engine. Left, 2-stroke engine. The charge compressed in crank case during down stroke of piston enters the cylinder through port B and drives out exhaust gases at A. Right, diagram illustrating phases of a 4-stroke cycle. Open valve A shown in position of maximum opening. E, closed valve. Dotted circular lines indicate duration of phase ending at black spot. From top to bottom, suction, compression, power, and exhaust strokes.

to a series of congresses composed of socialists of most countries of the world, was first given to the international association of workers, 1866-72, which broke up over the

problem of direct action. The second international, intended to unite socialist and trade union activities, took shape in 1882. It is governed by its congresses, held about every third year, and secured the adherence of the moderate sections of most of the nations, including the British labour party. The third or Moscow international aimed at bringing about a world revolution. See Bolshevism; Labour; Lenin; Marx, Karl; Socialism; Vandervelde, Emile.

INTERNATIONAL LAW. The body of rules and customs regarded by the society of civilized states as binding upon them in their relations with one another. Its sources are custom and treaties. International codes are as old as the Indian code of Manu, about 500 B.C.; but in the modern world the publication, in 1625, of the *De Jure belli et pacis*, by Hugo Grotius, won for its author the title of father of international law. The progress of international law is to be traced in agreements between nations regarding the slave trade, the white slave traffic, traffic in drugs, and the Red Cross movement; and is marked by congresses and conferences such as those at The Hague, Versailles, Berlin, and London: and by systematic codification of rules generally agreed to by states acting in unison.

With regard to war, it has been agreed that no injury should be done to peaceable individuals who do not participate in belligerent operations, and that the principle of humanity must be respected. International law was trodden upon in the Great War, but it could not be crushed. To-day it is largely concerning itself with the regulation of the use of aircraft; submarines; declaration of war zones; layings of mines on the high seas; changes in the laws of blockade, contraband, and government control of materials and supplies; the sequestration of enemy property; changes in the doctrine of continuous voyage and transport; the doctrine of merchantmen; regulation of reprisals, etc.

The new law of war must avoid the assumption that war is an affair between governments, armies, and navies, and not between populations in general. Finally, a more effective international arrangement will be indispensable for ensuring the observance of international law, including treaty obligations.

The Institute of International Law is a society founded in 1873 for the study of international law. It consists of members and associates, the number of each being limited to 60, and jurists of all nations are eligible for membership. No nation is allowed to have more than one-fifth of the members.

Consult History of the Law of Nations, T. A. Walker, 1899; International Law, W. E. Hall, 7th ed. 1917; International Law, Sir F. E. Smith, 5th ed. 1918.

INTERNMENT (Lat. *internus*, interior, within). Name given to a military and civil operation during war. Troops of belligerents entering neutral territory are compelled to disarm and to remain there until the end of hostilities. They are then said to be interned. Ships of war staying at a neutral port beyond the time required for coaling or carrying out necessary repairs, and enemy merchant shipping remaining in the harbours of another belligerent nation after the declaration of war, are also interned. See Alien; Blockade.

INTERPLEADER (Lat. *inter*, between; Fr. *plaideur*). English legal term. An interpleader is one who has the custody of goods or money claimed by two or more claimants and makes them fight it out, at the same time declaring his disinterestedness and willingness to hand over the property in question to the successful litigant.

INTERROGATORY (Lat. *interrogare*, to ask). Term of English law. In a civil

action in any English court of law or equity either party can, before the trial, obtain permission to put questions in writing which the other party must answer on oath. The questions must be strictly relevant to the issues in the action as disclosed on the pleadings, and must not be in the nature of cross-examination. It is the duty of the master and judge in chambers to see that interrogatories are not prolix or oppressive.

INTERTYPE. Machine for mechanically setting up words into type. Its basic principle is the same as the Linotype. It is the result of evolution since 1886, when the first similar machine was designed to eliminate the laborious picking up by hand of single letters of type out of little boxes in wooden trays. It is manipulated, as all type-setting machines are, on the typewriter principle—with a keyboard. See Linotype; Monotype.

INTESTACY (Lat. *in*, not; *testari*, to make a will). Dying without leaving a will. English law divides property into two main classes, real and personal; and until 1925 the descent of these two classes on intestacy was governed by entirely different rules. The legislation of 1925, however, abolished all distinctions between the two kinds of property as regards their disposal on the death of an intestate owner.

The most striking changes made by the Act of 1925, apart from the abolition of the distinction between real and personal property, are that the ancient rule of primogeniture disappears; that no advantage is now given to males over females; and that distant relations are excluded altogether.

The following shows the working of the law as regards the estates of an intestate.

If the deceased leaves a husband or wife. Husband or wife takes: (1) All the personal chattels absolutely (furniture, pictures, plate, jewelry, etc.); (2) £1,000 free of death duties, with interest at five per cent. from the date of death; (3) If the deceased leaves issue, the income from half the residue for life; (4) If the deceased leaves no issue, the income from the whole of the residue for life. Subject to the above rights of the surviving husband or wife, the whole of the residue is held on trust for the children of the deceased. If the intestate leaves no issue, then, subject again to the rights of the surviving spouse, the residue goes in equal shares to his father and mother absolutely, or all to the survivor if only one is alive.

If the deceased leaves neither issue nor parent, then the residue is held on trust for the deceased's brothers and sisters of the whole blood in equal shares; failing such, for the brothers and sisters of the half-blood; failing such, for the grandparents in equal shares; failing such, for the uncles and aunts of the whole blood; failing such, for the uncles and aunts of the half-blood, and, finally, failing such, for the surviving husband or wife of the deceased intestate absolutely.

Should it be found that none of the above relations is living, then the whole of the residue goes to the crown, but the crown may make provision for any dependants of the deceased who by his death are left unprovided for, whether such are relations or not. See Will.

INTESTINE (Lat. *pl. intestina*). Part of the alimentary canal. In the human species the intestines are divided into the small intestine, consisting of the duodenum, the jejunum, and the ileum; and the large intestine, consisting of the caecum, the colon, and the rectum.

The intestines provide a place for the continuation of the digestive processes begun in the stomach and continued by the secretions of the intestinal glands and other organs which are poured into the canal; and also provide

for the absorption of nutritive material from the food as it passes through—a process assisted by the large surface area of the mucous membrane; and for the discharge of waste material and undigested food from the body. See Appendicitis; Colic; Colitis; Dysentery; Dyspepsia; Hernia.

INTROIT (Lat. *introitus*, entrance). Portion of a psalm or an antiphon sung at the beginning of the mass. It varies with the seasons and festivals of the ecclesiastical year. In the Church of England the word is employed to describe the psalm or hymn sung by the clergy as they enter the chancel before the Communion service. See Mass.

INTROMISSION (Lat. *intro*, within; *mittere*, to send). In Scots law, the term applied to interference or dealing with the property of another. It is either lawful, as when a collector acts on a judgement from a court; or it is vicious, as when someone not duly appointed executor deals with the estate of a deceased person. In such a case the intromitter incurs legal liability.

INTUSSUSCEPTION (Lat. *intus*, within; *suscipere*, to take up). Medical term for the protrusion of one part of the intestine into another. The condition occurs most frequently in infants under two years of age. The normal position of the bowel may sometimes be restored by inflating the intestine with air or injecting an enema in warm water or oil. If these measures fail to effect a remedy, immediate operative treatment is necessary. See Intestine.

INVALIDES, HÔTEL DES French institution for wounded soldiers. Established by Louis XIV in 1670, the building was erected at the N.W. of the Champ de Mars, Paris. Napoleon re-endowed the institution in

Hôtel des Invalides, Paris, containing Napoleon's sarcophagus (above)

1811. The hôtel contains a magnificent collection of armour and weapons, and a comprehensive Napoleonic collection. At the rear is the dome, built in 1693 for a royal mausoleum. The remains of Napoleon were deposited here in a porphyry sarcophagus in 1861. See Paris.

INVAR. Important alloy of nickel, steel, and carbon. It is remarkable for its low coefficient of expansion under heat, and for that reason is almost universally used in the making of wires and metal tapes employed in measurement. Invar alloy is also used in the making of pendulums.

INVENTORY (Lat. *invenire*, to come upon). Term used in English law and business for a detailed list of goods and chattels. Such a list is commonly made out by an executor or administrator, and is also attached to a bill of sale to identify the goods and chattels which are mortgaged thereby.

A tax formerly charged in Scotland on the personal or movable property of a deceased person was known as an inventory duty. It was abolished for all persons dying after Aug. 2, 1894, and replaced by estate duties.

INVERARAY. Burgh and county town of Argyllshire, Scotland. It stands on a small bay of Loch Fyne, where the Aray enters it, about 40 m. from Glasgow, in a district famed for the beauty and variety of its trees. It was founded by a Campbell on the opposite side of the bay. There is an old and beautiful market cross, as well as a memorial to the Campbells who were hanged for their share in the rising of 1685. Outside the town is Inveraray Castle, seat of the duke of Argyll, with beautiful grounds. Pop. 490

Inveraray Castle, seat of the duke of Argyll, from the east

INVERCARGILL. Town of New Zealand. It stands on the New River estuary, 140 m. by rly S.W. of Dunedin and 17 m. from Bluff Harbour. The centre of agricultural and pastoral country, it has flour and saw mills, foundries, potteries, woollen mills, and meat preserving establishments. Pop. 22,910.

INVERCLYDE, BARON. Title borne by the family of Burns since 1897. John Burns (d. 1901), son of Sir George Burns, became associated with the Cunard Steamship Co., and when the original partners retired he became head of the firm. In addition he developed the steamship service between Glasgow and Ireland. He was created a peer in 1897. He was the author of *The Adaptation of Merchant Steamships for War Purposes*, and other works. The 4th baron (h. 1897) married in 1929 June, the well-known actress. The family seat is Castle Wemyss, near Wemyss Bay. See Cunard, S.

INVERELL. Town of Gough co., New South Wales. It is 341 m. by rly N. of Sydney, and is a mining centre, diamonds, copper, silver, tin, and coal being obtained in the neighbourhood. Pop. 4,560.

INVERESK. Village of Midlothian. It is on the Esk, 6½ m. from Edinburgh, with a station on the L.N.E.R. The chief industry is the manufacture of paper. Pop. 500.

INVERGORDON. Burgh and seaport of Ross and Cromarty Scotland. It stands on the N. shore of Cromarty Firth, 13 m. N.E. of Dingwall, on the LMS Rly. It was a naval base in the Great War. The castle, long the residence of the Macleods of Cadboll, was burned down in 1800 and rebuilt in 1874. Pop. 1,717.

INVERKEITHING. Burgh of Fifeshire, Scotland. It stands on a bay on the N. side of the Firth of Forth, 13 m. from Edinburgh, on the L.N.E. Rly. It is in the Rosyth area, and its industries are mainly connected with the navy. The battle of Inverkeithing, fought about 2 m. from the town, took place on July 20, 1650. Cromwell's troops defeating the Scottish adherents of Charles II. Pop. 3,350. See Rosyth.

INVERLOCHY. Village of Inverness-shire, Scotland. On the Lochy near where it enters Loch Linnhe, 1 m. N.E. of Fort William, it is the site of a town for the men employed on the Lochaber water power scheme. Near

the village is a ruined castle. Here, Feb. 2, 1645, the marquess of Montrose defeated the Campbells. The battle is described in Scott's *The Legend of Montrose*.

INVERNESS. Burgh of Inverness-shire, Scotland. It is also the county town, a seaport and a market town, and is regarded as the capital of the Highlands. It stands on both banks of the Ness, near where that river enters the Moray Firth, 100 m. from Aberdeen on the LMS and L.N.E. Rlys. and near the Caledonian Canal.

The buildings include the episcopal cathedral of S. Andrew, the town hall, and the 19th century castle on Castle Hill, containing the county offices. The mercat cross is near the town hall, as is the old stone of the tubs, on which water carriers used to rest their tubs. A cemetery stands on the hill of Tomnahurich. Inverness is the headquarters of the Highland Rly. (L.M.S.), which has its shops here. Other industries are distilling, and the manufacture of woollens, etc.

Inverness. The town and river Ness from the castle. The Northern Athletic Meeting is held here in September (see illus. p. 333). Market days, Tues. and Fri. Pop. 20,909.

INVERNESS-SHIRE. County of Scotland. It is bounded N. by Ross and Cromarty and S. by Perthshire and Argyllshire. Its area is 4,211 sq. m. It comprises the mainland, traversed N.E. to S.W. by Glen More, which contains the Caledonian Canal, and the insular division, embracing Skye,

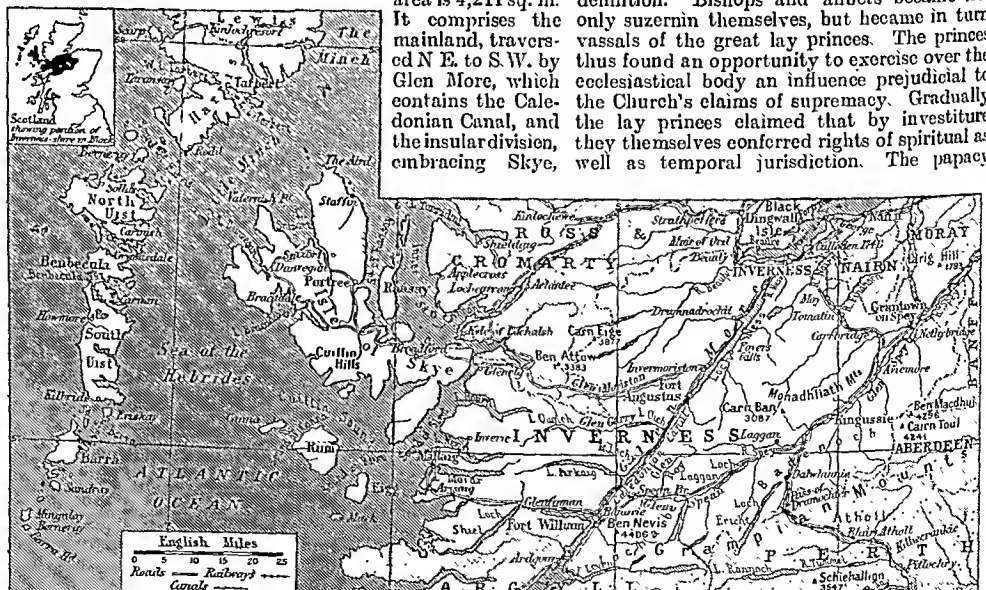

valley and loch scenery is extremely beautiful. The numerous lochs include Ness, Oich, Lochy, Arkraig, and Shiel. In addition to Glen More, the principal valleys are Glen Garry, Glen Moriston, Glen Spey, Glen Span, and Glen Roy (q.v.). The coast is deeply indented by sea-lochs. The chief rivers are the Spey, Ness, and Beaul. There are many deer forests and moors abounding in grouse and other game. The county is served by the L.M.S. Rly. Inverness, the county town, Fort William, and Kingussie are the largest towns. Pop. 76,100

LITERARY ASSOCIATIONS. The shire has figured in many historical romances owing to its associations with Prince Charles Edward. In Scott's poetry, *The Lord of the Isles*, and in his prose, *The Legend of Montrose*, may be specially noted, as well as Burns's lines on the waterfall at Foyers and his song on *The Lovely Lass of Inverness*. The islands inspired the poem, *From the Lone Shieling At Auchnacarrie Lochiel* first displayed the Stuart flag in 1745, and received the warning recorded in T. Campbell's poem.

INVERTEBRATE. Name applied to those classes of the animal kingdom which do not possess the characteristic and essential features of vertebrate or chordate animals. The central nervous system is neither dorsal nor tubular; there is no notochord or backbone; there are no gill-slits in any stage; the eye is usually an outgrowth of the skin, and not of the brain; and there is no ventral heart. The principal classes, proceeding downwards, are molluscs, arthropods, echinoderms, worms, coelenterata, sponges, and protozoa. See Animal.

INVERURIE. Burgh of Aberdeenshire, Scotland. It stands at the junction of the Don and the Urie, 16 m. N.W. of Aberdeen, on the L.N.E. Rly. Here are works of the L.N.E. Rly., and there is a trade in cattle, markets being held here. Pop. 4,455.

INVESTITURE. In feudal custom, the act of installation of a vassal by his superior lord. Round the question of investiture was centred one of the great medieval controversies of Church and State. As the holding of lands by the Church all over W. Europe increased, the precise status of the ecclesiastical holders in the feudal system became more difficult of definition. Bishops and abbots became not only suzerain themselves, but became in turn vassals of the great lay princes. The princes thus found an opportunity to exercise over the ecclesiastical body an influence prejudicial to the Church's claims of supremacy. Gradually the lay princes claimed that by investiture they themselves conferred rights of spiritual as well as temporal jurisdiction. The papacy

Inverness-shire. Map of the largest county in Scotland, with its outlying islands. The county is traversed by the Caledonian Canal, which saves the passage round the North of Scotland

Harris, Uist, Barra, and other islands. The mainland is highly mountainous and contains Ben Nevis and other heights

The made several efforts to check the resultant corruption, notably by the Lateran decree of 1059, which forbade the interference of laymen.

Pope Gregory VII forbad the emperor Henry IV to grant any ecclesiastical investitures, Feb., 1075. Henry's disobedience brought war, and ultimately his submission at Canossa, Jan. 28, 1077. In England, the rights of investiture were finally renounced by Henry I in 1107. The emperor Henry V renewed the old claims, and a compromise was effected by the concordat of Worms, signed Sept. 8, 1122. See Anselm; Gregory VII; Papacy.

INVINCIBLE. British battle cruiser. Completed in 1908, she was 555 ft. long, 80 ft. in beam, displaced 17,250 tons, and had engines of 45,000 h.p., giving her a speed of 25 knots. She carried eight 12-in. and 16 4-in. guns, and three torpedo tubes. The Indefatigable and the Indomitable were of the same class. She took part in the actions of the Heligoland Bight and the Falkland Islands, and was sunk by enemy gunfire at the battle of Jutland, May 31, 1916, with all hands.

H.M.S. Invincible, British battle-cruiser, completed in 1908 and sunk at the Battle of Jutland
Cribb, Southsea

INVINCIBLES. Name given to an Irish secret society which existed about 1880-85. It consisted of the more violent Fenians. They were responsible for the Phoenix Park (q.v.) murders and for many other crimes and outrages which took place about 1882. See Fenianism.

IO. In Greek mythology, daughter of Inachus, king of Argos. She was beloved of Zeus, who, to protect her from the jealousy of his wife Hera, changed her into a heifer. Hera obtained possession of the heifer, and set the hundred-eyed monster Argus to guard her. Zeus, however, sent Hermes to kill Argus, whereupon Hera sent a gadfly to torment Io. Still in the form of a heifer, she wandered far and wide, until finally she reached the Nile, where she was restored to human form.

IODIDES. Salts of hydriodic acid. Iodides of most of the elements are known. Metallic iodides are obtained either by direct union of iodine with the metal or metallic oxide, or by dissolving the metal in hydriodic acid. All iodides are decomposed, with the formation of iodine, by chlorine and bromine, and on heating strongly alone or with sulphuric acid. Most are employed in medicine, and silver iodide is used in photography.

IODINE. Non-metallic element discovered in 1812 by Courtois of Paris in the mother-liquors of the soda salts obtained from kelp. Its chemical symbol is I; atomic weight 126.93; atomic number 53. Iodine is found widely diffused in nature, but only in small quantities, and seldom in the free state. Combined in the form of iodides (q.v.), iodine is present in nearly all marine animals and plants, and is also found in the human body, particularly in the thyroid gland. The main source of iodine was formerly seaweed, but it is now obtained chiefly from the mother liquors left after refining Chile saltpetre or caliche. Iodine is chiefly employed as an antiseptic in surgery. In various forms it is also used externally for chilblains, ringworm, and glandular swellings.

Iodism is a condition which arises from taking iodides medicinally for too long a period. The patient complains of pain in the forehead, sore throat and running at the nose, and there is often a patchy eruption on the skin. The symptoms disappear when the use of the drug is completely stopped.

IODOFORM or **TRIODOMETHANE** (CHI₃). Lemon-yellow solid, with a persistent saffron-

like odour, prepared by the action of iodine on alcohol in the presence of sodium carbonate. It is employed as an antiseptic in surgery.

IOLAUS. In Greek mythology, the faithful companion and charioteer of Hercules. He assisted the hero in the slaying of the Lernaean Hydra, and helped his children in their fight for the Peloponnese, killing Eurystheus in battle.

ION. In Greek mythology, legendary founder of the Ionian race. He was the son of Apollo by Creusa, wife of Xuthus. On reaching manhood he narrowly escaped being unwittingly poisoned by his mother. The legend forms the theme of Euripides' play, *Ion*.

ION (Gr. ion, going). Term applied by Faraday to the products of electro-chemical decomposition which appear at the electrodes. When an electric current is passed through a solution of hydrochloric acid the electrolyte is decomposed, the hydrogen atoms appearing at the cathode or negative

pole, and the chlorine atoms at the anode or positive pole. The passage of the current consists of a movement of these electrically charged particles or ions. Faraday named the particles moving towards the cathode or negative pole cations, and those moving towards the positive pole he termed anions.

Another use of the term ions is for the electrified particles which under certain conditions endow gases with conductivity. When a gas is subjected to the influence of X-rays or rays from radioactive substances, or when cathode rays are passed through the gas, it acquires increased conductivity, and is then said to be ionised. See Electrolysis; Gas; Cathode; Radioactivity.

IONA or **ICOLMKILL.** Island of Scotland, one of the Inner Hebrides. It is part of the county of Argyll. About 3½ m. long and 1½ m. broad, it covers about 2,200 acres. The village of Iona is on the E. of the island. Here St. Columba landed from Ireland and founded a monastery, 563, from which monks went out to convert the Picts and Scots. Later a Benedictine monastery and nunnery were founded.

In the 9th century Iona was made a bishopric, which was later in the province of Trondhjem, Norway. The cathedral, a 13th century building, was destroyed at the Reformation. In 1899 the 8th duke of Argyll presented the ruins to the Church of Scotland, and, partly restored, the cathedral was reopened in 1905.

IONIA. Ancient district of Asia, so called from having been colonised by Greeks of the Ionian branch of the Hellenic race. The Ionians spoke a dialect distinct from Aeolic and Doric, and the name Ionian was applied to the inhabitants of Attica and Euboea, to the Ionian colonies of Asia Minor, and to offshoots from these. See Greece.

IONIAN ISLANDS. Islands of Greece. In the Ionian Sea, off the W. coast of Greece and S. Albania, they consist of Corfu, Cephalonia, Zante, Leukas (Lepkas) or Santa Maura, Ithaca, and a number of islets, their total area being about 1,100 sq. m. Largely mountainous, they produce grapes, currants, olives, and other fruits, and some of the islands are rich in marble, sulphur, salt, and coal. In 1814 they passed under British protection, and fifty years later they were annexed to Greece. Pop. about 270,000. See Cephalonia; Corfu, etc.

IONIAN MODE. In music, a church mode, beginning on C and only using the natural notes, i.e. the white keys of the pianoforte. The Ionian mode therefore corresponded to the modern major scale.

IONIC ORDER. Second of the three orders in Greek architecture. It is more slender and graceful than the Doric order; the fluting of the column is finer, and its square capital is easily distinguishable from both the Doric and the Corinthian examples by its volutes or spirals. The mouldings of the entablature, also, are more delicate. See Architecture; Corinthian Order; Greek Art.

I.O.U. Form of written acknowledgment of a debt. The letters are an abbreviation of the phrase I owe you. An I.O.U. is not negotiable, but it is evidence of debt, and as such can be sued upon. If it does not contain the name of the person to whom the debt is owed, then the presumption is that the holder of the I.O.U. is the person to whom the money is payable. See Promissory Note.

IOWA. North-central state of the U.S.A. It lies to the W. of the Mississippi river, which forms its eastern frontier. Its area is 56,147 sq. m. The bluffs along the chief rivers are the only relief to an undulating surface. Nearly the entire area is under cultivation. Maize is the chief cereal and hay is produced in abundance. There are valuable coal areas and large slaughtering and meat-packing and butter and cheese making industries. Besides the natural transport facilities of the Mississippi, Missouri, Des Moines, and other rivers, there are more than 10,000 m. of rly. Des Moines is the capital. Pop. 2,428,000.

Iowa city stands on the Iowa river, 55 m. W.N.W. of Devonport. It is the seat of the state university, and was the state capital from 1839 to 1857, when it was superseded by Des Moines. Pop. 11,267.

IPECACUANHA (Psychotria ipecacuanha). Brazilian plant, the dried roots of which are used in medicine. The most important constituent is an alkaloid called emetine. Ipecacuanha forms a useful emetic, and is also largely used in the treatment of dysentery. The chief preparations are the liquid extract; the vinum ipecacuanhae; and the compound pill with squill. Ipecacuanha is also a constituent of Dover's powder.

Ipecacuanha, an important Brazilian medicinal herb

IPHIGENIA (Gr. Iphigeneia). In Greek legend, the daughter of Agamemnon and Clytaemnestra. When the Greek fleet destined for Troy was detained at Aulis by a calm sent by Artemis, who had been offended because Agamemnon had killed a stag sacred to her, Calchas, the soothsayer, declared that Agamemnon must sacrifice his daughter to appease the wrath of the goddess. Iphigenia was sent for, under the pretext that she was

Iona. The cathedral, a 13th cent. edifice restored in 1905

to be married to Achilles; but at the moment when the sacrifice was about to take place, Artemis bore her off to the country of the Tauri, where she became a priestess. The story of Iphigenia is the subject of plays by Euripides and Racine. Pron. I-phij-eh-ah.

IPSWICH. City, county borough, seaport, market town, and county town of Suffolk. It stands where the Gipping becomes the Orwell, 69 m from London, and is served by the L.N.E. Rly. Its churches include S. Margaret's, with a fine hammer-beam roof; and S. Peter's, with a Norman font. There are technical, art, and other schools. Wolsey's Gateway, built by the cardinal, is a reminder of the great college he planned and began here. Sparrowe's House dates from 1567. Christchurch park mansion houses a museum and art gallery. The Great White Horse Hotel figures in The Pickwick Papers. In 1928 Chantry Park was given to the city for an open space. On Castle Hill the site of a Roman villa has been excavated. A crematorium was opened at Ipswich in 1928.

The city is an engineering centre, agricultural implements, railway wagons, and similar articles being made. There is a port with docks covering about 30 acres. In 1914, with Bury St. Edmunds, it was made the see of a bishop. Ipswich has adopted the French villages of Bazentin-le-Grand, Bazentin-le-Petit, and Fricourt. Market days, Tuks. and Sat. Pop. 85,990.

IPSWICH. Town of Queensland. It stands on the Bremer river, 24 m. by rly. S.W. of Brisbane. It has rly. works and there are coal mines in the vicinity. It also manufactures woollen goods, and has a large trade in agricultural produce. Pop. 23,000.

IQUIQUE. Seaport of Chile. On the coast, 40 m. by rly. W. of Tarapacá, it is an important nitrate port. There are rly. shops and soap and boot factories. The city is the outlet for the famous mines of the interior. The silver mines of Huantajaya lie to the N. The chief exports besides nitrates are silver, copper ore, borax, and iodine. Pop. 36,827. Pron. Ee-ke-kay.

IRAN OR ERAN. Official name for Persia. It is also the old name of the great plateau of Central Asia, the land between the Caucasus, the Hindu Kush, the Persian Gulf, Kurdistan, and the Tigris.

Iranian is a branch of the Aryan sub-family of Indo-European languages, the other branch being the Indo-Aryan. Iranian includes Zend, the language of the Avesta, and Old Persian. This passed through Middle Persian (Pahlavi) into New Persian. The Iranian-speaking peoples embrace the long-headed Persian and Pathan, and the round-headed Tajik. Originally herdsmen, they absorbed Aryan agriculture and religion, which have long since been overlaid by Mahomedanism. See Aryan; Ethnology; Pathan.

IRAQ OR IRAK. State of Asia, formerly included in Mesopotamia. It consists of the three vilayets of Bagdad, Basra, and Mosul. Bagdad is the capital; Basra the chief port. The government is carried on by a king and a cabinet, who are responsible to a parliament of two houses. Its area is 143,250 sq. m.; pop. 2,849,282.

Conquered from the Turks during the Great War, Iraq was in 1919 declared a mandatory state, and the mandate was given to Great Britain. In 1921 Feisal, a son of the king of the Hcjaz, was elected king by the votes of the people, and in 1922 the state entered

into treaty relations with Great Britain. In 1926 the frontier between Iraq and Turkey was fixed. In Dec., 1927, Great Britain formally recognized Iraq as an independent state, and in 1930 a treaty embodying this was signed. It will take effect when Iraq is admitted to the League of Nations.

The potentialities of the country are great. Oil exists in large quantities, and the Anglo-Persian and other companies are operating here. Cotton, wheat, barley, and dates are grown, but agricultural success depends on the development of irrigation. There is a railway line from Basra to Bagdad, and other lines are in operation. Bagdad is an important station on the air route from Europe to India. The unit of currency is the gold dinar, equal in value to half a sovereign in sterling. See Feisal; Mesopotamia.

IRAWADI OR IRAWADDY (nnc. Eriavati—the great river). River of S.E. Asia. It rises in N.E. Assam, and traverses Burma from N. to S., discharging into the Bay of Bengal by a delta of several months, W. of Rangoon. The delta has an area of some 20,000 sq. m. The chief tributary is the Chindwin. About 900 m. in length, the Irawadi is of great importance for irrigation and as a trade channel. It is

The people depend largely on agriculture. The chief crop is oats, grown most extensively in the N.E., where flax is almost equally important. About one-tenth of the arable land is still devoted to potato culture, while lily is grown on nearly half. Dairying, largely for butter, and the attendant pig-rearing on dairy by-products, as well as cattle, sheep and horse breeding, are important industries. The co-operative movement is well developed, especially in dairy farming. The great manufacturing industries are linen and shipbuilding, both centred in Belfast. Brewing is carried on chiefly at Dublin, Belfast, and Cork, and bacon curing at Limerick, Cork, Waterford, and Dublin. The fisheries are important. Increasing attention is being given to harnessing the power of the rivers, and there are large works for obtaining power from the Shannon.

There are over 3,000 m. of rly. track, of which nearly 800 are in Northern Ireland. In 1924 the Irish Free State passed a measure for amalgamating the rlys. Leaving alone the Gt. Northern as a line largely in Northern Ireland, the others were all combined into one, the Gt. Southern Rlys. In Northern Ireland the separate companies remain, save that one, the Northern Counties Committee, is part of the L.M.S. system. Ireland has 650 m. of inland waterways, which are mostly in the Irish Free State.

The Bank of Ireland is the state bank of the Irish Free State. It was established in

Ipswich. Sparrowe's House in the Buttermarket, built in 1567

Ireland. Fuller topographical details of this country will be found in the larger scale maps which are given under the headings of the respective counties

1783, and acts for the Free State much as the Bank of England does for England. Its headquarters are in the building on College Green, Dublin, which was once the Irish Houses of Parliament.

HISTORY. The early inhabitants of Ireland were of neolithic race and were called by the native historians Fir Bolg and Erainn, from which is derived the name, Erin. About 300 B.C. a blonde Aryan race who called themselves Gaedhil entered Ireland, conquered the whole of it, and imposed their Celtic speech upon it. The country was divided into a number of kingdoms, all under the supreme authority of a high king.

In 1154 the pope gave Henry II power to conquer Ireland, and soon English warriors entered the country. The Irish kings accepted Henry as their overlord, and a period of English domination began. Vast tracts of land were granted to English settlers, English law was introduced, and towns were founded. Somewhat later a parliament was established.

In 1494 Poyning's law made the Irish parliament definitely subservient to the English, and in 1541 Henry VIII was recognized as king of Ireland, instead of the former title of lord. In his reign religion raised the first serious breach between England and Ireland. The bulk of the Irish remained Roman Catholic, and in the reign of Elizabeth broke out into a fierce insurrection, due partly to the policy of confiscating the lands of the Irish.

During the early years of the Stuart period Ireland was in a fairly prosperous and contented condition. The settlement of Ulster with Scottish settlers was, however, resented, and this led to a rebellion in 1640. After 1649 Cromwell again made the English dominion effective, but at a high price in bitter memories. James II found a good deal of support in Ireland in his struggle with William III, and the events of his time divided, much more sharply than ever before, Protestant Ulster from the rest of the country.

The settlement that followed the defeat of James II placed the Roman Catholics in a position of inferiority which lasted for about a century. They had no share in the government, and their disabilities were many and serious. The commercial policy of Great Britain crippled the trade and industry of Ireland. With the American War came hopes of freedom, and after an agitation the country was granted legislative independence and the Roman Catholics were given the right to vote. Parliament, however, was still closed to them. In 1798 came the rising put down at Vinegar Hill, and in 1800 the parliament of Ireland was united with that of Great Britain.

The agitation led by Daniel O'Connell did not bring about a repeal of the union, but Roman Catholic emancipation was secured. The outbreak of a terrible famine in 1845 diverted attention from political questions, and when it ended death and emigration had seriously reduced the population. The land question was the next bone of contention. The grants of land to English settlers had created a difficult problem in a country where land hunger was strong, and the British Government therefore spent many millions in buying the land from the landlords and selling it on easy terms to the peasantry. In this way the wealth of Ireland was increased, but its discontent was by no means allayed. The republicans, now called Fenians, attempted one or two armed risings, but more serious were a series of outrages which culminated in the Phoenix Park murders of 1882.

About 1870, led by Isaac Butt and then by C. S. Parnell, some Irish members of parliament formed themselves into a home rule party seeking to obtain some measure of independence by constitutional means.

Early in the 20th cent. a new party called Sinn Féin arose, and this demanded complete independence for Ireland. In 1916 it was responsible for a rising in Dublin, and in 1918 it secured the return of 73 members to Parliament; refusing to take their seats, these formed themselves into a national

assembly and proclaimed a republic. For some time a great part of the land was in a state of civil war, in the midst of which an Act was passed giving self-government to both parts of Ireland. Northern Ireland accepted the measure, but the Sinn Féiners refused to do so, and with even greater brutalities the war was continued. At length a settlement was reached by a treaty signed on Dec. 6, 1921, and the republicans secured almost all their demands. See Fenianism; Home Rule; Irish Free State; Northern Ireland; Sinn Féin.

IRENAEUS (c. 120-202). Saint and bishop of Lyons. Supposed to have been born at Smyrna, he went to France, became a priest at Lyons, and succeeded Pothinus in the bishopric in 177. He preached Christianity, and helped to settle the dispute between the bishop of Rome and the Asiatic Churches concerning the date of Easter. He is said to have been martyred under Severus.

IRÈNĒ (Gr. Eirēnē). In Greek mythology, the goddess of Peace, daughter of Zeus and Themis. She was worshipped by the Romans under the name of Pax. Pron. I-ree-nee.

IRENE (752-803). East Roman empress, 797-803. After the death of her husband Leo IV in 780 she acted as regent for their son Constantine VI. Irene was a strong anti-iconoclast, and at the council of Nicaea, 787, the worship of images was restored. When Constantine rebelled she had his eyes put out, and for five years reigned alone.

IRETON, HENRY (1611-51). English soldier. Born at Attenborough, near Nottingham, he joined the parliamentary forces in the Civil War and was soon associated with Cromwell in Lincolnshire. He was at Marston Moor, Newbury, and Naseby. In Parliament Ireton drafted the Heads of the Proposals and strove to reunite the moderate men of both parties. When this failed he took an active part in the renewal of the Civil War, and was one of the

Henry Ireton,
English soldier

king's judges, signing the death warrant. In 1650 Ireton was left by Cromwell as lord deputy in Ireland, and there he died of the plague, Nov. 26, 1651. Ireton married Cromwell's daughter, Bridget.

IRIDIUM. Metallic element. Its chemical symbol is Ir; atomic weight 193.1; atomic number 77; specific gravity 22.40; and melting point approximately 2,000° C. It is obtained chiefly as a by-product of the refining of platinum, in which it is combined with osmium. Iridium is a bright, white metal, having the appearance of steel, extraordinarily hard, and resistant to all kinds of atmospheric or chemical influences. It is used for the tips of the gold nibs of fountain pens. See Osmium; Platinum.

IRIS (Gr. rainbow). In Greek mythology, the messenger of the gods, more especially of Hera, and the personification of the rainbow.

Iris is the name of one of the asteroids, seventh in order of discovery. It was first observed by Hind in 1847. See Asteroid.

IRIS. Large genus of perennial herbs often referred to as flags. Of the two sections, gardeners regard the rhizomatous section as flags and the bulbous section as irises. The latter are separated into English irises and Spanish irises; but no bulbous iris is a native of Britain. The common flag of our gardens with purple flowers is *Iris germanica* from Central and S. Europe, introduced as far back as 1573. The Florentine flag (*I. florentina*), with delicate lavender-tinted flowers, furnishes the orris-root of the druggist and perfumer. The golden flag (*I. aurea*) comes from the W. Himalayas. See Flag.

IRIS. Membrane surrounding the pupil of the eye. It has the power of contracting or enlarging in order to regulate the amount of light which enters the eye. Iritis, or inflammation of the iris, may be acute or chronic. The condition may follow an injury to the eye, but is most frequently due to tuberculosis, syphilis, and other infectious diseases.

IRIS. British steamer. A Liverpool ferry steamer, she was commandeered by the navy in the Great War. With the Daffodil she won fame in the attack upon Zeebrugge Mole, April 23, 1918. See Zeebrugge.

IRISH FREE STATE. Self-governing dominion of the British Empire. The Free State covers the whole of Ireland except six counties in the north-east, which form Northern Ireland. Dublin is the capital. The area is 26,600 sq. m. and the pop. 2,971,992, of whom 300,000 live in the three Ulster counties, Cavan, Donegal, and Monaghan. Irish is the national language, but English is officially recognized. The Free State is a member of the League of Nations and as a British dominion is represented at the Imperial Conference.

Arms of the Irish
Free State

The constitution, which was drawn up and accepted in 1922, provides for government by the king, who is represented by a governor-general, and a parliament of two houses. The Senate (Seanad Éireann) consists of 60 members, who are elected for nine years by members of the two houses voting on the principle of proportional representation. Twenty senators are chosen in this way every three years. The first senate was nominated by the elected chamber and the president. The senate has no power over money bills, and only a power of delay over other legislation.

The elected assembly, called Dail Éireann, is chosen for six years or less. The members are elected by all adults on the principle of proportional representation, and their number varies. In 1930 it was 153. The executive duties are directed by a council or cabinet, which must not exceed 12 members. Its head is the president, who is elected by the Dail.

In local matters the administration is very much the same as it was before 1922, although certain changes have been made. There are 27 administrative counties, each with a council. At the head of the legal system is the Supreme Court. A defence force is maintained.

HISTORY. When after the treaty of 1921, the British authorities ceased to function in Ireland the affairs of the Free State were taken over by a provisional government in which the chief spirits were Arthur Griffith and Michael Collins. The republicans under De Valera took up arms, and for a time there was serious disorder almost all over the country, in the midst of which Griffith died and Collins was shot. W. T. Cosgrave was then elected president, but a year of warfare passed before peace was in sight. Meanwhile, T. M. Healy had taken office as the first governor-general.

In Aug., 1923, the first general election under the new constitution, which had by now been approved, was held. Cosgrave's government obtained 63 seats and the republicans 44, the others going to independents and parties representing labour and agriculture. The republican deputies did not sit in the Dail, as they refused to take the oath of allegiance.

With the revolution stamped out, the condition of the country improved and the government could carry out certain reforms. An Act reformed the administration of poor relief and provided for new measures to safeguard and improve the public health. The courts of justice were remodelled. Certain

taxes were reduced, other revenue being raised by tariffs making the Free State a protectionist country.

In 1927 there were two general elections. One held in June proved so unsatisfactory to the government that President Cosgrave had to choose between resignation and another appeal to the country. In September the second election took place. Cosgrave's friends secured 61 seats, and the supporters of De Valera 57. As these now took the oath of allegiance, it was only by the aid of the independent members that Mr. Cosgrave was able to secure a working majority in the Dail.

In 1928 James McNeill succeeded T. M. Healy as governor-general. The most important piece of legislation was a measure altering the method of electing senators and abrogating the right to use the initiative and the referendum. A strict censorship of publications was established and a new coinage introduced. In 1929 some difficulty was caused by the reluctance of the Irish government to recognize the right of appeal to the Judicial Committee of the Privy Council. In 1930 a Legion of Honour was established. See Ireland.

IRISH GUARDS. Regiment raised in April, 1900, to commemorate the bravery shown by the Irish regiments in the S. African War. In the Great War, their first campaign, the Irish Guards fought at Mons, Le Catcau, and in the first battle of the Aisne. At the first battle of Ypres they stood firm in several critical days, and, with the Coldstreamers, regained the trenches captured by the Germans at Quinchy in Feb., 1915. It was on this occasion that Michael O'Leary won the V.C. The Irish Guards distinguished themselves at Loos, Sept., 1915, on the Somme, 1916, at Ypres and Cambrai, 1917, and in 1918. See Guards.

Irish Guards badge

IRISH MOSS (*Chondrus crispus*). Small seaweed of the order Rhodophyceae. It grows on rocks about low-water mark. The frond is flat, thick, and cartilaginous, repeatedly forking in one plane, varying in colour from greenish-white to dull purple. Under the name of carrageen dry fronds of this moss were formerly prescribed for invalids.

Irish Moss. Frond of the edible seaweed

IRISH SEA. Shallow sea separating the E. of Ireland from the S.W. of Scotland and the W. of England and Wales. It is connected with the Atlantic Ocean by the North Channel on the N. and S. George's Channel on the S. Its extreme breadth is 150 m.

IRISH TERRIER. Breed of large terrier. Ranging in weight from 18 lb. to 24 lb., it has a rough wiry coat, and in general build resembles the fox terrier, but is reddish brown in colour. It is exceedingly courageous, faithful, and affectionate, and few dogs show more enthusiasm for hunting. The Irish terrier originated in a cross between the fox terrier and one or more of the rough-coated breeds, and first appeared about 1870.

Irish Terrier. A breed introduced about 1870

IRISH WOLFHOUND. Breed of hunting dogs. One of the largest varieties of dog used in the chase, it stands about 32 ins. high at the shoulder and weighs about 120 lb. Somewhat resembling a

very large, heavily built, and rough coated deerhound, it is believed to have existed in Ireland from a very early period. Early in the 19th century the original breed, in anything like a pure strain, had become extinct, and its revival is the result of scientific selection in crossing.

IRKUTSK. Town of the Union of Socialist Soviet Republics, in the Siberian area. It stands on the right bank of the Angara. A station on the Siberian rly. it has a gold foundry, through which all the metal found in E. Siberia passes. A commercial centre, a large trade is carried on in tea and furs. It has a university. Pop. 98,979. See Russia; Siberia; also illus. below.

IRLAM. Urban district of Lancashire. It stands on the Manchester Ship Canal, at the junction of the Irwell and Mersey, 8 m. S.W. of Manchester.

It is served by the Cheshire Lines and L.N.E. Rlys. By an alteration of the boundary between Lancashire and Cheshire, carried out in 1920, parts of the townships of Partington and Carrington were transferred from Cheshire to Lancashire and made part of Irlam. Pop. 12,500.

Irkutsk. The five-domed cathedral and, left, the belfry

IRON. Elementary metal, chemical symbol Fe (Lat. ferrum), atomic weight 55.84, atomic number 26, specific gravity 7.86, and melting-point 1,505° C. Pure, it is silver or greyish white in colour; it is soft and malleable, easily magnetised, but does not retain its magnetism. In moist air, in the presence of carbonic acid gas, it rusts or oxidises quickly; dissolves readily in most acids; and combines easily with arsenic, phosphorus, and sulphur, forming compounds more readily fusible than the metal. It forms two permanent oxides, the red or ferric oxide and the black or magnetic oxide. Iron shares with platinum the property of being weldable without the intervention of any "soldering" agent. Iron combined with carbon (and usually with other substances) in considerable percentages forms common cast or pig iron; combined with the same element in very much smaller proportions, it forms steel.

Iron is very widely distributed as an ore; but it is doubtful if it ever occurs native.

The most important deposits of iron ores are those of the U.S.A., the United Kingdom, France, Germany, Spain, Sweden and Norway, Russia, Canada, Italy, Austria, India, and China. An important ore, one of the commonest, occurring in rocks of all ages, is iron pyrites or iron sulphide, the normal composition of which is iron 46.7 and sulphur 53.3. It is the chief source of the iron sulphate (green vitriol or copperas) and the sulphuric acid of commerce.

In the extraction of iron from its ores two processes are recognized: (1) A suitable ore is heated in a furnace with charcoal or coal.

When in a plastic mass, and before it is actually fused, the metal is taken out and worked by hammering or rolling or pressing, to separate and force out of it as much as possible of the foreign matter, slag and impurities. This is the process used by primitive man and by all iron-makers until well on in the Middle Ages. (2) The metal is melted out of the ore mass into a fused liquid condition and is then poured into moulds, in the first instance usually in the form of pigs. Pig iron is thus cast iron, but the latter term is applied particularly to manufactured articles made directly from melted iron as distinguished from wrought or malleable iron. The tensile strength of cast iron is about 6 to 18 tons per square inch, less than one-fifth of its compressive strength. The metal is brittle. From pig iron are formed all the many varieties of iron and steel.

Wrought or malleable iron is the purest form of commercial iron; it does not harden like steel by being quenched in water while hot; it is easily magnetised, but does not retain the magnetism. In tensile strength it ranges from 17 to 27 tons per square inch. The process of manufacture, termed puddling, is practically identical with the ancient semi-fusion process, with the exception that, instead of beginning with iron ore, it begins with pig iron, which is first melted down on the hearth of the puddling furnace and then treated so that it becomes practically the spongy, impure mass of the ancient iron-worker.

The world production of pig iron in 1929 was 96,180,000 tons, made up as follows: United States 42,700,000; Germany 13,100,000; France 10,300,000; Gt. Britain 7,500,000; other countries, 22,580,000. See Bessemer; Blast Furnace; Forge; Steel.

IRON AND STEEL EXCHANGE. Institution for the transaction of business in the iron, steel, and allied trades. The exchange is located at Imrie House, King William St., E.C. The Iron and Steel Institute is an association founded in 1869. It has a technical library at its headquarters, 28, Victoria Street, London, S.W.1.

IRON AGE. Archaeological term denoting a cultural phase conditioned by the use of iron, especially for edged tools and weapons. Iron was known as a curiosity by the pyramid-builders, but it was not until 1000 B.C. that iron-working became general in the Mediterranean basin. Its gradual development from bronze precursors is traceable at Hallstatt, and its fuller employment at La Tène (q.v.). These places give their names to the first and second periods of the early Iron Age in central and western Europe. The Teutonic culture overlapped that designated in Britain late-Celtic, which passed into Romano-British and Anglo-Saxon civilizations. In N. Europe iron began somewhat later.

In all these regions cast bronze continued and developed side by side with wrought iron, the production of cast iron being virtually unknown until the Middle Ages. In north and central Africa iron appeared in direct succession to stone. In aboriginal America, apart from the hammered implements of compact unsmelted ore of the mound builders, there was no Iron Age as such before the discovery. See Archaeology; Bronze Age.

IRON-BARK TREE (*Sideroxylon dulcificum*). Tree of the order Sapotaceae, native of W. Africa. It has leathery, alternate leaves,

and small, whitish flowers in clusters. Its fruit is an oval berry, known as miraculous-berry, its intense sweetness clinging to the palate and nullifying the acidity of other food taken shortly after. The timber is very hard.

IRONCLAD. Name given to the first armoured warships. The earliest British ironclads were the *Warrior*, completed at Blackwall in 1860, and the *Black Prince*, completed at Glasgow in 1861. In time wrought-iron armour as a protection for warships gave way to specially hardened steel plates. See *Battle Cruiser*; *Battleship*; *Destroyer*.

IRON CROSS. Prussian order. It was instituted by King Frederick William III in 1813 during the struggle against Napoleon, and was remodelled by William I in 1870. It has three grades, and is divided into civil and military divisions. The badge is an iron cross pattée, with silver edging and mountings. During the Great War it was said that about 3,000,000 of these crosses were awarded.

Iron Cross of Prussia

IRON DUKE. British battleship, the flagship of Lord Jellicoe while in command of the Grand Fleet, 1914-16; also nameship of a class of battleships completed in 1914. Their length is 622 ft. over all, and they are 90 ft. in beam. They displace 25,000 tons and have engines of 29,000 h.p., giving a speed of 22½ knots. These vessels carry ten 13.5-in. and twelve 6-in. guns. On their main gun positions and conning tower they have 6-in. armour, and a 2½-in. armoured deck. In this class are the *Iron Duke*, *Marlborough*, *Benbow*, and *Emperor of India* (formerly the *Delhi*). In 1919 *Iron Duke* became the flagship of the Mediterranean fleet. Under the London Naval Treaty (q.v.) three of this class were to be scrapped, and the *Iron Duke* retained as a training ship.

H.M.S. *Iron Duke*, battleship on which Lord Jellicoe flew his flag, 1914-16, during the Great War

IRON GATES. Name given to the narrowing of the Danube between Orsova and Turnu Severin in S.W. Rumania. It is about 2 m. long. Here are the great rapids beside an island in mid-stream, due to the Danube cutting through the mountains. Between 1890 and 1900 a navigable way was made by blasting. Both the main road and rly. follow the left bank from the Banat to the Wallachian plain. See *Danube*; *Rumania*.

IRON MASK, THE MAN IN THE. Unidentified French state prisoner. On Sept. 18, 1698, Saint Mars, a trusted officer of Louis XIV, brought to the Bastille a male prisoner, whose face was hidden by a mask. Five years later, Nov. 19, 1703, the prisoner died in the Bastille, and was buried in the churchyard of S. Paul, just outside the prison. The official entries of his reception in the Bastille, his death and interment, the sole incontestable documents in the case, are extant. The mask, described in some versions of the story as of iron, seems actually to have been of black velvet.

Many legends arose concerning his identity, one being that he was a hasty brother of Louis XIV, another that he was his legitimate twin brother. Modern criticism has suggested that he was Count Mattioli, who had negotiated the sale to Louis of the frontier fortress of Casale, belonging to the duke of Mantua, and, for a double bribe, had betrayed both his master and the French king.

IRONMONGER. Dealer in hardware. The trade includes the sale of builders' materials and requisites and, in its retail side, cutlery, tools, and household fittings.

The Ironmongers' Company is the tenth of the twelve chief London city livery companies.

Formed c. 1300, its arms were granted in 1435, by-laws framed in 1455, and the first of its six charters granted in 1464. Ironmongers' Hall, in Fenchurch Street, E.C., the site of which was acquired in 1457, was rebuilt in 1748-52. The trust estates and charities of the company include schools, almshouses, scholarships, and pensions.

Ironmongers' Company arms

IRONMOULD. Name given to the red stains resulting from the contact of iron, in soluble form, with linen or cotton fabrics. Ink is one of the chief causes of ironmould on linen. Oxalic acid or the so-called salts of lemon removes the stains.

IRONSIDES. Name given to the troopers of Oliver Cromwell. Rupert is said to have described Cromwell himself as an ironside, possibly with sarcastic reference to his body armour, and about 1648 the term was applied to Cromwell's troopers in recognition of their excellent discipline.

IRONSTONE. Name given to various ores of iron of which siderite is the chief. A substitute for black pearls, called ironstone jewelry, is made from close-grained haematite.

IRONWOOD. Term applied to a large number of distinct trees whose timber is hard and heavy. Almost every country has an ironwood tree, but in each the name is applied to a species distinct botanically, and even in one country it may indicate several species.

IRONY (Gr. *cirōneia*, dissimulation). In rhetoric, a method of speech by which the words used convey a meaning the reverse of that which is really intended. It is a form of ridicule, exposing errors or faults by seeming to adopt or approve them. Pascal's Provincial Letters is an admirable example of delicate irony. Swift was a master of savage irony.

IROQUOIS. Confederacy of North American Indian tribes, once occupying part of New York state. During the 16th century the Mohawks, Cayugas, Oneidas, Onondagas, and Senecas formed the so-called Five Nations; the incorporation (1715) of the Tuscaroras resulted in the Six Nations group. After the Revolution the Mohawks entered Canada, settling to the north of Lakes Erie and Ontario. The remainder are to be found in New York State and Wisconsin. See illus. p. 73. Pron. *Irrokwoy*.

IRREDENTISM. Name given to a movement in Italy which aimed at delivering all Italian land from foreign rule. The party cry was *Italia Irredenta*, the word *irredenta* meaning unredeemed, and the party came into existence soon after the formation of the kingdom of Italy, in which certain districts inhabited by Italians were not included. By 1920 most of the Irredentist demands had been conceded, and with D'Annunzio's failure to annex Fiume the party came to an end. See *Italy*.

IRRESISTIBLE. British battleship of the *Formidable* class. She was sunk by mines in the Dardanelles, March 18, 1915. A sister ship, the *Bulwark* was blown up at Sheerness, Nov. 26, 1914. See *Formidable*.

IRRIGATION (Lat. *irrigare*, to water). Method of supplying water to land in order to increase its productivity. In India 35,000,000 acres of land, hitherto worthless, have been put to useful account by irrigation. The irrigated area of the U.S.A. is about 12,000,000 acres, while the prosperity of Egypt depends almost entirely upon irrigation. Water for irrigation purposes is obtained either from rivers or wells. As the normal level of a river is below that of the lands to be irrigated, it is usual to construct a barrage or weir across the bed and raise the level of the river sufficiently to direct part of its flow into canals having intakes above the weir.

To make fuller use of a river which derives its water from the melting snow or rainfall of mountainous regions, the annual discharge must be regulated by a dam built in an appropriate location. In the flood season immense quantities of water are impounded behind the dam for consumption during periods of smaller natural flow. The most important irrigation schemes of the U.S.A., India, Egypt, and Australia are based upon the formation of huge artificial dam reservoirs. In India 13,000,000 acres are irrigated from wells, from which water is laboriously raised by hand or crude mechanical appliances. In America pumping windmills, the cheapest means of lifting water, are widely used.

Among notable irrigation works in India are the Lloyd dam at Bhatnagar, and the Wilson dam at Bhandardara. Works in progress include the Sukkur barrage and canals in Sind, and the Sutlej Valley canals in the Punjab. The Sukkur barrage, the greatest work of its kind, will measure 4,725 ft. between the faces of the regulators. The scheme commands an area of 7,500,000 acres. The Sutlej scheme involves over 5,000,000 acres, and comprises four weirs.

In Australia a great deal of land in the region of the Murray and Murrumbidgee rivers has been irrigated. In the Sudan large areas have been made suitable for cotton growing by means of irrigation schemes.

Irrigation canal of concrete in an Arizona desert

IRTHING. River of England. Rising in the Northumberland and Cumberland borders, it flows between these counties, and then S.W. through Cumberland to the Eden.

IRTHLINGBOROUGH. Urban district of Northamptonshire. It is 2 m. from Higham Ferrers, on the L.M.S. Rly. The chief industry is the manufacture of boots and shoes. Pop. 4,809.

IRVINE. Burgh and seaport of Ayrshire, Scotland. It stands on the Irvine, 30 m. S.W. of Glasgow, on the L.M.S. Rly. Shipbuilding.

engineering, and the manufacture of chemicals are carried on, and coal and chemicals are exported Pop. 11,826

IRVING, EDWARD (1792-1834). Scottish divine. Born at Annan, Dumfriesshire, Aug. 4, 1792, he became a schoolmaster at Haddington, where Jane Baillie Welsh, afterwards Mrs Carlyle, was one of his pupils. He and Carlyle were rival schoolmasters at Kircaldy. In 1819 he was assistant to Dr Thomas Chalmers, at S. John's, Glasgow, and in 1822 he became chaplain at the Caledonian Asylum's chapel in Hatton Garden London. His congregation removed to a new building in Regent's Square, 1824. In 1832, charged with heresy, he left the Presbyterian Church and associated himself with the Catholic Apostolic Church (q.v.). An appeal against his dismissal failing in 1833, his health gave way, and he died Dec 7, 1834.

After J. Slater

congregation removed to a new building in Regent's Square, 1824. In 1832, charged with heresy, he left the Presbyterian Church and associated himself with the Catholic Apostolic Church (q.v.). An appeal against his dismissal failing in 1833, his health gave way, and he died Dec 7, 1834.

IRVING, SIR HENRY (1838-1905) English actor. Born at Keinton Mandeville, Somerset, Feb. 6, 1838, his real name being John Henry Brodribb. Irving made his first public appearance at The Lyceum, Sunderland, in 1856. He played for two years and a half under R. H. Wyndham at Edinburgh; then for five years at Manchester. The part that brought him to London in 1866 was his Rawdon Scudamore, the villain in Boucicault's drama Hunted Down. In 1871 he became leading man at The Lyceum, where, as Mathias, in The Bells, he at length achieved fame.

On Dec. 30, 1878, he began his own management of The Lyceum, playing Hamlet to the Ophelia of Ellen Terry, thus commencing a famous connexion of 24 years. His greatest popular and financial success was won in Wills's version of Goethe's Faust. His greatest artistic triumph was achieved in Tennyson's Becket, Feb. 6, 1893. His final appearances at The Lyceum, in the summer of 1902, were made in Faust and in The Merchant of Venice. Irving, who was knighted in 1895, died at Bradford, Oct. 13, 1905, while on tour with Becket.

H. B. Irving,
British actor
Elliott & Fry

His elder son, Henry Brodribb Irving (1870-1919), became a member of Comyns Carr's company at the Comedy in 1894, and was with George Alexander, 1896-1900. A student of criminology, he wrote A Life of Lord Jeffreys, 1898; French Criminals of the 19th Century, 1901; The Trial of Mrs. Maybrick, 1913. He died Oct. 17, 1919.

Sir Henry's second son, Laurence Sydney Brodribb Irving (1871-1914), supported his father in many plays, and wrote for him Peter the Great, Lyceum, 1898. He first made his mark as Hjalmar

Sir Henry Irving,
British actor
Elliott & Fry

Laurence Irving,
British actor
Langflier

Ekdal in Ibsen's Wild Duck. Royalty 1894. He and his wife (Miss Mabel Hackney) were drowned when the Empress of Ireland foundered in the St. Lawrence river on May 29, 1914.

IRVING, WASHINGTON (1783-1859) American author. Born in New York, April 3, 1783 of Anglo-Scottish parentage, in 1802 he contributed to The Morning Chronicle a series of letters signed Jonathan Oldstyle, in the manner of Addison and Steele. In Dec., 1809 he issued his first book Diedrich Knickerbocker's History of New York, a good-humoured burlesque of the old Dutch settlers of New Amsterdam.

Washington Irving,
American author

Irving was military secretary to the governor of New York in 1812, and was in Europe 1815-22. In 1819-20 appeared The Sketch-Book of Geoffrey Crayon, Gent., which, in addition to sketches of English life, contained The Legend of Sleepy Hollow and Rip Van Winkle. Braebridge Hall a further study of English life, followed in 1822, and The Tales of a Traveller in 1824. The Life and Voyages of Columbus appeared in 1828, the Chronicle of the Conquest of Granada in 1829, Voyages and Discoveries of the Companions of Columbus in 1831, and The Alhambra in 1832. He died at Sunnyside, near Tarrytown, N.Y., Nov 28, 1859.

IRWELL. River of Lancashire. Rising on the E. side of Rossendale Forest, near Burnley, it flows S. to Manchester and then S.W. to the Mersey. Its lower course forms part of the Manchester Ship Canal. Its length is about 30 m. See Manchester Ship Canal.

IRWIN, EDWARD FREDERICK LINDLEY WOOD, 1ST BARON (b. 1881). British politician. The son and heir of Viscount Halifax (q.v.). In 1910 he was chosen M.P. for the Ripon division, and between 1922-25 was in the Cabinets, first as president of the board of education and then as minister for agriculture. In 1926 he went to India as viceroy, and was made a peer. He was there during the unrest of 1930.

ISAAC. One of the Hebrew patriarchs, and the inheritor of the promises made by God to his father Abraham (q.v.) (Gen. 21, 22, 24, 27, 35). A prosperous farmer and stock-keeper in the S. of Palestine, he is said to have been forty years old when he married Rebekah, and his sons Jacob and Esau were not born till twenty years later. Isaac is the first patriarch mentioned as sowing seeds, and was also notable as a well digger. He is said to have died at the age of 180, and was buried with his father at Machpelah.

ISAAC. Name of two East Roman emperors. Isaac I Comnenus, who reigned 1057-59, was the first imperial representative of the Comnenus family. During his brief reign he strove to check extravagance.

Isaac II, called Angelus, was emperor, 1185-95 and 1203-4. Belonging to a noble Greek family of Asia Minor, he was proclaimed emperor in place of Andronicus I, slain in 1185. Distrusting the Crusaders under Frederick Barbarossa, he formed an alliance with Saladin. The Bulgarians again took up arms, and after two severe defeats Isaac was blinded and imprisoned by his brother Alexius, April 10, 1195. Later, when the Latins entered Constantinople, he was again set on the throne with his son Alexius, July 18, 1203, but early in 1204 they were overthrown.

Baron Irwin,
British administrator

ISABELLA (c. 1292-1358) Queen of Edward II of England. Daughter of Philip IV of France, she married Edward in Jan., 1308. Edward neglected her, and about 1324 she became practically a prisoner. She made her way to France, where, with her lover Mortimer, she planned an invasion of England. Landing at Harwich in 1326, she captured her husband and Despensers, returned to London, and proclaimed Edward III as king. Causing her husband to be murdered at Berkeley Castle she and Mortimer held the regency until 1330 when Edward III seized both and sent his mother into retirement. She died at Hertford, Aug. 23, 1358. See Edward II.

Isabella I,
Queen of Castile

ISABELLA (1451-1504). Queen of Castile. Daughter of John II of Castile and Leon, she married Ferdinand of Aragon in 1469, and in 1474, with her husband, ascended the throne of Castile and Leon. Five years later Ferdinand succeeded to the throne of Aragon, and thus the greater part of Spain was united under one monarchy. Isabella died Nov. 26 1504. See Ferdinand V; Spain.

ISABELLA (1830-1904). Queen of Spain. Born at Madrid, Oct. 10, 1830, the daughter of Ferdinand VII she benefited by a decree which set aside the Salic law, and at the age of three succeeded her father under the regency of her mother, Maria Christina, and for the next seven years her uncle, Don Carlos, maintained constant conflict for his rights. In 1840 Maria Christina resigned the regency in favour of Espartero, and in 1843 Isabella was declared of age by the Cortes. Isabella was compelled to marry her cousin, Don Francis of Assisi, an unhappy match. Continued insurrections broke out and in 1868 she was deposed and banished. In 1870 she abdicated in favour of her son, Alphonso XII. The rest of her life was passed in Paris, where she died, April 10, 1904. See Carlos; Spain.

Isabella, Queen of
Spain, 1833-68

ISAIAH. Hebrew prophet, the author of one of the books of the Bible. A son of Amoz he lived in the 8th century B.C. He seems to have spent his life in Jerusalem, and received his call probably about 740 B.C. Apparently a man of rank and influence, his activity was at its height in the great crises that agitated the nation from the Syro-Ephraimitish war in 735-734 B.C. (Isa. 7, 1; 8, 18) to the invasion of Sennacherib in 701 B.C. (Isa. 36-39). Isaiah's great task was to warn people that, in consequence of their neglect of Jehovah, severe punishment at the hand of Assyria was about to overtake them. He warned them that salvation lay in a return to Jehovah and in renewed confidence in Him.

ISANDHLWANA. Place in Zululand, S. Africa. It stands near the Tugela river, 105 m. from Durban, and is noted as the scene of a fight between the British and Zulus, Jan. 22, 1879. A British army encamped here went out against the enemy, leaving a small force in charge. This was attacked by 10,000 Zulus and destroyed. The British losses were 800, and those of the native allies 600, only about 40 Europeans escaping alive. The honours were with the S. Wales Borderers. See Zulu Wars.

ISCHIA. Island of the Mediterranean, belonging to Italy. The ancient Pithecusa or Anagnina. It lies off the Campanian coast, 16 m. W.S.W. of Naples. Its area is 18 sq. m.

Of volcanic origin, it is mountainous, fertile, and most picturesque. Its highest point is Monte Epomeo. Ischia (pop 7,815), the capital, is the seat of a bishop, and has a 15th century castle. Other towns are Casamicciola, noted for its hot springs, and Forio, a port on the W coast. The island is subject to earthquakes. Pop. 28,500. Pron. Ees-keca

ISÈRE. River of France. It rises in the Graian Alps on the Italian frontier and flows mainly W., joining the Rhône near Valence. Its length is about 180 m., but its swift current makes it unsuitable for navigation. Its chief tributaries are the Drac, Are, and Breda.

The river gives its name to a department of France of which Grenoble is the capital.

ISHMAEL. Son of Abraham by his wife's Egyptian maid Hagar. The jealousy of Sarai and the birth of Isaac some years later led to Hagar being sent away with her son, and settling in the wilderness of Paran, where Ishmael married an Egyptian (Gen. 16-25). He was famed as an archer. His descendants occupied the land E. of Palestine. See Hagar.

ISHTAR. Babylonian and Assyrian goddess. A primitive Semitic deity, she had a chapel in the Esagila temple at Babylon, approached from the resplendent Ishtar gate. She appears as queen of heaven (Jer. 44), mother of all life, and goddess of love and war.

ISINGLASS. Gelatinous substance obtained by drying the swimming bladder of the sturgeon and other fish. It is used for clarifying wines, beers, and spirits, and is employed in cookery for making jellies.

ISIS. Egyptian goddess. Originally local, she became pre-eminently the great mother (Demeter), sister-wife of Osiris, and mother of Horus. Represented in human form, she bore, after assimilation with Hathor the cow-horned sun-disk. Her XXXth-dynasty temples were at Behbet and Philae, where her worship ceased about A.D. 560.

Isis. Name given to the upper part of the Thames, that about Oxford. See Thames.

ISLA. River of Scotland. It rises in the Grampians on the N.W. of Angus (q.v.), and flows 48 m. in a south-east direction to the Tay which it joins 4½ m. S.W. of Coupar Angus. It makes two fine falls—Reekie Linn and the Slugs of Auebrannie, both in the Angus ravine, the Den of Airdie. Pron. I-la.

ISLAM (Arab. making of peace). Name given in the Koran to the Mahomedan religion. Allah is called the Author of Peace; and Islam is held by all believers in it to lead to the Abode of Peace. See Koran; Mahomedanism; Mahomet.

ISLANDS, BAY OF. (1) Bay on the W. coast of Newfoundland. It penetrates inland by three branches, receiving the waters of the Humber, and containing numerous small islands. (2) A commodious, secure, and deep harbour in North Island, New Zealand, on the E. side of the Auckland peninsula.

ISLANDSHIRE. Formerly a detached portion of the co. of Durham. Consisting of land near Berwick-on-Tweed, together with the Farne Islands, it was incorporated with Northumberland (q.v.) in 1844.

ISLAY. Island of the Inner Hebrides, belonging to the co. of Argyll. It is separated from Jura by the Sound of Islay. Its area is 235 sq. m. The inhabitants are chiefly engaged in dairy farming and rearing sheep and cattle. Oats, barley, and potatoes are grown. Distilling is an important industry, slate and marble are quarried, and peat is cut. The surface is generally level. Bowmore is the chief town. Islay was the headquarters of the MacDonalds, lords of the isles, and afterwards

the island passed to one of the branches of the Campbells, whose seat was Islay House, situated near Bridgend. Pop. 5,743.

ISLEHAM. Village of Cambridgeshire. On the L.N.E. Rly., 6 m. from Newmarket, it gives its name to a fen partly drained during 1918-19 by German prisoners. Pop. 1,490.

ISLES, LORD OF THE. Title borne by the chieftains formerly ruling the Western Isles of Scotland, now surviving only as one of the titles of the prince of Wales.

ISLEWORTH. Urban district of Middlesex. It stands on the Thames, 12 m. W.S.W. of London on the Southern Rly. There are soap and perfumery works, breweries, flour mills, and market gardens. Syon House (q.v.) is a seat of the duke of Northumberland. The 14th century parish church of All Saints, rebuilt in 1705 and enlarged in 1865, contains old brasses and other monuments. Gumley House, Lacey House, and Worton Hall are noteworthy. Well-known residents in the past include the duchess of Kendal and R. B. Sheridan. Pop. 46,664. Pron. Iselworth.

ISLINGTON. Metropolitan borough of the co. of London. It is bounded S. by Finsbury and Shoreditch, N. by Hornsey and Highgate, E. by Stoke Newington, and W. by St. Pancras, and covers 4½ sq. m. The Royal Agricultural Hall, 1861-62, is notable for its cattle, dairy, horse, and dog shows. The Naval and Military Tournament (until 1906), and the Christmas fairs. In Liverpool Road is the London Fever Hospital. On Islington Green is a statue of Sir Hugh Myddelton.

Until early in the 19th century Islington was a village enclosed by fields. It was famous for its archery butts, dairy produce, mineral spas, tea gardens, and ducking ponds. The Philharmonic music hall stood in the High Street. Pop. 330,737. See Angel Inn; Canonbury; Highbury; Highgate.

ISLIP. Village of Oxfordshire. It stands on the Ray, near its junction with the Cherwell, 6 m. from Oxford, on the L.M.S. Rly. There is an old church, S. Nicholas, restored in the 19th century. Pop. 522.

ISMAILIA OR ISMAILIYA. Town of Egypt. On Lake Timsah

Ismail Pasha, Khedive of Egypt.

through which passes the Suez Canal, it was the headquarters of the works during the canal's construction. Pop. 10,400.

ISMAIL PASHA (1830-95). Khedive of Egypt. The second son of Ibrahim Pasha, he was born Dec. 31, 1830. He supported the Suez Canal scheme, and in 1867 was appointed khedive by Turkey. His extravagance occasioned the interference of Great Britain and France, and necessitated his abdication, 1879. He first retired to Naples, but died at Constantinople, March 2, 1895.

ISOBAR. Map line through places where the average barometric pressure is the same for the same period. The commonest use of isobars occurs upon the daily weather map. The arrangement of the isobars indicates the type of weather as cyclonic, etc. See Cyclone; Isotherm; Meteorology.

ISOCLINE. In geology, term used for rocks which are equally inclined in the same direction. Isoclinal strata often appear in mountain chains and Palaeozoic strata, and are the result of heavy tangential pressure. See Geology; Rocks.

ISOCRATES (436-338 B.C.). One of the so-called ten Attic orators. A pupil of Socrates in his early life, he gave up philosophy and started as a writer of speeches for clients to deliver in law cases, later composing

speeches dealing with public affairs and intended to be read, not spoken. He was thus the first political pamphleteer. Of his twenty-one extant speeches, the finest is the Panegyricus, in which he extols Athens as the natural leader of Greece.

Isocrates, Athenian orator. From a bust.

ISOLATION. Medically, the segregation of persons suffering from infectious diseases, in order to prevent the spread of the malady. Isolation hospitals are provided for persons suffering from smallpox and from certain other infectious diseases. Partial isolation in a private house can be effected by prohibiting all unnecessary persons from entering the patient's room, and by hanging a sheet, kept moist with carbolic acid or other disinfectant, in front of the door. See Notification.

ISOMERISM. In chemistry, the arrangement of the same elements in the same proportions to form different compounds. Ethyl alcohol and methyl ether both are represented by the formula C_2H_5O , but are different substances. The difference in properties is due to a different arrangement of the atoms. Substances of this kind are called isomerides, and are frequently met with in carbon compounds. See Polymerism.

ISOMORPHISM. Phenomenon exhibited by compounds of various elements of crystallising in the same form. The arsenates and phosphates of sodium, potassium, and ammonium possess the same crystalline forms, and under proper conditions form homogeneous mixed crystals. Such substances thus formed are termed isomorphous.

ISONZO. River of Italy, formerly of Austria. It rises in the Julian Alps, near the Predil Pass, and flowing S. issues into the Gulf of Trieste, 10 m. E. of Grado. The chief town on its banks is Gorizia, others being Plezzo, Suzzio, and Tolmino. Its length is 82 m.

BATTLES OF THE ISONZO. These were fought between the Austrians and the Italians, 1915-17. Italy declared war on Austria, May 23, 1915, and attacking on her E. front reached the line of the Isonzo by the end of the month. The Austrians withdrew mostly to the E. bank of the river, their centre being the entrenched camp of Gorizia, but they retained important bridgeheads on the W. bank. The second battle was a renewed offensive against Gorizia, and on July 2 the attack was general from Plava to Castelnuovo. Fighting continued for nearly a fortnight, with the result that the Italians pushed forward their line.

The third battle began on Oct. 18, 1915, with a general bombardment by the Italians of the Austrian positions from Plava to the sea, and fighting went on until Dec., the Italians gaining positions enabling them to bombard Gorizia. In the fourth battle, begun on Aug. 1, 1916, the Italians captured Gorizia. In the final offensive of May, 1917, the attack was from Plava to Salcano, and the heaviest fighting took place against the formidable Austrian positions on the Kuk, Vodice, Santo, and San Gabriele heights.

ISOTHERM (Gr. isos, equal; thermos, heat). Map line through places where the temperature is the same for the same period. The mean July isotherm of 90° F. passes through all places where the July temperature averaged over many years reaches that amount. In general, isotherms indicate temperatures which are corrected for the elevation of the meteorological station to an estimated corresponding value at sea level. The effect of mountains on air temperatures is shown only by isotherms specially drawn to show actual temperatures. See Meteorology; Temperature.

ISOTOPES. Term applied to different varieties of a chemical element which appear to be identical in chemical properties, and may have slightly different atomic weights. See Atom; Chemistry

Isfahan, Persia. The Grand Mosque

ISPAHAN or **ISFAHAN.** City of Persia, formerly the capital. It is on a fertile tableland above the river Zaindeh Rud, about 200 m. S. of Teheran. During its greatest prosperity, under Shah Abbas, 1586-1628, it was one of the largest cities of Asia, and possessed many fine buildings, some of which still stand, notably the Palace of the Forty Pillars and the Grand Mosque. It trades in tobacco, opium, cotton, and fruits. The suburb of New Julfa is inhabited by Armenians. Pop. 80,000.

ISRAEL (Heb. Perseverer with God). Name given by God to Jacob (Gen. 32 and 35). It became a synonym for Jew or Hebrew. See Hebrew; Jews; Palestine.

ISSUS. Ancient port of Cilicia. It stood on the gulf now called Iskanderun, and is celebrated for the battle fought in 333 B.C. between Alexander the Great and Darius III, in which the latter was totally defeated. Near here, also, Septimius Severus defeated Pescennius Niger in A.D. 194, and Heraclius overcame the Persians under Chosroes in 622.

ISTANBUL. Name by which Constantinople, the former capital of Turkey, is now known to the Turks. It lies on the shore of the Bosphorus, near the point where it broadens out into the Sea of Marmara. The distinctive feature of its situation is the inlet called the Golden Horn (q.v.), providing a fine natural harbour capable of floating the largest ships. The Golden Horn divides the city into two parts,

Istanbul. 1. Galata Bridge, looking towards Pera, with its famous tower. 2. General view across the Golden Horn from Pera, the European quarter

the Turkish city (Stamboul) on the southern side, and Galata, the business quarter, and Pera, the foreign residential quarter, on

the northern. N.E. of Galata lies the palace of Yildiz Kiosk (now a casino). The Fanar is the Greek quarter, the Jews are found at Chasskoi on the Golden Horn, while across the Bosphorus is the Asiatic suburb of Seutari.

Istanbul proper, which is connected with the northern suburbs by two bridges across the Golden Horn, contains the memorials of the Greek city. It is also a typically Asiatic city. The Palace of the Old Serai, which contained the offices and the Porte or Gate that gave a title to the Turkish Government, occupies the site of the residence of the Greek emperors; the square of the At-Meidan is the ancient hippodrome; and the column of the Three Serpents, brought from Delphi and crowned with the golden urn of Plataea, still forms the chief ornament of its vast expanse. Even more remarkable than all these is the church of S. Sophia, converted into a mosque.

Despite the removal of the capital and the consequent diversion of trade, Istanbul remains the financial, business, educational, and cultural centre of Turkey. It is still an important depot for sugar and coffee and a centre for silk production. It is the seat of the national university, founded in 1900. Pop., including suburbs, 673,029.

Founded by Constantine the Great in 330 as a new capital for his empire, Constantinople occupied the site of the Greek city of Byzantium. It remained under Greek and Latin rulers until May 29, 1453, when the Turks captured the city, remaining in possession of it without a break down to 1920.

After the armistice with Turkey in 1918 the Allied Fleet arrived off Constantinople, Nov. 13, 1918, and a high commissioner was appointed. An Allied force continued to occupy the city until shortly after the ratification by the Angora government of the treaty of Lausanne in Aug., 1923. In that year Angora was chosen as the capital of Turkey in place of Constantinople. See Angora; Caliphate; Turkey.

ISTHMIAN or **ISTHMIAN GAMES.** One of the four great athletic festivals of ancient Greece, the others being the Olympic, the Pythian, and the Nemean. The festival was

held every two years, near the isthmus of Corinth, in honour of Poseidon, god of the sea. See Olympic Games.

ISTHMUS (Gr. isthmus). Narrow neck of land either uniting a peninsula to the mainland or joining two continents together. Examples of the first are the isthmuses of Corinth, Kiel, and Kra (Malay Peninsula); of the second those of Panama and Suez. The cutting of a canal through an isthmus often shortens shipping routes very considerably.

ISTRIA. Italian peninsula at the head of the Adriatic Sea. The land boundary lies on the slopes of the Karst mountains overlooking the narrow strip of lowland between Trieste and Finme. Formerly an Austrian province, it included the Quarnero island, and passed to Italy after the Great War.

Pola is the largest town. Other towns include Pisinò (Mitterburg) and Rovigno, a flourishing small port. Its area is 1,913 sq. m. Pop. 319,700.

ITALIA. Airship in which General Nobile, commander of an Italian air expedition, flew over the North Pole on May 24, 1928. On the return voyage to Spitzbergen the ship crashed on a floe. Eight men, including Nobile, were marooned on the ice, while seven others were carried away with the balloon and never heard of again. The marooned men were located by aeroplane and rescued. In searching for the Italia, Amundsen lost his life. See Aeronautics; Amundsen, R.

ITALIAN GREYHOUND. Small breed of toy dog, closely resembling a diminutive greyhound. The average weight of a specimen is about 7 lb., and the favourite colour a golden fawn. The breed, which comes from Italy and dates from the beginning of the 15th century, has speed but is too delicate for sporting use.

Italian Greyhound. Prince Ivanovitch, a prize dog of the breed

ITALIC (Lat. italiens). In printing, a type, the letters of which slope up towards the right. Originally called Aldine or Venetian, and known also as cursive, it was first used at Venice in 1521 by Aldus Manutius (q.v.) and dedicated by him to the Italian states. At one time prefaces to books and all proper names were printed in italic. Later usage is for emphasis, foreign words, side headings, etc. See Printing.

ITALY. Kingdom of S. Europe. It comprises the long peninsula stretching S. from the Alps into the Mediterranean, as well as Sicily, Sardinia, Elba, the Lipari Islands, and other smaller islands. The country encloses the extra-territorial domains of the Papacy and the tiny republic of San Marino. The collapse of Austria after the Great War resulted in a rearrangement of the Italo-Austrian frontier and in the addition to Italy of large tracts of what were formerly Austrian lands. The Alps now form the N. frontier, while the agreement with Yugoslavia sets the N.E. frontier along the Dinare Alps, giving Italy the old coastland provinces of Austria, Görz (Gorizia) and Gradisca, Trieste, and Istria. Italy is a member of the League of Nations, Rome is the capital. Area, 119,743 sq. m.; pop. 41,173,000.

The Italian peninsula is traversed from N. to S. by the Apennines. The chief rivers are the Po, Adige, Tiber, and Arno. There is much volcanic and earthquake activity, as at Vesuvius, Etna, Stromboli, and Messina. The main agricultural products are cereals, olives, beans, chestnuts, rice, potatoes, fruit, sugar beet, hemp, flax, and cotton. Flowers are grown in the S.; vine growing and silk culture are carried on all over Italy. The minerals include sulphur, zinc, quicksilver, lead, iron, manganese, and antimony. Marble, limestone, and gypsum are quarried.

The textile industries are very important, especially cotton, silk, and wool. In production of artificial silk Italy holds the second place in the world. The manufacture of sugar and of cheese are growing industries. Other manufactures include motor cars, aeroplanes, chemical products, glass, and leather goods. The fisheries, particularly for tunny, are valuable. Water power is being increasingly utilised. There are more than 13,000 m. of

ry., of which over 10,000 m. are controlled by the state. Wireless stations have been erected in several places. Commercial air routes link up Brindisi with Istanbul via Athens, Rome with Vienna via Venice, etc.

The people of Italy, though of origins as diverse as those of Great Britain, have a distinctive quality of nationality, although from the days of the Roman Empire till the middle of the 19th century they never enjoyed political unity. At the centre of Italy, however, stands Rome, which from being the civilized world's imperial city became the western world's pontifical city and the central point of western culture till the 16th century, the close of the Middle Ages. Rome ruled religion; the Popes disputed with emperors and kings for a universal supremacy; the self-governing maritime cities, Venice, Genoa, and Pisa, had no other rivals in their control of sea-borne commerce; in the 14th and 15th centuries Italy had almost the monopoly in the revival of letters and art, which had originated there.

Modern Italy, then, has a past to be lived down for which she is far less responsible than the powers which held her in thrall, and a glorious past to live up to which is all her own. Not a century since, she became a united nation, under a constitutional monarchy framed on the British model which had been the gradual growth of a thousand years, with the task before her of organizing herself as a first-class power on the basis of resources less in themselves and far less developed than those of her powerful neighbours. It is not unnatural that she should feel impelled to a somewhat more active self-assertion than is altogether conducive to general harmony under the guidance of a chief whose extraordinary abilities are the warrant for his unbounded self-confidence; the aggressive spirit can hardly be lacking in the successful dictator. But until the rise of Mussolini it can hardly be said that Italy's front-rank position was definitely established.

A dictatorship has superseded the constitutional government; avowedly setting aside the conception of civic liberty and completely subordinating individual and personal interests to those of the state as the latter are conceived by the controlling authority, criticism of which is as sternly repressed as direct disobedience to its decrees. The new autocracy, known as Fascism, has the enthusiastic support of a large body of citizens, who regard it as essential to the maintenance of law and order; under

group of acari. The sufferer should take a hot bath, vigorously scrubbing the skin with soap, so helping to remove the superficial layers of the skin and lay open the burrows. Following this,

Italian types. Left, peasant girl from Bellagio; right, church beadle

sulphur ointment should be applied daily to the whole body. At the end of a week another hot bath should be taken, and the patient should then be cured. The clothes also should be disinfected by heat or formalin. See Mite.

ITCHEN. River of Hampshire. Rising near Alresford, it flows W., and then S. to Southampton Water, passing by Winchester. It enters the sea by a tidal estuary, 3 m. long. There is a river in Warwickshire named Itchen, a tributary of the Avon.

Itchen, a suburb of Southampton, stands at the mouth of the Itchen, 1 m. E. of Southampton proper. Until 1920, when it was included in Southampton, it was a separate urban district. Itchen Abbas is a village on the Itchen, 5 m. from Winchester. Pop. 206.

ITHACA (mod. Itbáki, Thiáki). One of the Ionian Islands, belonging to Greece. It was regarded as the home of Odysseus (Ulysses). It has an area of 45 sq. m. Vines, currants, and olives are grown, and goat-rearing and sponge and coral fishing are carried on. The island is cut almost in half by the Gulf of Molo, on which is the capital, Vathy. Some consider the ancient Ithaca a fictitious island, but the general opinion favours its identification with one of the Ionian islands. Pop. 11,715. See Greece.

ITO, PRINCE HIROBUMI (1841-1909). Japanese statesman. Born Sept. 2, 1841, a stay in Europe made him an advocate of western civilization. On his return home he advocated many reforms. In 1878 he became minister of the interior and in 1885 premier, a post he held with intervals until 1901. In 1906 he was made resident

general in Korea, and he was murdered at Kharbin, Oct. 26, 1909. Ito was largely responsible for a new constitution for Japan, the successful conduct of the war with China, and the alliance with Great Britain.

Intellectually, like Hellas of old, she was far in advance of the rest of the world; but, as with Hellas, there was among her city states no semblance of political unity. City states could not hold their own individually against the ambitions of the Great Powers which had now come into being, in whose international and dynastic conflicts they became pawns for two and a half centuries, the helpless prizes for which Hapsburgs, Capets, and Bourbons contended, ruling them as alien masters. Nevertheless, or in consequence, a pervading nationalist sentiment at last awoke. The spirit inspired by Mazzini and Garibaldi, joined with the politic statecraft of Cavour and Victor Emmanuel, achieved in 1861 and completed in 1866 the unification of Italy under a single monarchy and her liberation from foreign dynasts.

Italy. Map of the kingdom as established under Victor Emmanuel II, together with the territory acquired from Austria after the Great War

it the power of the government is and aims at being irresistible. See Fascisti; Mussolini; Naples; Rome; Savoy, etc.; also illus. p. 435.

ITCH OR SCABIES. Disease of the skin produced by a small parasite belonging to the

ITURBIDE, AUGUSTUS DE (1783-1824). Emperor of Mexico Bora Sept. 27, 1783, he became a soldier and later governor of two provinces of Mexico, then under Spanish rule. In 1820 he commanded a Spanish army against some rebels, but he soon changed sides and put forward a declaration demanding independence. This was granted by the viceroy, and Iturbide became emperor in May, 1822. In March, 1823, owing to a rebellion, he abdicated and went to Europe. Having returned to Mexico, he was arrested and shot July 19, 1824. Pron. Ee-tur-heeday.

IVAN OR **JOHN**. Name of several rulers of Russia. Pron. Ee-van.

Ivan III (1440-1505), surnamed the Great, grand duke of Muscovy 1462-1505, was the real founder of the tsardom of Muscovy.

Ivan IV (1530-84), surnamed the Terrible, was tsar of Russia 1547-84. He made himself master of Kazan, Astrakhan, and Western Siberia, but his attempts to obtain possession of the Baltic provinces were frustrated. He encouraged commerce, and was the first Russian ruler to conclude a treaty with England. He died March 18, 1584. Ivan IV was the first ruler to assume the title of tsar.

IVEAGH, EDWARD CECIL GUINNESS, 1ST EARL OF (1847-1927). British brewer and philanthropist. Born Nov. 10, 1847, a younger son of Sir B. L. Guinness, Bart., he became head of the great Dublin firm. He established in 1839 the Guinness Trust for building houses in London and Dublin, and subscribed liberally to hospitals and other charitable undertakings.

1st Earl of Iveagh, British philanthropist. Lajayette

In 1885 he was made a baronet; in 1891 a baron, taking the title of Iveagh; in 1905 a viscount, and in 1919 an earl. Lord Iveagh died Oct. 7, 1927. By his will, which was proved at £11,000,000, he left the Ken Wood (q.v.) estate and mansion, with a magnificent collection of pictures, to the nation. See Guinness.

Rupert Edward Cecil Lee Guinness (b. 1874), who became the 2nd earl on his father's death, was Unionist M.P. for Haggerston 1908-10; South East Essex 1912-18; and Southend-on-Sea, 1918-27. His wife, a daughter of the earl of Onslow, succeeded him as M.P. The first earl's third son, Walter Edward Guinness (b. 1880), M.P. for the Bury S. Edmunds division, was minister of agriculture and fisheries 1925-29 in the Baldwin Government. Like his eldest brother, he was a noted oarsman both at Eton and Cambridge.

IVINGHOE. Parish of Buckinghamshire. It is 9 m. from Aylesbury, and 4 m. from Tring. Its 13th century church is noteworthy. Ivinghoe Beacon (762 ft.) and Ringshall or Ivinghoe Common have been the property of the National Trust since 1926. Pop. 810.

IVORY. Name given to a variety of dentine or tooth substance, of various animals. Ivory proper is usually restricted to that obtained from the tusks of elephants, but that from the hippopotamus, narwhal, and walrus is also recognized. Ivory, on account of its hardness, whiteness, durability, and ability to take a high polish, has been from the earliest times a favourite article of ornament. It can be dyed by various chemical means, but no method has yet been discovered of restoring its colour when yellowed with age. Its principal commercial use, apart from ornamental carving, is for the manufacture of piano keys, billiard balls, knife handles, toilet ware, etc.

IVORY COAST (La Côte d'Ivoire). French colony in W. Africa. It is bounded N. by Upper-Senegal-Niger (French Sudan), W. by French Guinea and Liberia, S. by the

Gulf of Guinea, and E. by the Gold Coast Colony. The only highlands of importance are on the borders of Liberia. The coastal regions are broken by a series of lagoons. The forest area covers over 74,000 sq. m., with a width of about 186 m. The capital is Bingerville. From Abidjan a rly. runs N. for some 300 m. Its area is 126,100 sq. m.; pop. 1,216,300.

IVORY NUT OR **VEGETABLE IVORY** (Phyl. *elephas macrocarpa*). Dwarf tree of the order Palmae, native of the north of S. America. The greater part of the trunk lies along the

Ivory Nut. Foliage and fruit, with open nut on right

IVRY, BATTLE OF. Fought between Henry IV of France and the forces of the Catholic League, March 13, 1590. The two armies met near Ivry, 42 m. from Paris. The fight was short, the Leaguers being utterly defeated. Henry is estimated to have had about 11,000 men against 22,000. The battle is the subject of a well-known ballad by Macaulay.

Ivry-sur-Seine is a suburb of Paris on the left bank of the Seine, 4½ m. S.S.E. of the city, immediately outside the fortifications. On the river bank above Pont de Conflans is a harbour for river traffic, the Port d'Ivry.

IVY (*Hedera helix*). Climbing shrub of the order Araliaceae, native of Europe, N. Africa, and Asia. In old specimens the trunk may be nearly 1 ft. in thickness, and it reaches to the tops of tall trees and buildings, clinging to its support by peg-like rootlets. The thick, glossy leaves have five lobes, which vary in depth and the acuteness of their points; the upper leaves are oval or heart-shaped without lobes. The yellow-green flowers grow in umbels, and are produced from Sept. to Nov. The fruit is a small, black berry.

Ivy. Foliage and fruit of the climbing shrub

IXIA. Flowers of the South African herb

IXIA. Genus of bulbous herbs of the natural order Iridaceae. Natives of S. Africa, they have narrow sword-shaped leaves and spikes of showy salver-shaped tubular flowers. The flowers of the ixia vary through white, pink, and rose to dark red and blue, or cream colour to orange.

IXION. In Greek mythology, king of the Lapithae in Thessaly. Having murdered his father-in-law, he was taken to heaven by Zeus for purification. For attempting the virtue of Hera, wife of Zeus, he was condemned to be bound to a continuously rolling wheel in the nether world. See Hera

J. Tenth letter of the English and Latin alphabets, although its use in Latin texts is now generally abandoned. Its English value is that of g in gem 1 and J were once used in English indiscriminately, and were not separated in dictionaries until the middle of the 17th century. See Alphabet.

JABBOK (mod. Nahr ez Zerqa) Stream in Gilcad, Transjordan. A tributary of the Jordan, 110 m. long, it separated the kingdom of the Amorites from that of Bashan. Jacob's wrestling with the angel took place on its bank (Gen. 32).

JABESH-GILEAD. One of the chief cities in Gilcad. Its inhabitants were slain for refusing to help the Israelites against the Benjaminites (Judges 21), and Saul and his sons were buried close by (1 Sam. 31).

JABIRU (Mycteria). Genus of large birds of the stork family. They are found in India, Africa, Australasia, and S. America. Some have almost naked heads and necks, and the beaks are large and massive. The legs are very long, the toes comparatively short. The American species has white plumage, the African black and white. See Stork.

Jabiru, the South American species

JABORANDI (*Pilocarpus jaborandi*). Brazilian plant from whose leaves is prepared the nitrate of an alkaloid, pilocarpine. Externally, preparations of pilocarpine are employed to stimulate the growth of the hair; internally, to promote sweating in certain cases of Bright's disease. Applied to the eye, pilocarpine causes contraction of the pupil.

JACAMAR (Galbidae). Bird of tropical S. America, related to the woodpecker. Somewhat resembling a large humming-bird, it has beautiful plumage, reflecting metallic hues. It feeds chiefly on insects, and nests in holes in river banks.

Jacamar, bird of South America

JACANÁ (Pardidae). Group of birds found in India, Australasia, and the tropical regions of Africa and America. Including about ten species, they resemble coots, but are remarkable for their long legs and the extraordinary length of their toes, which enables them to walk on the floating leaves of large water-lilies. They feed upon insects, and make nests which sometimes float on the water.

Jacanà. Long-toed aquatic bird of the Tropics

JACK. Word used in many senses. The most common is as a familiar term of endearment in lieu of John, derived from Jacken, a variant of Jankin, diminutive of John. It is given to the heroes of many popular nursery tales, e.g. Jack the Giant-killer. This nominal use appears in Jack Tar, Jack Frost, cheap-jack, and many others. In an easily derived sense the word is applied to things which supplied the place of a boy-help, e.g. a boot-jack, and

thence to other purely mechanical appliances, such as the apparatus for raising weights. Its other use as a diminutive is equally easily

Jack. Garage implement used for lifting motor vehicles.

building operations known as a jack rafter

JACK, RICHARD (b. 1866). British painter Born at Sunderland, he studied in Paris at the Académie Julian, and did much black and white illustration. He was regarded as the most brilliant student of his day. He first exhibited at the R.A. in 1893. In 1912 his *Rehearsal with Nikisch* was purchased by the Chantrey Trustees. A member of the royal society of portrait painters, he became R.A., 1920. His portrait of King George V is notable.

JACKAL (*Canis aureus*). Animal of the dog tribe, common in Africa and S. Asia. Jackals are nearly related to the wolves, but are much smaller and have short, bushy tails. The Egyptian jackal is the largest, being about 50 ins. in total length and 16 ins. high at the shoulder. The general colour is brown of various hues, but one African species has a saddle of silvery black, while the rest of the body is bright tan. Jackals roam mainly at night and feed upon carrion and small animals, sometimes upon fruit and sugar-cane.

Jackal. Specimen of the black backed African variety

JACKASS. Male of the domesticated ass or donkey. Laughing Jackass (q.v.) is the popular name for an Australian bird (*Dacelo gigas*) belonging to the kingfisher family.

Jack Boot of 17th century
S. Kens. Museum

JACK BOOT. High riding boot of the 17th century. It reached above the knee, and had a large piece of leather covering the instep. It was superseded by a similar boot, cut away at the top, introduced by the duke of Wellington. A modified jack boot is still worn by fishermen.

JACKDAW (*Corvus monedula*). Bird of the crow family, common in Great Britain. Much smaller than the rook, it may be recognized by its greyish neck, white eye, and smaller beak.

It is commonly found about castles and church towers, where it builds its nest in holes in the masonry. It feeds mainly on worms, grubs, and insects.

JACKSON, ANDREW (1767-1845). American statesman. Born, probably in Lancaster county, S. Carolina, March 15, 1767, he was member of Congress, 1796-97, and senator, 1797-98. He held a command in the war against Great Britain, gained a signal victory at New Orleans, Jan. 8, 1815, and crushed the Seminole Indians in 1818. In 1821 he was made governor of Florida, and from 1823-25 was a senator. He was elected president in 1828, and in 1832 was re-elected. His term is memorable for the

Andrew Jackson, American statesman

bank war, due to his veto of the bill for renewing the charter of the Bank of the United States. He died June 8, 1845.

JACKSON, SIR FRANCIS STANLEY (b. 1870). English cricketer and politician. Born Nov. 21, 1870, he was educated at Trinity College, Cambridge, and was soon known as a cricketer. In 1893 he was captain of Cambridge, and he became one of the regular members of the Yorkshire team. He played several times for England against Australia, being captain in 1905, and for the Gentlemen. Both as a batsman and a bowler, Jackson was one of the finest all-round cricketers of the time. From 1915-26 he was M.P. for the Howdenshire div. of Yorkshire. In 1927 he was appointed governor of Bengal, and was knighted.

Sir Stanley Jackson
English cricketer
Elliott & Fry

JACKSON, JOHN (1769-1845). English pugilist. The son of a London builder, he was born Sept. 28, 1769. He became champion in 1795, and retained the title until 1803, although he had only three fights during the period, his first a victory over George Fewterel, 1788, his last an easy victory over Mendoza at Hornchurch, Essex, April 15, 1795. After his retirement Jackson became famous as a teacher of boxing, and Byron, one of his pupils, celebrated him in verse. His nickname was Gentleman Jackson. He died Oct. 7, 1845.

JACKSON, PETER (1861-1901). Negro boxer. Born July 3, 1861, at Porto Rico, West Indies, his first fight took place in Sydney, where he eventually won the championship of Australia by beating Tom Lees in 1886. In 1891 he fought his famous drawn battle of 61 rounds with James J. Corbett. His crowning victory was over Frank Slavin on May 30, 1892, at the National Sporting Club, London. He died in Australia, July 13, 1901.

Jackdaw, a bird of the crow family

JACKSON, SIR THOMAS GRAHAM (1835-1924). British architect. Born at Hampstead, Dec. 21, 1835, he trained as an architect under Sir Gilbert Scott. In 1861 he began to practise, and during the next fifty years was responsible for many important buildings. Among these are a number at Oxford, including the new Radcliffe Library, additions to some of the colleges, various museums and laboratories, and the city high school. His many restorations include Winchester Cathedral, Bath Abbey, and Christchurch Priory. Jackson was made A.R.A. in 1892 and R.A. in 1896. In 1913 he was created a baronet. He died Nov. 7, 1924.

JACKSON, THOMAS JONATHAN (1824-63). American soldier, commonly known as Stonewall Jackson. Born Jan. 21, 1824, he served in the Mexican War, 1845-48, winning the rank of brevet-major. His religious convictions induced him to leave the army, and in 1851 he went to Lexington military academy as instructor. On the outbreak of the Civil War he joined the Confederates, and in 1861 was promoted

Thomas J. Jackson
American soldier

brigadier and then major-general. In 1862, by a rapid march, he joined Lee in the seven days' battle for the defence of Richmond and helped in McClellan's defeat. From this time he became Lee's most trusted subordinate. He gained victories over the Federals at Cedar Mountain in the second battle of Bull Run and at Harper's Ferry.

Jackson's corps had a share in the battle of Antietam and was equally to the fore at Fredericksburg, while the Confederate success at Chancellorsville was due in great part to his skill. After the battle he was shot by mistake by his own outposts. A wound in the left arm made amputation necessary; pneumonia supervened, and Jackson died May 10, 1863. See American Civil War.

JACKSONVILLE. Seaport and winter resort of Florida, U.S.A. It is on the St. John's river, 140 m. S.W. of Savannah. Cotton, phosphates, lumber, and fruit are among the chief exports. The industries include iron-founding, the manufacture of lumber products, fertilisers, cigars, and there are shipbuilding yards and brick works. Pop. 95,450.

JACK THE RIPPER. Popular name given to an unaptured criminal who murdered and mutilated eight women in the East End of London during 1887-89. Sir Robert Anderson has left it on record that the murderer was probably a sexual maniac, a Polish Jew known to the police.

JACOB. Younger son of Isaac and Rebekah (Gen. 25). Having obtained his elder brother Esau's birthright and his father's blessing by stratagem, he became his father's heir and one of the three great patriarchs of the Israelites. He served his uncle Laban 14 years as a shepherd and obtained Leah and Rachel as his wives. The sale of his son Joseph to Egypt was a bitter grief, only allayed when a famine caused him to send his other sons to Egypt to buy corn, and the high position of Joseph was discovered. Later he removed with his family to Egypt, where he was honourably received by Pharaoh, and spent the remainder of his life in prosperity.

JACOB, SIR CLAUD WILLIAM (b. 1863). British soldier. Born Nov. 21, 1863, he entered the Worcestershire Regiment in 1882, and two years later transferred to the Indian Staff Corps. In 1908 he attained the rank of colonel. In 1914 he went to France at the head of the Dehra Dun brigade of the Indian army corps, and in Sept., 1915, took over the Meerut division. He took command of the 21st division in Nov., 1915, and in May, 1916, commanded the 2nd corps at the battle of the Somme in 1916, and throughout 1917 and the German offensive of 1918. In 1920 he was appointed chief of the Indian Army general staff, and promoted field-marshal in 1926, in which year he became secretary, military dept., India Office. He was knighted in 1917, and retired in 1930.

JACOBINS. Political society in France prominent during the Revolution. The Jacobins at first were constitutional monarchists, and styled themselves the Friends of the Constitution, including among their number d'Aiguillon, Mirabeau, de Noailles, Grégoire, Barnave, and Chénier.

After the king's flight to Varennes, 1791, there was a schism in the club, and henceforth the extreme republicans—Robespierre, St. Just, Marat, and Couthon—dominated the body in the capital and in the provinces. During the Terror they had unrivalled power, but the fall of Robespierre brought their sway to an end, and the club was closed in Nov., 1794. Attempts at revival were unsuccessful. The Jacobins wore a badge showing a Phrygian cap of liberty.

JACOBITE CHURCH. Name given to the followers of Jacob Baradaeus, a

Monophysite monk of Edessa (d. 578), who re-organized and restored the sect. The name was later applied to the Oriental churches of Egypt, Antioch, and Armenia, which were charged with holding the Monophysite heresy. At the present time the Jacobite Church includes the three patriarchates of Alexandria, Antioch, and Armenia, but its bishops repudiate Monophysite doctrines and are as orthodox as those of other Oriental Churches.

JACOBITES. Supporters of James II of England and his descendants. After his flight from England in 1688, through the rest of his life and that of his son James, the Old Pretender (q.v.), the adherents of the exiled Stuarts were known as Jacobites. In Scotland they were relatively much more numerous than in England.

The Jacobites were responsible for two risings, one in 1715 and the other in 1745; but both were crushed, and 1745 marks the end of the Jacobites as a political force, although the last male descendant of James II Henry, cardinal of York, lived until 1807. As a sentiment it survived, and there were Jacobite or legitimist societies in existence in the 20th century. See Charles Edward; Culloden; Prestonpans; Stewart.

JACOBS, WILLIAM WYMARK (b. 1863). British novelist. Born in London, Sept. 8, 1863, he entered the civil service, and until 1899 was a clerk in the Post Office Savings Bank. By this time he had made a success with some short stories and with a novel. The Skipper's Wooing, and henceforward gave his whole attention to writing. His volumes of short stories of seafaring men include *Many Cargoes*, 1896; *Sea Urchins*, 1898; *Light Freights*, 1901; *Captains All*, 1905; *Short Cruises*, 1907; *Sailors' Knots*, 1909. *Ship's Company*, 1911. *Night Watches*, 1914. *Deep Waters*, 1919; and *Sea Whispers*, 1926.

The chief of his longer stories are *The Skipper's Wooing*, 1897; *A Master of Craft*, 1900; *At Sunnyside*, 1902; and *Dialstone Lane*, 1904. He was part author of a play, *Beauty and the Barge*. Jacobs also excelled in short stories of the occult, and *A Monkey's Paw*, one of the most powerful of its kind, was dramatised by L. N. Parker in 1910.

W. W. Jacobs,
British novelist
Russell

weaver and invented a loom, which was exhibited in Paris in 1801. Improvements and modifications of the original loom revolutionised the weaving industry, and in 1806 the invention was acquired for the nation. Jaquard being granted a royalty and a pension. He died August 7, 1834.

JACQUEMART, JULES FERDINAND (1837-80). French engraver and painter. Born at Paris, he studied under his father, Albert Jacquemart, his first considerable work being a series of etchings for the *Gazette des Beaux Arts*, 1859. In 1862 he supplied the plates for his father's *Histoire de la Porcelaine*, for the *Histoire de la Céramique*, and for the *Histoire du Mobilier*, and produced 60 plates for Barbet de Jonny's *Les Gemmes et Joyaux de la Couronne*, and about 400 other etchings.

JADE. Member of the pyroxene group of minerals. Hard, tough, varying in colour from white to dark green, it takes a high polish, and has been used for ages as an ornamental stone. Specimens of jade ornaments have been found in the lake dwellings of Switzerland, in ancient Egypt, Greece, etc., while some of the oldest Chinese ornamental vases are made of jade. The stone is found in S. Asia, Burma, and China.

JAEGER. Name given to a certain type of foot soldier in the armies of Germany and Austria. The word means hunter, and was applied to battalions of soldiers who were more lightly armed than the rest of the infantry, in order that they might march more rapidly and perform pioneer duties of various kinds. In France the corresponding name is *chasseur*. Before the Great War the German army had 18 regiments of jaegers.

JAEL. Wife of Heber the Kenite (Judges 4 and 5). After the defeat of Jabin's army by the Israelites under Barak and Deborah, Jabin's general Sisera fled to Jael's tent for refuge. Jael, choosing between violation of the laws of hospitality and betrayal of Israel, killed the fugitive in a manner described

Jaffa. The seaport town of Palestine from the sea

differently in the prose of ch. 4 and in Deborah's song (the earlier version) in ch. 5.

JAFFA. Seaport of Palestine, the ancient Joppa. It is on the Mediterranean about 50 m. N.W. of Jerusalem, with which it is connected by rly. Its harbour is suitable only for small vessels. It has long been famous for its oranges, and is the centre of a fair amount of trade, oil and wool being amongst its exports. The town was taken by Napoleon in 1799, and it was captured by the British in the Palestine campaign, Nov. 17, 1917. Pop. 47,709.

Jacobus. Obverse and reverse of the gold coin struck by James I

JAGERSFONTEIN (Dutch, hunter's spring). Town of the Orange Free State, S. Africa, 9 m. E. of Fauresmith. An important diamond mine was discovered here in 1878. Pop. 9,500.

JAGUAR (*Felis onca*). Largest species of the spotted cats of Central and S. America and Argentina. A savage beast, heavily

Jaguar, the American member of the cat tribe
Gambier Bolton, F.Z.S.

built, the jaguar's coloration is similar to that of the leopard, but the black spots are larger and squarer, and in more definite rows.

Arboreal in its habits, the jaguar is destructive to monkeys, alligators, and turtles, and destroys cattle, horses, and sheep.

JAGUARONDI (*Felis jaguarondi*). Species of wild cat. Found in Central and S. America, it varies in colour from almost black to a reddish grey, and preys upon birds and small mammals. Its length is about 4½ ft.

JAIN. Member of a Hindu faith. Said to date from the 6th century B.C., Jainism rejected the Brahman sacred writings and evolved a kind of pantheon of Jina or Jains. Its followers believe in a future existence for all forms of life, and try to avoid killing even the smallest creature. The temples are noted for their superb architecture. See Calcutta.

JAIPUR. Capital of Jaipur state, Rajputana, India. An important rly. junction, with lines to Delhi, Jodhpur, Baroda, and Bombay, it was founded in 1728. Amber, the ancient capital, is a picturesque collection of ruins 5 m. distant. Pop. 120,207.

The area of the state is 15,579 sq. m. It lies between the Punjab, Bikaner, and Ajmer-Merwara. The principal crops are millet and barley. The ruler is a maharajah, with a salute of 17 guns. Pop. 2,338,802.

JALALABAD OR JILALABAD. Town of Afghanistan. It stands on the Kahl river, 80 m. E. of the city of Kabul, in the midst of a fertile plain, near the Khyber Pass. Here in 1841-42 the British, under Sir Robert Sale, kept the Afghans at bay for about five months. Pop. 5,000.

JALAPA (*Ipomoea purga*). Tuberous evergreen climbing herb of the order Convolvulaceae, native of Mexico. The tuber yields the drug called jalap. The smooth, alternate leaves are long heart-shaped, and the silver-shaped flowers are of a purplish rose colour. Several other species of *Ipomoea* furnish jalap.

Jalapa. Foliage and flower

JAMAICA. Chief island of the British W. Indies. One of the Greater Antilles, it has an area of 4,450 sq. m. and a pop. of 860,000, of whom about 15,000 are whites. Dependent

Jacob's Ladder. Stalks with flowers and foliage

up, feather-wise, into from six to twelve pairs of smooth, lance-shaped leaflets. The stem and branches terminate in a large cluster of blue or white drooping flowers.

Jacob's ladder is the name popularly given to the carvings of angels ascending and descending on the W. front of Bath Abbey.

JACOBUS (Lat. for James). Name of a gold coin struck by James I of England. Its value was 25s. See Coinage.

JACQUARD, JOSEPH MARIE (1752-1834). French inventor. Born at Lyons, July 7, 1752, he was trained to his father's trade of

islands are Grand Cayman, Little Cayman, Cayman Brac; and the Turks or Caicos group. The coastline is broken and the interior is an elevated plateau. In the E. the Blue Mts. rise to 7,360 ft. The lower slopes of the mountains in the N. are covered with luxuriant pimento groves and flowering shrubs, and the higher levels by dense forests of ebony, cedar, mahogany, fustie, logwood, lancewood, etc. Other trees are the ceiba, mango, and acacia. The numerous rivers are small.

Over 1,000,000 acres are under cultivation, and sugar, rum, coffee, bananas, oranges, coconuts, pepper, tobacco, yams, arrowroot, tamarinds, nutmegs, and lime juice are the chief products.

The climate is warm and agreeable, but hurricanes have at times caused enormous damage. There are no indigenous mammals and only a few reptiles. The commonest birds are parrots, buzzards, humming birds, tyrant birds, and the green tody. Mosquitoes and sand flies abound.

Kingston, on the S., is the chief port and seat of government. Next in importance are Spanish Town (the old capital), Montego Bay, and Port Antonio. The governor is assisted by a privy council and a legislative assembly. There are 200 m. of rly. Jamaica was discovered by Columbus in 1494, settled by the Spaniards in 1509, and ceded to Britain in 1670.

JAMBOREE. American Indian word for a merry meeting or joyful gathering of the tribes. It has been adopted by the Boy Scouts (q.v.) for their international rallies, a noted one being that held at Birkenhead in 1929.

JAMES. River of Virginia, U.S.A. Formed by the confluence of the Cowpasture and Jackson rivers, it enters Chesapeake Bay through Hampton Roads. Its length is about 450 m. At Newport News it is crossed by a bridge 5½ m. long, one of the longest in the world. Called the Powhatan by the Indians, the river was named after James I.

JAMES. Name of a bay, a large S.E. extension of Hudson Bay, Canada, between Ontario and Quebec. It contains numerous islands. The Albany, Ekwan, Moose, and Attawapiskat rivers discharge into it on the W. side, and Rupert on the E. The water is shallow.

JAMES. Saint and apostle. A fisherman of Galilee, he was one of the sons of Zebedee and a brother of John. The two were called Boanerges, or the sons of thunder. He was put to death by Herod Agrippa, A.D. 44 (Acts 12).

James, son of Alphaeus, is called James the Less to distinguish him from the son of Zebedee (Mark, 15-16, John 19).

JAMES. Brother of Jesus Christ. The relationship implied has been much discussed. James may have been the son of Joseph by a former marriage, or a cousin of Christ. He was converted after the Resurrection. Known as James the Just, he rose to be head of the Church at Jerusalem, wrote the Epistle which bears his name, and was martyred in A.D. 62 (Acts 15 and 21).

JAMES, THE EPISTLE OF. One of the N.T. Epistles. Addressed to Christians in general, the Epistle has been regarded as in some respects a sort of charter of Christian socialism. It is perhaps the earliest book of the New Testament.

JAMES I (1566-1625). King of Great Britain from 1603-25, previously, as James VI, king of Scotland from 1567. Born in Edin-

burgh, June 19, 1566, he was the son of Mary, Queen of Scots, and Lord Darnley. His personal reign began in 1583, and until 1603

lived mainly at Stirling, his person occasionally in danger of seizure. As king of England he disappointed the hopes of both Puritans and Catholics. Down to 1612 he was guided mainly by the opportunist statesmanship of Robert Cecil, earl of Salisbury. He stopped the long war with Spain, but was dragged into the Thirty Years' War. He died at Theobalds, March 27, 1625.

James I.
King of Great Britain
After Paul van Somer

James married in 1589 Anne, daughter of Frederick II, king of Denmark. Three of his children were Henry, prince of Wales (d. 1612), Charles I, and Elizabeth, from whom the present royal family is descended. James was a man of poor physique and ungainly appearance, untrustworthy, tactless, thriftless, and slovenly. On the other hand, he had been carefully educated and was a thinker and writer, his Counterblaste to Tobacco and his Daemonologie, a short work against witchcraft, being still read. See Gowrie, Earl of; Gunpowder Plot; Ruthven; Scotland; consult also The First Two Stuarts, S. R. Gardiner, 1900.

JAMES II (1633-1701). King of Great Britain and Ireland 1685-88. The younger son of Charles I, he was born at St. James's Palace, Oct. 14, 1633, and succeeded to the throne Feb. 6, 1685. He married (first) in 1659, Anne Hyde, daughter of Lord Clarendon, who bore him two daughters, Mary and Anne; and (in 1673) Mary of Modena, the mother of his son James Edward.

As a young man James displayed marked courage in the field, and as admiral he was devoted to the development of the navy. As king he drove both Anglican and constitutional sentiment into opposition by replacing Churchmen by Romanists, and by the Declaration of Indulgence. The arrest, trial, and acquittal of the seven bishops, 1688, turned public sentiment solidly against him, and when his son-in-law William of Orange landed at Torbay (Nov. 5) James took refuge with Louis XIV of France. His defeat at the battle of the Boyne (q.v.) in 1690 and the capitulation of Limerick in 1691 ended all his hopes. He returned to France, and died Sept. 6, 1701, leaving one son, James Edward.

JAMES II. King of Great Britain
After Kneller

JAMES. Name of six kings of Scotland. The last of them, James VI, became king of Great Britain and Ireland as James I.

Jamaica. Map of the largest of the British West Indian Islands

James I, the third son of Robert III, was born at Dunfermline in July, 1394. He became king in 1406, but was a prisoner in England until 1423. He reigned until Feb. 20, 1437, when he was murdered at Perth. He left a son, James II, and six daughters, one of whom became the wife of Louis XI of France. James was a man of exceptional culture. Two poems by him are extant: The Kingis Quair (King's Book) and Good Counsel.

James I was succeeded by his son, James II, who was born Oct. 6, 1430. He assumed power in 1449 and was involved in warfare with the Douglas and with England. He was killed whilst besieging Roxburgh Castle, Aug. 3, 1460.

James III, who was born July 10, 1451, succeeded his father James II in 1460, but regents governed the kingdom until about 1469. In a battle with some rebels, led nominally by his son, James was defeated and fled. He took refuge at Beaton's Mill, where he was killed, June 11, 1488.

James IV was born March 17, 1473. He married Margaret, daughter of Henry VII of England, an alliance which led to the union of the two crowns in 1603. But he soon quarrelled with Henry VIII, and when war broke out the two armies met at Flodden, where, on Sept. 9, 1513, James was killed.

James V, who was born at Linlithgow, April 10, 1512, was not two years old when his father's death at Flodden made him king. In Nov., 1542, the Scots were routed by the English at Solway Moss, and the king, grieving over this disaster, died at Falkland, Dec. 14. He married Mary of Guise, and was the father of Mary Queen of Scots.

JAMES, THE OLD PRETENDER (1688-1766).

Jacobite prince, also known as James Edward Stewart. Born in London, June 10, 1688, he was the son of James II and Mary of Modena. He was at St. Germain when his father died in 1701. Several disastrous attempts were made to secure his claim to the throne, the most notable being in 1715 and 1745. James married, in 1719, Maria Clementina, granddaughter of John Sobieski, king of Poland, and had two sons, Charles Edward and Henry, cardinal of York. James died in Rome, Jan. 2, 1766, and was buried in St. Peter's. See Charles Edward.

James Edward,
The Old Pretender

JAMES, HENRY JAMES, BARON (1828-1911).

British lawyer. The son of a doctor, he was born at Hereford, Oct. 30, 1828, educated at Cheltenham College, and called to the bar in 1852; he entered Parliament as a Liberal in 1863, being in succession solicitor-general and attorney-general. He was knighted in 1873. From 1885 a leading Liberal Unionist and an opponent of tariff reform, he was chancellor of the duchy of Lancaster from 1895, when he was made a peer, till 1902. He died Aug. 18, 1911. He was unmarried.

JAMES, HENRY (1843-1916). Anglo-American novelist. He was born in New York, April 15, 1843, son of Henry James, a well-known Swedeborgian, and younger brother of William James (q.v.).

The first of his novels to bring him recognition was Roderick Hudson, 1875. This was followed by some forty to fifty books in all, most of them novels. From 1869 onwards he made his home in Europe, living chiefly in London and at Rye in Sussex. Naturalised as a British subject, July, 1915, he was given the O.M. in Jan., 1916, and died Feb. 28, 1916.

Henry James, Anglo-American novelist
Hoppe

His novels include *The American*, 1877; *The Europeans*, 1878; *Washington Square*, 1880; *The Bostonians*, 1886; *The Tragic Muse*, 1890; *The Awkward Age*, 1899; *The Wings of a Dove*, 1902; *The Golden Bowl*, 1905; and *Julia Bride*, 1909. James's wide knowledge of French literature is reflected in his French Poets and Novelists, 1878

JAMES, JOHN ANGELL (1785-1859). British divine. Born at Blandford, June 6, 1785, he was apprenticed to a shopkeeper at Poole. Leaving that work, he studied for the ministry at Gosport. In 1805 he was chosen minister of a church in Carr's Lane, Birmingham, and for 50 years he was one of the foremost preachers of the Congregational denomination. James died Oct. 1, 1859.

JAMES, MONTAGUE RHODES (h. 1862). British scholar. Born Aug. 1, 1862, he became a fellow of King's College, Cambridge, and in 1905 was elected provost. He resigned in 1918 on being made provost of Eton. At Cambridge he was also Sanders reader in bibliography, director of the Fitzwilliam museum, and from 1913-15 vice-chancellor. He wrote many books on Biblical and historical subjects, did much bibliographical work, which gave him material for his *Wanderings and Homes of MSS.*, 1919, and was the author of *Ghost Stories of an Antiquary*, 1905, and *More Ghost Stories*, 1911. In 1930 he was given the Order of Merit.

Montague R. James,
British scholar

JAMES, WILLIAM (1842-1910). American philosopher. Born in New York, Jan. 11, 1842, brother of Henry James, the novelist, in 1881 he was appointed professor in Harvard University. In 1899-1901 he delivered the Gifford lectures on Natural Religion at Edinburgh, and the Hibbert lectures at Manchester College, Oxford, 1909. He died Aug. 26, 1910. James was an important representative of modern introspective psychology and radical empiricism or pragmatism. See Pragmatism.

JAMESON, SIR LEANDER STARR (1853-1917). British administrator. Born in Edinburgh, Feb. 9, 1853, he qualified in medicine, and, owing to ill-health, established himself at Kimberley, South Africa, in 1878. Here began his lifelong friendship with Cecil Rhodes, at whose invitation he gave up medical practice to go to Matabeleland in 1889, the chief, Lobengula, having been one of his patients.

The Chartered Company was duly formed, and in 1891 "Dr. Jim" was appointed administrator of Rhodesia. While acting in this capacity he organized the Jameson Raid. For this Jameson was sentenced to 15 months' imprisonment, May, 1896, but was released in Dec. owing to ill-health. In 1900 he became a member of the Cape Legislative Assembly for Kimberley, and was premier from 1904-1908. Made a baronet in 1911, in 1912 he returned to England, and in 1913 was appointed chairman of the British South Africa Company. He died in London, Nov. 26, 1917.

Sir L. Starr Jameson,
British administrator
Russell

JAMESON RAID. Name given to a coup d'état attempted in S. Africa in 1895 by Leander Starr Jameson. With the connivance and support of Cecil Rhodes, Jameson organized a force of some 500 men to invade the Transvaal simultaneously with a rising of

Uitlanders in Johannesburg. The latter was postponed, but Jameson crossed the Bechuanaland border with his men on Dec. 28, 1895. On Jan. 2 his small force was surrounded by the Boers under Cronje at Doornkop, and after 24 hours was compelled to surrender. The Boers handed them over to the British authorities, and Jameson with his military chief, Sir John Willoughby, and minor officers, were sentenced to various terms of imprisonment. See Rhodes, Cecil; South Africa.

JAMESTOWN. Town of Virginia, U.S.A. The first permanent English settlement in U.S.A., it was founded in 1607 on a peninsula in the river James, some 30 m. from its mouth. Here, in 1619, the first legislative assembly in America met, and slavery began in the original thirteen colonies. In 1699 the seat of government was transferred to Williamsburg. The action of the river James converted the peninsula into an island, which, with the ruins of a church, the fort, and other remains, were acquired in 1900 by the Association for the Preservation of Virginia Antiquities. In 1907 an exhibition was held to commemorate the tercentenary of the settlement.

JAMSHID. Traditional ruler of Persia. He is reputed to have flourished about 1000 B.C., and his memory is associated with the possession of a magical cup that contained the elixir of life. Jamshid's cup is referred to in Edward Fitzgerald's *Omar Khayyam*, and in Thomas Moore's *Lalla Rookh*.

JANICULUM. Hill of Rome. On the west bank of the Tiber, it lies to the W. of the city, and has an altitude of 275 ft. It was connected with the E. bank by a wooden bridge, the Pons Sublicius. Along the river front many villas were erected, inhabited mostly by foreigners and Jews, the latter forming a community here to the end of the 15th century. It was named from Janus, a mythical king of Latium, who is said to have built a citadel on the ridge. The site is now occupied by the district of Trastevere. See Rome.

JANINA or **YANNINA.** Town of Greece. On the lake of the same name in Epirus, and near the Albanian frontier, it is the seat of a Greek archbishop, and the capital of the department of Janina. From 1788 to 1818 it was famous as the stronghold of the Lion of Janina, Ali Pasha, who made himself independent, and tyrannised over the surrounding country. It was captured from the Turks during the first Balkan War. During the Great War it was occupied for a time by the Allies. Pop. town, 20,485; district, 180,418.

JANISSARIES or **JANIZARIES** (Turk. new soldiery). Special regiments of the Turkish army. The corps, recruited chiefly from boys taken as tribute from his Christian subjects, was first instituted by the sultan Orkhan (1326-59), was more fully developed by Murad I (1359-89), and became the flower of the Turkish army, specially distinguishing itself at the taking of Constantinople in 1453. From the 17th century onwards the tribute of Christian boys ceased to be levied, and the Janissaries became simply a corps of picked men. In 1825 a great mutiny of the Janissaries broke out under the sultan Mahmud II, and in 1826 the force was abolished.

Janissaries. Soldier of
the Turkish corps
From *The Day of the Crescent*,
courtesy of Camb. Univ. Press

JAN MAYEN ISLAND. Volcanic island in the Greenland Sea. N.E. of Iceland, it covers about 160 sq. m. Seal and whale fishing are carried on in summer, but the island is not permanently inhabited.

JANSENISM. Name given to the teachings of Cornelius Jansen (1585-1638), a Dutch Catholic divine, and his followers. Jansen was a professor at Louvain until made bishop of Ypres in 1636. He died May 6, 1638.

In 1640, Jansen's *Augustinus* was published, and this started the movement which aimed at reforming the Roman Catholic church from within. Its centre was Port Royal, and Pascal was one of its adherents; indeed his *Provincial Letters* were inspired by it. The movement aroused much opposition; Port Royal was destroyed and the Jansenists driven from France.

A section of them found a haven in the Netherlands, where the small existing Jansenist Church maintains its claim to episcopal succession by scrupulous adherence to the rules of the Roman pontifical, while rejecting the dogmas of papal infallibility and the Immaculate Conception. The Jansenist Church has conferred consecration on the Old Catholic bishops of Germany and Switzerland.

Jansen taught that man before the Fall was perfect, with a will subject only to his love of God, but subordinate only as love is subordinate to its object; that after the Fall salvation depended upon divine grace manifested by personal experience of predestination or inward spiritual joy, which experience was a qualification for communion.

JANSSEN or **JOHNSON, CORNELIUS** (c. 1593-1664). Dutch painter. He was born in London and spent the greater part of his life in England, where he was known as Johnson. He worked for a time with Van Dyck, by whom his style was influenced, at the court of Charles I. Among his portraits are those of Charles I. at Chatsworth; others are in the National Gallery, London, at The Hague, and Dresden.

JANUARIUS (4th century A.D.). Saint and martyr. He is said to have been a native of Naples, and bishop of Beneventum in the reign of Diocletian. Having visited some Christians who had been imprisoned at Pozzuoli for their faith, he was arrested and thrown to the lions; but as they did not injure him, he was beheaded. His day is Sept. 19.

JANUS. In Roman mythology, a god who presided over the beginnings of things. He was thus the patron of births, of the first month of the year, which was named after him, and of the first steps in all human activities. In art, he is represented with two heads, looking in opposite directions.

JAPAN. Empire of eastern Asia. Known to the Japanese as Nippon (Nihon) or Dai Nippon, Japan is a member of the League of Nations. The empire consists of a chain of islands in the N.W. of the Pacific Ocean, together with various dependencies. Japan proper comprises the four large islands of Honshu, Kyushu (Kiushiu), Shikoku, and Hokkaido or Yezo, and a number of smaller islands. These, with Formosa (Taiwan), Korea (Chosen), Karafuto (the S. part of Sakhalin), the Pescadores, the leased territory of Kwangtung, and the former German islands in the Pacific N. of the equator, namely, the Marshall, Caroline and Ladrone Islands, which are governed by Japan under mandate, make up the empire. Tokyo is the capital. The area of the Japanese empire is 265,129 sq. m. Pop. 83,455,000.

Janus, the two-headed god
From a coin

The islands are mountainous, only about one-sixth of the land being available for cultivation. Of many volcanoes the sacred mountain, Fujiyama, is well known. Earthquakes are frequent. The coastline is very broken, and contains many good harbours. The Inland Sea, an island-studded inlet of the Pacific S. of Honshu, is one of the most picturesque seas in the world. Japan is famed for its wealth of flowers and flowering trees. The country is subject to greater extremes of

The Japanese claim that their emperors trace descent in unbroken line from Jimmu, who ascended the imperial throne in 660 B.C. For centuries Japan followed a policy of national isolation. The 16th century marked the beginning of foreign trade, but in the 17th all intercourse with Europeans and all trade, except with the Dutch, were proscribed. Not until 1859 was the country open to foreign trade and residence. In 1871 the feudal system was suppressed, and Japan resolved henceforth to model her national life no longer on the old and effete civilization of China, but on that of Europe. From that date the country has steadily progressed, and for many years Japan has been one of the Great Powers. This was seen in her war with Russia, 1904-5, and her participation in the Great War.

The emperor, known to foreigners as the Mikado, exercises the executive power with the assistance of a cabinet appointed by and responsible to himself. The diet consists of a house of peers and a house of representatives. In 1925 manhood suffrage was introduced. In 1929 Baron Tanaka was succeeded as prime minister by Osachi Hamaguchi. Consult *The Story of Old Japan*, J. H. Longford, 1910; *The Evolution of New Japan*, J. H. Longford, 1913; *Japan (The Nations of To-day)*, J. H. Longford, 1928; *The Romance of Japan through the Ages*, J. A. B. Scherer, 1927; *Modern Japan*, G. C. Allen, 1928.

The Japan Society is a British society founded in 1892 for the study of the arts and industries of Japan. Its headquarters are at 22, Russell Square, London, W.C.1.

JAPHETH. One of the sons of Noah, whose son Javan was the reputed ancestor of the Ionians (Gen. 10. 1-4). The name Japhetic, now replaced by Aryan or Indo-European, was formerly used to designate the Caucasian peoples of Europe and parts of Asia, as contrasted with the Hamitic and Semitic.

natives of, or were first observed in, Japan. The word is in common use among gardeners, who generally mean by it *Pyrus japonica*.

JARGOON. Variety of the mineral zircon, usually yellow in colour. The mineral has the curious property of losing its colour when heated, and the well-known Matura diamonds of Ceylon are varieties of jargoon which have been so treated. It is much used as a gem, and is found in Ceylon, and in New South Wales and Queensland, Australia.

JARRAH. Dark coloured, close-grained wood of *Eucalyptus marginata*. It is much like mahogany, and very durable when kept dry. The tree is a native of Australia, and has a light-coloured bark, from which it is known as yellow jacket.

JARROW. Borough and river port of Durham. It is on the Tyne, 4 m. W.S.W. of South Shields on the L.N.E.R. Its growth is due to the ship-building industry established here by Sir C. M. Palmer. There are iron foundries, engine works, rolling mills, and chemical and paper manufactories, and near are extensive collieries. From Jarrow Slake, a river lay between Jarrow and South Shields, coal is shipped. In the monastery here the Venerable Bede spent most of his life. Pop. 35,590.

JASMINE or **JESSAMINE.** Family of hardy and exotic climbing and trailing plants of the order Olacaceae, genus *Jasminum*. Of the hardy sorts the most popular is *J. officinale*, which bears white star-like flowers in summer time and flourishes in any ordinary garden soil. *Jasminum nudiflorum*, the yellow winter jasmine, is a valuable climbing plant for town gardens.

Jasmine. Spray of *J. officinale*

JASON. In Greek mythology the leader of the Argonauts. He was the son of Aeson, king of Iolcus in Thessaly, whose throne had been usurped by his brother Pelias. Pelias, to get rid of the rightful heir, persuaded him to organize an expedition to fetch the famous Golden Fleece from Colchis on the Black Sea. On his return Jason found that Pelias had murdered his father. To avenge the murder, Medea, Jason's wife, persuaded the daughters of Pelias to cut their father in pieces and boil him in a cauldron. Expelled for this deed, Jason and Medea then went to Corinth, where Jason deserted his wife for Creusa. Medea avenged herself by sending Creusa a poisoned robe, which burned her to death, and by killing her children by Jason. See Argonauts.

JASPER. Crystalline variety of quartz. It varies in colour from reddish brown to brownish black, and is often streaked with white, grey, yellow, and blue bands. It takes a high polish and is used extensively as an ornamental stone.

JASPER. Ware or form of porcelain invented by Josiah Wedgwood. It had a smooth, unglazed surface, of a uniform colour, on which were placed cameo-like embellishments in white. As a rule Wedgwood adopted Grecian forms for his decorations.

JASSY. Yassy, or Iasi. City of Rumania, formerly the capital of Moldavia. It is about 200 m. N.E. of Bukarest, is an important rly. centre, and trades in cereals, petroleum, salt, and cattle. It has a university. In 1821 Alexander Ypsilanti here raised the standard of Greek independence against Turkey. During the Great War Jassy was for two years the seat of the Rumanian government after it left Bukarest in Dec., 1916. Pop. 80,000.

Japan. 1. Buddhist priest. 2. Typical hawk. 3. Little girls carrying babies on their backs. 4. Jinricksha, the Japanese cab

heat and cold than Britain. The E. coast is milder than the W. and the southern islands than the northern. The rivers are increasingly used for developing electric power.

Rice is the staple food of the people. Wheat and other cereals, cotton, tea, tobacco, and fruit are grown, and silk is widely cultivated. The minerals include copper, coal, iron, antimony, sulphur, zinc, and petroleum. There are large deposits of kaolin. The forests produce valuable timber, and the fisheries are important. Japan's two leading industries are the manufacture of cotton and silk goods. The engineering industry has made great strides, especially in the production of industrial and electrical machinery and internal combustion engines. Exports include silk and cotton, tea, matches, porcelain, earthenware, paper, marine products, and toys. There are over 11,000 m. of rlys., and a number of wireless stations.

Japan. Map showing the provinces, with insets, Korea and Formosa

JAPONICA. Species name applied by botanists to indicate that certain plants are

JAUNDICE (Fr. jaunisse, yellowness). Symptom which arises in the course of many diseases of the liver. The commonest cause is obstruction of the bile duct, through which the bile passes into the duodenum. If this becomes obstructed by a tumour or gall-stone, the bile is held up in the liver, and is forced into the blood stream. The earliest sign of jaundice is the yellow tinting seen in the whites of the eyes. As the condition progresses the whole skin changes from a lemon yellow to a deep olive green in colour. Treatment consists in the removal of the cause.

JAURÈS, JEAN LÉON (1859-1914). French Socialist. Born at Castres, Sept. 3, 1859, he was elected deputy in 1885. Jaurès joined the Socialist party in 1893, and henceforward was its chief orator and parliamentary leader. In 1893 Jaurès joined the staff of *La Petite République*, but left it in 1904 and founded *L'Humanité*. His action as an apostle of international peace and the reduction of armaments led to his assassination, on July 31, 1914, by a youth, Raoul Villain, who was tried and acquitted in 1919. Jaurès published many books on socialism and allied subjects.

Jean Jaurès,

Raoul Villain, who was tried and acquitted in 1919. Jaurès published many books on socialism and allied subjects.

JAVA. Island of the Malay Archipelago, belonging to the Netherlands. It is separated from Borneo by the Java Sea, from Sumatra by the Strait of Sunda, and from the island of Bali by the Bali Strait. The area, including the island of Madura, is 50,745 sq. m. Pop., with Madura, 37,384,343.

Low-lying and covered with mangrove swamps on the N., the interior is mountainous, with many active and extinct volcanoes. The S. coast is bold and rugged, and on the N. coast are several good harbours. The chief towns are Batavia, Surabaya, and Tjilatjap. Large areas are under rice, the staple crop, and petroleum is found. Before the landing of the Portuguese in the 16th century, Java was the seat of powerful Hindu princes. In the 16th century the Portuguese were ousted by the Dutch. Java has yielded fossil bones of the earliest known anthropoid exhibiting the erect posture of man. See Asia.

JAVELIN. Short, light spear, which can be thrown. As used for military purposes in classical times, its estimated range was from 30-40 yards. In England, javelin-men were formerly provided by the sheriffs as an escort for judges on assize circuit. Javelin throwing was revived in the modern Olympic games. See Spear.

JAW. Bones of the mouth containing the teeth. The upper jaw is formed by the margins of the two superior maxilla bones. They lie beneath the cheeks and form part of the orbits and the larger part of the nose. The bony structure into which the teeth are inserted is termed the alveolar margin. The lower jaw is formed by the two inferior maxilla bones, which are united in the chin in front. At the back the lower jaw articulates on each side with a cavity, the glenoid fossa of the temporal bone. The jaw-bone is

roughly shaped like an L, the vertical part being known as the ramus, and the horizontal part as the body, the point where the two parts meet forming the angle of the jaw.

JAY (Garrulus). Genus of birds of the crow family, corvinae, natives of Europe, Asia, Africa, and North America. The typical species is the Common Jay (*G. glandarius*) of British woodlands and the greater part of Europe. About the size of a jackdaw, its general colour is cinnamon with a grey crest which is streaked with black, black bill and moustache and a white throat.

Jay. Specimen of
Common Jay

JAY, JOHN (1745-1829). American statesman. Born in New York, Dec. 12, 1745, he became a lawyer and entered public life as secretary of a commission appointed to settle the boundary between New York and Connecticut. In the troubles between Britain and her colonies, Jay was prominent, though not as an extremist. He drew up the constitution of New York State, and was chief justice of his state for two years (1777-79). Jay went to Paris in 1782 to assist Franklin and Adams in concluding the treaty of 1783 with Great Britain. He was secretary for foreign affairs 1784-90, and chief justice of the Supreme Court 1790-95. From 1795-1801 he was governor of New York state. He died May 17, 1829.

His son, William Jay (1789-1858), was an opponent of slavery and an advocate of peace.

Java. Map of the most progressive of the Dutch East Indian islands, famed for its tropical products

JEANS, SIR JAMES HORWOOD (b. 1877). British scientist. Born Sept. 11, 1877, he was professor of applied mathematics, Princeton Univ., 1905-9; and Stokes Lecturer in applied mathematics, Cambridge Univ., 1910-12. In 1923 he became secretary of the Royal Society. His works include *The Dynamical Theory of Gases*, 1904; *Theoretical Mechanics*, 1906; *Problems of Cosmogony and Stellar Dynamics*, 1919; *Atomieity and Quanta*, 1926; *Astronomy and Cosmogony*, 1929; and *The Universe Around Us*, 1929. He was knighted in 1928.

ists of the past. His edition of Sophocles is generally considered to be his greatest contribution to classical scholarship. Other works include *Translations from Greek and Latin*, 1873; *The Attic Orators*, 1876-80; and *Primer of Greek Literature*, 1877.

JEDBURGH. Burgh of Roxburghshire, also the co. town. It stands on the Jed, 56 m. from Edinburgh, on the L.N.E. Rly. Interesting old houses include those once occupied by Mary Queen of Scots (presented to the burgh in 1928), Prince Charlie, and Robert Burns. Jedburgh Abbey is one of the finest ruins in Scotland. The chief industries are the manufacture of tweeds and woollen goods. The name, sometimes spelt Jeddart or Jethart, is commemorated by the Jethart axe, a terrible weapon in the hands of the burghers, and by Jethart justice, indicating the hanging of a man first and trying him afterwards. Pop. 2,426

JEDDAH or JIDDA. Seaport of the Hejaz. It stands on the E. side of the Red Sea, about 65 m. W. of Mecca. It played a large part in connexion with the pilgrimage to Mecca. With the building of the Hejaz Egyptian and Palestine rlys. it has lost much of its importance. Coffee, hides, leather, and mother-of-pearl are among its exports. During the Great War it was captured from the Turks by the Hejaz Arabs in 1916. It is the diplomatic headquarters of the kingdom. Pop. 30,000.

JEFFERIES, JOHN RICHARD (1848-87). British essayist and writer on natural history. He was born near Swindon, Nov. 6, 1848, and became reporter on the North Wilts Herald in 1866, but his health failed, and the rest of his life was occupied in contributing essays—mainly on natural history and agricultural subjects—to the press. His literary style had a peculiar charm, and his essays met with great success in book form. He died Aug. 14, 1887.

Thomas Jefferson,
American president

JEFFERSON, THOMAS (1743-1826). President of the U.S.A. Born at Shadwell, Albemarle co., Virginia, April 13, 1743, he became a lawyer. As a member of the second Continental Congress he helped to draw up the Declaration of Independence, July 4, 1776. He was governor of Virginia, 1779-81, member of Congress, 1783-84, and minister to France, 1785-89. Jefferson became secretary of state under Washington in 1790, and leader of the Democratic-Republican (afterwards Democratic) Party.

Sir James Jeans,
British scientist

From 1797-1801 Jefferson was vice-president, and from 1801-9 president of the U.S.A. During his term of office he sent an expedition against the Tripoli pirates; purchased Louisiana from the French; effected a considerable reduction in the national debt; and issued an embargo prohibiting the sailing of American vessels for foreign ports. After his retirement from public life he founded the university of Virginia. He died July 4, 1826.

JEFFREY, FRANCIS JEFFREY, LORD (1773-1850). Scottish lawyer and critic. Born at Edinburgh, Oct. 23, 1773, he entered Parliament as member for Perth in 1830, became lord advocate, and was made a Scottish law lord in 1834. He died Jan. 26, 1850. Jeffrey was one of the founders and first editor of *The Edinburgh Review*. His essays were published in four volumes in 1844 and 1853.

JEFFREYS, GEORGE JEFFREYS, 1st BARON (1648-89). English lawyer, best known as

Jaw. Its bones and muscles

the O.M. in 1905.

Jebb was one of the greatest scholars of his time, and a true successor of the great human-

JEBB, SIR RICHARD CLAYVERHOUSE (1841-1905). British scholar. Born at Dundee, Aug. 27, 1841, he was made fellow of Trinity College, Cambridge, 1863. In 1875 he was chosen professor of Greek at Glasgow, but in 1889 he returned to Cambridge as regius professor of Greek, and there he remained until his death. He was M.P. for the university, 1891-1905, was made a knight in 1900, and received the O.M. in 1905.

Judge Jeffreys. Born at Aeton, Denbighshire, he was called to the bar in 1668, and made a reputation in the courts, chiefly by his forcible speech and hec-

1st Baron Jeffreys, English lawyer
After Kneller

torious in the trial of the rebels who had followed Monmouth in 1685. His reward was the lord chancellorship. After the Revolution of 1688 he was arrested, and died a prisoner in the Tower of London, April 18, 1689.

JEHANGIR or **JAHANGIR** (1569-1627). Mogul emperor. Son of Akbar the Great, he ascended the throne at Delhi in 1605, and between 1616-18 was engaged in negotiations with the East India Company, who desired a commercial treaty in their favour. His wife, Nur Jahan, was famed for her beauty and wit.

JEHOIACHIN. King of Judah in succession to his father Jehoiakim. He only reigned three months (597 B.C.), and was carried captive to Babylon by Nebuchadrezzar, being released after thirty-seven years of imprisonment (2 Kings 24, 25).

JEHOIADA. High priest at Jerusalem during the reigns of Ahaziah, Athaliah, and Joash (2 Kings 11). He abolished the worship of Baal, raised funds to restore the Temple, and was buried among the kings.

JEHOIAKIM. King of Judah. The son of king Josiah, he was made king by Pharaoh Necho, the country at that time being under Egyptian domination. His reign lasted eleven years (608-597 B.C.), during three of which he was the vassal of Nebuchadrezzar.

JEHOSHAPHAT. King of Judah, 876-851 B.C. He came to the throne in succession to his father, Asa. In his earlier years he did much to exterminate idolatry, and built numerous strongholds. Alliance with Ahab, king of Israel, led him to take part in the battle of Ramoth Gilead. Later he was at war with Moab and Ammon. He joined Ahaziah in sending a maritime expedition to Tarshish to obtain gold from Ophir, but his fleet was destroyed at Ezion-Geber (1 Kings 22; 2 Chron. 17-20).

JEHOVAH. Proper name of the God of Israel. It is the name by which (Exod. 3, 12-15) He revealed Himself to Moses at Horeb. Jehovah is an artificial pronunciation of the consonants Jhvh or Yhwh, obtained by giving to the consonants the vowels of another divine name, Adonai, which means simply "My Lord." According to tradition the word was pronounced Ya-be. This seems to indicate Jahveh or Jahweh, Yahveh or Yahveh, a pronunciation adopted by many modern scholars. The word then gains a suitable meaning, either "he who causes to be" (giver of existence), or "he who is" (the absolute and unchangeable one).

JEHU. Son of Jehoshaphat, and king of Israel 843-815 B.C. He became a general under Jehoram, and during the illness of that king was proclaimed king by acclamation of the army (2 Kings 9), afterwards slaying Jehoram at Naboth. To protect himself against the Syrians, he formed an alliance with Shalmaneser II of Assyria. The reference to his furious driving (2 Kings 9, 20) has made his name a synonym for a driver of horses.

JELICOE, JOHN RUSHWORTH JELICOE, 1st EARL (b. 1859). British sailor. Born at Southampton, Dec. 5, 1859, he entered the navy in 1872. He became a lieutenant in 1880, served in the Egyptian War of 1882, and in China, 1898-1901. From 1902-10 he was almost continuously serving at the Admiralty on shore. He was created a K.C.V.O. in 1907, in which year he reached flag rank. From 1908-10 he was third sea lord and controller, being in charge of the construction of ships, under Sir J. Fisher. He commanded the Atlantic Fleet, 1910-11, and the 2nd squadron of the Home Fleet, 1911-12, and then became second sea lord. At the outbreak of the Great War, being then a vice-admiral in rank, he was made commander-in-chief of the Grand Fleet, Aug. 4, 1914, and held that post until Nov., 1916, when he became first sea lord. Jellicoe was in command at the battle of Jutland.

In Dec., 1917, he retired, and in Jan., 1918, he was raised to the peerage as Viscount Jellicoe of Seapa. On Aug. 5, 1919, he received the thanks of the nation and a grant of £50,000 for his war services. Promoted admiral of the fleet in 1919, he made a tour of the empire in that year in connexion with naval defence. Governor-general of New Zealand, 1920-24, he was created an earl in 1925, and in 1928 succeeded Earl Haig as president of the British Legion. He received the O.M. and the G.C.V.O. after Jutland.

In 1919 Jellicoe published *The Grand Fleet, 1914-16*, an account of its work under his command, and in 1920 *The Crisis of the Naval War*. See Jutland, Battle of.

JELLY FISH. Popular name applied to marine hydrozoa, which form a large class of the Coelenterata (q.v.). They embrace three divisions: (1) Siphonophora, colonies of bell-shaped organisms. (2) Hydromedusae, solitary bells. (3) Scyphomedusae, which have a kind of tube or gullet between mouth and stomach. In both (1) and (2) the mouth opens directly into the stomach. In the more common forms of free-swimming jelly fish the animal resembles a bell or parachute of translucent gelatinous matter, fringed with waving tentacles, some of which have the power of stinging or paralyzing the minute creatures on which the animal feeds. It swims by alternately expanding and contracting its bell.

Jelly Fish. Physalia pelagica, or Portuguese Man-o-War

The egg hatches out as a free-swimming larva which fixes itself on some object and develops into a hydra-tube about half an inch long. This alternately widens out and contracts till it resembles a small pile of plates. The top one splits off, floats away, and develops into an adult jelly fish. This process is repeated until the pile is disposed of. See Medusa.

JEMAPPES. Town of Belgium. It is 4 m. from Mons, with which it is connected by canal. Its industries are mainly connected

with the coal mines in the district. There are also glass works. Pop. 14,881.

Jemappes is famous for the battle fought here between the French and Austrians, Nov. 6, 1792. The French were superior in numbers, and gained a victory, decisive because it placed the southern Netherlands in their power. The French lost about 1,000 men, the Austrians about 7,000. There was also fighting here during the Great War. On Aug. 23-24, 1914, the British blew up the bridge in face of the advancing Germans. See Charleroi; Mons, Battle of.

JENA. Town of Germany, in Thuringia. It stands on the river Saale, 56 m. from Leipzig. The chief buildings, apart from the university, are the 15th century Rathaus and the Stadthaus. The industries centre round the university, the most famous being the manufacture of optical instruments by Zeiss. The university was founded in 1548. It has an observatory. Pop. 52,640. See Germany.

Jena. University buildings of this old German town

The battle of Jena was fought between the French and Prussians under Prince Hohenlohe, Oct. 14, 1806. Napoleon, who commanded in person, gained a sweeping victory, Hohenlohe's disorganized force being driven to meet the stream of fugitives from Auerstädt (q.v.), where on the same day the Duke of Brunswick's forces had been totally defeated. So decisive were these two battles that Napoleon was able to march without serious opposition to Berlin.

JENGHIZ KHAN (1162-1227). Mongol emperor. Son of a petty Mongol chieftain, he succeeded his father while still a boy. From about 1177 he was involved in almost unbroken warfare with various tribes, and in 1206 proclaimed himself khan or emperor. Further wars spread his dominion west beyond the Jaxartes river in Turkistan and to Bokhara, 1219. His armies penetrated through Samarkand into Khorasan, to Merv, and into Georgia, 1222, across the Indus into Peshawar and Lahore, and sacked Herat; and further campaigns in China made him ruler over almost the whole of the Chinese empire. Jenghiz was famous for his extremely enlightened legal code and the skilful administration of his far-spread possessions. He died Aug. 24, 1227. See Kublai Khan.

JENKINSON, ANTHONY (d. 1611). English sailor and traveller. After a youth spent in voyages to the Levant he was appointed captain-general of the Muscovy Company's fleet in 1557. Landing at St. Nicholas on the Drina in that year, he made his way into inland Russia, visited Ivan the Terrible at Moscow, pushed S. to the Caspian Sea, went to Bokhara, and returned to Moscow and England in 1560. His courage won for him the friendship of Ivan, who granted him valuable trading concessions, which Jenkinson transferred to his employers. He died in Feb., 1611.

Edward Jenner, English physician
From an engraving

JENNER, EDWARD (1749-1823). English doctor, the discoverer of vaccination. Born at Berkeley, Gloucestershire, May 17, 1749, he

came to London and studied under John Hunter, after which he returned to Berkeley to practise medicine. There he remained until his death, Jan. 25, 1823.

About 1775 Jenner began to study smallpox seriously, and after some years of this, meanwhile carrying on his practice, he made his first inoculation in May, 1796, on a boy, who was afterwards shown to be immune from smallpox. Other inoculations were carried out, and in spite of much opposition the practice of vaccination made great headway. A society named after the inventor was formed to promote it. In 1802 Parliament voted £10,000 to Jenner and in 1806 a further £20,000, while additional gifts were made to him, much of which went towards the advocacy of the cause. See Vaccination.

JENNER, SIR WILLIAM (1815-98). British physician. Born at Chatham, Jan. 30, 1815, he was made professor of pathological anatomy at University College, London, in 1849, later becoming professor of the principles and practice of medicine there. He was physician at several London hospitals, and also had a wide practice as a specialist. Jenner wrote much on fever, and the difference between typhus and typhoid was made known by his researches. In 1864 he was made F.R.S., and in 1868 was created a baronet. He died Dec. 11, 1898.

JEPHTHAH. One of the judges of Israel. An illegitimate son of Gilead, he was asked by the Gileadite elders to command the army against the Ammonites, and won a complete victory over the enemy at Rabbath-Ammon. He had vowed to God that, if successful, he would sacrifice the first thing he met on his return; it proved to be his own daughter.

JERBOA. Family of small rodents, found in the sandy regions of E. Europe, Asia, and N. Africa. Mouse-like in general form, with short forelegs and very long hind ones, they take long leaps. The tail is long and tufted at the extremity. The commoner species are about 6 ins. long and have light-brown fur. They often do great damage to crops.

JEREMIAH. Hebrew prophet, the author of one of the prophetic books of the Bible. He belonged to the priestly line, and was active during one of the most critical periods of Hebrew history—the period before and just after the final destruction of Jerusalem by the Chaldeans (586 B.C.). When Jerusalem fell he migrated, with other Jews, to Tahpanhes, the ancient Daphnae, in Egypt. According to a late tradition, he met his end there by martyrdom.

The book of Jeremiah consists partly of narrative (biographical) and partly of discourses. Three parts, each containing various chapters and passages throughout the book, have been distinguished: (1) prophecies written by Jeremiah; (2) biographical chapters written by another person, apparently after the prophet's death; and (3) a few chapters and verses written by a third person. Jeremiah did his utmost to dissuade his countrymen from following the counsels of false prophets. As a prophet he gave the Hebrew rulers and people inspired advice and also proclaimed a new covenant, that of a personal, spiritual relationship between God and each individual.

JERICHO. Town of Palestine, about 15 m. N.E. of Jerusalem. In the days of Christ it was a beautiful city, surrounded with gardens and such an abundance of palms that it was called the City of Palms. It remained a place of importance till the Jewish wars, when it was reduced to ruins. A neighbouring hill being traditionally believed to be the scene

of the Temptation, Jericho became a favourite retreat of anchorites and monks. The modern Jericho, a mere village, is a short distance from the old site. Jericho was captured by British troops under Allenby in the Palestine campaign on Feb. 21, 1918. See Palestine.

JEROBOAM. Names of two kings of Israel. Jeroboam I, the son of Nehat, became king after the death of Solomon. He set up the worship of the golden calf at Dan and Bethel, and so gained the epithet of "Jeroboam, son of Nehat, who made Israel to sin."

Jeroboam II, king of Israel, 781-740 B.C., was famed as a warrior under whom Israel defeated the Syrians and rectified its boundaries (2 Kings, 14).

JEROME (c. 340-420). Saint and father of the Latin Church. His full name was Sophronius Eusebius Hieronymus. As a result of a vision he retired to the Syrian desert and devoted himself to the mastery of Hebrew. In 379 he was ordained at Antioch by Paulinus and studied under Gregory Nazianzen at Constantinople. Leaving Rome in 385, he settled at Bethlehem, where he built a monastery and a hospital for pilgrims, and died Sept. 30, 420. He translated the Holy Scriptures into Latin (the Vulgate).

JEROME, JEROME KLAPEA (1859-1927). British author. Born at Walsall, May 2, 1859, he made his name with *Three Men in a Boat*, in 1880. In 1892, having earlier scored another success with *The Idle Thoughts of an Idle Fellow*, he started, with Robert Barr, a monthly magazine called *The Idler*, and in

1893 appeared *To-day*, a weekly which he edited. As a serious novelist, Jerome made a success in 1902 with *Paul Kelter*, and as a playwright with *The Passing of the Third Floor Back*, 1907. His later books include *The Second Thoughts of an Idle Fellow*, 1898; *Tommy & Co.*, 1904; *They & I*, 1909; and *All Roads Lead to Calvary*, 1919. His autobiography, *My Life and Times*, appeared 1925. He died June 14, 1927.

JERRAM, SIR THOMAS HENRY MARTYN (b. 1858). British sailor. Born Sept. 6, 1858, he joined the navy in 1871. In 1890 he served in the Vitu expedition, and also acted as vice-consul at Beira and Mapondosa during the Portuguese crisis, 1891. He was rear-admiral second in command of the Mediterranean fleet, 1910-12, and commanded the second battle squadron, 1915-16, which he led at the battle of Jutland, May 31, 1916. Promoted admiral in 1917, he was awarded the G.C.M.G. in 1919.

JERROLD, DOUGLAS WILLIAM (1803-57). British author, dramatist, and wit. Born in London, Jan. 3, 1803, he early began to write, and in 1821 his first play, *More Frightened than Hurt*, was produced. Altogether he produced nearly seventy plays, which include *Nell Gwynne*, 1833, and *The Prisoner of War*, 1842. Several of his most popular books appeared serially in *Punch*, notably *Punch's Letters to his Son*, 1843; *The Story of a Feather*, 1844; and *Mrs. Caudle's Curtain Lectures*, 1846. He edited *Douglas Jerrold's Shilling Magazine*,

1845-48; the *Illuminated Magazine*, 1846-49; and *Lloyd's Weekly Newspaper*, 1852-57. He died June 8, 1857. Consult *Douglas Jerrold, Dramatist and Wit*, Walter Jerrold, 1918.

JERSEY. Largest of the Channel Islands. The most southerly of the group, 12 m. from France, its area is 45 sq. m. St. Helier is the capital; other places are St. Aubyn, St. Mary, St. Brelade, and St. Ouen. The inhabitants are mainly Norman-French, and French is the principal language. Potatoes, grapes, flowers, etc., are raised for the English market. Corn is grown, and there is an excellent breed of milk-producing cattle.

Jersey is governed by a lieutenant-governor appointed by the crown, and a bailiff, who serves for life. For judicial purposes there is a body called the royal court, and for legislative purposes there is the States, which consist of both official and elected members. The bailiff presides over both these bodies. The dean is the chief ecclesiastic and the island is in the diocese of Winchester. Pop. 49,494. See Cattle; Channel Islands.

Earl of Jersey is an English title borne since 1697 by the family of Villiers. It descends from Sir Edward Villiers (d. 1626), who belonged to the same family as George Villiers, duke of Buckingham. George, the fifth earl, eloped with the granddaughter of Robert Child the banker, since which time each earl has been a partner in Child's bank, and the family name has been Child-Villiers. Victor George Albert (1845-1915), the 7th earl, was governor of New South Wales, 1890-93. George, the 9th earl, succeeded in 1923. The earl's seats are at Middleton Park, Bicester, and Osterley Park, Isleworth, Middlesex.

JERSEY CITY. City of New Jersey, U.S.A. It stands on a headland formed by the Hackensack river and Newark Bay on the W. and the Hudson River on the E., and lies opposite New York, with which it is connected by rly. tunnels under the Hudson river and by steam ferries. The terminus of several important rlys., it forms part of the port of New York. There is a trade in coal, iron, and agricultural produce, while other industries include slaughtering and meat packing. There are sugar refineries and factories for tobacco, glass, chemicals, radio apparatus, etc.; also lumber mills, grain elevators, and rly. workshops. Among the principal buildings are the city hall, court house, People's Palace, public library, and historical museum. The county park covers 200 acres. Pop. 298,103.

JERUSALEM. Chief city of Palestine. The Holy City is 33 m. from the Mediterranean and 15 from the Dead Sea. It occupies a plateau with two southward-pointing spurs bounded by the Hinnom and Kidron valleys, with an intermediate ravine, the Tyropoeon valley. Of the whole elevated area of 1,000 acres barely one-fifth lies within the present walls. Pottery finds on the E. hill attest a pre-Semitic settlement before 2500 B.C. The E. hill became a fortified town, as mentioned in the Amarna correspondence, about 1400 B.C.

The city remained Canaanite until about 1000 B.C., when its Jebusite population was subdued by David. Jerusalem was destroyed by Titus in A.D. 70, and Hadrian rebuilt it in 135, renaming it Aelia Capitolina. Islam's domination began in 1187, and culminated in the Ottoman occupation under Selim I and the erection in 1542 of the present walls. The city surrendered to British forces under Gen. Allenby on Dec. 9, 1917.

The modern city embraces four quarters, Mahomedan, Jewish, Christian, and Armenian. The Haram, an oblong platform resting partly on vaults, includes the temple area, which had a circuit of a mile in Herod's day. In the centre stands the Dome of the Rock, often called the mosque of Omar. The

Musjid el-Aksa arose, about 690, out of the remains of Justinian's and other churches. The Christian quarter includes the Church of the Holy Sepulchre. Within the Jaffa gate on the W stands the crusader structure usually called David's tower. The sacred places associated with the life of Christ have been localised by long tradition. The supreme site of all, that of Calvary and the Tomb, has been the object of much controversy.

One of the first results of the British occupation was the construction of a new water supply. Age-long accumulated refuse in the streets and lanes

Jerusalem. 1. The Jews' Wailing Place. 2. Church of the Holy Sepulchre in the Christian quarter

was removed, and many other improvements were put in hand. A department of antiquities has been formed to work in conjunction with the British School of Archaeology and other national institutions previously established. A Hebrew university was founded on Mount Scopus in 1918, and was opened by Lord Balfour in 1925. In August, 1929, friction occurred between the Jews and the Moslems over the Wailing Place. Serious rioting took place. Pop. 62,578. See Calvary; Crusades; David; Palestine; Siloam; consult also Jerusalem, Sir G. A. Smith, 1908.

JERVAULX. Hamlet of Yorkshire (N.R.). It is 13 m. from Ripon and is famous for its ruined Cistercian abbey. The Ure flows past it, and about here Wensleydale begins. It has a station on the L.N.E. Rly., but the ruins are about 4 m. from this. The abbey was founded in 1156 by monks from Byland.

Jervaulx. Ruins of the abbey buildings; in the foreground are remains of the chapter house
Frith

JERVIS BAY. Inlet of Australia, 82 m. S. of Sydney. Covering an area of about 28 sq. m. it was acquired in 1917 as a port for Canberra (q.v.). Here is the Australian Naval College.

JESMOND. District of Newcastle-upon-Tyne. It has a station on the L.N.E. Rly. Jesmond Dene, a beautiful glen, was presented to the city by Lord Armstrong.

Originally Jesus Mount, it was a place of pilgrimage. Remains of the pilgrimage chapel can still be seen. See Newcastle-upon-Tyne.

JESSE. Biblical character, known only as the father of David. He is described as a native of Bethlehem, and had seven sons, in addition to David (1 Sam. 16). As the father of David, he is regarded as the first person in the genealogy of Jesus Christ. A Jesse tree is a representation, in the form of a genealogical tree, showing the descent of Jesus Christ from Jesse. Such are frequently found on stained-glass windows, which are called Jesse windows.

JESSEL, SIR GEORGE (1824-83). British lawyer. Born in London, Feb. 13, 1824, he became a barrister in 1847. In 1868 he entered Parliament as Liberal M.P. for Dover, and from 1871

to 1872, when he was made master of the rolls, he was solicitor-general. In 1881 the master of the rolls was made a president of the court of appeal, and he was still master when he died, March 21, 1883. His elder son, Charles James (1860-1928), was made a baronet in 1883.

JESSOP, GILBERT LAIRD (b. 1874). English cricketer. Born at Cheltenham, May 19, 1874, he entered Christ's College, Cambridge, in 1896. In 1896 and 1898 he played for the university against Oxford, and in 1899 he captained the team. Afterwards Jessop's cricket career was mainly in Gloucestershire, of which county team he was captain. He played for England against Australia, and also for the Gentlemen. Jessop was renowned for his hitting powers, and was one of the finest fielders who have ever played the game of cricket.

Gilbert L. Jessop, English cricketer

JESSOPP, AUGUSTUS (1824-1914). British author and divine. Born at Cheshunt, Dec. 20, 1824, he was made headmaster of Helston Grammar School in 1855, and from 1859 to 1879 was head of King Edward VI School, Norwich. From 1879 to 1911 he was rector of Scarning, Norfolk. He died Feb. 12, 1914.

Jessopp devoted much time to studying the past of E. Anglia. His best work is *The Coming of the Friars*, 1888. Other books are the semi-historical *One Generation of a Norfolk House*, 1878; *Arcady*, for Better for Worse, 1887, a clear presentation of E. Anglian life; *Trials of a Country Parson*, 1890; *Frivola*, 1896; *Life of John Donne*, 1897; *Before the Great Pillage*, 1901; *England's Peasantry*, and *Other Essays*, 1914.

JESTER. Retainer attached to royal or noble households in medieval and later periods, and supposed originally to have been a teller of stories or gesses. The term came to be applied more particularly to one who was also known as the Court Fool, and was privileged by his supposed foolishness to utter sharp things without having to suffer for it. The custom of keeping such a retainer is of ancient date. See Fool.

JESUITS. Popular and abbreviated name of the Society or Company of Jesus. It was founded in 1534 by a Spanish knight, Inigo Lopez de Recalde (or de Loyola), best known as Ignatius Loyola (q.v.). Long before the

close of the 16th century it had become an international factor of first-rate importance; throughout the 17th and the first two-thirds of the 18th century its activities were apparent in every sphere. From that time it existed only upon sufferance until after the Napoleonic Wars; but its reinstatement by the bull of Pius VII in 1814 was not accompanied by the revival of anything approaching its former influence.

The highest grade of the society consists of the professed who, having passed through ten years of training, have taken the final vows. Next come the coadjutors; then the scholastics, who have passed the novitiate, but are still under education; and finally the novices. The field of labour is divided into provinces, each having its own provincial at its head. Throughout, the rule of complete and unquestioning obedience to the superior officer is absolute and unqualified. The business of each is to execute perfectly the commands which are laid on him. The principle that the end justifies the means, that if the ends be right, the means are lawful, is expressly laid down by authority. The education of the young, and, above all, the education of the society itself, forms an essential part of the Jesuit system.

JESUS CHRIST. All that we know of the life of Jesus is contained in the four Gospels. Mary, the mother of Jesus, described his birth in this way: An angel came and said, "The Holy Ghost shall come upon thee, and the power of the Most High shall overshadow thee, wherefore also that which is to be born shall be called holy, the Son of God." When the boy at the age of twelve achieved the status of manhood, he explained to his mother and to Joseph that he was bound to be "about his Father's business." For eighteen years, however, he lived in obscurity at Nazareth, working as a carpenter. The emergence of his cousin John as a prophet called him out of his retirement. He was baptized in the Jordan.

Gathering around him a few young disciples, he began at Capernaum a ministry of teaching and healing. His teaching was summed up in what we know as the Sermon on the Mount. The freshness, independence, and power of his message and work brought him speedily into collision with the religious authorities. Jesus made it a practice to go up to Jerusalem for the festivals; and going up for the Passover in the third year of his ministry he was conscious that he went to die. By the treachery of a disciple he was arrested; an illegal trial was hurried through in the night; and on the morning of the Paschal Feast the authorities of Judaism demanded from Pilate that he should authorise his crucifixion. The Roman procurator rebelled against this injustice, but a threat to denounce him to Tiberius, at Rome, brought Pilate into line and Jesus was crucified. See Christianity.

JESUS COLLEGE. This is the name of two colleges. Jesus College, Oxford, was founded by Queen Elizabeth in 1571. The buildings are in Turl St. They include chapel, hall, and library, and two quadrangles of the 17th century.

Jesus College, Cambridge, was founded in 1496 by John Alcock, bishop of Ely, on the site of the Benedictine nunnery of S. Radegund.

JET. Black variety of bituminous coal. It is easily cut and carved, and takes a high polish, and is extensively used for beads, as in mourning jewelry, and for ornamentation generally. It is found in many parts of Europe, notably in Bavaria, France, Germany, and Spain, and at Whithy in Yorkshire. Whithy jet is famous.

JETHOU. One of the Channel Islands. It is 4 m. from St. Peter Port, Guernsey, is about a mile in circumference, and, composed of

granite, is infertile. It is administered from Guernsey. See Channel Islands; Guernsey.

JETSAM, JETTISON, or JETSON. Term of English law. It means property that is thrown overboard during shipwreck. (See Flotsam.) Jettison is the act of throwing over the cargo or tackle of a ship when she is in danger of sinking, in order to lighten her. Loss of this kind is treated, on the general average principle, being divided between those who are interested in the ship and its cargo.

JETTY. Structure projecting into the sea or other body of water. The terms pier, mole, jetty, and breakwater are often incorrectly used indiscriminately. The principal purpose of a jetty is to guide or concentrate the current of a river where it enters the sea, or to maintain the entrance to an estuary harbour, when it can serve as a breakwater as well. Jetties may consist of rubble mounds, fascino work, earthwork contained by sheet piling, cribs, or piled stagings filled in solid with stone, or of solid masonry, or may be of open construction, with pile supports. See Breakwater; Pier.

JEVONS, WILLIAM STANLEY (1835-82). British economist. Born at Liverpool, Sept. 1, 1835, he was employed in the mint at Sydney, 1854-59. Again in England in 1866, he became professor of logic and political economy at Owens College, Manchester, and in 1876 removed to London as professor of political economy. He was drowned whilst bathing at Hastings, Aug. 13, 1882. Jevons published a number of notable works on logic and on political economy. As an economist he stressed the close connexion between political economy and mathematics.

JEWRY. Term applied in the Middle Ages to any part of a city chiefly inhabited by Jews. The City of London thoroughfare called Old Jewry is so named from its early Jewish residents. In several other English towns the name lingers, e.g. Jewry Street, Winchester.

JEWS. Men of Judah, or of Judea. In the Bible itself (Esther 2, 5) Jew signified an adherent of Judaism. These two connotations of Jew—the one racial, the other religious—have persisted into modern times.

The Jews have a continuous history of 4,000 years. The earliest dates are uncertain, but the migration of Israel's ancestors from Mesopotamia to Canaan must be placed not later than 2000 B.C. The Exodus from Egypt would, on this view, occur at 1225 B.C., followed by Joshua's invasion of Palestine soon after. David reigned about 1000 B.C. We are on quite certain ground when we date the fall of Samaria at 721 B.C. and the fall of Jerusalem at 586 B.C.

Followed half a century later by the return from the Babylonian exile, these events led up to the dominance of the Seleucids, the Maccabean Revolt, 165 B.C., the elevation of Simon to the principality, 142 B.C., the entry of the Romans under Pompey, 63 B.C., the reign of Herod, 37-4 B.C., the destruction of the Temple by Titus, A.D. 70, and the final suppression of the Jewish national life by Hadrian, A.D. 130.

The Middle Ages, so far as they affected the Jews, may be said to extend from the completion of the Talmud to 1492. This period covers the Gaonic régime and the Golden Age in the Iberian peninsula. The most influential external events were the rise of Islam, the Crusades, the development of the feudal system, which had no place in it for Jews, the infliction of the Jewish badge by Innocent III, the Black Death with its consequent anti-Jewish riots, the growth of feeling against the Jews owing to their enforced occupation with finance, and a variety of papal restrictions which culminated in the Inquisition. The restrictive legislation of Justinian was imitated in the resolutions of successive Church councils.

In early England Jews were treated with a certain rough justice, cruelly interrupted by "popular" riot and massacre, such as occurred at the coronation of Richard I. After that dire experience the English Jewry was reorganized, but their expulsion in 1290 followed when the inroad of Lombard bankers rendered the Jews no longer financially necessary. Cromwell re-admitted the Jews in the very year, 1655, which is assigned for the first important settlement of Jews in New York. The great increase of the Jewish population in America occurred very much later, as a consequence of the Russian persecutions of 1882 onwards. The successful outcome of the equality granted to Jews in America reacted on European conditions, and the conferment of civil and political rights was followed in all European countries by a similar incorporation of the Jews in the national life in the states which admitted them to citizenship.

At present there are about 300,000 Jews in the British Isles, chiefly concentrated in London and other large cities. They have some 300 synagogues and about 200 ministers and readers, under the chief rabbi at 4, St. James's Place, Aldgate, London, E.C.3. They have a training college at Queen Square House, London, W.C.1, and a hospital at Stepney Green, London, E.1.

In the British Empire there are about 550,000 Jews, and throughout the world some 16,000,000. Of these 10,000,000 are in Europe and 4,500,000 in N. America. The Jews have their own calendar, with a new year that begins on Oct. 5 of the Gregorian one, and a system of weights and measures. Hebrew is their national language, but many of them speak Yiddish, in which newspapers are published in London and elsewhere. English law allows them to be married and buried according to their own rites and ceremonies. See Anti-Semitism; Hebrew; Palestine; Semite; Talmud; Zionism.

JEW'S EAR (*Hirneola auriculajudae*). Fungus of the order Hymenomycetaceae. When the air is moist and the fungus is fully expanded, it is shaped like three-fourths of a saucer, with the inner surface thrown into folds and swollen veins. This surface is smooth and of a brownish flesh tint. The exterior is covered with a delicate pile. It grows chiefly on dead elder trunks, and looks like a swarthy human ear nailed to the tree.

JEW'S HARP. Small musical instrument. It consists of a metal frame holding a steel tongue set in vibration by strokes of the finger. The neck of the instrument is held between the teeth, and the varying breathing reinforces the tone and regulates the pitch. The origin of the name is uncertain.

JEX-BLAKE, SOPHIA (1840-1912). British doctor. Beginning life as a teacher, in 1866 she went to Boston, U.S.A., to study medicine, and, returning to England, matriculated in 1869 in the medical faculty of Edinburgh, but was not allowed to take her degree. Leaving Edinburgh, she founded the London school of medicine for women in 1874. In 1878 she started practice in Edinburgh, and in 1886 founded the Edinburgh school of medicine for women. She retired in 1899, and died Jan. 7, 1912.

Sophia's elder brother, Thomas William Jex-Blake (1832-1915), was an assistant master at Rugby, 1858-68, and then became principal of Cheltenham College. He was headmaster of Rugby, 1874-87, and dean of Wells, 1891-1911. He died July 2, 1915. His daughter Katharine was mistress of Gorton

College, and another daughter, Henrietta, principal of Lady Margaret Hall, Oxford. Both retired in 1921.

JEZEBEL. Daughter of Ethbaal, king of the Sidonians. She married Ahab before his accession, and was the first Canaanitish woman to share the throne of Israel. In her hands Ahab was a puppet. She established Phoenician worship in the kingdom, had Nahoth stoned, and persecuted the prophets of Israel. Thrown from her window at the command of Jehu, she was trampled to death under the boofs of his chariot horses (1 Kings, 18, 19, 21). Her name has been ever since a title of reproach, indicating a woman unscrupulous, cunning, and abandoned.

JEZREEL. Canaanitish city. It is about 11 m. from Nazareth. Ahab had his capital there, and the leading events of his reign took place in the neighbourhood (1 Kings 21).

Jezreelites is the name of a sect founded by a private soldier, who took the name of James Jereshom Jezreel and professed to have received a divine call. He commenced to build a tower on Chatham Hill, where the sect was to assemble on the Last Day, but did not live to finish it. Michael Mills, a native of Detroit, U.S.A., claimed to have received Jezreel's mantle, and visited England to finish the temple. Adopting the title of Prince Michael, he was received as an inspired teacher, but was unable to carry out his plans. He died in 1921.

JHELUM. River of India, the westernmost of the five rivers of the Punjab. It rises in Kashmir and flows through the Punjab to join the Chenab about 80 m. N.E. of Multan. Its length is 450 m. Navigable below Islamabad, it is of great importance for irrigation, its two canals supplying water to the doab between the Chenab and Jhelum. It is the ancient Hydaspes.

Jhelum district, in Rawalpindi Division, Punjab, covers 2,813 sq. m. Wheat and millet are among the chief crops, and fine horses and cattle are reared. Timber, stone, and grain are among the exports. Jhelum town is a growing trade centre. Pop. dist., 477,068; town, 14,422.

JIB. Foremost sail in any sailing craft. Triangular in shape, it is set between the foremast head and the bowsprit. Jibs are of various kinds, e.g. the halloon jib used in racing yachts, the flying jib of schooners, and the small storm jib used in bad weather. There are also jib top sails. A jibboom is a continuation of the bowsprit used for setting the jib. See Sail.

JIBUTION

DJIBOUTI. Seaport of French Somaliland, on the African coast opposite Aden. It is the terminus of the railway to Addis Ababa, the Abyssinian capital, and is the chief outlet for the trade of Abyssinia. It is a free port, a coal depot, and the seat of government of French Somaliland. Pop. 9,414; 540 Europeans.

JIG. Simple machine for the preliminary dressing of ores. A common form consists of a vertical box with a tapering bottom, divided into two portions, in one of which a piston

Jew's Harp. Small musical instrument

Jib sails of a cutter. 1. Flying jib. 2. Jib. 3. Foresail

works up and down while the other is fitted with a horizontal screen on which the broken, crude ore is placed. The box is filled with

Jig used for dressing ores

water, and as the piston operates the water is oscillated up and down through the screen, thus washing the lighter and worthless material away over the top of the box, while the more valuable portions gradually work down through the screen into the bottom of the jig.

In metal and wood working a jig is a variety of template used for repetition work. See Template.

JIG. Lively dance. The jig is the single national dance of Ireland, where it is made expressive of a wide range of emotion, and has been accompanied by a correspondingly characteristic music. Some form of triple time, or duple time with triple subdivisions, is the most usual. Corelli, Bach, and others have used the jig or gigue as a lively concluding movement to sonatas and suites.

JINGOISM. Slang term applied to bellicose and provocative patriotism. It came into use in 1878, being derived from the words of a popular song in which occurs the phrase "We don't want to fight, but, by Jingo, if we do." This song was a reflection of popular mistrust of Russia.

The French equivalent is Chauvinism

JINN OR DJINN. In Mahomedan mythology, a race of spirits or beings dwelling in the lowest firmaments. According to the Koran there are good and bad jinn, who are all subject to death and capable of future salvation or damnation.

JINRICKSHA. Japanese word meaning a small two-wheeled vehicle. It is pulled by one or more men and is common in Japan and elsewhere. See illus. p. 791.

JIU. River of Rumania, also known as the Schyl. It rises near the S. frontier of Transylvania, traverses Rumania from N. to S., and enters the Danube 50 m. E. by S. of Vidin (Widin), opposite Rahova, its length being 200 m. It came into prominence in the Great War in the early campaigns between the Rumanian and Austro-German forces.

JOAB. Nephew of David. Made a general of the army of Judah, he became commander-in-chief and one of the king's most intimate counsellors. On David's death he supported the claim of Adonijab to the throne, and he was executed by order of Solomon (2 Sam. 2, 18-20; 1 Kings 2).

JOACHIM, JOSEPH (1831-1907). Hungarian violinist. Born at Kittsee, Hungary, June 28, 1831, he appeared in public at Leipzig when only twelve and met Mendelssohn, and the next year played at concerts in London. He held posts at Weimar and Hanover, and in 1868 settled in Berlin as head of a branch of the Royal Academy of Arts, remaining there until his death, Aug. 15, 1907.

Joseph Joachim, Hungarian violinist

JOAN. Mythical woman pope of the 9th century. According to a legend she was an English girl who went disguised as a man to Rome with her lover, a monk. Having studied theology, she became pope, under the name of John VIII, her pontificate lasting from 853-855. The legend was finally exploded in 1863 by Johann Dollinger.

JOAN OF ARC (1412-31). French heroine and saint. Jeanne d'Arc was a peasant maiden of Domrémy, born Jan. 6, 1412. In 1428 the British and their Burgundian allies laid siege to the town of Orleans. Convinced by heavenly visions and voices that a divine mission had been laid upon her to deliver France, Joan demanded from the French king a troop of soldiers in order to relieve the beleaguered city.

She rode to Orleans and entered it; led by her, the garrison drove the English from post after post. Joan's inspiration breathed a new life into the soul of the French people. Her spell was broken, however, when she failed in an attempt to enter Paris. While heading an unsuccessful sortie from Compiègne, she was captured by the Bur-

Joan of Arc. Sword and breastplate said to have been worn by the Maid. These relics were exhibited at Westminster Cathedral in 1920

gundians (1430), who sold her to the English. Joan was tried on charges of heresy and witchcraft by a court of ecclesiastics, condemned, and handed over to die by fire at the hands of the English in the marketplace of Rouen, May 30, 1431. She was canonized at Rome, May 16, 1920.

JOASH OR JEHOASH. King of Judah. Youngest son of Jehoram, he was crowned in his seventh year. He abolished Baal worship, and reorganized the Temple worship, but in his later days was responsible for the murder of Zechariah. After a reign of forty years (836-796) he was killed by two of his servants (2 Kings 11).

Another Joash was king of Israel (797-781), the son and successor of Jehoahaz (2 Kings 13).

JOB. Hero of a book of the Bible. Ezekiel (14, 14, 20) mentions Job as being, with Noah and Daniel, an example of a proverbially righteous man. The book of Job is mainly a poem, with a prologue and epilogue in prose, which give an account of the hero's fortunes and misfortunes. Job was a blameless and upright man, fortunate and prosperous. This had been noted by Satan, who attended a session held by Jehovah in heaven. When Job's piety was praised, he suggested that it had a mercenary motive, and that if God turned against him he would curse Him to His face. Thus it came about that misfortunes and afflictions were sent to try Job's loyalty.

Although he lost his stock, his servants, and his children, and was smitten with a loathsome disease, Job refused to curse God. Three friends came to bemoan and comfort him. Their words, calculated to shake his faith in the justice of God, only added to his trials. But he was faithful to the end, so that "the patience of Job" has become proverbial.

JOB'S TEARS (Coix lachryma). Grass of the order Gramineae, native of India. It has leafy stems, 3 ft. or 4 ft. high, the leaves broad and drooping. The name is suggested by the large, hard, pearly-grey seeds, which hang in clusters from the upper portions of the stems.

JOCASTA OR EPIKASTE. In Greek legend, wife of Laius, king of Thebes, and mother of

Oedipus. How on the death of Laius, she unwittingly became the wife of her own son, and bore him children, is told under Oedipus. Overwhelmed with horror when she discovered what had happened, Jocasta banged herself.

JOCKEY. One who rides in a horse race. The training of a professional jockey begins with apprenticeship to a licensed trainer of racehorses, the term being not less than three years. All apprentices and full jockeys are required to obtain a riding licence, which must be renewed annually from the stewards of the Jockey Club, or the National Hunt Committee if for steeplechase riding.

Although most flat-race jockeys are professionals, amateur jockeys may ride in races other than those open to gentleman riders by securing annual permission from the stewards of the Jockey Club and paying an annual subscription to the Bentinck Benevolent Fund. Many more amateur jockeys ride under National Hunt rules, the higher scale of weights providing them with more opportunities. See Donoghue, S.; Horse Racing.

Jockey. The English jockey J. Childs

JOCKEY CLUB. Governing body of horse racing in Great Britain. It was founded in 1750 for the purpose of, inter alia, framing rules to govern all flat races, arranging annual fixture lists, arbitrating on all matters in dispute, and sitting in judgement on any person or persons reported to the stewards for malpractices. The usual form of punishment is to warn the offender off Newmarket Heath, equivalent to all racecourses, or permanently or temporarily to suspend training and riding licences. Fines may also be imposed. Its headquarters are at Newmarket.

JODEL OR YODEL. Style of vocalisation affected by the Tirolese. It consists of a verse in the natural voice, which is then followed by a coda in falsetto.

JOEL. Minor prophet. In the O.T. his book, written c. 500 B.C. or later, is inserted between the books of Hosea and Amos. He belonged, apparently, to Judah, was the son of Pethuel, and lived in Jerusalem. He uses the plague of locusts as symbolical, deals with divine judgement, and calls for repentance, pointing out the way of salvation for Judah. He is quoted in Acts 2 and Romans 10. The name is borne by other O.T. people.

JOFFRE, CÉSAIRE JOSEPH JACQUES (b. 1852). French soldier. Born Jan. 12, 1852, he fought in the Franco-Prussian War, took part in the expedition to Timbuktu, 1894, and served under Gallieni in Madagascar, 1896-99. Appointed generalissimo of the French armies, 1911, he was responsible for the violent and disconnected attacks made by the French armies on the opening of the Great War, and for the retreat which exposed the N. of France to German occupation. The credit of the first battle of the Marne (Sept., 1914) he shares with Gallieni, who commanded in Paris. This victory gave him singular prestige, but in the trench warfare which followed, Joffre's unsuccessful operations were accompanied

Marshal Joffre, French soldier
Manuel, Paris

by heavy losses. The French Ministry became dissatisfied with Joffre, though in Dec., 1915, he was given command of all the French armies. The dissatisfaction increased when the German attack on Verdun nearly succeeded in Feb.-Mar., 1916. But in that moment of extreme danger he directed with consummate skill and unflinching determination the measures which saved Verdun. The limited results of the battle of the Somme deepened the discontent of the government, and in Dec., 1916, Nivelle took over the command in the field. Joffre then retired, and was promoted marshal of France. See *Marno: Somme*.

Johannesburg, South Africa. The Town Hall, on Market Square, built in 1915
Courtesy of the High Commissioner of South Africa

JOHANNESBURG. City of the Transvaal, S. Africa. The centre of the gold-mining industry, it lies at an elevation of 5,740 ft., 975 m. from Cape Town and 46 from Pretoria. A well-planned modern city, its buildings include the town hall, post office, law courts, stock exchange, art gallery, and public library. S. Mary's church is the Anglican cathedral, the diocese having been created in 1922. There are parks, zoological gardens, racecourses, and other amenities. The observatory is outside the city proper. Johannesburg is the seat of the University of the Witwatersrand, constituted in 1922, which grew out of the school of mines and technology. The main industry is that of supplying the wants of the mines and miners. There is a large live-stock market, and the meat chilling industry is becoming increasingly important.

Johannesburg was founded in 1886, on the discovery of gold on the Rand. It is named after the surveyor, Johannes Risselk. It grew with amazing rapidity, and in 1896, having meanwhile been linked up by rail with the coast, had a pop. of over 100,000. In Sept., 1928, the town was formally made into a city. Pop. (1926), 170,741 whites. See *Gold; Witwatersrand*.

JOHN. Saint and apostle. The son of Zebedee and Salome, a sister of Mary, the mother of Jesus, he was a master fisherman on the Sea of Galilee, came under the influence of John the Baptist, and with his brother James was among the earliest of the followers of Christ. John was prominent at the Last Supper and present at the trial of Jesus before the Sanhedrim and the Roman procurator. He stood by the Cross, and into his care Jesus committed His mother. His festival occurs on Dec. 27.

JOHN THE BAPTIST. Christian saint, and last of the O.T. prophets. Son of Zacharias and Elisabeth, he was born in Judea. Ordained from birth to be a Nazirite, he lived in the wilderness apart. John soon began to preach, prophesying that the kingdom of Heaven was at hand, proclaiming the coming of Christ, calling the people to repentance, and practising baptism as an outward symbol of repentance. Herod was moved by his preaching, but when John reproved the tetrarch for his unlawful marriage, he was cast into prison, and later beheaded. His birth is commemorated on June 24; his beheading is a black-letter day (Aug. 29). See *Herod*.

JOHN. Name of 23 popes, of whom the following are the most notable. John VIII (d. 882), pope 872-882, directed his efforts chiefly to the conversion of the Slavs and the avoidance of a breach with the Eastern Church. On the death of Louis II, 875, the pope used his influence to secure the imperial crown for Charles the Bald, on whose death in 877 John promoted the cause of Charles the Fat. In 878 Rome was seized by the duke of Spoleto, and John retired to France.

John X, of Ravenna, pope 914-23, led the Italian princes against the Saracens and defeated them at the river Garigliano in 916.

John XII (c. 937-964), pope 955-964, made an alliance with the German king Otto, whom he crowned emperor Feb. 2, 962. In his absence the pope was accused of various crimes, and was declared deposed, a layman being crowned pope as Leo VIII. A counter-revolt enabled John to return and to execute savage vengeance on his enemies. Shortly after he died of paralysis. John XIII, a Roman noble, pope 965-72, allied himself with the emperor Otto II, and developed the hierarchy in Germany and Italy. John XVI, archbishop of Piacenza, was an anti-pope 997-98, who was created by Crescentius and deposed by Gregory V.

John XXII (1249-1334), pope 1316-34 took up his residence at Avignon. The main events of his pontificate were the long conflict with Louis of Bavaria and the establishment of the papal see on French soil. John XXIII (c. 1370-1419) was anti-pope during the Great Schism. Chosen in 1410 as pope of the Pisan party, he was driven from Rome by the approach of Ladislaus, king of Naples. Deposed by a general council in 1414, John was kept in confinement till after the election of Martin V, whom he acknowledged. Created cardinal-bishop, John died Nov. 29, 1419.

JOHN (1167-1216) King of England. The youngest son of Henry II and his wife, Eleanor, he was born at Oxford, Dec. 24, 1167. In 1177 he was made lord of Ireland, and he went to that country in 1185. Returning to England, he joined his brother, Richard, and Philip Augustus of France in their struggle against Henry II. John's reign was a period of disaster. He became involved in a war with France, a quarrel with the pope, and a dispute with his barons. The results were the loss of Normandy, the humiliation of the interdict, and the forced signature of Magna Carta. He had renewed the war against the barons when he died at Newark, Oct. 19, 1216. John had two sons, Henry III and Richard, earl of Cornwall. See *Magna Carta*.

JOHN. Name of several East Roman emperors. Their numbers are variously given, according as some are included in or omitted from the list of rulers. Their surnames were Tzimisces, Comnenus, Ducaas, Lascaris, Palaeologus, and Cantacuzene.

John Cantacuzene (called V or VI), East Roman emperor 1341-54, had been the minister and general of Andronicus III. The latter's widow acted as regent for his son Palaeologus, aged nine years. John, however, had himself proclaimed emperor in Thrace. On Feb. 6, 1347, he entered Constantinople, and was acknowledged as the colleague of Palaeologus. Civil war broke out, and Cantacuzene made the mistake of calling upon the Ottoman Turks for assistance, which gave them a footing in Europe. Finding his unpopularity growing, he abdicated in Dec., 1354.

JOHN (1296-1346). King of Bohemia. A son of the emperor Henry VII, born Aug. 10, 1296, he was crowned king of Bohemia in 1311. Disappointed at not succeeding Henry as emperor in 1313, and tiring of Bohemia, he passed the next few years fighting for his friends in various parts of Europe. Although by now blind, he was eager to help Philip of

France against the English, and was killed at Crécy Aug. 26, 1346. His son Charles became the emperor Charles IV.

JOHN. Name of two kings of France. John I, son of Louis X, was born Nov. 15, 1316. His father having just died, he became king at once, but he only lived seven days. John II (1319-64), surnamed the Good, was born near Le Mans, son of Philip VI, and succeeded his father in 1350. In 1356 John was defeated by the Black Prince at Poitiers, and brought captive to England. In 1359 an agreement for his liberty was rejected by the states-general, and he did not return to France until 1360. His son, Louis, broke his parole as his hostage, 1363, and John returned in 1364 to London, where he died in the same year.

JOHN (1624-96). King of Poland, known as John Sobieski. Born at Olensko June 8, 1624. Sobieski became grand marshal of

John III,
King of Poland

Poland in 1665, and commander-in-chief in 1667. Instigated by the Porte, Cossacks and Tartars advanced into Podolia and captured Kamieniec. To secure peace the king, Michael Wisniowiecki, was compelled to cede the Ukraine. Hereupon Sobieski marched against and destroyed the main Turkish host at Khotin, Nov. 10, 1673. On that same day King Michael died, and in April, 1674, Sobieski secured his own election as king. He proceeded to the Ukraine and conducted a successful campaign against the Turks, who made peace at Zarnovo, Oct. 16, 1678, yielding back the Ukraine on the Polish side of the Dniester. In 1683 Sobieski entered into an alliance with the emperor Leopold to drive the Turks from the Polish and Austrian borders. He crossed the Danube, annihilated the Turkish army, and relieved Vienna. Sobieski died June 17, 1696.

JOHN (1545-78). Spanish soldier, known as Don John of Austria. Born at Ratisbon Feb. 24, 1545, his early life was passed in Spain, and in 1559 his half-brother, Philip II, made him a member of the royal family. In 1571 John was in command of the fleet that crushed the Turks at Lepanto, which feat immortalised his name. He was sent in 1576 as governor-general to the Netherlands. On Oct. 1, 1578, he died of fever.

JOHN, THE EPISTLES OF. Three epistles in the N.T. All written in a style resembling that of the fourth Gospel, they are attributed to S. John. It is usual to group together the fourth Gospel, the three Epistles of John, and the Book of Revelation as the Johannine writings. The problem of authorship concerns all of them. Papias refers to two disciples of the same name, John (evidently the apostle) and the elder John (or the presbyter John). It is not certain which John is intended as the author of the Johannine writings.

JOHN, THE GOSPEL OF. Book of the N.T. It is an attempt to justify Christianity from the historical facts connected with the career of Jesus. There is serious controversy on the question of its authorship. The conservative position maintains that the Gospel was written by John the apostle. Other scholars hold that it was composed by a disciple of the apostle, who embodied material which came from John himself. The most advanced school thinks that the Gospel was written by an unknown Christian, possibly connected with Alexandria or Ephesus, about A.D. 140.

JOHN, AUGUSTUS EDWIN (b. 1878). British artist. He entered the Slade School and began to exhibit about 1899. Unconventional in his presentation of beauty, he possesses great qualities as a draughtsman, has achieved

eminence as a portraitist and subject painter, and is an etcher of exceptional quality.

Augustus John,
British artist

In 1921 he was made an A.R.A. and in 1928 an R.A. Among his works are a cartoon for the Canadian War Memorial, portraits of G. B. Shaw, D. Lloyd George, and Madame Suggia, *The Way Down to the Sea* and *The Orange Jacket*. For the R.A. exhibition of 1930 he produced a notable portrait of Tallulah Bankhead, the actress.

JOHN, SIR WILLIAM GOSCOMBE (b. 1860). British sculptor. He studied under Dalou at the Lambeth School, at the R.A. schools, and in Paris. He also travelled in Italy, Spain, and the East. He became A.R.A. in 1899, R.A. in 1909, and was knighted in 1911. Among his numerous works are Sir Arthur Sullivan (S. Paul's), and statues of King Edward VII (Cape Town) and Lord Salisbury (Westminster Abbey); also a number of war memorials.

John Bull, depicted

proprietors of Punch

JOHN BULL. Name used as a personification of the English nation, for the English nation as a body, and for the typical Englishman. The name and character were first popularised in 1712 by John Arbuthnot, the friend of Swift and Pope, in the *History of John Bull*, pamphlets attacking the Whig war policy.

JOHN O' GROAT'S. Name given to a spot on the N. coast of Caithness, Scotland. It is about 2 m. W. of Duncansby Head and 14 N. of Wick. Being only slightly S. of Dunnet Head, John o' Groat's came to be used colloquially for the most northerly point of Great Britain. The name is due to a house erected here by a Dutchman named Groot in the early 16th century. The story goes that in order to prevent disputes about precedence in his family, John built an octagonal house with eight doors, so that each of the eight Groots could enter by his own door. See Caithness.

John o' Groat's. Hotel at the most
northerly point of Great Britain

JOHNSON, AMY (b. 1904). British airwoman. Born at Hull, she studied at Sheffield University, where she graduated. Abandoning the idea of becoming a teacher, she went to London and entered on a business career, but in Sept., 1928, decided to devote her whole time to aviation. She soon became a qualified pilot, and was the first woman to take out an engineer's licence. On May 5, 1930, she set out from Croydon on a D.H. Moth machine to fly alone to Australia. After a very plucky but perilous 19 days' flight she reached Port

Amy Johnson,
British airwoman
Lafayette

Darwin, Northern Australia, on May 24. She established a record by reaching Karachi in six days. See *Australian Flight*.

JOHNSON, ANDREW (1808-75). President of the United States. Born at Raleigh, N. Carolina, Dec. 29, 1808, in 1835 he was sent to the state legislature. Member of the House of Representatives, 1843-53, after serving as governor of Tennessee between 1853 and 1857, he returned to Congress, this time in the Senate. In 1864 he was chosen vice-president, and the murder of Lincoln made him president. Johnson followed the policy of clemency inaugurated by Lincoln, but soon a sharp divergence of opinion arose between the president and the Republican majority of Congress, and a constitutional crisis was the result. He was impeached and tried before the Senate, but was acquitted. He left office in 1868, and died July 31, 1875.

JOHNSON, JACK (b. 1878). Negro pugilist. Born at Galveston, U.S.A., he first became famous by knocking out Bob Fitzsimmons in the second round, at Philadelphia, July 17, 1907, and secured the world's heavyweight championship by beating Tommy Burns at Sydney, Dec. 26, 1908. On July 4, 1910, Johnson fought his famous battle at Reno, Nevada, with James J. Jeffries. Johnson held the world's championship until beaten by Jesse Willard, at Havana, April 5, 1915.

JOHNSON, SAMUEL (1709-84). British essayist and lexicographer. Born at Lichfield, Sept. 18, 1709, the son of a bookseller, he proceeded in 1728 to Pembroke College, Oxford, leaving there without a degree. After trying, without success, to keep a school near Lichfield, he came to London with Garrick, in 1737, to pick up a living by his pen. He did some task work on *The Gentleman's Magazine*, and, in 1744 wrote a vigorous *Life of the poet Savage*. He then turned to poetry, and produced two satires, *London*, 1738, and *The Vanity of Human Wishes*, 1749, and obtained, through Garrick, the production of his tragedy, *Irene*, at Drury Lane. In 1747 he published his *Plan*, addressed to Lord Chesterfield, for the Dictionary. Chesterfield withheld his patronage, but the Dictionary proceeded, and was published in 1755. For this great work he received the not too liberal sum of £1,575.

In 1750 he began to write *The Rambler*, a semi-weekly series of essays and tales, and in 1759 he issued a second series in a lighter vein, entitled *The Idler*. To defray the funeral expenses of his aged mother, Johnson wrote his novel *Rasselas*, in a week, for £100. In 1762 he received a government pension of £300 a year. A year later he met James Boswell, who immediately conceived the happy idea of writing Johnson's life. In 1764 Johnson founded the famous club of which Sir Joshua Reynolds, Burke, Goldsmith, and others were members. Johnson's edition of Shakespeare

Samuel Johnson,
British essayist
After Sir J. Reynolds

Dr. Johnson's house in Gough
Square, London, where he pro-
duced his Dictionary

appeared in 1765, and in 1773 he visited the Hebrides with Boswell, both publishing accounts of the tour. Johnson's last work, *Lives of the Poets*, appeared in 1781. He died Dec. 13, 1784. His house in Gough Square, Fleet Street, was opened to the public in 1914.

In Boswell's inimitable *Life* are described, with masterly genius, the varied characteristics of the great doctor, his rugged personal appearance, his vigorous talk and ready wit, his simple piety and benevolence, his uncouth manners, his kindness of heart, and his wide and thorough scholarship.

JOHNSTON, SIR HARRY HAMILTON (1858-1927). British explorer and writer. Born in London, June 12, 1858, he travelled in N. Africa, 1878-80, and explored Portuguese W. Africa and the Congo, 1882-83. In 1884 he led an expedition to Mt. Kilima-Njaro, was appointed H.M. vice-consul to Cameroons, 1885, acting consul in the Niger Coast Protectorate in 1887, and consul for Mozambique in 1888. In 1889 he explored Lakes Nyasa and Tanganyika and founded the British Central Africa Protectorate. Knighted in 1896, he was commander-in-chief and consul-general for the Uganda Protectorate. Johnston, who wrote largely on tropical Africa, 1899-1901, died July 31, 1927.

JOHNSTON, MARY (b. 1870). American novelist. Born at Buchanan, Virginia, Nov. 21, 1870, she made a success in 1898 with *Prisoners of Hope*, called also *The Old Dominion*, in which, as in later stories, she gave excellent pictures of life in Virginia before the declaration of independence. Other of her novels deal with the period of the Civil War. They include *To Have and to Hold*, 1900; *By Order of the Company*, 1900; *Audrey*, 1902; *Sir Mortimer*, 1904; *The Long Roll*, 1911; *Cease Firing*, 1912; *The Wanderers*, 1917; *Michael Forth*, 1919; *The Exile*, 1927.

JOHNSTONE. Burgh of Renfrewshire, Scotland. On the Black Cart, 10 m. W. of Glasgow, it is served by the L.M.S. Rly. In a mining district, other industries are engineering works, cotton mills, flax mills, paper mills, and foundries. Near is Elderslie, which is said to be the birthplace of Sir William Wallace. The burgh of Johnstone was only a hamlet before the introduction of the cotton manufacture about 1780. Pop. 12,473.

JOHORE. Sultanate in the Malay Peninsula under British protection. At the S. extremity of the peninsula, it covers 7,678 sq. m. Rubber and tin and iron ore are the principal exports. It is crossed by the rly. from Singapore through Johore Bahru, the capital, northwards to the Straits Settlements and the Federated Malay States, the line being carried over Johore Strait on a causeway. Pop. 330,256. See *Malaya*.

JOICEY, JAMES JOICEY, BARON (b. 1846). British coalowner. Born April 4, 1846, as a youth he became connected with the mining industry. He became one of the chief figures in the Durham coalfield. Joicey was Liberal M.P. for the Chester-le-Street division of Durham from 1885 to 1905, when he was made a peer. He had been a baronet since 1893. His dislike of the Budget of 1910 caused him to leave the Liberal party and to sell his extensive estates in Montgomeryshire.

JOINT. In anatomy, articulation between two bones. The following forms of joints are recognized: Synarthroses, or immovable joints, such as those between the component bones of the skull; amphiarthroses, which allow slight movement between the bones, e.g. the inferior tibio-fibula joint; and diarthroses, or freely movable joints. Diarthroses are subdivided into ginglymus or hinged joint; condyloid joint, in which the surfaces are spheroidal and allow of all varieties of angular movements; saddle joint, in which the

movements are similar to those in the condyloid joint, but the articular surfaces are saddle-shaped; ball-and-socket joint, in which the articular surfaces are approximately spherical and free movement in any direction is allowed; trochoid or pivot joint, in which rotation only is allowed; and arthrodia or gliding joint, in which the articular processes are nearly flat and allow only gliding movements.

In geology, a joint is a plane dividing rock strata. These planes are nearly always approximately at right angles to the bedding planes. They are caused by irregular cooling of molten rocks by earthquakes, and by pressure. See Geology.

In engineering and woodworking, a joint is a device for holding together members of a structure. Hinges, ball-and-socket joints, toggle joints, etc., are examples of movable joints; butt joints welds and fishplates are examples of fixed joints.

JOINTURE. Legal term signifying strictly a joint estate limited to both husband and wife but in common acceptance extended also to a sole estate limited to the wife only. It represents a settlement on marriage.

JOINVILLE, FRANÇOIS, PRINCE DE (1818-1900). French sailor. Born at Neuilly, Aug. 14, 1818. the third son of Louis Philippe, king of the French, he entered the navy in 1836, and for the next ten years saw much active service.

Prince de Joinville.
French sailor

The events of 1848 drove him into retirement, and he was a refugee in England until 1870. He then returned to France. Although expelled, he went back in disguise, and fought in the later stages of the Franco-Prussian War. Two departments elected him to the National Assembly of 1871, and he sat in the Chamber until 1876. He died in Paris, June 16, 1900. His wife was a daughter of Pedro I, emperor of Brazil.

JOINVILLE, JEAN DE (1224-1319). French historian. A member of one of the oldest and noblest families in Champagne, he became a courtier and a soldier. He went on crusade with S. Louis, in the expedition of 1248-54, but declined to take part in the one which ended the king's career. About 1281 he began to write his History of S. Louis, which he finished in 1309. He died July 11, 1319. Joinville gives an excellent picture of his time, and his work is full of interesting, if not always relevant, detail.

JOKAI, MAURICE (1825-1904). Hungarian author. Born Feb. 19, 1825, he became a writer and, living in Budapest, produced novels, histories, dramas, poems, and essays. He edited several papers, and from 1861 to 1897 was a member of the lower house of the Hungarian legislature. Afterwards he sat in the upper house. He died May 5, 1904. Many of his stories have been translated into English. The best known are *The Turks in Hungary*, 1852; *The New Landlord*, 1868; *The Modern Midas*, 1886; *Eyes Like the Sea*, 1893; *Black Diamonds*, 1896; *The Lion of Janina*, 1897; and *A Hungarian Nabob*, 1898.

Maurice Jokai,
Hungarian novelist.

JOLIETTE. Town of Quebec, Canada. On the Assomption river, 36 m. N.N.E. of Montreal, it is served by the C.N.R. and C.P.R. There are lumber and saw mills, foundries, and paper mills. Pop. 9,113.

JOLLY BOAT (Dan. jolle, yawl, confused with the English adj. jolly). Name given to a general utility boat carried by largo vessels. It can be either rowed or sailed, collapsible rigging being provided. See Boat: Cutter.

JONAH. Author of an O.T. book. This belongs to a group of writings known as the "twelve prophets" or the minor prophets. A Jonah is mentioned in 2 Kings 14, 25, as Jonah, son of Amittai, the prophet who was of Gath-hepher. The book of Jonah, which is in the form of a narrative, represents the prophet Jonah as having preached in Nineveh. This may be based upon an old tradition.

JONATHAN. Eldest son of Saul. Famous as a warrior, he was the hero of the campaign against the Philistines called the war of Michmash. He is chiefly remembered, however, for his friendship with David. With his father, Jonathan fell in battle on Mt. Gilboa. (1 Sam 13, 14, 18, 20, 22, and 31: 2 Sam 1.) See David.

Henry Arthur Jones,
British dramatist
Russell

Saints and Sinners, 1884, followed by a long series of successful plays. They include *The Dancing Girl*, 1891; *The Liars*, 1897; *Mrs. Dane's Defence*, 1900; *The Ogre*, 1911; *The Pacifists*, 1917; *The Lie*, 1923. Jones also wrote on the theatre: *Renascence of English Drama*, 1895; and *Foundations of a National Drama*, 1913. Jones entered readily into controversy, as, for example, in his work *My Dear Wells*, 1921. He died Jan. 7, 1929. Consult his *Life and Letters*, by his daughter. Mrs Thorne 1930.

JONES, INIGO (1573-1652). English architect. Born at West Smithfield, he was apprenticed to a joiner. Lord Pembroke provided him with the means for a European tour. Returning in 1604, he was employed in designing court masques, which brought him into keen rivalry with Ben Jonson (q.v.). In 1613 he visited Italy, and in 1615 was appointed surveyor-general. In 1617 he designed the Queen's House at Greenwich, and in 1619 the Banqueting House at Whitehall. In the Civil War he was taken prisoner by the Roundheads. He died June 21, 1652. Jones introduced the Palladian style into England.

Inigo Jones,
English architect
After Van Dyck

JONES, JOHN PAUL (1747-92). Scottish-American sailor. Born at Kirkcubright, Kirkcubrightshire, July 6, 1747, he became skipper of a Whitehaven slaver. Settling in Virginia, he obtained a command in the American navy, 1775, and waged war against British trade. In 1777 he crossed the Atlantic in the Ranger frigate, and the following year landed at Whitehaven and dismantled the already ruined fort. After a similar exploit in Kirkcubright Bay, Jones captured the frigate Drake. In the Bonhomme Richard he captured the British ship Serapis off Scarborough in 1779. Jones was appointed an admiral in

John Paul Jones, Scottish-American sailor
After G. W. Peale

the Russian navy, 1788 but returned to Paris in 1790, where he died; July 18, 1792.

JONES, ROBERT TYRE (b. 1901). American golfer, popularly known as Bobby Jones. A member of the legal profession, he became one of the best amateur golfers in the U.S.A. He won the British open championship in 1926, 1927, and again in 1930, and the American open championship in 1929 and 1930. In 1930 he was captain of the U.S.A. team which retained the Walker Cup in the team match against Great Britain. See Golf.

JONES, SIR WILLIAM (1746-94). British scholar. Born Sept. 28, 1746, he was educated at Harrow and Oxford and showed an extraordinary aptitude for languages. He became a barrister, and in 1783 went to India as judge of the high court at Calcutta. He was then knighted. Jones was the first Englishman to learn Sanscrit, the affinity of which to Greek and Latin he immediately appreciated, a discovery of the utmost importance to the study of philology. He issued many translations of Vedic literature, and died April 27, 1794.

JONESCU, TAKE (1858-1922). Rumanian statesman. Born at Ploeshti, Wallachia, Oct. 25, 1858, he established himself as a lawyer, and became a great advocate. Minister of justice and vice-president of the council, in politics he was the leader of the Conservative-Democrats. After Rumania had thrown in her lot with the Allies in the Great War he joined the coalition government formed by Bratianu. Early in 1918 he and Bratianu both resigned on being outvoted on the question of Rumania's resuming the struggle against the Central powers. He died June 21, 1922.

JONQUIL (*Narcissus jonquilla*). Bulbous perennial herb of the order *Amaryllidaceae* native of Spain, whence it was introduced to British gardens about 1596. From the egg-shaped bulb arise several narrow half-rounded leaves from 8 ins. to 12 ins. long, and one or two tall flowering stems ending in a spathe. From this emerge later from two to six separately stalked fragrant flowers about 1½ ins. across, with a tube almost as long. In colour they are bright yellow, with saucer-shaped crown.

Jonquil. Flower-head and leaves

JONSON, BEN (c. 1573-1637). English poet and dramatist. Born in Westminster, he volunteered for service in Flanders, returning to London about 1592. He became an actor, was employed by Henslowe as a hack playwright, fought a duel with and killed a fellow-actor, Gabriel Spencer, was indicted, 1598, at the Old Bailey, and liberated on pleading benefit of clergy. In 1598 he produced his comedies *Every Man in His Humour* and *The Case is Altered*, these being followed in 1599 and 1600 by *Every Man Out of His Humour* and *Cynthia's Revels*. In 1603 his tragedy *Sejanus* was produced. In 1604-5 came the first of his thirty or more masques. In 1605 he completed his tragedy *Volpone*. The comedy *Epicene* or *The Silent Woman*, 1609-10, was followed by *The Alchemist*, 1610, and *Catiline*, 1611. After visiting the Continent in 1613 as tutor to the son of Sir Walter Raleigh, he wrote his comedy *Bartholomew's Fair*, and began

Ben Jonson, English poet and dramatist
After G. Honthorst.
Nat. Port. Gall.

his quarrel with Inigo Jones. In 1616 he published his Works and was granted a Royal pension. His play *The Devil is an ass* was produced in this year. Jonson's later plays show a decline in power. *The Staple of News*, 1626 was a failure, and with the death of James I, and his own illness, Jonson's star began to wane. In 1629 came *The New Inn*, which, with *The Magnetic Lady*, 1632, and *A Tale of a Tuh*, 1633, failed to obtain public favour. Four years later he died in comparative poverty.

Joppa. Ancient name for the town of Palestine better known as Jaffa (q.v.).

JORDAENS, JAKOB (1593-1678). Flemish painter. Born at Antwerp, he obtained, mainly through Ruhens, the patronage of the kings of Spain and Sweden and the Princess Amelia of Orange, for whom he painted his masterpiece, *The Triumph of Prince Frederick Henry of Nassau*, now in the Huist en Bosch, The Hague. He painted the convivial men and women of his time with rare expressiveness.

JORDAN. River of Palestine. Rising in the Mt. Hermon range, it flows S. through the Waters of Merom to the Sea of Galilee, from which, falling 1,300 ft. below sea level, it descends into the Dead Sea. Its length is about 200 m. Its tributaries, both from the E., are the Yarmuk and the Jabbok. In 1928 a scheme was set on foot for using the waters of the Jordan to provide electric power.

JORDAN, DOROTHY OR DOROTHEA (1762-1816). Irish actress. Born near Waterford, she played for the first time in London at Drury Lane as Peggy in *The Country Girl*, Oct. 18, 1785, and soon became recognized as an admirable performer of breeches parts. She remained at Drury Lane with one interval until 1809, obtaining her chief successes in comedy rôles. She made her final appearance at Covent Garden, June 1, 1814, as Lady Teazle, and died at St. Cloud, July 3, 1816.

Dorothy Jordan,
Irish actress
After Romney

From 1790 until 1811 she was the mistress of the duke of Clarence, later William IV, and bore him a large family, called Fitzclarence.

JORDANES, less correctly Jornandes (6th century A.D.). Historian of the Goths. Belonging to the Alani, a tribe not akin to, though influenced by, the Goths, he wrote two works in Latin, a compendium of history from the Creation to his own times, and a history of the Goths based on a lost work by Cassiodorus. Jordanes represents the Goths as the most enlightened of the barbarian tribes.

JORDANS. Quaker burial ground in Buckinghamshire. It is about 2 m. from Chalfont St. Giles. It contains the graves of Milton's friend Ellwood, and of William Penn. At Jordans the Friends met from their earliest days, and in 1671 they acquired this piece of ground for a graveyard. The present meeting house was erected in 1688. A barn near is believed to have been built out of the timbers of the Mayflower. (q.v.). See Society of Friends.

Jordans. Meeting House of the Society of Friends in Buckinghamshire

ment, where his skill in interpreting dreams brought him to the notice of the king. Pharaoh gave him charge of the arrangements for meeting an impending famine, and thus Joseph rose to be prime minister of Egypt. On the arrival of his brothers to buy corn he disclosed his identity, and invited his father and his family to Egypt, where they settled in Goshen.

JOSEPH. Husband of the Virgin Mary and foster-father of Christ. He was a native of Bethlehem and a carpenter at Nazareth. There is no mention of him after he accompanied Mary to Jerusalem when Christ was twelve years old. See Jesus Christ; Mary.

JOSEPH. Name of two rulers of the Holy Roman Empire.

Joseph I (1678-1711) was born July 26, 1678. Carefully educated and possessing cultured tastes, he was made king of Hungary in 1687, and king of the Romans in 1690. Having seen military service during the war of the Spanish Succession, he became emperor during its progress, 1705. He died April 17, 1711.

Joseph II (1741-90) was born March 13, 1741. In 1764 he was chosen king of the Romans. In 1765, on the death of his father, he became emperor, and colleague of his mother, Maria Theresa, in the government. In Nov., 1780, Joseph became actually ruler of Austria and the other Hapsburg lands. He put in hand a series of reforms, beneficent in the main. In foreign politics he tried to secure Bavaria and to add to his dominions elsewhere. He died Feb. 20, 1790.

JOSEPH OF ARIMATHEA. A wealthy Jew, apparently a member of the Sanhedrim, and a secret disciple of Christ. After the Crucifixion he used his influence with Pilate to obtain possession of Christ's body, which he hurried in the tomb prepared for himself.

JOSEPHINE MARIE ROSE (1763-1814) Empress of Napoleon I. Born at Trois-Ilets, Martinique, June 24, 1763, in 1777 she was married to the viscount de Beauharnais, who was guillotined in July, 1794. Well known in political circles in Paris, in 1796 she married Napoleon, then about to leave for the Italian expedition. She was crowned empress in 1804. Mutual jealousies and the barrenness of the union caused Napoleon to divorce her in Jan., 1810, after which Josephine lived in retirement until she died on May 24, 1814.

Empress Josephine,
wife of Napoleon I
After François Gérard

JOSEPHUS, FLAVIUS (A.D. 37-c. 100) Jewish historian and revolutionary leader. Born at Jerusalem, he was first disinclined to join the Jewish rebellion, but later threw himself into it with energy. After the gallant defence at Iotapata he was taken prisoner, but afterwards released. After the capture of

Jerusalem (70) he went to Rome, where he enjoyed the patronage of Vespasian, Titus, and Domitian, and was granted the citizenship. His works are *The Jewish War*, in seven books, a pro-Jewish propaganda; *Jewish Archaeology*, or *Antiquities of the Jews*, in twenty books; *Autobiography*; and *Against Apion*, this being a defence of Judaism.

JOSHUA. Author of a book of the O.T. It gives an account of the exploits of Joshua, the son of Nun, who succeeded Moses as leader of the Israelites into the Promised Land. It falls into three divisions: (a) History of the Conquest of Canaan, 1-12; (b) Division of

the conquered territory, 13-21; (c) Joshua's addresses to the tribes, with an account of his death and burial, 22-24.

JOSIAH. King of Judah. He succeeded his father Amon when only eight years old. During repairs to the Temple the lost book of the law was found. Greatly affected by its perusal, he set to work to cleanse the land of idolatry. Years of peace and prosperity followed, until Pharaoh Necho came with an army to fight against the Assyrians. Josiah attacked him, and fell at the battle of Megiddo (2 Kings 22-23).

Petrus J. Jonbert,
Boer soldier

JOUBERT, PETRUS JACOBUS (1834-1900). Boer soldier. Born in Cape Colony, as commander-in-chief of the forces of the South African Republic he defeated the British at Laing's Neck, Ingogo and Majuba in the Boer War of 1880-81. On the outbreak of the war with Britain in 1899 he was in chief command, and the result of his careful preparation bore fruit in the initial Boer successes. The rigours of campaigning, however, proved too hard for him, and he died at Pretoria, March 27, 1900.

JOULE, JAMES PRESCOTT (1818-1889). British physicist. Born Dec. 24, 1818, at Salford, he took up the study of electricity and magnetism. At 19 he published his first paper, *On an Electro-magnetic Engine*, and followed it with a number of others which attracted widespread attention. During his experiments and attempts to measure electricity, Joule was led to ascertain the mechanical equivalent of heat, with which his name is imperishably connected. He received numerous honours from the leading universities and scientific societies of the world. He died Oct. 11, 1889.

The joule is a practical unit of electrical work. It is the equivalent of the work done in a conductor in one second by one coulomb, at a pressure of one volt.

Jove. Popular name of Jupiter, who was the chief deity of Roman mythology. See Jupiter.

JOVIAN. Roman emperor, June, 363-Feb., 364. An officer of the imperial guard, he was proclaimed emperor by the soldiery after the death of Julian in the Persian campaign.

Jovian was compelled to conclude a humiliating peace with Persia. Within eight months of his accession he was found dead at Dadas-tana, in Bithynia.

JOWETT, BENJAMIN (1817-93). British scholar. Born at Cambervell, April 15, 1817, he was educated at S. Paul's School and Balliol College, Oxford, and was ordained in 1842.

Benjamin Jowett,
British scholar

He passed from the evangelical school of his youth to attach himself to the liberal party in the Anglican Church. In 1855 he was chosen professor of Greek, and from 1870 until his death, Oct. 1, 1893, he was master of Balliol. The most prominent figure in the Oxford of his day, Jowett raised Balliol to pre-eminence among its colleges. He was an advocate of university reform and of a wider education generally. As a Greek scholar his best work was done on Plato. Many stories are told of Jowett's conversation, shrewd and full of unexpected remarks.

Jovian,
Roman emperor
From a coin

JOWITT, SIR WILLIAM ALLEN (b 1885). British lawyer. The son of a clergyman, he was educated at Marlborough and New College, Oxford. He became a barrister in 1909, and in 1922, when just made a K.C., was elected Liberal M.P. for the Hartlepoons. He lost his seat in 1924, but in 1929 was elected for Preston. Just after his election he joined the Labour Party and was made attorney-general; on appealing to his constituents he was again returned as their member, July 31, 1929.

Sir W. A. Jowitt,
British lawyer
Russell

turned as their member, July 31, 1929.

JUAN FERNANDEZ. Island group in the Pacific Ocean. Belonging to Chile, they are 360 m W of Valparaiso, lat. 80° W. Mas-a-tierra, the largest island, is also known as Juan Fernandez island. Mas-a-fuera and Santa Clara complete the group. Mas-a-tierra is 12 m. by 3½ m. and Mas-a-fuera 6 m. by 3½ m. The islands are of volcanic origin.

Mas-a-tierra was discovered by Juan Fernandez in or about 1565. On it a Scotsman, Alexander Selkirk, lived alone from 1704-9, and his adventures are believed to have furnished Defoe with the groundwork of Robinson Crusoe. The Chilean government, in 1921, proposed to turn the island into a national park. There is a wireless station.

JUAREZ, BENITO PABLO (1806-72). President of Mexico, 1858-72. Born March 21, 1806, in the state of Oaxaca, S. Mexico, he became a judge of the civil court in 1842. When Oaxaca declared its independence in 1846, he became one of the voting triumvirate. On the federal restoration in 1847 he was a member of the constituent congress and governor of Oaxaca. In 1853, on Santa Anna's return to power, Juarez was exiled, but he returned in 1855, and at the beginning of 1858 was elected president and set up his government at Vera Cruz. In 1861 he entered Mexico City, but was driven out by the French who sought to establish the Austrian archduke, Maximilian, as emperor. After the shooting of Maximilian, 1867, Juarez was re-elected president, and again in 1871. He died July 18, 1872. See Mexico.

Jubal. Son of Lamech and Adah. He is traditionally the inventor of musical instruments (Gen. 4, 21).

JUBALAND. Italian territory in Africa, a prov. of Southern Somalia. Bounded S.E. by the Indian Ocean and W. by Tanaland, it consists of a tract of country from 50 to 100 m. wide on the right bank of the Juba river. The capital is Kismayu (q.v.). Formerly part of Kenya, Jubaland, including Kismayu, was ceded to Italy by Great Britain in 1925. Pop. 180,000. See Kenya.

JUBBULPORE. Town and div. in Central Provinces, India. The city, on the Narbada, stands at the junction of the Great Indian Peninsular Rly. from Bombay and the East India Rly. from Allahabad, and is one of the chief rly. centres in India. There is a college affiliated to the university of Nagpur. The area of the division is 18,950 sq. m. Pop., town, 108,793; division, 2,296,508. See India.

JUBILEE (Heb. jobel or yobel, a ram's horn trumpet). Jewish festival celebrated during every 50th year before the Babylonian Captivity. Held in celebration of the release from Egyptian bondage, it was proclaimed by the sound of trumpets, and began on the day of Atonement (q.v.). During the year of jubilee the land was allowed to be fallow, slaves were set free, all property reverted to its original owners or their descendants, and everyone returned to his family.

The term jubilee is used generally to define the 50th anniversary of any noteworthy event. A 60th anniversary is a diamond jubilee.

The Book of Jubilees is one of the non-canonical O.T. Apocrypha or Pseudepigrapha.

Judaea. Alternative spelling of Judea (q.v.), the district of Palestine.

JUDAH. Fourth son of Jacob and Leah. The misconduct of his three elder brothers, Reuben, Simeon, and Levi, resulted in his taking precedence over them. Jacob's prediction of his supremacy started the long feud which separated Judah and Israel. He died during the sojourn in Egypt.

JUDAS. One of the disciples of Christ, distinguished as "not Iscariot." Only mentioned once in the Gospels (John 14, 22), he is generally supposed to have been the person otherwise called Thaddaeus or Lebbaeus (Matt. 10, 3).

JUDAS ISCARIOT. One of the Apostles of Christ, who afterwards betrayed Him to the priests. He was the only Judean of the twelve, all the others being Galileans. He accepted a bribe of thirty pieces of silver to betray Christ, but subsequently returned the money and hanged himself in a fit of remorse.

JUDAS MACCABAEUS. Eldest son of the priest Mattathias. He was his successor in the leadership of the Jews against Antiochus Epiphanes about 166 B.C. He won several victories over the Syrian generals, and set up his headquarters at Jerusalem. He repaired and fortified the Temple, and established a regular service of priests. Demetrius Soter sent an army to Jerusalem to instal a new high priest, and Judas had to retire with his followers. In 161 he won the battle of Adasa and entered into a treaty of alliance with Rome. But Demetrius had invaded Judea with an army under Bacchides, and the Jews were routed at Elasa, where Judas was slain, 161 B.C. See Jews; Maccabees.

JUDAS TREE (*Cereis siliquastrum*). Small tree of the order Leguminosae, a native of S. Europe. It grows to a height of 20 ft. or 30 ft., and has polished, heart-shaped leaves. The flowers, which appear before the leaves, are pea-like, bright purple, and so abundant that the branches are hidden. It is said to be the tree on which Judas hanged himself.

JUDE, THE EPISTLE OF. One of the N.T. epistles. It belongs to the group known as the "Catholic Epistles," being apparently addressed not to particular communities but to Christians in general. If the author is the Jude or Judas of Matt. 13, 55, "one of the brethren of the Lord," the epistle must have been composed between about A.D. 60 and 70. The resemblances between the Epistle of Jude and the Second Epistle of Peter are so close that one must have borrowed from the other, or, on the other hand, both must have made use of a common source.

JUDEA. District comprising the S. part of Palestine in post-exilic days. When the Jews returned from the Babylonian Captivity, they settled here, and as they were mainly of the tribe of Judah they named their district Judea. The term sometimes means W. Palestine generally. See Jews; Palestine.

JUDGE (Lat. *judex*). Civil officer appointed to hear and determine criminal and civil causes. His function is to interpret the law as distinct from its enactment.

Judges of the king's bench division of the high court preside at the assizes, which are circuit courts of the high court of justice. Qualification for appointment as a judge of the high court is ten years' standing at the bar, and for a judge of the court of appeal 15 years' standing at the bar, or one year's service as a judge of the high court. In the county courts the judges are barristers of at least seven years' standing.

The Judge Advocate-General is an official appointed by letters patent under the great seal to advise the crown on matters of military law, and especially in relation to courts-martial. He also acts for the Air Ministry. For the British navy there is a judge advocate of the fleet. See Assizes.

In Jewish history the rulers of the people before the establishment of the monarchy were called judges. They existed for about 450 years until the election of Saul as king in 1095 B.C.

JUDGEMENT. In law, the decision of a court. The term is also often used for the actual delivery of a sentence. Judgements are divided into two classes, interlocutory and final. The former is delivered in the course of some cause upon some plea, etc., as an injunction or mandamus, while the latter, as far as the particular court is concerned, settles the action before the court.

JUDGEMENT SUMMONS. A judgement summons is one taken out against a judgement debtor, that is, one against whom judgement has been given, and who has, or is supposed to have, the means to pay, but refuses to do so. The judge is asked to make an order for payment, in default of which the debtor can be committed to prison for a short period.

JUDGES, THE BOOK OF. Book of the O.T. It is so called because it recounts the history of the Israelite tribal chieftains who led the people in peace and war from the time of the settlement in Canaan under Joshua until that of the birth of the prophet Samuel.

The book falls into four sections: (1) an introduction describing the state of Canaan at the beginning of the period of the judges, 1-2, 5; (2) a moralising prelude to the history, 2, 6-3, 6; (3) the history of the judges, or what has been described as the real kernel of the history, 3, 7-16, 31; and (4) an appendix describing some special episodes, 17-21. The book seems to represent a gradual growth, but much of it was probably compiled, with the help of older literary sources, in the 7th century B.C.

JUDICIAL COMMITTEE. Committee of the privy council, the final court of appeal in the British Empire. Constituted by the Act of 1833, amended three times since, it hears appeals from the courts of law throughout the Empire, except from those of Great Britain and Ireland, which go to the House of Lords. The members of the committee are the lord chancellor, and persons who hold or have held high judicial office in Great Britain, Ireland, or the Oversea Dominions. Such are former lord chancellors, the lord chief justice, and others.

The members meet in a room in Downing Street. When they have heard the case, they deliberate in private, decide by a majority, and depute one of their number to deliver the opinion of the committee. They do not deliver a judgement, but state that they will advise his Majesty to allow or disallow the appeal. If ecclesiastical cases archbishops and bishops can be called on to assist as assessors. See Appeal, Court of; Privy Council.

JUDITH, THE BOOK OF. One of the 35 he apocrypha. It was written originally in Hebrew towards the end of the 2nd c. B.C., was A.C. It is a kind of religious romance relating the adventures of a pious and pious woman, Judith, at the time of the return from the Captivity. See Holofernes.

Judge of English
High Court, in robes

JUGGERNAUT OR JAGANNATH (Skt. Jagannatha, Lord of the World). Name of a Hindu idol. It is kept in a temple dedicated to Vishnu or Krishna, at Juggernaut or Puri, in Orissa, anciently a sacred city of the Buddhists. On the most important of the many festivals in honour of the god the figure is dragged on a colossal car about a mile from its special temple and back again. This procession takes some time.

The idea that the festival is specially associated with self-immolation is erroneous, but it has given rise to the use of the term Juggernaut for any institution by which people or things are or may be crushed out of existence.

JUGURTHA (d. 104 B.C.). King of Numidia. His uncle Micipsa having left his kingdom to be divided equally between his two sons, Hiempsal and Adherbal, Jugurtha put them both to death and became sole ruler. He defied the power of Rome until he was defeated by Metellus and finally crushed by Marius. Taken to Rome, Jugurtha was starved to death. His life and campaigns were the subject of a work by Sallust, the Roman historian.

JUJITSU OR JU-JITSU. Japanese art of self-defence. Literally it means the soft way or gentle art, the two delicate qualities of leverage and balance being pitted against the rougher ones of strength and force. It was practised by the Samurai for many centuries, and until the accession of the mikado no one outside this caste was initiated into its secrets. It was introduced into England about 1900.

Leverage is applied to the assailant's limbs, which are forced into unnatural positions, called locks, to which there is no key; the victim or assailant must give in to the conqueror or have the limb broken. The neck, body, and hip joints are also attacked. The spine can be injured, the kidneys compressed, and the hips dislocated. The nerves and arteries can be operated upon.

The throws in jujitsu are very violent, but a jujitsu expert never gets hurt in falling or being thrown, as he has practised the break-fall, a very valuable branch of jujitsu. Its object is to save falling, or being thrown, on a joint or on the head. Consult *The Complete Jujitsuan*, W. H. Garrud, 2nd ed., 1919.

JUJUBE (*Zizyphus*). Genus of shrubs and trees of the order Rhamnaceae. Natives of Asia and Africa, they have alternate, oval and usually leathery leaves, and small greenish flowers. The fruits are fleshy, from $\frac{1}{2}$ in. to 1 in. in length, with a bony "stone" containing from one to four seeds. The common jujube (*Z. vulgaris*), a native of China, is now naturalised in Western Asia and S. Europe. It has twin prickles at the base of the leaves, and red or black, slightly acid, succulent fruit, the size of a cherry. The confectioners' jujubes derive their name from this fruit, once used in flavouring the sweet.

Julian the Apostate,
Roman emperor
From a bust

His full name was Flavius Claudius Julianus. Born in Constantinople in 331, he was the nephew of Constantine the Great. In

JULIAN (331-363). Roman emperor, 361-363, called the Apostate.

355 Constantine gave Julian the title of Caesar and placed him in command of Gaul and the west, where he gained victories over German tribes. He became emperor in 361. He proclaimed a policy of religious toleration, but discouraged Christianity by making it clear that the profession of paganism was the path to preferment. In 363 he set out on an expedition against the Persians. Penetrating too far into a waterless country, he was compelled to retreat, and in the last of a series of rearguard engagements received a mortal wound. Of his works a number of letters, orations, and satirical writings survive.

Juggernaut. Processional car, 50 ft. high, with solid wooden wheels 7 ft. in diameter and over a foot thick

JULIAN CALENDAR. Name given to the calendar as reformed by Julius Caesar. Revised in 1582 by Pope Gregory XIII, it has been superseded by the Gregorian calendar. See *Calendar*; *Gregory*.

JULIUS. Name of three popes. Julius I (d. 352) was pope 337-52, being elected to succeed Marcus. His festival is kept on Apr. 12.

Julius II (1443-1513) was pope 1503-13. Born near Savona, Dec. 5, 1443, his name was Giuliano della Rovere. Giuliano was made cardinal in 1471 and held numerous bishoprics during the next 30 years, the revenues of which he mainly devoted to building fortresses and palaces. Soldier and diplomat, he commanded the papal army in Umbria, 1474, and was legate to France, 1480. He secured the papacy, largely by bribery, in 1503. As Julius II he at once made war on Cesare Borgia, and joining the league of Cambrai, compelled Venice to restore papal territory in the Romagna. Aided by Venice and Spain, he drove the French out of Italy in 1512. Julius died Feb. 20, 1513. He was the patron of Raphael and Michelangelo.

Julius II,
Pope 1503-13
After Raphael

Julius III,
Pope 1550-55
After Putzone

Julius III (1487-1555) was pope 1550-55. He was papal legate in Italy, 1534, and cardinal, 1536, and presided at the opening of the council of Trent, 1545.

JUMNA. River in N. India, the most important tributary of the Ganges. The Jumna rises in the Jumnotri glacier in the Kumaon section of the Himalayas. Below its junction with the Tons, it forms the boundary between the Punjab and the United Provinces; it then turns S.E. and, receiving the Chambal, Sind, Betwa, and Ken, flows within the United Provinces to join the Ganges at Allahabad, after a course of 850 m. The Great Doab lies between the two rivers. Irrigation canals take off much of the water. Important towns on its banks are Delhi, Agra, and Muttra. See Allahabad.

JUMPING. Branch of athletics. One of the principal features at the Greek Olympic games, it still holds its place in modern athletic meetings, the high and long jump being the most prevalent forms. The record high jump (6 ft. 8 $\frac{1}{2}$ in.) was set up by H. M. Osborne at

Chicago in 1924, and the record long jump (26 ft. 2 $\frac{1}{2}$ in.) by D. H. Hubbard at Chicago in 1927. See *Athletics*.

JUMPING HARE OR SPRING HAAS (*Pedetes caffer*). Species of rodent found in S. Africa. It resembles a hare in size, colour,

Jumping Hare. Specimen of the South African rodent

etc., but has a long tail and kangaroo-like legs. Common in Cape Colony, where it lives among the hills, it is seldom found abroad in the daytime. It is able to take leaps of 20 ft. to 30 ft.

JUMPING MOUSE (*Zapus hudsonius*). Small rodent, related to the jerboa and found in N. America. It resembles a mouse

with very long hind legs, long tail, and remarkable leaping powers. It lives in the woods and feeds upon leaves, seeds, and bark. The rodent hibernates in holes. See *Jerboa*.

Jumping Mouse, native of the N. American woods

JUMPING SHREW (*Macroscelides*).

Family of shrews with long hind legs, rather resembling the jerboa. It belongs to the order of insectivora, but is said to eat vegetable food as well as insects. There are many species, all found in Africa, and some (elephant shrews) are remarkable for their long proboscis-like snouts. Living in burrows and rock crevices, they are nocturnal in habit.

Jumping Shrew. Specimen of the rock elephant shrew W. S. Berridge, F.Z.S.

JUNEAU. Capital of Alaska. On Gastineau channel, opposite Douglas Island, it is an important mining, fishing and lumbering centre, and is the chief supply base for the neighbouring mines. It has steamship connexion with Seattle, Sitka, and other ports. The city superseded Sitka as the capital in 1906. Pop. 3,058. See *Alaska*.

JUNG, CARL (b. 1875). Swiss scientist. Born at Basel, July 26, 1875, he became a doctor and practised for a time. Later he devoted himself to the study of psychoanalysis. He worked with Freud, subsequently differing from him, broke away and founded a new school of psychotherapy in Zürich. Jung differs from Freud mainly in that he attaches less importance to the factor of sex as a cause of neurotic disturbance; that he finds in the interpretation of dreams, or of some dreams, a meaning which should indicate to the dreamer the proper conduct to be followed; and he considers that the psychoanalyst should influence his patient in the direction of following higher ideals. See *Dream*; *Freud*; *Psychoanalysis*.

JUNGFRÄU (Ger. maiden). Mt. peak of Switzerland. On the boundary of the cantons of Berne and Valais, S.W. of the Mönch and Eiger, in the Bernese Oberland, it has an alt. of 13,670 ft. The peak was first ascended in 1811 by the brothers Meyer of Aarau. The first ascent from the Interlaken

sido was made by Sir G. Young and the Rev. H. B. George in 1865. The ascent can be made by rly. See Alps: Interlakea.

Jungfrau. View of this Alpine peak from Interlakea

jungles are common in equatorial regions, on coastal plains, and at the foot of mountain ranges, especially in India.

JUNGLE FOWL. Genus of wild birds, belonging to the game-bird tribe. They are found in India and the E. Indies. There are several species, some of them closely resembling bantams in appearance. They are the source from which the domestic fowl is derived.

JUNIPER (*Juniperus communis*). Evergreen shrub or small tree of the order Coniferae, a native of Europe, N. Africa, Asia, N. America, and the Arctic. Its form is bush-like, and its wood red, like that of the yew.

The leaves are awl-shaped with sharp points. The cones are round, berry-like, with fleshy blue-black scales coated with grey, waxy "bloom." In their first year they remain hard and green, ripening the second year. The whole plant has a strong odour of turpentine. Juniper "berries" provide the flavouring for gin. Oil distilled from the ripe fruit of *Juniperus communis* is used in medicine as a diuretic and to stimulate the gastric secretions.

JUNIUS, LETTERS OF. Series of letters on public affairs which appeared in *The Public Advertiser*, London, 1767-72. The identity of Junius is still disputed; he is generally supposed to have been Sir Philip Francis. Junius warned George III of the fate of Charles I, and attacked the government. He knew the inner working of war office and foreign office, was familiar with ovents at court, attended the House of Commons debates, and by turns defended and attacked the earl of Chatham. He successfully defied the law, and his printer, charged in connexion with the letter to George III, Dec. 19, 1769, was acquitted. The Letters were first collected and, dedicated to the nation, reissued in 1772. See Francis, Sir P.

JUNK (Port. Span. *juncos*). Chinese sailing ship. It has a high forecassle and stern, and square matting sails, and is also used by the

Japanese. Junk is a nautical term for old cordage and other obsolete gear; hence the word has passed into common use to designate any kind of discarded articles.

JUNKER (Ger. *jung*, young; *Herr*, gentleman). Term applied to members of the landowning class of Prussia and N. Germany generally. The name was also given to the great merchant princes of the free city of Danzig, where it survives in the exchange building, known as the Junkerhof.

JUNO. In Roman mythology, one of the major deities, identified with the Greek Hera.

She was the sister and wife of Jupiter and queen of heaven, and her power as such was greater than that of Hera, the wife of Zeus. Juno, Jupiter, and Minerva form a trinity which protects the Roman state. On March 1 married women celebrated in her honour the festival of the Matronalia. See Hera.

Jungle Fowl. Cock of the red species of this wild bird

Juno is the name of one of the asteroids, the third to be discovered. Recognized by Harding in 1804, it has a diameter of about 120 m., and takes just over four years to go round the sun. See Asteroids

JUNOT, ANDOCHE (1771-1813). French soldier. Born at Bussy-le-Grand, Oct. 23, 1771, he became secretary to Napoleon, with whom he went to Italy in 1796 and to Egypt in 1798. He served in Italy and as governor of Paris before being sent, in 1807, at the head of an army into Portugal. He gained some successes, but

was beaten at Vimiera, and, by the convention of Cintra, agreed perforce to withdraw from that country. His active military career came to an end when Napoleon, displeased with his conduct in the Russian expedition, made him governor of Illyria. His mind became unhinged, and he threw himself from a window, July 29, 1813. Junot was made duke of Abrantes for his services.

His wife, Laurette St. Martin Permon Junot (1784-1838), a famous wit, is best remembered by her Memoirs of Napoleon, the Revolution, Consulate, Empire, and Restoration, 1831-35.

JUPITER OR JUPITER (Diovis or Jovis pater, root *div*, to shine). In Roman mythology, an Italian divinity identified with the Greek Zeus. His name etymologically signifies "light-father," and he was especially associated with the

Jupiter. Chief of the Roman pantheon

From a bust in the Vatican

Junk. A Chinese sailing ship

Jupiter Latiaris he had a temple on the Alban mount. When the worship of Janus declined, Jupiter became the chief god of the Romans; his temple on the Capitoline Hill, the temple of Jupiter Optimus Maximus, was regarded as the heart of the Roman state. See Zeus

JUPITER. One of the major planets. It has an equatorial diameter of 89,790 m. and a polar diameter of 84,300 m. Its volume is almost 1,300 times that of the earth; its mass about 312 times; and its density approximately 1.27, a little more than that of water. The mean distance of Jupiter from the sun is 483,000,000 m., and the eccentricity of its elliptical orbit is such that at its greatest distance from the sun it is 46,600,000 m. farther away than its nearest approach. The planet revolves on its axis in about 9 hrs 55 m. The inclination of its orbit to the plane of the ecliptic is about 1° 19', and the inclination of its polar axis to the plane of its orbit is almost a right angle. Jupiter has nine satellites. See Astronomy.

JURA. Island of the Inner Hebrides, Argyllshire. With an area of 160 sq. m., it is one of the most rugged and bleak of the group. Its surface is hilly, the mts. known as the Paps of Jura having peaks of over 2,000 ft. The island is separated from the mainland by the sound of Jura, and from Islay by the Sound of Islay. Tarbert Loch almost cuts it in two. A ferry connects it with the mainland.

JURA. Range of mountains in Europe. They lie between the Rhine and Rhône valleys, forming the Franco-Swiss frontier in the depts. of Doubs, Ain, and Jura, and the cantons of Berne, Neuchâtel, Vaud, Geneva, Basel, and Soleure. The best known peaks are the Crêt de la Neige (5,654 ft.), the Chasseron (5,286 ft.), Mt. Tendre (5,515 ft.), and the Dôle (5,505 ft.). The principal passes are Pontarlier and the Col de la Faucille. The limestone mountains abound in stalactite caverns, while many of the rivers flow underground. Wolves are found in its pine forests.

Jura, a dept. of France, was part of the old province of Franche-Comté. Lons-le-Saulnier is the capital. Other towns are Dôle, Poligny, St. Claude, Arbois, and Salins. Its area is 1,951 sq. m. Pop 230,685.

JURASSIC SYSTEM. Division of strata between the Triassic and the Cretaceous, and so named from the Jura Mountains of Switzerland, largely composed of rocks of this period. The Jurassic system is divided into four main groups, the upper, middle, and lower Oolites, and the Lias. Jurassic rocks in Great Britain furnish the building stones of Bath and Portland, and the Purbeck marbles, while fuller's earth, certain brown coals, jet, etc., belong to the same period. The Jurassic period of time was prolific in giant tree ferns, cycads, and conifers. Marine fossils are common, and fossil reptile remains are so numerous as to have given the Jurassic age the alternative name of the reptile age. These include turtles, lizards, ichthyosauria, dinosauria, and pterosauria. The archæopteryx, the earliest known bird, belongs to this period. Over 4,000 species of Jurassic fossils are known. See Cretaceous System; Geology; Lias; Oolite.

JURAT. Literally, a person under oath (late Lat. *juratus*, sworn), and specifically, one sworn in on taking office. The term was applied to certain French municipal authorities, to the aldermen of the Cinque Ports, and is the title of the 12 elected members of the legislatures of Jersey and Guernsey, who form the royal court of justice under the bailiff as president.

JURISPRUDENCE (Lat. *jurisprudentia*, knowledge of law). The scientific theory of law, considered as a general notion. It deals with the underlying principles of law all the world over in their past, present and future development. It is not concerned with the

heavens, and with rain, thunder, lightning, and the growth of the fruits of the field. He then came to be regarded as the god of hospitality, truth, and justice in local and international relations. A further development of his functions was that that of a war-god and giver of victory. In early times, as

law of a particular country at a particular time, called municipal law, or with legal rules which one country has in common with another, called comparative law: or with the nature of the state or political philosophy.

Jurisprudence assumes the state as a fact, as being the origin of all law, positive law, as it is called by the Austinian school, by way of distinguishing it from divine law, moral law, and international law. Positive law falls into two main divisions, enacted and unenacted law. Enacted law consists of acts or decrees of a sovereign person or legislative body, and unenacted law consists of a body of customs which are observed as law.

The essential test and efficacy of positive law lies in what jurists know as the sanction of law, that is, in the painful results which will come upon the law-breaker. In an efficiently administered state they may be expected to follow as a swift and normal consequence of legal wrongdoing. Sanction is thus the inevitable concomitant of law. Law is the outcome of the organized will of the state and the method by which expression is given to the collective view of right and wrong. See Law.

JURY. Body of persons sworn to return a true verdict in accordance with the evidence laid before them. In England juries may be divided into three classes—grand jury, which is the jury that examines the charges against prisoners at assizes and quarter sessions, petty or common jury, and coroner's jury.

In English law a common jury is a body of twelve men or women who are called upon to attend the hearing of a trial and to give a verdict after hearing the evidence. Jurors are drawn from the residents of each county or borough. The names are taken from a roll of the persons qualified to be jurors drawn up by the rating authorities.

Lunatics, imbeciles, ex-convicts, persons suffering from a permanent infirmity such as blindness, and aliens who have not been domiciled in England or Wales for at least ten years are disqualified from serving on juries: and a great number of persons, such as peers, clergymen, and lawyers, are exempted. No remuneration for common jurors in the High Court is provided by statute. Jurors in county courts are allowed a shilling for each case.

Coroners' juries may consist of any number not less than 12 nor more than 23. They need not be unanimous, but at least twelve must agree on a finding. Since 1927 coroners can hold inquests without a jury.

Juries in Scotland and Ireland are similar to those in England, though special statutes govern them. The jury in Scotland has the right to bring in a special verdict, Not Proven, a verdict not allowed under English law. Trial by jury, following similar lines to the English procedure, exists in most British colonies, the United States, and many European countries.

JUSTICE OF THE PEACE. Unpaid magistrate. Qualifications for the office are good reputation and residence within 7 m. of the county or borough for which they are appointed. In 1919 women became eligible for appointment as justices of the peace equally with men. In the counties the lord chancellor appoints justices on the nomination of the lord-lieutenant; in boroughs on the recommendation of any person whom he approves.

Justices of the peace form the courts of quarter sessions in the counties, but not in the towns which, however, they may attend. The courts of summary jurisdiction, which try minor offences both in town and county, are formed by two justices sitting together. Their duties also include the signing of search and other warrants. See Magistrate.

JUSTICIAR. Name given in medieval times in England to the chief officer of state, the equivalent of the modern prime minister. A justiciar first appeared in the reign of

William the Conqueror, and the office lasted until that of Henry III, or a little later, when the chancellor took his place. There was also a justiciar in Scotland in early times.

The high court of justiciary is the name for the supreme criminal court in Scotland. It consists of the lord justice general, the lord justice clerk and five of the lords of session.

JUSTIN. Name of the two East Roman or Byzantine emperors. Justin I, probably a Goth, made his way to the command of the imperial guards, and was proclaimed emperor by the soldiery on the death of Anastasius. He reigned from 518 to 527.

Justin II was a nephew of Justinian I, whom he succeeded at an advanced age in 565. In 574 he became subject to fits of insanity and nominated Tiberius, commander of the imperial guards, as joint ruler. He died in 578.

JUSTINIAN I (483-565). Roman emperor. Born in Illyricum, May 11, 483, of Thracian or possibly Slavonic descent, he succeeded his uncle Justin in 527. His generals Belisarius and Narses rolled back the Persians, recovered the mastery of the African provinces by the destruction of the Vandal kingdom, and momentarily restored the imperial dominion in Italy by the overthrow and dispersion of the Ostrogoths.

The permanent fame of Justinian, however, rests upon his colossal achievement in the great codification of Roman law which became the basis of all the European systems except in England. This was accomplished in three great works: the Code, which dealt with legislative enactments; the Digest or Appendix, which dealt with what may be called case-made law (interpretations and precedents laid down by lawyers which had acquired a binding force); and the Institutes, which were in essence an exposition of and a commentary on the principle and practice of law. Justinian died Nov. 14, 565. See Belisarius.

Justinian II, emperor 685-95 and 705-11, was the last of the Heraclian dynasty.

JUSTIN MARTYR (c. 100-165). Christian apologist. Born about A.D. 100 in Samaria, of Greek parents, as a youth he studied the Stoic and Platonic philosophies. He became a Christian through the study of the O.T., but continued to lecture in philosophy at Rome, Ephesus, and elsewhere. He was martyred about 165. In his famous Apologies for the Christians he defended Christianity against the charges of heathen writers.

JUTE. Fibre obtained from two varieties of the Corchorus plant grown in India, chiefly in Bengal and Assam. The plants have a stem of 5 ft. to 10 ft. and the fibre occurs as bast below the bark. Strips 4 ft. to 7 ft. in length are thus obtained, and are manufactured into goods, principally in the Calcutta and Dundee jute mills.

The fibre is more woody than linen or hemp and lends itself especially to the manufacture of packing canvas. The higher grades make bright web for cheap tapestries, cart covers, stair carpets, carpet backings and stiff linings. Lower grades are used to make fabrics which are the base

of floorcloths and linoleums, school bags, scenic canvas, sandbags, and upholstery backings and linings.

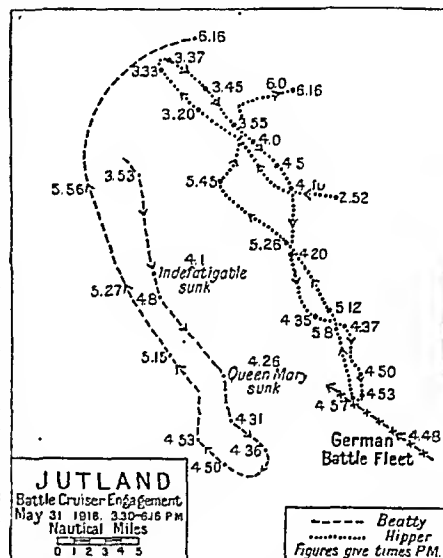

JUTES. Name of a Teutonic tribe. They invaded England in the 5th century, traditionally at the invitation of the Britons. They are mentioned by Bede, and the theory is that they settled in Kent and the Isle of Wight. Jutish burial grounds have been discovered at Finglesham, near Deal, and at Ospringe, both in Kent. The finds include a beaker necklace, pottery, etc. See Britain.

JUTLAND (Dan. Jylland). Mainland prov. of Denmark. It is bounded N. by the Skagerrak, S. by Slesvig, W. by the North Sea, and E. by the Kattegat. The coast is much broken by fiords. The area is 9,750 sq. m.

JUTLAND, BATTLE OF. Naval battle fought between the British and German fleets, May 31-June 1, 1916. The British force consisted of Sir D. Beatty's battle-cruiser squadron, Sir J. Jellicoe's battleship force, eight old armoured cruisers, 26 light cruisers and 78 destroyers. The German fleet consisted of 16 Dreadnoughts and 6 pre-Dreadnought

Justinian I, Roman emperor
From the 6th cent. mosaic in the
basilica of S. Vitale, Ravenna

battleships under Scheer, and a squadron of 5 battle-cruisers under Hipper. Eleven light cruisers and 72 destroyers accompanied the German fleet. In displacement the British had 845,100 tons of heavy armoured ships against 562,840 tons of the Germans.

Early on May 31 the German fleet left its bases and steamed towards the Skagerrak. There

was a wide gap between Jellicoe's battleships and Beatty's battle-cruisers when contact was gained with the Germans by light craft, at 2.20 p.m. The British battle-cruisers moved at their highest speed to get in between the Germans and their bases and thus compel them to fight. The first phase of the battle was the engagement between Beatty with his six battle-cruisers and the five German battle-cruisers, which were steaming S.S.E. Fire was opened by both sides at 3.47 p.m. at a range of 18,500 yards. The Germans hit Tiger's turrets; Indefatigable was blown up through the igniting of her turret ammunition, and the same fate overtook Queen Mary, and of the 2,000 men who manned these two ships only 18 were saved. Lion was badly hit, and had a narrow escape.

Jute. 1. Complete plant. 2. Detail of foliage. 3. Flower. 4. Seed-pod

The next phase was when Beatty, having sighted the German battle fleet, turned N. to draw the enemy to Jellicoe's battle fleet. The latter began his deployment at 6.15 p.m., forming a single line, heading away from the Germans on a course E.N.E. As this was taking place Sir R. Arbuthnot, with the 1st cruiser squadron, drew close to the German battle fleet, but his flagship, Defence, was hit and blew up, and at the same time Hood's flagship Invincible was blown up by salvoes from Lützow and Derflinger.

The two battle fleets were next engaged, but only a few of the British ships could fire effectively at the enemy at a range of about 12,000 yards. In this encounter Lützow and Derfflinger were badly damaged, and the British battleship Marlborough was hit. As signs of a German torpedo attack were seen the British battle fleet turned away. Beatty continued to press the enemy, who once more headed W, and this action broke off the engagements between the battle fleets. The battle was practically over except for a series of night torpedo actions.

In the night the old German battleship Pommern was sunk by a British destroyer and the British armoured cruiser Black Prince was sunk with all her crew. The German fleet returned to its bases in daylight. See Beatty; Chester; Jellicoe; consult also The Grand Fleet, Viscount Jellicoe, 1919; Battle of Jutland (official documents), 1920.

The British had 343 officers and 6,104 men killed and 51 officers and 513 men wounded, The German losses were 172 officers and 2,414 men killed and 490 of all ranks wounded.

TABLE SHOWING COMPARISON OF FORCES				
Dreadnought Battleships	28	16	
Battle-Cruisers	9	5	
Pre-Dreadnought Battleships	0	6	
Armoured Cruisers	8	0	
Light Cruisers	26	11	
Destroyers	78	72	
Comparison of—A, guns mounted; B, firing on broadside; C, weight of broadside (all weapons of 11 in. and over in battle fleets and battle-cruisers) In annour the Germans had a distinct advantage.				
	A Number of ships with that gun	B Number of that gun firing on broadside	C Total weight of broadside lb.	
BRITISH:				
15 in.	6	48	82,560	
14 in.	1	100	140,000	
13½ in.	15	142	177,550

11 in.	13	81	55,440	
Totals	27	212	165,520	
Displacement of the two Fleets (battleships and battle-cruisers):				
	Dread- noughts	Pre-Dread- noughts	Battle- cruisers	Total
British	648,200	—	196,900	845,100
German	363,360	79,200	150,280	592,840

JUVENAL (c. A.D. 60-140). Roman satirist, whose full name was Decimus Junius Juvenalis. His long life extended from the reign of the emperor Nero to that of Antoninus Pius, but details are obscure. The manners and morals of the age in which he lived were regarded by Juvenal with loathing and indignation, which find expression in his sixteen satires.

The best known, in spite of its revolting indecency, is the sixth, on Women. Another fine piece of work is the third, on Rome

JUVENILE OFFENDER. Person apparently under the age of 16 years who has been apprehended. In Great Britain juveniles detained in custody are to be kept from associating with adults under detention. If possible, juveniles under remand are to be sent to special places of detention, not to gaols.

Special courts for juveniles, from which the public are excluded, have been established. No

committed to prison in default of paying a

or costs. Juvenile offenders may be specially dealt with by being placed under the probation officer for a period; being bound over, or

mitted to the care of a relative or other person; committed to an industrial or a reformatory school; whipping; or sentence

JUXON, WILLIAM (1582-1663). Eng. prelate. Born at Chichester, he was educated at S. John's College, Oxford, of which he became president in 1621. He was made bishop of London in 1633, and lord high treasurer in 1635, a post which he held until 1641. Chained at his execution entrusted to Juxon his statements and personal desires "with famous injunction, "Remember." On Restoration he became archbishop of Canterbury. He died June 4 1663.

K. Eleventh letter of the English and Latin alphabets. In the latter, its sound being represented by C, it was regarded as superfluous, and only retained in a few words. In English it has the value of hard c, as in keel, kitchen, and before n it is mute, as in knock. It is a hard or voiceless throat-sound, the soft or voiced equivalent of which is g. See Alphabet.

KA'ABA (Arabio chamber). A shrine at the Great Mosque of Mecca. The building, which stands in the centre of the court, is about

50 ft. high, about 40 ft. long, and 30 ft. wide. Its peculiar sanctity is due to the Black Stone, which is built into the N.E. corner. Burton, one of the few Englishmen who have seen it, ascribed the stone to meteoric origin.

Ka'aba. Pilgrims gathered around the Moslem shrine in the centre of the court of the Great Mosque at Mecca

Oval in shape, and from 6 ins. to 7 ins. in diameter, it is kissed by every Mussulman making the pilgrimage. The present Ka'aba, built in 1620, reproduces the primitive idol temple venerated throughout Arabia in Mahomet's day. He destroyed the idols, but recognized the value of the fetish stone and the pilgrimages as a politically unifying force, and declared that the angel Gabriel had given the stone to Abraham, who had built the Ka'aba. The Ka'aba is covered with a cloth of black brocade, replaced every year. See Holy Carnet: Mecca.

KABINDA OR CABINDA. Portuguese enclave on the W. coast of Africa, part of Angola. N. of the mouth of the Congo, it covers about 3,000 sq. m. The capital, Kabinda, with a good harbour at the mouth of the Bele river, was formerly a slave mart. Pop. 12,000.

KABUL or CABUL. River of Afghanistan. Rising in the Hindu Kush, near the source of the Helmund, it flows through Afghanistan and falls into the Indus at Attock.

KABUL or **CABUL**. Capital of Afghanistan. On the Kabul river, about 150 m. N.W. of Peshawar, it is placed on a high plateau at the foot of hills. The Bala Hisar fort is now dismantled. The junction of several great caravan roads, it has a considerable trade in carpets, silk, and cotton goods. There is a wireless station.

For a time capital of the Mogul empire, Kabul was made by Timur the capital of Afghanistan in 1774. It was captured by the British in 1839, but lost by them two years later. The scene of the massacre of British troops in 1842, it was retaken by General Pollock in the same year. The murder of Cavagnari, the British political resident, and his escort, in 1879, led to the reoccupation of the city for a year. In 1928 there was a revolt, the city was besieged, and British and other women were rescued by aeroplanes. Pop. about 80,000. See Afghanistan.

Kabul, with the domed tomb of Sultan Babar

KAFFIR OR **KAFIR** (Arab. infidel). Name applied in popular usage to the non-Moslem Bantu-speaking negroid peoples of S. Africa. Thus defined, it includes Bechuana, Basuto, and even Hereros and Ovambo, in all about 4,500,000. It is preferably limited to certain aggressive tribal confederations, named after actual or mythical chiefs, who led the migratory movement from equatorial Africa into the coastlands E. of the Drakensberg shortly before the European discovery.

Kaffir bread is the pith obtained from the young shoots of the bread-tree, which grows in S. Africa. It is eaten by the natives.

KAFFIR WARS. There were several wars between the British and the Kaffirs in the 19th century; indeed one authority enumerates nine, excluding minor skirmishes. All were due to the desire of both parties to possess the lands which lay between them. The first war broke out in 1811, and the second was waged in 1818-19. In both Kaffir inroads were beaten back. In 1834 there was a further inroad, but after a struggle of nearly a year's duration the Kaffirs were again driven back and a treaty of peace made. In 1846-48 there was another prolonged struggle, but more serious was the one that broke out in 1850 and lasted until 1853. The last Kaffir war took place in 1877.

KAFFRARIA. Dist. of Cape of Good Hope prov., S. Africa. Once applied to the country inhabited by the Kaffirs, the name is now restricted to the coastal districts between the Great Kei river and the frontiers of Natal. After the Kaffir War of 1846-48 it was formed into a separate province, but in 1865 was incorporated with Cape Colony.

KAGU (*Rhinocetus jubatus*). Bird found in New Caledonia, related to the cranes. The size of the common fowl and grey in colour, it has a long pendent crest of feathers at the back of the head. It is rare, and appears to feed at night on snails, worms, and insects.

KAHUN. Ancient town in the Fayum, Upper Egypt. Excavated by Petrie in 1839, it comprised the dwellings of the workmen who constructed the XIIth dynasty Illahun pyramid for Senusert II. See Egypt.

KAILYARD SCHOOL. Name applied by J. H. Millar to the writers of novels of humble Scottish life notable for their sentimentality and over-use of dialect. In this school is generally included J. M. Barrie's *Auld Licht Idylls*, 1888; and, in particular, the novels of John Watson (Ian Maclaren) and S. R. Crockett. The name appears to be derived from the song *There grows a bonnie brier bush in our kailyard*. See Barrie, J. M.; Crockett, S. R.

KAINITE. Mineral consisting of potassium chloride and magnesium sulphate. It is found at Stassfurt in Germany and in the salt mines of Kalusz in the eastern Carpathians. It is one of the sources of potassium, and is widely used as a fertiliser.

KAISAR-I-HIND MEDAL. Medal instituted in 1900, awarded for public services in the Indian empire. Recipients may be of any race, or of either sex, and are divided into first and second classes, receiving gold and silver medals respectively.

KAISARIYEH OR **KAYSEEL.** Coast village of Palestine, the ancient Caesarea. It is 32 m. N. of Jaffa and close to the Haifa Rly. The ancient city was built by Herod the Great. A great breakwater, now in ruins, made a splendid harbour. S. Paul spent two years' imprisonment here. The city became the military headquarters of Palestine, and here Vespasian was proclaimed emperor in A.D. 69. After the fall of Jerusalem it became the capital of Palestine, until destroyed by the Egyptian Bibars in 1265.

Kaisariyeh, in Turkey, the ancient Caesarea, 140 m. due N. of Adana, on the Kizil Irmak

(Halys) river, is a noted road centre, at the foot of Mt. Argaeus (13,300 ft.). Rug and carpet weaving are industries. Pop. 50,000.

KAISER. German word for emperor. It is a variant of Caesar, and was used for Charlemagne and the other emperors of the Holy Roman Empire. With the dissolution of the Empire in 1806, the title was transferred to the emperor of Austria, who remained a kaiser until 1918. In 1871 the king of Prussia took the title of *Deutscher Kaiser*, and from then until 1918 the three successive German emperors were in turn known popularly as the kaiser. The feminine is *kaiserin*.

KAKA (*Nestor meridionalis*). Olive-brown parrot of New Zealand. Closely related to the kea (q.v.), it is about the size of a crow. It has a light grey crown, the cheeks and collar are purple bronze, the breast and tail brown, and the intervening underparts are deep crimson varying to orange or yellow. The upper half of the beak is very long and hooked, and is used for stripping bark in order to obtain wood-feeding grubs; it eats fruit and flowers also.

KAKAPO, TARAPU OR **OWL PARROT** (*Strigops habroptilus*). Bird of the parrot family, a native of alpine districts and open forests in New Zealand. It has soft plumage, green on the upper parts, speckled with yellow and barred with brown; brown cheeks and yellow underparts. A disk of feathers around the eye gives it an owl-like appearance. The wings are short and unfitted for proper flight. It spends the day in holes in or near the ground, and at night searches on foot, in companies, for seeds, berries, and lizards.

KALAHARI. Desert on the W. of South Africa, mainly in Bechuanaland. It extends N. for 600 m. from the Orange river. Generally about 3,000 ft. high, bordered by a waterless country, it contains large tracts suitable for cattle, and, under a system of dry-farming, for cereals. The country is filled with big game, and supports a scattered and nomad population. There are numerous salt pans, one at Makarikari covering over 2,000 sq. m.

KALAT. State of Baluchistan. It extends from the Arabian Sea N.E. almost to the Bolan Pass; W. and E. it is bounded by Persia and India; in the S.E. is the semi-independent state of Las Bela. Sarawan in the N. is highland; wheat, tobacco, and fruit are obtained in the valleys. Jhalawan in the S.E. is an arid mountainous area. Kacchi in the N.E. is a vast alluvial plain, noted for its breeds of horses and bullocks. Makran in the S.W. is an inhospitable desert yielding only dates. Kharan in the W. is largely a sandy waste. The ruler bears the title of khan, and has a salute of 19 guns. Kalat town is the capital. Area, 73,278 sq. m.; pop., 328,281.

Kale OR **KAIL.** One of the cultivated forms (*Acephala*) of the wild cabbage (*Brassica oleracea*). See Borecole.

KALEDOSCOPE. Optical toy. Two mirrors, sometimes three, usually placed at an angle of 60°, extend the length of a tube, at one end of which are two plates of glass enclosing fragments of coloured glass. The observer looks through a small eye piece at the other end of the tube, which, as it is turned in the hand, scatters the pieces of coloured glass into arrangements that, being symmetrically reflected in the mirrors, give rise to an endless variety of regular patterns.

KALGOORLIE. Town of W. Australia, 375 m. by rly, from Perth. It is the centre of Australia's richest gold mining area, and is the W. terminus of the broad gauge section of the Trans-Australian Rly., as well as the entrepot for the goldfields farther E. and N. Kalgoorlie, founded in 1893, and its sister town, Boulder, 4 m. distant, are well equipped modern towns. Pop. 5,200.

KALMUK OR **KALMUCK.** W. branch of the Mongol stock. Migrations from central Asia to Europe, begun in 1616, are still represented by over 172,000 inhabiting the southern Astrakhan steppe. They have partly abandoned nomadism, but maintain their ancestral lamaism, with over 60 monasteries. Six central Asian tribes now occupy a northern region in Sinkiang, N.W. Mongolia, and Kulja, besides a southern region in Alaskan, Kokonor, and N. Tibet. There are also some 15,000 in the Caucasus. See Mongol.

Kalmuk. Mongol peasants from Russian Central Asia

KAMAKURA. Historic site in Japan, 12 m. S.W. of Yokohama. During the 13th and 14th centuries the city was the capital of the Shogunate. The existing town on the site has a pop. of 10,000, and its numerous shrines are visited annually by thousands of tourists. The chief shrine, that of Hachiman, is dedicated to the emperor Ojin-Tenno, popularly called the God of War. The colossal bronze image of Buddha (see illus. p. 318), Daihutsu, is 50 ft. high, and 36 ft. from knee to knee; windows in the shoulders overlook the surrounding scenery.

KAMCHATKA. Peninsula in N.E. Asia, between the sea of Okhotsk and Bering sea. It forms part of the Far Eastern area of the Union of Socialist Soviet Republics. There are numerous extinct and active volcanoes; earthquakes are frequent. There are important fisheries, and trade in furs. The natives are chiefly engaged in hunting and fishing. Kamchatka has belonged to Russia since 1766.

Kamerun. Former German protectorate in W. Africa, more familiar under the name of Cameroons (q.v.).

KAMES, HENRY HOME, LORD (1696-1782). Scottish lawyer. Born at Kames, Berwickshire, he became an advocate and in 1752 he was made a judge of the court of session, taking the title of Lord Kames. He made a great reputation as a philosopher, especially by his *Essays on Morality, Elements of Criticism* and other works. Kames died Dec. 27, 1782.

KAMLOOPS. City of British Columbia, Canada. It is 250 m. from Vancouver, at the confluence of the N. and S. Thompson rivers. It is an important junction on the C.P.R. and C.N.R., and a trade centre for a mining and ranching dist. Pop. 4,501.

KANAKA. Aboriginal people of Polynesian stock living in the Hawaiian Islands. They furnished crews to early South Sea whalers, who introduced the native name. French usage extended it to other Pacific islanders, including the dark Melanesians of New Caledonia. Hence the name came to denote the coloured labourers, mostly Melanesians from the Solomons and New Hebrides, who were recruited for the Queensland sugar plantations. Brought under regulation in 1880, they were repatriated in 1906, except some who were permanently settled. These, all classed as Polynesians, number about 2,300. Pron. kannaka; in Australia, incorrectly, kanakka.

KANDAHAR. City of Afghanistan. It lies nearly 300 m. S.W. of Kabul, on a level plain between the Argand and Tarnak rivers.

Built in the form of an irregular parallelogram, it is traversed by four main streets, and surrounded by a ditch and a mud wall. There are four main gates and two minor ones. The gates are defended by six double bastions, and the angles by four circular towers. The citadel is N. of the city, a dominating feature of which is the tomb of Ahmed Shah Durani. Kandabar is strategically important as the key to India, being the focus of the various routes converging from the W. frontier of India towards Herat and Persia. In the Afghan Wars it was occupied by the British in 1839. Lord Roberts occupied it in 1879-80. Pop. 50,000. See Afghanistan.

KANDERSTEG. Tourist centre of Switzerland. It is in the Bernese Oberland at the foot of the Gemmi Pass and is itself 3,800 ft. high. Its name comes from the river Kander, a tributary of the Aar.

KANDY. Town of Ceylon. It lies 1,660 ft. above sea level, on a mt. lake, 75 m. by rly. N.E. of Colombo. Once capital of the native kingdom of Kandy, it was annexed by Britain in 1815, and is notable for its royal tombs and temples, including that containing a reputed tooth of Buddha. There are botanical gardens at Peradeniya, 3 m. distant. Pop. 32,562.

KANE, ELISHA KENT (1820-57). American explorer. Born at Philadelphia, Feb. 3, 1820, he became assistant surgeon in the U.S. navy in 1843. In 1850 he accompanied Grinnell's expedition to rescue Sir John Franklin. In 1853 he commanded the *Advance*, sailed to 78° 43' N. in Smith Sound, discovered the Humboldt glacier, and in 1854 reached Cape Constitution, 80° 35' N. Abandoning the *Advance* in 1855, the party made their way back in small boats. Kane died at Havana, Feb. 16, 1857.

KANGAROO (Macropus). Genus of marsupial or pouched mammals found only in Australasia and New Guinea. They are characterised by very long hind legs, and powerful tails on which they partly rest the body. The tapering head is small and the ears are prominent and erect. The fur may be red, grey, or blackish. There are many species, the largest measuring 5 ft. in length of body with a tail over 4 ft. long. The smallest is about as large as a rabbit.

They are found always in companies, and feed upon grass and herbage, and roots which they dig up. When not disturbed they move along like a rabbit, but if alarmed they make off at great speed, covering as much as 10 yds. at a bound. The young kangaroo is born in a small and rudimentary condition, and is placed by the mother in her pouch, where it remains until fully developed, when it begins to emerge and crop the grass. Only a single young one is produced at birth.

KANGAROO GRASS (*Anthistiria vulgaris*). Perennial grass of the order Gramineae, native of Australia, where it is the prevailing herbage in many of the tracts known as rich grass country. Kangaroo grass is of great value to the cattle-raising industry, both in Australia and S. Africa.

KANSAS. Central state of the U.S.A. Mainly an undulating prairie, it covers 82,158 sq. m. The principal navigable river is the Missouri, forming part of the W. frontier, others being the Arkansas and Kansas. Although suffering from a scarcity of rain in the W., Kansas is pre-eminently an agricultural state, and produces maize, wheat, hay, and fruit. Coal, salt, zinc, lead, limestone, petroleum, and natural gas are worked, and

Portland cement is produced. Glass is manufactured, and slaughtering and meat-packing are important industries. Topeka is the capital, but Kansas City is larger. Pop. 1,835,000.

KANSAS CITY. City of Kansas, U.S.A. At the junction of the Kansas and Missouri rivers, opposite Kansas City in Missouri, it is served by the Union Pacific and other rlys, and is the seat of Kansas City University. Next to Chicago it is the leading live-stock centre in the U.S.A. It has slaughtering and meat-packing establishments, large grain elevators, flour mills, rly. and other machine shops, and soap manufactories. Formed in 1886 by the union of the old city with Wyandotte and Armourdale, Kansas City was incorporated in 1858. Pop. 116,053.

KANSAS CITY. City and port of entry of Missouri, U.S.A. On the right bank of the Missouri river, opposite Kansas City in Kansas, it is an important rly. junction served by the Union Pacific and other rlys. Across the Missouri the railways are carried by three great bridges, and within the city the Kansas City Terminal Rly. connects up the various systems. Meat-packing and trade in grain and live-stock are important interests. Kansas City is also a distributing centre for hay, mules, coal, lumber, lime, and cement, and has agricultural implements, clothing, and confectionery manufactories, flour mills, foundries, and machine shops. Swopo Park covers about 1,350 acres. Pop. 367,481.

KANT, IMMANUEL (1724-1804). German philosopher. Born at Königsberg, April 22, 1724, the son of a saddler of Scottish descent, he was professor of logic and metaphysics at the university from 1770-97, when old age compelled him to discontinue his lectures. His long life, regulated by clockwork precision, was absolutely uneventful. He never married, and died at Königsberg, Feb. 12, 1804.

Kant's great service to philosophy was his endeavour to find a bond of union between realism (materialism) and idealism, each of which had claimed to be the only true system. The three great works in which he investigates the nature, limits, and extent of human knowledge are *Critique of Pure Reason* 1781; *Critique of Practical Reason*, 1788; *Critique of Judgement*, 1790. The last-mentioned deals with the sublime and the beautiful (aesthetic judgement) and the order of nature (teleological judgement). The *Prolegomena to every future Metaphysic*, 1783, a shorter and simpler work, embodies the main ideas of his system. Consult Kant's *Critical Philosophy*, J. P. Ma Haffy and J. H. Bernard, 1915.

KAOLIN or CHINA CLAY. Soft clay used in the manufacture of white earthenware, porcelain, and tiles. It gets its names from deposits at Kaoling, China. See China Clay.

KAPOK (*Eriodendron anfractuosum*). Tall evergreen tree of the natural order Malvaceae, a native of the W. Indies. The yellow flowers are coated externally with silky wool, and the woody capsules, like those of the cotton plant, are filled with silky hairs attached to

the numerous seeds. These filaments cannot be spun into threads, as are cotton fibres, but are used for stuffing cushions and pillows. Owing to the large quantity of air which the fibres hold in their canals kapok has great buoyancy, and is therefore employed for filling lifebelts. The pressed seeds yield kapok oil.

Karachi, Bombay Presidency. Frere municipal hall

KARACHI. Seaport of India. It lies at the W. end of the Indus delta, on the left bank of the distributary which enters Karachi Bay, an arm of the Arabian Sea, sheltered behind a long, narrow sand spit. Since its foundation in 1843 its trade has increased enormously. Its chief importance is due to the increase of wheat growing under the development of irrigation schemes, and cotton is collected from all parts of Sind for export, as well as for local manufacture. It has also become an important air port, being the terminus of the Indian air mail. Pop. 216,883.

KARAKORAM. Mountain range of Asia. Containing some of the highest summits in the world, the range extends S.E. for over 400 m. from the Pamirs to the Himalayas across the N.E. portion of Kashmir, and connects the Himalayas with the Hindu Kush. The highest point is Mount Godwin Austen or Peak K2, 28,250 ft. In 1929 an Italian expedition explored the region and made some valuable discoveries.

KARA SEA. Name of part of the Arctic Ocean. Between Novaya Zemlya and the island of Vaigatch on the N.W., and the peninsula of Yamal to the S.E., it is 440 m. long and 280 m. broad, and is generally navigable from mid-August to mid-October. There is a radio station in Novaya Zemlya. Its S.E. arm is called the Kara Gulf.

KARELIA. Autonomous republic of the Union of Socialist Soviet Republics. It lies E. of Finland, between the White Sea and Lake Ladoga. The capital is Petrosavodsk. Area, about 52,000 sq. m. Pop. 267,467.

KARLSBAD or CARLSBAD. Town and health resort of Czechoslovakia, in Bohemia, formerly in Austria. It lies at a height of more than 1,100 ft., 70 m. W.N.W. of Prague, in picturesque surroundings. It has been famous for its warm alkaline springs from at least the 14th century. The official name is now Karlovy Vary. Pop. 20,000.

The Karlsbad Decrees were resolutions passed by representatives of the German states at a congress held at Karlsbad in Aug., 1819. It was summoned by Metternich, and a principal object was to repress the liberal agitation then proceeding in Germany. The resolutions were adopted by the Diet, and probably contributed to restrain in Germany the revolutionary movement that shook France in 1830.

KARLSRUHE or CARLSRUHE. Town of Germany, capital of Baden. It lies 6 m. E. of the Rhine, and 39 m. W.N.W. of Stuttgart. The town of to-day is largely of modern growth, its industrial rise dating from 1871. The principal manufactures are locomotives, rolling-stock, furniture, and plated articles.

Kangaroo. Great Red Kangaroo, largest of the pouched mammals of Australia. Gambier Bolton, F.Z.S.

Immanuel Kant, German philosopher

Kapok. Foliage, flowers, seed and seed-pod

Notable buildings include the palace and the picture gallery. The museum contains valuable collections of antiquities, and a fine library of nearly 200,000 volumes. Pop 145,694.

The Germans had a light cruiser of this name. After serving as a commerce raider in the Atlantic in Oct., 1914, she was sunk at sea, in the beginning of Nov., as the result of an internal explosion.

KARNAK. Village on the right bank of the Nile. With Luxor it comprises the ancient city of Thebes, Upper Egypt. The Amen temple, begun in the XIIth dynasty by Senusret I, was enlarged during the XVIIIth dynasty, and obelisks of Thothmes I and Hatshepsut still stand. In the XIXth dynasty was added a hypostyle hall, with a flat stone roof borne by 12 central columns and 122 aisle columns. These sandstone shafts and the walls were sculptured with inscriptions and scenic reliefs. Outside the N. and S. walls occur historical scenes commemorating the Hittite and Palestine campaigns of the famous Egyptian rulers Seti I and Rameses II respectively. In front of this hall a colonnaded court was built by Shishak I, and a final pylon added in Ptolemaic times. See Egypt.

Karnak. Avenue of ram-headed sphinxes running between the Temple of Amen at Karnak and the temple at Luxor. Above, left, columns in Hypostyle Hall, Karnak, with obelisk of Thothmes I in the distance; right, pylon of Ptolemy III Energetes

KÁROLYI, ALOYS, COUNT (1825-89). Austro-Hungarian statesman. He was born at Vienna, Aug. 8, 1825, and entered the diplomatic service. In 1858 he was entrusted with the task of obtaining Russian co-operation against the schemes of Napoleon III. Ambassador to Germany in 1871, he was at the congress of Berlin (1878). He died Dec. 2, 1889.

Count Michael Károlyi (b. 1875), a Hungarian statesman, conducted the fruitless Austro-Hungarian peace negotiations with the Allies through a neutral intermediary in 1917. On the collapse of Austria at the end of Oct., 1918, he became prime minister of Hungary. He was provisional president of the republic, but resigned March, 1919. See Hungary.

KARRI (*Eucalyptus diversicolor*). Tree of the order Myrtaceae, a native of Australasia. Its characters are similar to those of the other gum-trees. Its hard wood is extensively used in blocks for paving roads. It is also employed for the construction of vats.

KARROO. Name applied to the high plains of the Cape Province, S. Africa, and more especially to the dist. (the Great Karroo) between the Nieuwveld Mts. on the N. and the Zwaarte Bergen on the S. The total area is about 100,000 sq. m. The Southern or Little Karroo consists of the highlands lying between the Zwaarte Bergen and the coastal ranges. See Cape of Good Hope.

KARROO SYSTEM. This is a series of sandstones and shales of S. Africa. They contain fossil remains of amphibians and reptiles chiefly of the Triassic period. The karroo system contains the volcanic pipes which have resulted in the diamond deposits of S. Africa.

KARS. Capital of the Turkish vilayet of the same name, 100 m. N.E. of Erzerum. It is a very important and strongly fortified position.

Known to the ancients as Khorzēnē, in the 10th century it was the seat of an independent Bagratide (Armenian) principality. It was occupied by the Turks in 1546, but its possession was frequently disputed by the Russians, and it was incorporated with Russia by the treaty of Berlin. When the Russians withdrew from Armenia in the winter of 1917-18, the Turks conducted a successful offensive in Caucasia, capturing Kars on April 27, 1918, and other towns. Pop. 25,000.

Kars. The town and fortress long contended for by Russians and Turks

Karst. Also known as Carso (q.v.), this is a limestone district of Yugoslavia, embracing large areas N. and E. of the Adriatic.

KASHGAR. Town of Sinkiang, in the district of Kashgar. It consists of two towns, an old and a new, separated by the river Kizil Daria, and is the seat of the governor of the district. There are manufactures of cottons, silks, and carpets. From very early times an important commercial centre, it has frequently changed hands. Pop. about 70,000.

KASHMIR. Native state of India, N. of the Punjab. The upper Indus, with the Gilgit tributary, forms a valley stretching from the S.E. to the N.W. of the State. N.E. of this and parallel to it lie the Karakoram Mts.; S.E. are the Himalayas, and S.W. of them the upper valleys of the Jhelum and Chenab. The Jhelum valley is the famous vale of Kashmir, overlooked by many lofty peaks. The Indus area is peopled mainly by nomad shepherds. Rice, buckwheat, millet, etc., are grown; and fruit and hides are exchanged for textile and metal goods. The ruler is a maharajah, with a salute of 21 guns. Srinagar is the capital. Under Asoka (q.v.), who founded Srinagar, began what is known as the golden age

Karri, the giant gum tree. Its wood is used for paving-blocks

of Kashmir. It reached its height when the Kashmiris defeated the victorious advance of Mahmud of Ghazni in the 11th century. Its area is 84,258 sq. m. Pop. 3,320,518.

KASSASSIN. Town of Egypt. Between Ismailia and Zagazig, 21 m. W. of Ismailia, it was the scene of actions fought Aug. 28 and Sept. 9, 1882, in which Arachi Pasha was defeated by the British.

KASSEL OR CASSEL. Town of Prussia, capital of Hesse-Nassau. It is on the Fulda, 90 m. N.N.E. of Frankfurt-on-Main. The Friedrichs-Platz separates old from new Kassel. From it runs the promenade Schöne Aussicht, on which is the Bellevue Schloss, once a royal residence. Near is the picture gallery, with paintings by Rembrandt, Frans Hals, Rubens, Van Dyck, etc. The Landes museum contains antiquities and other collections. Of the churches, that of S. Martin (14th century, restored) is perhaps the most interesting. Pop. 171,483.

KASSITE. People of non-Semitic origin frequently encountered in Babylonian history. Casual immigrants hearing the cuneiform name Kashshi, apparently from Elam, were living in Babylon under Hammurabi, about 2100 B.C. About 1780 Gandash founded the 3rd or Kassite dynasty, which ruled Babylon until 1200. Their chief contribution to W. Asian civilization was the introduction of the horse.

KATHODE OR CATHODE. Term used to denote the plate of a voltaic cell by which the current leaves the electrolyte or solution and flows to the external circuit. Thus, relatively to the electrolyte, the kathode is the negative plate (—), represented by the positive pole (+) of the external circuit. The anode, or positive (+) plate of the cell, by which the current enters the electrolyte, represents the negative (—) pole of the external circuit. See Cell; Electrolysis; Vacuum Tube

In a thermionic valve the filament is called the kathode. When heated by the current from a battery or other source it sends out electrons, which flow to the anode, or plate. See Anode; Grid; Thermionic Valve

KATRINE. Loch or lake of Scotland. It is almost wholly in Perthshire, with a little in Stirlingshire, and is 8 m. from Callander. About 8 m. long and 1 broad, it is 364 ft. above sea level, and covers nearly 5 sq. m. Its waters are carried by the Achray and Black Avon through lochs Achray and Vennachar to the Teith. Glasgow obtains much of its water from Loch Katrine. In the lake is Ellen's Isle (q.v.), and its scenery is described in Scott's *Lady of the Lake*.

KATTEGAT OR CATTEGAT. Arm of the North Sea, with which it is connected by the Skagerrak on the N. It lies between the E. coast of Jutland and the W. coast of Sweden, the islands of Fünen, Zealand, and Laland lying to the S., with the Sound, Great Belt, and Little Belt leading to the Baltic. Its length is about 150 m. from N. to S., breadth from 50 m. to 90 m., depth from 50 ft. in the W. to 200 ft. in the E. Shallow near its shores, the Kattegat is difficult of navigation.

KATYDID. Katydid. Laurel leaf variety. Popular name for certain American long-horned grasshoppers. Their chirping note, which is supposed to resemble the words *Katy did*, is heard by day and night. See Grasshopper.

Katydid. Laurel leaf variety. *Microcentrum laurifolia*

KAUFFMAN, ANGELICA (1741-1807) Swiss painter, usually classed with the English school. Born at Coire, Oct. 30, 1741, she studied at various centres in Italy, and in 1763 went to Rome. In 1766 she came to London, and painted portraits of the leading notabilities. Elected in 1768 one of the 36 foundation members of the R.A., to which she regularly contributed, she left London in 1781, in which year she married Antonio Zucchi, a Venetian painter. She died Nov. 5, 1807. She displayed exceptional skill in the decoration of the interiors of the mansions designed by the brothers Adam.

Angelica Kauffman,
Swiss painter
Self-portrait in the Acad
S. Luca, Rome

Kaunas. Alternative name of Kovno (q.v.), the capital of Lithuania.

KAURI PINE (*Dammara australis*). Large tree of the order Coniferae, native of New Zealand and Queensland. It stands 150 ft. high, with ovate-lance-shaped leaves and smooth oval cones. The timber is close-grained but soft, of a light yellow colour, and is used in joinery. The tree yields a hard, brittle resin, like dammar (q.v.).

KAVA. A shrubby plant, *Piper methysticum*, having narcotic properties. It is a native of Polynesia. An intoxicating drink is made from the fermented juice of the root.

KAVALLA OR **CAVALLA.** Town of Macedonia, Greece. At the head of the gulf of Kavalla, in the N. Aegean Sea opposite Thasos, it has a large tobacco trade, the district producing some of the best cigarette tobacco in the world. Its possession was one of the causes of the second Balkan War. Bulgaria claiming it from Greece, to whom it passed in 1913. During the Great War its forts were occupied by the Bulgars, Aug. 26, 1916, without opposition from the Greeks. British warships bombarded the forts, but on Sept. 12 the Greek garrison of 8,000 capitulated and the town was occupied by the enemy. The Greeks recovered Kavalla in Oct., 1918. Pop. 50,000. See Greece.

KAVANAGH, ARTHUR MACMORROUGH (1831-89). Irish politician. The son of Thomas Kavanagh, M.P., a landowner in co. Carlow, he was born March 25, 1831. He was remarkable because, although born without arms or legs, he lived the active life of his class. He rode, hunted and shot, and took a leading part in local affairs. From 1866 to 1880 he was an M.P., sitting on the Conservative side. Kavanagh, who married and had a family, died Dec. 25, 1889.

KAY, JAMES (b. 1858). Scottish painter. Born at Lamlash, Arran, Oct. 22, 1858, he exhibited at the R.A. from 1889, at the Salon from 1894, and in the U.S.A. His principal works include *Une Rivière du Nord*, 1903, in the Luxembourg; *Winter*, 1906, and *Un Canal, Ecosse*, 1909, in the Rouen municipal collection; *Launch of the Lusitania*, 1907, in the Glasgow municipal collection; *Launched—River Clyde*, 1907, in the Leeds municipal collection; *A Dutch Canal*, 1912, in the Bradford collection; and *In Search of Grist*, 1913, in the Stirling gallery.

KAYAK. Eskimo fish-
ing or hunting boat for one person, rarely used for two. A skin-covered wooden frame, about 18 ft. long by 2 ft. wide, it is propelled by a double paddle.

Kayak. Skin-covered fishing boat used by Eskimos

The occupant is encased in a skin coat laced to the canoe. See Eskimo.

KAYE-SMITH, SHEILA. British novelist. Putting to good advantage an intimate knowledge of life in the Sussex villages, she made a hit with her first book, *The Tramping Methodist*, 1908. Others, mainly in the same vein, include *Starbrace*, 1909; *Sussex Gorse*, 1916; *Tamarisk Town*, 1919; *Green Apple Harvest*, 1920; *The End of the House of Alard*, 1923; *The George and the Crown*, 1925; *Saints in Sussex*, 1926; *Iron and Smoke*, 1928; and *The Villago Doctor*, 1929.

Kayseri. Alternative name for the Palestine village of Kaisariyeh (q.v.).

KAZAK. Autonomous republic of Soviet Central Asia. It comprises a vast tract of country W. of Mongolia and S. of the Ural and Siberian areas. The capital is Kzyl-Orda (Ak-Mechet). The area is about 1,125,000 sq. m. Pop. about 6,530,000.

KAZAN. Town of the Union of Socialist Soviet Republics, capital of the autonomous Tartar republic. It stands on the Kazanka, near its junction with the Volga. It has a university. Kazan is an important place on the trade routes to Siberia, China, and Persia. Originally a Mongol khanate, it was conquered by Russia in 1552. Many of the inhabitants are Mongol Tartars. Pop. 174,732.

Kea. A New Zealand parrot

took to haunting the sheep-stations and feeding on the offal of sheep killed for consumption. It soon showed a preference for the fat surrounding the kidneys, and later became a bird of prey, attacking living sheep on the runs, and tearing off the wool and flesh of the loins to reach the kidneys. The kea is somewhat larger than the kaka (q.v.).

KEAN, CHARLES JOHN (1811-68). British actor. Born at Waterford, Jan. 18, 1811, the second son of Edmund Kean, he became an actor, but failed to achieve popularity until 1838, when he played Hamlet at Drury Lane. In 1850 he became lessee of the Princess's Theatre, and from 1852-59 produced gorgeous Shakespearian revivals. He died Jan. 22, 1868.

Kean's wife, Ellen Tree (1805-1880), whom he married in 1842, was an actress who made her debut at Covent Garden in 1823 as Olivia in *Twelfth Night*. She appeared with him in his Shakespearian revivals at the Princess's, and was also notable for her Lady Teazle, Jane Shore, and other rôles.

KEAN, EDMUND (1787-1833). British actor. Born in London, March 17, 1787, after a childhood of hardship, he took to the stage, playing in various touring companies, and suffering much privation. Given a chance by the Drury Lane management, he made a memorable and triumphant debut in the part of Shylock, Jan. 26, 1814. Success also attended his appearances as Richard III, Hamlet,

Charles John Kean,
British actor

Othello, Lear, and Macbeth, and he achieved popularity as Sir Giles Overreach in Mas-singer's comedy *A New Way to Pay Old Debts*, Leon in Beaumont and Fletcher's *Rule a Wife and Have a Wife*, Young Norval in Home's *Douglas*, and Rolla in Sheridan's *Pizarro*. He visited the U.S.A. in 1820 and 1825. He was regarded when at the height of his powers as the greatest tragedian of his day. Small in stature, he had a fine head, flashing eyes, and a voice of a rare magnetic quality. He died at Richmond, May 15, 1833.

Edmund Kean,
British actor

After S. J. Stump, in the
Nat. Portrait Gallery

KEARSLEY. Urban district of Lancashire. It is 4 m. from Bolton, on the L.M.S. Rly. The chief industries are connected with the coal mines in the neighbourhood. Pop. 9,610.

KEATE, JOHN (1773-1852). English school-master. Born at Wells, and educated at Eton and King's College, Cambridge, from 1809-34 he was headmaster of his old school. Under him the tone and character of the school were greatly improved, but he is best remembered for his vigorous floggings. He died Mar. 5, 1852.

KEATS, JOHN (1795-1821). English poet. Born in London, Oct. 29 or 31, 1795, the son of a livery stable keeper, he was apprenticed in 1810, after the death

of his parents, to a surgeon in Edmonton. In 1816 he became dresser at Guy's Hospital, but soon afterwards abandoned surgery for literature, having meanwhile made the acquaintance of Leigh Hunt, Hazlitt, Haydon, Shelley, and Godwin. His first volume of poems, published in 1817, achieved no recognition. It was followed in 1818 by *Endymion*, which was savagely attacked by *The Quarterly Review* and *Blackwood's Magazine*. In 1820 he published another volume, *Hyperion and Other Poems*, containing *Lamia*; the *Odes to Autumn*, *To a Nightingale*, and *On a Grecian Urn*; and the ballad *La Belle Dame Sans Merci*. A breakdown in health, for which his infatuation for Fanny Brawne was partly responsible, drove him from England in the same year. He died in Rome, Feb. 23, 1821.

From 1817-20 Keats lived at Hampstead, and his house in Keats Grove (formerly John St.) is now preserved as a memorial. Consult *Keats and His Poetry*, W. H. Hudson, 1911; *The John Keats Memorial Volume*, ed. J. C. Williamson, 1921.

KEBLE, JOHN (1792-1866). British divine and poet. Born at Fairford, Gloucestershire, April 25, 1792, he was ordained in 1815, and in 1816 became curate of two small parishes near his native place. In 1827 he published anonymously his most famous work, *The Christian Year*. Keble was professor of poetry at Oxford, 1831-41. In 1836, having already become identified with the Oxford Movement (q.v.), which had its origin in a sermon on National Apostasy preached by him at Oxford, he became vicar of Hursley, Hants. He died Mar. 29, 1866.

John Keble,
British divine
After G. Richmond, R.A.

Kehle College, Oxford, was founded in 1870 as a memorial. Undergraduates are all members of the Church of England. The buildings, which are in Parks Road, include a magnificent chapel in which Holman Hunt's *Light of the World* is preserved.

KEDLESTON. Village of Derbyshire, 4 m. from Derby. Here is Kedleston Hall, the seat of the Curzons and, until his death in 1925, of the Marquess Curzon. It was built between 1759-68 in the classical style. The Curzons have lived here since about 1100. In 1930 it was announced that the library and art treasures would be sold.

KEENE, CHARLES SAMUEL (1823-91). English illustrator. Born at Hornsey, London, Aug. 10, 1823, he began to work intermittently for Punch in 1851, and from 1860 was a full member of the staff. He illustrated books in general literature as well, such as Douglas Jerrold's *Mrs. Caudle's Curtain Lectures*. But his brilliant work on Punch constitutes his title to fame, and it is universally recognized that he was one of the most consummate draughtsmen in black and white ever known. He died in London, Jan. 4, 1891.

Charles S. Keene, English illustrator

KEEP. In architecture, the stronghold and residential part of a medieval castle in time of siege. The Norman square keep was the highest of the castle buildings, and generally occupied the highest site. Another type of keep was the "shell" keep, a polygonal or round structure, entirely surrounded by its own ditch, across which was carried a drawbridge. The most notable extant example of the square keep is the White Tower of the Tower of London, while the shell keep is worthily represented at Windsor, Arundel, and Warwick castles.

KEETMANSHOOP. Town of the S.W. Africa Protectorate. It is 573 m. from Walvis Bay, and has railway engineering shops. Pop. 2,633, Europeans 944.

KEEWATIN. One of the three provisional districts of the North-West Territories, Canada. Its area is 228,160 sq. m. The name is connected with Cree, the north-west wind. The old district of Keewatin was much larger, but in 1905 parts of it were given to Ontario and Manitoba.

The town of Keewatin, in Ontario, is a summer resort. It stands on Lake of the Woods, 130 m. S.E. of Winnipeg, with a station on the C.P.R. Pop. 1,327.

KEIGHLEY. Borough and market town of Yorkshire (W.R.). It is 9 m. from Bradford and 17 m. from Leeds, on the L.M.S. and L.N.E. Rlys., being also served by a canal. Keighley has manufactures of worsted goods, textile machinery, sewing machines, machine tools, etc. In 1921 it adopted the French town of Poix-du-Nord. Market day, Wed. Pop. 41,550. Pron. Keethly.

KEITH. Burgh of Banffshire, Scotland. It stands on the Isla, 53 m. from Aberdeen, and is served by the L.N.E. and L.M.S. Rlys. It consists of three parts, Old Keith and New Keith on the right bank of the river, and Fife Keith on the left. Old Keith, made a corporate town in the 12th century, lost its early prosperity, and in the 18th century New Keith was built. Pop. 4,270.

KEITH, SIR ARTHUR (b. 1866). British scientist. Born Feb. 5, 1866, he took his degree as a doctor, becoming famous as an authority on comparative anatomy and anthropology. He held many appointments with learned societies, and was conservator

of the museum and Hunterian professor at the Royal College of Surgeons. In 1913 he was made F.R.S., and in 1921 he was knighted.

He was president of the British Association in 1927. His writings include *The Human Body*, 1912; *Antiquity of Man*, 1915; *Religion of a Darwinist*, 1925; *Concerning Man's Origin*, 1927; and many others of similar character.

KELHAM. Village of Nottinghamshire. It stands on the Trent, 2 m. N.W. of Newark. The hall, formerly the seat of Lord Lexington, is a house of the Society of the Sacred Mission, wherein men are trained for the Anglican ministry. In 1928 a new chapel was opened. The village is the site of a sugar beet factory started in 1924.

KELLER, HELEN ADAMS (b. 1880). American blind deaf mute. Born at Tusculum, Alabama, June 27, 1880, she was deprived when 19 months old of sight, smell, and hearing, by an attack of scarlet fever. Miss Anna Sullivan, of the Perkins Institute of the Blind, taught her the deaf and dumb language by touch, reading by the Braille system, writing and typewriting, and, in 1890, how to speak. In 1904 she graduated with honours at Radcliffe College, Boston. She published *The Story of My Life*, 1902, and other books.

Sir Arthur Keith, British scientist

Helen Keller

KELLERMANN, FRANÇOIS CHRISTOPHE (1735-1820). French soldier. Born in Strasbourg, May 28, 1735, in 1752 he entered the French army, and had reached high rank when the French Revolution broke out. He was given a command in the republican army, and was responsible for its victory at Valmy, in 1792. In 1804 he was made a marshal, and in 1809 duke of Valmy. Kellermann supported the Bourbons after 1814, and was made a peer. He died Sept. 23, 1820.

His son François Étienne (1770-1835) was also a distinguished soldier, serving under Napoleon.

KELLOGG, FRANK BILLINGS (b. 1856). American diplomatist. Born in Potsdam, N.Y. State, he became a lawyer, and as such was retained by the United States Corporation. He became widely known as prosecuting counsel for the U.S. against the Standard Oil Company, and was elected to the Senate in 1916. He was United States ambassador to Great Britain in 1923-25, and became secretary of state, U.S.A., 1925. As secretary of state his name was associated with the pact for ensuring world peace proposed by the U.S.A. in 1928, and declared operative in 1929.

KELLS. Urban dist. of co. Meath, Irish Free State. It stands on the Blackwater, 10 m. from Navan, with a station on the G.N. of I. Rly. Its antiquities include S. Columba's House, a round tower, and several stone crosses. There is a modern church, with an old detached bell tower rebuilt in 1572. Kells owed its existence to the fact that the kings of Ireland made it a royal residence. In the 6th

century S. Columba founded here a monastery in which the Book of Kells was written. It was a bishopric, 800-1300. Pop. 2,196.

The Book of Kells is the finest extant early Irish illuminated MS. of the Gospels. Dating from the 8th century, it is now preserved in Trinity College, Dublin.

KELLY, EDWARD (1854-80). Australian bushranger. Familiarly known as Ned Kelly, he was the eldest of three sons of an ex-convict. Following a charge of horse-stealing, he and his brother Daniel took to the hills and inaugurated a reign of terror in Victoria and New South Wales, varying their cattle-thefts by raiding and burning banks and government property. On June 27-28, 1880, the gang was rounded up, and Ned Kelly was wounded and captured. He was afterwards tried, convicted, and hanged Oct., 1880.

KELMSCOTT PRESS. Private printing press founded by William Morris (q.v.). Started in 1890 in a cottage adjacent to Morris's residence, Kelmscott House, Hammer-smith, it was removed, in 1891, to Sussex House, near by. In seven years 53 works in 65 volumes were produced, including *The Story of the Glittering Plain*, and reprints of Chaucer's *Golden Legend* and Recueil of the *Histories of Troy*. Consult *Life of W. Morris*, J. W. Mackail, 1899.

KELP. Name given to the slag or ash obtained by burning seaweed, and also to the seaweed itself. Kelp production was formerly an important industry in the West Highlands of Scotland, and is still carried on there to a small extent, and in Normandy. From kelp are obtained soda and potash salts and iodine, but cheaper methods of producing these commodities had virtually extinguished the kelp industry in Great Britain before the Great War.

Kelpie. Spirit in Scottish folklore. It was supposed to haunt fords and streams, especially as a horse, on stormy nights.

KELSO. Burgh of Roxburghshire, Scotland. It is situated 52 m. S.E. of Edinburgh, on the L.N.E. Rly., at the junction of the rivers Teviot and Tweed. Kelso is an important agricultural centre, with corn and cattle markets and an annual fair. Its early importance was due to its abbey, founded about 1120 by David I; it was dissolved at the Reformation. Much of the cruciform church, including the great central tower, remains, but little else. In 1919 the ruins were given to the nation by the duke of Roxburgh. Pop. 3,527.

Book of Kells. Facsimile of illuminated miniature from this fine early Irish MS.

KELTY. Mining centre of Fifehire, Scotland. It is 8 m. by rly. N.E. of Dunfermline, on the L.N.E.R. Pop. 7,800. A river of this name forms part of the boundary between Stirlingshire and Perthshire.

KELVIN. River of Scotland. Rising in the Kilsyth Hills, it flows into the Clyde near Partick, after a course of 21 m., largely through the urban districts W. of Glasgow. It gives its name to a public park of Glasgow, Kelvin-grove. Kelvinhaugh is a district of Glasgow, containing docks. See Glasgow.

KELVIN, WILLIAM THOMSON, 1st BARON (1824-1907). British physicist. Born in Belfast, June 26, 1824, he was appointed professor of natural philosophy at Glasgow in 1846, an appointment he held for 53 years. In 1854 he published his paper *On the Theory of the Electric Telegraph*; in 1856 came his

invention for receiving messages, the mirror galvanometer; and in 1857 he took a leading part in laying the first Atlantic submarine cable. In 1867 appeared his paper On Vortex Atoms, one of the most remarkable theories of matter ever put forward. In 1884 he delivered a series of lectures at Baltimore on Molecular Dynamics and the Wave Theory of Light which have had a lasting effect upon human thought. Some sixty important inventions are due to Kelvin.

Lord Kelvin,
British physicist
Russell

His remarkable research work brought him numerous honours. He was president of the Royal Society 1890-94, was made a peer in 1892, and was the first member of the Order of Merit, 1902. Consult Life, S. P. Thompson, 1902.

KEMAL PASHA, GHAZI MUSTAPHA (b. 1882) Turkish nationalist leader. Born at Salonica, in 1915 he was commander of the Turkish army in Gallipoli. After the armistice of 1918 he gathered around him a band of followers, and in April, 1920, was the chief instrument in setting up the Grand National Assembly of Turkey at Angora (q.v.), which in November, 1922, abolished the office of the sultanate. Kemal soon became the virtual ruler of Turkey, and his unyielding attitude in negotiations with Britain ended in Turkey's recovery of practically her pre-war European territory as embodied in the treaty of Lausanne, July, 1923. In Oct., 1923, he became president of the Turkish republic. See Turkey.

Kemal Pasha,
Turkish leader

KEMBLE, CHARLES (1775-1854). British actor. Younger brother of John Kemble and Mrs. Siddons, he was born at Brecon, Nov. 25, 1775. He appeared first on the stage at Sheffield in 1793. In 1794 he acted in Macbeth in London and played a number of successful parts, chiefly in comedy, until 1840, when he retired. He died Nov. 12, 1854.

KEMBLE, FRANCES ANNE OR FANNY (1809-93). British actress. Born in London, Nov. 27, 1809. the elder daughter of Charles Kemble, she made her first appearance on the stage at Covent Garden, Oct. 5, 1829, as Juliet to her father's Mercutio. In 1848 she began at Willis's Rooms the first of her series of Shakespearean readings. She was the author of several plays and poems, and in addition wrote autobiographical volumes of reminiscences. She died in London, Jan. 15, 1893.

Fanny Kemble,
British actress
After Sir Thos.
Lawrence

Her younger sister Adelaide (c. 1814-79) was a successful opera singer at Covent Garden.

KEMBLE, JOHN PHILIP (1757-1823). British actor. Born at Prescott, Lancashire, Feb. 1, 1757, eldest son of Roger Kemble, a theatrical manager, and brother of Mrs. Siddons, he made his first London appearance at Drury Lane, Sept. 30, 1783, as Hamlet. From 1788-96, and in 1801-2, he was manager of Drury Lane, and from 1803 to 1817 of Covent

John Philip Kemble,
British actor
After Sir Thos.
Lawrence

Garden. His Coriolanus, Brutus, Cato, Hotspur, and Hamlet were deemed his most successful impersonations. He died at Lausanne, Feb. 26, 1823.

KEMMEL. Village and hill of Belgium. The village is 5 m. S.W. of Ypres, and the hill, Mont Kemmel, half a mile S.W. of the village. Both came into prominence in the later stages of the Great War. The village was used by the British as a rest billet. Mont Kemmel (512 ft.), defended by the French, was stormed by the Germans, April 25, 1918. The Allies recaptured the village on April 26, but soon retired from it, capturing it again in Aug. A British memorial has been erected here.

KEMP, SIR ALBERT EDWARD (1858-1929). Canadian politician. Born in Quebec, Aug. 11, 1858, he became a successful manufacturer at Toronto. He entered political life in 1900 as Conservative M.P. for East Toronto, which he represented until 1908, and for which he was again returned in 1911. He was minister without portfolio, 1911-15; minister of militia and defence, 1916-17, and minister of overseas military forces, 1917-20, with headquarters in London. In 1921 he was made a member of the Senate. Kemp was knighted in 1917 and died Aug. 12, 1929.

KEMPENFELT, RICHARD (1718-82). British sailor. Born at Westminster, the son of a Swede in British service, he entered the navy as a boy. He was appointed captain of the Elizabeth in 1757 and fought at Pondicherry in 1761. Captain of the fleet, 1778, and rear-admiral 1780, he went to sea again in 1781 and defeated a large French fleet off Ushant. In 1782 he was ordered to refit the Royal George. On the guns being shifted to mend a leak the vessel foundered, and nearly all the 800 on board perished, including Kempfenfelt, Aug. 29, 1782. The incident forms the theme of William Cowper's The Loss of the Royal George.

KEMPSEY. Town in New South Wales. On the Macleay river, 225 m. from Sydney by steamer, it exports maize, butter, and timber (cedar) produced in the district. Pop. 3,000.

KEMPSTON. Urban dist. of Bedfordshire. It stands on the Ouse 2 m. W.S.W. of Bedford. Pillow-lace making is carried on. All Saints' church is Norman, with a Decorated nave. Relics of Roman-British and Anglo-Saxon cemeteries have been obtained from gravel pits. Pop. 5,218.

KEMPTON PARK. District of Sunbury, Middlesex. The manor house became a royal dwelling, and so remained until the time of Edward III. With Hanworth (q.v.) Park, Kempton Park formed a hunting ground for Henry VIII. Kempton Park covers about 500 acres, 300 of which are enclosed to form a racecourse. The principal races here are the Great Jubilee Stakes in spring and the Duke of York Stakes in autumn. There is a station on the Southern Rly.

KEMP TOWN. District of Brighton. At the E. end of the borough, it has a station on the Southern Rly. The marine parade, Madeira drive, and an electric rly. connect it with Brighton proper. See Brighton.

KEMP-WELCH, LUCY ELIZABETH (b. 1869). British painter. Born at Bourne-mouth, she received her art training at the Herkomer School, Bushey, and exhibited at the Royal Academy after 1894. She devoted particular attention to animals, especially the horse. Her pictures, distinguished by vigour of design, admirable technique, and fine colouring, include Colt Hunting in the New Forest, 1897; Lord Donald's Dash on Ladysmith, 1901; and Timber Hauling, 1904.

KEMSING. Village of Kent. Below the Pilgrims' Way (q.v.), between Otford and Wrotham, it contains an ancient church,

restored in 1870, and a well, dedicated to the Saxon priocess, S. Edith, who is said to have been born here. Her image was long venerated as powerful for the preservation of grain.

KEN, THOMAS (1637-1711). English prelate. Born at Berkhamstead, he was ordained in 1662. For some years he was engaged in clerical work in Winchester, and in 1679-80 he was at The Hague as chaplain to Mary, princess of Orange. In 1685 he was made bishop of Bath and Wells, but he was deprived in 1691 as a nonjuror. Ken was one of the seven bishops who refused to read the Declaration of Indulgence in 1688. After 1691 he lived in retirement until his death at Longleat, March 19, 1711. Above all he is known as a hymn writer, two of his hymns being Awake my soul and with the sun, and Glory to Thee, my God, this night. See Nonjurors; Seven Bishops.

Thomas Ken,
English prelate

KENCHESTER. Village of Herefordshire. Near the Wye, 5 m. above Hereford, it is the site of the Romano-British town of Magna Castra. Excavations in 1912-13 revealed a street, houses with mosaic pavements, hypocausts, lead drains, Samian ware, and coins.

KENDAL. Borough and market town of Westmorland, in full, Kirkby-in-Kendal. It stands on the Kent, 21 m. from Lancaster and 251 m. from London, on the L.M.S. Rly. It is connected with Lancaster and Preston by canal. The Gothic church of Holy Trinity dates in part from the 13th century. The principal manufactures are woollen goods of various kinds, boots and shoes, agricultural machinery, paper, snuff, and tobacco. It has horse and cattle fairs. Kendal grew up round a castle built before 1066. Market day, Sat. Pop. 14,146.

The title duchess of Kendal was given in 1718 by George I to his mistress, Ehrengard Melusina (1667-1743), a daughter of a count of Schulenburg. Owing to her thinness, she was called the maypole. The title became extinct on her death, May 10, 1743.

KENDAL, MARGARET (b. 1849). British actress, whose early successes were won in her maiden name of Madge (for Margaret) Robertson. Born at Cleethorpes, Lincolnshire, March 25, 1849, a sister of T. W. Robertson, the dramatist, she made her London debut July 29, 1865, as Ophelia at The Haymarket, where she was also successful in old English comedies. At the old Prince of Wales's she appeared in Diplomacy, 1878, and from 1879-88 she played at The St. James's, more particularly in The Squire, The Ironmaster, and Clancarty. Her greatest triumph in her later years was in The Elder Miss Blossom. She married W. H. Kendal in 1869 and retired 1908. She received the D.B.E., 1926.

Kendal, Margaret and William
Kendal, in Diplomacy

Her husband, William Hunter Kendal (1843-1917), whose real name was Grimston, acted as her leading man for many years, and from 1879-88 managed The St. James's in association with John Hare.

KENFIG. Old town of Glamorganshire, Wales. It is on the coast, 6 m. from Bridgead. The English settlers built a castle here, and

before the 16th century it was a municipality and market town. It was partly destroyed by the sea about 1700, but remained a borough with its portreeve and recorder. Pop. 300. Kenfig Pool is a lake near.

Kenilworth Castle ruins, Warwickshire, showing Caesar's Tower on the right

KENILWORTH. Urban district of Warwickshire. It is 4 m. N. of Warwick, on the L.M.S. Rly. Pop. 7,598.

Kenilworth is chiefly noted for its castle, which figures in Sir Walter Scott's *Kenilworth*. John of Gaunt built the Strong Tower (Mervyn's Tower), the banqueting hall, and the White Hall, and further additions were made by Henry VIII and by Robert Dudley, earl of Leicester, upon whom, in 1562, it was conferred by Queen Elizabeth, who visited the castle several times. During the Civil War most of the castle was dismantled, and lake and moat drained.

The church of S. Nicholas has a Norman door, taken from the Augustinian priory, founded by Geoffrey de Clinton and destroyed by Henry VIII. Near are Stoneleigh Abbey and Baddesley Clinton, notable for its moated manor house. The Ban or Dictum of Kenilworth embodied terms offered to the garrison by Henry III, Oct. 31, 1266, when besieging the castle during the Barons' War.

KENLEY. Parish of Surrey. It is 17 m. S.E. of London, between Purley and Whyteleafe, on the Southern Rly. Kenley Common is the property of the corporation of the city of London. Part was acquired by the air ministry in connexion with the aerial defence of London. Pop. 2,034. There is a village of this name in Shropshire, 4 m. from Much Wenlock. S. John's Church dates from Saxon times.

KENMARE. Town of co. Kerry, Irish Free State. Near the head of the Kenmare river—an opening of the sea between cos. Kerry and Cork—which is crossed by a suspension bridge, and the terminus of a branch of the G.S. Railways, it is a favourite tourist centre. Near are Dunkerron Castle, the old home of O'Sullivan More; and Derreen, a residence of the marquess of Lansdowne. Pop. 883. See Kerry.

Earl of Kenmare is an Irish title borne since 1801 by the family of Browne. Sir Valentine Browne was made a baron and a viscount in 1798, and an earl in 1801. Valentine, the 4th earl, was an M.P. from 1852 to 1871, and was lord chamberlain 1880-85. The earl's seat is Kenmare House, Killarney, and his eldest son is known as Viscount Castlerosse.

KENNEDY, BENJAMIN HALL (1804-89). British scholar. Born at Summer Hill, Birmingham, Nov. 6, 1804, he became fellow and lecturer at S. John's College, Cambridge, in 1828, and was ordained. In 1830 he became a master at Harrow, and from 1836-66 was headmaster of Shrewsbury. In 1867 Kennedy became regius professor of Greek at Cambridge and canon residentiary of Ely.

He died April 6, 1889. He is best known by his *Public School Latin Grammar*.

His younger brother, Charles Rann Kennedy (1808-67), translated various classical authors, but his main work was as a barrister; he was also professor of law at Queen's College, Birmingham. Kennedy's nephew, William Rann Kennedy (d. 1915), was a famous lawyer who became a lord justice of appeal.

KENNEDY, MARGARET. British novelist. The daughter of a barrister, C. M. Kennedy, she was educated at Cheltenham and Somerville College, Oxford. Her first book was an historical study, *A Century of Revolution*, 1922, but she won fame by her novel, *The Constant Nymph*, 1924, which has been dramatised. In 1927 she published *Red Sky at Morning*, *Come with Me*, 1928, and she collaborated with Basil Dean in a play. In private life she is Mrs. David Davies.

KENNEL (Fr. *chenil*, late Lat. *canile*). Building or range of buildings in which dogs are kept. The name is also used loosely to include the staff and the entire organization of such an establishment.

The Kennel Club is a society founded in 1873 by S. E. Shirley to promote the interests of dog-breeders. All leading shows are held under its rules. Its house is 84, Piccadilly, London, W.1.

KENNET. River of Wiltshire and Berkshire. Rising on the Wiltshire Downs and flowing 44 m. in a generally E. direction to the Thames at Reading, it is noted for trout. It is navigable to Newbury.

The Kennet and Avon Canal passes through Berkshire, Wiltshire, and Somerset. It connects Reading with Bath. Including the Kennet river and Avon river sections, it measures 86½ m., and has 106 locks. Between Devizes and Bradford-on-Avon it is joined by the Wilts and Berks Canal.

Kennington Oval. The famous cricket ground of the Surrey County Cricket Club

KENNINGTON. District of the London bor. of Lambeth (q.v.). Kennington Road runs from Westminster Bridge Road to Kennington Park. Kennington Park covers part of what was once Kennington Common, which was the scene of the execution of many who took part in the Jacobite rising of 1745, and the meeting place selected for the great Chartist demonstration of 1848. Opposite the park is Kennington Oval, the ground of the Surrey County Cricket Club. Much of the property belongs to the duchy of Cornwall.

KENNINGTON, ERIC HENRI (b. 1888). British artist. Born in London, March 12, 1888, he studied art at the Lambeth School of Art, 1905-7. His painting, *The Costard-mongers*, 1914, is in the Luxembourg, Paris. In 1914 he went to France with the 13th batt. London Regt., but was invalided home in the summer of 1915. Shortly afterwards his large painting on glass, *The Kensingtons at Laventie*, attracted wide attention by its nobility of design. During 1917-18 he was an official artist on the Western front.

KENORA. Town of Ontario, Canada, formerly known as Rat Portage. It stands where the Winnipeg river issues from Lake of the Woods, 133 m. E. of Winnipeg, on the C.P.R. It has flour and other manufactures and a trade in lumber, and is a distributing centre for a mining district. Pop. 5,407.

KENSAL GREEN. District of N.W. London, on the L.M.S. and Bakerloo (Tube) Rlys. It lies between Kilburn and Harlesden, on the Harrow Road, and is notable for its two cemeteries, All Souls' and S. Mary's.

KENSICO. Village of New York state, U.S.A., 30 m. N. of New York City. A great concrete dam was completed here in 1916, by enclosing a part of the Bronx river. It forms a reservoir capable of holding water for ten weeks' supply to the city.

KENSINGTON. One of the 28 metropolitan boroughs of the county of London. Known as the royal borough, it covers 2,291 acres and includes the districts of Brompton, Campden Hill, Earl's Court, Holland Park, with Holland House, Notting Hill Gate, and Queen's Gate. The parish church of S. Mary Abbots is notable for its spire, 278 ft., long

Kensington Palace. South front of the palace, with statue of William III by H. Buncke

vaulted cloister, and fine peal of bells. The town hall, designed by R. Walker, was opened in 1880. Other buildings are the Natural History and Victoria and Albert Museums, Imperial Institute, and the Brompton Oratory. Kensington Canal ran from the Thames, near Battersea Bridge, to the Great Western Rd., near Kensington Palace. Pop. 175,686.

Kensington Gardens lie between Hyde Park and Kensington Palace. Herein is the Albert Memorial. The Round Pond, actually octagonal, the Sunk Garden, the Long Water (a part of the Serpentine), and the Broad Walk are other features.

Kensington Palace, a former royal residence, is an enlargement of the original Nottingham House, built in the reign of Charles II, and purchased from the 2nd earl of Nottingham by William III in 1689. The duke and duchess of Kent had apartments in the palace, and Queen Victoria was born there.

KENT. British cruiser. Launched in 1901, she displaced 9,800 tons, and had an armament of 14 6-in. guns, ten 10-pdrs., and two torpedo tubes. She won fame in the battle of the Falkland Islands by sinking

H.M.S. Kent. British cruiser laid down in 1924 and launched in March, 1928
S. Credit: Southsea

the Nürnberg, and later chased the Dresden. The ship was sold in 1920.

In 1924 a new Kent was laid down and in 1926 she was completed. The name ship of a class of five cruisers, she displaces 10,000 tons and is 590 ft. long. She carries eight 8-in. guns and steams 31½ knots. The cruisers are built to burn oil.

KENT. County of England. It lies between the estuary of the Thames and Sussex, with the sea on its E and S.E. sides. Its area is 1,525 sq. m. It is largely level, but the North Downs run through it. In the

In 1799 George III made his fourth son, Edward Augustus (1767-1820), duke of Kent. In 1818 he married Victoria Mary Louisa (1786-1861), widow of Emich Charles, prince of Leiningen, and was the father of Queen

Ohio and Mississippi, the chief rivers of the state. Agriculture is the principal industry. Maize and wheat are the predominant cereals, but tobacco is the largest crop.

Coal, petroleum, and natural gas are obtained, and the state is noted for its horses; manufactures include spirits, flour, and lumber, and timber products. Mineral springs occur, and there are limestone caves, including the Mammoth Cave. The railways have a track length of well over 4,000 m. Frankfort is the capital. The area is 40,598 sq. m. Pop. 2,553,000.

KEN WOOD or **CAEN WOOD.** London estate now the property of the nation. On high ground between Highgate and Hampstead, the house, which has N. and S. fronts, was reconstructed by Robert Adam and enlarged by George Saunders. The surrounding wood from which it takes its name is notable for cedars, beeches, and limes. In 1661 Thomas Vener and his Fifth Monarchy confederates fled here. Acquired later by the dukes of Argyll, Caen Wood was devised to the 3rd earl of Bute. It was bought in 1755 by William Murray, 1st earl of Mansfield, and belonged later to the earl of Iveagh, who left it by will to the nation, together with its valuable collection of pictures and grounds of 73 acres. The actual wood was

Kent. Map of the south-eastern county of England, famous for its orchards and hop fields and its historic associations

centre is the Weald, and in the S.E., around Romney, is a low, marshy area. The islands, in name only, of Sheppey and Thanet are in the county. The chief rivers are the Medway, Darent, and Stour. Maidstone is the county town. The W. end of the county is within the London area. Around Chatham and Rochester is a great industrial area, while Gravesend with its paper mills is another busy place. It is served by the Southern Rly.

Kent is a great hop growing county, and is noted for fruit and for sheep. Whitstable is famous for oysters. Coal has been found, and is worked. Canterbury and Tonbridge are noted cricketing centres. Those born east of the Medway are men of Kent and those born west of it are Kentish men.

Historically Kent is rich. Here are Thanet, where Hengist and Horsa and then S. Augustine landed; Canterbury and Rochester, with their cathedrals; Dover, Hythe, and other Cinque Ports; medieval castles at Rochester, Hever, Leeds, and elsewhere; memorable houses such as Penshurst and Knole. Places in the county figure in David Copperfield, The Pickwick Papers, etc. Pop. 1,411,867.

Kent was one of the Anglo-Saxon kingdoms, probably the first. It was settled by the Jutes, and in the 6th century was the most important of all the English kingdoms. Ethelbert was its best known king. Its independence was lost about 700, and it soon passed under the authority of Wessex.

KENT, EARL AND DUKE OF. English titles borne by various princes and others. As an hereditary title, the earldom began probably with Edmund, a son of Edward I. In 1405 it was revived for Edmund, Lord Grey of Ruthin, a descendant through his mother of the Hollands who had held it in the 14th century. Henry, the 12th earl, was made marquess of Kent in 1706 and duke in 1710, but the titles became extinct when he died in 1740.

Duke of Kent, British prince
After Sir W. Beechey R.A.

Victoria. On the duke's death, Jan. 23, 1820, the title became once more extinct.

KENTIGERN (c. 518-603) Scottish saint. A member of the Pictish royal family, he was educated at the abbey of Culross, where he was known by the name of Mungo (well-beloved). When a young man he lived for some years as a hermit at Glasgow, and was consecrated bishop of the district. He founded Glasgow Cathedral, and is the patron saint of the city. He also founded the monastery of S. Asaph.

Kentish Rag. Term used for a limestone of the Hythe beds found in Kent. It is used as a building stone and for road making.

KENTISH TOWN. District of N.W. London. It is a ward of the bor. of St. Pancras, S.E. of Parliament Hill Fields, between Haverstock Hill and Camden New Town. In 1670 the manor was acquired by the Jeffreys family, from whom it passed to that of Earl Camden. It is an industrial area with various manufactures and large railway yards. A polytechnic institute, the North-Western, was opened in 1929.

KENTUCKY. State of the U.S.A. Except in the E., which lies in the Allegheny region, and the S.E., broken by the Cumberland Mts., the surface is generally undulating. The N. and W. borders are formed respectively by the

saved from being built on, and opened to the public by King George in 1925.

KENYA. British crown colony in East Africa. Bounded N. by Abyssinia, S. by Tanganyika Territory, N.E. by Italian Somaliland, S.E. by the Indian Ocean, and W. by Uganda, it includes certain coast lands formerly belonging to the Sultan of Zanzibar (the Kenya Protectorate). Formerly a British protectorate, it was annexed to the crown in 1920. Jubaland was ceded to Italy

Kenya Colony. Map of the British possession formerly known as British East Africa. It is divided into seven provinces

in 1925. The colony is administered by a governor with an executive and a legislative council. Nairobi is the capital, and Mombasa

the chief port. The area is 225,100 sq. m. Pop. 2,891,691, including 12,000 Europeans.

The surface is mainly elevated plateaux, with broad valleys and isolated mt. peaks, including Mt. Kenya, 17,040 ft. Forests cover over 4,500 sq. m., the commonest and most valuable trees being the pencil cedar and the camphor tree. Agricultural products include coffee, maize, wheat, sisal, rice, coconuts, cotton, sugar cane, and fruits. Carbonate of soda is obtained from Lake Magadi. Gold, graphite, marble, limestone, and manganese are among the minerals found. The exports include coffee, sisal, flax, maize, carbonate of soda, oil seeds, hides, wool, and rubber. Trade is largely with Great Britain, but India, the U.S.A., Japan, and Germany are strong competitors. Almost the whole trade passes along the Kenya and Uganda Rly., which runs from Mombasa through Nairobi to Kisumu on Lake Victoria, and its branches. There are aerodromes at Kisumu and Nairobi.

In 1930 the British Government, having considered two reports on the subject, suggested that Kenya, Tanganyika, and Uganda should be united under a high commissioner and form a dominion of E. Africa. His duties would include the power to suspend any legislation he thought objectionable, and upon instructions of the secretary of state to initiate any legislation considered necessary. A new legislative council was also proposed. The proposition met with a good deal of opposition.

KENYON, SIR FREDERIC GEORGE (b. 1863). British author and librarian. Born in London, Jan. 15, 1863, he was appointed an assistant in the British Museum in 1889. He became assistant keeper of MSS., 1898, and director and principal librarian in 1909, retiring in 1930. He edited the works of Robert Browning, and various classical texts.

KEPLER, JOHANN (1571-1630). German astronomer. Born at Weil in Württemberg, Dec. 27, 1571, he was admitted to the foundation of the University of Tübingen at 17, and in 1594 was appointed professor of mathematics and astronomy at Graz. In 1600 he went to Prague as assistant to Tycho Brahe, whom he succeeded the following year. During the next 25 years he was astronomer and mathematician to Upper Austria, 1612, at Ulm, 1626, where he published the Rudolphine Tables, and to Wallenstein, 1628. He died Nov. 15, 1630. His greatest works were *Astronomia Nova*, 1609, and *Harmonices Mundi*, Libri V, 1619, containing his three laws of planetary motion.

Kepler's Laws are: (1) The orbit of each planet is an ellipse with the sun occupying one focus. (2) The areas described by the radius vector of a planet are proportional to the time taken in describing them. (3) The squares of the periodic times of the planets are proportional to the cubes of their mean distances.

KEPPEL, AUGUSTUS KEPPEL, VISCOUNT (1725-86). British sailor. Second son of the 2nd earl of Albemarle, he was born April 25, 1725, and entered the navy at the age of ten. He accompanied Anson on his voyage round the world (1740-44), and was promoted commander on his return. In 1754 he was given the command of the N. American squadron. Rear-admiral in 1762, vice-admiral in 1770, and admiral in 1778, he was appointed commander-in-chief of the fleet, and gave the

French battle off Brest. The action was indecisive, and Keppel was court-martialled for misconduct and neglect of duty, but was honourably acquitted. M.P. for Windsor in 1761, 1768, and 1774, and for Surrey in 1780, in 1782 he was made first lord of the admiralty and a viscount. Keppel died Oct. 2, 1786.

A relative, Sir Henry Keppel (1809-1904), had also a long and distinguished career in the navy, chiefly in Chinese waters, where he put an end to piracy in 1841. He died Jan. 17, 1904.

KERATIN. Chief constituent of horn, hoofs, and feathers. Keratin, dissolved in ammonia, is employed for coating pills the medicinal effects of which it is desirable to delay for a certain time. See Horn.

KERENSKY, ALEXANDER FEODOREVITCH (b. 1881). Russian politician. Born at Simbirsk, he joined the Russian labour party. At the beginning of the revolution he became minister of justice in the government formed by Prince Lvoff in March, 1917. When the government was reconstructed he became minister of war and marine. He was the prime mover in the offensive in July, 1917, and in that month formed a coalition government, of which he was premier as well as minister of war.

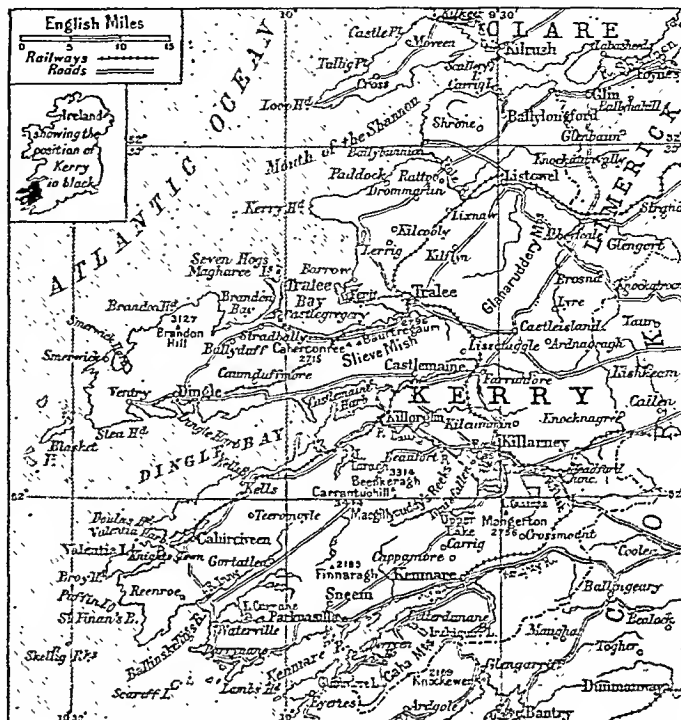

On Sept. 15 Kerensky proclaimed the Russian Republic, with himself as president of the provisional government and in chief command of all the Russian forces. During Oct. the power of the Bolsheviks increased, though Kerensky formed a new cabinet composed of socialists and moderates. Trotsky denounced this government, and on Nov. 8 he and Lenin carried out a coup d'état. Kerensky fled, eventually appearing in London in June, 1918. In 1919 he published a book entitled *Prelude to Bolshevism*. See Russia.

KERGUELEN LAND OR **DESOLATION ISLAND**. Uninhabited island in the S. section of the Indian Ocean (50° S., 70° E.). It was discovered by Kerguelen Trémarec in 1772, and annexed by France in 1893. Its area is about 1,400 sq. m. The Kerguelen cabbage is valued by mariners as a vegetable.

KERMES. Dye obtained from the dried bodies of female kermes insects. It has been displaced in modern times by cochineal, though still widely used in India and Persia. The kermes insect feeds on the kermes oak, *Quercus coccifera*, a hushy shrub with evergreen leaves. The size of a pea, the insects are extremely abundant in certain districts, and are killed with the fumes of boiling vinegar, afterwards being dried in the sun. The colouring matter, kermesic acid, dyes cloth a dark red.

Kermes mineral is the name applied to sulphurated antimony, an orange-red powder.

KERNAHAN, COULSON (b. 1858). British author. Born at Ilfracombe, Aug. 1, 1858, he first made a hit with *A Dead Man's Diary*,

Kerry. The Irish county which contains the lakes of Killarney and the loftiest mountains of Ireland. See below

1890. In the religio-imaginative sphere are to be noted his widely read booklets *God and the Ant*, 1895; *The Child*, the *Wise Man*, and the *Devil*, 1896; and *The Man of No Sorrows*, 1911. His novels include *Captain Shannon*, 1897, and *Scoundrels & Co.*, 1901. His best critical work is preserved in *Wise Men and a Fool*, 1901. Some of his many literary friendships are commemorated in *In Good Company*, 1917. Later works were *Celebrities*; *The Reading Girl*, 1925; and *The Garden of God*, 1928.

KEROSENE. Fluid hydrocarbon used for illumination. It is now prepared chiefly from petroleum, though bituminous coal and shales, fish oil, etc., have been used for its extraction. The flash-point, 150° C., makes the fluid safe under ordinary circumstances. Commercial kerosenes contain other hydrocarbons.

KERRY. County of the Irish Free State, in the prov. of Munster. With an area of 1,815 sq. m., its coast is penetrated by the Kenmare river, Dingle Bay, Brandon Bay, and Tralee Bay, and is fringed with islands, Valentia, the Blaskets, Skelligs, etc. There are plains of brown bog, pasture, and plough land, but the surface is generally picturesquely rugged and mountainous, Macgillycuddy's Reeks being a lofty range. The loughs include those of Killarney, Caragh, Currane, Inchiquin, and Glenmore. Agriculture and fishing are the chief industries. Tralee is the county town, others including Killarney and Listowel.

The county is rich in antiquities: Ogham stones, stone forts or cahers, beehive cells, chapels, the round tower at Rattoo, castles, abbeys, and cromlechs. Pop. 149,171.

KERRY CATTLE. Breed of native cattle found in S.W. Ireland. They are now of small size, averaging in weight about 900 lb. They are black in colour, but the cows often have a splash of white on the udder, while the skin is orange-coloured. Keries are chiefly valued as

Johann Kepler, German astronomer

A. F. Kerensky, Russian politician

Viscount Keppel, British sailor
After Reynolds

notable yielders of milk, but are also greatly esteemed for breeding purposes. See Cattle.

Earl of Kerry is the title borne by the eldest son of the marquess of Lansdowne (q.v.) The first holder was Thomas, Baron Fitzmaurice, who was created an earl in 1722. When the 3rd earl died in 1818 the title was inherited by Henry, 3rd marquess of Lansdowne.

KERTCH or **KERCH**. Town in the autonomous Soviet republic of Crimea, on the Strait of Kertch. Trade is done in wheat and furs, and there are soap, leather, and tobacco factories.

Kertch occupies the site of the ancient Milesian colony of Panticapaeum, afterwards the capital of the kingdom of Bosphorus. After belonging to the Genoese and Turks, it passed to Russia in 1773. It is rich in Greek archaeological remains. Pop. 26,000.

KESTEVEN. One of the three divisions of the county of Lincolnshire. Since 1888 it has been an administrative county with its own county council. The full name is the Parts of Kesteven. It is the central of the three divisions, and is watered mainly by the Witham. Its area is 733 sq. m. Pop. 108,237. See Lincolnshire.

Keston. Village of Kent. It is $3\frac{1}{2}$ m. S.E. of Bromley, and has a large and picturesque common. Pop. 1,029.

KESTREL or **WINDHOVER** (*Falco tinnunculus*). Group of small birds of the hawk tribe. The common kestrel is a resident in Great Britain and the lesser kestrel (*F. cenchris*) a rare visitor in spring and autumn. It is called windhover from its practice of hovering almost motionless in the air before swooping on its prey.

Kestrel, a small hawk

The plumage is brown, lightly barred with black, while the head, neck and tail are bluish grey. The average length of the bird is about 14 ins. The kestrel feeds almost entirely on mice and insects. See Hawk.

KESWICK. Market town and urban district of Cumberland. It stands on the Greta, 13 m. from Cockermouth, on the L.M.S. Rly. Situated at the lower end of Derwentwater, and overlooked by Skiddaw, it is within easy reach of the most beautiful scenery of the Lake District. Lead pencils are manufactured. Market day, Sat. Pop. 5,559. See Lake District.

KETCH. Two-masted vessel used in the coasting trade. A somewhat similar rig is also applied to a certain type of yacht. It is fore and aft rigged, with a short mizzen stepped forward of the rudder-post, while in the yawl the mizzen is abaft the rudder. In former days the ketch was rigged like a topsail schooner. It was then used mainly as a bomb vessel.

KETCH, JACK (d. 1686). English public executioner. He is notorious for his bungling executions of Lord William Russell in 1683 and of the duke of Monmouth in 1685. For a few months in 1686 he lost his position and was confined in the Bridewell, but was reinstated on his successor being himself hanged. His name has passed into common use as a nickname for any hangman.

KETTERING. Market town and urban district of Northamptonshire. It is 8 m. from Wellingborough, and 72 m. from London on the L.M.S. Rly. The Perpendicular church of

SS. Peter and Paul has a fine lofty spire. The main industries are the manufacture of boots and shoes, clothing, leather, etc. Kettering has a museum and art gallery presented by Sir Alfred East, and containing a collection of his works. In 1928 Wicksteed Park was opened as a public recreation ground. The town dates from Anglo-Saxon times, and was a thriving market town in the Middle Ages. Market day, Fri. Pop. 30,680.

KETTLE HOLE. Deep pot-shaped hole in rock attributed to glacial action. Potholes are found in Scandinavia, Switzerland, N. America, etc. The so-called glacial garden of Lucerne is famous for its kettle holes.

KEW. Suburb of London. In the borough of Richmond, with stations on the Southern and District Rlys., it is linked by King Edward VII Bridge, opened 1903, with Brentford. Near the centre of Kew Green, 13 acres, is the parish church of S. Anne, 1714.

Kew Palace, once a residence of George III, now a public museum

Dutch House, now known as Kew Palace, built by the son of a Dutch refugee in 1631, was bought by George III in 1781. Opened to the public in 1899, it contains a number of souvenirs of George III and his family.

The Royal Botanic Gardens at Kew cover 288 acres, and were opened to the public in 1841. They contain museums, palm house, temperate house, Victoria regia house, herbarium, arboretum, library, and lake. The grounds of Queen's cottage, built by George III and opened to the public in 1897, form a sanctuary for wild birds. Within the grounds are upwards of 24,000 different species and varieties of plants systematically arranged. See Banks, Sir J.

Kew Observatory, which is under the control of the Meteorological Office, is in Old Deer Park, Richmond, and was built in 1768.

Ketch yacht under full canvas

KEY. Implement for shooting or withdrawing the bolt of a lock. The word is also applied to a tool used for turning a nut or coupling-piece, and for a piece of metal driven in between two parts of a machine or structure to secure them.

In architecture, a key is something that holds together the parts of a fabric, as the keystone of an arch.

In music, the word key denotes a group of scale-sounds so related as to give the ear a definite sense of their starting point. Key is also the old term for the signs of pitch now more commonly called clefs. The term key signature is given to the signs at the beginning of a musical stave which indicate the key or scale in which the music is written.

KEYES, SIR. ROGER JOHN BROWNLOW (b. 1872). British sailor. He entered the navy in 1885, and in 1912 became commodore in charge of submarines. In the Great War he took part in the battle of Heligoland Bight and in the raid on Cuxhaven, and as commander of the Dover

Sir Roger Keyes, British sailor

Patrol he carried out the naval raid on Zeebrugge and Ostend, April 23, 1918, after which he was knighted. Created a baronet in 1919, he was awarded £10,000 for his services. After the war he was commander-in-chief in the Mediterranean, and then at Portsmouth. In 1930 he was made an admiral of the fleet.

KEYHAM. District of Devonport, included in the borough of Plymouth. It is served by the G.W.R. Here the government has engineering works and facilities for repairing ships; also naval barracks. At the naval college cadets take their engineering course. See Plymouth.

KEYNE. Welsh or Cornish saint. She is said to have lived in Wales about 485, and to have removed to Cornwall, where a famous well bears her name. According to another account, Keyne was a daughter of Prince Brughan of Wales, and lived as a recluse in a wood near Bristol.

KEYNES, JOHN MAYNARD (b. 1883). British economist. Born June 5, 1883, he was educated at Eton and King's College, Cambridge, of which he became fellow and bursar. In 1906 he entered the India office. Transferred in 1915 to the Treasury, in 1919 he represented the Chancellor of the Exchequer in the peace negotiations in Paris. Disagreeing with the terms of the treaty, he left the civil service. Editor of The Economic Journal since 1912, his writings include the much-discussed The Economic Consequences of the Peace, 1919; The End of Laissez-Faire, 1926; and A Treatise on Money, 1929.

KEYS, HOUSE OF. Name of lower house of the legislature (or Tynwald) of the Isle of Man. It is composed of 24 commoners elected for seven years, on a property qualification, by male and female suffrage, to represent the six sheadings, or divisions, and the four municipalities of the island. The word Keys is by some derived from the Scandinavian keise (chosen). See Man, Isle of.

KEYSERLING, HEIMANN (b. 1880). German philosopher. Born in Livonia, July 20, 1880, he was educated at Geneva, Dorpat, Heidelberg, and elsewhere. His education made him a scientist, but his early writings were on art, from which he soon turned to metaphysics. In 1906 appeared The Structure of the World, and in 1910 Prolegomena to Natural Philosophy. His ideas became known in Britain through the publication in 1925 of The Travel Diary of a Philosopher. In 1919 he founded a society, the "School of Wisdom," at Darmstadt.

Keystone of an arch in position

Khafrā. Egyptian king of the 19th dynasty. The Chephren of Herodotus, he built the second pyramid of Gizeh. See illus. above.

KHAKI (Hind. dusty). Dust-coloured fabric worn by troops on active service. Introduced by Sir H. B. Lumsden, it was first used by the corps of guides in 1848. It was worn by British troops in the Indian Mutiny, the second Afghan War, 1878-80, the South African War, 1899-1902, and the Great War, on account of its comparative invisibility at a distance. Several other nations adopted it.

Khafra, king of Egypt, builder of second pyramid of Gizeh. See below Statue in Cairo Museum

Khaki College was the name given to a Canadian educational organization in the Great War. Established in 1917 at Witley, in Surrey, its aim was to help young Canadian soldiers to equip themselves for the return to civil life. A similar work for British troops was organized in France and England.

KHALIFA OR **KHALEEFA**. Arab word meaning successor, adopted as his title by Abdullah el Taashi, the successor in 1885 of the Mahdi (q.v.). Born in Darfur, he was one of the Baggara Arabs engaged in the slave trade who resisted the Egyptian annexation of his native province. His power was broken by Kitchener at Omdurman, Sept. 2, 1898. He escaped to Kordofan, but was overtaken Nov. 24, 1899, at Om Debrikah by Anglo-Egyptian forces under Sir R. Wingate. In the ensuing battle the khalifa was killed.

KHAN. Persian-Tartar word meaning lord. Jenghiz, the 13th century Mongol ruler, was the first to call himself khan. In central Asia certain governors of cities and provinces are called khans, e.g. the Khan of Kelat. Khan is also the name for an inn.

KHARKOV. Capital of the republic of the Ukraine. It stands on three small streams which fall into the Uda, a tributary of the Donetz, 250 m. S.E. of Kiev. An important rly. junction, it is situated in a populous and fertile district, and is famous for its fair (horses and wool). Pop. 417,000.

KHARTOUM OR **KHARTUM**. Capital of the Anglo-Egyptian Sudan. It stands at the junction of the Blue and the White Nile, 1,345 m. from Cairo. It is connected by rly. with Sennar, El Obeid, Port Sudan, and Halfa. The city proper is on the S. side of the Blue Nile, across which is Khartoum North, a bridge connecting the two. Omdurman, just outside Khartoum, was the Mahdist capital. Since 1898 Khartoum has been rebuilt on modern lines. The chief buildings include the Anglican cathedral, Gordon Memorial College, governor-general's palace, government offices, hospital, clubs, and barracks. There are public and zoological gardens, a racecourse, and golf links. Much of the trade of the Sudan passes through here.

Khartoum was founded in 1830 by Mehemet Ali, but destroyed by the Mahdists in 1885, when, Jan. 26, 1885, Gordon was killed; but the site was recovered by the British in 1898, after the battle of Omdurman. Pop. 31,965.

Khartoum. 1. Gordon statue. Bronze copy of the statue at Osham. 2. Gordon Memorial College

KHEDIVE (Pers. khidiw, prince). Title of the former viceroy of Egypt. It was granted in 1867 by the sultan of Turkey to Ismail Pasha, and existed until Dec., 1914, when Abbas II was deposed by the British and a sultan installed in his place. On March 16, 1922, the reigning sultan was proclaimed king as Fuad I. See Fuad; Ismail Pasha.

KHERSON. Town and port of Ukraine. It stands on the right bank of the Dnieper, 20 m. from its mouth and 90 m. N.E. of Odessa. Pop. 58,809. There is another Kherson, situated 2 m. W. of Sevastopol.

KHIVA OR **KHWARIZMI** (anc. Chorasmia). With Bokhara and Tadjik part of the Soviet republic of Uzbekistan. Between Bokhara and the Kara Kalpak Territory, its area is about 26,000 sq. m., and its pop. about 900,000. It includes the fertile Amu-Daria delta. Wheat, barley, millet, rice, and fruit, especially melons, are cultivated. The chief industries are pottery, silk, and textile fabrics.

KHYBER PASS. Pass through the Khyber Mts. connecting India and Afghanistan. Always of military importance, the defile is 33 m. in length, and in parts only 15 ft. wide. The road which traverses the pass from Peshawar to Kabul was made by the British. A railway from Jampur to the Afghan frontier was opened in Nov., 1925.

KIANG (*Asinus hemionus*). Largest species of wild ass, native of Tibet. Its

Kiang. Species of wild ass which is a native of Tibet. W. S. Berridge, F.Z.S.

KIAO-CHAU. Bay and territory of Shantung prov., China. As compensation for the murder of two German missionaries the territory, 193 sq. m. in area, was leased in 1898 to Germany for 99 years. Pop. 200,000. The name of the port and chief town is Tsingtau. Captured by Anglo-Japanese forces Nov. 7, 1914, and allotted by mandate of the League of Nations to Japan, Kiao-chau was restored to China in 1922.

KICKING HORSE PASS. Pass through the Rocky Mts., Canada. It is on the borders of British Columbia and Alberta, near Banff, and about 200 m. N. of the U.S.A. boundary. It is 5,300 ft. high, and a trans-continental line of the C.P.R. passes through it.

KIDBROOKE. District of London. In the metropolitan borough of Greenwich, it is 7 m. south of the city and has a station on the Southern Rly. Here the Royal Air Force has a station which commands the route along the Thames to London.

KIDD, WILLIAM (c. 1650-1701). Scottish pirate. Emigrating to Boston, Mass., he commanded a privateer in the wars of William III. Appointed in 1696 to assist in the suppression of piracy, he became a very active pirate himself. In 1699 he was captured at Boston and sent to England, where he was tried at the Old Bailey, sentenced to death, and hanged, May 23, 1701.

KIDDERMINSTER. Mun. bor. and market town of Worcestershire. It stands on the

Stour, 15 m. from Worcester on the G.W.R. The chief buildings are the fine parish church of All Saints, S. George's church, and the town hall. There are memorials to Richard Baxter and Rowland Hill. The main industry is the manufacture of carpets, for which the town has long been famous. Market day, Thurs. Pop. 27,118.

KIDNAPPING. The forcible or fraudulent carrying away of any person, especially a child. In English law it is punishable by fine or imprisonment, or, in the case of children, by penal servitude. The word, a compound meaning to nab a kid, was chiefly used for the offence, specially prevalent in the 17th century, of seizing children and taking them to America to work on the plantations. The legal term is abduction. See Abduction.

KIDNEY. Organ which abstracts the waste material from the blood in the form of urine. In man the kidneys, two in number, are situated one on each side

of the spinal column. Their average length is 4 ins., breadth 2½ ins., and weight 4½ oz. in the male, and a little less in the female.

On the internal border of the kidney is a fissure through which pass the renal artery, which runs from the aorta, the renal vein, which joins the inferior vena cava, and the ureter, which conveys urine to the bladder. Internally the kidney consists of two parts—the cortical substance and the medullary portion. See Bright's Disease.

KIDNEY VETCH OR **LADY'S FINGERS** (*Anthyllis vulneraria*). Perennial herb of the order Leguminosae. A native of Europe,

Kidney Vetch, or lady's fingers

W. Asia, and N. Africa, it has a woody root-stock and numerous leafy stems. The leaves are divided into pairs of slender, oblong leaflets, and the yellow flowers are clustered in a head. The calyx is covered with silky wool and the leaves are adorned with silky hairs.

KIDRON. Torment valley between Jerusalem and the Mt. of Olives, now known as the Wadi en Nar, or the valley of Jehoshaphat. It is dry during about nine months of the year.

KIDSGROVE. Market town and urban district of Staffordshire. It is 6 m. N.W. of Stoke-upon-Trent, on the L.M.S. Rly. and on the Trent and Mersey canal. The chief industries are coal mining and iron-working. Market day, Tues. Pop. 9,491.

KIDWELLY. Borough and market town of Carmarthenshire. It stands on the Gwendraeth, near its entrance to Carmarthen Bay, 9 m. N.W. of Llanelly, with a station on the G.W.R. The castle, built in the 11th century, was one of the strongest in S. Wales. There are iron and tin works and collieries. Market day, Tues. Pop. 3,384.

KIEL. Port and town of Germany. At the southern end of Kiel Bay, 70 m. from

Hamburg, it has a splendid harbour, and till 1919 was the chief naval port and dockyard of the German empire. Its annual regatta was a leading social event. Pop. 213,881.

Kiel Bay is an indentation of the W. Baltic in the coast of German Slesvig-Holstein. Lying N.W. and S.E., it extends some 40 m. from Schleimünde to the island of Fehmarn.

Kiel Canal, where it is crossed by the high level railway bridge at Levensau

KIEL CANAL. Ship canal connecting the North Sea and the Baltic. Begun June 3, 1887, and opened June 19-21, 1895, it was widened and deepened 1909-14. It is 61 m. long, 45 ft. deep, 150 ft. wide, and cost approximately £19,000,000.

The double locks at Holtzenau and Brunsbüttel are among the largest in the world. The canal is electrically lighted, and the passage occupies 8½-9 hours. Just after the completion of its reconstruction the Great War began. In 1919 Germany agreed that the canal and its approaches should be for ever free to the ships of every nation at peace with her, and that the tolls and charges should be reasonable, levied without discrimination, and cover the expenses of working and maintenance.

KIESELGUHR. Grey or brownish earth formed by fossil diatoms, found chiefly as a deposit in fresh-water lakes. Containing 95 p.c. of silica, it has been largely used as an absorbent for nitroglycerin in the preparation of dynamite. It is also used as a polishing powder, for fireproof packing of boilers and steam pipes, and as an ingredient of soaps.

KIEV. Town in the republic of the Ukraine. It stands on the right bank of the Dnieper, at its junction with the Desna, 280 m. N. of Odessa, and is an important river junction. Founded in the 5th century, it is one of the oldest cities of Russia and the

birthplace of its Christianity. The cathedral of S. Sophia and the Cave Monastery date from the 11th century. A centre of the sugar beet industry and famous for its preserved fruits, Kiev has a trade in grain, timber, and cattle. During 1914-20 it changed hands repeatedly. Pop. 513,789.

KIKUYU. Province of Kenya, East Africa. The capital is Nyeri. Sweet potatoes, maize, and millet are cultivated.

Kikuyu was the scene of a missionary conference in June, 1913, when the bishops of Mombasa and Uganda aroused a protest by admitting those present, irrespective of their denomination, to communion. The Lambeth conference in April, 1915, decided that the action of the two bishops was irregular.

KILBIRNIE. Parish of Ayrshire, on the Garnock, 20 m. from Glasgow, with a station on the L.M.S. Rly. The chief building is the 16th century parish church. The industries include flax spinning and engineering. Here are the ruins of a 16th century castle, a seat of the earl of Crawford until destroyed by fire in 1757. Kilbirnie Loch is near. Pop. 8,032.

KILBRIDE OR **WEST KILBRIDE.** Watering place of Ayrshire, on Kilbride Burn, with a station on the L.M.S. Rly. It has two fine churches and institutions for invalids. Pop. 2,400.

In Scotland and Ireland are many other places of this name, which means the church of S. Bride. East Kilbride is a small town of Lanarkshire, 7 m. from Glasgow. Pop. 1,500. Kilbride Castle is near Dunblane.

KILBURN. Suburb of N.W. London. Partly in the parishes of Hampstead and Willesden, it has stations on the Met. and Bakerloo and L.M.S. Rlys., and includes West Kilburn and Kilburn Park. Near Belsize Road, on a spot adjoining the site of an Augustinian priory, which existed from 1376-1536, there was in the 18th century a spring, Kilburn Wells, the tea gardens attached to which existed from 1773-1829.

KILDARE. County of the Irish Free State. In the prov. of Leinster, its area is 654 sq. m. In the centre is the Curragh (q.v.). Kildare is drained by the Liffey, Boyne, and Barrow. The G.S. Rlys. and the Grand and Royal canals serve the county. Kildare (the co. town), Athy, Maynooth, Naas, and Newbridge are the chief places. Pop. 58,028.

KILDARE. Co. town of co. Kildare, Irish Free State. It is 30 m. S.W. of Dublin on the G.S. Rlys., of which it is a junction. The cathedral was erected in the 13th century and restored in the 19th. A round tower still stands, 108 ft. high. The town has a trade in agricultural produce. Kildare owes its origin to S. Bridget, who, in the 5th century, founded a monastery here. The name means the church of the oak. Pop. 2,116.

The Kildare Street Club is a club, founded in 1788, in Kildare Street, Dublin.

KILIMA-NJARO OR **KILIMANDJARO.** Mountain mass in Tanganyika Territory, East Africa. It consists of two extinct volcanic peaks, connected by a massive ridge. The highest point is 19,325 ft. and the crater is about 650 ft. deep. The slopes are clad with a forest belt, and the summits with glaciers.

KILKENNY. County of the Irish Free State. In the prov. of Leinster, its area is 796 sq. m., and it is served by the G.S. Rlys.

The co. is essentially agricultural. Coal is mined in the Castlecomer dist. and black marble is quarried. Kilkenny (the co. town), Callan, Castlecomer, and Thomastown are the chief towns. There are antiquities. Pop. 70,990.

Kilkenny. Map of this agricultural county of Ireland

KILKENNY. City and co. town of co. Kilkenny, Irish Free State. It stands on the Nore, 81 m. from Dublin by the G.S. Rlys. The chief buildings are the cathedral of S. Canice (except S. Patrick's, Dublin, the largest in the Irish Free State) and the 13th cent. castle, successor of one built by Strongbow and the seat of the marquess of Ormonde. There are marble works, tanneries, and corn mills, and a trade in agricultural produce. The town is named after S. Canice, and is the seat of the bishop of Ossory. Pop. 10,046.

The statute of Kilkenny was a measure passed in 1366 by a parliament which met at Kilkenny. It provided that the laws of England should apply to Ireland. It forbade any English person to intermarry with the Irish or to adopt the Irish dress, language, or customs. It was ineffective outside the Pale.

KILLALOE. City of co. Clare, Irish Free State, 17 m. from Limerick, on the G.S. Rlys. The cathedral of S. Flannan is a 12th century edifice. Killaloe has both a Roman Catholic and a Protestant bishop. It is a centre for fishing in the Shannon, which here flows through a noted gorge. Pop. 904.

KILLARNEY (Celt. Cill Arne, church of the slopes). Urban dist. and town of co. Kerry, Irish Free State. It is 46 m. W. by N. of Cork, on the G.S. Rlys. Of the three churches the R.C. cathedral of S. Mary, 1846-56, is by A. W. Pugin. Pop. 5,328.

The famous lakes of Killarney are about 1½ m. W. of the town, lie in a basin, backed by lofty mts. and wildly picturesque ravines,

Kildare. Map of the inland county of S.E. Ireland

Kilima-Njaro Mountain. The summit of this extinct volcanic peak

Killarney. Ruins of Ross Castle in Lough Leane, the largest of the three lakes of Killarney

and are studded with thickly wooded islands. They are fed by the river Fiesk and discharge their waters from the Lower Lake by the river Laune. In the neighbourhood are Macgillycuddy's Reeks, the Gap of Dunloe, and several castles and other buildings of historic and romantic interest. The earl of Kenmare in 1930 announced his intention to sell his extensive property here.

KILLIECRANKIE. Pass of Perthshire. Killiecrankie station, on the L.M.S. Rly., is 4 m. from Pitlochry, whence the pass stretches for about 1½ m. to Garry Bridge. The river Garry flows through it, and it is beautifully wooded. It is traversed by a military road.

The plain at the north of the pass was the scene of the encounter in which, July 17, 1689, Graham of Claverhouse, Viscount Dundee, at the head of some Highlanders, routed a force sent by William III to subdue the Scottish Jacobites. Both sides lost heavily, and Dundee was mortally wounded.

KILLIGREW, THOMAS (1612-83). English dramatist. Born in London, Feb. 7, 1612, son of Sir Robert Killigrew, he was page to Charles I. and groom of the bedchamber to Charles II. In 1663 he built a theatre where Drury Lane Theatre now stands, and in 1673 was appointed master of the revels. Known as the king's jester, he died March 19, 1683, and was buried in Westminster Abbey.

Killingworth. Coal mining centre of Northumberland. It is 6 m. N.E. of Newcastle-upon-Tyne, on the L.N.E.R. Pop. 2,711.

KILLYLEAGH. Town and seaport of co. Down, Northern Ireland. It stands on Strangford Lough, and its chief industry is the manufacture of linen. Pop. 1,600.

KILMACOLM or **KILMALCOLM.** Watering place of Renfrewshire, Scotland. It stands on Gryfe Water, 8 m. S.E. of Greenock, with a station on the L.M.S. Rly. A health resort, it has a hydropathic establishment, golf links, and a public park. Pop. 5,303.

KILMAINHAM. Suburb of Dublin. It contains Kilmainham Prison and the royal hospital, founded in 1675 on behalf of Charles II by the earl of Granard, for the relief of veteran soldiers, and built by Wren. Kilmainham Prison is memorable as the place where Parnell and other Irish leaders were incarcerated, and as the place of execution of the leaders of the Sinn Féin rising which took place in Easter Week, 1916.

The Kilmainham treaty is the name given to an informal arrangement made in April, 1882, between W. E. Gladstone's government and the Irish leader, C. S. Parnell, Captain O'Shea acting as chief intermediary. Parnell promised on certain conditions to assist the authorities in bringing Ireland to order. Parnell and his imprisoned colleagues were released. The Irish secretary, W. E. Forster, resigned and the Phoenix Park murders followed. See Home Rule; Parnell, C. S.

KILMALLOCK. Market town of Limerick, Irish Free State. It is 21 m. S. of Limerick, on the G.S. Rlys. A stronghold of the earls of Desmond, it was a fortified place in the 17th century and earlier. A Dominican abbey was founded here about 1291, and there are some remains of this and of the town's fortifications. Pop. 971.

KILMARNOCK. Burgh of Ayrshire. It stands on Kilmarnock Water, 22½ m. from Glasgow, on the L.M.S. Rly. In Kay Park is a Burns memorial and museum. The industries include foundries, engineering, the making of hoots and shoes, cloth, carpets, blankets, and lace curtains. Coal is mined near by. An agricultural centre, Kilmarnock has a famous cheese fair. Pop. 35,911.

EARL OF KILMARNOCK. This is a Scottish title borne by the family of Boyd from 1661 to 1746, when the 4th earl, who had been taken

prisoner at Culloden, was executed with Lord Balmerino on Tower Hill. The title of Lord Kilmarnock is borne by the eldest son of the earl of Erroll. The 20th earl (b. 1876), when Lord Kilmarnock, was the first British diplomatic representative appointed to Berlin after the Great War.

Kilocycle. In electricity, a measurement of frequency, 1,000 cycles per second. It is abbreviated kc. See Cycle.

KILOGRAMME. Measure of weight in the metric system. It contains 1,000 grammes, and its equivalent in English weight is 2.2046 lb. Its usual symbol is kg.

KILOMETRE. Measure of length in the metric system. It is 1,000 metres, and its equivalent in English measure is 0.6214 of a mile, or approximately 5 furlongs, i.e. 1,100 yds. The square kilometre equals 0.3862 sq. m., or 247 acres.

KILOWATT. In electricity, a unit of power. It is the commercial unit by which electricity is sold, and the equivalent of 1,000 watt-hours. See Watt.

KILPATRICK. Two places in Dumbartonshire, Scotland. Old or W. Kilpatrick is on the Clyde, 10 m. from Glasgow, and is served by the L.N.E. and L.M.S. Rlys. It is traditionally the birthplace of S. Patrick.

New or E. Kilpatrick (or Bearsden) is a residential suburb of Glasgow. There are several places of this name in Ireland.

KILRUSH. Urban dist. and seaport of co. Clare, Irish Free State. On the N. shore of the Shannon estuary, 27 m. S.W. of Ennis, it exports peat and fuel, has a fishing industry, and has slate quarries. Market days, Wed. and Sat. Pop. 3,345.

KILSYTH. Burgh of Stirlingshire, Scotland. It is 13 m. N.E. of Glasgow on the L.N.E. Rly. Cotton is manufactured, and there are limestone and sandstone quarries and iron and coal mines. The Kilsyth Hills and a ruined castle lie N. Pop. 7,600.

The battle of Kilsyth was fought Aug. 15, 1645, when Montrose defeated the Covenanters under William Baillie, and as a result became for a short time dominant in Scotland.

KILWA or **KILWA KISIWANI.** Town in Kilwa prov., Tanganyika Territory, E. Africa. Formerly known by its Portuguese name of Quiloa, it was founded by Persians in the 10th century, and contains interesting ruins.

KILWINNING. Police burgh of Ayrshire, Scotland. It is 24 m. S.W. of Glasgow, on the L.M.S. Rly., and is a famous archery centre and the traditional birthplace of Scottish Freemasonry. The ruins of an abbey, founded 1140, remain. Eglinton Castle lies about 1 m. S.E. There are engineering works and a woollen factory, and, at Eglinton, iron and fireclay works and collieries. Pop. 5,404.

KIMBERLEY. Village of Nottinghamshire. It is 5½ m. N.W. of Nottingham on the L.N.E. Rly. The chief industries are brewing and the mining of coal. Pop. 5,158. Another Kimberley is a village in Norfolk.

KIMBERLEY. City of Cape Province, S. Africa. In Griqualand West, it stands on a plateau between the rivers Modder and Vaal, and has grown since 1870 round the De Beers diamond mines. It is 647 m. from Cape Town, and is connected by rly. with Bloemfontein. Anglicans and Roman Catholics have cathedrals, and there are several other churches. Kenilworth is a suburb mainly occupied by workers in the mines. Kimberley, formerly known as Colesberg Kopje, was renamed after the politician who was colonial secretary in 1871. Pop. 17,268 Europeans.

SEIGE OF KIMBERLEY. As soon as the war with the British began in Oct., 1899, the Boers swarmed round the town, which was defended

by about 4,000 men. Col. Kekewich was in command, and Cecil Rhodes was in the town. During the siege, which lasted from Oct. 14, 1899, till the arrival of French and his cavalry on Feb. 15, 1900, the British loss was 181 officers and men killed and wounded, in addition to some civilian casualties.

KIMBERLEY, JOHN WODEHOUSE. 1st EARL OF (1826-1902). British statesman. Born Jan. 7, 1826, at Wymondham, Norfolk, and grandson of Baron Wodehouse, he was educated at Eton and Christ Church, Oxford. Succeeding to his grandfather's title in 1846, and sitting as a Liberal in the House of Lords, he was foreign under-secretary 1852-56 and 1859-61 and minister at St. Petersburg 1856-58. He was lord-lieutenant of Ireland 1864-66 (when he was created earl of Kimberley); lord privy seal 1868-70; colonial secretary 1870-74 and 1880-82; secretary for India 1882-86 and 1892-94; and foreign secretary 1894-95. He died April 8, 1902. He married a daughter of the last earl of Clare, and was succeeded as 2nd earl by his son, John Wodehouse (b. 1848).

KIMBOLTON. Market town of Huntingdonshire on the L.M.S. Rly. The church of S. Andrew has memorials of the earls and dukes of Manchester, whose seat, Kimbolton Castle, was partly rebuilt by Vanbrugh. Market day, Fri. Pop. 900.

KIMMERIDGIAN. In geology, a subdivision of the Jurassic system, a member of the upper Oolite series. It is also called Kim-

Kimono. Japanese woman wearing this form of robe

meridge Clay from the hamlet in Dorset, England. A dark bluish bituminous clay, it is found extensively in Dorset, Yorkshire, and Lincolnshire, and is rich in fossil remains.

KIMONO. Loose robe of the Japanese. The sleeves are cut in one piece with the rest of the gown, which is embroidered. It has become popular in Europe as a dressing-gown.

KIN. Relations by blood. In English law, next-of-kin is the nearest blood relation of a deceased person. The method is to count one degree for each link in the chain, which starts from the deceased person. Thus, father and mother, and all children, are in the first, while grandparents and grandchildren, brothers and sisters, are in the second degree of kin. See Intestacy.

Kincardineshire. Map of the Scottish county between the Grampians and the North Sea

KINCARDINESHIRE. County of Scotland, known also as the Mearns. The Grampians (Mt. Battock, 2,555 ft.) occupy the W.

and central portions. In the S. is the Howe of the Mearns, part of the great valley of Strathmore. Agriculture is pursued in the valleys and around the coast, and there are deer forests and moors. Fishing is engaged in. The L.N.E. & L.M.S. Rlys serve the county. Stonehaven (the co. town), Bervie or Inverbervie, Laurencekirk, and Banchory are the chief towns. One member is returned to Parliament. The area of the county is 38,259 sq. m. Pop. 42,000.

The county has many interesting literary associations. The poet James Beattie was born near Laurencekirk. At Dunnottar, Scott met Robert Paterson, the Old Mortality of his novel of that name.

KINCHINJUNGA. Five-peaked mountain of the Himalayas. It is 75 m. E.S.E. of Mt. Everest, near the Nepal and Sikkim frontiers, and is 28,146 ft. high. Its name means the "five treasure houses of the great snows."

In 1929 an international scientific expedition set out to explore the range. It was led by a German, Prof. G. O. Dyhrenfurth, and three Britishers were among its members. Assistance was given by the Indian Government. The expedition was abandoned in 1930. The American Geographical Society also sent out an expedition. The name is spelled variously, one form being Kanehenjunga.

KINDERGARTEN (Ger. children's garden). School for children between three and seven, if possible in the open air. They are taught by games, physical action, and simple manual occupations, e.g. paper folding and cutting, modelling, colouring, drawing, music. See Froebel, F. W. A.; Montessori.

Kinderscout. Highest point of the Peak, Derbyshire. It is 2,088 ft. high. See Peak.

KINDERSLEY, SIR ROBERT MOLESWORTH (b. 1872). British banker. Born Nov. 21, 1872, and educated at Repton, he became chairman of Lazard Brothers & Co., bankers, and a director of the Bank of England. He was governor of Hudson's Bay Co., 1916-25, and senior British representative on the Dawes Committee, 1924. He was for four years chairman of the National War Savings Committee, and was awarded the K.B.E. in 1917 and G.B.E. in 1929.

KINEMATICS. Branch of mathematics that treats of motion without reference to force or mass. It defines velocity and acceleration, and finds formulae expressing the connexion between acceleration, velocity, distance travelled, and the time elapsed, and deals with such problems as the conversion of reciprocal to circular motion in an engine.

KINETICS. Branch of dynamics which deals with the motion of real bodies under the action of forces. The fundamental theorems deal with a single particle, and bodies that can be treated as such. First of the sections into which the science is divided is that dealing with the kinetics of a particle moving in a straight line. This section embraces Newton's laws of motion and the composition and resolution of forces. It is continued by the consideration of forces acting anywhere in a plane, and diverges to the general motion of a particle. Then it proceeds to the action of central forces the foundations of which were laid by Newton, and on which the phenomenon of gravitation and the movements of the planets are explicable.

On these fundamental theorems later mathematicians built a structure which included the kinetics of systems of particles and of rigid bodies, and which considered motions in two and three dimensions. In kinetics the theory of vibrations is also included. See Dynamics; Statics.

KINETIC THEORY OF GASES. Theory which supposes that in a gas the molecules are all

endowed with a forward or translatory movement, and that the spaces between adjacent molecules are large compared with the size of the molecules. Such molecules are continually coming into collision with one another and with the sides of any vessel in which the gas may be contained. See Gas.

KINETON. Village of Warwickshire. It is 9 m. from Stratford-on-Avon and 3 m. from Edgchill on the L.M.S. Rly. Near is the ridge on which the battle of Edgchill (q.v.) was fought.

KINETOSCOPE. Form of instrument for showing moving pictures. Invented by Edison in 1893, it consisted of a small cabinet in which a film was put in motion by hand or motor power. The actual film was viewed through a magnifying glass. See Cinematography; Film.

KING. Term of Teutonic origin used for a male ruler. It is the usual English translation of the Greek *anax* and the Latin *rex*. The word king or *eyning* was given to the petty rulers of the states of Anglo-Saxon England. Later in medieval Europe one country, one king, was almost the rule; and Germany and Italy were under an emperor who claimed the right to create kings.

This power, however, was rarely exercised, and hardly any kings were created in Europe for some 500 years after the rulers of Bohemia and Hungary had taken the title. The creation of Frederick, elector of Brandenburg, as king of Prussia in 1701 was an exception. Kings were created for Saxony, Bavaria, Württemberg and the Netherlands at the settlement of 1815, and later new kings appeared elsewhere in Europe. With some of these the territorial idea came to the front, and Louis Philippe called himself king of the French, George king of the Hellenes, and Leopold king of the Belgians. A group of kings, Greece being the first, owed their existence to the creation of independent states in the Balkans: Serbia, Rumania, Bulgaria, and Montenegro. At the close of the Great War several of the European kings disappeared.

KING, EDWARD (1829-1910). British prelate. A son of the Rev. Walter King, rector of Stone, Kent, he was born Dec. 29, 1829. Educated at Oriel College, Oxford, he was canon of Christchurch and regius professor of pastoral theology at Oxford in 1873 and bishop of Lincoln from 1885 till his death on March 8, 1910. A friend and follower of Pusey, King was prosecuted for ritualistic practices which led to the Lincoln judgment (q.v.). He exercised a great influence in Oxford.

KING, WILLIAM LYON MACKENZIE (b. 1874). Canadian statesman. Born Dec. 17, 1874, at Berlin (now Kitchener), Ontario, the son of a lawyer, he was educated at Toronto University. A great authority on labour problems, he edited the Labour Gazette for eight years, entered the Dominion parliament in 1908, and was minister of labour 1909-11. In 1911 King succeeded Laurier as leader of the Liberal party, and in 1921 he became premier. He retained his position until July, 1926, and returned to it after a general election in Sept. He remained in office until the general election of July 1930, when his party was defeated. He has written several books. See Canada.

W. L. M. King, Canadian politician

KING BIRD or BEE MARTIN (*Tyrannus carolinensis*). Species of American flycatcher. Its plumage is blackish on the upper parts, with white and grey beneath, and the crown of the head is yellow. It is common in many parts of the U.S.A., and feeds mainly on insects, catching them on the wing. See Flycatcher.

KING CHARLES SPANIEL. Breed of toy dog which came into favour in Charles I's reign. It was liver and white in colour, and sharp-nosed, but in the 19th century the fashionable King Charles was black and tan and pug-nosed. It is between 7 lb and 10 lb. in weight. The skull should be domed and the eyes full. The ears long and drooping and close to the body. The coat is thick and silky, the legs and tail being well feathered. See Dog.

King Charles Spaniel, Champion Laureate, the winner of many prizes

KING CHRISTIAN IX LAND. Part of S.E. Greenland. It lies S. of King William Land and N. of King Frederick VI Land, intersected by the Arctic Circle. Its coastline is deeply cleft by the Bay of Terrors and numerous fiords, and its interior is perpetually covered by an ice-sheet.

King Crab (*Limulus*). Above, in natural position; below, lying on its back

KING CRAB (*Limulus*)

A marine arthropod whose body, apart from the spike-like tail, is almost covered by a large shell or carapace. King crabs occur on the E. coast of the U.S.A., off China and Japan, and around the Indo-Pacific islands. Unable to swim, they are found in comparatively shallow water, crawling on the bottom. At times they bury themselves in the mud, the tail being used as a prop to assist in changing position. The eggs are deposited in the sand at high tide mark.

King Cup. Variant name of the marsh marigold. See Marsh Marigold.

KING EDWARD VII. Name-ship of a group of battleships, the last built before the Dreadnoughts were designed. She was launched at Devonport in 1903 and completed in 1905 at a cost of £1,382,075. She served continuously as a flagship. On Jan. 9, 1916, she struck a mine in the North Sea and had to be abandoned, all on board being saved.

KING EDWARD VII LAND. Part of the Antarctic, S.E. of the Ross Sea. The Ross Ice Barrier connects it with Discovery Island. Ross was there in 1842 and Scott in 1902.

KINGFISHER (*Alcedinidae*). Family of birds of handsome appearance, and with powerful, dagger-like beaks. Great Britain has only one species (*A. spida*). The back is azure blue, the tail deep blue, the wing coverts dark green spotted with cobalt, the throat white, and the underparts yellowish chestnut. It is from 6 ins. to 7 ins. in length, and has red legs and feet. Fairly common about the rivers

Kingfisher. Specimen of the British species
W. S. Burridge, F.Z.S.

in S. England, it feeds on small fish, insects and, on the coast, small crabs. The nest is constructed at the end of a tunnel, usually in the bank of a stream.

KING FREDERICK VI LAND. S.E. portion of Greenland, stretching N. from Cape Farewell to King Christian IX Land. The coast is cleft by fiords and fringed by several islands. It is sparsely populated.

The N.E. littoral of Greenland, between Germania Land on the S. and Amdrup Land on the N., is called King Frederick VIII Land. It is much indented.

KING GEORGE V. Name-ship of a class of British battleships completed in 1913. They are 555 ft. long, 89 ft. in beam, displace 23,600 tons, and have engines of 27,000 h.p. giving a speed of 21 knots. Their armament consists of ten 13.5-inch, twelve 4-inch, and four 3-pounder guns, and several torpedo tubes. Ships of this class were the King George V, Ajax, and Centurion. The King George V, which fought at Jutland, and Ajax have been removed from the active list.

King George V. British battleship of 1913 class. She served in the Battle of Jutland, 1918.

KING GEORGE V LAND. Tract of the Antarctic due S. of Tasmania, between Adelie Land and Oates Land. The coastline is broken by many capes and bays and the tract contains the great Ninnis Glacier.

KINGHORN. Burgh of Fifeshire, Scotland. It stands on the Firth of Forth, on the L.N.E.R. Here, on March 12, 1286, King Alexander III fell over the cliffs and was killed. Pop. 2,425.

KINGLAKE, ALEXANDER WILLIAM (1809-91). Historian of the Crimean War. Born at Taunton, Aug. 5, 1809, he was educated at Eton and Trinity College, Cambridge, and became a barrister. His experiences in the East led him to write his *Eothen*, and his interest in military matters took him in 1845 to Algiers. In 1854 he was in the Crimea. From 1857-68 he was M.P. for Bridgwater. He died in London, Jan. 2, 1891. He is chiefly known for his *History of the Crimean War*.

KING OF ARMS. The chief herald (q.v.) or officer of armoury. Kings of arms were first known as kings of heralds, but Henry IV changed the title. Three (Garter, Clarenceux, and Norroy) are members of the College of Arms (q.v.). Bath king of arms was instituted in 1725 as herald to the order of the bath. In Scotland the chief herald is the Lord Lyon king of arms; in Ireland, the Ulster king of arms. All are entitled to wear coronets, composed of a circlet surmounted by sixteen oak leaves, collars of S.S., and armorial tabards, and to bear sceptres, or batons surmounted by crowns.

KING OSCAR LAND. S.W. portion of Ellesmere Island (q.v.), British N. America. The coast is deeply indented and bordered by numerous islands.

King Oscar II Land is an icebound part N. of Graham Land and between the Bellingshausen and Weddel Seas.

KINGS. Books of. Two books of the O.T. They are called in the Septuagint (cod. Vat.) the Third and Fourth Books of Kingdoms and in the vulgate the Third and Fourth Books of Kings (our 1 and 2 Samuel being in each case the First and Second Books). They contain a history of the Hebrew kings from the accession of Solomon (c. 970 B.C.) to the end of the monarchy in 586 B.C. The books in their present form are composite. See Bible; consult also Introduction to the Literature of the O.T., S. R. Driver, rev. 1910.

KING'S BENCH DIVISION. Division of the high court of justice, which consists of the lord chief justice of England as president and 17 judges. The title preserves the name of the court of king's bench, so called because the king formerly sat there in person on a raised bench, with the judges who determined the cases sitting on a low bench at his feet.

KINGSBRIDGE. Market town, seaport, and urban dist. of Devonshire. It stands at the head of Salcombe Bay, 15 m. from Dartmouth, on the G.W.R. It has an old church, S. Edmund's, and a town hall with a museum. Its grammar school was founded in the 17th century. There is a shipping trade and a little shipbuilding. In the Middle Ages Kingsbridge was a centre of the woollen

manufacture. It still has a fair and is famous for its ale. The parish includes Dodbrooke. Here John Wolcot, known as Peter Pindar, was born. Market day, Wed. Pop. 2,945.

KINGSBURY. Urban district of Middlesex. It is N. of Wembley and Neasden. West of that part of the Edgware Road known as Watling Street is Kingsbury Green. The parish church of Kingsbury-cum-Neasden, S. Andrew's, restored in 1870, has some old monuments and brasses. Pop. 5,000.

KINGSCLERE. Parish of Hampshire noted for its racing stables. The Norman church of S. Mary is a fine building. The industries include brewing and malting. Burghclere, 4 m. away, is the station, and in the vicinity is Highclere Castle, a seat of the earl of Carnarvon. Pop. 2,243.

KING'S COLLEGE. College of Cambridge University. It was founded in 1441 by Henry VI. The chapel, the foundation

stone of which was laid on July 25, 1446, is probably the finest example of ornate Perpendicular architecture in existence. The society consists of a provost, 46 fellows, and 48 scholars. See Cambridge.

KING'S COLLEGE.

College of the university of London since 1910. It was established in 1829, reorganized in 1908, and includes the faculties of arts, laws, medicine, science, engineering and economics. The buildings are in and near the Strand, as are those of King's College for Women, established in 1881, incorporated with the university of London in 1910 and possessing a household and social science department at Campden Hill. See London, University of.

KING'S COLLEGE HOSPITAL. Institution at Denmark Hill, London. Founded in 1839 close to Clare Market, it was removed to Denmark Hill in 1913. There are 384 beds.

KING'S COLLEGE SCHOOL. English public school. Founded in 1829 as the junior department of King's College, London, it was removed to Wimbledon in 1897 and separated from the college in 1908.

King's College, Cambridge. The chapel from the Backs. Felton

KING'S COUNSEL. In England a member of the bar appointed by the crown on the nomination of the lord chancellor, in Scotland on the recommendation of the lord justice-general. A K.C. wears a silk gown, and is thus frequently called a silk. He takes precedence over the junior bar, and in a case must have a junior barrister with him. When a queen is on the throne he is called Q.C.

King's County. County of the Irish Free State, now known as Offaly (q.v.).

KING'S CROSS. District of London. It is in the bor. of St. Pancras, and was formerly known as Battle Bridge, from a bridge which crossed the Fleet river and the tradition that here was fought a battle between the forces of Suetonius Paulinus and those of Boadicea. It was renamed King's Cross in 1836. Here is the terminus of the L.N.E.R., built in 1852, and near by are the St. Pancras terminus of the L.M.S., the Midland Grand Hotel, and stations of the Metropolitan, S. London (Tube), and Piccadilly (Tube) Rlys.

KING'S CUP. British air race. Instituted in 1922 by the Royal Aero Club, it is flown over a course of some 700 m. in England for the Challenge Cup presented by King George. In July, 1930, over a course of 753 m., it was won for the first time by a woman, Miss Winifred S. Brown.

King's Evidence. In English law, name applied to a criminal who volunteers to give evidence against his accomplices.

KING'S EVIL. Old name for scrofula (q.v.). It is derived from the fact that at one time the touch of the king was supposed to cure this disease.

KING'S INN. Headquarters of the Irish Free State bar, corresponding to the inns of court in London. The building, erected in 1800, is in Henrietta Street, Dublin, and the society possesses a valuable library of 93,000 volumes. See Barrister; Inns of Court.

KINGSLAND. District of N. London, partly in the bor. of Shoreditch and partly in that of Hackney. The Kingsland Road runs N. from Shoreditch station, on the L.M.S. Rly. to Dalston Junction and Kingsland High Street.

KINGSLEY, CHARLES (1819-75). British novelist, poet, and social reformer. Born at the vicarage of Holne, Devonshire, June 12, 1819, he was educated at King's College, London, and Magdalene College, Cambridge. He was rector of Eversley (q.v.), Hampshire, from 1844 till his death, Jan. 23, 1875. He was professor of modern history at Cambridge in 1860, and canon of Westminster in 1873. His passionate sympathy for the poor found expression in *Alton Locke* and *Yeast*, two novels published in 1849. His other works included *Hypatia*, 1853; *Westward Ho!*, 1855; *The Heroes*, 1856; *The Water Babies*, 1863; *Hereward the Wake*, 1866; and a number of Ballads.

KINGSLEY, HENRY (1830-76). British novelist. Born at Barnack, Northamptonshire, Jan. 2, 1830, a younger brother of Charles Kingsley, he left Oxford for the Australian goldfields, where he remained five years. Of his many novels the best are *Geoffrey Hamlyn* and *Ravenshoe*. He died at Cuckfield, Sussex, May 24, 1876.

KINGSLEY, MARY HENRIETTA (1862-1900). British traveller and author. Born in London, Oct. 13, 1862, and a niece of Charles Kingsley, she is remembered by her *Travels in W. Africa*, 1897. She died at Simon's Town, June 3, 1900.

Charles Kingsley. British novelist. Stereoscopic Co

KING'S LYNN, LYNN REGIS, OR LYNN Borough, seaport, and market town of Norfolk. It is near the Wash, on the L.N.E. and L.M.S. Rlys. Of the churches, St Margaret's contains some 14th century brasses. In the Guildhall is the Red Register of Lynn. In the grammar school Eugene Aram (q.v.) was an usher. Other notable features are the Grey Friars' Steeple and the octagonal Rood or Red Mount Chapel, 1482. There is a good harbour. There is a trade in timber, coal, corn, and oilcake. Market day, Tues. Pop. 19,975.

KING'S MESSENGER. Name given to officials of the British Foreign Office who carry confidential messages. Their badge of office is a silver greyhound.

KING'S OWN, in full THE KING'S OWN ROYAL REGIMENT (LANCASTER). Regiment of the British Army. Originally the 4th Foot, it was raised in 1680. It went with William of Orange to Ireland and then to Flanders, and in 1715 received the title of The King's Own (Royal Lancaster Regiment); this was changed to its present form in 1920. The regiment was engaged in the Peninsular War, at Waterloo, in the Crimea, the Indian Mutiny, Abyssinia, 1868, the Zulu War, 1879, and saw service in the South African War.

In the Great War the 1st battalion took part in the battles of Mons, the Marne, the Aisne, and Ypres. Other battalions fought at La Bassée in 1915, in the battle of the Somme, 1916, at Cambrai, 1917, and endured the brunt of the German offensive in March, 1918. The King's Own were in Mesopotamia, 1916-18. The regimental depot is at Lancaster.

KING'S OWN SCOTTISH BORDERERS. Regiment of the British army. Formerly the 25th Foot, it was raised in 1689, in Edinburgh, by Lord Leven, and has a distinguished service record. During the Great War the 1st batt. was in Gallipoli and the 2nd in France. The regiment has the privilege of beating up for recruits in the streets of Edinburgh. The depot is at Berwick-on-Tweed.

King's Own Scottish Borderers badge

KING'S PRIZE. Sum of £250 presented yearly by the British sovereign, and awarded to the highest scorer with the rifle at various ranges under specified conditions. Known till 1901 as the Queen's Prize, it was first shot for at Wimbledon in July, 1860. Capt. Edward Ross was the first winner. In 1890 the meeting was transferred to Bisley (q.v.). In 1919 the King's Prize was thrown open to members of the forces throughout the Empire. The winner in 1928 was Lance-Corporal A. C. Haie, of Birmingham. In 1929 it was won by a Canadian, Colonel R. M. Blair, and in 1930 for the first time by a woman, Miss M. E. Foster.

KING'S PROCTOR (Lat. procurator, agent, deputy). In England, a legal official who acts in the name of the crown in divorce cases. If he is informed, before a decree has been made absolute, that the suit is collusive, or that the «successful» petitioner is, or has been, living in adultery, he lays the facts before the court, with the result, as a rule, that no divorce is granted. See Divorce.

KING'S REMEMBRANCER. In England, a legal official. Originally he was one of the officials of the exchequer, but the judicial changes of 1873 made him a master of the supreme court. See Exchequer.

KING'S SPEECH. The speech with which in Great Britain the king (or his deputy) opens each session of parliament. Prepared by the king's ministers, the speech outlines their programme. It is addressed in the first place to the lords and commons, only the last paragraphs, dealing with finance, being addressed to the House of Commons alone. The ceremony takes place in the House of Lords, to which the faithful Commons are summoned. See Address. Parliament.

KINGSTON. City and seaport of Ontario, Canada. Named after George III and from 1841-44 the capital of Canada, it stands at the E. end of Lake Ontario and is served by the C.P.R. and National Rlys. The Rideau canal connects it with Ottawa. There are two cathedrals, a university, and the Royal Military College. Shipbuilding and engineering works are among the industries, and there are flour mills and grain elevators. Kingston is on the site of the Frontenac fort, built by the French. Pop. 25,000.

KINGSTON. Capital and chief port of Jamaica. On the S.E. coast, at the head of an excellent landlocked harbour, it is nearly

Kingston, Jamaica. King Street, the principal thoroughfare. By courtesy of the West Indian Committee.

centred, is fortified, well built, lighted by electricity, and has electric tramways. An extensive import and export trade is carried on. In the old church lie the remains of Admiral Benbow. Kingston was founded between 1693-1703, and was made the capital in 1872. It was almost destroyed by an earthquake, Jan. 14, 1907. Pop. 63,000.

KINGSTON - ON - SOAR. Village of Nottinghamshire. It stands on the L.M.S. Rly. Here, in the centre of an important dairying district, is the Midland Agricultural and Dairy College, opened in 1900, and connected with University College, Nottingham. Pop. 300.

Kingston-upon-Hull. Official name of the city, port, and ex. bor. of Hull (q.v.).

KINGSTON-UPON-THAMES. Market town and bor. of Surrey. Standing on the S. side of the Thames, it is 12 m. S.W. of London. The hor. includes Surbiton, Norbiton, and New Malden, and is within the metropolitan police area. It is served by the S.Rly. The principal building is the Perpendicular church of All Saints. There is an old grammar school in a modern building. A fine bridge crosses the river. The chief industries are flour mills, breweries, and oil refineries. About 838 Egbert held a council here. In St Mary's Chapel, which fell down in 1730, some of the Saxon kings were crowned, and the coronation stone is preserved near the market place. In 1930 the Surrey Assizes were transferred from Guildford to Kingston. Market days, Mon. and Sat. Pop. 40,000.

KINGSTOWN. Seaport, holiday resort, and urban dist. of co. Dublin, Irish Free State. It is on the S. side of Dublin Bay, 6 m. from Dublin, with a station on the G.S. Rlys. Tramways and buses connect it with the metropolis. It is the port of departure and arrival for steamers between Ireland and Holyhead. Pop. 18,987. The Irish call it Dun Laoghaire (Pron. Dunleary).

KINGSWAY. London thoroughfare connecting Holborn with Aldwych. The Stoll

Picture Theatre and Kingsway Hall, headquarters of the West London (Wesleyan Methodist) Mission, are in this thoroughfare. The Kingsway Theatre is a few yards down Great Queen Street. See Aldwych.

KINGSWINFORD. Rural district of Staffordshire. Its chief industries are coal and iron mining and the manufacture of iron goods, bricks, glass, etc. In Anglo-Saxon times it was the king's property. Pop. 22,057.

KINGSWOOD. District of Surrey. It is 3½ m. from Reigate, and consists of Kingswood proper and Lower Kingswood. There is a station, Kingswood and Burgh Heath, on the Southern Rly.

KINGSWOOD. Urban dist. of Gloucestershire. It is 3½ m. from Bristol. Boots and shoes are made, and in the neighbourhood are coal mines. The district was once known as Kingswood Forest. Pop. 12,957.

KINGUSSIE. Burgh of Inverness-shire, Scotland. It is on the left bank of the Spey, 46 m. S. of Inverness, on the L.M.S. Rly. and is a summer resort. Pop. 1,202.

KING WILLIAM'S TOWN. Town of Cape Province, S. Africa. It stands in a pastoral area on the river Buffalo 42 m. W. of East London. It was founded in 1835, and named after William IV. It is known usually as King. Pop. 6,444 Europeans.

KINKAJOU (*Cereuleptes caudivolvulus*). Small carnivorous mammal of the racoon family. Found in Central and tropical S. America, it is long and catlike in body, and has a remarkably long prehensile tail. Its soft fur is yellowish brown in colour, and its size is that of a small cat.

KINMEL PARK. Estate in Denbighshire, Wales. About 4 m. S.S.W. of Rhyl it was a military camp during the Great War, and became a dispersal centre for the demobilisation of Canadian soldiers. In 1929 Kinmel Park was opened as a public school to prepare boys for positions in the world of business.

KINO. Astringent gum, used in medicine, tanning, and dyeing. Indian kino which is that of the pharmacopoeia, is obtained by incisions in the bark of *Pterocarpus marsupium*, an Indian tree of the natural order Leguminosae. Another species *P. erinaceus*, affords African kino. Bengali kino is obtained from the dhak (*Butea frondosa*). Kino is used medicinally for gargling mixtures, and commercially in the manufacture of wines and as a cotton dye. It is brittle, has a dark red colour, and is soluble in alcohol.

KINROSS. Burgh of Kinross-shire, also the county town. It stands on the W. side of Loch Leven, with two stations on the L.N.E.R. The town was a royal residence in the 13th century. Pop. 2,631.

Kinross-shire. Map of the county which, save Clackmannan, is the smallest in Scotland.

KINROSS-SHIRE. County of Scotland. With an area of 82 sq. m. it lies between Fife and Perthshire. Loch Leven (associated with Mary Queen of Scots) is in the co., which has several small rivers—one, the Devon, dividing it from Perthshire. Much of the soil is under cultivation, and cattle and

sheep are reared. The L.N.E.R. serves the county. Kinross and Milnathort are the only towns. It unites with a division of Perthshire to send a member to Parliament. Pop. 7,963.

KINSALE. Seaport, urban district, and watering place of co Cork, Irish Free State. It stands at the head of Kinsale Harbour, 24 m. by rly S. of Cork on the G.S. Rlys., and is a fishing centre. The harbour is formed by the estuary of the Bandon river. On the E. side is a lighthouse. Off the Old Head of Kinsale, a headland of Courtmaesher Bay, the Lusitania was sunk, May 7, 1915. Pop. 2,747.

KINSHASA OR **KINSHASSA.** Port of the Belgian Congo. On Stanley Pool close to Léopoldville, it is connected by rly. with Matadi. Here is a wireless station.

Kintyre OR **CANTYRE.** Peninsula forming the extreme S. of Argyllshire, Scotland. On the Mull of Kintyre is a lighthouse.

KIPCHAK. Nomad people of Altaian stock in central Asia. Numbering about 60,000 in Ferghana, they are a moslemised tribe of the middle horde of the Kirghiz-Kazak. They represent the White Hordo or E. Kipchak, which flourished in the 13th-14th centuries until disintegrated by Timur.

KIPLING, RUDYARD (b. 1865). British novelist and poet. Born Dec. 30, 1865, at Bomhay, Kipling early showed literary promise, his first book, *Schoolboy Lyrics*, appearing in 1881. From 1882 to 1889

Rudyard Kipling, British novelist and poet
Hoppé

he was in India engaged in journalistic work. A prolific writer, his early prose works include *Plain Tales from the Hills*, 1887; *Soldiers Three*, 1888; *Under the Deodars*, 1888; *Wee Willie Winkie*, 1889; *The City of Dreadful Night*, 1891.

Kipling's first and only long novel, called *The Light That Failed*, appeared as a number of Lippincott's Magazine, 1890, and with a different ending in volume form, 1891. In rapid succession came two of his best collections of stories, *Life's Handicap*, 1891; and *Many Inventions*, 1893; and his best-known volume of verse, *Barraek Room Ballads*, 1892. In 1894 and 1895 came the two *Jungle Books*, in 1896 a volume of verse, *The Seven Seas*. *Stalky and Co.*, 1899, was followed by *Kim*, 1901; *Just So Stories*, 1902; *The Five Nations*, 1903; another volume of verse; and *Traffics and Discoveries*, 1904. *Puck of Pook's Hill*, 1906, and its sequel, *Rewards and Fairies*, 1910, are new interpretations of old England in many phases.

During the Great War, in which his only son John was killed, he produced *The New Army in Training*, 1914; *France at War*, 1915; *Fringes of the Fleet*, 1915; *Sea Warfare*, 1916. *Collected Verse* appeared in 1922; and in 1923 *History of the Irish Guards in the Great War*. Among his later works were *A Diversity of Creatures*, 1917; *The Years Between* (verse), 1918; *Debts and Credits*, 1926; and *A Book of Words*, 1928. In 1907 he was awarded the Nobel Prize for Literature.

KIRCHHOFF, GUSTAV ROBERT (1824-87). German astronomer. Born March 12, 1824, at Königsberg, he became professor of physics and mathematics at Berlin University in 1874. He did important work on the theory of the conduction of heat, and in optics. While at Heidelberg in 1859, working in cooperation with Robert Bunsen, he discovered the

spectroscope and laid the foundation of spectrum analysis in Kirchhoff's Law on the relation of emission and absorption. He died in Berlin, Oct. 17, 1887.

KIRGHIZ. Nomad peoples of Altaian stock, mostly in central Asia. One-eighth of them comprise the true or Kara-Kirghiz—black-capped—of the Pamir and Tianshan highlands. The rounder-headed, more Mongoloid, steppe-dwelling Kazak-riders are called by the Russians Kirghiz-Kazak to distinguish them from the lowland Slav Cossacks. Essentially herdsmen, they often cover 2,000 m. in their annual migrations. The Kirghiz Republic is an autonomous republic of Soviet Asia, to the S.E. of the Kazak Republic. The capital is Kara-Kol (Przevalsk). Its area is about 95,000 sq. m., and its population is 997,441.

Kirghiz. Type of this nomadic race

KIRJATH OR **KIRJATH-JEARIM** (Heb. city of woods). Town to the N. of the land of Judah, near Beth-Shemesb. Here the Ark of the Covenant was kept till provision could be made for it in Jerusalem (2 Sam. 6; 1 Chron. 13).

Kirjath or Kirjath-Sepher (Heb. city of the book) is an older name (Josh. 15, 15; Judges 1, 11) for the Canaanitish town of Debir, lying S.W. of Hebron.

KIRK (Gr. kyriakon). Name given chiefly in Scotland to a church. More particularly, kirk, in official use, was the name given to the Church of Scotland before the Westminster Assembly (1643). Afterwards it was usually given to that Church as distinguished from the Church of England, Roman Catholic Church, and the Scottish Episcopalian Church.

Kirk session in Scottish eccles. law is the lowest church court in the Church of Scotland. It consists of the minister, who is called the moderator, and laymen known as elders. See Presbyterianism; Scotland, Church of.

KIRK, SIR JOHN (1832-1922). British administrator. Born near Arbroath, Dec. 19, 1832, he graduated in medicine at Edinburgh. During the Crimean War he served on the medical staff in Turkey, and in 1853 accom-

panied Livingstone on his second expedition to Africa. In 1866 he was attached to the political mission at Zanzibar, becoming consul-general in 1873, and acting as agent from 1886-87. Knighted in 1881, he was appointed British plenipotentiary at the Slave Trade conference held at Brussels, 1889-90, and later he was commissioner to the Niger coast. He died Jan. 15, 1922.

KIRKBY-IN-ASHFIELD. Urban dist. of Nottinghamshire. It is 13 m. from Nottingham, and is served by the L.M.S. and L.N.E. Rlys. The chief industry is coal mining. S. Winifred's is the principal church. Pop. 17,237.

KIRKBY LONSDALE. Urban dist. and market town of Westmorland. It is on the Lune, 12 m. from Kendal, on the L.M.S. Rly. Kirkby is the Lowton of Jane Eyre. Market day, Thurs. Pop. 1,394.

KIRKBY MOORSIDE OR **KIRBY MOORSIDE.** Market town of Yorkshire (N.R.). It is on the Dove, 20 m. S.W. of Whitby, on the L.N.E. Rly. In the vale of Pickering, with the moors around it, it is an agricultural centre, and there are ironstone mines near. Market day, Wed. Pop. 1,695.

KIRKBY STEPHEN. Market town of Westmorland. It stands on the Eden, 10 m. from Appleby, and is served by the L.M.S. and L.N.E. Rlys. It has an old church, S. Stephen's. It is an agricultural centre, and there are lead, iron, and copper mines near. Market day, Mon. Pop. 1,542.

KIRKCALDY. Burgh and seaport of Fifeshire, Scotland. On the Firth of Forth, it is 26 m. from Edinburgh, on the L.N.E. Rly. It has a good harbour, and is a coal shipping port. The industries include the manufacture of linoleum and floor cloth, paper making and flour milling, also dyeing, bleaching, and tanning. From the length of its main street, about 4 m., it is known as the "lang town." The burgh includes Inveriel, Linktown, Abbotshall, Gallatown, Sinclairtown and Pathhead. Pop. 39,591.

KIRKCUDBRIGHT. Burgh and co. town of Kirkcudbrightshire, Scotland. It stands at the mouth of the Dee, on its left bank, 30 m. S.W. of Dumfries on the L.M.S. Rly. Among the town's antiquities are the ruins of the castle erected by Sir T. Maclellan of Bombie, and traces of the ancient castle of the lords of Galloway. The harbour, formed by Kireudbright Bay, is one of the largest and safest in the S. of Scotland. Pop. 2,101. Pron. Kirkcoobree.

KIRKCUDBRIGHTSHIRE. County of Scotland. In the S.W. of the country, it is part of the district called Galloway, between the shires of Dumfries and Wigtown. Its area is 900 sq. m. It has a rocky coastline on the Solway. The surface, undulating and hilly in the S., becomes mountainous on the inland borders. The chief rivers are the Ken, Cree, Dee, and Urr. The lakes include lochs Doon, Dee, and Ken. Wigtown Bay is the largest

Kirkcudbrightshire, county of Scotland famous for its Galloway cattle and sheep

inlet. Agriculture is the chief industry, and the co. is famous for its cattle, the Galloway breed, and for sheep. The L.M.S. Rly. serves the co. Kirkcudbright is the co. town. From very early times the shire was part of Galloway. Under the Douglasses a steward was appointed, and it became known as the stewartry of Kirkcudbright and E. Galloway. It is still called the stewartry. Pop. 37,156.

KIRKDALE. Village of Yorksbire (N.R.), 7 m. from Slingsby station on the L.N.E.R. It is notable for its Saxon church of S. Gregory, and for Kirkdale Cavo. The latter, discovered in 1821, is 250 ft. long, and has yielded large quantities of fossils, including remains of the cave-lion, cave-bear, wolf, elephant, and rhinoceros.

Kirkdale is also the name of a N. suburb of Liverpool, as well as of one of its parli. divisions, and of a parish of Kirkcudbrightshire.

KIRKHAM. Urban dist. and market town of Lancashire. It is 8 m. W.N.W. of Preston, on the L.M.S. Rly. There are cotton and flax manufactures, and cattle fairs are held. Market day, Fri. Pop. 3,850.

Kirkham, a village of Yorksbire (E.R.), on the Derwent, 16 m. N.E. of York, with a station on the L.N.E. Rly., has ruins of an Augustinian abbey, founded in 1121. In 1927 the ruins were presented to the nation.

KIRKINTILLOCH. Burgh of Dumbartonshire, Scotland. It is 8 m. from Glasgow, on the L.N.E. Rly., being also served by the Forth and Clyde canal. The park, called the Peel, contains remains of the Roman wall and of the castle of the Comyns. Pop. 11,690.

KIRK KILISSE OR KIRKLARELL. Town of Turkey, about 30 m. almost due E. of Adrianople. It trades in butter and cheese. Kirk Kilisse was the scene of a battle in the first Balkan War, 1912, when the Bulgarians won a signal victory over the Turks.

KIRKLISTON. Village of Linlithgowshire and Edinburghshire (Midlothian). On the Almond, 9 m. W. of Edinburgh, on the L.N.E.R., it has a Romanesque church. Pop. 3,694.

KIRKOSWALD. Village of Cumberland. On the right bank of the Eder, it is 15 m. from Carlisle, with a station, Lazonby and Kirkoswald, on the L.M.S. Rly. The church of S. Oswald has a detached tower and interesting monuments. There are remains of a castle. Pop. 475. Another Kirkoswald is a village in Ayrshire, 4 m. from Maybole. It is known for its associations with the early life of Burns.

Kirkstall. The remains of the 12th century Cistercian abbey viewed from the S.W.

Frith

KIRKSTALL. District of Yorksbire (W.R.). Now within the city of Leeds, it has a station on the L.M.S. and is famous for its ruined abbey. A Cistercian house, this was transferred from Barnoldswick to Kirkstall in 1152, and was destroyed at the dissolution of the monasteries. The remains include much of the church, the chapter house, and the abbot's lodgings.

KIRKSTONE. Pass in W. stmorland, 4 m. from Ambleside. It is on the direct route between Ambleside and Ullswater. Its summit

is 1,500 ft. high. The Traveller's Rest inn is one of the highest inhabited houses in England. The name is taken from a church-shaped rock at the top.

KIRKWALL. City, seaport, and capital of the Orkney Islands, Scotland. It stands on the island of Mainland (Pomona), 250 m. from Edinburgh. The chief building is the cathedral of S. Magnus, the older parts of which date from the 12th century. Pop. 3,697.

Kirriemuir. Bank Street, one of the thoroughfares in the town made famous as Thrums by Barrie

J. B. White, Dundee

KIRRIEMUIR. Burgh of Angus (Forfarshire), Scotland. It stands on Gairie Burn, 8 m. by rly. N.W. of Forfar, on the L.M.S. Rly. It was the birthplace of Sir J. M. Barrie, who made it famous as Thrums. It is engaged in linen weaving. In 1928 the cottage in which Sir J. M. Barrie was born (see illus. p. 199) was bought by Major R. D. Lauder for the nation. Pop. 3,408. See Auld Lights; Barrie.

KIRSCHWASSER (Ger. cherrywater). Liqueur made from cherries. A product of the Rhineland, it is made by pulping cherries with their kernels. After fermentation, the liquor is obtained by distillation.

KIRTON-IN-LINDSEY. Village of Lincolnshire. It is 6 m. from Brigg, on the L.N.E. Rly. The church of S. Andrew has some Norman and Early English work. Pop. 1,651. Another Kirton in Lincolnshire is known as Kirton-in-Holland. This is a market town 4 m. from Boston, on the L.N.E. Rly. Market day, Wed. Pop. 2,700.

KISH. Akkadian city at El-Obeimut, 9 m. E. of Hilla, N. Babylonia. From 1922 onwards important discoveries have been made near here. A cemetery of brick tombs has been unearthed and a great temple, dedicated to the earth goddess, excavated. In one tomb a large chariot was found.

KISHON. River of Central Palestine. It flows through the plain of Esdraelon and enters the Mediterranean about 6 m. S. of Acre. The defeat of Sisera (Judges 4, 1-16), and the slaying of the prophets of Baal (1 Kings 18, 40), took place on its banks.

KITCHENER. City and port of entry of Ontario, Canada. It is 62 m. S.W. of Toronto, on the Grand river, and is served by the C.N.R. The industries include furniture making and sugar refining. It is also an agricultural centre. Founded by German immigrants, the town was named Berlin. In 1916 the name was changed to Kitchener. Pop. 21,763.

KITCHENER OF KHARTOUM, HORATIO HERBERT KITCHENER, 1ST EARL (1850-1916). British soldier. Born at Croter House, Ballylongford, co. Kerry, Ireland, June 24, 1850, the second son of Lieut.-Col. Henry H. Kitchener, he passed out of Woolwich in 1870, and in 1874-78, as lieut. in the Royal Engineers, was on the staff of the Palestine Exploration Fund surveying Palestine and Cyprus.

In 1882 he entered the Egyptian army, and saw service in the unsuccessful Sudan Expedition of 1884-85 for the rescue of Gordon, the Suakin operations of 1888, and the Toski campaign of 1889. Appointed sirdar, or

commander, of the Egyptian army in 1892, he completed its reorganization and carried through the operations of 1896 and the Khartoum campaign of 1898. For his services he was made a baron and awarded £30,000.

After the disasters in S. Africa he was appointed chief of staff to Lord Roberts, who took over command there in Dec., 1899, and later succeeded him as commander-in-chief. In 1902 he brought the war to a close by the peace of Pretoria, and received the thanks of Parliament, a grant of £50,000, a viscounty, and the Order of Merit. From 1902-9 he served in India as commander-in-chief, and was appointed British agent in Egypt in 1911. He was created an earl in 1914.

On the outbreak of the Great War he was appointed secretary of state for war and at once took steps to raise a large army, known as Kitchener's Army, consisting of 70 divisions (1,400,000 men). On June 5, 1916, Kitchener left Scapa Flow for Russia in the cruiser Hampshire, in a violent storm; that evening she struck a mine near the Brough of Birsay, and all on board perished except 12 men. Kitchener's body was never found. He never married. He was succeeded by his elder brother, Henry Elliott Chevallier, 2nd earl (b. Oct. 5, 1846).

Three impressive memorials to Kitchener are the Memorial Chapel in S. Paul's Cathedral, a statue on the Horse Guards Parade, and the Memorial Tower on Marwick Head, near Birsay, Orkney. See Forshortening; consult also Life, Sir G. Arthur, 1920.

Kitchener scholarships are educational grants founded in 1916 by the Lord Kitchener National Memorial Fund. They are of an annual value of about £150 each.

KITCHEN MIDDEN. Anglied form of the Danish name for a prehistoric refuse-heap. These heaps usually comprise shells of edible molluscs, with animal bones and occasional relics of human handiwork. There are numerous examples on the Danish coasts, sometimes 1,000 ft. long and 10 ft. high. They were left by semi-nomad hunters and fishers who built rude huts with stone hearths.

KITE. Popular name for a number of birds of prey of the falcon tribe, but usually restricted to the common kite (Milvus icinus).

Kite. Bird of prey common to Europe

This bird is found in most parts of Europe and N. Africa, but is now rare in Great Britain. It is about 25 ins. long, and its plumage is reddish-brown on the upper parts and rufous with blackish stripes on the lower parts. The head and neck are whitish, streaked with brown, and the tail is forked and reddish-coloured. It lives mainly on small birds and insects.

KITE. Appliance which ascends into the air in virtue of the presence of a relative wind upon an inclined surface. In its commonest form a kite consists of a framework of wood or other light material covered with fabric or paper and held stationary in a

wind by a string in such a position that the air strikes upon its lower surface. In recent years kites have been developed for lifting recording instruments to explore the conditions of the air above the surface of the earth.

KITE BALLOON. This is a type of captive balloon developed for the purpose of making military observations. It consists generally of an elongated pear-shaped envelope inflated with hydrogen and fitted at its tapering end with four stabilising fins arranged in the form of a cross. These fins are open to the air and are inflated by the wind. From the envelope is suspended a basketwork ear containing the observers, their instruments, and telephone. See Aeronautics; Balloon.

Kite. 1. Standard Malay kite. 2. Cody's man-lifting kite. 3. Japanese pocket kite. 4. Semicircular cellular kite. 5. Box kite. 6. Chinese dragon kite

KITTIWAKE (*Rissa tridactyla*). Bird of the gull family. Common on the British coasts, it breeds in enormous numbers in Greenland and Spitsbergen and is also found in the N. Pacific. About the same size as the black-headed gull, it resembles the herring gull in its grey and white coloration. It is a good swimmer, and feeds upon fish chiefly. The young kittiwake is known as a tarrock.

Kiwi. Native name for a flightless bird of New Zealand, which is also known as apteryx (q.v.).

KLEBER, JEAN BAPTISTE (1753-1800). French soldier. Born at Strasbourg, March 9, 1753, he joined the French revolutionary army as a volunteer in 1792. In the following year he became a brigadier-general, and fought against the royalists in La Vendée. After service against the Austrians, in which he won the victory of Altenkirchen in 1796, he accompanied Napoleon to Egypt, and in the Syrian campaign won the battle of Mt. Tabor (1799). On Napoleon's return to France, Kléber became commander-in-chief. He defeated the Turks at Heliopolis, 1800, but was assassinated June 14, 1800.

KLERKSDORP. Town of the Transvaal, on the Seboonspruit, 29 m. S.W. of Potchefstroom by rly. The old village was one of the first Boer settlements in the Transvaal (1838). Klerksdorp is the centre of a gold-mining district. Small diamonds are found in the neighbourhood, and it is the market for an important cattle district. Pop. 4,200.

Klip. River in Natal. Rising in the Drakensberg Mts., it falls into the Tugela, a few miles from Ladysmith.

KLIPSPRINGER (*Oreotragus saltator*). Small species of antelope which occurs throughout E. Africa, usually in rocky districts. The name means rock-jumper, and well describes its habits. Its feet are so small that, when they are placed together, the animal can stand on a crown piece. In colour it is olive above and lighter below, and the horns are short, straight, and vertical. See Antelope.

KLONDIKE. River and district of the Yukon Territory, Canada. The river is about 120 m. long, and joins the Ynkon near Dawson City. The district lies E. and S. of the river. In 1896 placer gold was discovered in the creeks that flow into the larger streams, and for a few years much gold was produced.

KLUCK, ALEXANDER VON (b. 1846). German soldier. Born at Münster, May 20, 1846, he served in wars of 1866 and 1870-71, being wounded twice at Metz. In 1906 he was promoted general of infantry. When the Great War broke out he was placed in command of the German first army, which invaded and overran Belgium early in Aug., 1914. After receiving the surrender of Brussels and masking Antwerp, he moved on Mons, driving the Allies towards Paris.

Early in Sept. Kluck was attacked by the French and the British, who brought about his defeat in the battle of the Marne. He retired in 1916. See Marne; consult also The March on Paris, A. von Kluck, 1920.

Alexander von Kluck, German soldier

KNAPWEED (*Centaurea nigra*). Perennial herb of the order Compositae, native of W. Europe. The leaves are entire or lobed, and the small flower-heads are of a dull purple and thistle-like. Knapweed abounds in pastures and waysides.

KNARESBOROUGH. Urban dist. and market town of Yorkshire (W.R.). It is on the Nidd, 3½ m. N.E. of Harrogate, on the L.N.E.R. On a rocky pinnacle are the picturesque ruins of the castle, a residence of Piers Gaveston, Henry III, and John of Gaunt, dismantled in 1648. The church has monuments of the Slingsby family. Another local feature is the Dropping Well, famous for the petrifying qualities of the water. Market day, Wed. Pop. 5,518.

KNEBWORTH. Village of Hertfordshire. It is 25 m N of London by the L.N.E.R. Knebworth House, the seat of the earl of Lytton, is in the parish. It was erected early in the 19th century on the site of an older house. The estate has been owned by the Lyttons since 1490. Pop. 1,629. See Lytton.

KNEE JOINT. Hinge joint, formed by bony prominences or condyles at the head of the femur or thigh bone, the flattened head of the tibia or main bone of the lower leg, and the patella or knee-cap. The bones forming the joint are kept in their position by very strong ligaments. In addition to those surrounding the joint, there are two crucial ligaments inside the joint. The articular surface of the tibia consists of two cartilaginous plates, the semilunar cartilages.

Displacement or rupture of a semilunar cartilage is a common result of strain or sprain of the knee, particularly when associated with a movement of rotation, and any sudden wrench. Other affections of the knee joint are arthritis and bursitis.

KNELLER, SIR GODFREY (1646-1723). German painter, whose real name was Gottfried Kniller. Born at Lübeck, Aug. 8, 1646, he studied at Amsterdam under Ferdinand Bol, and received some lessons from Rembrandt. In 1675 he came to England, where he built up a lucrative connexion after painting the portrait of Charles II (1678). He also painted portraits of James II, William III, Queen Anne, and George I, and succeeded Sir Peter

Lely as court painter (1680). Peter the Great and Louis XIV also sat to him.

His most notable works include the equestrian portrait of William III, the portraits of Queen Anne, the duchess of Marlborough, Lord Chancery Cowper, Sir Isaac Newton, and the 48 members of the Kit-Cat Club. He was knighted in 1691, and died in London, Oct. 19, 1723. See illustrations, pp. 92, 231, 444, 502, 647, 653, 662, etc.

Sir Godfrey Kneller, German painter
Self-portrait

KNELLER HALL. This is the mansion built by Sir Godfrey in 1711, near Hounslow, Middlesex, and is now the Royal Military School of Music, established for the training of handsmen for the British army. The administration is strictly military.

KNIGHT, CHARLES (1791-1873). British publisher, editor, and author. Born at Windsor, March 15, 1791, he began as a publisher in London, in 1823, starting Knight's Quarterly Magazine, the contributors to which included W. M. Praed, Macaulay, and De Quincey. As publisher, and in some cases editor, between 1829-46, of the works of The Society for the Diffusion of Useful Knowledge, his name is associated with The Penny Magazine, The Penny Cyclopaedia, reissued later as The English Cyclopaedia, and other educational publications. His own writings include Lives of Caxton, Fairfax, Shakespeare (prefixed to his edition of the works), and Tasso; Popular History of England, 1862; Passages of a Working Life, 1864; and Shadows of the Old Booksellers, 1865. He died March 9, 1873.

Knapweed. Perennial herb of the waysides

KNIGHT, DAME LAURA. British painter. Daughter of Charles Johnson, of Nottingham, she married Harold Knight, a portrait painter,

in 1903. She first exhibited at the Royal Academy in 1903. Examples of her work are in the Victoria and Albert Museum, in Manchester and Birmingham, as well as in galleries in South Africa and Australia. She was elected A.R.A. in Nov., 1927. She has particularly concerned herself with painting scenes from circus and stage life. In 1929 she was made a Dame Commander.

Laura Knight, British painter

KNIGHTHOOD. Rank of a knight and the fraternity of knights. The Church early influenced knighthood, prescribing the terms of the knightly ideal, and some orders were exclusively religious. Of these, the best known are the Hospitallers or Knights of St. John, the Templars and the Teutonic Knights. There were three manners of knighting. (1) Sudden dubbing on the field of battle. (2) Dubbing by a layman, but accompanied by special ceremonial, including an all-night vigil and purification in a bath (hence the still surviving Order of the Bath). (3) Dubbing by the Church, with appropriate ritual.

Knight's fee was the name given in England in feudal times to the amount of land forming the unit of military service, men holding land in return for supplying the king or overlord

with a certain number of knights in case of war. This was known as knight service. By the late 13th century, owing partly to the decadence of the class from which the knights were drawn, the system was in full decay, and the introduction of gunpowder into common use dealt a death-blow to knighthood as a military and political force. But orders of knighthood remained, and membership was soon a coveted distinction conferred by the king.

In the United Kingdom to-day there are two classes of knights: (1) the knights bachelor, the lowest but most ancient order of knighthood, consisting of those who have merely been knighted; and (2) knights of the various orders: Garter, Thistle, St Patrick, Bath, St Michael and St George, Star of India, Indian Empire, Royal Victorian and British Empire. A knight is entitled to the prefix Sir and his wife to that of Lady, although her legal title is Dame. The title is not hereditary. Of foreign orders, that of the Golden Fleece is regarded as the most distinguished. See *Accolade*; *Banner*; and under the names of the various Orders.

KNIGHTLOW. Hundred of Warwickshire. It is noted for its hundred moot, still held every year on Nov 11. The steward of the duke of Buccleuch assembles the representatives of the parishes round a hollow stone, on the top of Knightlow Hill, and reads out the names of the parishes and the amount due from each, which is cast into the stone.

KNIGHTON. Market town and urban dist. of Radnorshire. It stands on the Teme, 5 m. from Presteigne, on the L.M.S. Rly. Market day, Thurs. Pop. 1,752. There are other places of this name in England, one a residential suburb of Leicester.

KNIGHTSBRIDGE. London thoroughfare. It runs between Hyde Park Corner and Kensington Gore, S. of Hyde Park and N. of Belgrave and Brompton. Charles Reade lived at No. 70, Knightsbridge, 1867-79. At 49, Prince's Gate, the Peacock Room was decorated by Whistler in 1876-77. The cavalry barracks date from 1879; the riding school from 1857. Here are St. Paul's church, that of Holy Trinity, and the horse mart of Tattersall's.

KNIGHT'S STAR LILY (*Hippeastrum*). Genus of bulbous herbs of the natural order Amaryllidaceae. Natives of S. America, they have strap-shaped leaves and small clusters of large funnel-shaped, lily-like flowers. In colour they are orange, crimson, or white, striped and mottled with various tints. Long cultivated in greenhouses, they have given rise to many florists' varieties and hybrids.

KNIGHTS TEMPLARS OR **KNIGHTS OF THE TEMPLE.** Religious and military order founded by Hugh de Payens and others at Jerusalem about 1118. The rule enjoined chastity, poverty, and obedience. The object was the defence of pilgrims to the Holy City. There were three grades—knights, esquires, and those who helped with gifts. The numbers at the end of the 13th century were about 15,000, while the property included 9,000 castles and manors. The mantle was white; in 1146 Eugenius III added to it a red cross. The seal represented two knights riding a single horse. The black and white banner (see illus. p. 190) bore the legend *Beau Séant* (q.v.). The order had stations at Jerusalem, Antioch, Tripoli, and Cyprus, and provinces in

nearly every country in W Europe. The head of the order was the Grand Master, while in each country was a governor.

Knights Templars. Effigy in Temple Church, London

seized Münster in Westphalia, in 1534. On the death of Matthys, Boekelson became king of the New Zion, and Knipperdolling his vice-steward and guardian of public order. Münster was recaptured in 1535, and Knipperdolling, Boekelson, and their colleague Bernhard Krechting were taken and executed. See *Anabaptists*.

KNOBLOCK, EDWARD (b. 1874). British dramatist. Born in New York, April 7, 1874, and educated at Harvard, he was naturalised as a British subject in 1916, changing the spelling of his name from Knoblauch. His numerous successful plays include *The Shulamite* (with Claude Askew), 1906; *Kismet*, 1911; *Milestones* (with Arnold Bennett), 1912; *My Lady's Dress*, 1914; *London Life* (with Arnold Bennett), 1924.

KNOCK. Village of co. Mayo, Irish Free State. It is 5½ m. N.E. of Claremorris. About 1880 it became a place of pilgrimage, owing to a report that an apparition of the Virgin Mary had appeared on the gable wall of the Roman Catholic chapel. Pop. 2,550.

KNOCKALOE. Locality 1½ m. S. of Peel, Isle of Man, which gave its name to one of the largest internment camps for enemy civilians during the Great War. Knockaloe camp lay near Peel, on the W. coast of the island. It was afterwards made into an experimental farm. See *Internment*.

KNOCKER. Piece of brass or iron suspended to an outer door, in order that a caller can make his presence known. In England, in the 18th century, the houses of the wealthy were adorned with knockers of fine workmanship, and collections of these have been made. In the 19th century the knocker was largely replaced by the bell, but it remained on many houses as an ornament. A knocker-up is a person who, for a small fee, knocks up the workers at a stated hour in the morning.

KNOCK KNEE (*Genu valgum*). Deformity in which the knees are bent inwards, so as to touch each other. The commonest cause is rickets during early life. In young children, rest in bed, massage, and manipulation, help to straighten the limb. In older children it may be necessary to apply splints on the outer side of the leg. In addition, appropriate measures must be taken to deal with the rickets. See *Bow Leg*.

KNOCKMEALDOWN. Mt. range of the Irish Free State. It extends for about 13 m. between co. Tipperary and Waterford. The highest summit attains 2,609 ft.

KNOLE. Seat of Lord Sackville, in Kent, 1½ m. from Sevenoaks. It was first a residence of the earl of Pembroke, but in the 15th century was bought and largely rebuilt by the archbishop of Canterbury, Thomas Beuchier. Later archbishops lived here until the house and estates were taken from Cranmer by Henry VIII. Elizabeth gave them to Thomas Sackville, afterwards earl of Dorset. The

Knole, the seat of Lord Sackville, Sevenoaks, reconstructed in 17th cent. on site of earlier buildings

present structure was built early in the 17th century. It contains many valuable works of art, especially paintings, and stands in a large deer park. Of the old house, the chapel remains.

KNOLLYS, FRANCIS KNOLLYS, 1ST VISCOUNT (1837-1924). British courtier. Born July 10, 1837, he was descended from a famous family that until about 1810 claimed the earldom of Banbury. In 1868 he became gentleman usher to Queen Victoria, and in 1870 private secretary to the prince of Wales, afterwards Edward VII, retaining this position throughout the reign of the latter, and also serving George V until his resignation in 1913. He was a lord-in-waiting to Queen Alexandra. Having been a knight since 1886, he was created a baron in 1902 and a viscount in 1911. In 1910 Lord Knollys became a privy councillor. He died Aug. 15, 1924. Pron. Noles.

Knot. Cordage knots in common use. 1. Overhand. 2. Reef. 3. Granny. 4. Bowline. 5. Clove hitch. 6. Blackwall hitch. 7. Timber hitch. 8. Sheepshank

KNOT. Word employed in different senses. (1) It is a measurement of speed in nautical miles per hour, so called from the knots in the log line by which a ship's speed used to be measured. The word includes time. The Admiralty nautical mile is usually taken as 6,080 ft.

(2) In cordage a knot is a loop, or combination of loops, used for fastening two ropes together, fastening a rope to some object, or for making a knob or swelling in or at one end of a rope to prevent slipping, etc.

(3) A knot in wood is the hard portion due to the growth of a branch.

Knot. The small migratory bird in its summer plumage

KNOT (*Tringa canutus*). Small wading bird of the plover family (Charadriidae) and the sandpiper section. Vast numbers visit

the E. and S.E. coasts of Britain in the autumn. About 9 ins in length, it has long legs and a long, slender bill, and its winter dress is ashy-grey above and white below. In summer this is replaced by red-brown feathers with black centres above, while the lower parts are chestnut. It frequents mud flats and salt marshes, and feeds on molluscs.

KNOTTINGLEY. Urban dist. and river port of Yorkshire (W.R.). It stands on the Aire, 3 m N of Pontefract on the L.M.S. Rly. The industries include brewing and malting. A canal connects the Aire at Knottingley with Goole. Pop. 6,757.

KNOUT (RUSS knout). Scourge formerly used in Russia for flogging criminals. The commonest form of this whip consisted of plaited thongs of hide, sometimes interwoven with wire. The punishment was so severe that death often ensued. Flogging with the knout was abolished by Tsar Nicholas I.

KNOWLES, JAMES SHERIDAN (1784-1862). British actor and playwright. Born at Cork, May 12, 1784, he went to London in 1793. His first play, *Leo, or The Gipsy*, 1810, was written for Edmund Kean. His first great success was with his comedy, *The Hunchback*, staged at Covent Garden, April 5, 1832, by Charles Kemble, with Mrs. Kemble in the part of Julia. For *The Wife*, 1833, Lamb wrote prologue and epilogue. His most popular play was the comedy, *The Love Chase*, first seen at The Haymarket, Oct. 9, 1837, and still occasionally revived. Knowles died Nov. 30, 1862. His son, Richard Brinsley Knowles (1820-1882), was an official of the Historical MSS. Commission.

Knucklebones. Women playing; from a painting in Herculaneum. See below. Courtesy of the trustees of the Brit. Mus.

KNOWLTON. Village of Kent. It is 4½ m. S.W. of Sandwich and 9 m. from Canterbury. It contains a cross erected as a memorial to the bravest village of the United Kingdom. A competition was organized for ascertaining the best voluntary recruiting record in the villages of the U.K. up to Feb. 28, 1915. The first place was given to Knowlton, which sent 13 recruits out of 39 residents.

KNOWSLEY. Lancashire residence of the earl of Derby, 8 m. from Liverpool. The estate came to the Stanleys before 1400 through the marriage of Sir John Stanley with the heiress of the Lathoms, and the original house was enlarged by the 1st earl of Derby. It is mainly built of red brick, and has many fine pictures and family portraits. There is an extensive park.

John Knox, Scottish reformer. After an unknown artist.

KNOX, JOHN (c. 1514-72). Scottish reformer. Born at Giffordgate or Morham, near Haddington, Knox became the companion of Wishart, the martyr, in 1545, and definitely embraced the reformed faith. He became preacher to the garrison of St Andrews, and when the castle surrendered to the French (July, 1547), Knox was consigned to the French galleys, but was released, Feb., 1549. For the next five years he played a notable part in the Reformation under Edward VI as a royal chaplain. He became minister to English refugees at Frankfurt, Nov., 1554, was chosen pastor by

English exiles at Geneva in 1555, and became imbued with the Calvinistic spirit. In 1559 he returned to Scotland, and delivered stirring sermons at Perth, St. Andrews, and Edinburgh.

When the French troops left Scotland the Roman Catholic doctrine was replaced by a Calvinistic Confession of Faith drawn up by Knox and his colleagues. But the cupidity of the nobles prevented the ratification of the First Book of Discipline, by which the revenues of the old church were claimed for the new. The breach between the Protestant nobles and Knox was widened by the conciliatory policy of the former on Mary's return to Scotland in Aug., 1561. Knox was persuaded that Mary was only biding her time to restore Catholicism, and his denunciations of this policy led to his famous interviews with Mary. He withdrew to St. Andrews in May, 1571, but returned to Edinburgh in Aug., 1572, and died Nov. 24, 1572. The most important of his numerous writings is his *Historie of the Reformation in Scotland*. See Calvin, J.; Reformation; also Edinburgh, illus.

KNOX, RONALD ARBUTHNOTT (b. 1888). British writer. A son of Rev. E. A. Knox, sometime bishop of Manchester, after a brilliant career at Oxford he joined the Roman Catholic church in 1917 and later became chaplain to the R.C. undergraduates at Oxford. He is also known as the author of some clever detective stories. His brother, Edmund George Valpy (b. 1881), was educated at Rugby and Corpus Christi College, Oxford. Having joined the staff of Punch, he became known by his witty contributions

Knowsley Hall, Lancashire, the residence of the earl of Derby. It has been enlarged and frequently altered since the 16th century.

to that journal signed Evoc, some of which have appeared as books.

KNUCKLEBONES. Primitive game originally played with the knucklebones of a sheep. The object of the game is to toss the five knucklebones, now usually stones, one after the other and catch them on the back of the hand. There are many variations and different kinds of throws. See illus. above.

KNUR AND SPELL. Popular game in Lancashire and Yorkshire. It is a species of trap and ball game: the spell answering to the trap, and the knur to the ball. The implement for striking the knur when thrown up by the trigger of the trap is called the pommel; it is a tapering ash stick with a head of beech faced with maple. The knur is now commonly of porcelain, about 1 in. in diameter, and ½ oz. in weight.

KNUTSFORD. Urban dist. and market town of Cheshire. It is 15 m. S.W. of Manchester, on the Cheshire Lines Rly., a favourite residence of Manchester merchants, and a

centre of leather, worsted, and cotton goods manufacture. It is the Cranford of Mrs. Gaskell, who was buried in the Unitarian churchyard Near are Tatton Park, the 13th century church of Lower Peover, Tabley House, and Tabley Old Hall, on an island in a lake. Market day, Sat. Pop. 5,507.

Koala, the marsupial commonly called the native bear of Australia.

KNUTSFORD, HENRY THURSTAN HOLLAND, 1st Viscount (1825-1914). British politician. The son of Sir Henry Holland, the physician, and the grandson of Sydney Smith, he was born Aug. 3, 1825. He became legal adviser to the colonial office in 1854, was promoted to be assistant under-secretary, and then took up a political career. From 1874-85 he was M.P. for Midhurst, and from 1885-88 for Hampstead. From 1887-92 he was secretary of state for the colonies. He was made a baron in 1888, and a viscount in 1895. He died Jan. 29, 1914.

His son, Sydney Holland, 2nd Viscount (b. 1853), was best known for his association with the London and other hospitals. He was chairman of the London Hospital. He published *In Black and White*, 1926.

KOALA (*Phascogaleus cinereus*). Marsupial mammal. Found in Australasia, it is commonly called the native bear, though not related to the bear tribe. A thick-set animal about 2 ft long, its fur is greyish in colour with white below. It has no visible tail. An expert climber, it spends most of its time in the eucalyptus or blue gum trees, feeding on the leaves. It also eats roots. See illus. above.

KOBE. Seaport and city of Japan. At the E. end of the Inland Sea, on Osaka Bay, Honshu, it is the port of Osaka 22 m. distant, with which it has rly. connexion. There are shipbuilding and engineering establishments. The chief exports include tea, rice, cotton yarn, and porcelain. Kobe has steamship communication with the great ports of the Pacific and N Atlantic oceans. Pop. 644,212.

KOCH, ROBERT (1843-1910). German bacteriologist. Born at Klausthal, Prussia, Dec. 11, 1843, he studied medicine at Göttingen University. In 1876 he announced the isolation of the bacillus of anthrax. In 1882, thanks to his new methods of microscopical examination, he was able to announce the discovery of the tubercle bacillus, and in 1883, after a visit to Egypt and India, of the comma bacillus, the cause of cholera.

In 1885 Koch became professor in the university of Berlin, and director of the new

Hygienic Institute. From 1896-1903 Koch paid several visits to Africa to study rinderpest, sleeping sickness, etc. In 1905 he was awarded the Nobel prize for medicine. He died May 28, 1910. His chief works are *On Cholera Bacteria* (Eng. trans. 1886); *On Bacteriological Investigation* (Eng. trans. 1891); *Investigation of Pathogenic Organisms* (Eng. trans. 1886). See Bacteriology; consult Life, C. Vezel, 1912.

Knur and Spell. Player about to strike trap trigger with pommel.

KOFFYFONTEIN. Town of the Orange Free Stat. S. Africa. It is 36 m. from Fauresmith. The town owes its existence to the diamond mines in the neighbourhood. Pop. 3,300.

KOH-I-NUR, or **KOH-I-NOOR**. Famous Indian diamond. Now in the British crown, it is supposed to have come from the Golconda mines. It came into the possession of Ala-ud-din, emperor of Delhi, in 1304, and in 1526 into that of Humayun, son of Babar, the founder of the Mogul dynasty. It passed in 1739 to the Persian invader Nadir Shah. Ranjit Singh acquired it in 1833, and after the annexation of the Punjab in 1849 it was presented to Queen Victoria, and cut from 186½ carats to 106½.

Koh-i-Nur. The famous diamond after its second cutting. Half actual size

KOHL. Powder used by Oriental women to darken the orbits of the eyes. Introduced in neolithic times, eye-paint became general in early Egypt, and its vogue spread thence to W Asia, Greece, and Rome. It was used by Jazebel (2 Kings 9, 30). The fashion survives among all classes, Copt and Moslem, in modern Egypt. Burnt almond shells and gum libanum are favourite materials.

KOHL-RABI OR **COLE-RAPE** (*Brassica oleracea* Caulo-rapa). Variety of cabbage with the stem swollen at its base, just above the ground. It is a food relished by stock, while some kinds are adapted for human consumption. Tolerant of drought and cold, it is cultivated very like the turnip is.

KOKRA. Timber of *Aporosa roxburghii*, a tree of the order Euphorbiaceae, native of India. It has laurel-like, leathery leaves, and flowers in catkins. The wood is very hard, and useful for many purposes, including the making of musical instruments, such as flutes.

Kohl-rab, variety of cabbage eaten by cattle

KOLA. Peninsula of Russia, between the White Sea and the Arctic Ocean. The N. shore is called the Murman, i.e. Norman, coast. The country is dreary and inhospitable. It came into prominence in the Allied expedition to the Murman coast, 1918. It is on the Murman rly. See Archangel; Murman.

KOLA NUT OR **GOORA NUT**. Seed of an evergreen tree (*Cola acuminata*) of the order Sterculiaceae, a native of tropical Africa. The tree is about 40 ft. high, and has large leathery oblong leaves pointed at each end and sprays of pale yellow flowers. The seeds, about the size of horse chestnuts, are contained in pod-like follicles. They are used as a condiment, a small piece also being chewed before a meal to improve the flavour of the viands.

KOLTCHAK, ALEXIS (1874-1920). Russian sailor. He entered the Russian navy in 1891, saw service in the Russo-Japanese War of 1904-5, and was rear-admiral of the Black Sea fleet at the outbreak of the Great War. After the Revolution of 1917 his fleet mutinied at Sevastopol and arrested him with his officers. In the winter of 1917-18 he organized an anti-Bolshevist force in E. Siberia, and set up a government with headquarters at Omsk. In 1918-19 he marched W. to the Urals and inflicted several defeats on the Bolshevik forces. Eventually falling into the hands of the enemy, he was shot at Irkutsk, Feb. 7, 1920. See Denikin; Korniloff.

Admiral Koltchak, Russian sailor

KOLUBARA. River of Serbia, in Yugoslavia. It rises in the hills S of Valievo, runs E., thence N., and enters the Save at Ohrenovatz. Its valley, which was the scene of fighting between the Austrians and Serbians in the Great War, gave its name to a battle, also called the battle of Suvobor, or of the Ridges. The battle began Nov. 6, 1914, with the invasion of N.W. Serbia by the Austrians, and terminated Dec. 15, 1914, with the recapture of Belgrade by the Serbians. This great victory freed Serbian territory from its invaders for the time being.

KOMATI. River of S.E. Africa. It rises in the E. Transvaal and runs through Swaziland and Portuguese E. Africa to Delagoa Bay. Low-grade auriferous rock is found in the upper valley in the Steynsdorp district. Near the junction of the Komati and Crocodile rivers, in the Transvaal, is the frontier settlement of Komati Poort. It is on the rly. from Lourenço Marques to Johannesburg.

KONIEH OR **KONYA**. City of Turkey, the ancient Iconium. Capital of the vilayet of the same name, it lies about 300 m. E. of Smyrna, with which and with the Bosphorus it is connected by railway. The centre of a fertile district, it carries on a large trade, and its carpet and silk industries are extensive and valuable. It has many fine mosques, and is famous for its monastery of the Dancing Dervishes. Pop. 47,286.

KÖNIG, FRIEDRICH (1774-1833). German inventor of the first practical steam printing machine. Born at Eisleben. April 17, 1774, he left Germany for England in 1806. König's first patent (1810) was for a hand press so modified as to permit of power being applied to it. König experimented with the idea of the cylinder, and took out three other patents, in 1812, 1814, and 1816. Two machines were made for The Times, and on Nov. 29, 1814, this paper was first printed by steam, the rate of production being quadrupled. König died Jan. 17, 1833.

Friedrich König, German inventor

KÖNIGGRÄTZ. Town of Czechoslovakia. It is in Bohemia, 14 m. from Prague, and has a Gothic cathedral and other interesting buildings. Pop. 13,100. Near is the village of Sadowa (q.v.), where, in July 1866, the Prussians defeated the Austrians.

KÖNIGSBERG. German cruiser. Raiding in the East at the outbreak of the Great War, she was driven into the Rufiji river, German E. Africa, and there blockaded by British warships, being finally destroyed July 11, 1915. Sister ships were the Nürnberg,

Königsberg. The castle, begun in the 13th cent.

destroyed at the Falklands battle, Dec. 8, 1914, the Stettin, and the Stuttgart.

KÖNIGSBERG. City and port of Germany, capital of E. Prussia. It stands on the Pregel, about 4½ m. from its mouth in the Frisches Haff, and 400 m. from Berlin. The town proper is divided into three parts, the old town, the district of Löbenicht, and the Kneiphof, on an island in the river; around are modern suburbs. The chief buildings are the palace

or castle, begun in the 13th century and the Gothic cathedral on the island. The university was founded in 1544. There is an old Rathaus. The industries include shipping, the channel connecting it with Pillau, its port on the Baltic, taking large ships. The manufactures include machinery, chemicals, toys, and sugar. Königsberg was founded by the Teutonic Order, who built a castle here in 1255. It was the residence of the masters of the Teutonic Order and afterwards of the dukes of Prussia. Pop. 279,926. See Tannenberg.

KÖNIGSSTUHL. Historic place in Germany. It is near Rense on the left bank of the Rhine, in the Prussian Rhine prov. In medieval times the junction of four of the German electorates, it became the meeting place of the electoral assemblies. In 1376 the emperor Charles IV erected a small building here, to which the name of Königsstuhl was given. It was rebuilt in 1843. See Empire.

KONJAK (*Amorophallus rivieri*). Perennial tuberous herb of the order Araceae, a native of Japan. The much divided leaves are about 4 ft. across, solitary, on a tall marbled leafstalk. The flowers appear before the leaves, and are clustered round a deep red spike which protrudes far above the rosy-green spreading spathe. A large quantity of starch is obtained from the tubers.

KOOTENAY. River of Canada. The chief tributary of the Columbia river, it rises on the W. of the Rocky Mts. in British Columbia, flows across adjacent parts of Montana and Idaho, emerges into British Columbia again W. of the Purcell range, flows into Kootenay Lake from the S., and leaves the lake to flow S.W. to the Columbia just below Lower Arrow Lake. Its length is 400 m.

The Kootenay Pass, in the Rocky Mts. between British Columbia and Alberta, sometimes called the Boundary Pass, is the most southerly of the Canadian passes, in lat. 49° 9'.

KOPECK (Russ. *kopeyka*). Russian coin. It is the one-hundredth part of a rouble (q.v.), its nominal value being three-eighths of a penny.

KÖPENICK OR **CÖPEN-ICK**. Part of Greater Berlin, before 1920 a separate town. It lies on an island at the junction of the Spree and Dahme. The manufactures include linoleum, chemicals, and dyestuffs. The "captain of Köpenick" was an impostor, Wilhelm Voigt, a cobbler and old convict. On Oct. 16, 1906, in the uniform of a captain of the guards, and accompanied by two grenadiers, he entered the burgomaster's office, appropriated a sum of money, and sent the burgomaster and treasurer to the guard-house at Berlin in charge of the grenadiers. He died in March, 1918.

KOPJE (Dutch, kop, top). Name given to flat-topped S. African hills produced by the denudation of an ancient plateau. Spion Kop is a well-known example. Pron. Kop-py.

KORAH. Israelitish rebel and cousin of Moses. Objecting to the priesthood being confined to the line of Aaron, he raised a revolt against Moses. The movement failed, and Korah and his household were destroyed. His descendants later appeared as a society of singers in the Temple.

KORAN, THE (Arabic Qur'an, that should be read). The Book which was revealed to the Prophet Mahomet or Muhammad, both at Mecca and Medina, during the last 23 years of his life, and is believed by the Moslems to be the word of God as distinguished from Hadis,

Kopeck. Two sides of coin of Alexander II, three-quarters of actual size

i.e. the sayings of the Prophet. It is divided into 30 parts, and sub-divided into 114 chapters, each having a separate title.

The Koran was reduced to writing in the Prophet's lifetime under his personal care; and was also committed to memory by his companions. It is in rhymed prose and is universally recognized as the finest production in Arabic literature. It claims to contain all the truths of previous revealed books, to be the final, unalterable, and the complete exposition of the religion of Islam. See Islam; Mahomedanism; Mahomet.

KOREA OR **CHOSEN**. Peninsula of Asia, S. of Manchuria, forming part of the Japanese Empire. It is separated from Japan by Korea Strait.

Korea. Lady of rank in her miniature sedan chair, with attendants

Along its coasts are about 200 islands, including Saishuto (Quelpart) and the Nankaito group. The capital is Seoul (Keijo). The area is 85,155 sq. m. Pop. 19,103,900.

The country is broken by hills and valleys

and the numerous rivers are swift and shallow. The chief industry is agriculture. Rice, barley, wheat, beans, cotton, tobacco, ginseng, and fruits are grown, and silk culture and cattle rearing are carried on. Fishing is a growing industry. Gold is mined, and copper, iron, coal and other minerals are found.

At the dawn of Christianity the people of Korea already possessed a high degree of civilization. At the close of the 16th century the country was invaded by Hideyoshi, the Napoleon of Japan. Korea never recovered from this blow, and for over 200 years remained isolated from the world. Since its annexation by Japan in 1910 the rlys. have been extended, roads improved, postal and telegraphic systems set up, and foreign trade has enormously increased. See Japan.

KÖRNER, KARL THEODOR (1791-1813). German poet. Born at Dresden, Sept. 23, 1791, he early took to writing, and is best remembered as a lyric poet. In 1813 he joined the army when Prussia rose against Napoleon, which inspired him to write his patriotic songs. Only a few hours before his death, Aug. 26, 1813, he wrote his famous *Das Schwertlied* (Song of the Sword). His songs were collected under the title of *Leier und Schwert* (Lyre and Sword), 1814; Eng. trans. W. B. Chorley, 1834.

KORNILOFF, LAVR GEORGIEVITCH (1870-1918). Russian soldier. The son of a Cossack officer, he served as a volunteer with the Boers

L. G. Korniloff, Russian soldier

in the South African War, and also took part in the Russo-Japanese War. During the Russian retreat from the Dunaetz, Korniloff, with the 48th division, broke through the Austro-German encirclement and rejoined the main Russian forces, then retreating to the San. After the Revolution he first held the Petrograd command, then became commander-in-chief of the Russian Eighth Army, and played a magnificent part in the Russian offensive of July, 1917. After being made commander of all the southwestern armies, he replaced Brusiloff as generalissimo. On the overthrow of Kerensky, Korniloff joined the Kuban Cossacks. He was killed in Caucasasia, March 31, 1918. See Kerensky.

KOSCIUSKO. Mt. in New South Wales. The highest peak in Australia (7,328 ft.), it is the enlminating point of the Muniong range, a group of the Anstralian Alps.

KOSCIUSKO, TADEUSZ (1746-1817). Polish soldier. Born in Lithuania, Feb. 12, 1746, he entered the Polish army, and in 1777 went to America to fight for the colonists against the British. In 1792 he distinguished himself in the war with Russia by bolding out for five days at Duhienka, with 4,000 men against 18,000. In the Polish rising of 1794, Kosciusko was made dictator, and the peasant army defeated the Russians at Raclawice. Warsaw was soon in his hands, but the Russians were reinforced by the Prussians, and the Poles suffered defeat at Maciejowice, Kosciusko being taken prisoner. In 1796 he was released, and visited England, America, and France in turn. He died Oct. 15, 1817. Pron. Kos-yus-ko. Consalt Life, M. M. Gardner, 1920.

KOSHER (Hebrew, fit). Jewish term for what is ceremonially clean. The word is applied both to food and to the vessels in which it is prepared. Kosher meat is that of a beast slaughtered by a licensed butcher according to the Mosaic law. Kosher wine is made from grapes grown in Palestine, and must be prepared solely by persons who are of the Jewish faith.

KOSSOVO OR **KOSOVO POLJE**. Plain of Serbia, also known as Amselfeld, or the field of blackbirds. It stretches S.W. from the river Ibar, and is bounded W. by the Albanian Mts., E. by the Sitnitze, and S. by the Shar Dag. During Turkish rule there was a vilayet of Kossovo, more extensive than the plain, particularly towards the N.

In the first Balkan War the Serbians defeated the Turks several times in this district in Oct., 1912. During the Great War

the plain was the scene of the last stand made by the Serbs, particularly at Prizren, in Nov., 1915, to cover the retreat into the Albanian Mts. Prizren and Mitrovitz (Mitrovica) were recovered by the Allies (French), Oct. 12, 1918. See Serbia.

KOSSUTH, LAJOS OR **LOUIS** (1802-94). Hungarian patriot. Born at Monok, in N.E. Hungary, Sept. 19, 1802, Kossuth studied law at Budapest and first sat in the national diet at Pressburg in 1825. His enthusiasm for the Hungarian national cause early attracted attention and the revolution of 1848 brought him into the forefront. He became minister of finance, and his appeal for a national army to resist the invading Serbs and Croats raised a force of over 200,000 men.

On Sept. 28 he became responsible for national defence, and his oratory fired the soldiers to the successes of April, 1849. It was then that his famous declaration of independence sent a thrill of inspiration throughout Europe, but early in Aug., realizing that surrender to Austria was inevitable, he abdicated. After spending some time in Asia Minor, he came to England through France, meeting with an enthusiastic welcome in both countries, 1851. In Dec., 1851, he began a violent propaganda campaign against Austria in the U.S.A. The rest of his life was spent in exile, and he died at Turin on March 20, 1894.

His son, Ferencz Lajos Akos Kossuth (1841-1914), was elected to the chamber in 1895. He was prominent in opposition from 1896-1905, notably by his obstructive tactics against the army bills in 1902. He became minister of commerce in 1906, and died at Budapest, May 25, 1914. Pron. Kosh-oot.

Lajos Kossuth, Hungarian patriot

KOTZEBUE, AUGUST FRIEDRICH FERDINAND VON (1761-1819). German dramatist. Born May 3, 1761, at Weimar, he studied law, and held official appointments at St. Petersburg and Reval. The remarkable success of his play *Menschenhass und Reue* long popular in England as *The Stranger*, 1790, decided him to write almost exclusively for the theatre. He produced upwards of 200 plays, and was made director of the St. Petersburg Theatre. From 1816 till his death he lived in Germany as a Russian secret service agent, and on March 23, 1819, he was assassinated at Mannheim by a student, whose indignation had been aroused by Kotzebue's History of the German Empire.

A. F. F. von Kotzebue German dramatist

Three sons of Kotzebue attained distinction: Otto von Kotzebue commanded a Russian expedition in search of a N.E. passage, 1815-18, in the course of which the N. coast of Alaska was explored, Kotzebue Sound was discovered, and much geological and botanical knowledge was acquired. Wilhelm von Kotzebue was Russian minister at Dresden, 1870-80, and wrote dramas under the pen-name Wilhelm Augustsohn. Alexander von Kotzebue painted a series of historical pictures for the Winter Palace in St. Petersburg illustrating Russian victories. Pron. Kotseboo.

KOUMISS. Fermented beverage made from mare's or camel's milk by Asiatic nomad peoples. In Europe and America koumiss is also prepared from cow's milk. It has a curious acid taste and is valuable in medicine as a diuretic, and as an article of diet in wasting diseases, e.g. phthisis.

KOVNO OR **KAUNAS**. Town of Lithuania. It is on the N. side of the Niemen (Nemunas), 60 m. N.W. of Vilna, and is the seat of the government. The university was opened in 1922. There are breweries, bone-grinding mills, and wire and nail factories. Kovno was founded in the 11th century, and till the end of the 16th was the great cereal mart of Lithuania. It was captured by the Austrians in the Great War, Aug., 1915. Pop. 97,000.

KOWEIT OR **KUWAIT**. Seaport on the Arabian side of the Persian Gulf. Standing at the head of the gulf, with a fine barharour, it was originally designated as the terminus of the Bagdad railway, but in this respect has been largely superseded by Basra. It is the chief town of a state extending along the Persian Gulf from Iraq to Nejd, ruled by an independent sheikh, who has friendly relations with Great Britain. Pop. 50,000. See Bagdad Railway.

KOWLOON. Former city of China. It gives its name to the peninsula in which it is situated, immediately opposite Hong Kong. Kowloon was outside the territory originally ceded to Britain in 1860, and when in 1887 a customs cordon was established on the boundary to check smuggling, Kowloon frequently became the general name for all the stations. With the extension of the colony's boundaries in 1898 the customs stations were removed outside the limits of the leased territory, but retained the original name. See Hong Kong.

KOWTOW OR **KOTOW** (Chinese, knock-head). Chinese salutation expressing homage, respect, or worship, performed by kneeling and touching the ground with the forehead. The kowtow to the emperor consisted in kneeling thrice and knocking the forehead on the ground nine times. After Lord Amherst's refusal to kowtow in 1816, the word came to be used in English for obsequiousness.

KRAAL (Dutch) Group of huts built round a cattle enclosure, often stockaded with timber or mud. It is the typical Hottentot and Kaffir village. It may denote the community itself, and, by extension, an encampment formed on the march, defended by palisading and wagons. Pron. krahll.

KRAKATOA. East Indian island, in Sunda Strait, between Sumatra and Java. During the second half of the 18th century a volcanic eruption had made a crater the vent of which had become plugged with solid lava. In 1883 a tremendous eruption blew two-thirds of the island to fragments, and left exposed part of the wall of the ancient crater, a cubic mile of material being hurled into the air. The sound of the explosion was heard in Australia. In Jan., 1928, the volcano was again in eruption.

Krakatoa. Cliff showing vent and structure of the original crater as exposed by the eruption of 1883

KRASSIN, LEONID BORISOVICH (1870-1920) Russian official. Born in Siberia, he studied engineering at the Technological Institute, St. Petersburg, from which he was expelled owing to his advocacy of revolution. He was arrested at Viborg in 1907, but escaped to Berlin and was later pardoned. He went to Brest-Litovsk with Lenin and Trotsky to negotiate the peace treaty with Germany, March, 1918, and was commissary of food in the Soviet army, and later minister of commerce and industry. He went to London in May, 1920, as head of a commercial mission, and after undertaking other missions was Soviet chargé d'affaires in London from Oct., 1925, until his death on Nov. 24, 1926.

KREISLER, FRITZ (b. 1875). Austrian violinist. Born in Vienna, Feb. 2, 1875, he studied in Vienna and Paris, and when only 14 years old made a successful concert tour in the U.S.A. He chose the army as a profession, and entered the Uhlans, but forsook this to return to his violin, and the performances he gave in America and Europe after 1899 ranked him among the greatest living masters of his art. In the Great War he fought in the Austrian infantry and artillery, but reappeared at the Queen's Hall, London, 1921, and in subsequent years.

KREMLIN (Russ. Kreml). Name of the citadel or acropolis of old Russian towns, the most famous being that of Moscow, to which the term is specially applied. It is triangular in shape, on a hill 125 ft. high, and surrounded by a wall $\frac{1}{2}$ m. long and 65 ft. high. It contains a number of palaces, offices, ecclesiastical buildings, and open spaces. Amongst these are the Uspenski Cathedral (1474), where the tsars were crowned; the Arkhangelski (St. Michael), the burying place of the tsars down to the time of Peter the Great; and the Chudov monastery, remarkable for the bell-tower (320 ft. high) of Ivan the Great. The palaces are mostly of modern date. See Moscow.

KREUZER. Name given to an Austrian and a German coin. The Austrian kreuzer, now obsolete, was a copper coin, equal to the

hundredth part of a guilder. Its nominal value was the fifth of a penny. The German kreuzer, originally of silver, and afterwards of copper, was current in S. Germany till 1876, and was equal to about one-third of a penny.

KRIEMHILD OR **CHRIEMHILDE.** Heroine of the German epic, Nibelungenlied. A sister of Gunther, king of Burgundy, she is wooed by Siegfried, master of the Nibelungs' hoard, and marries him after he has won Brunhild (q.v.) for Gunther. Siegfried is treacherously murdered by Hagen, a Burgundian chief, who sinks Kriemhild's dowry, the Nibelungs' hoard, in the Rhine. Kriemhild marries Etzel (Attila), king of the Huns, but nurses her vengeance many years, and finally causes the Burgundians, including her brother, to be slain. She is killed by Hildebrand. See Nibelungenlied.

KRIS, CREASE, OR CREESE. Malay weapon. It is a dagger or knife of varying size and shape, sometimes straight, long, and narrow, but frequently made with a wavy or sinuous blade. The hilt, generally of wood or ivory, and scabbard are sometimes highly ornamented.

KRISHNA OR **CRISHNA.** God of the Hindus, sometimes regarded as an incarnation of Vishnu, and sometimes as Vishnu himself. His story is set forth in the Indian epic of The Mahabharata. He is represented as trampling upon the head of a snake, and playing a flute, while holding the tail of the snake with one of his four hands. See Hinduism.

KRITHIA. Village of Gallipoli, 4 m. N.E. of Cape Helles, near the S. end of the peninsula. It gives its name to a series of battles fought between the Allies and the Turks during the campaign in Gallipoli, 1915, for its possession. After the landing of the Allies, April 25-26, Sir Inn Hamilton decided to push on, his objective being Krithia, with Aeli Baba (q.v.), a peak, a short distance to the N.E. The advance began at 8 a.m., April 28, and within two hours the British had moved forward 2 m., but were held up by a strong work. On April 29-30 the line was consolidated and held against Turkish attacks.

Hamilton's next attempt on Krithia took place on May 6-8. The battle resulted in an advance by the Allies of more than 1,000 yds., but with the Turks still in possession of their main position.

In July Hamilton again attacked, and accomplished his purpose of holding the Turks on this front while the main operation was proceeding in the N. at Suvla. The last attack of any importance in this part of Gallipoli took place on Nov. 15, when the enemy's trenches were carried. See Dardanelles; Gallipoli.

KRONBORG CASTLE. Building near Elsinore, Denmark, associated with Hamlet. Of Gothic design, it was built by King Frederick II about 1600 for a royal residence. Later it was used as barracks, but in 1928 it was restored to its original condition.

KRONE (Ger. crown). Monetary unit of Austria and Hungary. Its nominal value was about 10d. Divided into 100 heller (Hung. filler), it was introduced to the Austro-Hungarian currency in 1892, taking the place of the old system of kreuzer and guilder. In 1925 in Austria the place of the krone was taken by a new unit, the schilling.

The krone or krona (Scandinavian crown) is also the monetary unit of Norway, Sweden, Denmark, and Iceland. It is divided into 100 øre, and was adopted as the common unit of these countries by the treaties

of 1873 and 1875. Its nominal value is about 1s. 1½d., or 18 to the £ sterling.

Kronstadt. Former name of the town of Rumania, in Transylvania, now known as Brasov (q.v.).

KRONSTADT. Seaport of the Russian Soviet republic. It is in the Leningrad area, 20 m. W. of Leningrad, on the island of Kotlin, opposite the mouth of the Neva, in the Gulf of Finland. Kronstadt is the commercial harbour of

Leningrad, with which it is connected by canal. The town and port were founded by Peter the Great in 1703. After the revolution of 1917 its local govt. was taken over by a committee of workmen and soldiers' delegates, who opposed the provisional government. In March, 1921, a revolt against the Moscow government, engineered by sailors of the port, was put down by the Red troops of the government. Pop. 21,243. See Russia.

KROONSTAD. Town of the Orange Free State, S. Africa. It is on the Valshe River, 129 m. N.W. of Bloemfontein, and 878 m. from Cape Town, and is an important rly. junction and the centre of a farming district. During the S. African War it was temporarily the capital of the Orange Free State, until the British entered it, May 12, 1900. In the vicinity are coal mines. Pop. 4,250 whites.

KROPOTKIN, PRINCE PETER ALEXEVITCH (1842-1921). Russian revolutionary and geographer. Born in Moscow, Dec. 9,

Prince Kropotkin, Russian revolutionary

1842, he belonged to a noble family and became a soldier. He spent some time in Siberia, where his travels yielded valuable scientific results and made him known as a geographer. When, in 1867, he returned to Russia, he was a revolutionary, and, having joined the international founded in Switzerland by Bakunin, he began to preach revolution in Russia. He was put in prison in 1874, but escaped in 1876. He then worked for the cause of revolution in Switzerland and France, where he spent three years in prison. On his release he settled in London. He returned to Moscow in 1917, and he died there Feb. 8, 1921. Among Kropotkin's writings, most of which have been translated into English, are *Memoirs of a Revolutionist*, 1899; *Mutual Aid*, 1902.

KRU OR **CROO.** Negro people occupying scattered villages along the Liberian coastland, W. Africa. They have for generations served in the W. coast trade as surf boatmen and cargo-lifters and on European vessels, where they are dubbed Krumen or Krooboyes. They have urban colonies in Monrovia and Sierra Leone, and nearly all speak English.

Kronstadt, Russia. The great Naval Cathedral, built in 1903-13

Kru man from Liberia

KRÜDENER, BARBARA JULIANA DE WIETENHOFF, BARONESS DE (1764-1824). Russian philanthropist and mystic. Born at Riga, Nov. 11, 1764, at an early age she married Baron von Krüdener who became ambassador at Berlin and Venice. There a secretary of legation fell in love with her and committed suicide, an incident which suggested her romance, Valérie, 1803. She separated from her husband in 1792. Influenced by the teaching of J. H. Jung (Jung Stilling), J. F. Oberlin, and Mme. Guyon, she preached a system of quietism and mystical piety. To the tsar Alexander I she suggested the title for the Holy Alliance. She died Dec. 25, 1824.

KRUGER, STEPHEN JOHN PAUL (1825-1904). Boer politician. Born in the Colesberg dist. of Cape Colony, Oct. 10, 1825. He trekked into the Transvaal with his father in 1836. Kruger soon became active in the politics of the little state, and in 1883 he was chosen president of the Transvaal, being re-elected in 1888, 1893, and 1898. The opening of the gold mines brought a new train of questions that required real statesmanship for their solution, but it fell to Kruger to conduct negotiations with Britain about the position of the Uitlanders in the Transvaal. The result was the South African War. In Oct., 1900, Kruger fled to Holland, and in 1902 he wrote his Memoirs. He died at Clarens, Switzerland, July 14, 1904. See Jameson Raid; South Africa; Transvaal.

Paul Kruger,
Boer politician

KRUGERSDORP. Town of the Transvaal, S. Africa. It is on the rly., 20 m. from Johannesburg, and is the chief town on the western part of the Rand. The main industry is gold-mining. Manganese deposits have been found. The town, which was named after Kruger, was occupied by the British on June 13, 1900. Pop. 14,524 whites.

Krupp. Interior of a gun-shop in the munition works of Krupps during the Great War

KRUPP. Name of a German family famous for its connexion with the iron and steel industry. Friedrich Krupp (1787-1826) a native of Essen, was employed in the ironworks there. With a partner, Friedrich Nicolai, he began to make cast steel by a secret process in 1812. The business was continued by his son Alfred (1812-87), under whom it became one of the greatest in the world. His son, Friedrich Alfred Krupp (1854-1902), the next head of the firm, left an only child, Bertha, who married in 1906 Gustav von Bohlen und Halbach, who became the head of the firm.

Alfred Krupp,
German inventor and
steel manufacturer

Just before the Great War Krupps employed 80,000 workpeople. Following the armistice the firm turned its attention to all kinds of engineering work. The manufactures include railway engines, wagons, motor cars, dynamos, agricultural machinery, and cash registers

KRYPTON. Element contained in the atmosphere to the extent of one part in 20 millions. It has also been separated from the gases evolved from various mineral springs. Its symbol is Kr, atomic weight 82.92, and atomic number 36. Krypton is recognized by the brilliant yellow and green lines which it shows in the spectrum.

KUBELIK, JAN (b. 1880). Bohemian violinist. Born at Miehle, near Prague, July 5, 1880, Kubelik was an infant prodigy with the violin. He studied at Prague, and after a successful appearance in Vienna in 1898 made a tour in Italy. A visit to America, 1902-3, made him known, and he was recognized as one of the leading violinists of his day.

Jan Kubelik,
Bohemian violinist

KUBLAI KHAN OR KUBLA KHAN (1216-94). First Mongol emperor of China. Grandson of Jenghiz Khan (q.v.), he became grand khan of the Mongols in 1250, and completed the conquest of N. China, 1260, and S. China, 1279. He founded the Yuen dynasty, which lasted until 1368, and set up his capital on the site of what is now known as the city of Peking. He made Buddhism the state religion of his empire, and Marco Polo was for many years in his service. The magnificence of his court inspired Coleridge's unfinished poem, Kubla Khan. See China; Mongol.

KUDU (Strepsiceros koodoo). Species of large antelope, found in Africa. Its colour is reddish brown, with vertical white stripes; its horns are long and twisted like a corkscrew. The neck has an upstanding mane, and a fringe of hair hangs from the throat. It is about 4½ ft. high at the shoulder. It is usually found among the hills, and feeds upon grass and shoots. The lesser Kudu (S. imberbis) is similar, but bears no fringe on its neck. See Antelope.

Kudu. Specimen of the Lesser Kudu of Somaliland
Photopress

KUFAH. Town in Iraq (Mesopotamia), 90 m. S. of Bagdad. Originally founded as a military station in A.D. 636, it became a seat of learning, and was long the residence of the caliphs of Bagdad. As Bagdad grew in importance, Kufah fell into decay.

Kufic, the old Arabic script, is so called from Kufah. It was used in the earliest copies of the Koran, but has been superseded by Neskhi in eastern Islam.

KUFRA OR KUFARA. Oasis of the Libyan desert. It is the headquarters of the powerful Mahomedan sect of the Senussi. Until the conquest of the central Sudan by the French, completed by the Allies in the Great War, this district was less explored than any outside the Polar regions. In Jan., 1921, Mrs. Rosita Forbes after a perilous journey reached Kufra, only once before visited by Europeans. She returned across a stretch of desert never before traversed except by Arabs. See Forbes, J. R.

KU-KLUX KLAN (Gr. kyklos, circle). Secret society formed in the Southern States of America in the period of reconstruction following the Civil War. It originated at Pulaski, Tennessee, in 1865, as a secret social club of young white men, and became a secret police force with an elaborate constitution, the main purpose of which was to oppose coloured influence in government and society. To control the negro, play was made upon his superstitions. Undesirable whites, as well as blacks, were driven away, ostracised, or murdered.

In 1915 the Ku-Klux Klan was revived in Georgia, as a fraternal organization, and spread from the South to the North soon after the close of the Great War. The society now stands for 100 per cent Americanism.

KULADAN. River of N.W. Burma. After a course of 200 m. it enters the bay of Bengal, 15 m. N.E. of Akyab. The lowest 90 m. are usually navigable.

KUM OR KOM. Oasis town of Persia. The capital of an administrative district of the same name, it lies 80 m. S.S.W. of Teheran. Its main importance is that it is one of the sacred places of the Shia Mahomedans, who make pilgrimages to it.

KUMASI.

Capital of Ashanti. It is connected by rly. with Sekondi and Accra, the Gold Coast ports. Pop. about 20,000.

At the end of the 3rd Ashanti war, 1895-96, Ashanti was made a British protectorate, a resident being appointed at Kumasi. In March, 1900, tribal fighting broke out, and Kumasi was besieged while occupied by the governor, Sir Frederiek Hodgson, and a small garrison. The governor and his staff cut their way through the enemy's lines and reached Accra, and Kumasi was relieved on July 15, after two days' severe fighting, by a force under Col. Willcocks. When the rising had been subdued, the country was annexed, Sept., 1901. See Ashanti.

KUN, BELA (b. 1886). Hungarian politician. Of Jewish parentage, he fought in the Great War until taken prisoner by the Russians. On the conclusion of peace he returned to Hungary, founded a paper, and became an exponent of Bolshevik ideas. For a few months in 1919 Hungary was a Bolshevik republic under his control. In 1927 he again created trouble in Hungary, but was deported to Russia. See Hungary.

KUOMINTANG. Name of a Chinese political party, prominent from 1927. It exists to further nationalist ideas, as laid down by Sun Yat Sen, by freeing China from all foreign influences. The party is strongest in the south, but in 1928 it defeated Chang Tso Lin and got possession of Peking, being then in control of nearly all China proper. See China.

KURD. People of mixed stock in the upland region, called Kurdistan, between Armenia and Mesopotamia. A slender, straight-nosed, moustached, long-headed people—the last feature emphasised by head-deformation in the cradle—they descend from the neolithic Mediterranean brown race. Their most famous seign was Saladin. They number about 1,500,000.

In its widest geographical meaning Kurdistan includes the mountainous region reaching

Kum. Famous Persian mosque known as Fatima's shrine

from the head-waters of the Euphrates to the shores of Lake Urmia, and from S. of Lake Van into Mesopotamia, inhabited by the various Kurdish tribes.

Kurd from uplands of Kurdistan

Kurdistan was prominent in the fighting between Russia and Turkey, 1914-17. By the treaty of Sèvres, 1920, Turkey accepted a scheme of self-government for the Kurdish areas. In Feb., 1925, a revolt of Kurds, which was led by Sheikh Said, against the Turkish government's administration of Kurdistan broke out, but the agitation soon subsided. The Kurds are now peacefully settled under Turkish, Persian, and Iraq rule.

KURIA MURIA ISLANDS. Group of five islands off the S. coast of Arabia. They are about 750 m. N.E. of Aden, to which they are attached Area, 29 sq. m. They were ceded to Great Britain in 1854 by the sultan of Muscat as a landing place for the Red Sea cable. Inhabited by a few Arabs, they are mostly barren, but contain deposits of guano.

KURILE OR KURIL ISLANDS (Jap. Chishima). Fescion of islands of N. Japan. It includes about 30 volcanic islands, and stretches for 150 m. N.E. from Japan to Kamchatka. The chief islands are Etorofu (Etorop), Paramoshiri (Paramusir), Kunashiri, Urup, Shimoshiri (Simusir), and Onnekotan. They are hilly, with steep cliff coasts; the S. islands are inhabited and contain forests. The fisheries are valuable. The people are Ainu and Gilyaks. The area is 6,193 sq. m.; pop. about 5,000. See Japan.

KURNA OR QURNAIL. Village of Iraq. It is on a narrow point of land some 35 m. N. of Basra (q.v.), at the junction of the Tigris and Euphrates. In the Great War it was of commanding military importance on account of its situation. Here, on Dec. 4-8, 1914, a battle was fought between the British and the Turks, resulting in the surrender of the latter. In April-May, 1915, the Turks attacked the British at Kurna, but were defeated. As they were still menacing the British forces based on Kurna, Townshend attacked them, and two battles were fought, Amara by Townshend, and Nasrieh, or Nasiriyeh, by Gorrington, in which the British dispersed the enemy. See Mesopotamia.

KUROKI, TAMESADA, COUNT (1844-1923). Japanese soldier. He fought in the Civil War of 1877 on the imperial side, served with distinction in the war with China in 1894-95, and during the Russo-Japanese War (1904-5) commanded the first army. He was responsible for the victory of the Yalu, and also participated in the battles of Liao-Yang and Mukden. Created a count in 1905, he died on Feb. 4, 1923.

KUROPATKIN, ALEXEI NIKOLAEVITCH (1848-1925). Russian soldier. Entering the army in 1864, he served during the Russo-Turkish War (1877-78), and in 1880-81 distinguished himself by a brilliant march to Geok-Tepe and at the storming of the fortress. In 1898-1904 he was minister of war, and in 1904 was in command in the war with Japan. Early in the Great War he was commander-in-chief of the armies on the northern front, but in Aug., 1916, was appointed governor of Turkistan. A year later he was arrested by the committee of the soldiers' delegates on a

A. N. Kuropatkin, Russian soldier

charge of fomenting trouble between the Russian colonists and the natives. His death was announced in January, 1925.

KUT. Popular abbreviation of the proper name Kut-el-Amara. It is a town of Iraq (Mesopotamia), on the Tigris, 290 m. up the river from Basra. It is all but encircled by the river, which forms a U-shaped loop here. Until the Great War it was a drab, insanitary collection of squalid buildings and mud huts, inhabited by a few thousand Arabs. Destroyed in 1915-17 by gunfire, it was reconstructed by the British after the conclusion of the war. Near is a cemetery containing the graves of the 1,746 British and Indian soldiers who died of wounds and disease during the siege, Dec. 4, 1915, to April 29, 1916. Pop. 7,000.

Kut was an objective of the British forces in their campaign in Mesopotamia in 1915. The first battle of Kut was fought Sept. 26-28, 1915. The British troops began their advance on Aug. 1 and on Sept. 16 reached a point 15 m. below Kut. On Sept. 26 they moved forward to within 4 m. of the Turkish position, and on the 28th gained a complete victory.

After his failure at Ctesiphon, Nov. 22, 1915, Townshend's forces retreated to Kut, reaching it on Dec. 3. The Turks towards the end of the month completely invested the town. Despite repeated attempts by British columns to relieve it, Kut was surrendered to the Turks, April 29, 1916.

In Dec., 1916, operations were begun for its recapture, and on Dec. 13 General Maude, now in supreme command and with a well-equipped army, concentrated a force on the S. side of the Tigris, about 7 m. from Kut. The town was entered by the British on Feb. 23, 1917. See Bagdad; Maude, F.; Mesopotamia; consult also My Campaign in Mesopotamia, Sir C. Townshend, 1920.

KYD, THOMAS (c. 1558-1594). English dramatist. The son of a London scrivener, he was educated at Merchant Taylors' school. He translated Garnier's tragedy *Cornélie*, and was the author of *The Spanish Tragedy*, a popular Elizabethan play of revenge which, in a measure, anticipated Shakespeare's *Hamlet*. The lost pre-Shakespearean play of *Hamlet* is usually ascribed to him. His works were edited by F. S. Boas, 1901.

KYLE. District of Ayrshire. One of the old divisions of the county, it lay between the rivers Doon and Irvine. It was divided by the Ayr into King's Kyle and Kyle Stewart.

KYLEMORE. Pass, lough, and castle of co. Galway, Irish Free State. They are in the N.W. of the co. between Letterfrack and Lecanane. Kylemore Castle is a picturesque castellated structure.

Kyles of Bute. Narrow, curved channel separating the island of Bute (q.v.) from the mainland of Argyllshire Scotland.

KYNETON. Township of Victoria, Australia. On the Campaspe river, 57 m. by rail N.W. of Melbourne, it is a favourite tourist resort and also an agricultural and gold-mining centre. Pop. 3,000.

KYOTO. Town and former capital of Japan. On the island of Honshu, it is 27 m. by rail from Osaka. It receives water used for electrical and irrigation purposes by a canal from Lake Biwa. The manufactures include bronze and cloisonné ware, fans, silks, and

Kyoto. 1. Great Hexagonal Temple. 2. Street with a fabulous stone creature at entrance to a temple

lacquer goods. It is the seat of a university. Kyoto was founded in A.D. 794 from which date until 1869 it was the Japanese capital. Pop. 679,976. See Japan.

KYRIE ELEISON (Gr. Lord, have mercy). Form of supplication frequently used in the services of the Christian Church, and sometimes called the lesser Litany. It is common to all ancient liturgies, and was repeated three times, as being addressed to each Person of the Holy Trinity.

KYRLE, JOHN (1637-1724). English philanthropist, commonly known as The Man of Ross. Born at Dymock, Gloucestershire, May 22, 1637, he was educated at Balliol College, Oxford, which he left to settle on his estate in Ross, Herefordshire, becoming a benefactor to the poor. He died Nov. 7, 1724. He is best known from his eulogy in Pope's Third Moral Epistle, 1732.

The Kyrle Society is a British philanthropic organization founded in 1877 and named after John Kyrle, its aim being to brighten the lives of the poor.

L. Twelfth letter of the English and Latin alphabets, one of the two liquid consonants, R being the other. When sounded it has the soft sound heard in lamp, let. It is silent in many words, e.g. calf, could, half, talk. As a symbol in chemistry L = lithium; in Roman notation L = 50; and in financial usage £ represents pound or pounds sterling. L is the name given to a class of British submarines, and was sometimes used for a class of British destroyers built 1911-13, e.g. *Laertes* and *Lance*; also for a former type of German airships. See Alphabet; Phonetics.

LAALAND OR LOLLAND. Island in the Baltic, belonging to Denmark. Its area is 447 sq. m. It lies between Falster and Langeland, and is separated from Schleswig by the Fehmarn Belt. As its name (lowland) implies, it is low and level, its maximum alt. being only 95 ft. The soil is fertile, and there are forests of oak and beech. It has a broken coastline, and contains a few small lakes. Mariho is the chief town. Pop. 86,614.

LABADIE, JEAN DE (1610-74). French mystic and religious reformer. Born Feb. 13, 1610, he was educated at the Jesuit College at Bordeaux. Separating from the order in 1639, he became a popular preacher. Preacher and professor of theology at Montauban, he was pastor at Geneva and Middelburg, where in 1666 he started the community known as the Labadists. Suspended in 1668 for refusing to subscribe to the Belgic Confession, and expelled, he settled at Herford, Westphalia, where he drew up a regular organization for his followers, who, however, were banished in 1672 to Altona, where Labadie died, Feb. 13, 1674. The Labadists, who practised community of goods, soon disappeared.

LABARUM. Standard of the Roman army in Christian times. It is said to have been adopted by Constantine the Great after his conversion to Christianity. According to Eusebius, the labarum consisted of a spear, surmounted by a cross-piepe, from which was suspended a square silken banner. It bore the monogram XP, the first two letters of the Greek Christos.

Labarum. Roman standard adopted by the Christian emperors. Adopted from a coin of Constantine

LA BASSÉE. Town of France. In the dept. of Nord, it is 16 m. S.W. of Lille on the La Bassée Canal. Before the Great War it was a busy industrial and mining centre with a population of 4,800. It remained for nearly four years one of the strongest positions in the German northern sector of France, and was reduced to ruins during the fighting. It was also a strong position during Marlborough's campaigns against France. La Bassée has been rebuilt, and has a pop. about 34,000. It has been adopted by Preston.

From Oct. 16-30, 1914, heavy fighting, to which the name battle of La Bassée is sometimes given, took place between the British and Germans, but without result. The district was also the scene of fighting later in the war.

LABICHE, EUGÈNE (1815-88). French dramatist. Born May 5, 1815, he produced his first drama at the Panthéon Theatre, Paris, in 1838, and thereafter, until 1877, produced, in collaboration with other writers, nearly a hundred comedies and vaudevilles, e.g. *Le Chapeau de Paille d'Italie*, *Le Voyage de M. Perrichon*, *La Cagnotte*. They were published in 10 vols., 1878-79, and had an immense vogue, with the result that Labiche was elected a member of the Academy in 1880. He died Jan. 23, 1888. Pron. La-beesh.

LABORI, FERNAND GUSTAVE GASTON (1860-1917). French lawyer. Born at Reims, April

18, 1860, he became a barrister, and was soon the most famous advocate of his day. He defended Dreyfus and Zola, and later Madame Humbert and Madame Caillaux. In 1906 he was elected to the Chamber of Deputies, and he was still a member when he died suddenly during its sittings, March 14, 1917.

F. G. G. Labori,
French advocate

LABOUCHERE, HENRY DUPRÉ (1831-1912). British politician and journalist. Born in London, Nov. 9, 1831, he was for a time in the diplomatic service. In 1865 he entered the House of Commons as M.P. for Windsor, but was soon unseated; for a short time he represented Middlesex, but his real parliamentary career covered the years between 1880-1906, when he was Radical M.P. for Northampton. In the House he was a remarkably candid critic.

Henry Labouchere,
British politician
Elliott & Fry

As a journalist he was correspondent for *The Daily News* in Paris during the siege of 1870-71. In 1870 he established *Truth*, and in that organ was a fearless critic of what he considered sham and humbug. He died Jan. 15, 1912.

LABOUR. Term used for those who work for others, usually for wages and under the industrial system, as opposed to the capitalists who employ them.

The Labour movement is the movement by which these classes and their friends have tried, and to a great extent have succeeded, in improving the condition of the mass of the people. It is essentially a product of the 19th century, an inevitable sequel to the industrial revolution, of the 18th, and is linked with the history of the trade unions. The extension of the franchise in 1832, and especially in 1872, helped the Labour movement, but for a time only indirectly. In 1874 two trade unionists, Alexander Macdonald and Thomas Burt, were returned to Parliament.

After the extension of the franchise in 1884 the Labour movement became more political

and socialistic in its aims. The trade unions had secured most of their demands, and were soon, in 1906, to be placed in an exceptional position before the law. A great mass of legislation, by giving the working classes shorter hours of labour, education, and other advantages, had opened the door to a wider life for millions, and many of them looked definitely to the day when Labour should become the controlling power in the state.

In 1892 three socialists were returned to Parliament, and at each succeeding election their numbers were increased. They called themselves Labour members, and in 1923, having more representatives in the House of Commons than the Liberals, they became the official opposition. In 1924 a Labour government, although without a clear majority, took office for the first time. Its tenure was brief, but in 1929, as the result of the general election, another Labour government, also a minority one, was formed.

LABOUR, MINISTRY OF. Department of the British government set up in 1916. It took over certain work from the board of trade and from the treasury, and is responsible for industrial arbitration, employment exchanges, labour statistics, and the like. The offices are at Montagu House, Whitehall. Its head is the minister, who, with a salary of £2,000 a year, is assisted by a parliamentary secretary and a permanent secretary.

LABOUR DAY. Day set apart for labour demonstrations. Since 1890, the year of the Berlin labour congress, it has been held on May 1 in most European countries, when processions and demonstrations are organized and the aims of the labour parties are reiterated.

Labour Day is a legal holiday in the U.S.A. and Canada, and is held on the first Monday in Sept. It is a holiday in the Australian states on varying dates.

LABOURDONNAIS, BERTRAND FRANÇOIS, COUNT MAHÉ DE (1699-1753). French sailor. Born at St. Malo, Feb. 11, 1699, he entered the French East India Company in 1718, and rose rapidly to the command of a vessel. In recognition of his gallantry in the capture of Mahé, Malabar, 1724, he was given permission to take the name of that town, and, after several years fighting in the Indies, in 1735 was appointed governor of the Îles de France and de Bourbon. He distinguished himself in the war with Britain, 1740-48, but a quarrel with Duplex ended his public career. He died Nov. 10, 1753.

Labour Exchange. Name by which the employment exchanges (q.v.) were known from their establishment in 1910 to 1916.

LABOUR PARTY. Name given to a British working-class organization which may include non-manual workers. It is socialist in policy, and is organized for the purpose of securing parliamentary representation.

It is composed of the chief socialist organizations, excluding the extreme sections, and became in 1914 politically the central socialist body. The Independent Labour Party (q.v.) is a distinct organization. There is a labour party organized for parliamentary representation in Australia and other of the British dominions, as well as the U.S.A. and Germany. The British labour party holds an annual conference, which meets usually in the autumn. Its headquarters are at Transport House, Westminster, London, S.W.1.

LABRADOR. Dependency of Newfoundland, forming part of the great peninsula N. of the Gulf of St. Lawrence between Hudson Bay and the Atlantic. The boundary, with Quebec, long in dispute, was settled by the judicial committee of the privy council in 1927, as being, in effect, the watershed of the rivers running into the Atlantic. The coast boundaries are Blanc Sablon on the S. and Capo Chidley on the N. The area is some 110,000 sq. in. The coastline is bare and rugged, the climate is cold, and fishing and hunting are the only industries. The name comes from a Portuguese word meaning farmer. Pop. 4,054, mainly Eskimos.

LABRADORITE. Variety of felspar, consisting of aluminium, calcium, and sodium silicate, found widely distributed in many crystalline rocks, e.g. basalt, gabbro, andesite.

LA BRUYÈRE, JEAN DE (1645-96). French writer. Born in Paris on Aug. 16, 1645, he became tutor in 1684 to one of the Condé family, whose lifelong patronage he retained. A friend of Bossuet and many other distinguished men, La Bruyère was elected a member of the Académie Française in 1693, and died on May 10, 1696.

He is best known by *Caractères*, 1688, which consists of a medley of character studies and reflections on the personalities and morality of his times. His *Dialogues sur le Quiétisme* appeared in 1698.

LABUAN (Malay, anchorage). Island off the N.W. coast of Borneo. Administratively attached to the Straits Settlements, it is about 40 m. from Brunei and 725 m. from Singapore. Area 30 sq. miles.

It has a fine port, Victoria Harbour. The surface is hilly and the soil fertile. Cattle and goats are reared and there are large sago factories. There are cables to Singapore, Hong Kong, and North Borneo. Labuan was ceded to Great Britain in 1846 by the sultan of Brunei. Pop. about 6,000. See Borneo; Brunei.

LABURNUM (Laburnum vulgare). Hardy flowering tree of the order Leguminosae. A native of central and southern Europe, it was introduced into Britain before 1597. It flourishes in any ordinary soil in a sunny position, and its long racemes of yellow flowers are familiar objects in the springtime in many gardens. The seeds are poisonous. The wood is dark brown in colour, with a greenish shade towards the heart, and has a broad yellow sapwood. It is used in turnery work and also for inlaying.

Laburnum. Flower sprays and foliage. Above, fruit or seed-pods

Labyrinth. Facsimile of print showing circular labyrinth of Daedalus in Crete

Smith Square, The most famous labyrinths of ancient times were the Egyptian, described by

LABYRINTH. In Greco-Roman times a confusing network of paths or passages, generally underground, purposely designed so as to make it difficult for anyone who entered to get out again.

Herodotus, situated near Lake Moeris and constructed about 2300 B.C.; the site has been excavated and the foundation exposed by Sir Flinders Petrie. See Maze.

LAC on LAKH. Hindu word meaning a hundred thousand. It is chiefly used for 100,000 rupees, the nominal value of which is therefore £10,000. One hundred lacs is called a crore. See Rupee.

LAC. Name given to an insect, a dye, and a resinous material. The lac insect, *Coccus lacca*, is found in great numbers on the twigs of certain trees in India, China, and Japan. It covers itself with a resinous secretion from which are prepared the lacs of commerce. The secretion, known as gum-lac, stick lac, or shellac, is dissolved in water and the dye precipitated with lime and alum. The resin is washed and dried a number of times until it is completely separated from the colouring matter. Lac dye is a beautiful purple colour, secreted by the insect when alive. See Shellac.

LACCADIVE. Group of coral islands in the Indian Ocean. Belonging to the British Empire, they are administered from Madras and lie 170 m. W. of the Malabar coast. The five Amindivi islands form the N. group; the S. group includes the isolated island of Minicoy. The area is 80 sq. m.; pop 13,633.

LACCOLITE or **LACCOLITH.** Intrusive mass of igneous rock which has penetrated the strata of the earth's crust but has not reached the surface. The dome-shaped boss which is pushed above the general surface by the intrusion is a laccolitic mountain, e.g.,

Laccolite. Diagram illustrating the formation of a mountain when the strength of the earth's crust dams a volcanic outflow.

the Henry Mts. of Utah, where denudation has exposed the intrusive matter.

LACE. Lace, in the strict sense of the word, is an arrangement of twisted threads, and the simplest of all forms is seen in the shoe lace. Such laces are by custom regarded as separate from the more or less decorative laces used in apparel and in furnishings. Ornamental laces are made in many materials—cotton, silk, linen, worsted, artificial silk, and metallic threads. They are divided into real or hand-made, and mechanical or machine-made.

Two main methods of making lace by hand demand notice: (1) needle or point, and (2) pillow lace. The first-named approaches embroidery in nature, and is worked with the needle upon a foundation of fabric; the second requires the aid of a pillow or pad, into which pins are pressed in such a pattern as will form the design, and threads, contained on separate small bobbins, are twisted or plaited around the pins and each other. The machine-made laces repeat all, or very nearly all, the features of hand-made.

The first mechanical laces produced in England were made upon an adapted knitting frame in 1764. A great step forward was taken when John Heathcoat perfected, in 1809, his bobbin-net machine. It was an invention by John Leavers, a Nottingham mechanic, in 1813 that laid the foundations of the modern lace-manufacturing industry. This machine in its perfect form allows of the production of any pattern. Control of the pattern is secured by an adaptation of the Jacquard principle. The import duty on lace was abolished in 1930. See Loom.

LACE-BARK TREE (*Lagetta lintearia*). Tree of the order Thymelaeaceae. A native of Jamaica, it has oval leaves and white tubular

flowers. Its inner bark consists largely of concentric layers of interlacing fibres. By beating and maceration these layers may be

Lace-bark Tree. Foliage and flower sprays.

of the Eurotas valley in S. Peloponnesus, and for its capital, Sparta (q.v.).

LACERTA (Lat. lizard). Small constellation whose stars were grouped together by Hevelius. It lies in between Cygnus and Andromeda. It is the radiant point of the Lacertid meteors. See Constellation; Meteor.

LACE-WING FLY.

Neuropterous (nerve-winged) insect of the families Chrysopidae and Hemerobiidae. They are distinguished by their four delicate gauzy wings. The body is slender, and the eyes are conspicuously brilliant. There are a large number of genera, four being British. The larvae as a rule feed upon aphides, and are useful to the gardener.

LA CHAISE, FRANÇOIS DE (1624-1709). French Jesuit. Born at Aix, Aug. 25, 1624, he was educated at the university of Lyons, and entered the Society of Jesus. He is chiefly known, however, as the confessor of Louis XIV, and as the man who gave his name to the cemetery of Père-Lachaise (q.v.) in Paris. He became the king's confessor in 1674, and retained the post until his death, Jan. 20, 1709. He founded the college of Clermont and was a friend of Fénelon.

Lachine. Quebec. The rapids on the St. Lawrence River.

LACHINE. Town of Quebec, Canada. It stands on Lake St. Louis, a widening of the St. Lawrence, 8 m. from Montreal, of which it is virtually a suburb. With stations on the C.N.R. and C.P.R., it stands at the head of a canal to Montreal, built to avoid the Lachine rapids. The industries include boat-building and the manufacture of wheels and radiators. The name La Chine (China) was given to it because the explorer La Salle thought it was on the way to that country. Pop. 15,404.

LACHISH. Ancient fortified town, 16 m. E. of Gaza. Petrie's excavations at Tell el-Hesi in 1890 inaugurated Palestine archaeology. In 1891-93 Bliss completed the revelation of this Mound of Many Cities (1700 B.C.-400 B.C.). A cuneiform tablet of 1400 B.C. belongs to the Tell el-Amarna correspondence. Successive levels are identifiable with Joshua (Josh. 10), Rehoboam (2 Chron. 11), Sennacherib (2 Kings

18), who besieged it in 701 B.C., and Nebuchadnezzar (Jer. 34). See Palestine.

LACHLAN or **CALANE.** River of New South Wales, Australia. It rises in the Cullarin ranges about 120 m. S.W. of Sydney, and flows W. to join the Murrumbidgee, 40 m. above its junction with the Murray. It is about 850 m. long. Lake Cowal is maintained by the Lachlan floods, which take off by a distributary, 20 m. long, to reach the lake, which, in turn, ultimately drains into the Lachlan, 40 m. farther down stream.

LACHUTE. Town of Quebec, Canada. It is on North river, 44 m. W. of Montreal and 76 m. from Ottawa, on the C.P.R. and C.N.R. The industries include the making of paper and furniture. Pop. 2,592.

LACORDAIRE, JEAN BAPTISTE HENRI (1802-61). French priest and orator. Born March 12, 1802, he was educated at Dijon and studied law. At first a follower of Rousseau and hostile

to clerical influences, about 1822 he decided to become a priest. Having studied at S. Sulpice, he was ordained in 1827. About 1834 Lacordaire began his great work as a preacher, speaking to crowded audiences in the Collège Stanislas, while his preaching attracted thousands to Notre Dame. In 1836 he went to Italy and joined the order of S. Dominic. Having been made

a provincial, he founded in 1840 a house for it at Naney. As a Dominican monk Lacordaire returned to his work as a preacher. In 1848 he was chosen a deputy to the National Assembly, but he resigned in 1850; in 1860 he was elected to the Academy. He died Nov. 22, 1861.

LACQUER. Name given to a kind of varnish. The lacquers of Japan and China are usually obtained from the resinous exudation of the *Rhus vernicifera* or varnish tree (q.v.). From three to eighteen layers of lacquer are applied, each being allowed to dry before the next is put on. Lacquered wood prepared in this way is extremely hard and capable of taking a very high polish. It is often highly decorated, the work being protected afterwards by a layer of transparent lacquer. The alternative method of lacquering is by the use of lac made up from the lac insect, but this is usually reserved for small objects, e.g. tea caddies, elbow-chow boxes, etc. See Lac.

LACROSSE. Ball game. It originated with the North American Indians and has since become the national game of Canada. The implements for playing the game consist of the crosse, the ball, and the goal posts. The crosse is a hickory stick with a hook at one end from the tip of which is strung a net of loosely-cut catgut in the form of a triangle, not more than 12 inches in its widest part. The ball is made from indiarubber sponge, not less than 8 nor more than 8½ ins. in circumference; each goal consists of two square poles, 6 ft. apart and 6 ft. high. The playing space between the goals varies from 100 to 150 yards.

There are twelve players on a side, and, excepting the goalkeepers, stationed one at each end, each particular position in the field is occupied by rival players, who mark each other. The object of the game is to score goals by passing the ball between the goal posts and under the cross-bar. The ball

Lace-wing Fly. Specimen with delicate wings fully extended.

J. B. H. Lacordaire, French priest.

must be kicked, or struck, or carried on the cross, in which lies the great art of the game; the goalkeeper is the only player who may handle it.

LACTATION (Lat. lac, milk). Term applied to the secretion of milk, and also to the period during which the infant is being suckled. During the first two days after delivery the secretion from the breasts is a fluid called colostrum, which differs from milk in having much less casein but more albumen. About the third day a secretion of normal milk is established.

LACTIC ACID. Liquid discovered in 1780 by Scheele in sour milk. It is obtained by fermenting lactose (q.v.). The fermentation is brought about by various germs, the most notable of which is the lactic acid bacillus. Lactic acid is used in strong solution as a mordant in dyeing and as an addition to tanning liquors in leather-making. A culture of lactic acid bacillus is used to ripen cream for butter making, and preparations of the bacilli are employed in the treatment of gastro-intestinal disturbances.

LACTOMETER. Instrument for determining the richness of milk. In one form, by means of which the determination is made by volume, it consists of a graduated glass tube. Milk is poured in until its level reaches the top graduation; the instrument is then allowed to stand until the cream separates out and its amount can be read on the scale. A second form of instrument measures the specific gravity of the milk.

LACTOSE OR MILK SUGAR. Variety of sugar found in milk. It is not so sweet as cane sugar, and does not undergo alcoholic fermentation. The souring of milk is due to the lactic acid fermentation, which takes place in the presence of casein. The source of lactose is the whey from cheese factories and the separated milk of creameries. It is prepared on a large scale in Switzerland, Holland, and New Zealand. Lactose is used as a food for infants and invalids.

LADAS. Name of two famous ancient athletes. One, of unknown date, belonged to Laconia, and won the long race at the Olympic games; he was the subject of a statue by the sculptor Myron. The other Ladas won the short race at the Olympic games in 280 B.C. The name Ladas became proverbial for speed.

LADOGA. Lake of Russia. It is the largest lake in Europe, being 125 m. long and 80 m. wide. Along its shores canals have been made to facilitate traffic. It contains many small islands, on two of which are monasteries.

LADRONES OR MARIANNE ISLANDS. Chain of islands in the N.W. Pacific Ocean, N. of the Carolines and about 1,500 m. E. of the Philippines. Divided into two groups, those to the N. are volcanic and mountainous, and are uninhabited; those to the S. are flat and low-lying, the chief being Guam, Saipan, Tinian, and Rota. The islands produce cotton, sugar, and tobacco. Formerly under Spanish rule, the islands, with the exception of Guam (ceded to U.S.A. in 1898), were sold to Germany in 1899. Since 1919 Japan has ruled them under mandate from the League of Nations. The area is 430 sq. m. Pop. 57,500.

LADY. Title of honour. It is used informally of a marchioness, countess, viscountess, or baroness. The daughter of a duke, marquess, or earl has lady prefixed to her Christian name and surname. The wife of a younger son of a duke or marquess has lady prefixed to her husband's Christian name and surname. The wife of a baronet or knight is commonly known as lady with her husband's surname, the formal title is dame with the wife's Christian name and the husband's surname.

LADYBANK. Burgh of Fifeshire. In full, Ladybank and Monkston, it is 5½ m. from Cupar. It is an important junction on the L.N.E. Rly. Pop. 1,220.

LADYBIRD (Coccinellidae). Popular name for a family of small beetles. It includes some 2,000 species, of which about forty occur in Great Britain. Their bodies are hemispherical, and most of them are red or yellow in colour, with a varying number of black or white spots. The seven-spot species is familiar. Their larvae feed upon aphides or plant lice.

LADYBRAND. Town of the Orange Free State, S. Africa. It is near the Maluti Mountains, about 15 m. from Maseru in Basutoland. The town is the centre of an administrative district of the same name, which is separated from Basutoland by the Caledon river. It is the terminus of a branch rly. from Bloemfontein to Bethlehem.

LADY CHAPEL. Name applied to the chapel of a cathedral or church where the altar of the Virgin was placed. The Lady chapels of the more important cathedrals had almost the character of detached structures; there is a very beautiful Early English example at Hereford. See Cathedral.

LADY DAY. Name now applied to March 25, the Feast of the Annunciation of the Virgin Mary. In England Lady Day is a quarter day, the first of the year.

LADY FERN (*Athyrium filix-foemina*). Fern of the order Polypodiaceae, of world-wide distribution. It has a stout root-stock clothed in rusty brown scales, and large, broad, lance-shaped leaves of soft texture. These are cut into leaflets (pinnae), which are dissected into toothed pinnules. The black clusters of spore-cases are covered with a kidney-shaped scale (indusium). The lady fern is found of abundant moisture, and may be found wherever the water is not stagnant. See Fern.

LADY'S MANTLE (*Alchemilla vulgaris*). Perennial herb of the order Rosaceae, a native of Europe, N. and W. Asia, Greenland, and Labrador. It has a short, stout root-stock and large, serrated leaves with lobed margins, thrown into plaits from the centre to the circumference. The small yellow-green flowers are in numerous clusters of short sprays. They have no petals. The root-stock of lady's mantle, which is edible and astringent, is used in rustic medicine.

LADYSMITH. Town of Natal, S. Africa. It stands at a height of over 3,000 ft. on a slope near the Klip river, about 30 m. from the Drakensberg Mts. It is 190 m. by rail from Durban. The chief buildings are the town hall, court house, and several churches, including the Anglican church with memorials to those who fell during the siege of 1899-1900. It was named after the wife of Sir Harry Smith. Pop. 6,600.

Ladysmith was the centre of the struggle in the first stage of the S. African war. The British garrisons in Natal were concentrated there under the command of Sir George White, and after several unavailing assaults on the Boer positions White held the town against siege from Nov. 2, 1899, to Feb. 28, 1900, when it was relieved by Sir Redvers Buller after three unsuccessful attempts.

LADY'S SLIPPER

ORCHID (*Cypripedium calceolus*). Herb of the order Orchidaceae. A native of Europe and N. Asia, it has a creeping root-stock and a leafy stem a foot or more high. The flowers (one or two only) are large and slipper-shaped, reddish brown, except the large upturned lip, which is pale yellow.

Lady's slipper is a variant name for the herb bird's-foot trefoil (*Lotus corniculatus*). See Bird's-Foot.

Lady's Smock. Alternative popular name for the plant also known as cuckoo flower (q.v.).

LADY'S TRESSES

(*Sparganium angustifolium*). Perennial herb of the order Cyperaceae. A native of Europe and N. Africa. It has two or three egg-shaped tubers from which, in Aug., arises the single, slender flowering stem with a few slender leaves and a row of small white fragrant flowers, this part of the stem being spirally twisted. Later a rosette of oval leaves is produced direct from another tuber. It occurs on hillsides and in dry pastures. Another species the summer lady's tresses (*S. aestivale*), is a bog plant with cylindrical tubers, and the flowering stem, 6 to 18 ins. high, arises amid the root leaves. It is a rare plant in Gt. Britain.

LAECEN. Suburb of Brussels. It lies N. of the city and contains a palace, one of the residences of the king of the Belgians. The church of Notre Dame is a modern Gothic building. On a hill near is a memorial to Leopold I, king of the Belgians. Electric tramways connect Laeken with the centre of the city.

LAERTES. In Greek legend, the aged father of Odysseus. When Odysseus returned after his 20 years' absence from Ithaca, he found his father still alive, and their meeting is described by Homer in a passage of great beauty. Pron. Lay-er-teez.

Lacrosse. Plan of field, players of opposing sides designated by squares and circles respectively. 1. Goal-keeper. 2. Point. 3. Cover point. 4. Third man. 5 and 6. Defence fields. 7. Centre. 8 and 9. Attack fields. 10. Third home. 11. Second home. 12. First home.

Ladybird, Coccinella seven punctata, much enlarged.

Lady's slipper Orchid *Cypripedium bicinctum* an American variety.

Lady's Tresses Flower stems.

Lady's Mantle. Flower-heads and foliage. Liset flower.

LAERTES. British destroyer. She belonged to the L class built in 1912-13, displacing about 1,000 tons and having engines of 24,500 h.p., giving a speed of 29 knots. In the Heligoland Bight action, Aug. 28, 1914, she was seriously damaged. She afterwards served with the Harwich Force on patrol and for convoy duties.

LAFAYETTE, MARIE JOSEPH PAUL DU MOTIER, MARQUIS DE (1757-1834) French soldier and statesman. Born Sept. 6, 1757,

Marquis de Lafayette, French soldier and statesman

he was an enthusiastic supporter of the American colonists in their struggle for independence and brought reinforcements from France to their aid. He led the National Guard to Versailles on Oct. 5, 1789, and was given command of an army against Austria in Dec. But he felt himself unable to support Jacobin policy against Louis XVI, and in

Aug., 1792, was formally declared a traitor to the republic and took refuge in Liège, returning to France in 1799. He sat in the Chamber of Deputies from 1825-34, and died May 20, 1834.

Lafayette is the name of a city of Indiana, U.S.A., 75 m. N.W. of Indianapolis, with important manufactures. Pop. 21,250.

LA FÈRE. Town of France. In the dept. of Aisne, it stands on an island at the junction of the Serre with the Oise, 14 m. N.W. of Laon and 10 m. S. of St. Quentin. An old fortress before the Great War, it has a population of about 5,000.

It remained in the possession of the Germans during 1914-18. It was on the front St. Quentin-La Fère that the Germans broke through on Mar. 21, 1918.

LA FONTAINE, JEAN DE (1621-95). French poet and fabulist. Born at Château-Thierry in Champagne, July 8, 1621, he

J. de La Fontaine, French poet

turned to literature comparatively late in life, the first volume of his *Contes* being published in 1664, though three years earlier he had produced the first of his works in *L'Élégie aux Nymphes*, and in 1663 his *Voyage en Limousin*. In 1668 came a second series of *Contes* and the first six books of the famous *Fables*; a second series of *Fables* followed in 1679 and a third in 1693. In 1684 La Fontaine was elected a member of the French Academy. He died in Paris, April 13, 1695. His complete works are included in *Les Grands Écrivains de la France*, J. A. A. Regnier, 1883-92.

LAGASH. Sumerian city at Tello, S. Babylonia. The earliest personage identified is the patesi Lugalshagengur, who ruled under Mesilim, king of Kish. Within a century Eannatum made Lagash the S. Babylonian capital. This dynasty ended with the reformer Urukagina, after whom the city was ruled until 2400 B.C. by patesis owing allegiance to Akkad, Ereh, and Ur. See Babylonia.

LAGERLÖF, SELMA OTTILIANA LOUISA (b. 1858). Swedish novelist. Born Nov. 20, 1858, in Värmland, she abandoned a teaching career for literature. In 1890 she won a prize by a collection of her early stories, whose publication in 1891, under the title of *Gösta Berling's Saga*, Eng. trans. 1898, placed her in the front rank of Swedish writers.

The first part of her greatest novel, *Jerusalem*, was published in 1901, followed by a second part in 1902, Eng. trans. 1903. She was awarded the Nobel Prize for Literature in 1909, and in 1914 was elected a member of the Swedish Academy being the first woman so honoured. Her novel *The Outcast* was published in 1920. Later works were *The General's Ring*, 1925, and *Anna Svörd*, 1927.

Selma Lagerlöf, Swedish novelist

LAGOON (Lat. lacuna, pool). Shallow lake or sheet of water connected with a river or the sea. Usually found along the seaward margins of low-lying coastal plains, lagoons frequently occur in seas where the tides are very small, e.g. the Baltic. They are also found on a sand-dune coast like that of the Landes in S.W. France, and in large deltas. Another type of lagoon is that enclosed by the ring of coral which makes an atoll or coral island. See Atoll; Coral Reef.

LAGOS. District, island, and town of S. Nigeria. The district has an area of 28,600 sq. m., and contains that portion of Nigeria known as "the Colony," i.e. the colony of Lagos, created in 1862. In 1914 this was united with the protectorate of N. Nigeria to

Lagoon enclosed by a ring of coral, thus forming an atoll

form the colony and protectorate of Nigeria.

The town of Lagos (pop. 75,000) is the seat of the central government. It stands at the western end of the island of Lagos, which has an area of 3½ sq. m. There is an important harbour, and a railway runs from Iddo, on the mainland, with which Lagos is connected by a bridge, to Kano, 740 m. N.E. There is a wireless station for ship to shore communication. See Nigeria.

BATTLE OF LAGOS. Naval engagement fought Aug. 18, 1759. A French fleet of 12 ships escaped from Toulon and made for the Portu-

gueso coast, pursued by a British squadron under Boscawen. With four ships their admiral reached Lagos Bay. Ignoring the neutrality of Portugal, Boscawen sailed after them into Lagos Bay, and captured two and destroyed the others.

LAGRANGE, JOSEPH LOUIS (1736-1813). French mathematician. Born at Turin, Jan. 25, 1736, he early showed his profound mathematical ability. For some time professor of mathematics at Turin, he was director of the Berlin Academy for 20 years. In 1787 he went to Paris, and headed the commission

which produced the metric system of measurements. Lagrange has left his mark on every branch of mathematics; while he was no less noted for his power of analysis in astronomical problems. His works were published in 14 vols. in Paris, 1866-92. He died April 10, 1813.

LA HARPE, JEAN FRANÇOIS DE (1739-1803). French critic. He was born in Paris, Nov. 20, 1739. His reputation rests on his 12 volumes of lectures, *Lycée, ou Cours de Littérature*. He also wrote mediocre tragedies, the first of which, *Warwick*, 1763, was very successful. At the first a warm adherent of the Revolution, he was alienated by its later excesses, and finally became a supporter of church and throne. He died Feb. 11, 1803.

Lagos, Nigeria. The sea front from the tower of Christ Church

LA HOGUE, BATTLE OF. Naval engagement fought May 19, 1692, between the English and the French. It takes its name from the old spelling of the place in the Cotentin Peninsula called La Hougue.

Tourville, the French admiral, had orders to attack, whatever the strength of the English, under Admiral Russell, might be. The fleets were in sight of one another on May 19 off Cape Barfleur. Tourville attacked the English centre, but the English fire was very accurate, and his flagship, the *Soleil Royal*, was badly damaged. After five hours Tourville endeavoured to draw off westward in a fog, but his movement was discovered. Some of the French ships weathered Cape de la Hague, the westernmost point of the peninsula, and reached Saint Malo. The *Soleil Royal* and other ships were driven ashore near Cherbourg and burned. Other French ships, which had taken refuge in the harbour of Saint Vaast de la Hougue, were burned by fireships. In the engagement the French had 44 ships, and the English and Dutch had 99.

LAHORE. Division, district, and city of the Punjab, India. The division is the smallest of the prov. and the most populous. Its area is 12,389 sq. m. Pop. 4,997,441. The district of Lahore surrounds the capital, in the Bari Doab, S.W. of Amritsar. Raiwind and Kasur are important trade centres in addition to Lahore city. The area of the dist. is 2,824 sq. m., its pop. 1,131,336.

Lahore city, the capital of the Punjab, is situated nearly midway between Delhi and Peshawar, near the E. bank of the Ravi. Government House, Montgomery Hall, two cathedrals, the Punjab Chiefs' College, Wazir Khan's Mosque, the Great Mosque, and the Hall of Mirrors are notable buildings. The Mausoleum of Jahangir lies across the river. Lahore is the headquarters of a great rly. system, 8,000 people being employed in the rly. workshops. Pop. 281,781.

Lahore. 1. Jama Masjid, or the Great Mosque. 2. General view of the city

LAING, SAMUEL (1810-97). British politician and author. Born in Edinburgh, Dec. 12, 1810, he was secretary to the railway department of the board of trade, 1842-47. In 1852 Laing entered Parliament as Liberal

M.P. for Wick: in 1859 he was financial secretary to the treasury; and in 1860 he went to India as finance member of the viceroy's council. He returned to England in 1865 and re-entered Parliament. From 1867-94 he was chairman of the L.B. & S.C. Rly., and he died Aug. 6, 1897. Laing wrote *Modern Science and Modern Thought*, 1885; *The Antiquity of Man*, 1890; *Human Origins*, 1892.

Laing's Nek. Name sometimes given to the pass in the Drakensberg, S. Africa, more correctly called Lang's Nek (q.v.).

LAIRD, JOHN (1805-74) British shipbuilder. Born at Greenock, he joined his father, a shipbuilder at Birkenhead, and the firm of William Laird & Son was one of the first to use iron for shipbuilding, several of the earliest iron vessels being built in its yard. Laird was Conservative M.P. for Birkenhead from 1861 till his death, Oct. 29, 1874. His sons continued his business as Laird Bros.

LAITY. Term used for those who are not clergymen. In the Church of England the House of Laity is a body of laymen and laywomen set up for the government of the Church of England under the Enabling Act of 1919, and is one of the three houses of its National Assembly. Its members are elected every five years by the lay members of the diocesan conferences. See Church of England.

LAKE. Insoluble pigment obtained by precipitating solutions of organic colouring matters with alum or a tin salt. The variety of pigments made by precipitating coal-tar colours and known as aniline lakes are not true lakes. The lakes prepared from natural dyestuffs, as cochineal, fustic, etc., have been largely replaced by similar productions from aniline dyes. See Dyes; Pigment.

LAKE, GERARD LAKE, 1ST VISCOUNT (1744-1808). British soldier. Born July 27, 1744, he served in Germany during the Seven Years' War and in America during the War of Independence. He was commander-in-chief in Ireland during the rising of 1798, routing the rebels at Vinegar Hill. From 1801-05 Lake was commander-in-chief in India, being responsible with Sir Arthur Wellesley for crushing the Marhattas in several battles. In 1804 he was made a baron and in 1807 a viscount. From 1790-1802 he was M.P. for Aylesbury, and he was for a time a member of the Irish House of Commons. He died Feb. 20, 1808. Consult *Memoir*, H. Pearse, 1903.

LAKE DISTRICT. Name given to the picturesque region of mountains, lakes, streams, and waterfalls in Cumberland, Westmorland, and part of Lancashire, England. The lakes are Windermere, Ullswater, Conistone, Bassenthwaite, Derwentwater, Wastwater, Thirlmere, Crummock Water, Ennerdale Water, Hawes Water, Esthwaite Water, Lowes Water, Buttermere, Grasmere, Rydal Water, Brothers' Water, and Elterwater. Of the mts. the highest are Scafell Pike, Scafell, Helvellyn, and Skiddaw. There are many passes ranging from 780 ft. to 2,490 ft. The district, long a favourite tourist resort, was first made popular by Wordsworth, though Gray, at an earlier date, had drawn attention to its beauties. The area of the dist., the rainiest in England, is about 35 sq. m.

The Lake School of Poets was a term applied derisively by The Edinburgh Review, and by Byron, to the group of poets, Wordsworth, Coleridge, and Southey, who for varying periods made the Lake District their home.

LAKE DWELLING or **PALAEITTE.** Habitation upon a pile-supported platform. They are found on shallow lake-margins, especially along the Alpine axis of Europe. Of the neolithic and early metallic ages, they are best preserved in Switzerland and N. Italy. The submerged piles supported platforms above

water level, bearing 200 to 300 round or oblong huts, with thatched roofs, clay floors, and stone hearths. Some villages specialised

Lake Dwelling. Pile-built village of Parajano Indians in the lagoon of Sinimaica, Venezuela. Hence arose the name Venezuela (Little Venice).

in axe-making, pottery, bronze-smelting, and the like. Of 70 animals identified, the dog, pig, goat, sheep, ox, and horse were domesticated. Many plants were cultivated, including wheat, millet, barley, beans, vine, and apple. Much use was made of bone implements. See Bronze Age; Stone Age.

LAKE OF THE WOODS. Lake of N. America: area 1,850 sq. m., length 70 m. The Rainy river flows into it, and the Winnipeg river carries its waters to Lake Winnipeg. It is studded with islands. Kenora, at the outlet, is the centre for steamer traffic on the lake.

Lalang grass, ears and leaves

that of collection.

LALLY, THOMAS ARTHUR (1702-66). French soldier. Born at Romans, Dauphiné, in Jan., 1702, the son of an Irish father and a French mother, he entered the French army in 1721, and rose to command the regiment de Lally, which he led at Fontenoy. He served in the Jacobite expedition of 1745-46, and in the various wars against Austria. In 1758 Lally headed an expedition to India, and took Fort St. David from the British, but his troops were crushed at Wandiwash, and he surrendered Pondicherry in 1761. From England, as a prisoner of war, he went on parole to France, where he was charged with treachery and cowardice. He was tried and found guilty, and on May 9, 1766, was beheaded.

His son, Trophime Gérard Lally-Tollendal (1751-1830), took part in public affairs during the French Revolution as a moderate. He died in Paris, March 11, 1830.

LAMAISM. Religious system of Tibet and Mongolia. Named after the Tibetan word lama, Superior One, given to its priests and monks, it constitutes the civil as well as the religious government of Tibet. Its

elaborate hierarchy has as its head the Grand or Dalai Lama, whose spirit is supposed to be reborn in a child, the child being found by oracular signs, and tutored by a regent until the age of 18. The Potala of Lamsaism is a palace on Mt. Potala, near Lhasa (q.v.). In Tibet every family devotes at least one of its sons to the church. There are gorgeous cathedrals, huge monasteries, and nunneries; and a ritual resembling outwardly that of Roman Catholicism.

While in the higher ranks of the Lamas are found exponents of the loftier philosophy and ethics taught by Gautama Buddha, the founder of Buddhism, priests and people are steeped in superstition and idolatry. See Buddhism; Tibet; consult also The Buddhism of Tibet, or Lamaism, L. A. Waddell, 1895.

LAMARCK, JEAN BAPTISTE PIERRE ANTOINE MONNET, CHEVALIER DE (1744-1829) French zoologist. Born Aug. 1, 1744. Lamarck

enlisted when 16 years of age. An accident caused him to throw up his military career, and, taking an interest in medicine and botany, he began studying in Paris. In 1778 he published his *Flore Française*, 3 vols. In 1788 he was appointed keeper of the herbarium of the Royal Garden. He reorganized the Museum of Natural History, at which he was professor of invertebrate zoology. He died Dec. 18, 1829.

Lamarck was the greatest zoologist of his time. He advocated the gradual descent of all living animals from fossil forms, and gave his name to Lamarckism, or the doctrine of the descent of animals from germs by spontaneous generation. He was the founder of invertebrate palaeontology, and one of the great reformers of animal classification.

LAMARTINE, ALPHONSE MARIE LOUIS DE PRAT DE (1790-1869). French author. Born at Mâcon, Burgundy, Oct. 21, 1790, when 21 he was sent to Italy, and at Naples met a young cigarette maker whom he later idealised in his *Graziella*, 1852. His *Méditations Poétiques* 1820, struck the first note of the new French romantic poetry. He was elected to the Academy in 1829. In 1832 he went on an extended tour to the East, described in his *Voyage en Orient*, 1835.

On returning to France he was elected to the Chamber as an independent. He wrote *Jocelyn*, a narrative poem, in 1836. As minister for foreign affairs in the provisional government of 1848, the popularity of his *Histoire des Girondins* secured for him something like a dictatorship, but this only lasted for a short time. He died in Paris, May 1, 1869.

Lamasism. 1. Monastic lamas with telescopic trumpet. 2. Lamas of Nud in ceremonial dress.

LAMB, CHARLES (1775-1834). English essayist. Born at 2, Crown Office Row, Temple, London, Feb. 10, 1775, his father, John Lamb, was clerk to Samuel Salt, one of

J. B. de Lamarck, French zoologist

A. M. de Lamartine, French poet

the benchers. Educated at Christ's Hospital, in 1792 Charles entered the accountant's office in the East India House. There was insanity in the family, and in 1796 his sister, Mary Lamb (1764-1847), stabbed her mother in a sudden access of madness. Charles, then only 21, made himself responsible for her guardianship, and their mutual devotion is one of the tenderest pages in literary history. Lamb had early leanings to literature, and had already published verse

Charles Lamb,
English essayist

by Henry Mayer

when his first independent book, *A Tale of Rosamund Gray and Old Blind Margaret*, appeared in 1798. In 1801 he published a tragedy, *John Woodvil*.

With Mary he wrote *Tales from Shakespeare*, 1807, *Mrs. Leicester's School*, 1808, and *Poetry for Children*, 1809. To the same period belong his children's books, *The King and Queen of Hearts* (1806), and *The Adventures of Ulysses* (1808), and the *Specimens of English Dramatists Who Lived about the Time of Shakespeare* (1808). In 1820 *The London Magazine* was started, and to it Lamb contributed those *Essays* signed *Elia* which were to give him a high and abiding place in literature. In 1825 he retired from the East India House, and in 1833 published *The Last Essays of Elia*. He died Dec. 27, 1834. Consult *Bibliography of Charles and Mary Lamb*, J. C. Thomson, 1908. *Life of Charles Lamb*, E. V. Lucas, 5th ed. 1921.

LAMBALLE, MARIE THÉRÈSE, PRINCESSE DE (1749-92). French princess. Daughter of Louis Victor of Savoy-Carignano, she was born at Turin, Sept. 8, 1749. In 1767 she made an unhappy marriage with the prince de Lamballe (d. 1768). Living after his death with his father, the duko of Penthièvre, she later became intimate with Marie Antoinette.

In Aug., 1792, she was arrested and imprisoned in the Prison de la Force, where on Sept. 3 she was murdered in the massacres. *Memoirs* published as hers in 1826 are spurious.

LAMBERT, DANIEL (1770-1809). Born at Leicester, March 13, 1770, he succeeded his father as the keeper of the town gaol in 1791, and in 1793 weighed 32 stone.

In 1805 he resigned his post at the prison, and for the last four years of his life exhibited himself for profit. He weighed 52½ stone at the time of his death, July 21, 1809.

LAMBERT, JOHN (1619-94). English soldier. Born at Calton Hall, Yorkshire, in 1642 he joined the parliamentary army. He served at Marston Moor and became one of the chief officers of the new model army, holding commands under Cromwell at Dunbar and Worcester.

A member of the council of state, he helped to draw up the instrument of government and

was one of the major-generals. About 1656 a serious dispute with the protector led to his retirement, but in 1659 he was again prominent. He put an end to the Long Parliament, and for a moment he and Monk were the two most powerful men in the country. Imprisoned at the Restoration, he was a prisoner in Guernsey when he died, sometime in 1694.

LAMBETH. One of the boroughs of the co. of London. Between Southwark and Camberwell on the E., and Westminster and Wandsworth on the W., it includes the dists. of Kennington, Brixton, Herne Hill,ulse Hill, Vauxhall, and part of Norwood, also the S. approaches to Waterloo, Westminster, Lambeth, and Vauxhall bridges over the Thames. The Albert Embankment runs from Westminster Bridge to Vauxhall. The parish church of S. Mary's, adjacent to Lambeth Palace, was rebuilt, 1851, on the foundation of a 15th century structure, of which only the tower remains. Other notable buildings include the London County Hall, the town hall, 1908, at Brixton; S. Thomas's Hospital; Christ Church, Westminster Bridge Road; Waterloo rly. station; the Old Vic Theatre, eight public libraries, public baths, and the South-Western Fever Hospital. Within the boundary are Kennington Oval, Kennington Park, Camberwell Park or Myatt's Fields, Brockwell Park, Ruskin Park, and Norwood Cemetery. In 1929 work on a new bridge was begun. Pop. 302,960.

Lambeth ware is a type of glazed earthenware produced in Lambeth. In 1630 Dutch potters were turning out there a kind of delft, while later, English potters produced a kind of Palissy ware. Another potter produced glazed stoneware for chemical manufacturing, and this industry still flourishes. The Lambeth pottery was established by Doulton (q.v.).

Lambeth Palace. The main entrance, dating from 1490. On the right is Lambeth parish church

The Lambeth Conference, held decennially at Lambeth Palace, is a gathering of the bishops of the Anglican Church throughout the world. An important one took place in July-Aug., 1930.

LAMBETH PALACE. London residence since the 13th century of the archbishops of Canterbury. It is on the right bank of the Thames, between S. Thomas's Hospital and Lambeth Bridge, and is built partly of red brick and partly of grey stone. At the end of the outer court rises Chicheley's Water Tower, popularly called the Lollards' Tower, restored in 1873. On the right is the Great Hall, built by Juxon. Apart from the library of 30,000 books and MSS. which it has housed since 1834, its open timber roof is its most famous feature. Part of the extensive grounds was made a public recreation ground. Consult the *Story of Lambeth Palace*, Dorothy Gardiner, 1930.

John Lambert,
English soldier

LAMENNAIS, HUGUES FÉLICITÉ ROBERT DE (1782-1854). French philosopher. Born June 16, 1782, he published in 1808 an able study of the importance of the Church in society. He was ordained priest in 1816. His essay on *L'Indifférence en Matière de Religion*, 1817 (Eng. trans. 1898), was a vigorous defence of authority against liberty of opinion. He published his *Progrès de la Révolution* in 1829, and in 1830 founded his paper *L'Avenir*, which was condemned by Rome in 1832. Lamennais thereupon broke with the Church, and thenceforth was allied with democratic forces in politics, sitting in the Constituent Assembly as a radical from 1848-51. He died Feb. 27, 1854.

LAMENTATIONS, BOOK OF. O.T. writing belonging to a group known as the Five Megilloth (i.e. Rolls). In the English versions the book is called *The Lamentations of Jeremiah*. It contains five independent poems, four of which are alphabetic and written in a solemn metre consisting of three beats followed by two. The poems are lamentations over the destruction of Jerusalem by Nebuchadnezzar in 586 B.C., and are ascribed by an ancient tradition to Jeremiah.

LAMESLEY. Parish of Durham. It stands on the Team, 4 m. S. of Gateshead, with a station on the L.N.E. Rly. It is a mining centre, and near the village is Ravensworth Castle. Pop. 6,792.

LAMIA. (1) In Greek mythology, a fabulous monster which was supposed to devour children. (2) Name of an old Libyan queen who, to avenge the death of her own children slain by Hera, slew all other children she could lay hands upon. In later legend Lamia became a beautiful female who gained the affections of handsome young men, and then sucked their blood and ate their flesh.

LAMMAS DAY. Festival of the wheat harvest, observed in the Early English Church on Aug. 1. Lammas was one of the English quarter days, and is still a quarter day in Scotland (Aug. 1). Lammas lands belonged to the owners while in corn or grass, and were afterwards subject to common rights of pasturage. Lammas floods is a wet period occurring about the first week in August.

LÄMMERGEIER. Large bird of prey, belonging to the vulture group. It is found in S. Europe, W. and Central Asia, and in N.E. Africa, and lives always among the mountains. The plumage is black on the upper parts and orange below, with a whitish head and white markings on the wings. The wings are over 9 ft. in expanse. Unlike the true vultures, the head is completely feathered; and the curious tuft of bristles at the base of the beak gives the bird its popular name of the bearded vulture. It feeds mainly upon carrion.

LÄMMERMUIR OR LÄMMERMOOR. Range of hills in Berwickshire and Haddingtonshire. They extend in an E.N.E. direction to St. Abb's Head. Lammer Law (1,733 ft.) is the culminating summit. Ravenswood, the Wolf's Crag of Sir Walter Scott's *Bride of Lammermoor*, is situated on a spur towards the sea.

LA MOTTE, ANTOINE HOUDART DE (1672-1731). French man of letters. Born in Paris, Jan. 17, 1672, he early began to write for the theatre, but without any great success. In 1719 he published a volume of witty *Fables*, Eng. trans. 1721, and in 1723 made his chief stage success with *Inès de Castro*, which has been acclaimed as being nearly a great play. The most notable of his writings were his essays and letters. He died Dec. 26, 1731.

LA MOTTE OR LAMOTHE, JEAN DE VALOIS, COMTESSE DE (1756-91). French adventuress. Claiming descent from the blood-royal of France, she was a beggar when befriended by the Countess of Boulaivilliers, and thus came into touch with the court circle. She married

M. de La Motte, called count. She induced Cardinal De Rohan to purchase the famous diamond necklace on credit, on the pretence that it was coveted by the queen. Branded and imprisoned in 1786 for her part in this transaction, the comtesse de La Motte escaped to London, and was killed by falling from a window, Aug. 23, 1791.

Comtesse de La Motte, French adventuress

LAMP (Gr. lampein, to shine). Vessel for holding inflammable material intended to be burnt for the production of light or heat. By extension the term is applied to any device for providing artificial illumination. The invention of the pottery lamp, wherein animal oil, and afterwards vegetable oil, was burned at a wick confined in a nozzle, is attributable to the Mediterranean region. The original form, a shallow bowl with one end pinched in, gradually passed into the closed type, with central apertures for filling and end apertures for wicks. Apart from the introduction of wicks of spun cotton and other fibres, no improvement in technical efficiency was effected until after the Renaissance.

Towards 1800 the small round wicks were largely replaced by flat ones. These ran in a metal casing, and were adjusted by means of a toothed wheel which gripped the wick. Argand, in 1784, further improved the lamp by substituting a tubular wick, moving between metal cylinders. The inner cylinder allowed a draught of air to play upon the wick, thus increasing combustion. This burner, with various modifications and the addition of a glass chimney, remains the basis of nearly all oil lamps. See Arc Lamp; Electric Lighting; Gas.

LAMP BLACK. Nearly pure form of carbon, consisting of soot produced by the imperfect combustion of coal-tar, resin, oil, or gas. Commercially it is obtained by burning hydrocarbons in a special kind of furnace, the soot being deposited on a funnel or hood, from which it may be collected. In another method the smoke from the burning substances passes through a long brickwork flue into chambers, where it collects. Lamp black is extensively used in the manufacture of printers' and other inks. See Carbon; Ink.

LAMPETER. Borough and market town of Cardiganshire. It stands on the Teify, 27 m. from Carmarthen, and is served by the G.W. Rly. The chief buildings are the parish church of S. Peter, much restored, and S. David's College for training candidates for the ministry of the episcopal church, established 1822. Lampeter was founded by a Celtic missionary, S. Pedr, whence its name. Market day, Fri. Pop. 1,813.

LAMPREY (Petromyzon). Fresh-water animal belonging to the order Cyclostomata (round-mouthed). It differs from the fishes in having neither scales, paired fins, nor jaws, as well as in various points of internal anatomy. In appearance it is eel-like, but has a round sucking mouth with which it attaches itself to stones and other objects. Three species occur in Great Britain. One is marine (*P. marinus*) and attains a length of over 3 ft., while the other two (*P. fluviatilis* and *P. branchialis*) live in the rivers and are much smaller. The lamprey feeds upon small water creatures and upon dead bodies, sometimes attaching itself to

Lampreys collecting stones to make a nest

living fish and rasping holes through the skin. Its flesh was formerly esteemed for the table. It deposits its eggs in stone heaps. See Hag Fish.

LANARK. Burgh of Lanarkshire, also the county town. It stands above the right bank of the Clyde, 32 m. from Edinburgh and 31 m. from Glasgow, and is served by the L.M.S. Rly. The chief buildings are those erected for burgh and county purposes, e.g. hospitals, a library, and an orphanage. The industries include cotton spinning, hosiery making, and a trade in horses, cattle, sheep, and agricultural produce. Lanark is noted for its picturesque surroundings. Near are the Falls of Clyde and Cartland Craigs. Lee House, the old seat of the Lockharts, is referred to in *The Talisman*. Market day, Mon. Pop. 6,268.

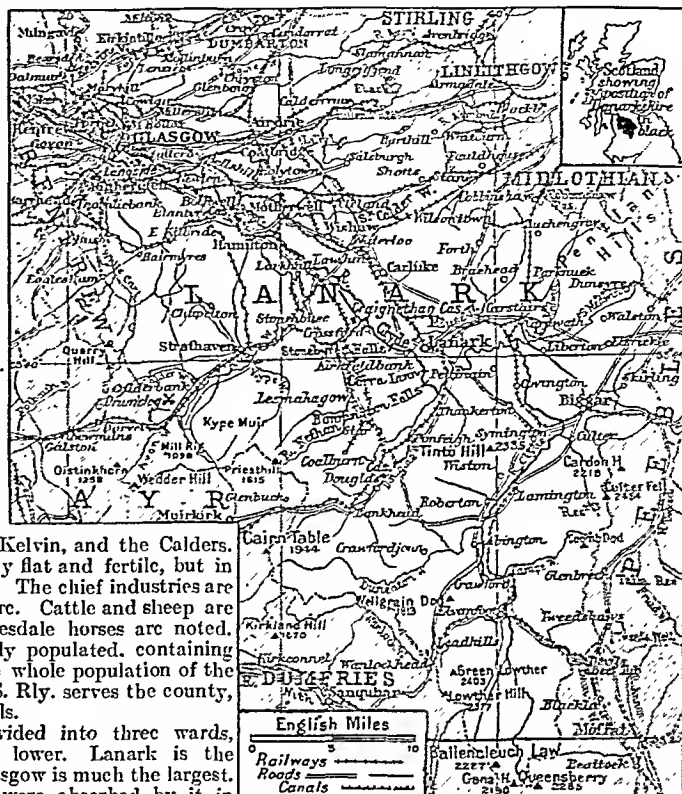

LANARKSHIRE. Inland county in the S.W. of Scotland, sometimes called Clydesdale. Its area is 879 sq. m. The chief river is the Clyde; others are its tributaries, Douglas, Aron, Nethan, Cart, Kelvin, and the Calder. The surface is mainly flat and fertile, but in the S. there are hills. The chief industries are mining and agriculture. Cattle and sheep are reared and the Clydesdale horses are noted. Lanarkshire is densely populated, containing about a third of the whole population of the country. The L.M.S. Rly. serves the county, which has also canals.

Lanarkshire is divided into three wards, upper, middle, and lower. Lanark is the county town, but Glasgow is much the largest. Partick and Govan were absorbed by it in 1912. Other towns are Rutherglen, Motherwell, Airdrie, Wishaw, Coatbridge, and Hamilton. Lanarkshire is associated with many events in Scottish history, herein being Langside, Bothwell Brig, and Drumclog, also the castles of Douglas, Craignethan, and Bothwell (q.v.). Pop. 1,539,307.

LANCASHIRE. County of England. Its area is 1,869 sq. m. With a long and irregular coastline on the Irish Sea, it is broken into two unequal parts by Morecambe Bay; the small northern part is known as Furness. In the E., where it borders Yorkshire, the surface is mountainous. In the N. the mountains of the Cumbrian group enter it, while lesser elevations of the Pennine Chain cover much of the centre. The level areas are in the south and along the coast. Pop. 4,927,484.

The most important rivers are the Mersey, Ribble, and Lune. The only lakes are Coniston and others of the Lake District. Off the coast is the island of Walney. There is much agriculture and some fertile land, especially in the S.W., but much of the county is an industrial area, while in the E. is some moorland. Standing on a great coal-field, S. Lancashire is covered with a network of populous towns, of which Manchester and Liverpool are the chief. Watering places line the coast; these include Southport, Blackpool, Morecambe, and Lytham St. Anne's. Lancaster is the county town.

The county's main industry is the cotton manufacture, but there are many others, especially those included in the engineering and machinery group. Lancashire is served by the two great trunk lines, the L.M.S. and L.N.E.R., and also by the Cheshire Lines Rly., and by several canals, especially the Manchester Ship Canal. Lancashire is a county palatine, and, as Duke of Lancaster, the king appoints its sheriff. It has a large number of

Lancashire. Map of the industrial Scottish county sometimes called Clydesdale

families of ancient lineage and many stately mansions, for instance, Knowsley. It is also known for the strong Roman Catholic element in its population. It contains the ruins of Furness Abbey, and there are many noted ecclesiastical buildings. See map p. 840.

LANCASHIRE FUSILIERS. Regiment of the British army. Raised in 1683, as the old 20th Foot, it first saw service in Ireland and Portugal. It helped to defend Gibraltar in 1726, and fought at Dettingen, Fontenoy, and Culloden. The Fusiliers fought in the Seven Years' War, in the Peninsular War, and in the Crimean War, and were at Lucknow during the Indian Mutiny. In 1899 they went to S. Africa.

In the Great War the 1st battalion won great renown in the landing on Beach W, Gallipoli, April 25, 1915, and in subsequent fighting there. The 3rd, 6th, 7th, and 9th batts. also fought in the peninsula. The 2nd was at Mons and other earlier battles of 1914, and in the second battle of Ypres, 1915. Other battalions also distinguished themselves on the Western Front, 1916-18, and in Egypt and Sinai in 1916. The 2-5th batt. bore a notable part in stemming the German offensive, Mar.-April, 1918, particularly at Bethune. The regimental depot is at Bury.

LANCASTER. Borough and market town of Lancashire, also the county town. It stands on the S. side of the river Lune, 4 m.

from the sea, 230 m. from London and 21 m. from Preston, and is served by the LMS Rly. This chief of the old buildings are S. Mary's Church, mainly Perpendicular, and the castle. The latter was built in the 11th century, and strengthened by John of Gaunt. Features are the four towers and the keep; it is now used as law courts. There is a town hall, given by Lord Ashton, an infirmary, and an observatory. The Storey Institute contains the art gallery, library, museum, and technical school. Lancaster has spinning mills and engineering works, and the chief industries are the making of linoleum and railway stock. Market day, Sat. Pop 40,212.

LANCASTER, DUCHY OF. Name given to the lands which for several centuries had belonged to the king as duke of Lancaster. Not surrendered with the rest of the crown lands by William IV, they still form a separate estate, of which the king receives the net income. They are mainly in the counties of Lancashire and Stafford, and are managed by a council presided over by the chancellor of the duchy, who is a member of the Government. Until 1930 its offices were at Lancaster Place, Strand, London, W.C. 2.

LANCASTER, HOUSE OF. Name given to the descendants of John of Gaunt, duke of Lancaster, the family that reigned in England

of this kind in England, and his daughter married John of Gaunt, who was also made duke of Lancaster. Gaunt's son Henry, then

Lancaster. Gateway of the castle dating from the 11th century

LANCASTER, JOHN OF GAUNT, DUKE OF (1340-99). English prince. The fourth son of Edward III, he was born in Mar., 1340, at Ghent, whence his name. In 1359 he married his cousin Blanche, daughter of Henry, duke of Lancaster, and so acquired, somewhat later, that rich duchy. He fought in France and in Spain, where he helped to restore Pedro to his throne of Castile, and married as his second wife Pedro's daughter, Constance. In England, John's vigorous personality made him prominent, and during the reign of Richard II he was a conspicuous and usually an unpopular figure. He died Feb. 3, 1399, and was buried in S. Paul's. He was the father of Henry IV. His third wife was Catherine Swynford, by whom he was the father of the Beauforts.

LANCASTER, JOSEPH (1778-1838). A British educationist. He took a large room in the Borough Road, London, in 1801, and established a school for poor children, which he conducted on the monitorial principle of setting the older scholars to teach the younger. Managed on undenominational lines, it developed in 1808 into the Royal Lancasterian Society, while in 1912 the name was changed to the British and Foreign School Society. Having emigrated, 1818, Lancaster died in New York, Oct. 24, 1838.

Lancaster Regiment, KING'S OWN ROYAL. Regiment of the British army now known as The King's Own (q.v.).

LANCASTER SOUND. Channel of British North America. It connects Baffin Bay with Barrow Strait, running E. and W. for about 300 m. It is within the Arctic Circle, and was discovered by Baffin in 1616.

LANCE. Spear used by mounted troops. The length of the lance in modern armies varies from 8 ft. 8 ins. to 11 ft. 9 ins., the German equipment being the longest. The weight of a lance is 4 to 4½ lb. Lancer regiments were hardly known until the Napoleonic Wars, and it was due to the effective use that Napoleon made of his lancers at Waterloo that the British army adopted the lance as one of its standard arms. Its use was abolished in 1928, although

for ceremonial purposes only it is still carried by the Lancer regiments.

LANCE CORPORAL. Lowest non-commissioned officer in the British infantry. Lance corporals on the establishment of a battalion wear a single chevron on each sleeve. Lance serjeants are corporals promoted to the rank of serjeant, and wear serjeant's stripes.

LANCELET OR AMPHIOXUS. Small marine creature, forming the class Cephalochorda. From one and a half to three inches in length, the lancelet, found in salt water near the coast, resembles a flat, silvery fish, pointed at both ends, and is remarkable as being the most primitive of the vertebrates. It has no skull or distinct brain, no jaws, heart, ears, eyes, or limbs, but it possesses the notochord characteristic of vertebrates. It is found widely distributed, and feeds on microscopic organisms.

LANCELOT. Character in the *Morte d'Arthur*, generally known as Sir Lancelot of the Lake. He was chief of the Knights of the Round Table. From his illicit love for Guinevere, Arthur's queen, resulted the last battle, in which the king fell. Lancelot then took the habit of a monk.

LANCERS. Regiments of cavalry in the British army. They are so called because their principal weapon was the lance. In 1930 there were four of these regiments, numbered 9th, 12th, 16th/5th, and 17th/21st. Two former regiments, the 5th and 21st, have been amalgamated with the 16th and 17th respectively. The 9th Lancers, dating from 1697, won fame in the Peninsular War, and in India in 1843. It was engaged in the Indian Mutiny, accompanied Lord Roberts to Kandahar, and took part in the S. African War. The 16th Lancers, dating from 1759, was the first lancer regiment to serve in India; and the first British corps to use the lance in action. The 17th Lancers was raised in 1759 as the 18th Light Dragoons and converted into Lancers in 1816. From this regiment's badge, a Death's Head, its popular designation Death or Glory Boys has been derived. In 1929 the 12th Lancers was converted into an armoured car regiment.

LANCERS. Square dance for eight people. It is in five figures, each consisting of several steps. It was invented in Paris in 1836 and introduced into London in 1850, where it soon became popular and was adopted at court ten years later.

LANCEWOOD (*Duguetia quitarensis*). Tree of the order Anonaceae, native of S. America. The wood, owing to its light, elastic character, is largely used for making the shafts of traps and other light vehicles.

LANCHESTER. Village of Durham. It is ½ m. from Durham, with a station on the L.N.E.R. All Saints, an old church, has some Norman work, and was made a collegiate church in 1283. The main occupation of the inhabitants is in the surrounding coal mines. On a hill above the village are remains of a Roman station, hence its name. Pop. 5,091.

LANCIANI, RODOLFO AMADEO (1846-1929). Italian archaeologist and senator. Born in Rome, Jan. 1, 1846, he became secretary of the archaeological commission in 1872. In 1878 he was made director of excavations, and professor of ancient topography in the university of Rome. His publications, numbering from 1871 about 450, include *Ancient Rome in the Light of Recent Discoveries*, 1888; and *The Destruction of Ancient Rome*, 1899. His *Forma Urbis Romae*, 1893-1902, a plan of ancient Rome, comprises 276 sq. ft. He was a member of the Communal Council and acted as Vice Syndic in the Great War, resigning in 1920. He was created K.C.V.O. in 1923. He died May 21, 1929.

Lancashire. Map of the chief industrial county of England. See article p. 833

from 1399 to 1461. In 1267 Henry III created his second son, Edmund, earl of Lancaster. Edmund's son was Thomas, earl of Lancaster, the baronial leader against Edward II, and then came his brother Henry. Henry's son, a second Henry, was made in 1351 duke of Lancaster, the second creation

LANCING. Village of Sussex, England. It stands on the coast 8 m. from Brighton and 2 m. from Worthing, with a station on the Southern Rly. There is a church here dating in part from Norman times, and S. Nicholas College, usually known as Lancing College, is the senior of the schools founded in 1848 by the Rev. N. Woodward. It is conducted on Anglican lines. Pop. 3,163.

LAND. Primarily the solid, dry part of the earth's surface, as opposed to the area covered with water. Its most frequent use, however, is for the soil on which men live and work, from which ultimately all the requirements of the human race are supplied. This divides itself into two main aspects. The amount and nature of the crops produced is the business of the agriculturist, and is discussed under the heading of agriculture and related subjects. The division of the produce of the soil is in the domain of the economist, and connected with it is the question of land ownership.

The crown lands of Great Britain and the lands belonging to the state in other European countries are in the main the remains of the vast estates possessed by the rulers, who were, according to the principles of feudalism, the ultimate owners of all the land in the country. In the U.S.A., Canada, and other newer countries the state assumed possession of all unoccupied land. Much of this has been granted out to settlers, but a good deal is still the property of the state.

THE LAND LAWS. In their inception the land laws of England are derived from the modified feudal system established after 1066. The basis of that system was the giving of land by the owner, called the lord, to a person, called the vassal or tenant, to be held by the vassal in consideration of his rendering certain fixed services to the lord.

Later the practice of entailing estates was introduced, and prevailed widely in Great Britain. By this a landed estate was settled by a man on the heirs of his body, and they could not dispose of it either by deed or by will. The lawyers, however, found a way, called fines and recoveries, of circumventing the law, and for long it was possible to break an entail in this way. Fines and recoveries were abolished in 1833, but entails could be broken after this by deed.

In 1922 and 1925 an important group of measures entirely altered the land laws. Copyhold, primogeniture, and other remains of feudal days were abolished. Land passes by will, or by the rules of intestacy just as any other kind of property. It can be settled on an individual, but only in the same way as other forms of property, not by way of entail.

REGISTRATION OF LAND. The usual method of transferring land is by deed, but to some extent this has been replaced by a system of registration, the state being the registrar. This method has been adopted in Australia, parts of Canada, and some other areas of the British Empire, as well as in some of the states of the U.S.A. Here land is transferred from seller to buyer in much the same way as are stocks and shares.

In England and Wales registration of land was introduced in 1875, but for a time it was only voluntary. In 1897 an Act gave the privy council power to make the registration compulsory in any district. The county of London was chosen for the experiment and offices were opened in Lincoln's Inn Fields. In 1925 registration was made compulsory in the county borough of Eastbourne. The registration of all deeds affecting land is compulsory in Yorkshire and Middlesex. In Yorkshire there are registries at Beverley, Wakefield, and Northallerton. The budget of 1930 proposed a valuation of land for taxation of rateable values.

LANDAU. Four-wheeled horse carriage. It has the top divided, so that it may be closed, half-closed, or open. It is still used in state processions, etc., and is a comfortable vehicle of graceful design. It probably takes its name from the town of Landau in Bavaria.

LAND COURT. Judicial body appointed to administer new and exceptional laws relating to the land. Such are primarily in districts where poverty and discontent with the existing system prevail, as in Ireland and parts of Scotland, where one was set up in 1911. Really, it is the abolished Crofters' Commission in an enlarged form, doing for the whole country what that body did only for the crofting districts. It fixes fair rents, where necessary, and decides questions of price when land is acquired compulsorily for small holdings and the like.

LAND CRAB (Gecarcinus). Crab whose breathing apparatus is so modified as to enable it to live on land. Land crabs are

Land Crab. Specimen of Gecarcinus ruficola, from St. Kitts, West Indies

common in many of the tropical regions and usually live near the sea, burrowing under stones and in the sand. At the breeding season in the spring they make their way in companies to the sea, where the eggs are laid. Their food consists mainly of vegetable matter and offal, and they often inflict great damage in sugar plantations.

LAND LEAGUE. Organization formed in Ireland in 1879. The avowed objects of its promoters were to secure the reduction of rent and the ownership of the land by the peasantry. It was also proposed to raise money for assisting the peasants and to help them with legal advice. The period of its greatest activity, 1879-81, was one of great unrest in rural Ireland, shooting, maiming, and other outrages being frequent. Michael Davitt was the real founder of the league, it was declared an illegal association in Oct., 1881, and gradually its activities decreased.

LANDLORD. General term for one who owns land or houses. The one who hires the land or house from the landlord is known as the tenant, and the relations between the two are regulated by the common law and a number of statutes.

The liability of the landlord and tenant to do repairs is a matter of agreement between them. But in the case of tenements let at not more than £20 in London, £13 in Liverpool, Manchester, or Birmingham, £10 in the rest of England, £8 in Scotland, and £4 in Ireland, the landlord impliedly warrants that the house is fit for habitation, and undertakes to keep it so. In the letting of a furnished house, also, there is an implied condition that the house is reasonably fit for human habitation. In all other cases, unless by express agreement, the landlord is not liable for any repairs, and the tenant must go on paying rent even if the house is burnt down.

The rights of the landlord to charge any rent he can get, to distrain for arrears of rent without summoning the defaulting tenant to the county court, and to recover possession of his property whenever he wishes, subject only to giving the legal notice, were considerably curtailed by the Rent Restriction Acts passed during and after the Great War. The landlords of agricultural land have certain obligations towards their tenants under the Agricultural Holdings Acts.

Tenants who pay property tax on the premises occupied by them can deduct this from the rent paid to the landlord. Any agreement made to the contrary is illegal.

LANDOR, ARTHUR HENRY SAVAGE (1865-1924). British explorer. Grandson of Walter Savage Landor, he was born at Florence. After travels in the East and in America, he explored in 1897 both sources of the Brahmaputra river, and was the first white man to explore central Mindanao Island, and was one of the first to enter the forbidden city of Lhasa. In 1902 he travelled overland from Russia to Calcutta, crossing Persia and Afghanistan, and in 1906 he crossed Africa, travelling 8,500 m. in 364 days. Four years later he crossed the S. American continent from Rio de Janeiro to Lima. His works include *In the Forbidden Land*, 1898. He died Dec 26, 1924.

LANDOR, WALTER SAVAGE (1775-1864). British author. Born at Warwick, Jan. 30, 1775, he was educated at Knowle, Rugby, and Trinity College, Oxford, where his temper got him into trouble with the authorities. Estranged from his family, he spent some time in Wales, where he met the Ioné and Ianthe of his early verse, and the Rose Aylmer whose untimely death at Calcutta in 1800 inspired the elegy that enshrines her name. He raised and accompanied a force to fight for Spanish independence in the Peninsular War, and on his return to England bought the estate of Llanthony Abbey. In 1811 appeared his *Count Julian*, a tragedy. From 1814 he lived in various places in France and Italy, settling in Florence in 1821. His *Imaginary Conversations* appeared, in 5 vols., 1824-29, and his *Citation and Examination of William Shakespeare*, 1834. He left Italy in 1835; published *The Pentameron* in 1837, settled at Bath, 1838-58, and published his collected works, 1846. In 1858 he returned to Florence, where he died, Sept. 17, 1864.

W. S. Landor
British author
After W. Fisher

LANDRECIES. Town of France, in the dept. of Nord. Situated on the canalised Sambre, near the S part of the Morinal forest, it is 11 m W. of Avesnes and 50 m. S.E. of Lille. Long a fortified town on the frontiers of the Netherlands, it figures in Stevenson's *Inland Voyage*. Pop. 2,334.

Landrecies was the scene of a sharp engagement between the British and Germans on Aug. 25, 1914, during the retreat from Mons. In this the Guards were attacked by some Germans, whom in the end they drove out.

LANDSEER, SIR EDWIN HENRY (1802-73). British animal painter. Born in Queen Anne Street East, London, March 7, 1802, son of

Sir Edwin Landseer,
British painter
Self-portrait

John Landseer the engraver, he studied under his father, and in 1816 entered the R.A. schools. His first pictures appeared at the R.A. in 1815. In 1822 his *Larder Invaded* gained him a premium of £150 from the British Institution. He was elected A.R.A. in 1826 and R.A. in 1831. He died Oct. 1, 1873. Landseer, who was the most popular artist of his time, is well represented at the National Gallery, London. He excelled in the portrayal of dogs and deer, his *Dignity and Impudence*, 1839, being well-known. Many of his best paintings showed scenes in the Scottish Highlands. The sculptured lions in Trafalgar Square, London, were amongst his last important works.

LAND'S END. Most westerly point of the island of Great Britain. It is in Cornwall, 9 m. S.W. of Penzance. The cliffs, of granite formation, are 60 ft. in height. To the W. are the Longships (q.v.), a dangerous cluster of rocks with a lighthouse.

Land's End, the most noted promontory in the British Isles

From Land's End to John o' Groats is regarded as the extreme length of Great Britain.

LANE-POOLE, STANLEY (b. 1854). British scholar. Born in London, Dec. 18, 1854, he entered the coins department of the British Museum in 1874. There he prepared the British Museum catalogues of Oriental and Indian coins, 1875-92, and between 1876-93 he completed his great-uncle E. W. Lane's Arabic lexicon. A visit to Egypt in 1883 resulted in *Social Life in Egypt and Studies in a Mosque*, 1883, and *Art of the Saracens*, 1886. He left the Museum in 1892, and was afterwards employed on archaeological research by the government of Egypt. He was professor of Arabic at Trinity College, Dublin, 1898-1904. In 1906 he brought out an edition of *The Thousand and One Nights*.

LANERCOST. Parish and village of Cumberland. It stands on the Irthing, 11 m. from Carlisle. Here was an Augustinian priory founded by Robert des Vaux about 1169. In 1928 Lady Cecilia Roberts, a daughter of the 9th earl of Carlisle, presented the ruins to the nation. The station is Brimpton, 2 m. away. The Chronicle of Lanercost is valuable for the affairs of the north of England in the time of Edward I and II.

LANFRANC (c. 1005-89). Archbishop of Canterbury. Born at Pavin, Italy, and educated as a jurist, he founded a college at Avranches. In 1042 he entered the Benedictine abbey of Bec, near Rouen, of which in 1045 he became prior. When Duke William founded the monastery of St. Stephen at Caen in 1066, Lanfranc was nominated its first abbot. He was made archbishop of Canterbury in 1070. As primate he is remembered for his efforts to purify English monasticism, his zeal for the enforcement of clerical celibacy, and his works of charity. After the fire of 1067 he rebuilt Canterbury Cathedral. He died May 24, 1089.

As a theologian, Lanfranc took a prominent part in the controversy with Berengar of Tours, 1050, on the question of transubstantiation (q.v.). He set forth his views in the treatise *De Corpore et Sanguine Domini*.

LANG, ALEXANDER MATHESON (b. 1879). British actor. Born at Montreal, May 15, 1879, he appeared at The Lyceum, London, in 1900, as Mountjoy, in *King Henry V*. He scored successes in Shakespearean and other parts, and from 1909-12 toured in America, Australia, S. Africa, and India. He reappeared in London at His Majesty's in 1913, and made his great success as Mr. Wu in the play of that name. In 1919 he produced *Othello*, playing the name part, and in 1920 created the leading part in *The Wandering Jew*. From 1922 he appeared in *Christopher Sly*, *Blood and Sand*, *Jew Süss* (1929), and other plays, and in films.

LANG, ANDREW (1844-1912). Scottish author and editor. Born at Sellirk, March 31, 1844, he became hon. fellow of Merton College, Oxford. One of the most versatile and graceful of writers, he was responsible for more than sixty books and a vast amount of literary journalism, appearing notably in *The Daily News*. Lang died July 20, 1912.

In poetry he was author of *Ballades and Verses Vain*, 1884; *Grass of Parnassus*, 1888; and *Ban and Arrière Ban*, 1894. His *History of Scotland* appeared in 1900-7; *Prince Charles Edward*, 1900; *The Mystery of Mary Stuart*, 1901; *John Knox and the Reformation*, 1905; and *Joan of Arc, The Maid of France*, 1908. He wrote *Letters to Dead Authors*, 1886. He edited *Longmans' Magazine* and many fairy books, and was an original member of the *Psychical Research Society*.

LANG, COSMO GORDON (b. 1864). British prelate. Born Oct. 31, 1864, he became a fellow of Magdalen College, Oxford, and was ordained. After three years (1890-93) as a curate in Leeds, he returned to Oxford, where he was dean of divinity at Magdalen and vicar of S. Mary the Virgin, 1894-96. From 1896-1901, Lang was vicar of Portsea. During 1901-8 he was bishop of Stepney and canon of S. Paul's. In 1908 he was made archbishop of York, and in 1928 he was chosen to succeed Dr. Davidson as archbishop of Canterbury.

Cosmo Gordon Lang, British Prelate Russell

LANGDALE. Name of two hills, or pikes, and two valleys in the Lake District in Westmorland, near Grasmere. Great Langdale is a valley 5 m. long, reaching from the Cumberland border to Elterwater; the Langdale beek flows through it. Little Langdale is 3½ m. long and meets Great Langdale at Elterwater. The pikes are at the head of Great Langdale: they are 2,400 and 2,320 ft. high, and are known as Harrison Stickle and Pike o' Stickle respectively. In 1929 Mr. G. M. Trevelyan presented 400 acres at the head of the Langdale Valley to the National Trust.

LANGHOLM. Burgh of Dumfriesshire Scotland. On the Esk, 16 m. N.E. of Annan, on the L.N.E.R., it has manufactures of tweed. Near are Langholm Lodge, a seat of the duke of Buccleuch, and Gilnockie Tower, the stronghold of Johnny Armstrong. Pop. 2,653.

LANGLAND, WILLIAM (c. 1330-1400). English poet. Born at Cleobury Mortimer, in Shropshire, he became a clerk or minor priest, but further progress in the Church was barred by his being married. As a young man he came to London, and earned a living chiefly by chanting dirges at funerals. The great gulf between rich and poor impressed him deeply, and his feelings found expression in his poem. *The Vision of Piers Plowman*.

LANGPORT. Market town of Somerset. It is on the Parret, 11 m. from Yeovil, on the G.W. Rly. Near All Saints is an old chapel called the "Hanging Chapel," because it stands on an archway over the road. Langport was the scene of an engagement during the Civil War, on July 10, 1645, in which, although numerically superior, the royalists under Goring were beaten. Market day, alternate Tues. Pop. 781.

LANGSIDE. Historic spot in Scotland, now included in the city of Glasgow. It has a station on the L.M.S. Rly. It was a village outside Glasgow when, May 13, 1568, the troops of Mary Queen of Scots, about 6,000 strong, were met by about 4,500 under the regent Murray and routed, Mary fleeing to England. A monument commemorates the battle. See *Glasgow*; *Mary Queen of Scots*.

LANG'S NEK OR LAING'S NEK. Pass through the Drakensberg Mts., Natal. Near the borders of the Orange Free State and the Transvaal, it is 5,399 ft. high. A rly. line goes through the pass by a tunnel, the Nek being on the direct route from Durban to Pretoria. During the war between the British and Boers in 1880-81, the Boers occupied the Nek, where

they were attacked by a small force, Jan. 28, 1881. The latter was driven back, and Majuba followed. There was fighting in the pass during the S. African War, especially in May and June, 1900.

LANGTON, STEPHEN (d. 1228). English prelate and statesman. He was of British birth, studied at Paris, and in 1206 was made a cardinal by Innocent III. Being soon afterwards elected archbishop of Canterbury, he was rejected by King John and took refuge in France until 1212. Under a threat of deposition, John at length gave way, and Langton, as primate, entered upon a contest against kingly tyranny and papal usurpation. In 1215 he had a large share in securing Magna Carta from John. In 1223 he procured the confirmation of Magna Carta, and in 1225 defended the English Church against fresh levies demanded by Rome. He died July 9, 1228, and was buried in Canterbury cathedral.

LANGTRY, LILLIE (1852-1929). British actress. Born in Jersey, Oct. 13, 1852, daughter of W. C. E. Le Breton, dean of the island, she made her début at The Haymarket in 1881 as Kate Harcastle in *She Stoops to Conquer*. Her great beauty and talent made her an immediate favourite. In 1874 she married Edward Langtry, who died in 1897, and in 1899 she became the wife of Sir Hugo de Bathe. She toured in the provinces and in the U.S.A. She died at Monte Carlo, Feb. 12, 1929.

Lillie Langtry, British actress Ellis & Watery

LANGUAGE (Lat. lingua, tongue). In the narrowest sense, the communication of ideas between man and man by means of articulate speech. The earliest sounds were probably merely reflex, involuntary, and independent of the will, produced under the impulse of the emotions. The next stage is that of emotional imitation. In the case of different individuals similarly constituted, similar impressions of the senses would produce similar involuntary sounds. If any movement or sound created an impression, e.g. of pleasure or pain, the sound uttered as the result of such impression was of the nature of an interjection. There is no doubt that, at least in the earliest stages of a language, imitation ("bow-wow") and exclamation ("pooh-pooh") played a considerable part.

The communication of ideas followed the communications of emotions. But the development of the process of imitation of the uttered sounds must have been slow. At the time of the beginnings of language there existed no standard authority, such as regulates the sounds heard around him by the child of modern times. Language must at first have consisted of a medley of articulate utterances of most varied character, in which uniformity and their usage in common only became possible when certain sounds were employed by different individuals on their own initiative, uninfluenced by imitation. But the most decided step in the progress of language was the establishment of relations between two words for two things, and the combination of several words in a single sentence. Then only did it become possible for man to transcend the limits of the senses and to investigate matters which were beyond his ken. See *Phonetic Philology*; consult *The Romance of Language*, A. Chaplin, 1920.

LANGUEDOC. One of the provinces into which France was divided before the Revolution. It covered the south-central part of the country, from the Pyrenees almost to the Loire; E. it was bordered by the Rhône. The people there pronounced the word for yes, oc, not oil, as they did elsewhere: their

speech, therefore, became the langue d'oïl and their land Languedoc. Languedoc was a prosperous and populous part of the Roman Empire, afterwards passing to the Franks. Its chief town was Toulouse. Since the Revolution, Languedoc has been divided into the departments of Haute Garonne, Ariège, Hérault, Aude, Gard, Lozère, Pyrénées-Orientales, and one or two others. See France.

LANKESTER, SIR EDWIN RAY (1847-1929). British scientist. Born May 15, 1847, the son of a doctor, he began his teaching career as a lecturer at Exeter College, Oxford. From 1874-90 he was professor of zoology at University College, London, and from 1891-98 Linaere professor of comparative anatomy at Oxford. In 1898 he was appointed director of the Natural History departments at South Kensington, and there he remained until 1907, when he was knighted. He died Aug. 15, 1929.

As a zoologist and follower of Darwin and Huxley, Lankester was in the first rank. He founded the Marine Biological Association, and his writings include *Degeneration*, 1880; *The Advancement of Science*, 1889; *The Kingdom of Man*, 1907; *Diversions of a Naturalist*, 1915; *Half-hours with the Microscope*, 1918; *Secrets of the Earth and Sea*, 1920; *Great and Small Things*, 1923. He also contributed to the press *Science from an Easy Chair*, published in book form, 1910 and 1912.

LANNER (Falco feldeggii or F. lanarius). Species of small falcon, found around the Mediterranean. Its plumage is brown on the upper parts, with barred back and blackish head and a reddish neck. The adult male measures about 17 ins. in length. See Falcon.

LANOLIN. Purified fat of sheep's wool that has been freed from water. A white or yellowish-white substance insoluble in water, its chief constituents are cholesterol and the esters of stearic, palmitic, oleic, and other acids. It is more readily absorbed than most fats when rubbed into the skin, and is partly antiseptic, hence its use as the basis of a large number of face creams and ointments.

LANREZAC, CHARLES LOUIS MARIE (1852-1925). French soldier. Born at La Pointe à Pitre, Guadeloupe, July 30, 1852, he entered the French army in 1870. After fighting through the Franco-Prussian War, 1870-71, he was on active service in Tunisia, 1886-92. Colonel in 1901, he was brigadier-general in 1906, governor of Reims in 1909, and general of division in 1911. At the outbreak of the Great War he was in command of the 5th Army, which was driven back from the Sambre, necessitating the retreat from Mons, Aug.-Sept., 1914. In Oct., 1914, Lanrezac was relieved of his command, being appointed inspector of military schools, and in 1917 was inspector general. He died Jan. 17, 1925.

LANSBURY, GEORGE (b. 1859). British socialist leader. Born Feb. 21, 1859, he earned a living in various ways for some years, and in 1884 went out to Australia. Returning to England in 1885, Lansbury soon became an active politician. In 1891 he was elected poor law guardian for Bow and Bromley, and in 1903 to the Poplar borough council. He was elected also to the L.C.C., and from 1910 to 1912 was M.P. for Bow and Bromley. From 1914-22 he was

George Lansbury,
British politician
Russell

editor of *The Daily Herald*. A member of the commission on the poor laws, he was again M.P. for Bow and Bromley from 1922. In June, 1929, he was appointed first commissioner of works in the Labour government.

LANDSDOWN. Hill in Somerset, just outside Bath. It is known for the battle with Germany. He died June 3, 1927. His portrait, by Lord Newton, appeared in 1929. In Nov., 1917, he advocated peace outside Bath. It is known for the battle with Germany. He died June 3, 1927. His portrait, by Lord Newton, appeared in 1929. In Nov., 1917, he advocated peace outside Bath. It is known for the battle with Germany. He died June 3, 1927. His portrait, by Lord Newton, appeared in 1929.

LANDSDOWNE, MARQUESS OF. British title borne by the family of Fitzmaurice since 1784. Thomas Fitzmaurice, who died in 1280, was created baron of Kerry. A long succession of barons followed, and in 1722 the 21st baron was made earl of Kerry. The first earl's younger son, John, inherited the estates of his uncle, Henry Petty, earl of Shelburne, and was himself made earl of Shelburne in 1753. His son, the 2nd earl, in 1784 was created marquess of Lansdowne, and the 3rd marquess inherited the earldom of Kerry.

The third marquess (1780-1863) was an M.P. from 1802 until he succeeded his half-brother in the title in 1809. One of the leaders of the Whigs, he was home secretary in 1827. From 1830 to 1841, except for a few months in 1835, he was lord president of the council, a post he filled again 1846-52. He was in the cabinets of Lord Aberdeen and Lord Palmerston from 1852 almost until his death, but without office. Lansdowne, who refused both the office of prime minister and a dukedom, died at Bowood, Jan. 31, 1863.

The family seat is Bowood, Wiltshire. The London residence was known as Lansdowne House. In Berkeley Square, the mansion was built in 1766 from designs by the brothers Adam. (See *illus.* p. 403.)

Lord Lansdowne,
British statesman
Elliott & Fry

The sculpture gallery was added in 1778, and the library, built by G. Dance, jun., R.A., in 1790. In 1929 it was sold. The marquess's eldest son is known as earl of Kerry.

LANDSDOWNE, HENRY CHARLES KEITH FITZMAURICE, 5TH MARQUESS OF (1845-1927). British statesman. Born Jan. 14, 1845, the elder son of the 4th marquess, he soon became prominent in the House of Lords. Adhering to the Whig traditions of his family, he joined the Liberal ministry as a lord of the treasury in 1869, and in 1872-74 was under-secretary at the war office. In 1883 he went to Canada as governor-general, and after five years there was transferred to India, where he was viceroy until 1893.

By this time the marquess had joined the Liberal Unionists, and he became secretary for war in Lord Salisbury's ministry in 1895. From 1900-05 he was secretary for foreign affairs. On Lord Salisbury's resignation he assumed the Unionist leadership in the House of Lords. In 1915, when a Coalition government was formed, he joined it as a minister without

Lantern. Left, Roman bronze lantern. Right, octagonal lantern, or openwork stone structure, on the tower of Ely Cathedral.

LANTERN. Name given to a case to contain a light. It usually consists of a metal framework containing windows of glass, mica, horn, or some other transparent material. The light may come from a candle, oil, etc. In engineering, any lantern-shaped construction is often called a lantern, e.g. a lantern pinion or trundle wheel.

Lantern Fly. Specimen of *Fulgura nobilis*, a species found in Borneo

In architecture lantern means an openwork structure of timber or stone, circular or polygonal in shape, erected on the summit of a tower or dome, or the roof of a dwelling-house. Occasionally the term is used of a tower that is open-work wholly or in front.

LANTERN FLY (Fulgoroidea). Family of homopterous insects, found in Great Britain and in many other parts of the world. They are often brilliant in colour, and the curious forms assumed by the heads of some of the tropical species are supposed to resemble lanterns. They are sap-suckers, and do great damage to crops.

LANTHANUM. Rare earth metal, discovered by Mosander in 1839. Chemically it is an element, symbol La; atomic weight, 138.9; atomic number, 57; specific gravity, 6.16; melting point, 810° C. In colour and lustre it resembles iron, and is readily attacked by moist air, while boiling water decomposes it. It is found in lanthanite, a form of the mineral cerite, and also in orthite, monazite, and some other minerals. Lanthanum nitrate is used for stamping a mark or name on incandescent mantles, the mark coming out brown.

LAO. Siamese name for a people of Tai stock in Indo-China. They number about 2,000,000 in Siam, with smaller offshoots in other parts of French Indo-China. Lax Buddhists, they occupy huts, erected on piles, which enclose the domestic animals and weaving looms.

LAOCOON (Gr. Laokoön). In Greek mythology, the Trojan priest who warned his countrymen of the wooden horse, the Greek stratagem which proved so disastrous to Troy. After his warning two serpents sent by Poseidon

Laocoön. Famous sculpture found in 1503, now in the Vatican Museum, Rome

came up from the sea while Laocoon was sacrificing and crushed the priest and his two sons to death. This incident is depicted in the famous piece of statuary discovered in Rome in 1506 and now in the Vatican Museum. Rome Pron. Lay-oeko-on.

LAODAMIA (Gr. Laodameia). In Greek mythology, wife of Proteus. When her husband had been killed at Troy, she asked the gods if he might return from Hades to converse with her for three hours. When Proteus went back to Hades, Laodamia died and went with him.

LAOMEDON. In Greek mythology, king of Troy. The gods Poseidon and Apollo, having offended Zeus, were condemned to give their services to Laomedon. When the period ended the two gods claimed from Laomedon the reward he had promised. Laomedon refused, and in revenge Poseidon sent a sea-monster to ravage the neighbourhood of Troy, to which a maiden had to be sacrificed from time to time.

Hesione, the king's daughter, was saved by Hercules, who killed the monster, but a second time the king proved faithless, refused the promised reward, and Hercules, in his wrath, led an expedition against Troy and killed Laomedon and all his sons, except Priam, who became king. Pron. La-ommed-on.

LAON. Town of France. It lies 87 m. by rly. N.E. of Paris. The cathedral of Notre Dame is a fine example of Gothic architecture, with a splendid W. façade and impressive towers; it dates chiefly from the 12th-14th centuries. The palais de justice was formerly the episcopal palace, built in the 13th century. The town was taken by German troops on Aug. 30, 1914, and it remained in German hands until its recapture by the French, Oct. 13, 1918, after a series of battles, Aug.-Oct. Pop. 16,159.

LAO-TSE (6th cent. B.C.). Chinese philosopher, a contemporary and opponent of Confucius. He was librarian to a prince of the Chu dynasty, and at an advanced age retired to a hermitage. Here he wrote Tao-teh-king (the canon of reason and virtue), one of the Chinese sacred books. His doctrine may be described as a mystical pantheism.

LA PAZ. Largest town and commercial capital of Bolivia, S. America. It stands on a dry plateau over 12,000 ft. high, and is connected by rail with Arica and Antofagasta in Chile, and also with Buenos Aires. It is the seat of a university. Pop. 142,000.

La Paz is also the name of the capital of Lower California, Mexico, and of a port of the Argentine Republic, on the river

Paraná, 87 m. N.E. of Panamá city.

LA PEROUSE, JEAN FRANÇOIS DE GALAUP, COMTE DE (1741-88). French sailor. Born Aug. 22, 1741, he entered the navy and served against the British. In 1785 he went with two ships on a voyage round the world. He had made some valuable discoveries, when he

was wrecked early in 1788 on a coral reef north of the New Hebrides. His name is borne by some islands in this region and his journals were published in 1797.

LAPIS LAZULI OR **LAZURITE**. Mineral valued for decorative and ornamental purposes. Consisting of sodium and aluminium orthosilicate and sodium sulphide, it usually possesses a fine blue colour, and is found in compact masses in granite and crystalline limestone. Lapis lazuli, the sapphire of the ancients, has been used as a decorative stone from the earliest times. Powdered, it was esteemed in ancient times in medicine as a dressing for ulcerations. It is the base of the pigment ultramarine. See Ultramarine.

Laon, France. Façade of the cathedral of Notre Dame, built 12th-14th cent.

LAPLACE, PIERRE SIMON, MARQUIS DE (1749-1827). French astronomer. Born at Beaumont-en-Auge, March 28, 1749, he became professor of mathematics at the Ecole Militaire. His remarkable mathematical ability was early shown by the publication, 1766-69, of his researches on the integral calculus, followed by papers on the theory of probability. In 1794 he became professor of analysis at the Ecole Normale. In 1796 he published his *Exposition du système du monde*, and in 1799 his *Mécanique Céleste*, these being his two most celebrated works. Made a count by Napoleon, 1804, and a marquis by Louis XVIII, he died at Arcueil, March 5, 1827.

Laplace was the greatest astronomer France has produced. His famous nebular hypothesis, his mathematical researches into the inequalities of the motions of Jupiter and Saturn, of the motions of the moon and the tides, and into the equilibrium of the solar system have given him enduring fame.

LAPLAND. Homeland of the Lapps, an undefined district in the N.W. of Europe. It extends W. from the White Sea to the Atlantic Coast in the N. of Scandinavia, and includes parts of Finland, Sweden, Norway, and Soviet Russia. The Lapps are of Finno-Ugric stock and speak Lappish. They are a short, ungainly, brown-haired, flat-faced, yellowish-white, round-headed people, some being reindeer-nomads, others living in coast and riverside fishing and cattle-breeding settlements. They number in all some 30,000.

LA PLATA, RIO DE, OR **RIVER PLATE** (Sp Silver river). Estuary of S. America. Between Uruguay on the N. and Argentina on the S., it is formed by the union of the Uruguay and Paraná rivers. It is 200 m. long and 140 m. wide at its mouth. The N. shore is steep, the S. low, with sandbanks. With affluents, it drains an area estimated at 1,500,000 sq. m.; and its muddy stream is noticeable over 50 m. out at sea. The estuary is continually silting

up, involving constant dredging, while its shoals and currents render its navigation dangerous.

LA PLATA. City of the Argentine. It is 35 m. by rly S.E. of Buenos Aires and 5 m. by rly. and canal from Ensenada, its port on the Río de la Plata. Founded in 1882, it has many squares and parks, a cathedral, university, and observatory. Pop. 169,678.

LAPWING. Common British bird, *Vanelius cristatus*, one of the plovers. It is often known as the peewit from its call-note. The back and crest are dark green, the throat black, and the cheeks and underparts white. The bird is found especially in marshy districts, where it feeds mainly upon snails, insects, and worms. See Plover.

Lapwing or Green Plover, a common bird of the English countryside

LARBERT. Colliery and iron working centre of Stirlingshire, Scotland. On the Carron, 2½ m. from Falkirk and 8 m. from Stirling, it has stations on the L.M.S. and L.N.E.R. The dist. around was formerly called Torwood Forest. Pop. 12,389.

LARCENY (Lat. *latrocinium*, robbery). Term used in English law to describe one kind of theft. To "steal, take and carry away" the goods of another, with intent to deprive the owner of his property in them, is larceny.

There are several forms: (1) Simple larceny or common theft; (2) larceny in a dwelling-house; (3) larceny as a bailee—where a person entrusted with the property of another appropriates it for himself; (4) larceny from the person, which if accompanied by violence is called robbery, and is punishable by corporal punishment. Larceny is a felony. The punishment varies from a maximum of three years' penal servitude for simple larceny to 14 years for larceny in a dwelling-house. See Theft.

LARCH (*Larix europaea*). Lofty pyramidal tree of the order Coniferae, a native of Europe, where its home is chiefly in the central Alps. Its branches spread with a downward sweep on all sides and give it a graceful symmetry. The needle-like leaves are disposed in bundles, and are completely shed on the approach of winter. Its growth is very rapid, and it attains a height of 100 ft., with a very straight, tapering trunk, clothed with longitudinally furrowed brown bark. The timber is used for pit props, poles, and railway purposes.

Larch. Cones and foliage

LARES (old form, *lases*). In Roman mythology, originally divinities who watched over agricultural pursuits. They were worshipped at the cross roads, where an annual festival was held in their honour. Each household also had a private lar or household god (afterwards two), whose image was kept on the hearth or in the lararium, a kind of chapel set apart for the purpose. They were also tutelary deities of travellers, of streets and districts, and of entire towns and cities.

LARGO. Parish of Fifeshire. It is on Largo Bay, 3 m. N.E. of Leven, on the L.N.E.R. Alexander Selkirk, to whom there is a statue, was a native. The chief industry is fishing. Near is Largo Law. Pop. 3,215.

La Paz, Bolivia. Plaza del 16 Julio, showing the Legislative Palace

Lapland. Family of Lapps outside their cavellike home near Tromsø

LARGS. Burgh and watering place of Ayrshire, Scotland. It stands on Largs Bay, an opening of the Firth of Clyde, 11 m. from Greenock and 43 from Glasgow, on the L.M.S. Railway. An aisle of the old parish church still stands and has been turned into a mausoleum. The town is famous for the battle fought in 1203 between the Scots and the Norwegians, Haakon of Norway being defeated by Alexander III. Pop. 9,450.

LARK (Alaudidae). Name given to a large family of small birds, including about a hundred species, most of which occur in the E. Hemisphere. Seven species are included among the birds of Great Britain, but only two breed here. The skylark (q.v.) is the best known, and is found throughout the country. The wood lark is widely distributed but is very local. It closely resembles the skylark, but is smaller in size. Characteristic features are the long, straight claw on the hind toe and the long, pointed wings.

LARKHALL. Colliery centre of Lanarkshire. It is on the Avon near its junction with the Clyde, 3 m. from Hamilton, on the L.M.S. Rly. Besides mining, there are manufactures of bricks and tiles. Pop. 14,974.

LARKSPUR. Genus of annual and perennial herbs of the order Ranunculaceae, also known as delphinium. The field larkspur (*D. ajacis*) is an annual, with the leaves divided into many thread-like segments, and with erect sprays of blue, pink, or white flowers. See Delphinium.

LARMOR, Sir JOSEPH (b. 1857). British scientist. Born at Magheragall, co. Antrim, July 11, 1857, he was educated at Belfast and St. John's College, Cambridge. In 1880 he was made professor of natural philosophy in Queen's College, Galway, but in 1885 he returned to Cambridge as lecturer. In 1903 he was chosen Lucasian professor of mathematics at Cambridge, and was secretary of the Royal Society, 1901-12. In 1909 he was knighted, and from 1911 to 1922 was Unionist M.P. for the university. He wrote *Aether and Matter*, 1900, and memoirs on physics, etc., re-published, 1927-29.

LARNE. Seaport and watering place of co. Antrim, Northern Ireland. It is 24 m. from Belfast, with a station on the Northern Counties Committee Rly., and stands at the entrance to Lough Larne. There is a good harbour, from which there is a regular service to Stranraer in Scotland 39 m. away, and other ports. It was a flourishing port before the rise of Belfast, reviving when it was made a steamship terminus. Pop. 8,100.

LA ROCHEFOUCAULD, FRANÇOIS, DUC DE (1613-80). French author. Born in Paris, Sept. 15, 1613, of one of the oldest French noble families, he became a leading figure in the salons of the capital. In 1665 he published anonymously *Reflexions ou Sentences et Maximes Morales*, now best known as *Maxims*. The book has been widely translated, and gained for the author the distinction of being the originator of studies in morals. He died March 17, 1680, leaving some of the best *Memoirs of the 17th century*.

LAROUSSE, PIERRE ATHANASE (1817-75). French lexicographer. Born at Toucy, Yonne, he began by writing text-books of grammar for schools, and then established a notable journal, *L'École Normale*. His name is chiefly associated with the *Grand Dictionnaire Universel du XIXe Siècle*, 15 vols. (1866-76), supplements, 1877 and 1887. His earlier *Nouveau Dictionnaire* had reached its 30th edition by the time of his death; he also published *Fleurs Latines*, 1874, a key to Latin quotations. The *Nouveau Larousse illustré*, ed. C. Augé, appeared in 1898-1907, and is kept up to date by the monthly publication, *Larousse Mensuel illustré*.

LARVA. Term applied to the young of any animal which, after leaving the egg, differs in essential characters, and generally in appearance, from the adult. In many cases the larva is adapted to an aquatic life, while the adult lives upon land. In the case of the cockroach and grasshopper, etc., the larvae differ little externally from the adult, except in size and the absence of wings. The change from the larval to the adult stage may be through a resting stage, or by gradual change. See Chrysalis; Insect.

LARYNGITIS. Inflammation of the mucous membrane of the larynx. Acute and chronic forms are recognized. In acute laryngitis there is a dry cough, the voice becomes husky, and the throat painful. The patient should not use his voice. Dover's powder may be given if the irritation and cough prevent sleeping, and an ice bag or cold compress applied externally. Chronic laryngitis may follow repeated acute attacks, excessive smoking, or constant over-use of the voice. The larynx should be sprayed with a solution of chlorate of potash or tannic acid.

Spasmodic laryngitis, or laryngismus stridulus, is a nervous condition occurring in young children, and often associated with rickets. Dashing cold water on the face sometimes relieves the paroxysm. Treatment should be directed towards relieving the underlying rickety condition. See Throat.

LARYNX. Expanded upper part of the air passage which serves for the production of the voice. It is a cartilaginous box-like structure, situated in the front and upper part of the neck. Below, the larynx passes into the trachea or windpipe, and above into the pharynx. The cartilages composing the larynx are the thyroid, which is the largest and forms the "Adam's apple"; the cricoid cartilage, shaped like a signet ring; and smaller cartilages. The epiglottis projects upwards behind the root of the tongue.

Inside the larynx are the vocal cords. The false vocal cords are two prominent folds of mucous membrane on the sides of the larynx. The true vocal cords are composed of elastic tissue covered by mucous membrane, and are situated immediately below the false vocal cords. In speaking, a current of air is directed upwards from the lungs through the larynx, and a musical note is produced by vibrations of the true vocal cords, the movements of the cords altering their tension and so determining the pitch and character of the note. The articulate character of the sound when

Larynx from the front, showing the cartilaginous structures which form its framework. The vocal cords lie behind the Adam's apple.

Las Palmas, Canary Islands, from the west, showing the massive pile of the 16th century cathedral.

words are uttered is imparted to the note by the movements of the tongue and lips. In the act of coughing or sneezing the vocal cords are closed.

A surgical instrument for examining the larynx and trachea or wind-pipe is termed a laryngoscope. See Throat; Voice.

LA SALLE, RENÉ ROBERT CAVELIER, SIEUR DE (1643-87) French explorer. Born at Rouen, Nov. 22, 1643, he went to Canada as a young man, and in 1669 embarked on a voyage of discovery up the St. Lawrence and charted the northern lakes. Travelling thence, he explored the Ohio river as far as its junction with the Missouri. In 1682 he travelled down the Mississippi as far as the Gulf, thus being the first to follow that river as far as the sea. He proclaimed the river and all adjacent lands as territory of France, and later was appointed governor of the territory from Michigan to the Gulf of Mexico. Mistaking Matagorda Bay, on again landing in America, for the mouth of the Mississippi, he spent two years in fruitless attempts to find this opening. He was leading his party to Canada, when his party murdered him, Mar. 20, 1687.

LASCAR. Name usually denoting an Oriental seaman on a British ocean-going ship. At the International Seamen's Conference in Genoa on July 5, 1920, the Indian government delegate stated that the name covered deck hands only, excluding firemen and stewards. They are largely recruited from the Mahomedan boat-population of Kathiawar. The name in early British-Indian history was applied also to camp followers.

Lascelles, Viscount. Title borne by the eldest son of the earl of Harewood. See Harewood, Earl of.

LASKER, EMANUEL (b. 1868). Chess player. Born at Berlinchen, Germany, Dec. 24, 1868, he made a special study of mathematics and contributed mathematical articles to various scientific journals and societies. He won the chess championships of England in 1892, America, 1893, and the world, 1894. He abandoned the title of world's chess champion to Capablanca in June, 1920, but the latter induced Lasker to meet him in Havana in 1921. The match ended with Lasker's defeat.

LAS PALMAS. Seaport of the Canary Islands. On the N.E. coast of Grand Canary, it is an important port of call with a wireless station and coaling depot. The most notable building is the cathedral. Pop. 69,086.

LASSALLE, FERDINAND (1825-64). German socialist. Born at Breslau, April 11, 1825, of a wealthy Jewish family, he devoted himself to democratic agitation, which in 1848 resulted in his imprisonment. His system of Acquired Rights, published in 1861, outlines his ideas on the organization of society. In 1863 he was asked by the workers to formulate an effective scheme of reform. His answer was the famous open letter, which has been called the "barter of German socialism." The result

Lascar stoker

Ferdinand Lassalle, German socialist

was the foundation, in May, 1863, of the General Working Men's Association. Marx was associated with Lassalle in the formation of this association. Lassalle died Aug. 31, 1864.

LASSO (Span lazo, snare). Cord or thong with a slip-noose for capturing animals. Of plaited untanned hide, 30 ft. to 100 ft long, it is used throughout Latin America for catching horses and cattle. On the N. American prairies it is a hempen rope. The coiled lasso is thrown from horseback, being cast so that the noose fastens round either the leg or the head of the quarry. Tunguses and other Siberian tribes use short lassos for bringing in reindeer.

LASSWADE. Burgh of Midlothian, Scotland. It stands on the N. Esk, 6 m. from Edinburgh, on the L.N.E.R. Here Sir Walter Scott resided for several years. Pop. 913.

LASZLO DE LOMBO, PHILIP ALEXIUS (b. 1869). Portrait painter. Born at Budapest, of Hungarian parentage, he studied in Munich and at Julian's in Paris. His best known work includes portraits of King Edward VII and Queen Alexandra, prince Hohenlohe, Lord Roberts, and President Roosevelt. He settled in England and was naturalised on July 28, 1914.

LATAKIA. Seaport of Syria, in the state of the Alaouites (Alawis). The ancient Laodicea ad Mare, it lies about 70 m. N. of Tripoli, and has a considerable trade in oil, olives, sponges, and tobacco, grown on the neighbouring hills. The tobacco which comes from here is called latakia. Pop. 20,000.

LATEEN SAIL (Fr. latine, latin). Large triangular sail now used only by vessels in the Mediterranean and certain Asiatic waters. It has a very long yard and a short mast. See Felucca.

LA TÈNE. Celtic settlement near Marin, Switzerland. It is near Lake Neuchâtel and was exposed when the water level of the lake was lowered.

Originally classed with lake dwellings, it is now shown to have been a land settlement, whose situation on the trade highway between the Rhine and the Rhône valley led to its becoming a customs station and fortified camp. The remains include iron objects, chiefly weapons, and personal ornaments of bronze, silver, and other materials. The characteristic types of fibula, bead, and other ornaments are found in Gaul, Britain, Scandinavia, Bosnia, and Scythia. Hence this station gives its name to the second period of iron-age culture, following that of Hallstatt, and extending from 400 B.C. to the Christian era. See Archaeology. Iron Age.

LATERAN. Palace of the popes at Rome before the transfer of the papacy to Avignon. By the time of the return to Rome it had fallen into such disrepair that the papal headquarters were removed to the Vatican. It owes its name to the ancient Roman family of the Laterani. The actual palace was erected in 1586, and was partly used by Gregory XVI as a museum of sculpture. The chapel of the Santa Seala is traditionally identified with the house of Pontius Pilate. Contiguous is the church of S. John Lateran and its baptistery, the oldest in Rome. The Lateran Treaty, signed Feb. 11, 1929, granted the Pope sovereign jurisdiction over territory known as Vatican City. See Vatican.

The church of S. John Lateran was a favourite place of assembly for ecclesiastical councils. Of eleven synods held here, five classed as ecumenical councils are specifically known as the Lateran councils.

LATERITE. Reddish to yellowish brown deposit of clay or earth occurring in wide areas in the tropics especially India, Brazil, and the Sudan. It is formed by the decomposition of certain rocks, and consists largely of iron oxides. The deposit may run to 40 ft. in thickness, and is worked for building purposes, chiefly in the making of cements, mortar, and tiles.

LATHE. Mechanical appliance for the holding and rotating of wood, metal, ivory, or other materials for the purpose of cutting, scraping, polishing, etc. The earliest form of lathe consists of two supports for the object to be turned. The latter is revolved rapidly by a cord wound round it and pulled against a spring, the object constantly altering its direction of rotation. The substitution of a crank attached to a flywheel, converting the reciprocating motion of a treadle to rotary motion, proved a great advance. In most modern lathes the flywheel is mechanically driven. A chisel or other cutting tool removes the wood as the object is turned in the lathe, and for repetition

Lasso. It is first whirled above the head and then cast

work the cutting tool follows a pattern, so cutting out an exact facsimile. Metal-working lathes vary in size from a small inchline used by jewellers to huge machines for shaping guns weighing some 200 tons or more.

Lathe (A.S. loeth, district). Division of Kent. There are five lathes, each containing three or more hundreds. See Kent.

LATHOM. Village of Lancashire, 3 m. from Ormskirk. Here is Lathom House, the former seat of the Stanleys and the Wilbrahams. It is known for the defence made by Charlotte, countess of Derby, against the parliamentarians in 1644. The present house dates from the 18th century. With Burscough, Lathom forms an urban district. There are two stations on the L.M.S. Rly. at Burscough Pop., urban district, 7,633.

The title of earl of Lathom has been borne since 1880 by the family of Bootle-Wilbraham. The third earl, Edward William (b. 1895), has written, under the name of Edward Wilbraham, several plays produced in London.

LATIMER, HUGH (c. 1485-1555). English bishop and martyr. Born at Thuraston, near Leicester, the son of a yeoman, he embraced Lutheranism, and became one of the most popular preachers of the Reformation period. He was appointed rector of West Kingston, Wilts, in 1531, and was elevated in 1535 to the see of Worcester, having won favour at court by supporting the dissolution of Henry VIII's marriage with Catharine of Aragon. He resigned his bishopric in 1539 and was imprisoned for non-compliance with the Six Articles. After the accession of Mary he was found guilty of heresy and burned with Ridley at Oxford, Oct. 16, 1555. His sermons, simple, forcible, and colloquial, were edited by the Rev. G. E. Corrie, 1844-45.

LATIN. One of the dialects belonging to the Indo-European group of languages originally spoken by the Latin inhabitants of the plain of Latium in central Italy. As the Romans gradually made themselves masters of the peninsula this dialect established itself as the predominant literary and spoken language throughout Italy.

LATIN LITERATURE. Regarded as separate from the copious Latin writings of the Middle Ages and the Renaissance, this extended over seven centuries from 240 B.C. It may be considered in three divisions.

I. In poetry the pioneers were Andronicus, Naevius, and Ennius. Andronicus inaugurated a style of play after the Menandrian Greek comedy of manners. Naevius began the play drawn from Roman history. Ennius, by importing the hexameter for his *Annales* on the growth of Rome, made a momentous contribution. His style in epic and drama profoundly influenced Virgil. The only two comic authors from whom plays have descended are Plautus and Terence. Satire received its true Roman colour from Lucilius. Prose developed slowly to meet the needs of law, oratory, and history. The first outstanding figure was Porcius Cato, the Censor.

II. The next epoch saw the loftiest achievements of Roman genius. Its first generation had two great poets, Lucretius and Catullus. At the same time Latin prose was used with absolute mastery by M. Tullius Cicero in the speeches which proved him one of the

greatest orators of antiquity. Through his philosophical treatises Cicero bequeathed an heirloom in vocabulary for Christian Fathers and the medieval schoolmen. M. Terentius Varro wrote on history, antiquities, agriculture, and language. The chief historians of the day were C. Julius Caesar, Sallust, Nepos. Virgil drew from Greek and Roman predecessors for his pastoral Eclogues, his Georgics on rural work, and his great epic, the Aeneid. The Odes of Horace had in part an imperial ring, but were often occasional verses of fancy and moralising, love, and wine. The elegiac poets of the time were Tibullus, Propertius, and Ovid. The star of Augustan prose was Livy, with his history.

III. The key to the "Silver Age," heralding the Decline, lies in the rhetorical education, whose exercises fostered ingenious argument, epigrammatic point, and far-fetched conceits. Such artifices, added to Virgilian influence, go far to account for the style of the epics of the first century, Lucan's *Pharsalia*, Valerius Flaccus's *Argonautica*, Silius Italicus's *Punica*, and Statius's *Thebaid* and unfinished *Achilleid*. Satire was continued in Menippean form by the Satyricon of Petronius, and in hexameters by Persius and by Juvenal. Phaedrus, a freedman, had under Tiberius struck a new satiric vein in Fables, and Martial before A.D. 100 gave the epigram its distinctive sting. The younger Seneca introduced in his philosophical treatises and epistles a glittering type of short pointed sentence, eminently quotable. Against this Senecan prose Quintilian protested by precept and example in an educational masterpiece, *The Institutes of Oratory*. Pliny the Younger wrote *Letters*.

Tacitus was the greatest prose writer of his era; he developed a unique prose, condensed, epigrammatic, and caustic. Later, Suetonius handled learning and history on biographic lines; Florus epitomised history; and Aulus Gellius wrote his literary miscellany, *Noctes*

Lasso. It is first whirled above the head and then cast

Lathe. Gap lathe, which is used for turning metal

Attieac In the second century some of the most vital writing came to be that of Christian apologists like Tertullian, Minucius Felix, Cyprian, Arnobius, Lactantius. The Vulgate or Bible translation by Jerome indelibly affected medieval Latin. The best known work of the rhetorician Apuleius is his tale of adventure entitled *Metamorphoses*, or *Golden Ass*.

LATITUDE AND LONGITUDE. Latitude is the angular distance of a point on the earth's surface N. or S. of the equator. All places with the same angular distance lie on the same parallel of latitude, a small circle on the earth's surface parallel to the equator. A difference in lat. of 1° equals, on the average, 69½ m.

Longitude is the number of degrees from the zero or prime meridian, measured E. or W. along any parallel of latitude. The prime meridian is usually taken as passing through Greenwich. E. and W. longitudes meet at the meridian 180°. The rotation of the earth from W. to E. gives to places which are E. of Greenwich an earlier noon than to places W.

Latitude. Diagram showing how the lat. of A, 30° N., is the angular distance, measured at the earth's centre, N. of the equator. B is lat. 60° N., 30° farther N. than A.

LATITUDINARIANS (Lat. *latus*, broad). Name sometimes applied to the more extreme members of the Broad school of thought in the Church of England; and especially to certain prominent liberal theologians in the 17th and 18th centuries.

LATIUM ("flat" land). Central district of ancient Italy. Before the growth of the power of Rome, its boundaries were N. the Tiber, S. the river Numicus, W. the Tyrrhenian Sea, and E. the Alban Mts. By the time of Augustus the district included the country from the Tiber to the Liris (Garigliano). Rome was within the territory of Latium. Alba Longa was the chief city. See Alba Longa; Campagna; Rome.

LA TRAPPE. Monastery of France. It lies in hilly country in the dept. of Orne, 26 m. N.E. of Alençon. The house was founded as a Cistercian monastery in 1140, and under the abbacy of Armand de Rancé (1626-1700) gave its name to the Trappist order.

LATTEN. Mixture of copper and zinc, closely resembling brass, and rolled into thin sheets. It was used from the 13th century onwards for monumental brasses, church vessels, and domestic utensils. It was also cast into effigies, gates, and tomb-screens, as in Henry VII's chapel at Westminster. The word now denotes normal brass mixtures for church purposes.

LATTER DAY SAINTS. Abbreviated form of The Church of Jesus Christ of Latter Day Saints, the title which was officially adopted in 1834 by the sect commonly called Mormons (q.v.).

LATTICE LEAF (*Aponogeton fenestralis*). Perennial aquatic herb of the order Naiadaceae, a native of Madagascar. It grows in fresh-water rivers, and has a tuberous root filled with farinaceous matter, used for food. Except at the early stage of development, the leaves, 1 ft. to 1½ ft. long, consist of a mere network of vessels enclosed in a thin layer of cellular tissue, with innumerable open circular and oblong spaces. The long flower-stem forks, near its extremity, into two branches which support the numerous small greenish-white flowers.

LATVIA. Republic of N Europe, formerly part of the Russian Empire. The land of the Letts is bounded N by Estonia, W. by the Gulf of Riga and the Baltic, S. by Lithuania, and E. by Russia. It comprises the districts of Vidzeme (Livonia), Kurzeme (Courland), Zemgale, and Latgale. The country is mainly flat and low-lying, with many forests. The chief of the numerous rivers is the Dvina (Daugava). The summers are hot and short, the winters long and cold. The area is about 25,000 sq m and the population nearly 2,000,000.

The main occupation is agriculture. Dairy farming is important. The exports include timber, flax, and butter. The country is well served with rlys. radiating from Riga. The capital and chief port is Riga, other important towns including Libau (Liepāja), Dvinsk (Daugavpils), Mitau (Jelgava), Rossitten (Rezēkne), and Windau (Ventspils).

In the early days of the Russian Revolution, 1917, Livonia was split into N. Livonia, inhabited by Estonians, and S. Livonia, inhabited by Letts. Later N. Livonia became part of the new state of Estonia, and S. Livonia part of the new state of Latvia, or Lettland, which also comprised Courland and Latgale. In 1917 a demand had been expressed for the formation of a united autonomous Latvia, and on Nov. 18, 1918, Latvia was proclaimed a republic. It was admitted to the League of Nations in 1921.

In 1922 a constitution came into existence. Under it the country is governed by a president and a parliament of 100 members, who are elected by all adults for three years, on the principle of proportional representation. The parliament chooses the president, who serves for three years, and the council of ministers is responsible to it. At the election of 1925 the social democrats proved the strongest party. In 1927 Gustav Zemgals was elected president. The state has a small army and a few ships for coast defence. The national debt is about £3,300,000. The chief exports are timber and flax. The unit of currency is the lat, equal to the franc. See Libau; Riga.

LAUD, WILLIAM (1573-1645). English prelate. Born at Reading, Oct. 7, 1573, he was educated at Oxford and became a fellow of S. John's College in 1593. He was ordained in 1600, and in 1611 was chosen president of S. John's. He was archdeacon of Huntingdon, 1615; dean of Gloucester, 1616; bishop of St. Davids, 1621-26; dean of the chapel royal, 1626; bishop of Bath

William Laud, English prelate After Van Dyck

and Wells, 1626-28; and bishop of London, 1628-33. He was responsible for the Declaration prefixed in 1628 to the Thirty-Nine Articles, and stood out generally for strict clerical discipline. Appointed archbishop of Canterbury in 1633, he was a member of the courts of Star Chamber and of High Commission. In Scotland Laud supported the restored episcopacy, and endeavoured, with disastrous results, to introduce a new prayer book containing the Scottish Communion Office. Laud was impeached of high treason and sent to the Tower, March 1, 1641. On Jan. 10, 1645, he was executed on Tower Hill, London.

LAUDANUM OR **TINCTURE OF OPIUM.** Fluid extract of opium containing 1 p.e. of anhydrous morphine. Laudanum is made by macerating the powdered drug in alcohol and filtering. It is used for the relief of pain, but should be given with caution. See Morphine.

LAUDER. Burgh of Berwickshire. It is on the Lauder, 33 m. from Edinburgh, on the L.N.E. Rly. Here, in 1482, Archibald Douglas, earl of Angus, seized the earl of Mar and other favourites of James III and hanged them on the bridge. For this deed he won his nickname of Bell-the-Cat. Pop. 759.

LAUDER, SIR HARRY MACLENNAN (b. 1870). Scottish comedian. Born at Portobello, Aug. 4, 1870, he made his London debut at Gatti's in 1900, and a series of engagements at the leading London music halls, where he sang Scottish songs written and composed by himself, placed him at the forefront of his profession. He was knighted in 1920. He published *A Minstrel in France*, 1918; and *Roamin' in the Gloamin'*, 1928.

Sir Harry Lauder, Scottish comedian

Latvia. Map of the republic formed in 1918 from portions of the Russian empire

LAUDERDALE, EARL OF. Scottish title borne since 1624 by the family of Maitland. James (d. 1839), the 8th earl, was a prominent politician for about fifty years. In 1924 Frederick Colin (b. 1868) became the 14th earl. The earl is hereditary royal standard-bearer for Scotland. His eldest son is known as Viscount Maitland, and the family seat is Thirlstant Castle, Berwickshire.

John Maitland, duke of Lauderdale (1616-82), was a son of the 1st earl of Lauderdale. He accompanied Charles II to Scotland in 1650, and into England, where the duke was taken prisoner at Worcester. After the restoration he was made secretary of state for Scotland. Created duke of Lauderdale in 1672, he died in Aug., 1682, when his dukedom became extinct.

LAUGHING GAS OR **NITROUS OXIDE.** Compound used in medicine to produce anaesthesia for short operations, e.g. tooth

extraction. The gas at first produces a stage of excitement, the condition sometimes being manifested by uncontrollable laughter. Unconsciousness supervenes in about 30 seconds and lasts for from 30 to 50 seconds, the patient feeling quite normal two or three minutes later.

LAUGHING JACKASS OR **SETTLER'S CROCK** (Dacelo). Popular name for a group of large kingfishers found in Australasia and New Guinea. They are so called from their curious gurgling cry, uttered at regular times about dusk and dawn. They are usually brown, black, and white in colour with sometimes a tinge of bluish green.

Laughing jackass, an Australian kingfisher

LAUNCESTON.

Borough and market town of Cornwall. It stands on the Kensey, near its junction with the Tamar, 48 m. from Exeter and 213 from London, on the G.W. and Southern Rlys. The 16th century church of S. Mary Magdalene has some fine carving. At the entrance to a hotel is a

Norman gateway preserved from an Augustinian priory. The keep of the castle remains. Launceston was one of the two county towns until 1837. Across the Kensey is the hamlet of Newport, which is within the borough. Market day Sat. Pop. 3,975

LAUNCESTON. City in Tasmania. It stands on the Tamar, 40 miles from Port Dalrymple. The capital of the N. part of the state, it has an active seaborne trade with the chief Australian ports, and by rail with Hobart. It has smelting works in connexion with the Mount Bischoff tin mines. Pop. 28,400

LAUNDRY (old Fr. *lavanderie*, Lat. *lavandus*, to be washed). Term for a place where washing or laundering clothes is carried on; also, the articles sent there to be laundered.

Laundries in Great Britain come under the various Public Health Acts in respect of clothing, bed-linen, etc., used by persons suffering from infectious diseases. A customer who sends infected linen to a laundry without taking proper precautions is liable to a fine. The sanitary conditions and the regulation of employment of labour are defined by the Factory and Workshop Act, 1907. Among other provisions it is laid down that if mechanical power is used, a fan or other efficient means for regulating the temperature of ironing rooms and carrying away the steam of wash-houses must be employed.

LAUREL (Lat. *laurus*, bay-tree). Loosely applied popular name for many unrelated evergreen shrubs and trees. The garden laurel is more correctly known as cherry laurel (*Prunus laurocerasus*). The true laurel of the ancients is the bay tree (q.v.) (*Laurus nobilis*). *Prunus lusitana* is distinguished as Portugal laurel. Other laurels are Alexandrian laurel (*Danao raemosa*) and spurge laurel (*Daphne laureola*). American laurels are the several species of *Kalmia*. Japan laurel is *Aucuba japonica*; and *Rhododendron maximum* is known in the United States as the great laurel. The sweet bay or beaver tree (q.v.) of N. America is known also as the laurel magnolia.

LAURENTIAN ROCKS. Name given to highly metamorphosed rocks found in the Laurentian Mountains, Canada. A sub-division of the Archaean system, they consist of an immense series of crystalline rocks, gneiss, quartzite, limestone, etc., more than 30,000 ft. in thickness. See Geology.

Laurie, Annie (1682-1764). Heroine of the famous Scottish song of this name. Daughter of Sir Robert Laurie, of Maxwellton House, Dumfriesshire, she married in 1717 Alexander Ferguson of Craigdarroch. The song was written by her rejected suitor, William Douglas. The words were first printed in 1824, they were remodelled in 1835 by Lady John Scott (1810-1900), who added the third verse and also composed the music.

Laurier, Sir Wilfrid (1841-1919). Canadian statesman. Born at St. Lin, Quebec, Nov. 20, 1841, he was called to the bar in 1864. His political career began in 1871, when he was sent by his native district to the Quebec legislature. He sat there for three years, and in 1874 was returned to the Parliament at Ottawa. From 1878 until his death he represented Quebec East. He was soon the recognized leader of the Quebec Liberals, and when Edward Blake left the country Laurier was chosen chief of the whole party.

Sir Wilfrid Laurier, Canadian statesman

In 1896 the Liberals gained a majority at the general election, and Laurier became premier. In that capacity he revised the tariff giving preference to Great Britain; inaugurated the plan for a national trans-continental railway; and was responsible for measures designed to benefit the working classes. He remained in power until 1911, when the Conservatives secured a large majority. Laurier went into opposition, and remained the leader of his party until his death, Feb. 17, 1919.

LAUSANNE. City of Switzerland. Near the N. shore of the Lago di Genova, 38 m. by rly. N.E. of Geneva, it is divided into two parts by the Flon Valley, spanned by a fine bridge.

Lausanne. Gothic Cathedral of Notre Dame, restored 1873-1906

The fine Gothic cathedral of Notre Dame was founded in the 10th century, rebuilt in the 13th, sacked in 1536, and restored 1873-1906. The 15th century castle of the bishops and later of the Bernese bailiffs is occupied by cantonal offices. Lausanne is a great educational centre, and is the residence of numerous foreigners. The university was founded as an academy in 1537. At Lausanne Gibbon lived and wrote much of the *Decline and Fall*, and J. P. Kemble was buried here. The treaty which settled the status of Turkey was signed here, July 24, 1923. Pop. 77,000. See Turkey.

LAVA. Molten rock discharged or poured out from volcanoes, fissures, etc. Its composition varies considerably. Lavas are divided into two main classes, acid and basic, according to the proportion of silica. The latter are more fluid than the former and spread out farther from the source of origin. See Volcano.

LAVALLIÈRE, LOUISE FRANÇOISE, DUCHESSE DE (1644-1710). Mistress of Louis XIV.

Born of good family at Tours, Aug. 6, 1644, she came to court with her mother and sisters in 1661, and soon attracted the attention of Louis, having great mental gifts as well as beauty. Their intimacy developed into a liaison which lasted for some six years, during which she bore four children to the king; she was created duchess in 1667. In June, 1674, she joined the Carmelites, and died a member of that order, June 6, 1710.

LAVAL - MONTMORENCY, FRANÇOIS XAVIER DE (1623-1708). French prelate. Born at Laval, April 30, 1623, he entered the church, and in 1653 was made archdeacon of Evreux. In 1659 the pope sent him to Canada with the rank of bishop, and in 1674, after a period in France, he returned as bishop of Quebec. His position there was one of great influence. In 1683 he resigned his bishopric to give his entire time to educational work there. He died May 6, 1708.

Today the name Laval University is given to two educational establishments in Canada, one at Quebec and the other at Montreal. The one at Quebec was established in 1852, being an outcome of the seminary founded there by Laval-Montmorency. It is modelled on the lines of the university of Paris. Laval University at Montreal originated as a branch of the one at Quebec in 1878. In 1919 it became independent.

LAVATER, JOHANN KASPAR (1741-1801). Swiss physiognomist. Born at Zürich, Nov. 15, 1741, his claim to fame rests on his *Physiognomische Fragmente*, 1775-78, a treatise on physiognomy which was translated into English. Lavater was also a poet and wrote on mysticism. He died Jan. 2, 1801.

LAVENDER (*Lavandula vera*). Shrub of the order Labiales, a native of S. Europe. It has a thick, ragged-barked stem, 2 ft. high, branching above into a broad bushy head. Its downy, grey-green slender leaves have their edges rolled under. The mauve flowers are produced in long, erect spikes, which are gathered as soon as the flowers are fully expanded, when they retain their pleasant fragrance after drying. These yield by distillation about one p.c. of the essential oil which is the basis of lavender water. Oil of spike is another product, used by artists and in varnish making.

Lavender. Leaves and flower spikes of the fragrant shrub

LAVENDER COTTON (*Santolina chamaecyparissus*). Shrub of the natural order Compositae. A native of the Mediterranean region, its small, narrow, alternate leaves, with rows of short, blunt teeth, give off an agreeable odour. Its yellow flower-heads are solitary, and the whole plant is clothed with cottony down.

LAVENHAM. Town of Suffolk. It is 10 m. from Bury St. Edmunds, on the L.N.E. Rly. The church of SS. Peter and Paul is one of the largest and finest in the county. There is also a guildhall of the 16th century and some Tudor houses. Pop. 1,620.

LAVER (*Porphyra laciniata*). Seaweed of the order Porphyraceae. Common on rocks at half-tide mark, it has very thin, broad fronds of tints varying from rose to purple. It is eaten with oil and lemon-juice after careful stewing, but the taste for it has to be acquired, and the repugnance to its appearance when cooked overcome. Green laver is the product of *Ulva latissima*, which is a similar plant but of bright green colour.

Laver. Fronds of the edible seaweed

LAVERSTOKE. Village of Hampshire. It stands on the Test, 2 m. from Whitehureh. Here are the paper mills owned by the Portals at which the paper for Bank of England notes has been made for over 200 years. Pop. 600.

LAVERY, SIR JOHN (h. 1856). British painter. Born in Belfast, he studied at the Glasgow art school and in Paris. Largely influenced by Whistler and Velasquez, he painted classical subject pictures in a style of his own, a few landscapes, and many women's portraits. In 1888 he was commissioned to execute the official picture of The Queen's Visit to the Glasgow exhibition. He was elected A.R.A. in 1912, and R.A. in 1921. He was knighted in 1918.

Examples of his work are in the National Portrait Gallery, London, in the Corporation galleries at Glasgow, and Liverpool, and in foreign galleries.

LAVOISIER, ANTOINE LAURENT (1743-94) French chemist. Born in Paris, Aug. 26, 1743, he won a prize for the best method of lighting Paris. He was made a member of the Academy of Sciences, 1768, and in 1776 director of powder works. In 1794, owing to his position as fermier-général, he perished by the guillotine, May 8, 1794.

Lavoisier laid the very foundations of modern chemistry by his recognition, and experiments to prove, that matter is indestructible. His researches and methods gave an immense impetus to quantitative methods in chemistry, and the system of nomenclature which he proposed is still in use.

LA VOISIN or **MONVOISIN, CATHERINE** (d. 1680). French adventuress. The wife of a bankrupt tradesman, she took up palmistry and witchcraft, acquiring a reputation among the court ladies for her love potions and other less harmless drugs. When the wholesale poison plots of 1679-81 came to light in Paris, implicating many of the ladies of the land, it was found that La Voisin had supplied the potions, and she was executed on Feb. 20, 1680.

LAW. The sum of the rules by which the actions of men living in society are governed. Or it may be defined as a body of rules set by one or more persons, who have power to impose them, to another person or persons whose duty it is to obey. From this conception must be distinguished a figurative and non-juristie use of the term arising out of the world of physical phenomena. We find the word law employed to express the idea of order, or cause and effect, or the apparently immutable sequence of events in nature.

The historical method of inquiry into the evolution of positive law is the only one which can lead to satisfactory results. Among primitive and semi-cultured peoples almost all law is based on custom. It is patriarchal, tribal, and sacerdotal. All studies in comparative law tend to prove this. The hereditary traditions from common ancestors and the tribal habits of life are persistently followed by the members of the community, while the terror of the gods acting on naturally superstitious minds forms a powerful sanction and secures their permanence.

Another feature of early customary law is its formalism. The customs are by no means loose and ill-defined. One might expect, perhaps, the opposite, but strict observance of the recognized forms was insisted on; they

had the sanction of superstitious reverence. Formal words and gestures were of the essence of most transactions.

But in a progressive community settled customs do not long suffice for the wants of the people, and the next step seems to have been everywhere resort to legislation, i.e. the making of direct ordinances or decrees by the ruler or, later, by the people themselves, which are put in writing and become obligatory on the whole community. Such legislation, however, is at first small in bulk. The enactments are brief and in imperative words, mostly of a penal character. See Jurisprudence.

LAW, ANDREW BONAR (1858-1923). British politician. Born in New Brunswick, Sept. 16, 1858, he started in business in Glasgow. Having acquired a competency, he turned his attention to politics, and in 1900 entered the House of Commons as Unionist M.P. for the Blackfriars Division of Glasgow. He soon made a reputation as a speaker, and in 1902 was appointed parliamentary secretary to the board of trade. He left office with his party in 1905, and in 1906 lost his seat at Glasgow. He sat in turn for Dulwich, Bootle, and a Glasgow division.

In 1911 he succeeded A. J. Balfour as leader of the Unionist party. When a coalition ministry became essential in May, 1915, he took the post of colonial secretary, which he held until Dec., 1916, when he threw in his lot with Lloyd George, becoming leader of the House and chancellor of the exchequer. He was also a member of the war cabinet. At the election of 1918, Law and George appeared as the leaders of the coalition, which was returned to power. Law was one of the British representatives at the peace conference in Paris, in 1919. In March, 1921, his resignation was suddenly announced, due to a complete breakdown in health. Having recovered, he succeeded Lloyd George as prime minister, Oct. 23, 1922, but, owing to ill-health, resigned on May 19, 1923. He died Oct. 30, 1923.

In 1928 Ashridge Park (q.v.) was presented to the party as a memorial to Bonar Law.

LAW, JOHN (1671-1729). Scottish financier. Born April 21, 1671, in Edinburgh, he went to London in 1688, and then to France. He found a friend in the duke of Orleans, who when regent allowed Law and his brother William (1675-1752) to start a bank, known at first as the Banque Générale and then as the Banque Royale. In 1717 Law established a company with the privilege of exclusive trade with the Mississippi; in 1720 he adopted Roman Catholicism and was made controller-general of French finances. But in that year the combined bank and company failed owing to paper issues far beyond the necessary security. Law was driven from France and his estates were confiscated. He died in Venice, March 21, 1729.

LAW, WILLIAM (1686-1761). English non-juring divine and mystic. Born at King's Cliffe, Northamptonshire, he was ordained in 1711, and refusing to take the oath of allegiance to the house of Hanover, remained a non-juror (q.v.) until his death. He was attached, 1727-39, to the household of Mr. Gibbon, father of the historian, and retired in 1740 to King's Cliffe, where he died, April 9, 1761. Law's most celebrated work is A Serious Call to a Devout and Holy Life, 1728, often reprinted.

LAW AGENT. Scottish term for a person who has the right to transact legal business for others, i.e. a solicitor. They are defined under the Law Agents (Scotland) Act, 1863. See Solicitor.

LAW COURTS. English name for the central courts of justice which form a feature of all great cities. Examples are the Royal Courts of Justice in London, the Palais de Justice in Paris, and the Palais de Justice in Brussels. The London building is the headquarters of the administration of justice in England. On the N. side of the Strand, the site covers about 5½ acres. The architecture is composite, Gothic predominating. The main building was opened by Queen Victoria, Dec. 4, 1882, and the business of the supreme court was transferred here Jan. 12, 1883. The main entrance is in the Strand. See illus. below.

LAWES, SIR JOHN BENNET (1814-1900). British agriculturist. Born at Rothamsted, Dec. 28, 1814, he began, on the estate which he inherited in 1822, the experiments which, with Sir J. H. Gilbert, he carried on, with great advantage to agriculture generally, for over 50 years. In 1899 he completed his work by founding the Lawes Agricultural Trust to manage the experimental station at Rothamsted. In 1882 he was created a baronet. He died Aug. 31, 1900.

LAW LORD. Name given in the United Kingdom to those members of the House of Lords who act as lords of appeal. The ordinary lords are six in number, and are lawyers who

Sir John Lavery, British painter Hoppe

Law Courts, London, looking east towards Temple Bar Memorial and Fleet Street. See above

John Law, Scottish financier

have held some high legal office, either as judge or law officer of the crown. Each is made a life peer on his appointment. See Appeal, Court of.

LAWN TENNIS. Game played with a ball and rackets by two or four persons on a lawn or other smooth surface.

The first championship was played at Wimbledon in 1877, and in 1888 a Lawn Tennis Association was formed, representative of the leading clubs in the United Kingdom. The success of the championship at Wimbledon led to the institution of numerous competitions throughout the country, and in 1900 came the foundation of the international competition popularly known as the Davis Cup.

Where, and when, grass is either unprocureable or unsuitable, various substitutes, such as sand, gravel, cement, and asphalt, have been used. A very successful surface has been furnished comparatively recently by a red composition, which is now in extensive use.

There is no legal restriction on the weight or size of the rackets; for a man the ordinary weight is 14 oz., length about 27 inches. The balls—hollow india-rubber covered with white flannel—must be between 2½ and 2¾ in. in diameter, and between 2 and 2½ oz. in weight. The court is 78 ft. long, divided in the middle by the net, 3 ft. high at the centre and 3 ft. 6 in.

at the post. The width of the court is 27 ft. for the single game; 21 ft. from the net on each side are the service lines, which are out into two by the half-court lines. For the double game the court is 36 ft. wide, and service side lines, 4 ft. 6 in. from the side lines, run from the net to the service lines. The server serves from the right and left courts alternately into the diagonally opposite half of the opposite service court. A service which touches the net is called a let.

Any breach of the service law is a fault, and two faults lose the server the point. The player receiving the service may not volley it, but has the whole of the opposite court into which he may return it. The ball is then in play, and any player hitting it into the net or out of court loses the stroke. On the line counts in, for either service or return. The game is called by strokes, love, fifteen, thirty, and forty. Forty all is called deuce, and the next stroke vantage; if the vantage player wins the next stroke, he wins the game; if not, the score goes back to deuce again. At the end of the game the service passes to the opponent. The first to reach six games wins the set, unless the score is five games all, when vantage games are played.

In 1920, 1921, and 1930 W. T. Tilden (U.S.A.) was champion at Wimbledon, while he held the American title from 1920 to 1925. In 1919 Mlle. Suzanne Lenglen (q.v.) won the women's championship from Mrs. Lambert Chambers and kept it until 1924, when it passed to Miss McKane. After a triumphant return in 1925, Mlle. Lenglen turned professional in 1926, in which year the title was again won by Miss McKane (later Mrs. Godfree), the runner-up being Señorita de Alvarez. Other French players of distinction have been Mlle. Vlasto, Jean Borotra (Wimbledon champion 1924 and 1926), René Lacoste (Wimbledon 1925 and 1928, France and America 1927) and Henri Cochet (France 1926, Wimbledon 1927 and 1929). In 1927, 1928, 1929, and 1930 the women's championship at Wimbledon was won by Helen Wills (Mrs. Wills-Moody), the U.S.A. champion.

The Wightman Cup, for which women's teams compete, was, in 1929, been won four times by the United States and three times by Great Britain. See Davis Cup; consult also On and Off the Court, by A. F. Wilding, 1914; Lawn Tennis, W. T. Tilden, 1920.

LAWRENCE, SAINT AND MARTYR. Probably born in Spain, he was educated in Rome. Ordained deacon about 257, he was put to death probably in 258. The story is that, as treasurer of the church in Rome, he was ordered to produce the valuables in his charge, whereupon he showed the official a number of beggars, and for this was roasted on a gridiron. His day is Aug. 10.

LAWRENCE, JOHN LAIRD MAIR LAWRENCE, 1st Baron (1811-79). British administrator. Born at Richmond, Yorks, March 4, 1811, and educated at Foyle College, Londonderry, and Haileybury, he entered the Indian civil service in 1829 and won a high reputation in Delhi. During the Mutiny, as lieutenant-governor of the Punjab, he raised an army of 50,000 Sikhs, and was instrumental in capturing Delhi. For his services he was made a baronet in 1858 and pensioned. In 1864 he returned to

India as governor-general, a post he retained for five years, being made a peer on his retirement. He died June 27, 1879, and was buried in Westminster Abbey.

LAWRENCE, DAVID HERBERT (1885-1930). British novelist and poet. Born at Eastwood, Notts, Sept. 11, 1885, he made a success with a realistic novel, *Sons and Lovers*, and followed it with *The Trespasser*, *The Prussian Officer*, *The Rainbow* (which was suppressed), and *Lady Chatterley's Lover* (privately printed abroad). He wrote three dramas, *Widowing of Mrs. Holroyd*, *Touch and Go*, and *David*; several volumes of verse; and a number of essays, including *Mornings in Mexico*. He died March 3, 1930.

D. H. Lawrence, British writer

LAWRENCE, SIR HENRY MONTGOMERY (1806-1857). British soldier and administrator. Born in Ceylon, June 28, 1806, the brother of Lord Lawrence, he joined the Bengal artillery in 1823. He saw service in the Burmese War, 1824-26, the Afghan War, 1838, and the first, 1845, and second, 1848-49, Sikh Wars. After defeating Lucknow with 1,000 Europeans and 800 natives for four months against 7,000 rebels, he was struck by a shell on July 2, 1857, and died within two days. He ranks as one of the noblest characters in Anglo-Indian history.

LAWRENCE, SIR HERBERT ALEXANDER (b. 1861). British soldier. Born Aug. 8, 1861, a younger son of the 1st Lord Lawrence, he was gazetted to the 17th Lancers. After serving in the S. African War, he left the service for a business career, but on the outbreak of the Great War rejoined. He went to Egypt and Gallipoli, and later served on the West front, becoming in Jan., 1918, chief of the staff to Sir Douglas Haig, a post he retained until the end of the war. Knighted in 1917, Sir Herbert in 1919 left the army again. He then became a partner in a banking firm.

LAWRENCE, SUSAN (h. 1871). British politician. She was educated at Newnham College, Cambridge, and then took up social work in London. She became a member of the London school board and of the borough council of Poplar, which she represented on the London County Council, 1912-28; she was deputy chairman in 1926. In 1923 she was elected as Labour M.P. for East Ham North, and she was again returned in 1924 and 1929. In 1929 Miss Lawrence was made parliamentary secretary to the ministry of health. From 1912-21 she was organizer of the national federation of women workers, and in 1928 was chosen deputy chairman of the labour party.

Sir T. Lawrence, British painter After G. Landseer

LAWRENCE, SIR THOMAS (1769-1830). He was born May 4, 1769; children of the landlord of the White Lion, at Bristol. At 12 he had a studio at Bath; at 18 he entered the R.A.

schools, being elected R.A. in 1794 and P.R.A. in 1820. He died in London, Jan. 7, 1830, and was buried in S. Paul's. Lawrence's portraits of children have a place of their own in British art, and his fashionable women are always splendidly vivacious. A great array of his portraits of kings, queens, and statesmen is to be seen at Windsor Castle, in the National Gallery, the National Portrait Gallery, and other collections. See illus. pp. 347, 352, 353, 364, 429, 490, 535, 551, 590, 647, etc.

LAWRENCE, THOMAS EDWARD (b. 1888). British soldier and administrator. He was born in Carnarvonshire, and educated at Jesus College, Oxford, where he specialised in Oriental languages. He spent some years in Arabia, Syria, and Mesopotamia, mastering the Arab dialects and studying ancient monuments. He organized the Arab revolt against the Turks in 1916-18 and was later adviser on Arab affairs to the Colonial Office. Of his *The Seven Pillars of Wisdom* an abridged edition was published in 1927 as *Revolt in the Desert*.

T. E. Lawrence, British soldier

LAWSON, SIR WILFRID (1829-1906). British politician. The son of a baronet, Sir Wilfrid Lawson of Brayton Hall, Carlisle, he was born there Sept. 4, 1829. Privately educated, he entered Parliament in 1859 as M.P. for Carlisle (which he represented till 1865, and in 1868-85), and in 1867 succeeded to his father's title and estates. From 1886-1900 he was M.P. for Cockermonth, in 1903 for Camborne, and in 1906 for Cockermonth again. He died July 1, 1906. Despite his advanced radicalism his genial humour made him a general favourite.

Sir Wilfrid Lawson, British politician

LAYAMON (c. A.D. 1200). English poet. A priest of Arelcy in Worcestershire, he was author of *Brut*. This, the first English poem after the Norman Conquest, makes Brut or Brutus, grandson of Aeneas the Trojan, the progenitor of the British race, and traces the history of Britain down to the 7th century.

LAYARD, SIR AUSTEN HENRY (1817-94). British diplomatist and Assyriologist. Born in Paris, Mar. 5, 1817, he studied law in London, 1833. Many of the results of his exploration of Nimrud and Kuyunjik (described in his *Nineveh and Its Remains*, 1848-49) and Babylon (described in his *Nineveh and Babylon*, 1853) are in the British Museum. He was minister at Madrid, 1869; and ambassador to Constantinople, 1877. Retiring in 1880, he died in London, July 5, 1894.

Sir A. H. Layard, British Assyriologist

LAYERING. Method of increasing stocks of plants, shrubs, and trees. The process is usually carried out when the subject is in full vigour. It consists of making an acute angular cut with a knife across a knot or joint in a prostrate branch. The semi-severed branch is then forced down at right angles into soil suitable for its culture, mixed with silver sand, and kept in position by a hairpin-shaped peg. The returning sap, unable to return to its roots, forms fresh roots, which are thrown out into the soil, and thus a new plant is formed. This can be detached from the parent in about two months after the operation. See illus. p. 851.

LAY READER. In the Church of England, one who, holding a bishop's licence, assists in the work of a diocese. Lay readers include diocesan readers, parochial readers, and evangelists. The movement dates from 1866.

LAZARIST FATHERS OR **VINCENTIANS.** Congregation of the Priests of the Mission, a Roman Catholic order founded by S. Vincent de Paul. Its name is derived from the Collège de S. Lazare opened in Paris, 1632. The order is devoted to mission work and to education for the priesthood.

LAZARUS (Heb. Eleazar). Name of two characters in the N.T. The Lazarus of John 11 was a native of Bethany, a village 2 m. from Jerusalem, now called El Azariyeh, the place of Lazarus. He lived with his two sisters, Mary and Martha. Jesus, who was often a guest of the family, raised Lazarus from the dead. The other Lazarus is named in the parable of the callous rich man (Lat. Dives) and the beggar who lay at his gate full of sores (Luke 16, 19-31).

LAZULITE. Aluminium phosphate and iron and magnesium hydroxide. Called azurite or blue spar from its clear blue colour, it is similar to lapis lazuli (q.v.). It is found in Sweden, Switzerland, and Brazil.

Leaching. Variant name for the chemical and metallurgical process known also as lixiviation (q.v.).

LEACOCK, STEPHEN BUTLER (b. 1869). Canadian author and educationist. Born at Swanmoor, Hants, Dec. 30, 1869, he became head of the department of political economy at McGill University, Montreal. Author of biographies of notable Canadians, and several works on political economy, he won wide popularity as a writer of humorous short stories, including *Literary Lapses*, 1910; *Nonsense Novels*, 1911; *Sunshine Sketches of a Little Town*, 1912; *Behind the Beyond*, 1913; *Arcadian Adventures With the Idle Rich*, 1914; *Moonbeams from the Larger Lunacy*, 1915; *Winsome Winnie*, 1920; *Winnowed Wisdom*, 1926; *Short Circuits*, 1928.

LEAD. Important industrial metal, known and worked from very early times. Its chemical symbol is Pb (Lat. plumbum); atomic weight 207.2; atomic number 82; specific gravity 11.4; melting point 327° C. It is very soft, and can be scratched with the finger-nail; very malleable, tough and flexible, its tensile strength is the lowest of the common metals. Heated to redness in air it oxidises readily, forming litharge. At a bright red heat it boils and gives off fumes of oxide; at a still higher temperature it burns with a livid flame. Lead is the end product of the degradation of certain radioactive substances (e.g. uranium and thorium), and the forms of lead thus produced are isotopes of the common element, with different atomic weights.

Lead is found in the crust of the earth in various forms; rarely native in thin laminae or globules. Its chief source is the mineral galena (q.v.), its sulphide, widely distributed throughout the world. This ore normally carries about 86.5 p.c. of lead, generally with silver, antimony, arsenic, copper, and zinc, and often gold. In 1929 the world's output of lead was 1,931,796 tons. Of this total the U.S.A. contributed 602,233; Mexico 274,418; Australia 194,048 tons, and other countries the balance.

The most important compounds of lead are litharge (q.v.) and minium (q.v.). They are

used in glass manufacture, for pigments, glazing pottery, and for jointing purposes in engineering. The metal itself is manufactured in sheets, pipes, wire and shot, and enters into the composition of type metal, pewter, and Britannia.

LEAD POISONING. Chronic poisoning occurs among those who handle lead or its compounds or who are exposed to fumes from smelting, particularly plumbers, painters, type-setters, gas-fitters, glaziers, and potters.

When the condition arises in a workshop, it must be notified to the Home Office.

LEADENHALL MARKET. London's poultry market. It is on the S. side of Leadenhall Street. The estate was acquired by the city corporation in 1411, and the existing buildings were erected in 1881.

Leadenhall Street connects Cornhill with Aldgate, and was largely rebuilt in the 19th century. Here, among other notable buildings, are the magnificent premises of Lloyd's, opened in 1928, standing on the site of the old East India House.

LEADER, BENJAMIN WILLIAMS (1831-1923) British painter. Born at Worcester, March 12, 1831, he studied at the Worcester art school and the R.A. schools. He first exhibited at the R.A. in 1854, became A.R.A. in 1883, and R.A. in 1898. His landscapes have been freely engraved. Among them are *Tintern Abbey in Moonlight*, *The Weald of Surrey*, and *In the Evening It Shall Be Light*. He died Mar. 22, 1923.

LEADHILLS. Village of Lanarkshire, Scotland, 18 m. from Lanark, on a branch of the L.M.S. Ry. It is 1,300 ft. above sea level, and is noted for its lead mines. Allan Ramsay, the pastoral poet, was born here. Pop. 850.

LEAF. Thin green lateral expansion of the cellular tissue of the stems of plants, traversed by midrib and "veins," which are extensions of the fibro-vascular bundles. The middle layers of this tissue, mesophyll, have air spaces between the cells; the outer layers are more compact and form the epidermis, covered externally by a cuticle impervious to the passage of water. Both cuticle and epidermis are pierced by minute openings (stomata) to the air spaces, permitting transpiration and the admission of carbonic acid from the atmosphere. The leaf is the laboratory of the plant, the mineral salts and water absorbed by the roots being brought to it through the fibro-vascular bundles, and, with the carbon admitted by the stomata, assimilated by the green cells under the influence of sunlight. The plan of the leaf is to expose the maximum of cell-structure to air and light. The expanded portion of the leaf is the blade

or lamina; the stalk is the petiole, and near the attachment of the latter to the stem there are often a pair of blade-like expansions known as stipules.

LEAF INSECT (Phyllium). Popular name for a large family of orthopteran (straight-winged) insects. The body is large and flat, and the wing covers of the female are leaf-like in shape and colour. The legs are frequently so modified as to resemble small leaves, fragments of moss, or sticks.

LEAFIELD. Village near Oxford. A high-power wireless station was completed here in August, 1921, for long-distance communication with ships, and for broadcasting British official news messages.

LEAGUE (Gaulish leuga). Measure of length. By the Romans it was taken as the equivalent of 1,500 passus of 5 ft., or rather over 1½ English m. In Norman times its length was increased to about three modern English miles. As a nautical measure it is equivalent to the twentieth of a degree.

LEAGUE OF MERCY. Association founded in 1898 to assist the hospitals by collecting for King Edward's Hospital Fund.

King Edward instituted in 1899 the Order of Mercy as a reward for personal service on its behalf, or in the relief of suffering, poverty or distress. It carries no title or precedence.

LEAGUE OF NATIONS, THE. An international organization to promote co-operation and peace between nations. Inspired largely by President Woodrow Wilson, its constitution (the covenant), framed at the Peace Conference at Paris in 1919 was embodied in the treaty of Versailles, with which it came into force, Jan. 10, 1920, and in the later treaties with Germany's allies, Austria, Bulgaria, and Hungary. At the first meeting of the assembly 42 states were represented. The league has now 54 members, including all the great states except the U.S.A. and Russia. The British Dominions, India, and the Irish Free State are separately represented. Germany was admitted in 1926.

The organs of the league are the assembly, the council, and the permanent secretariat, which comprises various technical bodies acting as expert advisers. Closely connected with it are the Permanent Court of International Justice which sits at The Hague and the International Labour Office, which has its centre at Geneva. In the assembly each member-state has three representatives, but only one vote. It meets annually in September. Of the council, which meets four times a year, Great Britain, France, Italy, Germany, and Japan are permanent members, representatives of smaller states being annually elected as temporary members. With certain specified exceptions, all decisions in both assembly and council must be unanimous.

The covenant is embodied in 26 articles. Members guarantee each other against external aggression. War or any threat of war is declared of concern for the whole league; and each member has the right to call the league's attention to any matter which threatens to disturb the world's peace. Disputes between members must be submitted to the council, or to the permanent court of international justice or a court of arbitration. A member may not resort to war

Leaf. Left, sectional diagram, greatly magnified, through the blade of a leaf. Right, chief parts of a simple leaf

Layering applied to Carnations. 1. Rooted layer ready for planting. Piece of stem at A is cut off. B indicates depth at which to plant. 2. Pegging down layer. A illustrates peg wrongly inserted; B, a correctly placed peg. 3. How stem is split at A or B. Right, side view after cutting. See art. p. 850

until three months after the league, or the court, has given its award. A state which goes to war in violation of its covenant is considered at war with all the other members.

All international engagements have to be registered for publication with the secretariat. Under a mandatory system certain undeveloped peoples in territories taken during the Great War are regarded as a sacred trust of civilization and placed under mandatory powers who must submit an annual report to a permanent commission of the league. The headquarters are at Geneva, where, in Sept., 1929, the foundation-stone of new offices was laid in Ariana Park, to house the secretariat and the library. The estimated cost of the new building is £1,000,000. A new building for the International Labour office has been erected near Parc Mon Repos.

The expenses of the league (about £1,080,000 in 1928-9) are distributed, according to a graduated scale, among its members; Britain's share being about £108,000 in the year named.

The league has done invaluable work in preventing wars; in post-war reconstruction; in the repatriation of refugees; in the repression of slavery and the trade in pernicious drugs; and in the promotion of better trade relations and public health. It has also stimulated voluntary societies, such as the League of Nations Union. See Geneva; Hague, The; consult also Ten Years' Life of the League of Nations; compiled by J. Epstein, 1930.

LEAMINGTON. Mun. borough and inland watering place of Warwickshire, in full, Royal Leamington Spa. It stands on the Leam, 2 m. from Warwick on the G.W. and L.M.S. Rlys. There are two pump rooms with baths and gardens, an art gallery, school of art, theatres, and several educational establishments. The early name was Leamington Priors, but in 1838, after a visit by Queen Victoria, it was named Royal Leamington Spa. The springs are mentioned by Camden and Dugdale. Pop. 28,946.

LEANDER. In Greek legend, the lover of Hero. To visit her he used to swim the Hellespont every evening. See Hero.

The Leander Club is premier English rowing club, with headquarters at Putney. It was founded about 1818.

LEAP YEAR. A year the date of which is divisible by four without remainder. It consists, roughly, of 366 days. It occurs every four years, except that the last year of a century is not a leap year unless its number is divisible by 400. A solar year contains 365 days, 5 hours, and 48 minutes. Taking this as 365½ days, a day was added by Julius Caesar every four years to absorb the additional 24 hours. See Calendar.

LEAR, EDWARD (1812-88). British author. Born in London, May 12, 1812, of a family of Danish descent, he began his working life as a zoological draughtsman, but from 1836 devoted himself to landscape painting. He issued many books of travel illustrated by himself, but his fame rests chiefly on his rather dismal Book of Nonsense, 1846, which he undertook in the first instance to amuse the children of the earl of Derby. Other books in the same vein are More Nonsense Rhymes, 1871, and Laughable Lyrics, 1876. Lear died at San Remo, Jan. 30, 1888.

LEASE (Lat. *laxare*, to let go). Term in English law. It means the letting of land or some interest in it for a certain period. The person who grants the lease is called the lessor, and the person to whom it is granted the lessee. A lease does not become complete until the lessee has entered into possession. If the term of a lease is three years or more it must be in writing, and by deed under the Real Property Act of 1845; but in equity, if a

lease is made in writing, and not by deed, it will be construed as an agreement for a lease. A mining lease is a grant of the right to work minerals, for consideration.

In England land held on a lease is called leasehold. The general period of a lease is 99 years. At the end of the period the land, with any buildings erected thereon, reverts to the grantor of the lease or his successors. Leasehold property is regarded as personal estate.

LEATHER. An imputrescible substance prepared from hide or skin by tanning. It is used for footwear, bags, leggings, breeches, gloves, harness, furniture, and in the manufacture of cricket balls, footballs, and many other articles. In England the centre of the tanning industry is Bermondsey, and of the leather manufacture Leeds. Large quantities of hides and skins come from abroad.

The term hide is used in reference to heavy goods, e.g. the covering of the cow, ox, or horse, the coverings of the smaller animals being referred to as skins. Leather is also made from the skins of marine animals, such as seals, while even fish skins are turned to good account. With hides, when the cleansing process is complete, the hair or wool has next to be removed, a process technically known as depilation. When the hide or skin is free from hair, etc., and the flesh side cleaned by fleshing, it is known by the name of pelt. Tanning, or conversion into leather, can be accomplished in a number of ways. The chief of these are vegetable (or bark) tanning, chrome tanning, alum tanning, and oil tanning or chamoising.

In vegetable tanning the hides are suspended in an infusion of tannin obtained from barks, etc. As tanning proceeds the hides are transferred to stronger liquors, until the process is complete. Chrome tanning has developed enormously since about 1890. Here, instead of vegetable substances, chromium compounds form the active tanning agent. Chrome leather resists the action of boiling water, a test not withstood by the ordinary vegetable tanned leather.

Finishing processes include fat-liquoring, dyeing, embossing, etc. When the skins have been chromed they are steeped or drummed in a warm dye solution of the desired colour, and then given a dressing of a soap and oil emulsion called a fat-liquor to nourish the leather and give it a soft feel and substance. The finishing process itself consists in applying to the grain side a coating of season or finish, which is composed of such materials as casein, Irish moss, or albumin.

LEATHERSELLERS' COMPANY. London city livery company. Its first charter was granted in 1444. It has contributed largely to educational and philanthropic work and maintains a technical college at 176, Tower Bridge Road, London, S.E.1. The site of its first hall is covered by Copthall Avenue. The existing structure, St. Helen's Place, E.C.3, was built in 1878 from designs by G. A. Wilson. The company has estates at London Wall, Bishopsgate, and Lewisham.

LEATHERHEAD. Town and urban dist. of Surrey. On the river Mole, it is 18 m. from London on the S.R. The industries include tanning and brewing and the making of bricks and tiles. Near are Box Hill and other beauty spots of the North Downs. There are some picturesque old houses, and an old church dedicated to SS. Mary and Nicholas, S. John's school for the sons of clergymen, and the Royal School for the Indigent Blind. Pop. 5,821.

LEATHERWOOD (*Dicra palustris*). Shrub of the order Thymelaeaceae. A native of N. America, it is much branched and tree-like, but

only 4 to 6 ft. high, and has lance-shaped, alternate leaves. The light yellow, funnel-shaped flowers are in clusters of three or four, and precede the leaves. The Indians use strips of the bark for thongs.

Leatherwood. Spray of the North American shrub

LEAVEN (Lat. *levare*, to raise). Substance that causes fermentation, or modification. Fermented dough added to fresh flour and baked results in leavened bread.

Among the Israelites the use of leavened bread was forbidden in connexion with divine worship (Ex. 12 & 13; Lev. 2), except in the case of the two loaves for the priests (Lev. 23). See Bread.

LEBANON (Arabic, Libnan; Semitic, lāhan, to be white). Mountain range in Syria. Deriving its name from its white calcareous rocks, it rises over 10,000 ft. and extends, at an average distance of 20 m. from the Mediterranean, for about 95 m. N.E. to S.W. It is separated from the parallel E. chain of Anti-Lebanon by the valley of the Buk'a'a, the ancient Coele-Syria, part of the Great Rift, through which the river el-Asi (Orontes) flows N., and the Litany S. The mountains, pierced by deep gorges, are arid except near perennial streams, and little is left of the famous cedar forests (see illus. p. 379).

LEBANON, THE, OR GREAT LEBANON. Republic of Syria. Consisting of the former Turkish provs. of Lebanon and Beirut, it was proclaimed a state Sept. 1, 1920, under a proclamation of General Gouraud, French high commissioner in Syria, and reorganized into a republic. In May, 1926, the National Assembly elected Charles Debbas, an Arab, first president. The flag is the French tricolour, with a cedar of Lebanon on the white band. The capital is Beirut (q.v.). Other ports are Tripoli, Junieh, Tyre, and Sidon. The products include silk, olive oil, wheat, wine, nuts, lignite, coal, and iron. The inhabitants include Maronites, Orthodox Greeks, Druses, and Mahomedans.

The state extends along the Mediterranean littoral from Palestine to Nahr-el-Kebir, being bounded E. by the Buk'a'a, in which flow the Orontes and the Litany. The Syrian trunk rly. and branch lines afford the chief communications. Its area is 4,300 sq. m. Pop. 580,000. See Syria.

LEBLANC, NICHOLAS (1742-1806). French chemist. Born at Issoudun, Indre, he studied medicine and chemistry. Attracted by the offer of a prize by the French Academy for a method of making soda from salt, he investigated the problem, and in 1791 started the first artificial soda factory. During the Revolution his factory was confiscated, but when it was returned to him in 1799 he was too poor to restart work, and on Jan. 16, 1806, he committed suicide. The process he invented brought great fortunes to many, but since 1884 it has been largely superseded by the Solvay process. See Soda.

LE BRUN, CHARLES (1619-90). French painter. He was born in Paris, Feb. 24, 1619, studied under his father, a sculptor, Vonet, and Poussin. Having been introduced to Louis XIV, he designed or painted many of the royal decorations at Versailles. He founded the Royal Academy of the Fine Arts in 1648, and the French School at Rome, and was first director of the Gobelins factory. He died in Paris, Feb. 12, 1690.

Leather-sellers' Company arms

LEBRUN, MARIE LOUISE ELIZABETH VIGÉE (1755-1842). French painter. She was born in Paris, April 16, 1755, and studied under Davesne, Briard, and Joseph Vernet. In 1776 she married Jean Baptiste Lebrun, painter and picture dealer. Her talent soon made her a fashionable portrait painter. In 1779 she painted her first portrait of Marie Antoinette, and in 1782 was admitted to the Academy. The Revolution drove her abroad, but in 1815 she was back in Paris, where she established a salon. She died in Paris, Mar. 30, 1842.

E. Vigée Lebrun. French painter. Self-portrait. Uffizi Gallery, Florence

LE CATEAU OR CATEAU CAMBRÉSIS. Town of France. It stands on the Selle in the department of the Nord, 15 m. from Cambrai. Formerly part of Flanders, it became French in 1678, and here a treaty was signed between France and Spain in 1559. During the whole of the Great War the town was occupied by the Germans, and it gave its name to two battles.

BATTLES OF LE CATEAU. The first battle of Le Cateau was fought between the British and the Germans, Aug. 26, 1914. The British 2nd corps, consisting of the 3rd and 5th divisions of 30,000 men, on its retreat from Mons reached Le Cateau late on Aug. 25, after three days of continuous fighting. It took up a position from Le Cateau to Caudry, with the 4th division (16,000 men) on its left flank from Caudry to near Esmes.

Early on Aug. 26 the German artillery attacked, and having 600 guns to the British 246, gradually silenced the British batteries. About 3.30 p.m. a general retirement was ordered. The British artillery lost 225 men and 38 guns. The total British loss was about 8,000 out of less than 50,000 men engaged. The German loss was probably equal. After the battle the British retirement at all points was practically unmolested.

The second battle took place Oct. 6-12, 1918. Preparations for a general advance by the British 1st, 3rd, and 4th armies were not completed till Oct. 8, when the 3rd and 4th armies attacked, the former at 4.30 a.m., and the latter at 5.10, on a front between Cambrai and Sequehart, while the French 1st army to the south also advanced. By daybreak on the 9th Cambrai was in British hands. By Oct. 12 the battle had resulted in the capture of 12,000 prisoners and 250 guns, with a wide tract of important ground.

LECITHIN. Wax-like substance extracted from egg-yolk and various animal substances. Chemically it is a mono-amino-phosphatide, and it appears to be essential in protoplasm, and especially cellular membranes. It is used in medicine in neurasthenia and various nervous diseases.

LECKY, WILLIAM EDWARD HARTPOLE (1838-1903). British historian. Born in co. Dublin, March 26, 1838, he was educated at Cheltenham College and Trinity College, Dublin.

W. E. H. Lecky. British historian

He studied divinity, but turning his mind to historical research, established his reputation with his *History of the Rise and Influence of Rationalism in Europe*, 1865, and *History of European Morals*, 1869. His great *History of England during the Eighteenth Century* appeared in eight large volumes, 1878-90. He also wrote *Democracy and Liberty*, 1896; *The Map of Life*, 1899; and the posthumous *Historical and Political Essays*, 1908. He was

Unionist M.P. for Duhlin University 1895-1903 and died Oct. 22, 1903.

LECOUVREUR, ADRIENNE (1692-1730). French actress. Born near Châlons, April 5, 1692, she first appeared at the Comédie Française in 1717 as Electre in Crébillon's tragedy of that name and as Angélique in Molière's comedy *George Dandin*, and at once became celebrated for her powers as a tragic actress. In 1721 she became the mistress of Maurice de Saxe. She died March 20, 1730.

LECTERN. Reading desk or stand in a church from which the Epistle and Gospel are read. Of bronze or wood, it is generally in the form of an eagle with outstretched wings.

LEDA. In Greek mythology, wife of Tyndareus, king of Sparta. Zeus fell in love with her beauty, and visited her in the form of a swan; as a result Leda brought forth two eggs, from one of which sprang Castor and Pollux, and from the other Helen. See Castor and Pollux.

LEDBURY. Urban dist. and market town of Herefordshire. It is 13 m. E. by S. of Hereford on the G.W.R.

Ledbury, Herefordshire. The timbered Market House, 1633

There are tanning and malting industries, and extensive orchards and hop gardens. The church has a detached tower and a beautiful baptistery. Market day, Tues. Pop. 3,152.

LEDUM. Genus of small evergreen shrubs comprising three species. They belong to the tribe Rhododendroidae of the order Ericaceae, and are found in Europe and N. America. Possessing narcotic properties, the leaves of *L. latifolium* and *L. palustre* have been used medically. *L. latifolium* is sometimes known as Labrador tea.

LEDWIDGE, FRANCIS (1891-1917). Irish poet. Born June 19, 1891, at Slane, co. Meath, he began writing poems while a road-mender. When the Great War broke out he joined, Oct., 1914, the 5th batt. Royal Inniskilling Fusiliers, and served in Gallipoli, Salonica, Serbia, and on the western front, where he was killed in action, July 31, 1917. A poet of rare gifts, especially in his impressions of the countryside in which he had been brought up, his successive volumes were *Songs of the Fields*, 1916; *Songs of Peace*, 1917; *Last Songs*, 1918; and *Complete Poems*, 1919.

LEE OR LEA. River of England. Rising near Houghton Regis, in the S. part of Bedfordshire, it flows S.W. through Hertfordshire and then between Middlesex and Essex to the Thames near Blackwall. The total length of navigable waterway is 50 m. Its chief tributary is the Stort. There is good fishing in the upper part. Some of the water of the New River is taken from the Lee. It is controlled by the Lee Conservancy Board, whose offices are at Surrey House, Victoria Embankment, London, W.C.1.

Other rivers of this name include a Kentish tributary of the Thames and a little stream in Angus (Scotland). The Irish Lee is in co. Cork.

Lectern in Exeter Cathedral

It rises in Gougane Barra Lough, is 45 m. long, and empties itself into Cork harbour.

LEE. District of London. In the met. hor. of Lewisham, it is 8 m. from Charing Cross, with a station on the Southern Rly. The almshouses founded by Christopher Boone in 1683 were pulled down in 1877, but the chapel was left, and near to it are the almshouses of the Merchant Taylors' Company. The manor house, once the residence of the earl of Northbrook, is public property. S. Margaret's is a fine modern church.

LEE, ARTHUR HAMILTON LEE, 1ST VISCOUNT (h. 1868). British politician. Born Nov. 8, 1868, at Bridport, he was educated at Cheltenham College. He passed through the R.M.A., Woolwich, into the artillery, 1888, and remained on the active list until 1900. From 1890-97 he was professor of strategy and tactics at the R.M.C. Kingston, Canada, and in 1898 British attaché with the U.S. army in the Spanish-American war. M.P. for Fareham, 1900-18, he was civil lord of the admiralty, 1903-5, and first lord, 1921-22; director-general of food production, 1917-18; and minister of agriculture, 1919-21. Created a baron in 1918 as Lord Lee of Fareham, he was made a viscount in 1922 and received the G.C.B. in 1929. In 1921 he gave Chequers (q.v.), his Buckinghamshire home, to the nation.

LEE, NATHANIEL (1653-92). English poet and dramatist. Said to have been a son of Dr. Lee, sometime rector of Hatfield, Herts.

he was educated at Westminster School and Trinity College Cambridge. With Dryden he collaborated in two blank verse tragedies, *Oedipus*, 1679, and *The Duke of Guise*, 1682. Of his own plays the most popular was *The Rival Queens*, 1677. The others include *Nero*, 1675; *Gloriana*, 1676; *Sophonisba*, 1676, for which Purcell wrote incidental music; *Theodosius*, 1680; *Lucius Junius Brutus*, 1681; and *Constantine the Great*, 1684.

Nathaniel Lee, English poet

LEE, ROBERT EDWARD (1807-70). American soldier. Born Jan. 19, 1807, of an old Virginian family, he entered the military academy at West Point in 1825, and passed out with distinction. When the civil war began in 1861 he was in command of the first U.S. cavalry regiment, and was at once offered a high Federal command; but feeling his first duty was to Virginia, he joined the Confederates in command of the Virginian levy. Throughout 1861 he acted as assistant to President Davis. In 1862 he became commander-in-chief of the army of N. Virginia, and in three months entirely reversed the situation. His greatest victory was Chancellorsville, but the waning resources of the South placed him at a disadvantage.

Robert E. Lee, American soldier

Always hampered by presidential control, Lee was not given the general command of the Confederate forces till Feb. 18, 1865. The change came too late. His health was affected and his worn-out troops were reduced by many desertions. He surrendered to Grant at Appomattox Court House on April 9, with 26,000 men, this event marking the end of the war. In Aug., 1865, he was appointed president of Washington College, Lexington, which position he held until his death, Oct. 12, 1870. He was buried in the college grounds. In the words of Captain Chamberlayne, he was "a great soldier, wise in command, patient in preparation, swift in decision,

terrible in onset, tenacious of hold, sullen in retreat." See American Civil War.

LEE, SIR SIDNEY (1859-1926). British author. Born in London, Dec. 5, 1859, he was educated at the City of London School and Balliol College, Oxford. He joined, in 1883, the editorial staff of *The Dictionary of National Biography*; in 1890 he became joint editor with Sir Leslie Stephen, and in 1891 sole editor. The first of many editions of his *Life of Shakespeare* appeared in 1898. In addition to his *Lives of Queen Victoria* and *Edward VII* he wrote much on Elizabethan topics and lectured at Oxford and Cambridge and Boston, U.S.A. In 1913 he was made professor of English language and literature at the E. London College. Knighted in 1911, he died March 3, 1926.

LEECH. Name applied to an order (Hirudinea) of annelid worms. They possess sucking disks and live upon the blood of other animals. They are inhabitants of sea, fresh water, and marshy land. About twenty species are found in Great Britain, including the horse leech (q.v.), and, less commonly, the smaller medicinal leech. The latter (*Hirudo officinalis*) is common in Germany and Russia and it is the best known. Its mouth possesses three tooth-like serrated plates, curved so as to form semicircular saws, which enable the leech to make its typical three-gash wound. The animal sucks the blood of its victim till completely gorged, when it drops off and slowly digests its meal. Leeches are oviparous and hermaphroditic, and vary considerably in size. The colours are black, brown, or grey.

LEECH, JOHN (1817-64). British caricaturist. Born in London, Aug. 29, 1817, he was educated at the Charterhouse, and became a medical student, but spent most of his time sketching. His first Punch drawing was published in Aug., 1841. Altogether, he contributed about 3,000 drawings to that periodical, his connexion with which lasted till his death, in London, Oct. 29, 1864. Leech illustrated Dickens's Christmas Carol and a number of other books and periodicals. His original pencil work is always delicate and sensitive and instinctively well composed.

LEEDS. City and co. bor. of Yorkshire (W.R.). It stands on the Aire, 185 m. from London, and is served by the L.M.S. and L.N.E. Rlys., and the Leeds and Liverpool Canal and the Aire and Calder Navigation. Nearly 60 sq. m. in area, with a pop. of 458,000, it is a great centre of the woollen industry and the wholesale clothing and leather trades. There are extensive engineering, printing, and rope works, and thread, linen, glass, earthenware, and other factories, and breweries. The corporation owns the gas, water, and electricity supplies and a splendid system of markets. Electric tramways serve the city and suburbs

and connect it with Bradford, Wakefield, and other places. The civic buildings include the town hall, opened in 1858, municipal buildings, public library and art gallery, royal exchange, corn exchange, mechanics' institute philosophical hall, and a fine infirmary. There is a grammar school.

S. Peter's, the parish church, is famous for its clergy and influence. S. John's is a 17th century building with a notable Renaissance screen. The Roman Catholics have a cathedral, and there are many Nonconformist churches. Of public parks the chief are Roundhay Park and Woodhouse Moor. Within the city is Kirkstall (q.v.), with its ruined abbey. Temple Newsam (q.v.) was acquired by the corporation in 1922. The city sends six members to Parliament, and its head is the lord mayor.

LEEDS WARE. Pottery, made at Leeds by the firm of Hartley, Greens & Co. It was black from 1760-75, when cream ware was introduced. This is uniform in colour, with a rich glaze, thin and light, the ornament refined, and the colouring limited to printed designs and a few enamels of subdued tone. The "frog mugs" are celebrated.

UNIVERSITY OF LEEDS. This university was established in 1904, its nucleus being the Yorkshire College, founded in 1884. It took over the college buildings, but others have since been added. In 1928 the foundation stone of a fine new block was laid.

LEEDS. Village of Kent. It is 4 m. from Maidstone. The restored church of S. Nicholas is mainly Early English. Battle Hall is a 14th century building. Leeds Castle, a fine example of a medieval fortress, is on a small island on a branch of the Medway, and has a tower, a gateway, and a drawbridge.

LEEDS, DUKE OF. British title borne by the family of Osborne since 1694. It is taken from Leeds near Maidstone. Sir Edward Osborne (d. 1591), when an apprentice, saved his master's daughter from drowning, married her, and became lord mayor of London. His wealth passed to a grandson, Sir Edward Osborne, who had es-

Leeds. City Hall and municipal buildings, opened in 1858. Above, parish church of S. Peter, rebuilt 1839-41

Danby and earl of Danby before he was made marquess of Carmarthen, in 1689, and then a duke. In 1674 he became lord high treasurer and the chief adviser of Charles II, but in 1678 he was impeached for irregu-

larities. Having passed five years in prison, he signed the invitation to William of Orange in 1688, and was made president of the council. In 1695 he was again impeached, and he died July 26, 1712.

LEEDS AND LIVERPOOL CANAL. Artificial waterway of England. Opened in 1816, branches connect it with the Mersey and Liverpool Docks and with the North Sea. The length of the main cut is 127 m.; with branches, its total length is 143 m.

LEE-ENFIELD. Name of the standard rifle of the British army and navy since 1903. It is a development of the Lee-Enfield rifle of 1888. It has a bolt action and a magazine holding ten cartridges. A steel spring feeds the cartridges upwards from the magazine, and the withdrawal of the bolt throws out the empty case. A trained soldier can fire twenty aimed shots per minute. There are two sets of sights, that for normal use being graduated up to 2,000 yds., while the long range sight is graduated from 1,600 to 2,800 yds., the extreme range being about 3,700 yds. Weight, 8 lb. 14½ oz.; length 3 ft. 8½ ins.; length of barrel 25½ ins.; calibre 0.303 ins. See Rifle.

LEEK (*Allium porrum*) Hardy bulbous perennial plant of the order Liliaceae. Closely related to the onion, this vegetable is cooked and prepared in a similar manner. It is worn as an emblem by Welshmen on S. David's Day, March 1. Some regard the daffodil as the true Welsh leek.

LEEK. Market town and urban dist. of Staffordshire. It stands on the Churnet, with a station on the L.M.S. Rly., 13 m. from Macclesfield. A branch canal connects it with the Trent and Mersey Canal. The church of Edward the Confessor is a fine Decorated edifice. In the churchyard is a cross of somewhat unusual type, possibly Danish. There is an old grammar school. The chief industries are the manufacture of silks (introduced in the 17th century), ribbons, and similar goods. Near the town are the ruins of the 13th century Cistercian abbey of Dieulacresse, and Rudyard, with its lake. To the N.E. is the range of hills known as the Roches. Market day, Wed. Pop. 17,213.

Lee-on-the-Solent. Village and watering place of Hampshire. It is 18 m. from Eastleigh, with a station on the S.R.

LEET. Word of uncertain origin, meaning a court or assembly. In this sense it was used in England in the Middle Ages. In Scotland a leet is a selected list of candidates for an office. See Court.

LEEUWARDEN. Town of the Netherlands. The capital of Friesland, it is 33 m. from Groningen, with which it is connected by rly. and canal. The chief church is S. Jacob's. There is a palace in which the stadtholders of Friesland lived; a fine building, now housing the provincial library, was formerly the law courts. The Frisian Society has its headquarters here, and there are several libraries. The chief public garden was laid out by one of the princes of Orange in 1648. There is a trade in agricultural produce,

Thomas Osborne, 1st Duke of Leeds. After Van de Vaert

Leeds Ware. Plate with pierced pattern and painted portrait

Leek, leaves and root

fruit, and fish, and the town manufactures glass, linen, and gold and silver ware. Its cattle market is important. Pop. 47,700.

LEEWARD ISLANDS. Group of the Lesser Antilles between the Atlantic and the Caribbean Sea, forming Froude's "Bow of Ulysses." They form a British possession and have an area of 715 sq. m. and a pop. of 140,000. They include Antigua (with Barbuda and Redonda), St. Kitts (with Nevis and Anguilla), Dominica, Montserrat, and part of the Virgin Islands (with Sombbrero). They form five presidencies administered by a governor assisted by executive and legislative councils. The capital is St. John, Antigua. The chief products are sugar, cotton, limes, cocoa, fruits, vegetables, and livestock.

LE FANU, JOSEPH SHREIDAN (1814-73). Irish novelist and journalist. Born in Dublin, Aug. 28, 1814, and educated privately and at Trinity College, Dublin, he was called to the Bar in 1839, but took up journalism. In addition to the series of Irish stories called *The Purcell Papers*, he wrote the popular ballad *Shamus O'Brien*, 1837, and the novels *Uncle Silas*, 1864; *Haunted Lives*, 1868; *The Wyvern Mystery*, 1869; *Willing to Die*, 1870; and *In a Glass Darkly*, 1872. He died in Dublin, Feb. 7, 1873.

LEG. In human anatomy, that part of the lower limb between knee and foot. The upper extremity of the leg enters into the knee-joint, and the lower into the ankle-joint. The leg bones—the tibia and fibula—receive the insertions of the muscles of the thigh in their upper parts, and give attachment to the muscles which move the foot. The main arteries of the leg are the anterior tibial, the posterior tibial, and the peroneal. See *Anatomy*; *Fibula*; *Knee Joint*.

Leg. Relative positions of the bones seen from three aspects

members of his council, deputed to represent him at councils, or sent as plenipotentiaries on missions of first importance. Legates de latere (or missi) act under special commission in matters of smaller importance. Legates are generally known as nuncios.

LEGATION (Lat. legare, to depute). Originally, a person or persons acting in an ambassadorial capacity for the pope. The term came to be used for those sent as envoys by secular rulers. To-day it is a collective term for the members of a mission sent to a foreign country and for their official residence. If the minister has the rank of ambassador this building is called the embassy.

LEGHORN (Ital. Livorno). Seaport of Italy. The capital of the prov. of Leghorn, it is 12 m. by rly. S.S.W. of Pisa. An important trading port, first mentioned in 891 and developed by the Medici princes, it has a cathedral, many handsome churches, and a synagogue. Among notable buildings are the exchange, theatre, naval academy, public library, museum, and lazaretto. Shipbuilding, glass-making, metal founding, and the manufacture of silk and woollen goods, straw hats, paper, and soap are among the chief industries. The sulphur springs and fine sea bathing facilities attract many visitors. Pop. 115,000.

LEGHORN FOWL. Hardy breed of domestic poultry which originated in Italy. The chief varieties are the brown and the white; others which may be considered fancy or show birds are the black, buff, pile, duckwing, and cuckoo strains. They are good layers, small eaters, and require no undue attention.

Leghorn Fowl, a hardy bird which is an excellent layer

LEGION (Lat. legere, to collect). Chief unit of the Roman army. The original number of 3,000 infantry was increased in the time of Servius Tullius to 3,000 heavy and 1,200 light-armed troops, and from the time of Marius consisted of 6,000. The legion was divided into 30 maniples or companies, each under the command of two centurions. The legionary soldier was equipped with a helmet, shield, cuirass, sword, dagger, and a missile weapon. Under the Empire the standing army consisted of from 25 to 30 legions. Legion is now used colloquially for a large number. See *British Legion*; *Foreign Legion*.

LEGION OF HONOUR. French order of merit instituted by Napoleon I, May 19, 1802. It consists of five classes, grand cross, grand officer, commander, officer, and chevalier or knight. The president of the republic is the grand master, under whom there is a grand chancellor and a council. The badge is a five-branched cross with a medallion bearing a symbolic figure of the republic and round it the legend, *République Française*, 1870. This is crowned by a laurel wreath, and the ribbon is of red watered silk. Military members are entitled to pensions. In 1930 the Irish Free State instituted a Legion of Honour.

Legion of Honour. Badge of the order

LEGATE (Lat. legatus, one legally deputed). A papal ambassador. Legates a latere are confidential persons at the pope's side,

the husband was the father of the child. See *Illegitimacy*.

LEGITIMISTS (Lat. lex, a law). Name given to those who believe that all authority has a divine sanction, and that the sovereign power in a state does not exist merely by the will of the people or the consent of the governed. In Great Britain the legitimists (known as Jacobites) believe that the house of Stuart could not lawfully forfeit or be deprived of its divinely sanctioned authority. In France the royalists and in Spain the Carlists are called legitimists. See *Bourbon*; *Carlists*; *Jacobites*.

LEGROS, ALPHONSE (1837-1911). French painter and etcher. Born at Dijon, May 8, 1837, he worked in Paris under Cambon, the scene-painter, and then studied at the Beaux Arts. Coming to England in 1863, he was professor of etching at South Kensington and then Slade professor in London University, 1876-92. He rendered memorable service to art in England, especially in regard to etching. He died at Watford, Dec. 8, 1911.

Gottfried Leibniz, German philosopher and mathematician

LEIBNIZ, GOTTFRIED WILHELM (1646-1716). German philosopher and mathematician. Born at Leipzig, July 1, 1646, a professor's son, he studied law. He visited Paris and London, meeting Boyle and Newton. Chiefly distinguished in mathematics and philosophy, he invented a calculating machine, and in 1677 devised a consistent system of the calculus which gave rise to a controversy regarding the priority of Newton's method of fluxions. In 1700 he persuaded King Frederick I to found the Berlin Academy. He died Nov. 14, 1716.

In philosophy Leibniz assumes that substance exists of monads, each with an individuality. God is the original monad, and every soul is a monad. The actions and reactions of these monads are the result of pre-established harmony. "Sufficient reason" is the chief idea of the system.

LEICESTER. City, co. bor., also co. town of Leicestershire. It stands on the Soar, 25 m. from Nottingham, and is served by the L.M.S. and L.N.E. Rlys., and the Grand Union and Navigation canals. A centre of the hosiery trade since the introduction of the stocking loom towards the close of the 17th century, it manufactures boots and shoes, cotton and elastic web goods, machinery and bricks, and has textile dyeing works. Of its churches S. Nicholas dates from Saxon times, S. Mary's and All Saints from Norman times. S. Martin's, now the cathedral, and S. Margaret's are Early English and Perpendicular. There is a 15th-16th century timber and plaster guild hall. Trinity Hospital was endowed by Henry earl of Lancaster. Of the once famous castle there remain the great hall, now used as assize courts, and the gateways. There are a few ruins of the abbey of S. Mary, in which Wolsey died.

Leicester. S. Martin's Cathedral and the Guildhall, built 15th-16th cent. Dixon Scott

Modern buildings include the municipal buildings, De Montfort Hall, market house, corn exchange, public library, art gallery, and museum. Educational establishments include the Wyggeston, technical, and art schools. A university college was founded in 1921. In 1928 Bradgate Park was presented to the city. It covers 900 acres and in it are the ruins of the house in which Lady Jane Grey was born. In 1928 the mayor was given the title of lord mayor. The city sends three members to Parliament. Pop. 234,143.

LEICESTER, EARL OF. English title borne to-day by the family of Coke. The Beaumonts, a Norman family, were the first earls. In 1206 the earldom was given to Simon de Montfort. Edmund, earl of Lancaster, a son of Henry III, obtained the earldom in 1265, and in 1564 Elizabeth made Robert Dudley earl of Leicester. The title was held by the Sidneys from 1618-1743. Thomas Coke Lord Lovel, was earl 1744-59, and George Townshend and his son from 1784 to 1855. Since 1837 the title has been held by the Cokes. The estates are in Norfolk, where is the family seat, Holkham Hall (q.v.). The earl's eldest son is called Viscount Coke (pron. Cook).

LEICESTER, ROBERT DUDLEY, EARL OF (c. 1532-88). English courtier. Fifth son of John Dudley, duke of Northumberland, he was knighted by Edward VI. In 1550 he married Amy Robsart (q.v.). A favourite and suitor of Elizabeth, he was created earl of Leicester, 1564. In 1573 he secretly married Lady Sheffield, and in 1578 bigamously married Lettice Knollys, countess of Essex (d. 1634). In 1585 he commanded the expedition to the Low Countries in which his nephew, Sir Philip Sidney (q.v.), met his death. Governor of the United Provinces in 1586, he died suddenly at Cornbury, Oxfordshire, Sept. 4, 1588.

Robert Dudley,
Earl of Leicester

was the son of Robert Wenman, who took the name of Coke as the heir to his uncle, Thomas Coke, earl of Leicester. Born May 4, 1752, he inherited, in 1776, the estates in Norfolk, which in the previous year had come to his father, and was M.P. for the county, except for a few years, from 1776-1833. In 1837 he was made earl of Leicester of Holkham, and he died June 30, 1842, being succeeded by his son, Thomas William. Coke won lasting fame as an agriculturist.

LEICESTERSHIRE. Midland co. of England. Its area is 823 sq. m. The most elevated area is Charnwood Forest (Bardon Hill over 900 ft.). In the N.E. are the Wolds. The chief river is the Soar. Leicester is the co. town; Loughborough is the only other bor., but there are a number of populous market towns and urban districts, e.g. Hinckley, Melton Mowbray, Market Harborough, and Shepshed. The main industry, outside hosiery and mining, is farming. Cattle and sheep are reared, and wheat, oats, and other cereals grown. Before the Conquest Leicestershire was part of Mercia. Since 1918 it has sent four members to Parliament, the divisions being Bosworth, Harborough, Loughborough, and Melton. The county is a famous hunting district, being one of the shires. Pop. 494,522. See map below.

LITERARY ASSOCIATIONS. At Leicester Ahoy Cardinal Wolsey died. At Leicester was born Thomas Cooper, the Chartist poet. Francis Beaumont was born at Gracedieu. Bradgate is associated with Lady Jane Grey. At Market Bosworth Grammar School Samuel Johnson taught for a time. Ashby-de-la-Zouch is the scene of the tournament in Ivanhoe. At Lutterworth Wycliffe was rector.

LEICESTERSHIRE REGIMENT. Regiment of the British army, formerly the 17th Foot. It was raised in 1688, and for its services in India in 1804 was granted the badge of the Royal Tiger and the word "Hindoo-stan," hence its nickname, The Tigers.

The regiment had three regular and special reserve battalions, two territorial, and six service battalions in the Great War. The depot is at Leicester.

LEICESTER SQUARE. London area between Charing Cross Road and Piccadilly Circus. Built 1635-71, it was named after Robert Sidney, earl of Leicester, whose mansion, Leicester House, stood on the N. side till 1790. George II when prince of Wales held a petty court here. Noted residents include Hogarth, John Hunter, the surgeon, and Sir Joshua Reynolds. The central garden was laid out and presented to the nation by Baron Albert Grant in 1874. The principal buildings are the Royal Dental Hospital and the Alhambra and Empire cinemas. The Empire, once famous as the home of ballet, was rebuilt in 1927.

One of the chief centres of theatrical land in the metropolis, it has a tube rly. station.

LEIDEN OR LEYDEN. Town of the Netherlands in the prov. of S. Holland. It lies on the Oude Rijn, 9 m. N.E. of The Hague, with which, and with Haarlem, there is rly and tramway communication. Leiden has cloth

Leiden. The Oude Rijn, with the Weigh House and Butter Market, and the Stadhuis before fire of 1929

and yarn manufactures, printing works, and markets for agricultural produce. Notable churches are those of S. Peter and S. Pancras. There are a municipal museum and a museum of antiquities, founded 1818. The university, founded by William of Orange in 1575, was famous as a medical school. In the Middle Ages Leiden was a centre of the cloth trade, and is noted also for its defence against the Spaniards in 1573-74. Pop. 70,000.

LEIGH. Mun. bor. and market town of Lancashire. It is 7 m. from Wigan on the L.M.S. Rly. There are silk and cotton industries, iron foundries, heweries, and coal mines. The borough sends one member to Parliament. Market days, Fri. and Sat. Pop. 45,532.

There are villages of this name in Kent (2½ m. from Tonbridge) and Worcestershire (4 m. from Worcester), Devon, and Surrey.

Leicestershire
Regimental badge

LEIGH-ON-SEA. Watering place of Essex. It is 33 m. from London and 3 m. from Southend, on the L.M.S. Rly., and has fishing and oyster raising industries. Pop. 7,883. See Southend.

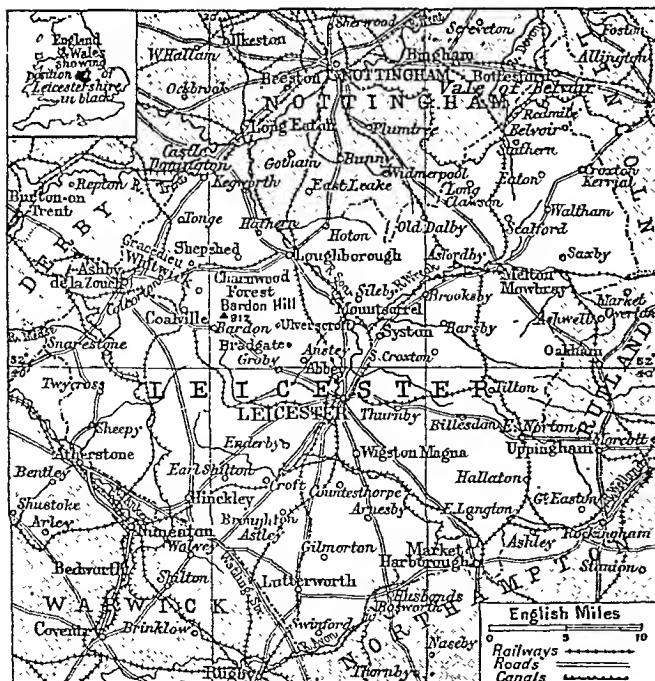

LEIGHTON, FREDERIC LEIGHTON, BARON (1830-96). British painter and sculptor. Born in Scarborough, the son of a physician, Dec. 3, 1830, he was educated in Rome, Frankfurt, Florence, Brussels, and Paris. He regarded Steinle, under whom he studied for three years at Frankfurt, as his principal master. His Cimabue's Procession, exhibited at the Academy in 1855, created a sensation. In 1858 he settled in London. He became A.R.A. in 1864, R.A. in 1869, and P.R.A. 1878, when he was knighted. Made a baronet in 1896, he was created Lord Leighton of Stretton the day before his death, on Jan. 25, 1896. He was buried in S. Paul's.

Leighton was a prolific worker and exhibited at the R.A. a fine series of canvases, most of them connected with classical story. In the representation of drapery and in rhythm of line he had hardly an equal; and he was a born sculptor. He had the Greek love for beauty of line and form.

LEIGHTON HOUSE. London residence from 1866-96 of Frederic, Lord Leighton. It is No. 12, Holland Park Road, Kensington, was designed by G. Aitchison, and was given to the nation by his sisters. Oriental in character, its chief feature is the Arab Hall. The house, to which is attached an old-world garden, contains examples of Leighton's own work, and is controlled by the Kensington bor. council, who added two new galleries in 1928.

Lord Leighton,
British painter
Elliott & Fry

Leicestershire. Map of this midland county, famous as a hunting shire

LEICESTER, THOMAS WILLIAM COKE, EARL OF (1752-1842). British nobleman and agriculturist, known as Coke of Norfolk. He

LEIGHTON, ROBERT (1611-84). Scottish divine. Educated at Edinburgh and Douai, he became in 1653 principal of the university of Edinburgh and professor of divinity. Consecrated bishop of Dunblane in 1661, and archbishop of Glasgow eight years later, he resigned in 1674, retiring to Horsted Keynes, in Sussex. He died Jan. 25, 1684. A man of saintly life, he strove to reconcile the religious factions of his country. His works, which were not published till after his death, include a Commentary of S. Peter and sermons. They exerted a great influence on Coleridge.

LEIGHTON BUZZARD. Urban dist. and market town of Bedfordshire. It stands on the Ouzel, 7 m. from Dunstable, on the L.M.S. Rly., and has a trade in corn, timber, etc. The Early English Church of All Saints was restored in the 19th cent. There is an old endowed school. The fine market cross was restored in 1852. The town takes its name from the family of Beaudesert or Bosart. Market day, Tues. Pop. 6,795.

LEINSTER. Province of the Irish Free State. It contains the counties of Carlow, Dublin, Kildare, Kilkenny, King's (now Offaly), Longford, Louth, Meath, Queen's (now Laoighise or Leix), Westmeath, Wexford, and Wicklow. It has a long coastline on the Irish Sea, while the Shannon divides it from Connaught. Its area is 7,624 sq. m., and its pop. (1926) 1,149,000. Leinster (the land of the broad pointed spears) had its own kings until the time of Henry II. See Ireland:

The title of duke of Leinster was given to the family of Fitzgerald in 1766. The duke's seat is Carton near Maynooth, and his eldest son is called the earl of Kildare.

The Leinster Regiment, also known as the Royal Canadians, was a regiment of the British army until it was disbanded in 1922.

LEIPZIG. City of Saxony. It stands on the Elster 74 m. from Dresden and has an excellent service of state railways, with a central station said to be the largest in Europe.

The chief buildings include the magnificent law courts (finished in 1895), town hall, university (founded in 1409, reorganized in 1830, and one of the most celebrated in Germany), several museums, many colleges and schools, and an observatory. The old Rathaus (now a museum) dates from the 16th century, and the old Gewandhaus (or cloth hall), now containing the municipal library, from about the same time. The churches include S. Nicholas's, S. Thomas's, rebuilt in the 19th century, S. Paul's, the university church, S. John's, and S. Peter's. The old part of the city is devoted to business purposes. Of the squares, the largest is the

Leipzig. 1. Town Hall, built on the site of the citadel. 2. Railway station, the largest in Europe

Augustusplatz. Chief of the public parks are the Rosenthal and the Johanna. There are a zoological garden, a palm garden, and a race-course. The conservatoire of music has long

possessed an international reputation.

Leipzig is famous for its fairs and as a centre of the bookselling and publishing

industry. It has a large trade in furs, glass, and leather. Printing, typefounding, and bookbinding are prominent industries, while among the manufactures are paper, machinery, textiles, musical and scientific instruments, chemicals, and leather. Pop. (1925) 680,000.

LEIPZIG FAIR. This is one of the great fairs of the world. The chief gathering, the Easter fair, which lasts about three weeks and is often called the book fair, though many other articles such as furs are dealt in, was founded about 1170. Important from the 16th to the 18th centuries, the fair decayed during the Napoleonic wars, but revived in the 19th century and still attracted, up to the Great War, some 30,000 traders from all parts of the civilized world, including many Asiatics. A fair was held in 1930.

LEIPZIG, BATTLE OF. Fought between Napoleon and the allies, Oct. 16-18, 1813, and known as the battle of the nations. After the retreat from Moscow, Napoleon had raised a new but much inferior army. He had decided to defend the line of the Elbe, but had to fall back on Leipzig, menaced by Schwarzenberg from the S., Blücher from the N.E., and Bernadotte from the N. In the ensuing battle, in which the Napoleonic forces of about 180,000 men were opposed by 300,000, both sides suffered severely, the estimated losses being: French, 40,000 killed and wounded, 30,000 prisoners, 65 guns, and many standards; allies, 54,000 killed and wounded.

LEISTON-CUM-SIZEWELL. Urban dist. of Suffolk. It is 4 m. from Saxmundham, on the L.N.E. Rly. Near are the ruins of a 12th century house of Praemonstratensian canons. Sizewell, on the coast, gives its name to Sizewell Bank and Gap. Pop. 4,632.

LEITH. Port of Edinburgh, since 1920 part of the city. On the S. shore of the Firth of Forth, 2 m. N. of Edinburgh proper, with which it is connected by Leith Walk, it is served by the L.M.S. and L.N.E. Rlys., and is divided into two parts, North and South, by the Water of Leith. The church of S. Mary is a 15th century building much restored. Secular buildings include the town hall and Trinity House. Leith Links is an open space.

One of the chief ports of Scotland, Leith has both wet and dry docks in its extensive harbour, and from here ships go to many other ports. Other industries include shipbuilding, distilling, and the making of rope, paints and colours. Leith is a centre of the wholesale provision trade and of the fishing industry. The harbour of Leith was granted by Robert the Bruce in 1329 to the citizens of Edinburgh, and it was soon a thriving port. In 1833 it was made a burgh independent of Edinburgh, but in 1920 it was again included in the city of Edinburgh. See Edinburgh.

LEITH HILL. An eminence in Surrey, 965 ft. high. On the summit is a tower built in 1766 by Richard Hull and restored in 1863. In 1923 the tower and the surrounding five acres of land were bought for the nation.

LEITRIM. County of the Irish Free State. In the prov. of Connaught, it has a coastline of about 3 m. on Donegal Bay. Its area is 613 sq. m., and it is divided into two parts by Lough Allen. The Shannon forms its S.W. boundary. There are hills in the north and east, where the scenery is very beautiful, and a number of loughs. Cattle, pigs, and poultry are reared, and oats and potatoes grown. The G.S. Rlys. serve the county. Carrick-on-Shannon is the county town. Other places are Manor Hamilton, Ballinamore, and Mohill. Leitrim was known as Brenny O'Rourke, the O'Rourkes being the chief family. Pop. 55,907.

Earl of Leitrim is an Irish title borne since 1795 by the family of Clements. The family seat is Mulroy, co. Donegal.

LEIX OR LAOIGHISE. County of the Irish Free State, before 1922 known as Queen's county. In the province of Leinster, its area

Leix. Map of the county of the Irish Free State which was formerly known as Queen's county

is 664 sq. m. The surface is generally flat or undulating. In the N.W. are the Slieve Bloom Mts., and in the interior is much bogland. The chief rivers are the Barrow and Nore. Agriculture is the main occupation, and a little coal is mined. The Gt. Southern Rlys. and the Grand Canal serve the county. Maryborough is the county town; other places are Mountmellick, Portlaoighise, Abbey-leix, and Stradally. The district, which in 1556 was made a county and named after the queen of England, was before that time covered by the districts of Leix and Ossory. Pop. 51,540.

LELAND, CHARLES GODFREY (1824-1903). American author. Born in Philadelphia, Aug. 15, 1824, he studied at Princeton, Heidelberg, Munich, and Paris. When living in Paris, Leland took part at the barricades

Leitrim, Ireland. Map of the Connaught county showing the loughs and principal mountain heights

with the Paris students in the revolution of 1848. Returning to America, he was called to the bar, afterwards beginning his study of gipsy life and language and devoting himself to literature. He lived in London from 1869 to 1880. In 1871 he published Hans Breitmann's

Party, and other Ballads, which achieved enormous popularity, and caused the author to be known as Hans Breitmann. Besides translating Heine and humorous German songs, he published books of verse, travel sketches, and gipsy studies, and wrote on art and folklore. He died at Florence, March 20, 1903.

LELAND, JOHN (o. 1506-52). English antiquary. Born in London, he was appointed king's antiquary by Henry VIII in 1533, and spent six years in searching abbeys, colleges, and other likely places for antiquarian records. He became insane through overwork, and died April 18, 1552, leaving a mass of MSS. which were used by later antiquaries. His chief works are *Commentarii de Scriptoribus Britannicis*, *Collectanea*, and *The Itinerary*, a valuable record of an antiquarian tour through England and Wales.

LELY, SIR PETER (1618-80). Portrait painter. Born probably at Soest, near Utrecht, Sept. 14, 1618, after studying art in Holland, Lely made his home in England in 1641, and there remained throughout his life, in favour both at the court of Charles I and during the Commonwealth. Charles II knighted him and made him court painter. He died Nov. 30, 1680.

Sir Peter Lely.
Portrait painter
Self-portrait

Lely painted most of the English notables of his time. His best work is perhaps his gallery of court beauties, now at Hampton Court. See illus. pp. 391, 420, 459, 532, 691, etc.

Leman, LAKE. Alternative name for the lake of Geneva (q.v.).

LEMAN, GÉRARD MATHIEU JOSEPH GEORGES (1851-1920). Belgian soldier. Born Jan. 8, 1851, he entered the army as a lieutenant of engineers, March 29, 1872.

At the end of 1880 he was made a professor in the Belgian military school, became director of studies Dec. 20, 1899, and its commandant in 1905. When the Great War broke out he was a lieutenant-general, in charge of the fortress of Liège, the defence of which he directed against the Germans. On its capture he was taken prisoner, Aug. 15, 1914. He was repatriated in Jan., 1918, and died Oct. 17, 1920.

General Leman,
Belgian soldier
Henri Manuel

LEMARE, EDWIN HENRY (b. 1866). British organist. Born at Ventnor, Sept. 9, 1866, in 1886 he became organist of Sheffield parish church, and in 1892 moved to London, where as organist of Holy Trinity, Sloane Street, and then of St Margaret's, Westminster, his recitals attracted much attention. He was organist at the Carnegie Hall, Pittsburgh, 1902-5; city organist of San Francisco, 1915-21; of Portland, Maine, 1922-23, and of Chattanooga, Tennessee, 1924. He published over 130 original organ and choral works.

LEMBERG or **Lwow**. Town of Poland, formerly capital of the Austrian crownland of Galicia. On the Peltew, a tributary of the Bug, it is an important rly. centre, with lines radiating to many of the great cities of Central Europe, and is the seat of a university. There are manufactures of machinery, bricks and candles. Among important buildings are the Armenian cathedral, the Roman Catholic cathedral, and the cathedral of the Greek Church. Lemberg was the centre of heavy fighting in 1914-15 in the Great War. It passed to Poland in 1923. Pop. 219,388. See Poland.

LEMMING. Genns of small rodents found in N. Europe, Asia, and America. The European lemming (*Myodes lemmus*) is about

Lemming. The small rodent with remarkable migratory habits

5 ins. long and yellowish brown in colour. It is extremely common in Norway, living in huddles and feeding on grass and moss. It has a remarkable habit of migrating from time to time without apparent reason. In countless hordes they make their way across country, eating their way through the fields of corn and devastating the country. Although at other times they display the utmost aversion to water or damp ground, during this migratory movement they swim rivers and lakes, and march on steadily in spite of every obstacle and danger till they reach the sea, into which they plunge and swim till drowned.

LEMNOS or **LMNOS**. Greek island of the Aegean Sea. It lies S.W. of Imbros, about 45 m. W. of the S. entrance to the Dardanelles. Lemnos produces grain, fruits, and tobacco. Lemnian earth, used as an antidote for poison and the plague by the ancients, was valued highly by Turks and Greeks until quite recent years. The chief town is Kastro, the ancient Myrina. The island was taken from Venice by the Turks in 1478, and was used by the British during the Great War. Its area is 180 sq. m. Pop. 27,000. See Aegean Sea; Dardanelles; Gallipoli; Mudros.

LEMON (Arabic, limoun). Small evergreen tree of the order Rutaceae. It is a native of the E. Indies, with oblong leaves and fragrant white flowers, and is still found in the wild state in N. India. The fruit is really a large, oval berry, with a nipple-like extension at the end opposite to the footstalk, the pulp and seeds enclosed in a thin, yellow rind. This skin contains numerous cells filled with the essential oil of lemon, which is obtained for use in medicine, perfumery, and confectionery by puncturing and pressure of the fresh rind. In addition to this product, and the use of the fresh fruit for making lemonade, lemons yield citric acid (q.v.), which is present in the juice.

LEMON, MARK (1809-70). British journalist and dramatist. Born in London.

Lemberg. View showing, left, the Valaque church; centre, domed Greek cathedral; right, the city hall

Nov. 30, 1809, he founded and for a time edited *The Field*; he also edited *The London*

Journal, *The Family Herald*, and *Once a Week*. With Henry Mayhew he helped to found *Punch*, of which he was editor, 1843-70. He began to write for the stage in 1835, and was author of some 60 plays, the most notable being *Hearts are Trumps*, 1849. Successful as an amateur actor, his versatility was further displayed by several novels, including *Falkner Lyle*, 1866; fairy tales, essays, and *Mark Lemon's Jest Book*. He died May 23, 1870.

LEMON GRASS (*Andropogon schoenanthus*). Grass of the order Gramineae, native of S. Asia. Its leaves, when bruised, emit a refreshing fragrance. In India they are roasted and used medicinally. By distillation a strong yellow essential oil, emitting a lemon-like odour, is obtained. It is used in perfumery as oil of verbenia.

Lemon sole. Specimen of the flatfish found off the coasts of Britain

LEMON SOLE (*Pleuronectes microcephalus*). Species of dab, belonging to the flatfish family. Common around the N. coasts of Europe and forming an important food fish, it is also known as the smear dab, its English name being a corruption of the French *limande* (dah). The true sole (*Solea vulgaris*) belongs to a different genus and is superior in flavour and quality of flesh. Lemon soles are brownish yellow in colour on the upper side, with numerous small spots, and feed on small crustaceans. They are captured by trawling.

LEMUR (Lat. ghost). Large family of the Primates. While closely allied to the monkeys and apes, it differs from them in many important respects. The head is fox-like, and there is a total absence of the semi-human facial aspect of the monkeys. The fur is thick, and the bushy, brush-like tail is never prehensile. The slit-like nostrils are at the tip of the muzzle, and resemble those of the dog. Lemurs are most numerous in Madagascar, where alone the typical forms are found. Other genera occur in Africa, India, and the Malay Archipelago. With few exceptions lemurs live in the trees. They feed upon fruit, leaves, insects, eggs, and small birds, and are strictly nocturnal in habit. See Aye-aye; Flying Lemur; Galago, etc.

LE NAIN. Family of French painters, Antoine (o 1588-1648), Louis (1593-1648), and Mathieu (1607-77). These brothers were all born at Laon, where they received their early art instruction. They went to Paris c. 1629, and in 1630 Antoine was received as master painter of the guild, and Louis and Mathieu as "companion" painters. They were all admitted to the Academy in 1648, but Antoine and Louis died a few months later. The brothers' usual subjects were domestic genre and portraits. They excelled especially in pictures of cabinet size.

L'ENCLOS, NINON (ANNE) DE (1616-1706). French courtesan. Born in Paris, May 15, 1616, daughter of a landowner of Touraine, she became the intimate of a succession of distinguished men, who were attracted more, perhaps, by her wit than by her beauty. Among those said to have been her lovers were St. Evremond, Condé, Sévigné, and Larochehoucauld, and she certainly had great influence in Parisian society. She died Oct. 17, 1706. Pron. Longolo.

Suzanne Lenglen,
French lawn tennis
player

LENGLEN, SUZANNE (b. 1899). French lawn tennis player. She first became prominent as a player on the Riviera in 1913, and

won the French championship at St. Cloud in 1914. She won the Ladies' Singles grass championship of the world at Wimbledon in 1919-23 and again in 1925. In 1926 she turned professional, and later appeared in exhibition matches in America, England, and other countries. Her first novel was published in 1925. *See* Lawn Tennis.

LENIN (1870-1924). Name assumed by the Russian Bolshevik leader, Vladimir Ilyich Uhanoff. The son of an hereditary noble who

Lenin, Russian Bolshevik leader

was a state councillor, he was born at Simbirsk, April 10, 1870. In 1891 he studied law at the university of St. Petersburg, and four years later was exiled to Siberia as a pronounced Revolutionary. Released in 1900, he became prominent as a Socialist leader of an extreme type at various congresses, and for the next sixteen years he visited many countries, spreading his propaganda. In 1917, some weeks after the fall of the tsardom, the German government permitted Lenin and other extremists to travel through Germany in a sealed carriage and enter Russia, where he put himself at the head of the Bolsheviks, in opposition to Krensky. But the disturbances he engineered were suppressed, and for a short time Lenin disappeared.

On Nov. 8 Lenin suddenly reappeared in Petrograd, deposed the government, and established himself as president of the "council of the people's commissioners." One of his first steps was to negotiate for peace with Germany. In 1918 he transferred the seat of his government from Petrograd to Moscow. Meanwhile, Russia went to pieces, the central portion alone remaining to him, and in this he kept himself in power by a system of terrorism. During 1919-20 Lenin and Trotsky were able to defeat all attempts to overthrow their power by Kolchak, Denikin, and Wrangel, and Lenin was in power until his death, Jan. 21, 1924. *See* Bolshevism; Russia; consult also *Memories of Lenin*, N. Krupskaya, 1930.

LENINGRAD. Former capital of the Russian Empire, now the capital of the province of Leningrad. At the mouth of the Neva, with three channels emptying into the Gulf of Finland, and the meeting place of important railway lines and river and canal

now given up to the use of the people. The churches include two cathedrals, Kazan, modelled on S. Peter's, Rome, and S. Isaac's. The Hermitage contained one of the finest art collections in Europe, and the Admiralty buildings form a large pile. There is a university and an exchange. The fortress of S. Peter and S. Paul is on the right bank of the Neva. Pop. (1926) 1,614,008.

LENNGREN, ANNA MARIA (1754-1817). Swedish poet. Born at Upsala. June 18, 1754, in 1780 she married Carl Peter Lenngren, and their home became a resort of the eminent people of the day. She wrote anonymously, and for many years her poems were attributed to Leopold and Kellgren—the prominent poets of the day. In 1797 she was honoured by the Swedish Academy. She died March 8, 1817. Among her best works are her satires *My Poor Dear Husband*, *Love and Folly*, etc.

LENNOX. District of Scotland. It consists of Dumbartonshire and part of Stirlingshire, with smaller portions of Renfrewshire and Perthshire. The Lennox Hills extend almost from Dumbarton to Stirling in a N.E. direction and include the Kilpatrick Hills, Campsie Fells, Fintry Hills, etc.

LENNOX TOWN. Town in Stirlingshire. It is 11 m. from Glasgow, on the L.N.E. Rly. It is a centre of the mining and calico printing industries. Pop. 2,526.

LENO, DAN (1860-1904). British comedian, whose real name was George Galvin. Born Dec. 20, 1860, he began life as an acrobat, and in 1880 became champion clog-dancer of the North of England. His quaint humour, eccentric dancing and feverish energy speedily gained him a leading position on the music-hall stage, and in 1888 he was engaged by Sir Augustus Harris for the pantomime at Drury Lane, where in each year he was the chief attraction. He died Oct. 31, 1904.

Dan Leno, British comedian

LENORMANT, FRANÇOIS (1837-83). French archaeologist. Born in Paris. Jan. 17, 1837, he accompanied his father, Charles, a distinguished archaeologist, to Greece in 1859. He became sub-librarian of the Institut, 1862; and taught archaeology at the Bibliothèque Nationale, 1874. He died in Paris, Dec. 9, 1883. He wrote on the Phoenician alphabet, 1872; *Money in Antiquity*, 1878-79;

Leningrad. View from the Neva, showing Schmidt (formerly Nicholas) Bridge and the dome of S. Isaac's. Left, Nevski Prospekt

Prospekt (October 25th Street) is the finest.

Founded in 1703 by Peter the Great, the city was known at St. Petersburg until 1914, when it was renamed Petrograd, this name being changed after the death of Lenin in 1924 to Leningrad.

The city is full of magnificent buildings, many of which front the Neva. Some of these are palaces, notably the winter palace,

and Historic Origins according to the Bible, 1880-84. His *Ancient History of the East*, 1868-69, and *Chaldean Magic*, 1874-75, have been translated into English.

LENS (Lat. lens, lentil, from its shape). Portion of some transparent refracting substance, such as glass, bounded by two surfaces, one of which is curvilinear and the other plane or curvilinear. Through it rays of light are by refraction caused to converge or diverge regularly. The point through which the refracted rays, or their direction, pass when the incident rays travel parallel to the axis is called the principal focus (q.v.) of the lens, and the distance between this point and the

lens is called the focal length. Every lens has two principal foci, one on each side of the lens and equidistant from it. *See* Microscope; Refraction; Telescope.

LENS. Town of France. It stands on the canalised river Souchez, which becomes the Deule, 13 m. from Arras, and is a railway junction and an important coal-mining centre. It has engineering works, and its industries include the making of iron, steel, and other manufactures dependent upon coal. During the Great War there was almost constant fighting around Lens, and great damage was done to its buildings and industries, which came to a standstill. It was occupied by the Germans in Oct., 1914, evacuated by them Oct. 2, 1918, and occupied by the British, Oct. 3. It was not until 1921 that its mines were worked again. Pop. 30,155.

LENT. In the Christian year the fast of 40 days immediately preceding Easter. Its present duration dates from early in the 4th century. Lent begins on Ash Wednesday and does not include Sundays. *See* Easter.

LENTHALL, WILLIAM (1591-1662). English politician. Born at Henley-on-Thames, June, 1591, he became a barrister. In 1640 he entered the House of Commons as M.P. for Woodstock, and was chosen by Charles I speaker of the Long Parliament. He remained speaker until 1656, and on that his fame rests. After the virtual deposition of the king he was something like the president of a republic, and to him Cromwell's letters and other official documents were addressed. He was one of those excluded from pardon when Charles II returned, and he died Sept. 3, 1662.

LENTIL (*Lens esculenta*). Annual herb of the order Leguminosae. It is a native of the Mediterranean region, and much resembles vetch. The leaf is broken up into five or six pairs of oblong leaflets, the midrib ending in a tendril. The small, pea-like flowers are pale blue, and are succeeded by short, broad pods containing one or two of the biconvex round seeds, which form an important article of food, particularly in the East. It has been cultivated from very remote times.

LENTON. Suburb of Nottingham. It stands on the Leen, and has a station on the L.M.S. Rly. It consists of Old and New Lenton. In the Middle Ages there was a Cluniac priory here. The parish church of Holy Trinity contains an old font. In 1926 the Prince of Wales bought a farm at Lenton. *See* Nottingham.

LENTULUS, PUBLIUS CORNELIUS, surnamed Sura (d. 63 B.C.). Member of one of the proudest patrician families in ancient Rome, he was consul in 71, but in 70 was expelled from the senate for his scandalous immorality. Having joined Catiline in his conspiracy against the republic in 63 B.C., he carried on negotiations with the envoys of the Allobroges, who afterwards sold their information to Cicero. Arrested with his accomplices by Cicero, he was put to death. *See* Catiline.

LENZ'S LAW. In electricity, a law of electric currents discovered by H. F. E. Lenz (1804-65). The law states that if a constant current flows in a primary circuit, and if by the motion of the latter a secondary current is created in a neighbouring circuit, the direction of the secondary current is such that it opposes the relative motion of the two circuits. *See* Current; Electricity.

Lentil. Leaves and pods containing the nutritious seeds

LEO. One of the constellations. It is the fifth sign of the Zodiac. The sun enters the constellation in the last part of July. It contains a number of notable stars, e.g. α Leonis or Regulus, a well-known helium star; β Leonis or Denebola, a blue star; Algieba, a famous double star; and also several nebulae. See Constellation.

LEO. Name of 13 popes, of whom the more important are noticed separately. Leo II, pope in 682-83, is named as a saint, June 28 being his day. Leo III, pope from 795 to 816, crowned his protector Charlemagne in 800. He was canonised in 1673. Leo IV, pope from 847-55, was a Roman, who fortified the city against the Saracens, and built at Rome the suburb called after him the Leonine city. Leo IX, a German, was pope 1049 to 1054, dying April 19, 1054. Leo XI belonged to the Medici family, and had been archbishop of Florence for over 30 years before his election to the papacy, at the age of 70. He reigned only 27 days, dying April 27, 1605.

LEO I (d. 461). Pope, 440-61. He was by tradition a native of Tuscany, and was known as Leo the Great. Elected pope in succession to Sixtus III in 440, his chief care was the promotion of the unity of the church by the extirpation of heresies, and by the maintenance of the papal supremacy over the whole church. His measures against Pelagianism were seconded by an edict of the emperor in 445. His widespread influence turned back Attila, the Hun king and his hordes in their march on Rome, and saved Rome from being sacked after the capture of the city by the Vandals in 455. Leo died Nov. 10, 461.

LEO X (1475-1521). Pope 1513-21. Born at Florence, Dec. 11, 1475, he belonged to the Medici family, and was the second son of Lorenzo the Magnificent. He was elected pope in 1513, and at once proceeded to spend the papal revenues on art, letters, and music. Under him the Roman Renaissance reached its highest splendour. Leo died Dec. 1, 1521.

LEO XIII (1810-1903). Pope, 1878-1903. Born at Carpineto, March 2, 1810, he belonged to the old Italian family of the Pecci. From 1846-78 he was archbishop of Perugia, and on the death of Pius IX was elected pope. His pontificate was remarkable for the good relations maintained with France and established with Germany, and for concordats with other governments. In Italy, Leo continued the protest against the occupation of Roman Rome by the monarchy, and prohibited Catholics from engaging in politics. He made J. H. Newman a cardinal in 1879, and issued a brief, 1896, declaring Anglican orders invalid. He died July 20, 1903.

LEO. Name of six East Roman emperors. Leo I, emperor 457-74, was called the Great, but he had little claim to the honour. Leo II succeeded his grandfather, Leo I, as an infant in 474, but died a few months later. Leo III, emperor 717-41, was named the Isaurian, as he was the founder of that dynasty. He drove back the Arabs from Constantinople, but is better known for his edict forbidding the worship of images which started a quarrel that lasted 100 years. Leo IV, son of Constantine V, succeeded him in 775, and died in 780. Leo V, surnamed the Armenian, a commander in the army of Michael I, rose against him and deposed him in 813. As emperor, he defeated the Bulgars, but made enemies by his measures against the Paulicians and image-worshippers, and was murdered, Dec. 24, 820. Leo VI, surnamed the Philo-

sopher, reigned 886-911, completed the digest of Justinian's code, and composed orations and poems.

LEOMINSTER. Borough and market town of Herefordshire. It stands on the Lugg, 157 m. from London and 12 from Hereford, on the L.M.S. and G.W. Ryhs. The church of SS. Peter and Paul has been restored, but the Norman nave remains. It was at one time the priory church. Grange House, the former market house, dates from 1633. The town has a trade in hops, cider, and cattle, and agricultural produce generally. Market day, Friday. Pop. 5,538. Pron. Lemster.

LEON. One of the old kingdoms of Spain. It originated during the years when the country was retaken from the Moors. The strip of land in the north, held by the Christians and known as Asturias, was gradually enlarged until it reached the plain and included the city of Leon. About 900 Garcia, one of its rulers, made Leon his capital, and the whole land was soon called by that name. Later, Leon passed to Ferdinand, king of Castile. On his death, in 1065, it became again a separate kingdom. Ferdinand, the son of Alphonso and Berengaria, united the two crowns finally, and the kingdoms of Castile and Leon developed into the kingdom of Spain. Leon is now covered by the provinces of Salamanca; Leon, Zamora, Palencia, and Valladolid. See Castile; Spain.

Leon, the capital of the province and earlier the capital of the kingdom, is 174 m. from Madrid. It has a Gothic cathedral, founded in 1199, and other interesting buildings, chiefly ecclesiastical. Pop. 22,200.

LEONARDO DA VINCI (1452-1519). Italian painter and sculptor. Born in the little village of Vinci, he was the natural son of a notary and of his mistress Caterina. Apprenticed to the sculptor-painter Verrochio at eighteen, Leonardo came rapidly to the front. About his thirtieth year he entered the service of Ludovico Sforza, duke of Milan, making Milan his home for about seventeen of the best years of his life. Leonardo's genius was colossal. He excelled as a mathematician, an architect and an engineer, forestalled Copernicus's theory of the movement of the earth and Lamarck's classification of animals into vertebrate and invertebrate; he discovered laws of optics, gravitation, friction, heat, and light. At thirty-five he was working on his great equestrian statue of Francesco Sforza. He painted the world-famous Last Supper; the study for the head of Christ is also at Milan.

Leonardo da Vinci, Italian painter and sculptor

From a self-portrait

Leonardo da Vinci, Italian painter and sculptor
From a self-portrait

The fine cartoon for his Virgin and Child with S. Anne and S. John, in the Diploma Gallery at Burlington House, London, was the last work of Leonardo's hands in Milan, for the Sforza had to flee before the French king, Louis XII. Leonardo withdrew to Mantua, going thence by way of Venice to Florence at Easter, 1500. His second Virgin and Child with S. Anne is in the Louvre, as is his famous Mona Lisa. At the age of fifty-four he was back

at Milan, now in the service of the French king. In 1516 he was persuaded to go to France by Francis I, and he died there, May 2, 1519.

LEONCAVALLO, RUGGIERO (1858-1919). Italian composer. Born March 8, 1858, at Naples, he studied at the Conservatoire there.

His first work, *Tommaso Chatterton*, was not very successful, but he suddenly leapt into fame in 1892 on the production of his opera *I Pagliacci* at Milan. None of his subsequent works, which include the operas *Der Roland von Berlin* and *Trilby*, achieved an equal success. He died Aug. 9, 1919.

R. Leoncavallo,
Italian composer

LEONIDAS. King of Sparta, 491-480 a.c. When Greece was invaded by Xerxes in 480 a.c., Leonidas was sent to defend the pass of Thermopylae. At first the large Persian force was successfully repulsed, but a means of reaching the heroic defenders was divulged to them by a traitor called Ephialtes. Leonidas, with probably no more than 1,000 men, continued the fight to the last man.

LEONIDS. Swarm of meteors, so called because they apparently radiate from a point in the constellation of Leo (q.v.). The first record of this meteor shower is in A.D. 902, and there are enough records to show that the shower came in greater brilliancy and profusion some three times a century. On Nov. 12, 1833, there was a remarkable display, and Newton and Adams demonstrated that the shower was due to an immense swarm or band of meteors travelling in an elliptic orbit round the sun in a period of 33½ years. For two years after 1866 the earth still seemed to be in the thick portion of the band, but after that conspicuous showers ceased. See Meteor.

LEOPARD (*Felis pardus*). Large member of the cat genus, distinguished by its size and rosette-like spots. It resembles the tiger in ferocity, and is usually about four feet long. Leopards are found in Africa and throughout Asia, and differ considerably in the tone of their yellowish tawny fur. The leopard is an expert climber of trees, nocturnal in habit, and preys upon animals such as antelopes, goats, dogs, and monkeys. In India the leopard is commonly called the panther, the name leopard being usually restricted to the cheetah (q.v.) or hunting leopard, which belongs to a different genus.

LEOPARD. Anciently used to describe a lion with its face turned to the spectator, e.g. the lions in the first and fourth quarters of the royal arms. In this sense leopard has no relation to the animal of that name. Later heraldry, however, includes the leopard as such, but not necessarily in natural colours.

Leopard. Indian leopard, the true *Felis pardus*

LEOPARDI, COUNT GIACOMO (1798-1837). Italian poet. He was born at Recanati, June 29, 1798. After prolonged absences in Rome, Milan, and other places, he left

home in 1830 and lived in poverty at Florence and elsewhere. He died at Naples, June 14, 1837. The dominating note of Leopardi's work, in both poetry and prose, is pessimism, born of ill-health. A genius of a high order, he wrote but little, and his work is marked by a Greek refinement of beauty and form. His chief poems are canzoni and odes—mostly unrhymed—and his principal prose consists of dialogues, letters, and aphorisms.

LEOPARD'S BANE. Popular name for plants of the genus *Doronicum*, of the order *Compositae*, containing about a dozen species. They are hardy perennials with yellow flower-heads. One variety is said to be poisonous.

Leopardstown. Racecourse in the Irish Free State. It is 6½ m. S. of Dublin City.

LEOPOLD I. (1640-1705). German king and Roman emperor. A younger son of the emperor Ferdinand II, he was born June 9, 1640. He became heir to the throne of the Hapsburgs when his elder brother died in 1654. In 1655 he was chosen king of Hungary, and in 1656 king of Bohemia. In 1657 his father died, and he became ruler of a great inheritance. In 1658 he was formally chosen emperor. His reign was largely occupied with wars with France and the Turks. His last war was over the Spanish Succession, which he tried unsuccessfully to obtain for his second son Charles. He died May 5, 1705.

His great-grandson, Leopold II (1747-1792), was a younger son of the empress Maria Theresa and her husband, Francis I. By arrangement he succeeded his father as grand duke of Tuscany in 1765. In 1790, on the death of his brother, Joseph II, he became emperor. He reversed in certain directions the unwise policy of Joseph. Leopold died March 1, 1792. His eldest son was the emperor Francis II.

LEOPOLD I (1790-1865). King of the Belgians. A younger son of Francis, duke of Saxe-Coburg-Gotha, he was born at Coburg, Dec. 16, 1790. His intimate connexion with England began when, in 1816, he married the Princess Charlotte, daughter of George IV, while a little later another marriage in his family made him the uncle of Victoria, the future queen. In July, 1831, Leopold accepted an invitation to become the first king of the Belgians; in difficult circumstances and in a troubled age he ruled that country wisely and successfully until his death, Dec. 10, 1865. His second wife was a daughter of Louis Philippe. By her he had two sons: Leopold, his successor, and Philip, count of Flanders, the father of King Albert.

Leopold I.
King of the Belgians
After Laurence

Leopold II,
King of the Belgians

LEOPOLD II (1835-1909). King of the Belgians. Son of King Leopold I, he was born at Brussels, April 9, 1835. He is known as the founder of the Congo Free State, which was his private property and which, by iniquitous means, was made to yield him a large income until 1908, when he handed it over to his country. In Belgium his rule was, on the whole, wise, but the scandals of his private life were notorious. He died Dec. 17, 1909. His only son died in 1869. His third daughter, Clémentine, was married in 1910 to Napoleon, head of the Bonaparte family.

LEOPOLD, PRINCE OF BAVARIA (b. 1846). German soldier. The son of Prince Luitpold, regent of Bavaria, and Gisela, daughter of Francis Joseph of Austria, he was born at Munich, Feb. 9, 1846. He entered the Bavarian army in 1861, and was made a field-marshal in 1904. During the Great War he commanded, in 1915, the German Fifth Army, which lay along the line from the Vistula south by the Bzura to the Pilitza, and he occupied Warsaw on Aug. 5, after its evacuation by the Russians. In 1916 he was nominally commander of the Ninth Army, operating in Russia.

LEOPOLDVILLE. Capital of the Belgian Congo. It lies just below the S.W. end of Stanley Pool, not far from Brazzaville, on the opposite side. It is the farthest point reached by steamers navigating down the Congo from Stanleyville, is connected by rly. with the river port of Matadi, and is a stage on the postal air service between Boma and Elizabethville. Pop. 2,465 whites.

LEPANTO or **EPAKTOS.** Port of Greece. On the N. of the Gulf of Corinth, sometimes called the Gulf of Lepanto, it lies about 12 m. N.E. of Patras. It is the ancient Naupaktos.

The battle of Lepanto was a naval engagement fought between the Holy League and the Turks, Oct. 7, 1571. It was the last great naval engagement between oared galleys. Under Don John of Austria, a combined Spanish, Papal, Venetian, and Genoese fleet of 202 vessels attacked a Turkish force, estimated at 275 galleys, off the Curzolari islands, and inflicted upon it a defeat from which Turkish naval power never recovered.

LEPIDOPTERA. Order of insects consisting of the butterflies and moths. The four wings are covered with minute scales. It is these scales that come off in the form of coloured dust if the insect is roughly handled. All the lepidoptera pass through a complete metamorphosis, being in turn egg, larva, pupa, and imago. In the larval stage they are known as caterpillars. See Butterfly; Insect; Moth.

LEPIDOSIREN. Genus of the dipnoi or lung fishes, which are able to breathe air by means of a lung, in addition to extracting air from the water by gills. There is only one species (*L. paradoxa*), commonly known as the South American lung fish, found in the Amazon and its tributaries and in the Upper Paraguay river, where it feeds upon water snails. It resembles in appearance a very thick eel, and is about 4 ft. long when adult. When the waters dry up in the hot season it takes refuge in a burrow, and remains dormant till the rainy season.

LEPIDUS, MARCUS AEMILIUS (d. 13 B.C.). Roman politician, general, and triumvir. On the outbreak of the civil war between Pompey and Caesar in 49 B.C. he took the side of Caesar and was rewarded with several important offices. In 43 Lepidus joined Antony and Octavian in the first triumvirate, the object of which was the partition of the Roman world among its three members, Gaul and Spain being assigned to Lepidus. The pact was renewed after the battle of Philippi in the following year, Lepidus now receiving Africa, but eventually he took independent action with a view to securing Sicily for himself. He was no match, however, for Octavian, who deprived him of all his power, and Lepidus died in retirement at Circi.

LEPRECHAUN (Ir. *luchorpan*, little body). In Irish folklore, small creatures generally appearing in the form of wrinkled old men.

Leopold.
Prince of Bavaria

They are supposed to be of evil disposition, but by means of spells can be made to work for human beings or to discover hidden treasure.

LEPROSY (Gr. *lepros*, scabby). Chronic infectious disease caused by the bacilli *leprae*. It is referred to in early Egyptian records, was known in

ancient India and China, and is described in the Bible (Lev. 13). The disease prevailed extensively in Europe up to the 14th or 15th centuries, but thereafter rapidly declined. At the present day, leprosy occurs chiefly in Scandinavia, Central America, the West Indies, South America, South Africa, China, India, and Ceylon.

Leprosy is not highly contagious, and only those in the closest contact with lepers acquire the disease. It is considered probable that the bacilli enter the system through both the skin and the mucous membranes. The following forms are recognized: Following attacks of fever, a diffuse or spotted eruption appears on the face and limbs. Later, the spots become pigmented and develop into irregular nodules which sometimes ulcerate. The mucous membranes of the mouth, throat, and larynx are attacked, and death may follow from pneumonia. In another form the characteristic feature is involvement, and ultimately destruction, of the nerves.

No method is known of curing leprosy. The administration of Chaulmoogra oil is beneficial, but this must be continued for at least two years. In 1928 the British Empire Leprosy Relief Association started a campaign to stamp out leprosy.

LE PUY. City of France. It is 90 m from Lyons in the dept. of Haute-Loire. The cathedral of Notre Dame is a notable example of Romanesque work, with a lofty bell tower and beautiful cloisters. Other churches are those of S. Michel d'Aiguille, on a high rock, and S. Laurent. On the top of the steep Rocher de Corneille, which dominates the town, is a metal statue of Notre Dame de France, 50 ft. high. See illus. below.

Lepidosiren. South
American lung fish

LÉRIDA. City of Spain. The ancient Ilerda, it stands on the Segre river, 114 m. by rly. W. of Barcelona. There are two cathedrals, one founded in 1203, the other in 1759, an episcopal palace, a 13th century church, and an old town hall. Pop. 42,556.

LERWICK. Burgh of Scotland, capital of the Shetland Isles. It stands on the E. side of Mainland on Bressay Sound, 110 m. from Kirkwall. Port Charlotte, originally built by Cromwell, is used by the Royal Naval Reserve. Lerwick has a good harbour. Fishing is the main industry, and the town is also the distributing centre for the islands. Pop. 4,792.

LE SAGE, ALAIN RENÉ (1668-1747). French author. Born at Sarzeau, in Brittany. Dec. 13, 1668, he produced a large amount of work which is now forgotten, but is remembered for one of his plays, *Turcaret*, 1709, the finest comedy of the period, and for two novels, *Le Diable boiteux*, 1707, and *Gil Blas*, the first

Le Puy, France. View showing, left, S. Michel d'Aiguille; right, the Rocher de Corneille. See above real masterpiece of French fiction. *Gil Blas* was issued in four parts, the first two in 1715,

the third and fourth in 1724 and 1735. It is one of the great picaresque novels of the world's literature. Le Sage died Nov. 17, 1747.

LES ANDELYS. Town of France, composed of Le Grand and Le Petit Andely. It stands on the Seine, about 30 m. S.E. of Rouen. Le Petit Andely has some old houses and the 12th cent. church of S. Saviour. Near it is Château Gaillard. Le Grand Andely has the 13th-15th century church of Notre Dame, with some notable glass. Pop. 5,300.

LESLIE. Burgh of Fifeshire. It stands on the Leven, 12 m. from Cupar, on the L.N.E. Rly. The parish church is one of those said to be Christ's Kirk on the Green, famed in a ballad attributed to King James I. On the Green is the bull-stone. Near is Leslie House. Pop. 2,339.

LESLIE, CHARLES ROBERT (1794-1859). British painter. Born in London, Oct. 19, 1794, of American parents, he came to England and studied art at the R.A. schools. Made A.R.A. in 1821 and R.A. in 1825, he became professor of painting at the R.A. in 1848. One of his pictures is that of Queen Victoria's coronation. He died May 5, 1859. See illus. pp. 446, 630

LESLIE, FRED (1855-92). British actor whose real name was Frederick Hobson. Born at Woolwich, April 1, 1855, he made his earlier successes as a baritone vocalist in comic opera. Developing rare powers as a comedian, and finding an admirable colleague in Nolly Farren, he became for the last seven years of his life the chief mainstay of The Gaiety. He died Dec. 7, 1892.

LESLIE, GEORGE DUNLOP (1835-1921). British painter. Born in London, July 2, 1835, he was educated at the R.A. schools. He was elected A.R.A. in 1868, R.A. in 1875. His pictures were chiefly of English girlhood and idyllic groups in ancient gardens or Georgian interiors. He wrote *Our River*, 1881; *Letters to Marco* (H. S. Marks), 1893; *Riverside Letters*, 1896; *The Inner Life of the Royal Academy*, 1914. He died Feb. 21, 1921.

LESLIE OR LESLEY, JOHN (1527-96). Scottish prelate and historian. Born at Kinnassie, Sept. 29, 1527, he became a priest, his earliest charge being Oyne, Aberdeenshire. He became known as a learned and able defender of Roman Catholicism, and was one of those who fetched Queen Mary from France. He was professor of canon law at Aberdeen, a judge of the court of session, a member of the privy council, and abbot of

John Leslie, Scottish prelate

Lindores. In 1555 he was chosen bishop of Ross. His zeal in Mary's cause led to his imprisonment in England from 1571-73. He was made vicar-general of Rouen in 1579 and later bishop of Coutances. He died May 30, 1596. Leslie wrote in Latin a History of Scotland, translated by E. G. Cody in 1888-95.

LESNES ABBEY. Augustinian abbey, at Abbey Wood, Plumstead, Kent. It is 12½ m. from Charing Cross on the Southern Rly. The abbey, founded in 1178, was suppressed by Wolsey in 1524, its revenues being diverted to his colleges at Oxford and Ipswich. The property was seized by Henry VIII, and in the 17th century was settled on Christ's Hospital. It is now public property.

LESSEPS, FERDINAND, VICOMTE DE (1805-94). French diplomatist and engineer. Born at Versailles, Nov. 19, 1805, he entered the consular service in 1825. He was an able and successful consul until his retirement from the service in 1849. In 1854 he secured the

concession for his Suez Canal. Indifferent to political opposition and the doubts of the engineering world, he organized his company in 1858, and eleven years later the canal was opened by Ismail Pasha. In 1879 he was persuaded to undertake the Panama Canal scheme. The failure of this ruined him financially, and his name was implicated in the scandals resulting from its mismanagement. He died Dec. 7, 1894. See Panama Canal; Suez Canal.

Vicomte de Lesseps, French engineer

LESSING, GOTTHOLD EHRHAIM (1729-81). German critic and dramatist. Born at Kamenz, Saxony, Jan. 22, 1729, he studied theology, philosophy, medicine, the drama, and literature. He became associated with Voltaire and Moses Mendelssohn, and contributed to the *Vossische Zeitung*. In 1767 he became adviser to the national theatre at Hamburg, and in 1770 librarian to the Duke of Brunswick. He died Feb. 15, 1781.

Lessing's best known and most influential works are his *Laokoon*, 1766, a critical treatise on the limits of painting and poetry; the poetic drama, *Nathan the Wise*, 1779, which was an outcome of his controversy with Pastor Goetze and is unique as a plea for religious toleration; and *Hamburg Dramaturgy*, 1767-69, a critical commentary on the productions at the national theatre, Hamburg. He wrote many other works, all in their way notable. Lessing was a pioneer of the modern German study of Greek literature and a champion of Shakespeare. He maintained that the ultimate appeal of all art is to the imagination through the senses.

L'ESTRANGE, SIR ROGER (1616-1704). English author. Born at Hunstanton, Dec. 17, 1616, as an officer in Rupert's Horse he accompanied Charles I to Scotland in 1639. In 1648 he attempted to raise an insurrection in Kent, and, failing in this effort, fled to the Continent, where he acted as Hyde's agent on behalf of Charles II. He returned to England under an amnesty in 1653, and wrote anonymous pamphlets directed against the Puritans. Appointed surveyor of

Sir Roger L'Estrange, English author After Kneller

the imprimery and licenser of the press, 1663, he suppressed all the papers hostile to the Restoration, and issued *The Intelligencer* and *The News*, 1663-66; *The City Mercury*, 1675-80; and *The Observator*, 1681-87. He became M.P. for Winchester, 1685, and in the same year was knighted by James II. He died Dec. 11, 1704.

LETCWORTH. Urban dist. of Hertfordshire. It is 34 m. from London and 2 m. from Hitchin, on the L.N.E.R. The place was chosen for the site of the first garden city in England, and in 1903 this was laid out. A Jacobean manor house has been turned into an hotel and the old church remains, but the other buildings are modern. There are printing, bookbinding, and engineering industries. Pop. 13,316. See Garden City.

LETHAL CHAMBER. Room or receptacle in which animals can be put to death painlessly by the admission of poisonous gas

or gases, e.g. chloroform and carbonic acid. The entrance is by means of an airtight door, and chloroform vapour and carbonic acid gas are sprayed under pressure into the chamber. The process only takes a few seconds.

LETHBRIDGE. City of Alberta, Canada. On the Belly river in the S. of the province, it is a station on the C.P.R. and C.N.R., 760 m. from Winnipeg and 560 m. from Vancouver. It is the distributing centre of a coal-mining and wheat-growing district. Near is an experimental farm. Pop. 10,893.

LETHE (Gr. forgetfulness). In Greek mythology, a river of the lower world. When the souls of the dead drank of its waters, they forgot the events of their previous existence. Pron. Leeth-ce.

LETO. In Greek mythology, the mother of Apollo and Artemis by Zeus. His love for her aroused the jealousy of Hera, who sent the serpent Python to pursue Leto. She fled far and wide, finding no rest. At last in pity Poseidon fixed the floating island of Delos, and there Leto gave birth to the twins Apollo and Artemis. The Roman name was Latona.

LETTERKENNY. Urban district of co. Donegal, Irish Free State. It stands on the Swilly, 17 m. from Londonderry. Here is the Roman Catholic cathedral of the diocese of Raphoe. The port is Port Ballyraine, a mile away on Lough Swilly. Pop. 2,308.

LETTERS PATENT. In English law, letters under the great seal of England. They usually grant to some person or company a privilege, i.e. a right which is not enjoyable under the general law. See Patent Law.

LETTOW-VOR-

BECK, PAUL EMIL VON (b. 1870). German soldier. He was born at Saarlouis, March 20, 1870, and entered the German army as a lieutenant of artillery. He first came into prominence in connexion with the German operations in East Africa, 1914-15, then being a colonel and commander-in-chief of the German forces in that region. After the British under Smuts took the offensive, he made a skilful retreat, and escaped into Portuguese East Africa in 1917. He published *My Reminiscences of East Africa*, 1920.

P. E. Lettow-Vorbeck, German soldier

LETTIS. Dominant people of the Baltic republic of Latvia. In 1925 they formed 75.93 per cent of the total population of about two millions. Of N. European stock, they are tall, robust, long-faced, blue-eyed, self-reliant, two-thirds being pure blondes. Their dialect, with Lithuanian and Borussia or Old Prussian, formed the older

or Baltic sub-group of the Balto-Slavonic group of Indo-European languages. Their political history was bound up with that of Lithuania and Poland until the Russian subjugation of their land in 1795. See Latvia.

LETTUCE. Hardy annual vegetable of the order Compositae and genus *Lactuca*. Perhaps of Asiatic origin, it has been cultivated

Lettuce. Specimen of cabbage lettuce

in Europe from antiquity, and is not known as a wild plant. Lettuces may be grown practically all the year round by successive sowings under glass and pricking out; also by forcing and by intensive culture. The two principal kinds are the cabbage lettuce, or flat-growing sort, and the cos, or upright.

LEU. Rumanian silver coin, in the plural lei. The unit of the country's coinage, it is equivalent to a franc, its nominal value being 9½d. It is divided into 100 bani and is coined in 1, 2, and 5 lei pieces.

LEUCITE. Aluminium and potassium silicate found chiefly in volcanic lavas. Semi-transparent, with a vitreous lustre, it is ash grey in colour and occurs in crystals. It is remarkable for its optical properties, which vary with the temperature. White varieties of leucite are known as white garnet.

LEUCOCYTHAEMIA or **LEUKAEMIA** (Gr. leukos, white; haima, blood). Disease characterised by a permanent increase in the number of leucocytes or white corpuscles in the blood, with enlargement and changes in the spleen, the lymphatic glands, and bone marrow. Its cause is unknown. The condition is more frequent in males than females, and generally begins in middle age. Several forms are recognized. It is almost invariably fatal, though the administration of arsenic has proved beneficial in some cases.

LEUCODERMIA. Affection of the skin characterised by loss of pigment. The cause is unknown. Some cases have followed shock, and others have occurred in the course of exophthalmic goitre. White patches appear on the skin, and the pigment is increased in the surrounding areas.

LEV. Bulgarian silver coin, in the plural leva. The unit of the country's monetary system, it is equivalent to a franc, its nominal value being 9½d. It is divided into 100 stotinki, and is coined in 2 and 5 pieces.

LEVANT, THE (French, levant, rising, i.e. Orient). Name applied to the Eastern Mediterranean in general, and more particularly to the coast lands of Asia Minor, Syria, Palestine, and Egypt. In the Middle Ages trade with the Levant was maintained chiefly by French and Italian merchants, but eventually various causes forced English merchants to send merchant fleets into the Mediterranean. Levant trade suffered in the early days from pirates, and from the development of the oceanic route to the Far East. The opening of the Suez Canal route again took British ships to Levantine seas.

The Levant Company was an English company which traded with the Levant from 1592 to 1825. In 1803 the British government took over from the company the payment of the ambassador in Constantinople, and in 1825 the charter was given up. A new Levant company was formed in 1918, under British auspices, to revive the former's activities.

Levanter is the name for a wind of Eastern Spain. A cloudy, rain-bearing wind from the E., it assists in forming sand-dunes on the E. coast of Spain.

LEVÉE (Fr. lever, to raise). Reception held by the British and other sovereigns for men only, the corresponding function for ladies being a drawing-room. Levées are held during the daytime, and thereat are presented to the king persons who have been appointed to offices of various kinds, officers in the army and navy on promotion, and other approved persons. The governors-general of Canada and India hold levées in the king's name.

LEVÉE. Natural embankment formed by a river as it flows over a nearly level floodplain. Moderate floods increase the rate of formation; excessive floods cover the levées or burst through them. Beyond the levées are stagnant marshes at a lower level than the

river bed. The Mississippi has well-defined natural levees, which have prevented former tributaries from joining the main stream. Natural levees may be planted with trees or embanked. New Orleans is built upon such foundations. The dykes of Holland belong to this type. See Hwang-bo.

LEVEL. Instrument used for obtaining a horizontal surface. A common form is the spirit level, consisting of a glass tube, bent in the arc of a large circle, and filled with alcohol, save for a small bubble of air. In use the plane of the circle is vertical, the bubble seeking the highest position in the tube. When the surface on which the tube rests is horizontal, the bubble takes up a position in the centre. The surveyor's level comprises a telescope and a spirit level.

In mining, level is the name given to the horizontal excavations which are made at intervals from the shaft.

LEVELLERS. Name applied to a party that arose in England during the Civil War. Levellers were found mainly among the soldiers of the parliamentary army; their leader was John Lilburne (q.v.), and their desires for democratic reforms and toleration were put forward in the Agreement of the People. In Jan., 1649, their leaders were arrested for making statements declared by Parliament to be treasonable, and in April the Levellers in certain regiments led a mutiny. This was put down, but the party continued in existence, making fitful appearances during the Commonwealth as opponents of the existing order.

LEVEN. Loch or lake of Kinross-shire, Scotland. It is 22 m. from Edinburgh, and has an area of 5½ m. On Castle Island are the ruins of a castle, for a time the prison of Mary Queen of Scots, and on St. Serf's Island are the ruins of a priory. The lake is celebrated for trout. The river Leven, which issues from the lake, is 16 m. long. There are other rivers of this name in Scotland, and there is one in Lancashire, which flows from Windermere to Morecambe Bay.

The sea loch of Leven lies between Argyllshire and Inverness-shire, being an arm of Loch Linnhe, and is 12 m. long. Its waters are used for generating electric power. The river Leven, 17 m. long, flows into the loch.

LEVEN. Burgh and watering place of Fifeshire. It stands at the mouth of the river Leven, on the N. side of the Firth of Forth, 11 m. from Kirkcaldy; on the L.N.E.R. There are good golf links. Pop. 7,500.

LEVEN, ALEXANDER LESLIE, 1ST EARL OF (c. 1580-1661). Scottish soldier. He served in the Netherlands under Sir Horace Vere, and later he entered the Swedish service, in which he rose to be a general. In 1638 Leslie returned to Scotland, and commanded the force raised to resist Charles I. He took the castle at Edinburgh, was responsible for the rout at Newburn, and helped to make the treaty of Ripon with the king, who, in 1641, created him

Alexander Leslie,
1st Earl of Leven
After Van Dyck

carl of Leven. As lord general, he took a force to Ireland to avenge the massacre in Ulster, and in 1643 led an army into England. This took part in the battle of Marston Moor. He was again made commander-in-chief when Cromwell invaded Scotland, but the actual direction of the force that was defeated at Dunbar, in 1650, was with David Leslie. He died April 4, 1661.

In 1913 Archibald Alexander Leslie-Melville became 13th earl of Leven and 12th earl of Melville. The estates are mainly in Fifeshire, and the earl's eldest son is Lord Melville.

LEVER (Fr. leveur, Lat. levator, lifter). One of the fundamental simple machines or mechanical powers. It consists of a rigid bar fixed at one point called the fulcrum, and acted on at two other points by two forces which tend to cause the bar to rotate in opposite directions about the fulcrum. The force which the lever is used to overcome is called the weight, the remaining force the power. In a lever of the first order the fulcrum is between the power and the weight, e.g. a crowbar. In a lever of the second order the weight is between the fulcrum and the power e.g. the oar of a boat. In a lever of the third order the power is between the fulcrum and the weight, and acts at a mechanical disadvantage.

LEVER. Name of two districts Great and Little, in Lancashire. Little Lever is an urban dist. 2½ m. from Bolton. It manufactures cotton, chemicals, and paper, while around are coal mines. Great Lever, adjoining, has similar industries. Pop. 5,172.

LEVER, CHARLES (1806-1872). Irish novelist. Born in Dublin of English descent, Aug. 31, 1806, he studied medicine at Göttingen, and practised at Port-

Charles Lever,
Irish novelist

stewart, endeavouring to increase his income by contributing to the Dublin University Magazine. In 1837 his novel, Harry Lorrequer, began serially in its pages. This was followed by Charles O'Malley, 1841, and Jack Hinton, 1843. He edited the Magazine, 1842-45. In 1867 he became British

consul at Trieste, where he died, June 1, 1872. Among others of his numerous novels are Tom Burke of Ours, 1843, Con Cregan, 1849, The Martins of Cro-Martin, 1856. They are characterised by vivacity and rollicking humour.

LEVERHULME, WILLIAM HESKETH LEVER, 1ST VISCOUNT (1851-1925). British manufacturer. Born at Bolton, Sept. 19, 1851, when only sixteen he joined his father in a grocery business. His soap-making business, started in 1886, increased enormously, its wares becoming known all over the world. In 1929, before the amalgamation with the Margarine Union, Lever Bros. had a capital of £56,000,000. Its headquarters were at Wigan and Warrington until a new town, Port Sunlight, was built for its activities. Lever had interests in politics and the theatre, was an advocate of a six-hour working day and started a co-partnership scheme at Port Sunlight. He was M.P. for the Wirral division of Cheshire, 1906-10. In 1911 he was made a baronet and in 1917 a baron. He was promoted viscount in 1922. During the Coalition government, 1918-22, Leverhulme was a prominent supporter of Lloyd George and had a financial interest in its organ, The Daily Chronicle. He died May 7, 1925. He was succeeded by his son William Hulme Lever (b. 1888), who wrote his father's life.

1st Viscount Lever-
hulme,
British manufacturer
Russell

LEVERRIER, URBAIN JEAN JOSEPH (1811-77). French astronomer. Born at St Lô, Normandy, March 11, 1811, he became professor of astronomy at the École Polytechnique in 1837. In 1839 he contributed papers on the stability of the solar system to the Academy of Sciences, followed by his Tables de Mercure, 1843, which resulted in his election to the Academy in 1846. He was asked to investigate the problem of the irregularities in the movements of the planet Uranus, and as a result of a brilliant mathematical investigation Leverrier predicted the

position of a then unknown planet, and from his calculations Neptune was discovered by Professor Galle of Berlin a few days later. In 1854 he became director of the Paris observatory. He died Sept. 23, 1877. See Adams, J. C.; Neptune.

LEVI. Third son of Jacob and Leah. With Simeon he massacred the Shechemites in revenge for an injury to his sister Dinah. He had three sons when he emigrated with Jacob to Egypt. His descendants were the Levites (q.v.).

LEVIATHAN. In ancient Jewish belief, monster inhabiting the water. The name is probably derived from Heb. *lavah*, to twist. The Septuagint generally renders it dragon, and there may be a connexion with the serpent of Babylonian mythology. In Job 41, 1-34, the crocodile is described under this name, but in Isaiah 27 *leviathan* is a serpent. The word is used figuratively of anything of monstrous size.

Leviathan was the name given to a steamship, formerly the German liner *Vaterland*. She was built for the Hamburg-America line at Hamburg in 1914. She was in New York harbour when the Great War broke out, and remained there until 1917. When the United States entered the war she was used as a transport, and renamed the *Leviathan*. She carried 12,000 troops on each trip. Her gross tonnage is 59,957 tons, and her length is 907 ft.

LEVIS. Town and river port of Quebec, Canada. It is on the S. bank of the St. Lawrence, opposite Quebec, on the Canadian National Rlys., and steam ferries connect it with Quebec. Shipping and the making of boots are the chief industries. Pop. 10,470.

LEVITATION (Lat. *levitas*, lightness). Term applied by spiritualists to the phenomenon of heavy bodies rising and floating in the air. Such phenomena have been a feature of the seances of many so-called mediums. Levitation has become the subject of scientific study, quickened and intensified by the discovery of such radiations as Hertz's electromagnetic waves, employed in wireless telegraphy, Becquerel rays, Röntgen or X-rays, and Dr. Blondlot's so-called N-rays. The physicist Crawford published, 1920, the results of investigations of the subject with scientific apparatus. See Spiritualism.

LEVITES. One of the twelve tribes of Israel, forming a sacred caste. Traditionally descended from Levi (q.v.), they acted as assistants to the priests in both the Tabernacle and Temple. They had no distinct territory, but 48 cities were allotted to them, and they received tithes and alms.

LEVITICUS. Third book of the Pentateuch or Hexateuch. The title, taken from the Septuagint, means "That which concerns the Levites." Leviticus deals entirely with the priests, or with legal and ceremonial institutions. The book may be divided into five parts: (1) Sacrifices, and the duties and privileges of the priests, 1-7; (2) Consecration of the priests, 8-10; (3) Clean and Unclean, and the Day of Atonement, 11-16; (4) Holiness, 17-26; (5) Vows and Tithes, 27. See Old Testament.

LEVULOSE or **FRUIT SUGAR.** Sugar which occurs in honey and many fruits. Sweeter than cane sugar and not readily crystallisable, it is produced together with an equal amount of glucose when cane sugar is inverted by heating a solution of the sugar with a dilute acid. See Glucose; Sugar.

LEVY, JOSEPH MOSES (1812-88). British newspaper proprietor. Born in London, Dec. 15, 1812, he became a master printer in Shoe Lane, Fleet Street. There he published *The Sunday Times*, in which he acquired a chief share. In 1855 he took over *The Daily*

Telegraph and Courier, and after it had run for three months at a loss, issued it as a daily newspaper at a penny—the first penny newspaper published in London. He died Oct. 12, 1888. See Burnham, Baron; Camrose, Baron.

Lewes, Sussex. Ruins of the Norman castle which were presented to the nation in 1920

LEWES. Borough and market town of Sussex, also the county town. It stands on the Ouse, 50 m. from London and 7 m. from Brighton on the Southern Rly. The keep and gateways of the Norman castle remain, and were presented to the nation in 1920. There is a museum in the Barbican House. There are several old churches, S. Anne's, S. Michael's, and S. John's, the last-named in the part of the town known as Southover. The town hall has a fine oak staircase. About 2 m. from the town is a racecourse. Lewes was early a centre of the wool trade. It now trades in corn, malt, and timber. Market days, Mon. and Tues. Pop. 10,798.

BATTLE OF LEWES. This was fought May 14, 1264, between the troops of Henry III and those of the insurgent barons under Simon de Montfort. On May 13 Montfort had encamped at Fletching, nine miles N. of Lewes, and on the next day led his men towards the town. After a fight King Henry was made prisoner and the town was occupied. See Henry III; Montfort, Simon de.

LEWES, GEORGE HENRY (1817-78). British philosopher, critic, and miscellaneous writer. He was born in London, April 18, 1817, and studied medicine, but drifted into journalism, and wrote voluminously on a variety of subjects, besides making solid contributions to the literature of science and philosophy. He was editor of *The Leader*, 1851-54, and founded *The Fortnightly Review* in 1863. In 1854 he formed an association with Mary Ann Evans (George Eliot), whose mental development owed much to Lewes's sympathy and understanding. The two lived together as husband and wife until his death, Nov. 28, 1878. See Eliot, George.

LEWIS. Island of the Outer Hebrides, Scotland. The southern part is known as Harris and the whole sometimes as Long Island. It is separated from the mainland by the Minch. Lewis proper is 633 sq. m. in area and belongs to Ross and Cromarty; Harris belongs to Inverness-shire. It has an extreme length of 60 m. and an extreme width of 29 m.

The island is hilly in Harris and in the S.E. but most of Lewis is fairly flat. The coast is rocky and deeply indented. On the E. is the little peninsula of Eye. The town of Stornoway is on the E. coast. The main industries are cattle and sheep rearing, fishing, and, in Harris, weaving. In 1918-19 Viscount Leverhulme (q.v.) bought Lewis and part of Harris, with the idea of developing the island industries, but the scheme failed. Pop., excluding Harris, 29,000. See Harris. Pron. Lews.

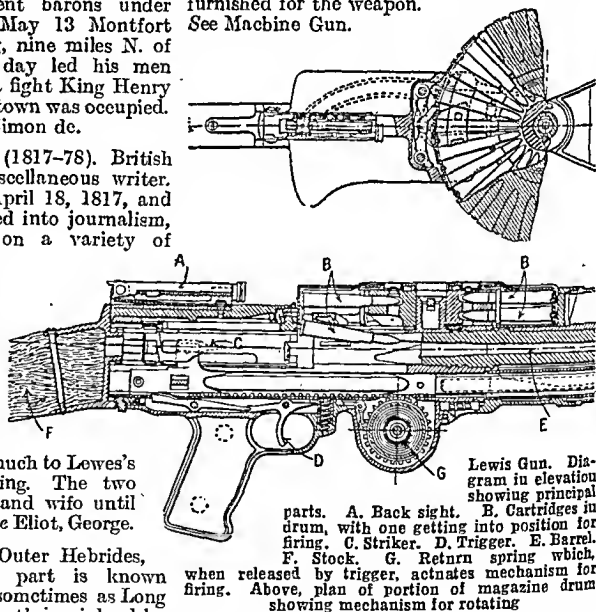

LEWIS, SIR GEORGE CORNEWALL (1806-63) British politician and author. Born in London, he became a barrister, but spent his time mainly in study and in public work. In 1847 he entered Parliament as Liberal M.P. for Herefordshire, and joined the ministry as secretary to the board of control. He held office successively as home secretary, financial secretary to the treasury, chancellor of the exchequer, home secretary again, and finally war secretary. He died April 13, 1863.

A man of great intellectual vigour, Lewis wrote *Remarks on the Use and Abuse of Political Terms*, 1832, and other works. He edited *The Edinburgh Review*, 1852-55. The baronetcy he inherited passed to his brother.

LEWIS, SINCLAIR (b. 1885). American author. Born Feb. 7, 1885, his first piece of fiction was *Our Mr. Wrenn*, 1914, but his reputation in Great Britain began with *Main Street*, 1920, and was increased with *Babbitt*, 1922. Afterwards he wrote *Martin Arrowsmith*, 1925; *Mantrap*, 1926; *Elmer Gantry*, 1927; and *Dodsworth*, 1929.

LEWIS GUN. Automatic weapon of the machine-gun type. It was invented by Colonel Lewis of the U.S. army, and first manufactured in England in 1915. It is worked automatically by the pressure of the gas resulting from the explosion of the charge and a return spring. When the trigger is pressed, a backward and forward movement, with the ignition of a cartridge at the end of each forward movement, continues until the magazine is empty. The gun is cooled by air, and can be fired from the shoulder or on an improvised rest. For use in aircraft a special form of mount is furnished for the weapon.

See Machine Gun.

Lewis Gun. Diagram in elevation showing principal parts. A. Back sight. B. Cartridges in drum, with one getting into position for firing. C. Striker. D. Trigger. E. Barrel. F. Stock. G. Return spring which, when released by trigger, actuates mechanism for firing. Above, plan of portion of magazine drum showing mechanism for rotating

LEWISHAM. Metropolitan borough of London. It lies S.E. of Camberwell and Deptford, W. of Greenwich and Woolwich, and is bordered S. by Kent. It covers about 11 sq. m. It is served by the Southern Rly. The buildings include the town hall at Catford, 1874; the church of S. Mary, 1774; the central library, enlarged in 1930; the grammar school, founded by the Rev. Abraham Colfe; the Colfe almshouses; S. Dunstan's College, opened 1838; public baths, libraries, etc. In the borough are the L.C.C. housing estates at Bellingham and Downham. Lewisham's War Memorial consists of the obelisk and lamps of remembrance which have been erected in the High Street. Pop. 188,600.

LEXINGTON. City of Kentucky, U.S.A. It is 80 m. S. of Cincinnati, on the Chesapeake and Ohio and other rlys. and is the seat of the State University. Pop. 41,534.

BATTLE OF LEXINGTON. Another Lexington is a village 11 m. N.W. of Boston, where the first action in the War of Independence was fought April 19, 1775. Anticipating an outbreak, General Gage sent 800 men to seize the stores at Concord and capture Hancock and Adams. Major Pitcairn, who had been sent in advance, encountered 50 minute-men on Lexington Common. Pitcairn fired and eight Americans were killed. The British were attacked on their return from Concord, and were only saved by reinforcements under Lord Percy. See American Independence, War of.

LEYDEN JAR. Form of electrical condenser, invented at Leiden by Cunaeus in 1746. It consists of a wide-mouthed jar coated inside and out, on the bottom and half-way up the sides, with tinfoil. An upright bar with a tripod bottom and a brass knob at the top stands in the jar. If the jar is earthed, and a high-tension current is passed into the knob from a terminal of an influence machine, electricity of the opposite polarity collects in the outside foil. The jar is discharged by applying one end of a conductor to the outside and bringing the other near the knob. Leyden jars are used for electrostatic experiments and in wireless telegraphy. See Condenser; Electricity.

LEYLAND. Urban dist. of Lancashire. It is 4½ m. S. of Preston, on the L.M.S. Rly. The chief industry is cotton manufacture. S. Andrew's Church contains interesting antiquities. Pop. 9,900.

LEYS SCHOOL, THE. English public school at Cambridge. Founded by prominent Wesleyans in 1874, it has fine modern buildings, and accommodation for 260 boys. The chapel was completed in 1906, and in 1914 King George V. opened the main gateway and library. Old Leysians maintain a mission in City Road, London, E.C.

LEYTON OR LOW LEXTON. County borough of Essex. It is on the border of Epping Forest, about 5 miles from London, and is served by the L.N.E. and L.M.S. Rlys. Of the old parish church of S. Mary, John Stryke, the antiquary, was nominal vicar, but never inducted; he was buried in the chancel. Etloo House, in Church Lane, built in 1760, was long the residence of Cardinal Wiseman. Leyton has a fine town hall, public library, and pleasure grounds, including those of the Essex cricket club. Pop. 128,432.

LEYTONSTONE. District of Greater London, in Essex. It is served by the L.M.S. & L.N.E. Rlys., is 6½ m. from Liverpool Street, and is bordered by Wanstead Flats and parts of Epping Forest. About ½ m. to the E. is Wanstead Park. See Wanstead.

LEZE MAJESTY (Fr. léser, from Lat. laedere, to injure). In law, a crime coming within the category of treason committed or which may be attempted against the sovereign or the sovereign power of a state. See Treason.

LHASA. Chief city of Tibet, and the seat of the Dalai Lama. Hemmed in by mountains, in the fertile plain of the Kyi-chu, which has its outlet into the Brahmaputra (Tsang-po), some 50 m. farther W., it is 390 m.

by road from Darjeeling, and is screened from the S.W. by two low hills. That on the left is crowned by the Potala, the palace of the Dalai Lama, which rises in tiers on the hillside, and completely dominates right the Chagpo-ri rises bluffly from the river bank. Built over the bottleneck between these hills is the gateway to the city.

The Potala is not so much a palace on a hill as a hill that is also a palace. The golden summit, five gilded pavilions, rises 300 ft. above the marsh. The whole building is 900 ft. in length. The central mass, the private palace of the priest king, is dull crimson, in fine contrast with the white of the wings and base. The immense zig-zagging staircases on either side form an imposing feature, and the great brown yak-hair curtain shrouding the sanctuary and hanging 80 feet from the roof adds a note of mystery.

The three great monasteries, De-bung, Sera, and Gaden, lie outside the city at the foot of the mountains, each constituting a small town in itself. De-bung stands in a natural amphitheatre in the hillside, 2 m. to the W. of the city. Sera, on the north border of the Lhasa plain, is a monastic university. Gaden lies 23 m. to the east. Pop. 20,000.

LI. Chinese measure of distance, averaging about one-third of a British mile. On main roads posthouses are usually placed 10 li distant from each other.

LIANA. General term for the climbing plants of great length that occur in tropical forests. They mount to the tops of the highest trees, often killing them by their deadly embrace or by shutting out the light. Many of them may be used as ropes.

LIAO-YANG, BATTLE OF. Fought in Aug. and Sept., 1904, during the Russo-Japanese War. The Russian troops, numbering 145,000 men, were commanded by Kuropatkin, while Marshal Oyama attacked with 120,000, divided into three armies. Kuropatkin, deceived as to numbers, fell back from his outer line of defence, which was 55 m. in extent,

Japanese entered Liao-yang. The Japanese lost heavily and were exhausted, while Kuropatkin had strong untouched reserves, for he mistakenly ordered retreat when victory was within reach. See Kuropatkin, A. N.

LIAS. In geology, the lowest division of the Jurassic system. It consists chiefly of clays, sands, and limestones, over 1,000 ft. in thickness, and divided into the Lower, Middle, and Upper Lias. These rocks are found extensively in England from Devonshire to Yorkshire, and have abundant fossil remains. See Fossil; Jurassic System.

LIAU-TUNG. Peninsula at the S. extremity of Manchuria, separated from the prov. of Chih-li by the Gulf of Liau-tung. In 1895, after the Chino-Japanese War, it was ceded to Japan. Russia, Germany, and France, however, compelled Japan to waive her claim in exchange for a monetary payment. In 1898 Russia obtained on lease from China Port Arthur and Talienwan (Dairen, Dairen).

at the extreme point of the peninsula. After the Russo-Japanese War, the territory was transferred to Japan, 1905, and in 1915 China agreed to extend the lease to 99 years from the original date of the cession to Russia. The territory is now called by the Japanese Kwantung province, and is governed from Dairen. Its area is about 1,438 sq. m. Pop. 1,147,394, including 909,133 Chinese.

LIBAU. Seaport of Latvia, also known as Liepaja. It is on a sandy strip of land between the Baltic and Lake Liepaja, 150 m. W. of Riga by rail. Exports include timber, cereals, wool, and hides. The harbour is excellent. There are sulphur springs in the neighbourhood. Pop. 75,000. See Latvia.

LIBEL (Lat. libellus, a little book). In law, defamation of a person by means of written words, print, pictures, or any publication tending to bring him into contempt or hold him up to ridicule. It also includes in law any writing of a blasphemous, treasonable, seditious, or immoral nature. Malicious intention is not necessary to make a written or printed statement libellous if it reflects on the character of another and is published without lawful justification or excuse, and the use of the name of a real person in a work of fiction has been held to constitute a libel.

Action lies both against the author and the publisher of a libel. It is a defence to an action for libel that the words were written or printed on a privileged occasion; thus the written character of a servant, however unfavourable, is privileged if in accordance with truth and free from malice, as also is the written report of the financial stability of a customer given by a banker if requested to do so by the customer. In respect of both these, however, care must be taken to avoid publication by allowing the privileged communication to be brought to the knowledge of any third person not entitled to see it.

LIBERAL. Name taken by one of the political parties of Great Britain. The successor of the Whig party, its members believe in steady progress along constitutional lines, and are prepared to trust the people to the fullest extent compatible with order. The party organization is twofold. There is a Liberal Central Association at 21, Abingdon St., Westminster, while local associations are united as the National Liberal Federation,

Liana. Trees in a Brazilian forest showing the liana hanging from the highest branches.

Lhasa, Tibet. Palace of the Dalai Lama. The great building is his residence; at the foot are convents and hostels for lamas and pilgrims.

to the second line, known as the Shushan position, 15 m. long.

In this position the Russians were attacked by the combined Japanese armies, and after severe fighting retired northward, while the

whose offices are at 42, Parliament St., London, S.W. The name Liberalism was given to the movement for greater political liberty, in all countries, that was a feature of European history in the 19th century. See Conservative; Unionist; Whig.

LIBERAL UNIONIST. Name taken by those members of the Liberal party who broke away from the main body when Gladstone declared in favour of Home Rule for Ireland, in 1886. In 1912 they formally amalgamated with the Conservative party.

LIBERATOR. Literally, one who liberates. It has been applied especially to Daniel O'Connell, the protagonist of Roman Catholic emancipation, and to Simon Bolivar, the S. American patriot. The Liberator was the title of a paper issued in the U.S.A., from 1831 to 1865, to protest against slavery.

The name liberator is also connected with a financial crash which occurred in 1892, when the failure of the Liberator Permanent Building Society and the London and General Bank established by Jabez Balfour (q.v.) caused widespread distress among small investors.

Liberia. Map of the Negro republic of West Africa.

LIBERIA. Negro republic of Africa. It stretches inland from the W. African coast to a depth in some places of 200 m., from Sierra Leone to the Ivory Coast. There is a strip of level land along the coast, but the interior is mountainous. Its area is about 45,000 sq. m. The capital is Monrovia. The soil is fertile; the forests produce ebony, mahogany, teak, and other valuable woods; and gold, tin, copper, zinc, diamonds, and other minerals exist; but the country awaits development and is still largely unexplored.

The republic was constituted in 1847 as the result of efforts of various colonisation societies in N. America and Europe to settle freed slaves in Africa. It was an original member of the League of Nations. The constitution is modelled on that of the U.S.A. Pop. estimated at from 2,000,000 to 2,500,000.

LIBERTY. SIR ARTHUR LASENBY (1843-1917). British merchant. Born at Chesham, Aug. 13, 1843, in 1875 he started business on his own account in London, and began to put into practice the artistic ideas for dress and furnishing fabrics which he had acquired. A large business, unique in its way, was built up, and in 1894 was turned into a limited liability company. Liberty, who was knighted in 1913, rendered many services to the applied arts. He died May 11, 1917.

LIBITINA. In classical mythology, an Italian goddess. She is especially identified with the cultivation of the earth and with the dead. She was sometimes identified with Venus. Pron. Lihhi-tina.

LIBONIAS OR **JACOBINIA.** Genus of shrubs and herbs of the order Acanthaceae, natives of tropical America. They have opposite, somewhat leathery, undivided leaves, and large, two-lipped flowers, of yellow, red or rosy hue. *Jacobinia ghiesbreghtiana* is frequently grown in European hot-houses. It is a native of Mexico, and has polished, lance-shaped leaves and terminal clusters of bright scarlet flowers, which appear in winter.

Libonias. Foliage and bloom of the Central American shrub

LIBRA (Lat. balance, pound; Ital. libbra). Roman unit of weight nearly equal to 12 oz. avoirdupois. The name is still used in Spain, Portugal, Mexico, and S. American countries for the pound weight, while the initial letter appears in the English £ s. d. as an abbreviation for pound sterling.

The name libra is given to one of the constellations, the seventh sign of the Zodiac also called the scales.

LIBRARY. Collection of books, and, by extension, the building or room in which they are housed. The earliest libraries were collected in Babylonia and Egypt, while many famous libraries existed in the cities of Asia Minor. Those of ancient Rome were chiefly the spoils of war. Modern libraries have their beginnings in the spread of Christianity in Europe. In Great Britain they began with the collection in great monastic institutions, and when these were suppressed in the 16th century their treasures were dispersed and largely destroyed.

In 1604 Sir Thomas Bodley founded the Bodleian Library (q.v.) at Oxford, while the university libraries of Cambridge, Trinity College, Dublin, Aberdeen, Edinburgh, Glasgow, and St. Andrews were all of earlier date. The British Museum (q.v.) library, the greatest in the world, owed its foundation, 1753, to the benefactions of Sir Hans Sloane, and its pre-eminence to the addition of many priceless collections. Other famous libraries are the Bibliothèque Nationale, Paris; the Vatican library in Rome, which is the oldest in Europe; national libraries in Rome and other great continental cities; and the library of Congress, Washington, U.S.A.

The first act of Parliament giving local authorities power to levy a rate for libraries was passed in 1850, and various acts relating to public libraries have been passed since, that of 1919 empowering county councils to levy a library rate while entrusting the administrative arrangements to their education committees. Andrew Carnegie (q.v.) paid the cost of buildings for many places and founded the United Kingdom Carnegie Trust for carrying out and extending this work.

The organization and administration of libraries requires technical knowledge and experience of a special kind. In 1905 the Library Association, founded in 1877, instituted a diploma in librarianship obtainable by examination. At University College, London, instruction in the principles of library practice is given. (See Frontispiece.)

LIBYA. Italian colony in N. Africa. With the Mediterranean on the N. it lies between Tunisia and Algeria on the W. and Egypt on the E., and extends as far S. as the French Niger Colony. It is divided for administrative purposes into the districts of Tripolitania and Cyrenaica, with their respective capitals at Tripoli and Benghazi. In Sept., 1911, Italy invaded Tripoli, then in Turkish possession, drove out the Turkish and Arab forces, and

on Nov. 5, 1911, annexed the country. By the treaty of Ouchy, Oct. 18, 1912, Italy's sovereignty over Tripolitania and Cyrenaica was established. The chief towns are Tripoli, Benghazi, Derna, and Homs, with the oasis-towns of Ghadames, Murzuq (Murzuk), and Ghat. The area is about 635,000 sq. m.; pop. about 775,000 natives and about 30,000 Europeans. See Cyrenaica; Tripolitania.

The Greeks used the word Libya for the whole of the African continent. The name Libyan desert is given to that portion of the Sahara which stretches from the valley of the Nile into Libya.

LICENCE (Lat. licentia, permission to act). In law, an authorisation from competent authority to do something which otherwise would be unlawful. The word is also used of the document conveying the authorisation.

Music and dancing licences are required for houses kept for public dancing, music, and similar entertainments. Excise licences are necessary to carry on various trades; also for keeping carriages, dogs, male servants, and motor vehicles, and to carry a gun, kill game, and use armorial bearings.

LICENSING. Term used mainly for the laws relating to restrictions on the sale of intoxicating liquors.

The law in England was consolidated by the Licensing (Consolidation) Act, 1910. It provides that licences may be granted by licensing justices at their annual meeting to such persons as they think fit and proper. As a rule every licensee must be renewed annually. It runs from April 5 to April 5. But in the case of licences granted since 1904 the justices may, at their discretion, grant a licence for a term not exceeding seven years.

When the licensing justices are convinced that a licensed house is not required by the needs of the locality they may refer it to the county compensation authority, and the latter may suppress the licence on the payment of compensation to the licensee and the owners of the house. The fund for compensation is provided by an annual levy on all holders of on-licences. When a new licensee is granted (since 1904) the grantee must pay what is called monopoly value; that is to say, a sum which is supposed to represent the value of the monopoly right granted to him.

In Scotland a seller of exposable liquor must obtain an excise licence; and every retailer must first procure from a local court of licensing magistrates a certificate entitling him so to apply. The Scots law on the subject is to be found mainly in the Licensing (Scotland) Act, 1903. Such certificates are granted from year to year; but are renewed as a matter of course unless notice of objection is given to the holder. There is an appeal against a refusal to renew, but none against the refusal of a new certificate. See Club; Local Option; Prohibition; Sunday Closing.

LICHEN.

Dual plant, each apparent individual being a colony of algae and fungi, living symbiotically, i.e. each supplying some need of the other. Formerly considered as a distinct division of the flowerless plants, their proper place in classification is under the head of Ascomycetes, a division of the fungi. A lichen consists of a greyish network of filaments, the fungal element, enclosing a large number of

Lichen. Tree lichen, *Evernia prunastri*, a foliaceous kind

simple green cells, the algal element. By the continuous renewal of both elements the compound organism can live almost indefinitely, enduring extremes of cold and heat, dryness and moisture, on rocks, tree-trunks, dry brick walls of dwellings, and under the shelter of heather. A few lichens have been used as a food or medicine, but their chief economic value is as dye-stuffs, e.g. orange dye from beard moss. See Beard Moss; Fungus; Iceland Moss. Pron. lie-ken

LICHFIELD. City and market town of Staffordshire. It is 117 m. from London and 16 from Stafford, on the L.M.S. Rly. It is chiefly famous for its cathedral, built mainly in the 13th and 14th centuries. Features of this beautiful building are the west front, the chapter house, the lady chapel, the three spires, Chantrey's Sleeping Children, and some fine glass. The city was the birthplace of Samuel Johnson, the house in which he was born having been made into a museum. It also has associations with Garrick, Addison, and Anna Seward. Old buildings include S. John's Hospital, dating from 1495, and the Three Crowns inn. Lichfield is an agricultural centre and has breweries and harness-making works. Market day, Friday. Pop. 8,393. See Chantrey, Sir F. L.; Johnson, Samuel.

Earl of Lichfield is a British title borne since 1831 by the family of Anson. The family residence is Shugborough Hall, Stafford. The eldest son is known as Viscount Anson.

LICHNOWSKY, CHARLES MAX, PRINCE (1860-1928), German diplomatist. Born at Kreuzenort, Mar. 8, 1860, he was for a time an officer in the Life Guard Hussars. An attaché of the German embassy in London, 1885, he later became a departmental chief in the foreign office of Berlin. From Oct., 1912, until the outbreak of the Great War in Aug., 1914, he was German ambassador in London. In a memorandum, My Mission to London, written in 1916, and published in April, 1918, he charged Germany with having deliberately destroyed the chance of peace, and paid a tribute to Sir Edward Grey's pacific policy. He died Feb. 27, 1928.

Prince Lichnowsky, German diplomatist

written in 1916, and published in April, 1918, he charged Germany with having deliberately destroyed the chance of peace, and paid a tribute to Sir Edward Grey's pacific policy. He died Feb. 27, 1928.

LICHTENBERG. Former principality of Germany, part of the Prussian Rhine province. It was a district about 220 sq. m. in extent, on the W. bank of the Rhine, enclosed by the rivers Nahe, Blies, and Glan. The congress of Vienna decreed that Prussia should provide a state for Ernest, duke of Saxe-Coburg. This was created from lands on the Rhine in 1816, and in 1919 Ernest took the title of duke of Lichtenberg. In 1834 he gave it back to Prussia in return for a pension.

LICINIUS. Roman emperor 307-24. He was promoted by Galerius to be one of the junior rulers of the empire. He defeated Maximinus II in 313, and became sole ruler of the eastern half. In 314 war broke out between him and his brother-in-law Constantine. After Constantine adopted a policy of toleration towards the Christians in the West, Licinius continued to persecute them in the East. In 324 Licinius was defeated by Constantine and put to death.

LICK. American observatory erected on one of the three peaks of Mount Hamilton, in California. It was endowed by James Lick, a San Francisco millionaire, who died Oct. 1, 1876. It belongs to the university of California, and its first director was Professor Holden, appointed in 1885. In 1888 the great 36-in. refracting telescope was installed. See Observatory; Telescope.

LICTOR. Officer who walked in front of certain of the higher magistrates of ancient Rome. He bore on his left shoulder the fasces, a bundle of rods with an axe bound in the middle, which symbolised the magistrate's power of corporal and capital punishment.

LIDDELL, HENRY GEORGE (1811-98) British scholar. Born Feb. 6, 1811, he became a tutor and lecturer at Christ Church, Oxford. Having been ordained, he went, in 1846, to Westminster School as headmaster, where he remained until 1855, when he succeeded Gaisford as dean of Christ Church. He held that post until 1891, and died Jan. 18, 1898. He is best known as the part author of Liddell and Scott's Greek Lexicon, still the outstanding work of its kind.

LIDDESDALE. District of Roxburghshire, Scotland. It is the valley of the Liddel. Hermitage Castle, a stronghold dating from the 13th century, stands on a hill overlooking Hermitage Water, which runs into the Liddel. It was the property of the Douglasses and then of the Hepburns. Other historical buildings in the vale include Mangerton Tower. Dandie Dimmont, who figures in Scott's Guy Mannering, was a Liddesdale farmer.

LIDDON, HENRY PARRY (1829-90). British divine. Born at North Stoneham, Hampshire, Aug. 20, 1829, he was ordained and became a curate at Wantage. In 1854 he was made vice-principal of the theological college at Cuddesdon, and in 1859 vice-president of S. Edmund Hall, Oxford. He remained in Oxford, one of its most influential figures and a leader among the followers of Pusey, until 1870, when he was appointed canon residentiary of S. Paul's. He held the post of Ireland professor of exegesis at Oxford until 1882. He died Sept. 9, 1890. Liddon belonged to the high church school, and was a vigorous defender of orthodoxy. He was the greatest Anglican preacher of his time, and one of the most popular.

LIDFORD, OR LYDFORD, LAW. Term denoting trial after execution, farcical injustice, as expressed in the old English proverb, "First hang and draw, then hear the cause by Lidford law." The allusion is to the summary procedure of the stannaries or tin mines courts, Lidford, on the western edge of Dartmoor, having been formerly the chief town of the stannaries. See Lyneh Law.

LIDO (old Ital. shore). Watering place of Italy, S.E. of Venice (q.v.). It is one of a chain of small islands separating the Venetian lagoon from the Adriatic. At the N. end is the fortress of San Nicolo, with an old Protestant cemetery containing the graves of several well-known English persons. The plural, Lidi, is applied to the whole chain of islets.

LIEBIG, JUSTUS, BARON VON (1803-73). German chemist. Born at Darmstadt, May 12, 1803, he was apprenticed to a pharmacist, and went to Bonn in 1819 to study chemistry. After graduating at Erlangen, he attended the lectures of Gay-Lussac, Thénard, and Dulong in Paris. In 1824 he was appointed professor of chemistry at Giessen, was

Lick Observatory, opened in 1885. It is built on Mt. Hamilton, California

created a baron in 1845, and in 1852 accepted the chair of chemistry at Munich, which he held until his death, April 18 1873.

Liebig introduced many improvements in chemical apparatus. He discovered hippuric acid, aldehyde, chloral, and chloroform, and investigated many organic chemicals. In addition he rendered great services to agriculture by his researches. Those relating to the latter are contained in his Familiar Letters on Chemistry.

Justus von Liebig, German chemist

LIEBKNECHT, KARL (1871-1919). German socialist. Born in Leipzig, son of Wilhelm Liebknecht, he practised as a barrister in Berlin. He was returned, in Jan., 1912 by the Potsdam socialists to the Reichstag. In 1914 he refused to vote for the war credits, but, called to the colours in 1915, served with a labour battalion. A speech on government finance, made when on leave, led to his expulsion from the Reichstag in April, 1916, and shortly afterwards he was sentenced to imprisonment for attempted high treason. Released in Oct., 1918, he was joined by Rosa Luxemburg. On the failure of the Spartacist rising he was arrested, and was shot while attempting to escape, Jan. 15, 1919.

LIEBKNECHT, WILHELM (1826-1900). German socialist. Born at Giessen, March 29, 1826, he was in Paris on the outbreak of the revolutions of 1848, and led some volunteers to Baden. After a vain attempt to establish a republic, he made his way to London, where he fell under the influence of Karl Marx. On the amnesty of 1861 he returned to Prussia as editor of the Norddeutsche Allgemeine Zeitung, 1862. A bitter opponent of Bismarck, he was banished in 1865, settling in Leipzig. In 1872 he was imprisoned, together with Bebel, for libelling the chancellor. Whilst in gaol he was elected to the Reichstag in 1874. In 1890 he became editor of Vorwärts. He died Aug. 6, 1900.

LIECHTENSTEIN. Independent principality in Central Europe. It extends along the right bank of the Rhine between Switzerland and the Austrian province of Vorarlberg. Its area is 65 sq. m. Vaduz is the capital.

The principality takes its name from the family of Liechtenstein, which, long seated at Mädling, near Vienna, acquired in 1699 and 1713 the co. of Vaduz and the lordship of Schellenberg, and made this region, and not Austria, their home. Their head was made a prince of the empire in 1719. Liechtenstein was an independent state from 1806-15, when it joined the German Confederation. In 1866 it became again a sovereign state, although it still maintained relations with Austria. The Great War severed this connexion, and since

Henry Parry Liddon, British divine

Lichfield. West front of the cathedral, showing the famous three spires

1921 Liechtenstein has had the Swiss currency, and since 1924 has been included in the Swiss customs union. The state is governed by a diet of 15 members. Pop. 11,500.

LIÉGE. City of Belgium. Forming an amphitheatre surrounded by lofty hills, it occupies a magnificent position on both banks of the Meuse, 55 m. S.E. of Brussels and about 10 m. from the German frontier.

The cathedral of S. Lambert was destroyed by the French in 1795, and the

Liège, Belgium. Church of S. Paul, which dates from the 10th century, but was rebuilt in the 14th

title of cathedral was conferred on the church of S. Paul, a Gothic building of the 13th and 14th centuries. The palais du justice, the former residence of the prince-bishops dates from the 16th century, with the exception of the main front, which was rebuilt in the 18th century after a fire. Among modern buildings are the university and the museum of arms.

Liège is a leading centre of the Belgian iron and steel industries, and occupies an important position in a rich coalfield. The state rifle factories and gun foundries are at Herstal, a northern suburb; the principal steel works are at Angleur, and there are large zinc works. Iron is the chief industry of Seraing, the seat of the great engineering firm of Cockerill. Motor cars are manufactured, and there is a large cattle market. Pop. 169,566.

Liège came into prominence in the early days of the Great War. A German force 100,000 strong, opened the attack on the town on Aug. 5, 1914. Soon a number of the forts fell, the last two on Aug. 16, and Liège remained in German possession throughout the war.

LIEN (Fr. lien, tie). Term used in English law. It describes the right to retain property until some debt in claim is paid. Thus an innkeeper has a lien on a lodger's property until the bill for board and lodging is paid. A workman, e.g. a tailor who has mended a coat, may retain the thing he has been working on until the work is paid for. A carrier may retain the goods carried until his charges are met; and there are many other instances—notably a solicitor's lien on all his client's papers for his bill. But as a rule a lien cannot be claimed for a general balance of account.

LIEUTENANT. Title denoting a rank in the army, navy, and air service. In the British army a lieutenant is next below a

officer, or observer, in the R.A.F. A senior lieutenant in the Royal Marines is equivalent in rank to a lieutenant-commander, major, and squadron-leader in the navy, army, and R.A.F. respectively. In the army a second lieutenant is the lowest rank of officer. In the navy there are various branches of lieutenant.

LIEUTENANT-COLONEL. Title denoting a rank in the British army next below that of a colonel. A battalion of infantry, a regiment of cavalry, and a brigade of artillery is each commanded by a lieutenant-colonel. The corresponding rank in the navy is commander, and in the air force wing commander.

LIEUTENANT-COMMANDER. Title denoting a rank in the British navy. It is below commander and above lieutenant, and ranks with major in the army and squadron-leader in the R.A.F. There are engineer, surgeon, paymaster, and instructor lieutenant-commanders.

LIEUTENANT-GENERAL. In the British army the rank below that of full general. During the Great War it was given to officers in command of army corps. The equivalent rank in the navy is vice-admiral, and in the R.A.F. air-marshal. The rank is common to most armies.

Left to right, shoulder badges of lieutenant-colonel, lieutenant-commander, and lieutenant-general

LIFE. Life is the particular kind of activity which characterises man, animals, and plants. Living is a kind of activity, consisting of action and reaction between the organism and its environment, directed towards securing either self-maintenance or the continuance of the race. A living organism exhibits five forms of activity—movement, sensation, nutrition, growth, and reproduction. A typical living creature is in process of continual chemical change (metabolism), in which the complex substances called proteids or proteins are fundamentally involved. It is probable that living matter or protoplasm is a mixture of complex substances—especially proteids—which act and react among themselves and on surrounding material.

Death is the irrecoverable dissolution of the unity of the organism. There is violent death, when some catastrophe shatters an essential part of the bodily organization; death due to disease; and natural death, which often supervenes at the end of a period of senescence or after the crisis of reproduction. It may be said that in the case of many if not all of the protozoa, natural death does not occur. The Amoeba and the like reproduce in a very simple, physiologically inexpensive way, by

have the same immunity from natural death, since their processes of rejuvenescence are so perfect that senescence and death can be successfully evaded. See Animal; Biology; Cell.

LIFEBOAT. Boat for saving life from shipwreck. It is specially designed to weather storms in which other boats and vessels would founder. The lifeboat differs from the ordinary open boat in three main essentials. She is very much stronger in build. She is fitted with air cases and chambers and other devices which make her very buoyant, and she is able, through special self-acting non-return valves, to discharge in a few seconds any quantity of water which comes into her. All lifeboats are fitted with 10 to 16 oars and with sails, and the largest, which are nearly 50 feet long, can take nearly 100 persons on board. Many motor lifeboats are now in use.

LIFEBOAT INSTITUTION. This was founded in 1824 to provide lifeboats and equip stations with apparatus for saving life from shipwreck on the British coast. Known in full as the Royal National Lifeboat Institution, its offices are at 22, Charing Cross Road, London, W.C.

LIFEBUOY. Float, usually ring-shaped, for the support of persons in water. The common lifebuoy consists of a thick ring of canvas filled with cork, about 2 ft. 6 ins. in diameter and attached to a life-line. In use the ring slips over the head of the wearer, who rests with his arms over it.

1st Life Guards badge

LIFE GUARDS. Regiments of household cavalry in the British army. Consisting of the 1st and 2nd regiments, these originated in two troops of cavaliers who accompanied Charles II into exile. The life guards won distinction at Dettingen and Fontenoy, covering the retreat at the latter. They made historic charges at Waterloo, and later participated in the Egyptian War, 1882. In the South African War squadrons formed part of the composite regiment. In the Great War, as part of the cavalry corps of the expeditionary force, they especially distinguished themselves as dismounted troops at the first battle of Ypres, and also at the second, in 1915.

Life Guards. Corporal of horse

LIFFEY. River of the Irish Free State. It is formed by two streams which rise in the Wicklow mountains, not far from Enniskerry. Thence it flows through co. Kildare and past Kilkullen and Newbridge, and across co. Dublin. Having passed through the city of Dublin, it falls into Dublin Bay. Its length is 50 m.

LIFFORD. Co. town of co. Donegal, Irish Free State. On the left bank of the Foyle, 15 m. from Londonderry; it is practically a suburb of Strabane, across the river. Pop. 485.

This town gives its name to a title of viscount borne since 1781 by the family of Hewitt. It originated with Sir James Hewitt, lord chancellor of Ireland, who was made a baron in 1786 and a viscount in 1781. The family's connexion with Ireland is now slight.

Lieutenant. Badges of rank worn on the cuff. Left to right, lieutenant, navy; sub-lieutenant, navy; lieutenant, army; second-lieutenant, army; lieutenant, Royal Marines; right-lieutenant, Royal Air Force

captain; in the navy next below a lieutenant-commander; in the royal air force a flight-lieutenant is next below a squadron-leader. An army lieutenant corresponds in rank to a sub-lieutenant in the navy, and to a flying

dividing into two or more daughter units, so that reproduction has not the nemesis of exhaustion or even death, as in many complex animals. It may be that some simple animals like the fresh-water hydra and planarian worms

LIFT. Contrivance for lowering or raising passengers and goods. Lifts are worked by hydraulic power for heights up to 250 ft. and by electricity for all heights: 200 ft. a minute is considered a good average running speed; but in the skyscrapers of New York 500 ft. or more a minute is reached. The automatic electric lift dispenses with the services of an attendant. The passenger steps inside, closes the door, and presses a button carrying the number of the floor to which he wishes to go. The lift travels to the desired floor and then stops. By means of a stop button it may be brought to a halt anywhere. In some underground stations passengers are taken up and down by escalators. See Escalator.

LIGAMENT. Medical term for a band of tough fibrous tissue which connects bones together. The false ligaments are bands of thickened, peritoneum which hold the intestines and other viscera in place.

LIGATURE. Thread of catgut, silk, or other material employed for tying round blood vessels. Ligatures are employed in surgical operations, and their use was known in Roman times. Catgut and silk are the materials used.

LIGHT. Form of radiant energy or wave motion which travels through space and, acting on the eye, excites the sense of sight. Its principal characteristics are dealt with in the articles on polarisation, reflection, refraction, and spectroscopy. The real founder of the modern wave theory of light was Huygens (q.v.), who postulated the existence of a luminiferous ether filling all space, and held that vision is due to the excitation of waves or ripples on this medium by luminous matter, these waves being transmitted through the ether with a definite speed. Huygens' views were revived about 1800 by an English scientist, Young, who showed by experiment that two beams of light nearly parallel would cause interference where they crossed each other's track. (See Interference.)

Young's advocacy of the wave theory was taken up by Fresnel, Kirchhoff, Stokes, Thomson, and Rayleigh, who gradually elaborated the hypothesis until it gave a satisfactory account of all the well-known properties of light. This theory supplanted the older corpuscular hypothesis, formulated by Newton, which stated that light consisted of elastic corpuscles emitted by all luminous bodies. In 1862 Clerk Maxwell formulated his electromagnetic theory of light, which stated that light waves were set up by electromagnetic tressses. He predicted electromagnetic waves, and Hertz later obtained them and showed their fundamental identity with light. The theory is now extended to radiation of all wave-lengths, from the infinitely short gamma rays emitted by radioactive substances to the wireless waves, which may be many miles in length. All these waves travel with the same velocity as light, 186,000 miles per second. Light from the sun takes about eight minutes to reach the earth.

When a beam of sunlight is passed through prism it is spread out into a many-coloured and or spectrum, ranging from red through orange, yellow, green, blue, and indigo to violet. Visible rays beyond the red—infra-red rays—are heating rays; other invisible rays beyond

the violet—ultra-violet rays—have actinic or chemical effects. Differences in colour coincide with differences in wave-length: the infra-red rays being longest and the ultra-violet shortest in wave-length.

According to Planck's quantum theory the energy of radiation is emitted by a radiating body in certain definite fixed amounts or "quanta," the quantum being proportional to the frequency of the vibration. While this theory accords with certain physical phenomena, such as the photo-electric effect, it is in conflict with the wave theory of light. Scientists are divided on the existence of the ether, that is, in the form of the elastic solid postulated as the medium of wave propagation. Attempts have been made to prove its reality by measuring the passage of the earth through the ether, by means of certain optical devices, but the results have been inconclusive. According to Einstein's theory of relativity we cannot measure the earth's velocity, or determine absolute motion. Einstein's general theory of relativity states that space possesses physical qualities, and may thus fulfil functions ascribed to the ether. See Quantum Theory: Radiation; Relativity; Wave.

LIGHT BRIGADE. Name given to a brigade of cavalry when its regiments are divided into light and heavy. It is applied specifically to the brigade consisting of the 4th and 13th Light Dragoons, the 8th and 11th Hussars, and the 17th Lancers, that made the famous charge at Balaclava. See Balaclava.

LIGHT CRUISER. Fast, lightly armed or unarmoured type of warship. Usually they are from 430 to 460 ft. in length, displace about 5,500 tons, and carry 6-in. or 4-in. guns. Their functions are to undertake patrol duties or other work in which speed and quick manoeuvring power rather than fighting capacity are required, and to form screens for the battle squadrons. See Cruiser; Hawkins; Vindictive.

LIGHTER. Large flat-bottomed boat used in ports for loading or discharging vessels and for carrying cargo over short distances. It is sometimes fitted for steam propulsion, but more usually is towed from one point to another. On the inland waters of East Anglia considerable use is made of lighters, which are towed in strings by horses driven on a tow-path.

LIGHTFOOT, JOSEPH BARBER (1828-89). British theologian and prelate. Born at Liverpool, April 13, 1828, he was senior classic at Cambridge in 1851, and as fellow and tutor of Trinity he remained there for some years. In 1861 he was made Hulsean professor of divinity, in 1871 canon residentiary of S. Paul's, and in 1875 Lady Margaret professor of divinity. In 1879 he was chosen bishop of Durham. He died Dec. 21, 1889. Lightfoot's reputation is

that of a theologian. He worked on the committee for the revision of the N.T., and defended its canon in articles in The Contemporary Review.

LIGHTHOUSE. Tower or high building erected, as a guide to navigation, on or near the coast or on a rock at sea, and provided with a light visible at a considerable distance. Most modern isolated rock lighthouses follow in general details the tower reared by Smeaton on the Eddystone, being circular in plan and tapering gradually upwards, from a cylindrical base, in a gentle curve ending just below the lantern gallery. A lighthouse of this type resists the most violent impact by sheer weight, independently of the grip which its foundations may have on the rock. It is therefore essentially a very solid structure, built up of stones which interlock and are interconnected, both vertically and horizontally, so firmly as to form what is in effect a monolith. The illuminant most commonly

used in important isolated lighthouses is petroleum, vaporised by heat, mixed with air, and burnt in an incandescent mantle. In automatic lighthouses, beacons, and lightbuoys compressed acetylene gas is used, a clock or "sun valve" control shutting off the gas during daylight. Noted British lighthouses are the Eddystone (q.v.) and that at Beachy Head and on the Incecape Rock, etc.

LIGHTING. Wick lamps burning animal or vegetable oil have been used from the earliest times. Colza oil was introduced about the middle of the 18th century, and in 1783 Argand invented the burner with the circular wick and central draught, surrounded by a glass chimney. By 1860 petroleum began to displace all other lamp fuels. Coal gas was used for lighting by Murdock in 1792, and in 1886 the incandescent mantle, introduced by Welsbach, revolutionised coal-gas illumination. The electric arc lamp was developed round about 1845, and on the invention of the dynamo became a commercial proposition. Incandescent electric lamps with a filament of carbon were devised by Edison in 1879 and by Swan in 1880. Early in the 20th century the substitution of a metal filament and the use of gas-filled bulbs caused striking improvements in this form of lighting. See Acetylene; Gas; Lamp.

LIGHTNING. Flash produced by the discharge of electricity between two clouds or between a cloud and the earth. Lightning can be classified into forked, or zigzag, sheet, and ball lightning. The first form of flash gives the appearance to the naked eye of a blinding streak of light which occasionally throws off branches. Graphographically, it appears as a sinuous line, usually branched. Sheet lightning is caused by the glow from lightning below the horizon or at a considerable distance from the observer. It may also be some

Lift. Diagram showing principle of hydraulic lift

Lighthouse. Diagram of Eddystone lighthouse showing sectional elevation and plan of base

Lightning. Photograph of a ramified flash most branches of which did not reach the ground

form of discharge corresponding to the glow discharge from an electric machine. Ball lightning, a rare phenomenon, appears as a luminous ball moving slowly in the air, breaking up explosively on contact with some object. See Electricity; Meteorology; Thunder.

LIGHTNING ARRESTER. This is a device used to protect apparatus connected with aerial wires from lightning, by providing an easy means of escape to earth. As a lightning flash has very great electromotive force or intensity, it is able to leap gaps which ordinary working currents cannot cross. The arrester commonly used for telegraph circuits consists of a fine wire which fuses when the current is excessive, and a pair of plates separated by a very small air-gap. One plate is connected with the line, the other with earth.

LIGHTNING CONDUCTOR. Metal rod or series of rods of much greater conductance than the material to which it is attached. Its purpose is to discharge electrified bodies gradually or "silently," and if a sudden lightning flash discharge occurs it gives a comparatively easy passage to earth.

LIGHTS. Candles and lamps are used symbolically in churches and in divine worship. Their ceremonial use is associated with the idea of a visible light as a sign of the Divine Presence. Lights had a somewhat similar use in pagan ritual. In the Christian churches candles and lamps have been used symbolically since the 4th century.

LIGHTSHIP. Ship moored upon a shoal or at some other dangerous point near a coast, to give warning to shipping by showing a light at its mast-head. Many lightships are manned and the men relieved at regular intervals, but a number are unattended and automatic. See Goodwin Sands; Lighthouse.

LIGHT YEAR. In astronomy, the distance travelled in a year by light. It is equivalent to 5,876,068,880,000 miles. It is used as a unit for the distances of stars, etc.

LIGNIN OR XYLOGEN. Organic substance forming the essential constituent of woody fibres. It is the undissolved residue after boiling wood in water and alcohol. See Cellulose.

LIGNITE (Lat. lignum, wood). Partly formed coal, usually brownish in colour, whence its alternative name of brown coal. Lignite is really an intermediate stage between wood and coal, and shows the structure of the former. The powdered form is used as a pigment of an amber or sepia tone, under the name of Cologne earth. Dried and pressed into blocks, lignite is largely used as a fuel in many countries, particularly in Germany. Jet (q.v.) is a variety of lignite. See Coal.

Lignum nephriticum. Spray of *Pterocarpus indicus*

LIGNUM NEPHRITICUM (Lat. kidney wood) Wood celebrated from the 16th to the 18th century for its supposed medicinal properties, and for the wonderful colour effects produced by varying light upon water in which it had been steeped. Drinking cups were contrived from this wood, and when spring water had been allowed to stand for a

time in the cup it became blue and beautifully opalescent, showing wonderful colour changes and shadows. The water so treated took up the virtues of the wood, and if drunk was said to cure diseases of the kidneys and liver.

The exact nature of this wood was long in doubt, but in 1915 an American botanist proved that it was from two trees of the order Leguminosae, one a Mexican tree and the other a native of the Philippines.

LIGNUM VITAE (*Guaiacum officinale*). Tree of the order Zygophyllaceae. A native of Jamaica, it has a variegated, smooth bark. The leaves are divided into two pairs of oval leaflets, and the blue flowers grow in clusters. From the stem exudes the fragrant resin known as gum guaiacum, used medicinally in rheumatism, etc. The wood is hard and heavy, and much in demand by turners.

Lignum vitae. Foliage and flowers of the Jamaican tree

LIGNY. Village of Belgium. Standing 9 m. from Charleroi, it is famous for the battle fought between the French and Prussians in the Waterloo campaign, June 16, 1815. Despite a series of mistakes occasioned by his orders to Ney going astray, Napoleon succeeded in launching a violent attack with the troops of Gérard and Milhaud, which broke the Prussian forces under Blücher and won the day. Pop. 2,067. See Napoleon; Waterloo.

LIGURIA. Name of a division of ancient Italy, and of the modern division embracing the provs. of Genoa, Imperia, Savona, and Spezia. Its area is 2,038 sq. m. See Italy.

The Ligurian Alps, in N. Italy, form the most S. section of the Alpine curve. They lie between the Maritime Alps and the lower ground N.W. of Savona.

Ligurian Republic was the name given to the republic of Genoa as reconstituted by Napoleon. The French having fomented a feud between the democrats of Genoa and the pro-Austrian aristocrats, Bonaparte transformed the oligarchy into a moderate democracy under a directory on the French model, June 6, 1797, and later into a government by a senate, and a doge appointed by himself. The Ligurian Republic was annexed by France in 1805.

The Ligurian Sea is that portion of the Mediterranean Sea between Corsica and the mainland. Its N. section, bounded by Liguria, is the Gulf of Genoa. See Mediterranean Sea.

LI-HUNG-CHANG (1823-1901). Chinese statesman. Born in Ngau-hui, Feb. 16, 1823, he had a brilliant scholastic career and next distinguished himself as a soldier in the actions against the 'Tai-p'ing rebels. Viceroy of Hu-kwang, 1867-70, in the latter year he was transferred to Chih-li, became royal tutor, and turned his attention to fostering trade between China and the West.

On the death of the emperor T'ung-chi in 1875, Li placed Kwang-su, a child of five, on the throne, and himself became the leading spirit in the government. His endeavour to make China militarily efficient had, however, failed, and she suffered an utter defeat in the war with Japan, 1894-95. After a brief period as foreign minister, he successfully put down the Boxer rebellion. He died Nov. 7, 1901.

LIKIN. Name given to a tax on goods entering the various provinces of China. Although illegal, it was long levied by the heads of the various provinces in order to raise revenue. The settlement of 1928 provided for its abolition. See China.

LILAC (*Syringa*). Genus of shrubs of the order Oleaceae, natives of Asia and E. Europe. The common lilac (*S. vulgaris*), familiar in gardens, attains a height of about 20 ft. and has smooth, heart-shaped opposite leaves and small, fragrant flowers in pyramidal clusters, blue, red, violet-purple, or white in colour. Other varieties are Rouen lilac (*S. chinensis*), *S. emodi*, from the Himalaya, *S. josikaea*, from Hungary, and *S. japonica*. The wood of the common lilac is used in inlaying and turning. See illus. below.

LILBURNE, JOHN (c. 1614-57). English political agitator and pamphleteer. Born at Greenwich, in 1637 he was charged before the Star Chamber with circulating unlicensed books, and was whipped, pilloried, and imprisoned until 1640. From prison he began that pamphlet warfare which he carried on all his life. He rose to be lieutenant-colonel in the parliamentary army, but was one of the extremists known as Levellers (q.v.), and resented Cromwell's assumption of power. A courageous advocate of the rights of the people, he became an idol of the London populace. He died at Eltham, Aug. 29, 1657.

LILIENTHAL, OTTO (1848-96). German engineer and flying pioneer. Born May 23, 1848, at Anklam, he early turned his attention to the problem of flight, and was the first to demonstrate the superiority of curved or cambered aeroplane wings over flat ones in lifting power. He made a large number of glides, and his careful observations enabled the brothers Wright to initiate their first successful flying experiments. He was killed while gliding, Aug. 10, 1896.

LILITH. Female nocturnal demon in Babylonian and Jewish folklore. The name is connected with the Hebrew *lilätu*, night. Lilith is mentioned in Is. 34, 14 (R.V. marginal note). She was considered dangerous, especially to children, and was dreaded by Mesopotamian Jews until the 7th century after the death of Christ. The Rabbis held that she was Adam's first wife before her transformation into a demon.

Lilac. Flower clusters of the common variety. See above

LILLE. City of France, formerly capital of French Flanders. It lies on the river Deule, in flat country, 155 m. by rly. N.N.E. of Paris, and 66 m. S.E. of Calais. One of the greatest manufacturing towns of France, it is an important business centre and rly. and canal junction, and the seat of a bishop and a university. Its industries are in linen, cotton, oils, chemicals, printing, dyeing, rly. and other machinery, and there is a state tobacco factory. There is a large export trade, through Dunkirk and Calais. Pop. 201,610.

The town, largely of recent growth, is well laid out. On the Grande Place are the 17th

cent. Old Bourse and the picturesque Grande Garde, 1717. The Palais des Beaux Arts, 1892, contains one of the finest collections outside

Lille. Clock Tower of the new Bourse looking on to the Place du Théâtre

of Paris. Opposite stands the Préfecture, 1870, and a little to the W. the Porte de Paris, 1685. The churches include those of S. Maurice and Notre Dame de la Treille (the cathedral). On the outbreak of the Great War Lille was protected by twenty detached forts, but these were of antiquated type. In Oct., 1914, after some fighting, the city was entered by the Germans and a certain amount of damage was done, partly by the explosion of some ammunition in Jan. 1916. The Germans remained in possession for four years, during which time the Allies refrained from shelling a town of such importance to the economic life of France. The Germans evacuated it on Oct. 17, 1918.

LILleshall. Village in Shropshire, 3 m. from Newport. It is famous for the remains of Lilleshall Abbey, founded in the 12th century for Augustinian canons; these include the ruins of a fine Norman church.

LILLBURLERO. Tune ascribed to Henry Purcell. Set to doggerel verses of a party-political nature, it had a great vogue and influence during the Revolutionary period of 1688 onwards, especially in Ireland. Numerous references to the ballad and its influence are found in Macaulay's History of England, vol. II.

LILLIPUT (dialect Eng. lille put, little fellow). Imaginary island in the Indian ocean to which Gulliver, in Swift's Gulliver's Travels, journeyed on his first voyage. The inhabitants were people not six inches high, hence the word lilliputian has come to signify anything very small.

LILLY, WILLIAM (1602-81). English astrologer. Born at Discworth, Leicestershire, April 30, 1602, he left for London in 1620, came into money by marrying his master's widow, in 1632 turned his attention to astrology and medicine, and issued a number of prophetic pamphlets and almanacs. He was a friend of Ashmole, and died at Heresham, June 9, 1681. In addition to his astrological works and an autobiography, 1715, repr. 1832, he wrote The True History of King James I and King Charles I, 1651. He was the Sidrophel of Butler's Hudibras.

LILLYWHITE, FREDERIC WILLIAM (1792-1854). English cricketer. He was born near Goodwood, Sussex, June 13, 1792. Though exhibiting cricketing prowess as a boy he did not become a professional player until middle age, playing his first match at Lord's in June, 1827. He was engaged by the M.C.C. as a bowler in 1844, and was connected with the club until his death. From 1851 to 1853 he acted as cricket coach at Winchester College, and died of cholera in London, Aug. 21, 1854. He was the first notable round-arm bowler.

LILY (*Lilium*) Genus of bulbous herbs of the order Liliaceae, natives of the temperate regions of the N. hemisphere. The bulbs are composed of overlapping, fleshy scales. The stems are tall, erect, and leafy; the leaves, varying in shape, alternate or in whorls.

The large, showy flowers are funnel-shaped or somewhat bell-shaped, composed of six perianth-segments, with a channelled nectary along the central line of each. Most known species have been adopted as garden flowers, the most popular being the white, Madonna lily (*L. candidum*), a S. European species with pure white fragrant flowers in a cluster. The golden-rayed lily of Japan (*L. auratum*) is a great favourite in conservatories. *L. bulbiferum* (Europe) has red flowers and bears bulblets at the base of the leaves. *L. speciosum* (Japan) is white, sometimes spotted with red, or in some forms entirely rosy. *L. tigrinum* (China), the tiger lily, is orange-red spotted with purplish-black. See African Lily; Belladonna Lily; Bugle Lily; Guernsey Lily, etc.

LILY OF THE VALLEY (*Convallaria majalis*). Hardy perennial herb of the order Liliaceae. A native of Britain and N. Asia, it has oval leaves and bears white, bell-like, fragrant flowers on erect stems in spring. Lilies of the valley are invaluable in the shady corner of the town garden.

Lily of the Valley, flowers and leaf

have taken the place of the ramparts. The imposing cathedral, founded in 1535, was destroyed by an earthquake in 1746, but rebuilt. Among other prominent buildings are the university and the archiepiscopal palace. The city possesses zoological and botanical gardens, and an immense bull-ring. It is the commercial centre of the country and has many manufacturing establishments. These include paper, tobacco, soap, furniture, dye-stuffs, copper and iron articles, sugar, cocoa, and silverware. Pop., with suburbs, 316,000.

Lima, Peru. Western façade and main doorway of the cathedral

LIMAN VON SANDERS, OTTO VICTOR KARL (1855-1929). German soldier. Born at Stolp, Prussia, June 16, 1855, he entered the German army as a lieutenant of cavalry in 1874. In 1913 he attained the rank of general. In 1914 he was sent to Constantinople, and, having been appointed a Turkish field-marshal, was commander-in-chief of the Turkish forces opposing the Allies in Gallipoli in 1915. After the death of von der Goltz he directed the operations of the Turkish armies in the Middle East, and in 1918 was in chief command in Palestine and Syria, when Allenby conquered those countries. He published Five Years of Turkey (English edition, 1928), and died in Munich, Aug. 24, 1929.

LIMASOL. Seaport of Cyprus. It stands on Akrotiri Bay, on the S. coast, 37 m. S.W. of Larnaca, near the site of the ancient town of Amathus. The chief exports are carobs, wine, plaster of Paris, and salt. Pop. 13,302.

LIMBER. Term used for a two-wheeled carriage, with apparatus behind it for attaching to a gun or wagon. The limber also forms a box for the ammunition and a seat for the gunners or driver. To limber up means to attach the gun to the limber.

LIMBUS or **LIMBO** (Lat. fringe) Theological term for an intermediate state between death and the last judgement. Dante represents Limbus as the outer zone of hell (Inferno, canto 4). See Hell; Purgatory.

LIME. Name given to oxide of calcium, CaO. The term is loosely used, the oxide only being strictly called lime or quicklime; the hydroxide, formed by adding water, slaked lime; and the carbonate from which quicklime is prepared by heating limestone. Calcium oxide is a white powdery substance which readily

absorbs water with the evolution of heat, and finally crumbles into a soft, dry powder. It is widely used in agriculture, in particular when the soil is badly infested with insect pests or fungi spores. Calcium carbonate is broken down into lime and carbon dioxide by heating in lime-kilns. Mixed with sand and water, lime is used in the making of mortar. Other uses of lime are in the production of cane and other sugars; in the manufacture of glass and artificial building stones; in medicine as a liniment mixed with linseed oil; for the softening of water; in the preparation of caustic soda; in wood-pulping; in the manufacture of ammonia, etc. See Cement.

LIME (*Tilia*). Genus of deciduous trees. They are natives of Europe, N. Asia, and N. America. The trees have alternate heart-shaped leaves, and the sweet-scented flowers are yellowish-white or greenish-white. The broad-leaved lime and the small leaved lime are natives of Britain; and the common lime from Europe and the Caucasus is naturalised. The light, white, fine-grained timber is in demand for cabinet work, musical instruments, and carving. Linden is another form of the name. See Basswood.

LIME (*Citrus limetta*). Fruit of a small tree of the order Rutaceae. A native of Asia, it is round or oval, pale yellow, with a nipple-like prominence at the top, and has acid juice. It is usually known as sweet lime, to distinguish it from the West Indian lime, a variety of the citron (*C. medicus*), from which citric acid and commercial lime juice is obtained. See Citron; Lemon.

Lily. 1. Tiger Lily, *Lilium tigrinum*. 2. Madonna Lily, *Lilium candidum*

Lima. Tree in full leaf

LIMEHOUSE. District of London, in the metropolitan bor. of Stepney. Named from limekilns which once existed here, it is familiar as London's Chinatown. The Grand Union Canal here enters the Thames; Limehouse Cut connects with the river Lee through Poplar and Limehouse Reach divides the Surrey Commercial and the West India Docks.

LIMELIGHT. Intense brilliant white light produced by heating lime to incandescence in an oxy hydrogen or other high-temperature flame. The flame is directed against a slowly revolving cylinder of lime, the latter becoming volatilised by the intense heat. Though limelight is still employed in magic lanterns, and for stage effects, etc., it is largely superseded by the electric arc light. See Magic Lantern.

LIMERICK. County of the Irish Free State. In the prov. of Munster, its area is 1,064 sq. m. It is bounded by the Shannon on the N., and by Cork, Kerry, Clare, and Tipperary. Much of the county is level, but in the S.E. are the Galty Mts., with Galtymore, over 3,000 ft. high. It is served by the G.S. Rlys. Agriculture is the chief industry, and much of the land is regarded as the most fertile in Ireland. Cattle, sheep, and pigs are reared, and there are a number of dairy farms. Limerick was part of Thomond in the Middle Ages it had many monasteries. Pop. 100,895

Earl of Limerick is an Irish title borne since 1803 by the family of Pery. The family seat is Dromore Castle, co. Limerick, and the earl's eldest son is known as Viscount Glentworth.

LIMERICK. City, seaport, and county town of co. Limerick, Irish Free State. It stands on both banks of the Shannon, 129 m. from Dublin by the G.S. Rlys. The old buildings include the Protestant cathedral of S. Mary, dating from the 12th century, and the castle. As a port Limerick's pre-eminence is due to its position where the Shannon becomes navigable, while it is connected with the interior by canals. Flour milling, bacon curing, and cream making are extensively carried on, and the city is a centre of the Irish butter trade. Limerick has long been noted for its lace. Pop. 39,448

LIMERICK. Form of nonsense verse in five lines. The origin of the name is doubtful. An example is:

There was a young lady of Wilts
Who walked up to Scotland on stilts,
When they said it was shocking
To show so much stocking,
She answered, "Well, what about kilts?"

LIMESTONE. Rock consisting chiefly of lime carbonate. It usually contains varying amounts of silica, alumina, carbonate or oxide of iron, phosphate of lime, magnesium carbonate, etc. Pure limestone is white, but impurities give it a large variety of colours, grey, blue, black, brown, and red, and vary its texture from fine to coarse. Most of the varieties of limestone are used for building purposes, cements, and for road materials.

Marbles, chalks, corals, deep-sea ooze, marls, and dolomite are all kinds of limestone.

Limestone rocks are found in every geological formation and occur in masses hundreds of feet thick. They contain many fossil remains. The picturesque chalk cliffs of the British coasts are limestones. See Cement; Lime; Marble; Marl.

LIMNAEA (Gr. limnē, lake). Genus of gastropod molluscs found in fresh water and known as water or pond snails. There are six British species, which include most of the large water snails. The shell is long, spiral, and horny, and the animal must come at intervals to the surface in order to breathe. It feeds upon aquatic vegetation.

LIMOGES. Town of France. On the right bank of the Vienne, 251 m. by rly. S.S.W

Limnaea. Shell of *Limnaea stagnalis*

Limpet. Shell of the common limpet, *Patella vulgata*

LIMOUSINE. Type of automobile body. The roof is an immovable part of the body and extends over the front seat, occupied by the driver. See Motor Car.

LIMPET. Group of marine gastropod molluscs in which the shell is conical or tent-shaped. There are many species, found in most parts of the world, some being common around the British coasts. The animal adheres tightly to a rock by means of its foot, which acts like a sucker: and moves about and grazes on minute vegetation when the tide is up, always returning to the same spot before the tide ebbs. Limpets are used for bait, and in some places for food. See Mollusc.

LIMPOPO or CROCODILE. River of S. Africa. It rises in the S.W. portion of the Transvaal, and runs 800 m. to the sea, which it enters 100 m. N.E. of Delagoa Bay. It forms the N. and W. boundary of the Transvaal. The main difficulties of navigation are the Tolo Azimé Falls near the Transvaal border and the low level of water during the dry season. The Alfred Beit bridge over the river near Messina was opened in 1920.

LINACRE, THOMAS (c. 1460-1524). English scholar. Educated at Canterbury and Oxford, he was soon interested in the new learning. He studied medicine in Italy, and in 1509 became physician to Henry VIII. In 1520 he became a priest, and died Oct. 20, 1524. Linacre was a ripe Greek scholar and the founder of the London College of Physicians.

LINCOLN. City, county borough, and the county town of Lincolnshire. It stands on the Witham, 130 m. from London, and is served by the L.M.S. and the L.N.E. Rlys. The cathedral is one of the most magnificent in England. It was built chiefly in the 13th century, and since 1920 many repairs have been carried out. The library was built by Wren. Parts of the castle built by the Normans remain. More complete is the Roman Gate known as the Newport Arch. The Jews' House and the house of Aaron the Jew are examples of early domestic architecture. The hall of S. Mary's Guild, popularly called John of Gaunt's stables, is of the 12th century. S. Peter at Gowts and S. Mary le Wigford are old churches. Of the city's gates the exchequer gate and the Pottergate still stand. Above another gate, the Stonebow, is the guildhall. The city and county museum is partly housed in the old priory of the Grey Friars. The Usher Gallery, opened in 1927, has a fine collection of porcelain and miniatures.

Lincoln is an agricultural centre and has works for making agricultural machinery. Other machinery is made, and there are flour mills and a large corn market. Important race meetings are held. Pop. 65,550.

LINCOLN, ABRAHAM (1809-65). American statesman. Born in Kentucky, Feb. 12, 1809, he was the son of an unprosperous farmer, the descendant of an emigrant from England. The family moved from place to place, but Abraham managed to get a little education.

Limerick. Map of the agricultural county in the province of Munster

of Paris, it is an important rly. junction, and has several porcelain factories. The cathedral of S. Etienne, founded in 1273, has a 14th cent. choir and a 16th cent. N. portal and roof loft. Other churches are those of S. Michel-des-Lions and S. Pierre-du-Queyroix. In the 16th century Limoges was famed for its magnificent enamel work. It was once capital of the province of the Limousin. The hard paste chinaware manufactured at Limoges has a hard, tough, semi-transparent body, brilliant glaze, and remarkably good colouring. It dates from about 1764, after the discovery of kaolin. Pop. 90,187. See Enamel; Pottery

LIMONITE or BROWN HAEMATITE. Hydrated sesquioxide of iron, an important source of the metal. Limonite is usually found mixed with other minerals, e.g. pyrites, but pure it has a metallic black to brown colour. It often occurs in clay soils, in meadows and bogs, and in fresh-water lakes is deposited as a brown slime on the bottom. In the latter form, and better known under the name of bog ore, it is found in Sweden and Norway. As gossan ore it occurs in the W. of the United States. See Iron; Ochre.

Lincoln Cathedral, showing the two west towers in the late Decorated style

In 1830 he settled in Illinois where he was in succession a labourer, a soldier serving against the Indians, a storekeeper, and a surveyor. He made two journeys down the river to New Orleans. Later he became a lawyer and began to practise at Springfield.

Lincoln's public life began in 1834, when he was elected to the legislature of Illinois, where he protested against slavery and made his name as an orator. He remained a member until 1842, the year in which he married Mary Todd. In 1846 he was elected to Congress as a Whig, but he declined to stand at the end of his term in 1850. In 1856 he came to the front again, this time as a leader of the new Republican party, and his verbal duels in 1858 with his powerful antagonist S. A. Douglas are landmarks in American history.

Lincoln failed in secure election as vice-president of his country in 1856 and as senator in 1858, but in 1860 he was the party's candidate for president. He was elected, and took office in 1861 on the principle that slavery was wrong, though he opposed any attack on it by outsiders where it was already lawful. He carried on the war against the seceding states, and at the end of 1862, by proclamation, he emancipated all slaves within the reach of the northern armies.

In 1864 Lincoln was re-elected president, and he passed his remaining months in preparing for a reconstruction of the South. The war ended with Lee's surrender on April 9, 1865, and on April 14 Lincoln was shot in the theatre at Washington by an actor named Booth. He died next morning.

In 1919 G. G. Barnard's statue of him was unveiled in Platt Fields, Manchester, and in 1920 a replica of the figure by A. St.

Gaudens in Lincoln Park, Chicago, was unveiled opposite Westminster Abbey, London. In 1922 a magnificent memorial, erected by authority of congress, was dedicated in Washington.

Innumerable tongues told tales of Lincoln's shrewdness and compassion. His melancholy and his humour became blended in a vivid but indescribable portrait for popular imagination. Soon the scholarly world discovered the charm and perfection of his restrained oratory. Later study revealed a profundity in his thought, as, for instance, in the human wisdom of his unique feeling towards the negro, his inferior and his equal. See American Civil War; consult also Life, Lord Charnwood, 1916.

LINCOLN JUDGEMENT. Decision on ritual by the archbishop of Canterbury. In

1888 a prosecution was instituted against Edward King, bishop of Lincoln, for eight ritual acts alleged to be illegal. The case was tried by Arch. Benson, who pronounced all the acts to be legal save the sign of the cross in benediction and certain manual acts.

LINCOLNSHIRE. County of England. For 110 m it lies along the E. coast between the Humber and the Wash. Its area is 2,665 sq. m., and it is divided into three administrative counties: the parts of Lindsey in the N.; the parts of Kesteven on the S.W. and the parts of Holland on the S.E. The county town is Lincoln. Other places are Grimshy, Boston, Horncastle, and Grantham. Watering places include Cleethorpes and Skegness on the coast and Woodhall Spa inland.

The surface is mostly flat, and in places along the coast marshy. In the S.E. are fens forming part of the Bedford Level, and in the N.W. the so-called Isle of Axholme is a fenny district. In the N.E. the Wolds, a range of chalk hills, extend for 40 m. The county is drained by the Trent, Witham, Welland, and by a network of canals and dykes, and is served by the L.M.S. and L.N.E. Railways. Lincolnshire is almost wholly agricultural. It is noted for its herds of cattle, sheep, and horses, while much wheat and barley are grown. There is a good deal of fishing, and in the N. iron ore is mined. Pop. 602,202.

LINCOLNSHIRE REGIMENT. Regiment of the British army. Formerly the 10th Foot, it was raised in 1685, and first saw active service in Flanders in 1690-96. It was in the Netherlands from 1701 to 1713, and participated in all Marlborough's campaigns. After serving with Aheromby in Egypt, in 1801, where it earned the Sphinx and Egypt on the colours, it fought in the Peninsular War, the Sikh War of 1846, the Indian Mutiny, the Sudan campaign in 1898, and the South African War. The regiment had a distinguished record in the Great War. The 1st battalion formed part of the expeditionary force in August 1914. The regimental depot is at Lincoln.

Lincolnshire. Map of the second largest county in England

LINCOLN'S INN. Third of the London inns of court. Between Chancery Lane and Lincoln's Inn Fields, W.C., on the site of the town house of Henry de Lacy, third earl of Lincoln, it became an inn of court about 1312. The Old Hall, dating from 1506, was once the Chancery Court. It was restored in 1927-28, and reopened by Queen Mary, Nov. 1928. The New Hall, 1843-45, contains a library of 70,000 volumes. The chapel, built over a crypt, was designed by Inigo Jones. The gatehouse in Chancery Lane is dated 1518, bears the arms of Sir Thomas Lovell, and was restored in 1899.

The gardens in Lincoln's Inn Fields, W. of the Inn, a large square laid out by Inigo Jones in 1618, were acquired by the London County

Council in 1895. Notable buildings in the square are the Royal College of Surgeons and Sir John Soane's Museum.

LIND, JOHANNA MARIA, known as Jenny Lind (1820-87). Swedish vocalist. Born at Stockholm Oct. 6, 1820, she made her debut at the Court Theatre there in 1838. After studying under Garcia in Paris, she visited the big cities of Europe and America with great success, being especially popular in London, where she first appeared in 1847. After 1849 she appeared only in oratorios and concerts. She died at Malvern, Nov. 2, 1887.

Jenny Lind, Swedish singer. From a bust by J. Durham

LINDAU, PAUL (1839-1919) German dramatist and novelist. Born at Magdeburg, June 3, 1839, he became a newspaper correspondent in Paris, afterwards doing journalistic work at Düsseldorf and elsewhere. He founded and edited two magazines, *Die Gegenwart*, 1872, and *Nord und Süd*, 1877. In 1895 he became connected with the theatre at Meiningen, and he was afterwards manager of theatres in Berlin. Long before this Lindau had made his name as a writer. He began in 1868 with his play *Marion*; others were *Maria und Magdalen*, *Die Erste* (the first), *Der Abend* (the evening), etc. He wrote a number of novels and other works. He died Jan. 31, 1919.

LINDBERGH, CHARLES A. (b. 1903). American airman. Of Swedish-American parentage, he took up flying in 1921. He acted as pilot in the U.S. Air Mail Service, and was flight commander of the Missouri National Guard. Hearing of Raymond Orteig's offer of \$5,000 for the first flight from New York to Paris, on May 20, 1927, Lindbergh set forth on a monoplane alone, and arrived on May 21 at Le Bourget aerodrome, Paris, after a flight of 33 hours 50 minutes, being the first aviator to cross the Atlantic alone. Lindbergh, who later flew to London, received the Legion of Honour from the French president and the Air Force Cross from King George. See Atlantic Flights.

LINDISFARNE. Alternative name of Holy Island, Northumberland.

Lindisfarne Gospels is the name given to the finest extant Early English illuminated MS. of the Gospels. It is an example of Anglo-Celtic illumination at its best. The MS. is in the British Museum. See Holy Island.

LINDLEY, NATHANIEL LINDLEY, BARON (1828-1921). British lawyer. Son of John Lindley (q.v.) he was born at Acton, Nov. 29, 1828. Called to the bar in 1850, he began to

Lincoln's Inn, London. Gateway looking towards Chancery Lane

practise in the chancery court, but he made his name by writing the standard works on the law of partnerships and the law of companies. In 1872 he was made a Q.C., and was appointed a judge in 1875. In 1881 he joined the court of appeal; in 1897 was made master of the rolls, and in 1900 a lord of appeal. He died Dec. 11, 1921.

LINDLEY, JOHN (1799-1865). British botanist and horticulturist. Born near Norwich, Feb. 5, 1799, he was employed in

1821 by the Royal Horticultural Society to superintend the laying out of their new garden at Chiswick, and this led to his becoming secretary. In 1829 he published a Synopsis of the British Flora, and in 1830 An Introduction to the Natural System of Botany. He was appointed professor of botany in University College, London, in 1829, and to the Apothecaries' Company in 1835. The most important of his publications is The Vegetable Kingdom, 1846. He edited The Botanical Register for 19 years and The Gardeners' Chronicle for 25 years. He died Nov. 1, 1865.

LINDRUM, WALTER. Australian billiard player. Known as the left-handed champion of Australia, after creating a number of records in his own country, in 1928 he played in New Zealand, where at Wellington he set up a record break of 1,461. In 1930 he defeated Willie Smith, the former English champion, in London. His winning margin of 21,825 points constituted a record in billiard contests. He made a farewell appearance on April 7, 1930, before returning home. See Billiards.

LINDSAY. Town of Ontario, Canada. It is on the Scugog river, 69 m. N.E. of Toronto, and is served by the C.P.R. and C.N.R., being a junction on the latter. The industries include saw-mills and the manufacture of agricultural implements. Pop. 7,620.

LINDSAY, SIR RONALD CHARLES (b. 1877). British diplomatist. Born May 3, 1877, a son of the earl of Crawford and Balcarres, he entered the diplomatic service in 1895. He served as attaché in several foreign capitals, going to Egypt in 1913 as under-secretary for finance. He remained there until 1919. Under-secretary at the Foreign Office 1921-24, from 1926-28 he was ambassador in Berlin, and in 1930 he went as ambassador to Washington. The first of Lindsay's knighthoods dates from 1925.

LINDSEY. One of three parts into which Lincolnshire is divided. The N. part of the co., it covers nearly 1,000,000 acres, and is more than half the whole. Being an administrative co., it has its own co. council. For parliamentary purposes it is divided into four divisions, Brigg, Gainsborough, Horncastle and Louth. Its chief town is Lincoln. See Lincolnshire.

Earl of Lindsey is a British title borne since 1626 by the family of Bertie (pron. Barty).

LINEN (Lat. *linum flax*). Flax fibre in a manufactured form. The fibre is derived from the stalks, and forms the bast beneath the bark. It is recovered by one or other of the processes known as retting, a putrefactive operation which weakens the resin which binds the fibre to the straw. As done in Ireland, the process consists in immersing the dried stalks in ponds. Retted flax passes from the fields to the flax or scutch mills. The broken and brittle woody matter is removed by scutching.

In the flax-spinning mill the raw material is combed and hackled. In course of hackling the short fibre, or tow, is removed from the long, or line and the fibres are laid parallel. Tow makes an inferior yarn, largely used for towelling. Line suitable for fine purposes makes handkerchiefs, lawns, cambrics, and fine damask. Coarser qualities make the heavier sheetings and cheaper tablecloths. See Flax; Loom; Spinning; Weaving.

LING (*Molva vulgaris*). Fish allied to the cod, found in the seas of Northern Europe. It is more closely related to the eel-pout (q.v.), varies from four to six feet in length, and in colour is grey or black on the back and greyish white below. It feeds upon smaller fishes and is prolific. It is a food in S. Europe, chiefly eaten dry cured. The oil from its liver is an adulterant of cod liver oil.

Ling. Specimen of the N. European fish

LINGARD, JOHN (1771-1851). British historian. Born at Winchester, Feb. 5, 1771. Lingard's fame rests entirely on his History of England, the one work of its kind written by an English Roman Catholic. It narrates the history of England from the earliest times to 1688, but has been superseded to some extent by the results of later research. Lingard also wrote The Antiquities of the Anglo-Saxon Church, 1806 3rd ed. with numerous additions 1845. He died at Hornby, July 17, 1851.

LINGFIELD. Village of Surrey. It is 10 m. from Reigate, on the Southern Rly. The river Eden separates it from Kent. The church of SS. Peter and Paul was rebuilt by Lord Cobham in the 15th century. Races are held here. Pop. 4,905.

Link extinguisher outside a house

LINK. Torch made of tow dipped in pitch. Before the illumination of the streets these were used for lighting pedestrians on their way. Occasionally in front of old houses may still be seen the extinguishers used to put out the lights. Link boys were men or boys who, for a fee, carried links to guide persons.

Link. Measure of length. It is the hundredth part of a chain, and measures 7.92 ins.

LINLITHGOW. Burgh and county town of Linlithgowshire (West Lothian). It is 17 m. W. of Edinburgh, on the L.N.E. Rly. The chief church is the 16th-century S. Michael's, with a fine tower and other beautiful features. Secular buildings include the old town house, the modern town hall, and the county hall. The Cross Well is a stone fountain, rebuilt early in the 19th century. The burgh is famous for the ruins of its palace, long a royal residence, overlooking Linlithgow Loch, where both James V and his daughter Mary were born. The town has manufactures of paper and leather; also boots and shoes. Pop. 3,882.

Linlithgow. Ruins of the 15th cent. Scottish royal palace

LINLITHGOW, MARQUESS OF. Scottish title borne since 1902 by the family of Hope. John Adrian Louis Hope, 7th earl of Hopetoun (1860-1908), went to Australia in 1900 as first governor-general of the Commonwealth, and in 1905 he was secretary for Scotland from Feb. to Dec. He was made marquess of Linlithgow in 1902. His son Victor (b. 1887) became the 2nd marquess. He was civil lord 1922-24, and in 1923 presided over the committee that inquired into

the prices and distribution of agricultural produce. His seat is Hopetoun House, Linlithgowshire, and his eldest son is called the earl of Hopetoun.

LINLITHGOWSHIRE. County of Scotland. The western of the three Lothians it is also known as West Lothian. Its area is 120 sq. m., and it has a coastline of about 17 m. on the Firth of Forth. The surface varies from the low coast belt to the undulating and hilly region of the interior, rising to 1,000 ft. The only rivers are the Avon and the Almond. Agriculture is the staple industry, oats being the chief crop, and there are many dairy farms. There is much coal and iron ore in the county. Oil is extracted from shales. The shire is served by the L.M.S. and L.N.E. Rlys., and by the Union Canal. The chief town is Linlithgow; others are Broxburn, Borrowstounness, or Bo'ness, Bathgate, and S. Queensferry. Pop. 84,300.

LINNAEA BOREALIS. Small creeping evergreen shrub of the natural order Caprifoliaceae. A native of Europe, N. Asia, and N. America, it has thread-like stems, distant pairs of toothed, oval, leathery leaves, and tiny, sweet-scented, pink flowers somewhat bell-shaped with five lobes at the mouth. It grows in pine forests. Gronovius named it after Linnaeus, who adopted it as his badge. The Laplanders make a decoction of the flowers and use it as a remedy for rheumatism.

LINNAEUS, CARL (1707-78). Swedish botanist, called also Carl von Linné. Born at Reasult, Sweden, May 23, 1707, he soon showed a preference for botany, and this led to his study of medicine. He laid the foundation of his important works, *Bibliotheca Botanica*, 1736, and *Genera Plantarum*, 1737, while assistant professor of botany at Upsala. He made botanical explorations of Lapland and Dalcarlia. Graduating as M.D., he practised as a physician at Stockholm. From 1741 until his death, Jan. 10, 1778, Linnaeus was professor of botany at Upsala.

Carl Linnaeus, Swedish botanist

Linnaeus produced many works, covering the whole range of animal and vegetable life. By his adoption of the binomial system of nomenclature he helped to make natural history more exact and intelligible. His artificial system for the classification of plants ranged species into orders and classes according to the number of stamens and pistils.

LINNEAN SOCIETY. This is a British scientific society founded in 1788, "for the cultivation of the science of natural history in all its branches." It possesses the collections and library of Linnaeus, and is located at Burlington House, Piccadilly, London, W.

LINNELL, JOHN (1792-1882). British painter and engraver. Born in London, June 16, 1792, he studied at the R.A. schools and under John Varley. In 1812 he joined the Society of Painters in Oil and Water Colour. A portrait painter in his early career, from 1847 he devoted himself to landscapes, chiefly in oils. He died at Redhill, Jan. 20, 1882. Of his works may be cited his Noonday Rest, in the Tate Gallery, London.

LINNET (*Linota cannabina*). Familiar British song-bird of the finch group found in most parts of Europe, and commonly met with on waste land where gorse grows. The plumage is a warm brown above, the male with crimson forehead and chest, and brownish-white below. The linnet feeds mainly on seeds, and derives its name from its fondness for linseed.

Linnet, a male of the British song-bird

LINNHE. Sea loch of Argyllshire and Inverness-shire. It extends N.E. from the Firth of Lorne to Corran Narrows, and thence as Lower Loch Eil to Fort William. Its length is 30½ m. and its greatest breadth 8 m.

LINOLEUM. Type of floor covering manufactured from oxidised linseed oil mixed with gum resins, cork dust, and various pigments. This mixture forms a stiff paste which is spread over linen fabric to a thickness of $\frac{1}{8}$ to $\frac{1}{4}$ of an inch. Patterns are printed upon it, or, in inlaid linoleum, different coloured compositions are pieced together to form the pattern and passed through heated rollers. There are large linoleum factories at Lancaster and Greenwich. See Oilcloth.

LINOTYPE. Machine for printing. It casts a line of type from a previously assembled line of matrices which have been collected by the depression of finger-keys on the typewriter principle.

The working consists of three main functions—setting up the matrices, casting the type, and the return of the matrices to their magazines. Each time a key is depressed it permits a matrix bearing a corresponding character to escape out of an inclined magazine. The matrices constituting the words are divided and spaced by steel wedges which fall into the assembling line between the words and are afterwards forced upwards until the line is accurately spaced. The combined line of matrices and space wedges is now transferred to a recessed chamber in a revolving wheel.

Into this molten metal is pumped against the face of characters on the line of matrices from a gas-heated metal pot, the metal solidifies on contact, and after the ragged edges of the metal have been trimmed away a composite "line-o'-type" is produced. It bears upon its upper edges characters to print an entire line. After a cast has thus been taken from the assembled matrices, they are automatically distributed to their own compartments. A German invention, it was developed in the United States and was introduced into England in 1889. See Printing.

LINSEED. Dry ripe seeds of *Linum usitatissimum*, the flax plant. Linseed is mainly used for poultices, and linseed oil is sometimes applied to burns. The oil is prepared by crushing and pressing the seeds. It is largely used in the manufacture of paints and varnishes, and has the property of drying quickly on exposure to the air. This property is greatly increased by boiling it, either alone or with white lead. Further boiling turns the oil into a sticky substance used in the preparation of printing inks.

Linseed cake is an artificial feeding stuff, of especial value for young and fattening stock, made from linseed after most of the oil has been extracted.

LINTHWAITE. Urban dist. of Yorkshire (W.R.). It stands on the Colne, 3 m. from Huddersfield. The principal industry is woollen manufacture. Pop. 10,100.

LION (*Felis leo*). Largest member of the cat genus. It now occurs only in some parts of Africa and S.W. Asia, though once common

in Europe. A lion may measure 9 ft. from the nose to the tip of the tail, and weigh about 500 lb. The hair is tawny yellow, varying considerably in tone; the mane may be black or brown; and the tuft of the tail is often black. The cubs are spotted.

Only one species is recognized by zoologists, though there are several local races, as the Indian, Persian, Masai, Senegal, and Somali lions. Lions are found both in the forests and the open country, and are nocturnal in their habits. The food consists of antelopes and other mammals, for which the lion lies in wait near the drinking places to which these animals resort. As a rule the lion mates for life, and one litter of cubs is produced each season, usually consisting of two or three. The Indian lion, usually rather smaller than the African variety and less heavily maned, is now extinct except in the Gir forest of Kathiawar, where it is to some extent preserved.

Lion. Heavily maned African lion with his mate in captivity
Gambler Bolton, F.Z.S.

THE HERALDIC LION. This is a conventional representation of a fierce beast with shaggy mane and long tufted tail. The principal positions are: (1) rampant, or rearing on its hind legs; if full faced, the word guardant is added; if looking backwards, regardant; (2) passant, walking past, with its right paw lifted; if full faced it is passant guardant, if looking backward, passant regardant.

LION. British battle-cruiser, the flagship of Sir David Beatty at Jutland and earlier fights. She was 660 ft. long, 88 ft. in beam, displaced 26,350 tons, and had engines of 70,000 h.p., giving her a speed of 31 knots. She was condemned as obsolete in 1924. Lion is a celebrated ship name in the British navy. See Dogger Bank; Jutland, Battle of.

R.M.S. Lion. British battle-cruiser on which Sir David Beatty flew his flag in the battle of Jutland

LIP. Muscular fold, two of which surround the orifice of the mouth.

Lip-reading is the art of understanding the speech of others by interpreting the visible movements of the speaking mouth, and is the chief means of communication employed in the education of deaf children taught on the oral method. See Deaf and Dumb.

LIP-ORNAMENT. Object attached to the human lip, usually by perforation. Limited

to some American and African peoples, they are made of stone, bone, shell, leather, wood, or metal, and were believed to guard the portal of the mouth against malignant spirits.

LIPARI ISLANDS. Group of volcanic islands belonging to Italy, about 20 m. from the N. coast of Sicily. Area, 46 sq. m. All are mountainous; Stromboli (qv) is actively volcanic, and Vulcano intermittently volcanic. Lipari, the largest island, contains the capital, Lipari. Currants, olives, etc., are raised. Pop. 12,704.

LIPHOOK. Village of Hampshire. It is 8 m. N.E. of Petersfield, on the Southern Rly., and during the Great War was a military centre. Wolmer Forest is near.

LIPOMA (pl. lipomata, Gr. lipos, animal fat). Tumour composed of fibrous tissue infiltrated with fat. Lipomata vary in size from that of a pea to that of an orange, and most often originate in the tissues immediately beneath the skin, most frequently on the trunk.

LIPPE. State of Germany, before 1918 a principality, now a republic. In the N.W. of the country, it is almost surrounded by Prussian territory, and besides the main block has three small enclaves. It takes its name from the Lippe, although that river does not flow through it. The country is watered by the Weser, the Werre, and other of its tributaries, and is hilly, with much forest. Beetroot, oats, barley, and potatoes are grown, and horses and cattle reared. The chief town is Detmold. Its area is 470 sq. m.; pop. 163,648.

Before 1918 Lippe was governed by a prince, assisted by a house of representatives (landtag) of 21 members and a ministry of three. After the revolution of Nov., 1918, the state became a republic.

LIPPI, FRA FILIPPO (1412-69). Italian painter. The son of a butcher, Tommaso Lippi, he was born at Florence. He was the pupil of Lorenzo Monaco, though greatly influenced by Masaccio and Fra Angelico.

Among his best known works are the Nativity in the Academy at Florence; a Madonna and Child at Berlin; the Coronation of the Virgin in the Lateran, Rome; and the Annunciation, and the S. John the Baptist with six other Saints in the National Gallery, London. Botticelli was his pupil.

His son, Fra Filippino Lippi (1460-1504), studied chiefly under Botticelli. There are important frescoes by him in the Brancacci chapel of the Carmine and the Filippo Strozzi chapel of S. Maria Novella, Florence (1502). He died at Florence April 15, 1504.

LIPTON, SIR THOMAS JOHNSTONE (b. 1850). British merchant and sportsman. Born in Glasgow, May 10, 1850, of Irish parentage, he went to the U.S.A. about 1865, and there worked as a clerk, a tramcar driver, and on some rice plantations. In 1876 he opened a grocer's shop in Glasgow, which developed into the extensive concern known as Lipton's, Ltd., with interests in the U.S.A. and Ceylon, as well

Filippino Lippi, Italian painter
Self-portrait

Sir Thomas Lipton, British merchant
Elliott & Fry

as throughout Great Britain. In 1930 it was merged in Allied Stores. In 1898 he was knighted, and in 1902 made a baronet. Lipton was known for his attempts to win the America Cup (q.v.) and his donations to charity.

LIQUATION. In metallurgy, the operation of extracting a metal from its ore by heating the ore in a furnace to a temperature just sufficient to make the metal liquify. It refers also more particularly to a phenomenon presented when alloys cool from a molten state. When a mass of mixed metals cools there will be a portion which will solidify first, and in solidifying will throw out some other parts of the mixture.

LIQUEFACTION. Change of state of a substance from a solid to a liquid or from a gas to a liquid. The term has been more particularly used in recent years in connexion with the liquefaction of gas.

LIQUEUR. Aromatic and usually sweetened beverage, combined with various flavourings to give it a distinctive character. Liqueurs generally consist of equal proportions of alcohol and plain syrup made from cane sugar, mixed with small proportions of essences and herbs. Some, such as Vergin and Kloogin, contain no syrup, but are mixtures of Vermouth, or Khoosh Bitters, and gin. Some of the most renowned liqueurs originated in the monasteries, but the secret of their composition has always been jealously guarded. Among the best known liqueurs are Advocaat, Benedictine, Chartreuse, green and yellow, Cointreau, Crème de Menthe, Curaçao, Grand Marnier, Kummel, and Maraschino.

LIQUID. One of the three states of matter. It may be defined as matter which is unable to sustain a steady shearing stress no matter how small that stress may be. It is a fundamental characteristic of liquids that when a certain volume is introduced into a vessel of greater volume it only occupies a portion of the vessel equal to its own volume, in contradistinction to a gas, which fills the containing vessel. The free surface of a liquid at rest is horizontal and the pressure at any point in the liquid is the same in all directions.

Most liquids are incompressible. All liquids are viscous to a greater or less degree. The viscous property of certain liquids, e.g. oils, is made use of for lubrication purposes. An important property of many liquids is their power of holding solids, other liquids, or gases in solution to form a new homogeneous liquid. See Hydraulics; Matter; Osmosis; Solution.

LIQUIDAMBAR. Gum tree. A large tree of the natural order Hamamelidaceae, it is also known as the sweet gum tree, and is a native of North and Central America. It has alternate leaves, much like those of the maples, which are fragrant when bruised and turn crimson in autumn. The tree exudes a fragrant terebinthine juice, and the wood is fine-grained.

LIQUID FIRE. Term popularly employed to describe a method of short range fighting introduced by the Germans during the Great War. It was chiefly employed in assaults on trenches, the principle being to spray the antagonists with flame to drive them from their position, or to make it untenable by creating a conflagration actually in the trenches. The apparatus most commonly used was the flammeurverfer, essentially a high-power blowpipe, from the nozzle of which a spray of inflammable oil was forced by gas pressure and ignited.

LIQUID MEASURE. Measure of capacity concerned with liquids. In the United Kingdom the gallon is the standard measure of capacity in the imperial system and is defined as the measure of 10 lbs. of distilled water at 62° F., with the barometer at 30 ins.

It contains, under these conditions, 277.274 cubic inches of distilled water. The imperial gallon was made legal in 1824, the old wine gallon being in use till then. A similar standard is used in the U.S.A.

LIQUOR CONTROL. Term used for the state supervision of the sale of intoxicating drink. This has been the subject of control in England since 1494, and licences for its sale have been necessary since 1552. Control took a more decided form during the Great War. In 1915 the trade in liquor was placed under the control of an independent board, the Central Control (Liquor Traffic) Board. The board instituted a policy of severe restriction. The quantities of spirits and beer allowed to be sold were drastically reduced, and state management of the traffic was introduced into the Carlisle area. See Gretna Green; Licensing.

LIQUORICE. Peeled root of various species of Glycyrrhiza. It is met with in commerce in long cylindrical pieces of a brownish colour. Liquorice has a sedative action on sore throats, and is used as a flavouring agent. Both an extract and a powder are used medicinally.

LIRA. Italian silver coin, the unit of the country's currency. The plural is lire. It is worth nominally 94d., the same as the franc, and is divided into 100 centesimi. In 1927 the lire was stabilized at 92.46 to the £ sterling. See Italy.

LISBON (Port. Lisboa). City of Portugal, capital of the republic. It stands on the estuary of the Tagus, about 9 m. from its mouth. The older portion of the city has steep and tortuous streets, but the newer part is well planned, with spacious streets and boulevards. The Moorish citadel, the white houses, the numerous churches, palaces, and convents, the many parks and open spaces, combine to make Lisbon one of the most beautiful cities of Europe. The harbour is one of the finest in the world. There is a wireless station.

Lisbon. Praça do Commercio, where are the Custom House, Exchange, War Office and other state buildings

The earthquake of 1755 destroyed the greater part of the city. It was followed by a destructive tidal wave and a fire. Of the cathedral, founded in 1150, but little old work remains. Other buildings are many churches, including St. Vincent and the Sacred Heart, the town hall, the bull-ring, that holds over 8,000 people, and the national theatre. The chief of several squares is the Praça do Commercio, one of the largest in the world. On it is a triumphal arch and many public buildings, also the equestrian statue of Joseph I, from which comes its name of Black Horse Square. The monastery of Carmo is a museum. In the suburb of Belem is a tower erected in the 16th century, the monastery of Jeronimos, and a monument to Albuquerque. The city has a university founded in 1588. Pop. 529,524.

LISBURN. City of co. Antrim, Northern Ireland. It stands on the Lagan, 8 m. from Belfast, on the G.N. of I. Rly. The cathedral

contains a memorial of Jeremy Taylor, who was bishop here. The chief industry is linen manufacture. Pop. 11,500.

Earl of Lisburne is an Irish title borne since 1776 by the family of Vaughan. John Vaughan, M.P. for Cardiganshire, having estates in Ireland, was made Viscount Lisburne in 1695. The earl's eldest son is known as Lord Vaughan.

LISIEUX. City of France. It stands at the junction of the Touques and Orbiequet, 30 m. from Rouen. The church of St. Peter, the former cathedral, is noted for its portal, pulpit, nave, and Lady Chapel. Most of it was built in the 12th and 13th centuries. The church of St. James is famous for its stained glass and other works of art. The city manufactures woollen goods. Pop. 15,341.

LISKEARD. Borough and market town of Cornwall. It is 15 m. W. of Plymouth on the G.W. Rly. The town lies on the hills above the Looe river, and from it a short railway runs to Looe. Liskeard was formerly a mining centre. The church of St. Martin is one of the largest in Cornwall. Market days, Sat. and second Mon. Pop. 4,376.

LISMORE. Town of co. Waterford, Irish Free State. It is 43 m. W.S.W. of Waterford, on the G.S. Rlys., and lies on an eminence rising above the Blackwater. The castle, the property of Sir Walter Raleigh, passed to the 4th duke of Devonshire by his marriage with Lady Charlotte Boyle. Near is the cathedral of St. Carthagh. Pop. 1,363.

LISMORE. (Gael. great garden). Island of Argyllshire, Scotland. In Loch Linnhe, it is 5 m. N.W. of Oban. Its area is 15 sq. m. The inhabitants engage in agriculture and fishing. About 1200 the island became the seat of the bishop of Argyll. The cathedral has been modernised and is used as the parish church. The Book of the Dean of Lismore is a collection of Gaelic poems written down, 1512-26, by J. Macgregor, dean of Lismore. Pop. 400.

LISMORE. Port of New South Wales, Australia. At the head of navigation of Rich-

mond river, it is 521 m. N. of Sydney, with which it has rly. connexion. It has saw-mills and sugar refineries. Pop. 9,540.

LISS. Village of Hampshire. It is 16 m. S.W. of Aldershot, on the Southern Rly. There is a fine old church, St. Peter's, restored in the 19th century. Pop. 2,322.

LISSA or **Vis.** Island in the Adriatic Sea. The westernmost of the larger S. Dalmatian Islands, it was formerly Austrian, and now belongs to Yugoslavia. The chief town is Lissa (pop. 4,000). Pop. about 10,000.

Lissa was the scene of two naval actions. In one, in 1866, the Austrians defeated the Italians, and in the other, in 1811, the British were victorious over the French.

LISTER, JOSEPH LISTER, BARON (1827-1912). British surgeon and scientist. Born at Upton, Essex, April 5, 1827, he took his medical degree in London in 1852. He became professor of surgery at Glasgow in 1860, of clinical surgery at Edinburgh in 1869, and

professor of clinical surgery at King's College, London, in 1877. He retired in 1893. At University College, where he was educated, Lister began those remarkable investigations into septic poisoning which revolutionised the treatment of wounds.

Lord Lister,
British surgeon
Elliott & Fry

When Pasteur, in 1862, announced his theory of fermentation and putrefaction Lister saw that the formation of pus was due to bacteria and turned his attention to a method of destroying them. The success of his

methods and his constant advocacy of antiseptics marked one of the greatest advances in the history of surgery.

Lister was made a baronet in 1883, a baron in 1897, and in 1902 one of the original members of the Order of Merit. He died Feb. 10, 1912, the title becoming extinct. See Antiseptics; Pasteur.

The Lister Institute is an institution for furthering scientific research into the causation and prevention of infective diseases of men and animals. Its premises are in Chelsea Bridge Road, London, S.W.1, and it has laboratories near Elstree, Herts.

LISTOWEL. Urban district of co. Kerry, Irish Free State. It stands on the Feale, 170 m. from Dublin and 20 m. from Tralee, on the G.S. Rlys. In the time of Henry II a castle was built here. Pop. 2,917.

Earl of Listowel is an Irish title borne since 1822 by the family of Hare. In 1869 the 3rd earl was made a peer of the United Kingdom as Baron Hare, Convamore, Ballyhooly, Cork, is the earl's seat, and his eldest son is known as Viscount Ennismore.

LISZT, FRANZ (1811-86). Hungarian pianist and composer. Born at Raiding, in a German-speaking part of Hungary, Oct. 22, 1811, his remarkable musical gifts attracted the attention of several Hungarian nobles, who defrayed the cost of his musical education in Vienna and Paris.

His public career as a pianist began about 1824, when he first visited England. In 1849 he settled in Weimar as conductor of the opera there, leaving in 1861, and afterwards spent his time in Rome and in Budapest, where he was director of the Academy of Music. His Rhapsodies Hongroises are notable among his compositions. He died July 31, 1886.

LITANY (Gr. *litaneia*, Lat. *rogatio*). Responsive form of supplication and intercessory prayer. The term first occurs in this sense in Eusebius, 339. The litany drawn up by Cranmer in 1544 is almost identical with that in the English Book of Common Prayer. It was based upon that of Gregory, the Sarum and York uses, and that by Melancthon and Bucer in Archbishop Hermann's Consultatio. Called The Litany and Suffrages, it was first sung in St. Paul's Cathedral, Sept. 13, 1545. Since 1552 The Litany, or General Supplication, as it is termed in the English Prayer Book, has been ordered to be sung or said after Morning Prayer upon Sundays, Wednesdays, and Fridays, and at other times when it shall be commanded by the ordinary. See Faldstool; Rogation Days.

LITCHI or **LEE-CHEE** (*Nephelium litchi*). Evergreen tree of the natural order Sapindaceae. It is a native of S. China. Its leaves are divided into four or five pairs of lance-shaped leaflets, and the small white flowers

form a loose cluster. The fruit, about 1½ in. across, is a berry with a hard, thin, warty, red shell, filled with a sweet, white jelly, enclosing a single seed.

LITHARGE. Oxide of lead (PbO). It is formed by the slow oxidation of molten lead, and is also made directly from lead ores. It is an important assayer's flux, and is largely used as a pigment; also as the raw material for the manufacture of red lead, as a glaze for earthenware, and in the preparation of the commoner kinds of glass. See Lead.

LITHERLAND. Urban dist. of Lancashire. It is 4½ m. N. of Liverpool, on the L.M.S. Rly., and is connected with Liverpool by the overhead electric rly. Pop. 16,870

LITHGOW. Town of New South Wales, Australia. It is 96 m. by rly. W. of Sydney, on the Blue Mts. Coal, iron, and kerosene shale are found. There are smelting works and a small-arms factory. Pop. 15,170.

LITHIUM. One of the metallic elements. Its chemical symbol is Li; atomic weight 6.94; atomic number 3; specific gravity 0.59; melting point 186° C. White in colour it may be pressed into wire and welded at atmospheric temperature; in moist air it takes on a film of yellowish oxide; decomposes water readily, and is less volatile than sodium or potassium, though it belongs to the same class of alkaline metals. Lithium is prepared from the mineral lepidolite, found in the Urals and in the U.S.A. It is the lightest metal known, its specific gravity being not much more than the half of that of water. Lithia preparations are much used in medicine.

LITHOGRAPHY (Gr. *lithos*, stone; *graphein*, to write). Process of printing in which the ink adheres to an image on a flat absorbent surface, whence it is transferred by contact to paper, and, in the case of offset, by the intermediary of rubber. Originally the surface was stone, but it is now invariably aluminium or zinc. Invented about 1796 by a German printer, Alois Senefelder (1771-1834), the process may be broadly subdivided into two processes of application: (1) Chromolithography, the parent and original method, i.e. the image drawn by hand on to the printing surface. By this process a picture is built up on the paper tint by tint, until the original is faithfully reproduced. (2) Photo-lithography, a method whereby the image of the original is transferred photographically and mechanically to the printing surface.

The chemical action involved in lithography is based on the lack of affinity between fat and water. When a stone or plate upon which the image lies is moistened with a thin film of water, the subject, compounded of a greasy ink, repels the water, which only covers the white spaces, and when the plate is afterwards rolled with ink the same adheres to the image, i.e. the plate will accept the greasy ink wherever it is drawn or photographed upon, but the ink will be repelled by the water elsewhere. In the older or direct method of lithographic printing it is necessary to use a smooth-surfaced paper, so that the plate may be brought closely in contact with it. In offset printing the impression is received on a rubber sheet and thence transferred to the paper. In this method rougher papers may be used.

Litchi. Foliage and flowers; inset, above, the fruit

LITHUANIA. Republic of central Europe, until 1918 part of Russia. It is bounded N. by Latvia, E. by Poland, S. by Poland and East Prussia, and W. by the Baltic. According to the treaty of peace with the Soviet government, 1920, its area was about 31,700 sq. m., with an estimated population of upwards of 4,000,000. Since then there have been territorial changes, including the loss of Vilna (Vilnius, Wilno) and Grodno (Gardinas) and acquisition of the Memel territory, 1923. The frontier with Poland is still unsettled. The government is carried on from Kovno (Kannas), though the Lithuanians claim that Vilna, which is in possession of Poland, is their capital. The area is now about 20,000 sq. m.; pop. about 2,000,000.

The country is flat and low-lying, with much forest. The chief river is the Niemen (Nemunas). Cereals, potatoes, flax, and linseed are produced, and dairy farming, pig

Lithuania. Map of the republic of north Europe, which formed part of Russia until February, 1918

rearing, and poultry farming are engaged in. There are over 1,000 m. of rlys. The bank of Lithuania was established in 1922. The unit of currency is the lita, and 48.66 go to the £ sterling.

In the 13th century Lithuania became a grand duchy, and in 1386 the grand duke married the Polish queen Hedvig, thus becoming king of Poland. Henceforward the two were united until Poland was dismembered, and Lithuania passed to Russia in 1776.

A national movement began in 1880, and in 1905 the assembly of Vilna demanded autonomy within the Russian empire. It was revived after its occupation by Germany in 1915-17, when a conference at Vilna of 200 representative Lithuanians elected a state council and demanded complete independence. On Feb. 16, 1918, Lithuania proclaimed its independence, and in 1922 received de jure recognition by the Great Powers. The constitution, adopted in 1922, was amended in 1928. The sovereign power resides in the diet (Seimas). The executive power is in the hands of the president and the cabinet, the president being elected for seven years.

LITMUS. Colouring matter prepared from various species of lichens, of the genera *Rocella*, *Variolaria*, *Leanora*, which are also employed in the manufacture of archil (q.v.). It is made by allowing these lichens to ferment in the presence of ammonia, as in the manufacture of archil, but potassium or sodium carbonate is also added, so that azolitmin, the colouring principle of litmus, is formed. The action of acid on azolitmin produces a red colour which is turned blue by alkali, and vice versa. The chief uses of litmus are as a colouring matter for wine and vinegar, and in analytical chemistry as an "indicator" of acidity or alkalinity in liquids.

LITRE. Measure of capacity in the metric system. It is both a dry and a liquid measure, and contains one cubic decimetre. The litre equals approximately 1.76 pints. It is spelt litro in Italian and Spanish. See Metric System.

LITTLEBOROUGH. Urban district and market town of Lancashire. It stands on the Rochdale Canal, 3½ m. N.E. of Rochdale, on the L.M.S. Rly. Practically a suburb of Rochdale, it lies in a coal mining district and has cotton manufactures. Market day, Fri. Pop. 11,488.

LITTLE ENTENTE. Name given to an alliance between Czechoslovakia, Yugoslavia, and Rumania. A common interest brought it into being, and formal treaties were signed in 1920 and renewed in 1929. One of its chief aims is to prevent the restoration of a Hapsburg prince to the throne of Hungary.

LITTLEHAM. Parish of Devonshire. It is 2 m. E. of Exmouth, on the Southern Rly. The church of S. Swithin is early English, restored in the 19th century. Pop. 6,602.

LITTLEHAMPTON. Seaport, watering place, and urban district of Sussex. It stands at the mouth of the Arun, 62 m. from London and 18 m. from Brighton, on the Southern Railway. It has golf links. Pop. 11,286.

LITTLE JOHN. One of the outlaw band under the leadership of Robin Hood (q.v.). He is supposed to have considerably exceeded ordinary stature. What is traditionally known as Little John's Grave is in the churchyard of Hathersage, Derbyshire, and a gigantic how supposed to have been his still hung in the church in the early 17th cent.

LITTLEPORT. Town of Cambridgeshire. On the Ouse, 6 m. N.E. of Ely, with a station on the L.N.E.R., it is in a fruit-growing and market-gardening district. Pop. 4,467.

Littlestone-on-Sea. Seaside resort of Kent. It is on the S.R., 8 m. S.W. of Hythe. There are golf links.

LITTLETON. Village of Middlesex. It is 3 m. from Staines. Here the Metropolitan Water Board has a huge reservoir capable of holding 7,000 million gallons of water. It was opened in 1925.

LITTLETON, SIR THOMAS (c. 1410-81). English jurist. Born at Frankley, Worcestershire, he was the son of Thomas Westcote and his wife, the daughter and heiress of Thomas de Littleton, to whose estate he succeeded, taking his grandfather's name. His

Sir Thomas Littleton, English jurist

Treatise on Tenures, first printed in 1481, started the systematic study of the English law of real property. Written in Norman French, many editions have appeared. Coke's Commentaries on it are noted. He died Aug. 23, 1481 and was buried in Worcester.

LITURGY (Gr. leitourgia, public service). Proper name for the form, order, or office of the administration of the Holy Communion. The Greek word, adopted by the Alexandrian translators of the O.T., corresponds to the Hebrew Abodah used for the priestly ministrations in temple and tabernacle. In a wider sense the word liturgy is used for any form of public worship.

LITURGICAL COLOURS. These are the colours of altar frontals and clerical vestments as they alternate during the Church's year. White is used on all great festivals, and red on feasts of martyrs; violet is a penitential colour; blue is used for week days after Trinity; and black on Good Friday.

LITVINOFF, MAXIM (b. 1869). Russian revolutionary. Of Jewish origin, he originally bore the name of Finkelstein. After an active revolutionary career in Russia he lived in England. He was an accredited representative in England of the Russian republic, and later represented the Soviet in Sweden and Norway. His Bolshevik activities led to his imprisonment for a short time in England. A close personal friend of Lenin (q.v.), he married an English lady. In 1930 he became foreign commissar.

LIVER. Largest glandular organ in the body. Its average weight in an adult is about 3 lb. Situated beneath the diaphragm, or large horizontal muscle which divides the body into two parts, its important functions are the secretion of bile (q.v.) and the formation of glycogen, a substance resembling starch in composition. Glycogen is stored in the liver, and is converted into sugar and passed into the blood as the system demands it. The liver also plays an important part in the metabolism of fats in the body.

Liver. Diagram of lower surface of the human liver. 1. Right lobe. 2. Left lobe. 3. Fundus of gall bladder. 4. Rough surface of the liver. 5. Vena cava

LIVER FLUKE. Species of trematode worm, the cause of distomiasis, or rot, in sheep.

Liverpool Cathedral, begun in 1904 from the designs of Sir G. G. Scott. It is in red sandstone. Dixon Scott

The liver fluke is a flattened, leaf-shaped creature about an inch long. Its eggs, passed with the excrement of the diseased animal, are hatched into little embryos which find their way to ponds and ditches; there they bore into the small water snail, *Limnaea truncatula*, and, leaving the snail, become encysted on blades of grass. If the grass is eaten by a sheep, the fluke finds its way to the liver, where it sets up serious disease.

LIVERPOOL. City, seaport, and co. bor. of Lancashire. It stands on the Mersey estuary, 31 m. W. of Manchester, and is served by the L.M.S. and other rlys. An electric rly. traverses the docks from Dingle to Seaford Sands. The docks, which line both banks of the Mersey, have a quayside of 37 miles, and the annual value of the sea-borne trade (controlled by the Mersey Docks and Harbour Board) reaches nearly £590,000,000. The chief import is cotton, and the port has a large proportion of the Atlantic passenger and cattle trades. Its area is about 33 sq. m., and the pop. (1921) 803,118.

There is extensive cold storage and, in addition to marine appliances, the city manufactures cement, asphalt, colour, varnish, and fertilisers; there are dye works, sugar and oil mills, tobacco factories, tanneries, engineering works, and corn mills.

The buildings include the new cathedral, designed by Sir G. G. Scott and begun in 1904, town hall (1754), St. George's Hall (1854), S. Nicholas Church, and the Greek Church. The Walker Art Gallery, the Picton Reference Library and Museum, the Technical School, the dock offices, and the buildings of the great steamship lines call for mention. There are many schools and hospitals, and a number of fine parks. In 1930 a site for a new R.C. cathedral was acquired.

Liverpool in 1172 was a small port whence troops embarked for Ireland, and it received

Liverpool. Plan of the central districts of the city, showing the docks on the Mersey and part of Birkenhead

its first charter from Henry II in 1173. It became a city and a diocese in 1880; its chief magistrate received the title of lord mayor in 1893. The city returns 11 members to Parliament. The water supply comes from Rivington watershed and Lake Vyrnwy.

UNIVERSITY OF LIVERPOOL. Founded as an independent university in 1903, it has faculties of arts, medicine, law, science, and engineering, departments of commerce, architecture, social science, tropical medicine, hygiene, local history and records, and Russian studies. It has an institute of archaeology.

LIVERPOOL, EARL OF. British title borne 1796-1851 by the family of Jenkinson, and since 1905 by that of Foljambe. George Savile Foljambe, a Nottinghamshire landowner, married the daughter and co-heiress of the third earl, and their son, Cecil George Savile Foljambe, was created Baron Hawkesbury in 1893 and earl of Liverpool in 1905. His son Arthur, the 2nd earl (h. 1870), was governor-general of New Zealand, 1912-20.

LIVERPOOL, ROBERT BANKS JENKINSON, 2ND EARL OF (1770-1828). British statesman. He was a son of Charles Jenkinson (1727-1808), who held many public offices under George III and was made an earl in 1796.

Born June 7, 1770, he entered Parliament in 1790, and in 1801 was foreign secretary. In 1803 he was made Baron Hawkesbury, and in 1804 he was home secretary under Pitt, on whose death he declined the premiership. He was again home secretary in 1807, and from 1809-12 was secretary for war. In 1812 he succeeded Perceval as prime minister, and he held that office for the long period of 15 years. He resigned in 1827, and died Dec. 4, 1828. His titles passed to a half-brother, on whose death in 1851 they became extinct.

2nd Earl of Liverpool,
British statesman
After Lawrence

LIVERPOOL REGIMENT. Regiment of the British army, whose official title is The King's Regiment (Liverpool). Formerly the 8th Foot, it was long known as the King's (Liverpool) Regiment. Raised in 1685, it had four regular and special reserve battalions, ten territorial, fifteen service, two dock, and two garrison battalions serving in the Great War.

Liverpool Regimental badge

LIVERPOOL STREET. London thoroughfare. It runs W. from Bishopsgate to Blomfield Street, E.C., and, till 1829 known as Old Bethlehem, was renamed after Lord Liverpool, prime minister 1812-27. Here is the terminus of the L.N.E.R., opened in 1875.

LIVERSEDEGE. Market town of Yorkshire (W.R.). It is 6 m. E.S.E. of Halifax, on the L.M.S. Rly. It has cotton, worsted, machinery, and chemical manufacturing. Market days, Tues. and Sat. Pop. 14,752.

LIVERWORT (Hepaticeae). Small class of flowerless plants allied to the mosses. They grow on damp ground, wet rocks, and the base of tree trunks. Some are scale-like (liverworts proper); others have a distinct stem and pellucid leaves (scale-mosses). The larger of the scale-like species were anciently considered remedies for liver troubles, but have no economic value.

Liverwort. Plant and fruit of *Marchantia polymorpha*

Liverpool. Air view of the pierhead and St. George's landing stage, whence the Mersey ferry-boats ply. The three great buildings are, from the left, the Royal Liver Building, Cunard Building, and Dock Board Offices
Central Aerophot

LIVERY (Fr. *livrée*, something delivered). Uniform worn by the men-servants of a person of position. In the city of London the word implies the freemen of the city entitled to wear the costume of the city or livery companies and to vote at elections.

Livery was applied formerly to rations of food issued to a household and to the horses in the stables, whence the phrase livery stable, meaning properly one where horses are fed and attended to at a fixed charge.

LIVING. Term used for an eccles. benefice. A living is obtained by presentation, institution, and induction, and the incumbent must reside on his living for at least nine months of the year, unless he has leave of absence from the bishop.

LIVINGSTONE. Capital of N. Rhodesia, B.S.A. It is 4 m. from the left bank of the Zambezi river. Livingstone is also the name of a mountain range N. and N.E. of Lake Nyasa. The gorge on the Zambezi river formerly known as Karba Gorge is named Livingstone Gorge, after the great explorer.

LIVINGSTONE, DAVID (1813-73). Scottish missionary and explorer. Born at Low Blantyre, Lanarkshire, March 19, 1813, he was the son of Neil Livingstone, a tea agent and deacon in the Independent church at Hamilton. His mother, Agnes, was a daughter of David Hunter, a Blantyre tailor. His great-grandfather fell at Culloden fighting for Prince Charles. David Livingstone's early years were divided between a cotton mill and an evening school. By dint of saving he managed to study at Glasgow University. In 1838 he offered his services to the London Missionary Society; and, gaining a medical diploma at Glasgow, he sailed Dec. 8, 1840, for South Africa, to join Dr. Moffat (q.v.), whose daughter Mary he married in 1844. She died at Shupanga in 1862.

As a missionary he won the lasting regard of the natives, as an explorer he discovered Lakes Ngami, Shitwa, Nyasa, and Bangweulu and the Victoria Falls, and was the first white man to traverse the length of Lake Tanganyika. He was consul at Quilimane 1858-64. In Oct., 1871, H. M. Stanley (q.v.) found him in sore need at Ujiji. Though wasted in health, he refused to return, and made further efforts to reach the sources of the Nile. He died at Ijala, May 1, 1873, and was buried in West-

David Livingstone,
Scottish explorer

minster Abbey. It is estimated that, attended by a few native servants, in 33 years he travelled over 30,000 m. of country unknown to the white man. See Blantyre.

LIVY (59 B.C.-A.D. 17). Roman historian, whose full name was Titus Livius. He was born at Padua, and spent 40 years on his History of Rome in 142 books. Only about a quarter of the work has been preserved. Among scientific historians Livy has no place, but he is in the first rank as a stylist, being at his best in such passages as his sketch of the character of Hannibal, and in his descriptions of battles and sieges.

LIXIVIATION or **LEACHING** (Lat. *lix*, ashes). Process of treating a mixture of soluble and insoluble mineral substances with solvents which only partly dissolve them. It is practised for the purpose of extracting alkali carbonates from wood ashes or kelp, the extraction of certain metals from their ores, and under the name of percolation for extracting the active constituents from drugs.

LI YUAN-HUNG (1864-1928). Chinese statesman. As a young man he saw service in the navy and army. On the outbreak of the revolution of 1911 he commanded the troops at Wu-chang. Vice-president in turn to Sun Yat-sen and Yuan Shih-kai, he was president 1916-17 and 1922-23, and died June 3, 1928.

LIZARD (Lat. *lacerta*). Name applied commonly to any small four-limbed and tailed reptile or batrachian. Modern biologists, however, restrict its use to the scale-clad sub-order Lacertae of the reptilian order Lacertilia, and so exclude the geckos and chameleons. So restricted, the lizards comprise about 1,500 known species, divided into 18 families. The family Lacertidae, with about 100 species, includes all the true lizards in the narrower sense. These are represented in Britain by the common Lizard (*Lacerta vivipara*) and the sand lizard (*L. agilis*). In Ireland the common lizard is the sole representative of the Reptilia. With the exception of the Polar regions the distribution of the lizards is world-wide. Lizards are almost exclusively carnivorous. The American Gila Monster belongs to the only known family of poisonous lizards. See *Amphisbaena*; *Basilisk*; *Blindworm*; *Chameleon*; *Friiled Lizard*; *Gecko*; *Glass Snake*; etc.

LIZARD, THE. Most southerly point of England. It is in Cornwall, 10 m from Helston, its nearest rly. station. The name is also given to the peninsula which terminates in Lizard Point (186 ft.). At Poldhu is a wireless station. There is a lighthouse

LLAMA. Group of mammals belonging to the camel family. They are smaller than the camel, are of lighter build, and have no hump. The tail is shorter, the woolly hair usually longer, and the dentition different. Llamas occur only in the S. and W. of S. America. The wild species are known as the guanaco and the vicuña, and it is a domesticated breed of the former which is usually known as the llama, another and smaller breed being called the alpaca. The llama is about the same size as the wild guanaco (q.v.) and is usually white. It is much used as a beast of burden in the Andes.

Llama, the South American member of the camel tribe
Gambier Bolton, F.Z.S.

known as the llama, another and smaller breed being called the alpaca. The llama is about the same size as the wild guanaco (q.v.) and is usually white. It is much used as a beast of burden in the Andes.

LLANBERIS. Village of Carmarvonshire, Wales. It is 9 m. S.E. of Carmarvon on the L.M.S. Rly. Romantically situated between two small lakes, Llanberis is a centre for tourists. Its pass is a notable beauty spot, and the Snowdon mountain railway starts from here. Slate is extensively quarried. Pop. 2,373.

LLANDAFF. City of Glamorganshire, now part of Cardiff. It stands on the Taff, near Cardiff, with a station on the G.W.R. The cathedral, practically rebuilt in the 19th century, incorporates some part of the Norman building and a 15th century tower. There is a school for girls maintained by the Howell Trust, and the city has an old stone cross. Market day, Sat. Pop. 13,277.

LLANDEBIE OR LLANDYBI. Coal mining and ironstone working centre of Carmarthenshire, Wales. It is 12 m. N.N.E. of Llanelli, on the G.W.R. Pop. 8,019.

LLANDILO OR LLANDEILO. Urban dist. and market town of Carmarthenshire, Wales. It stands on the Towy, 15 m. E. of Carmarthen, with stations on the G.W. and L.M.S. Rlys. The chief building is the church of S. Teilo. The town owes its growth to the castle of Dinefawr, built here in the 9th century. Near its ruins is the 17th century Dynevor Castle. Market day, Sat. Pop. 2,120.

LLANDILO GROUP. Subdivision of the Ordovician rocks found typically at Llandilo. The rocks consist of a series of slates, shales, calcareous flagstones, and sandstones. The group is found in N. Wales, Cumberland, Pembrokeshire, and parts of Scotland.

LLANDOVERY. Mun. bor. and market town of Carmarthenshire, Wales. It is 26 m. from Carmarthen, on the L.M.S. Rly. There are remains of a castle built in the 12th century. The town has horse and cattle fairs. Market day, Fri. Pop. 1,332.

LLANDOVERY COLLEGE. A British public school, founded and endowed by Thomas Dinefawr, and has about 150 boys.

LLANDOWERY GROUP. Lowest division of the Ordovician rocks in Britain. Llandovery rocks are used for roads, pavement and

LLANIDLOES. Urban dist. of Radnorshire, Wales. It is 45 m. from Llanidloes, on the L.M.S. Rly. It is famous for its sulphur, and has a station on the G.W.R. The old parish

Liverpool. Plan of the central districts of the city.

LLANDUDNO. Watering place and urban district of Carnarvonshire, Wales. It stands on the N. coast of the co., just to the east of Great Orme's Head. On the L.M.S. Rly., it has a good promenade, a fine pier, golf links, and other attractions for visitors. The restored church of S. Tudno is said to date from the 7th century. Pop. 15,500.

LLANDYSSUL. Market town and parish of Cardiganshire, Wales. It stands on the Teih, and has a station on the G.W.R. Woollens are made. Near are the remains of two castles. Market day, Tues. Pop. 2,688.

LLANELLY. Seaport, mun. bor., and market town of Carmarthenshire, Wales. It stands on Burry Inlet, an opening of Carmarthen Bay, 12 m. from Swansea, with a station on the G.W.R. It is the centre of the tinplate industry and has works for refining copper and making chemicals, etc., and extensive docks, including a large floating dock, from which coal is exported. Market day, Thurs. Pop. 37,180.

LLANFAIRFECHAN. Urban district and seaside resort of Carmarvonshire, Wales. It stands at the foot of Penmaen Mawr Mt., 8 m. S.W. of Conway on the L.M.S. Rly. There is good bathing. Pop. 3,083.

LLANGAMMARCH. Village and inland watering place of Brecknockshire, Wales. It is 15 m. N.E. of Llandovery on the L.M.S. Rly., and has a spring containing chloride of barium. Pop. 740.

LLANGFNI. Urban district and market town of Anglesey, Wales. It stands on the Cefni, 8 m. N.N.W. of Carnarvon, with a station on the L.M.S. Rly. There is a trade in agricultural produce. Market day, Thurs. Pop. 1,691.

LLANGOLLEN. Urban dist. and market town of Denbighshire, Wales. It stands on the Dec, 9 m. from Wrexham, and has a station on the G.W.R. An old bridge (14th century), crosses the Dec here, and near by are the remains of an old castle and Cistercian abbey. The church of S. Collen is partly Norman. Flannel is manufactured, and around are coal mines and limestone quarries. The vale of Llangollen is 8 m. in length. The house, Plas Newydd, where the ladies of Llangollen, Lady Eleanor Butler and the Hon. Sarah Ponsonby, lived in retirement for 50 years, is an object of much interest. Market day, Tues. Pop. 3,680.

Llandaff. Cathedral church of SS. Dabidus and Teilo, restored 1843-69

manufactured, and around are coal mines and limestone quarries. The vale of Llangollen is 8 m. in length. The house, Plas Newydd, where the ladies of Llangollen, Lady Eleanor Butler and the Hon. Sarah Ponsonby, lived in retirement for 50 years, is an object of much interest. Market day, Tues. Pop. 3,680.

Llangollen, N. Wales. The Dee and 14th cent. bridge, counted as one of the three wonders of N. Wales
Frith

LLANHILLETH OR LLANHIDDEL. Coal mining centre of Monmouthshire, Wales. It stands on the Ebbw, 8 m. from Pontypool, and has a station on the G.W.R. Pop. 10,950.

LLANIDLOES. Mun. bor. and ancient market town of Montgomeryshire, Wales. It stands on the Severn, 19 m. from Montgomery, with a station on the G.W.R. The old parish

church of S. Idloes was restored in the 19th century. Flannel is manufactured, and in the neighbourhood are lead mines. Market day, Sat. Pop. 2,590.

LLANOS (Sp. plains). Name given in S. America to treeless plains or prairies and particularly to the tropical grasslands or savannas in the basin of the Orinoco river. Large numbers of cattle are reared on the llanos, but industry is impeded by the summer floods and the drought of the dry winter season. Pron. Yah-nos.

LLANRWST. Market town, urban dist., and tourist centre of Denbighshire, Wales. It stands on the Conway, and has a station on the L.M.S. Rly. The church of S. Grwst is modern. An adjacent chapel, built by Inigo Jones (who also designed the bridge over the Conway), contains some ancient work removed from an abbey. In 1928 the earl of Ancaster presented an Elizabethan house for use as a town hall. The chief industries are tanning and malting. Market day, Tues. Pop. 2,368.

LLANSAMLET. Two parishes of Glamorganshire, Wales, known as Higher and Lower. They stand on the Tawe, 3 m. from Swansea, on the G.W.R. The chief industries are coal mining and copper smelting. Pop. 6,671.

LLANTARNAM. Urban dist. of Monmouthshire, England. It is 3½ m. from Newport, on the G.W.R. The chief industry is coal mining. In the Middle Ages there was a Cistercian abbey here. The existing Llantarnam Abbey was partly built from the material of an older one. Pop. 7,800.

LLANTHONY. Ruined abbey in Monmouthshire, England. It stands on the Honddu river, 9 m. N. of Abergavenny, and was founded by the Austin Friars in 1107. About 4 m. away is the abbey founded in 1870 by Father Ignatius. Just outside Gloucester are the scanty ruins of another Llanthony Abbey, an offshoot of the older one in Monmouthshire.

LLANTRISANT OR LLANTRISAINT. Parish of Glamorganshire, Wales. It is 11 m. from Cardiff, on the G.W.R. Of its castle, reputed one of the strongest in Wales, little remains. There is an old church dedicated to three saints, hence the name of the town, which was incorporated from the 14th century till 1883, when the corporation was dissolved. Pop. 21,946.

LLANTWIT MAJOR. Market town of Glamorganshire, Wales. It is 5 m. from Cowbridge, on the G.W.R. In the 6th century a saint named Illtyd established a monastery here which became famous as a missionary centre and for its school. The church, which dates from the 13th cent., was rebuilt in the 14th cent. and restored between 1900-5. Near the town are remains of a Roman villa. Market day, Mon. Pop. 1,504.

LLANWRTYD WELLS. Urban dist. and inland watering place of Brecknockshire, Wales. It stands on the Irfon, has a station on the L.M.S. Rly. and is noted for its springs and its trout fishing. The springs are of chalybeate and sulphur and were widely known in the 19th century. The attractions include the Abernart pleasure grounds.

LLEWELLYN, SIR WILLIAM (b. 1863). British painter. Born in Dec., 1863, he was elected A.R.A. in 1912, R.A. in 1920. In 1918 he was knighted, and in 1928 was chosen president of the R.A. He is chiefly known for his many portraits, one being the state portrait of Queen Mary.

Sir W. Llewellyn, British painter
Russell

LLEWELYN (old Welsb, lion-like). Name of two princes of N. Wales. Llewelyn the Great, who reigned 1194-1239, married King John's daughter Joan, 1206, and conquered most of S. Wales. He submitted to Henry III in 1237, and retired to a monastery at Aberconway, where he died April 11, 1240. His grandson, Llewelyn ab Gruffydd, became prince about 1246, in succession to his uncle David. His life was mainly passed in wars with England, and he was killed in 1282.

LLOYD, GEORGE AMBROSE LLOYD, 1st BARON (b. 1879). British diplomatist and administrator. Member of a well-known Warwickshire family, he was born September 19, 1879, and educated at Eton and Cambridge. Having travelled a good deal in the East, he was elected Unionist M.P. for W. Staffordshire in 1910. From 1919 to 1923 he was governor of Bombay, and in 1924 he returned to Parliament as M.P. for Eastbourne. In 1925 he was appointed high commissioner for Egypt and the Sudan and made a peer. He resigned in 1929 owing to differences of opinion with the Labour Government.

LLOYD, EDWARD (1815-90). British newspaper proprietor. Born at Thornton Heath, Surrey, Feb. 16, 1815, he founded Lloyd's Weekly London Newspaper, Nov. 27, 1842, and in 1876 established The Clerkenwell News as The London Daily Chronicle. He also founded large paper mills at Sittingbourne, Kent. He died April 8, 1890.

LLOYD, EDWARD (1845-1927). British singer. Born London, Mar. 7, 1845, he became a chorister of Westminster Abbey, and in 1869 a gentleman of the Chapel Royal. From 1871 until his retirement in 1900 he was regarded as the leading tenor singer in England. He died Mar. 31, 1927.

LLOYD'S. Name of the corporation of marine underwriters in London. The business originated about 1688 in a coffee-house opened in Tower Street by Edward Lloyd (d. 1726). Men interested in shipping met there for refreshment, made it a place of business, and in 1692 Lloyd obtained larger premises at the corner of Lombard Street and Achechurch Lane. In 1696 Lloyd's News, afterwards Lloyd's List, a record of the movements of ships, was first issued. In 1774 Lloyd's moved into the Royal Exchange, the S.E. portion of which was its headquarters until 1928, when its new building in Leadenhall Street, designed by Sir E. Cooper, was opened.

LLWYNPIA. Mining district of Glamorganshire, Wales. It is 9 m. S. by W. of Merthyr Tydfil, on the G.W. Rly. Coal is extensively mined. Pop. 18,700.

LOACH. Small fresh-water fishes of the carp family, of which the common loach (*Nemachilus barbatulus*) is the best known. A native of the greater part of Europe, it is common in shallow, gravel-bottomed streams in Britain, especially in the mountainous districts. The back is dark green and the sides are yellow, the upper parts marbled with brownish-black. An allied species, the spiny loach (*Cobitis taenia*), is found in England, but not in Scotland or Ireland. It has an erectile spine in front of each eye.

LOAD. In engineering, term applied to the work an engine, generator, or motor is built to perform. The expression is also applied to the loading of vehicles, cranes, etc. The word denotes also a unit of weight, e.g. a load of hay is 36 trusses weighing 2,016 lb., if old, and 2,160 lb. if new hay. In aeronautics, loading is the term used to denote the weight carried per sq. ft. of wing surface.

LOAD LINE. Plimsoll mark carried amidships on each side by every British mercantile ship. It shows the maximum depth to which she may be loaded in salt water, in fresh water, at different times of the year, and in different oceans, etc. See Plimsoll, Samuel.

Load Line, or Plimsoll mark

LOBBY. Word meaning a waiting-room or passage to a more important apartment. In a special sense it is used for the entrances to the Houses of Lords and Commons, and to those of other legislative buildings; also for the two corridors through which M.P.s pass to record their votes.

Lobbying is a term used for the practice of calling upon members of a legislative assembly, e.g. the House of Commons, in the lobby to secure their support for a measure. It is also applied to the work of journalists who act as political correspondents and are given a right of entry to the lobby.

LOBELIA. Genus of hardy and half-hardy perennial and annual plants of the order Campanulaceae, natives of tropical and temperate regions. The genus is named after M. de L'Ohel, physician to James I.

Lobelia. Leaves and flowers of the blue dwarf variety

The blue great lobelia was introduced from N. America in 1665. The familiar blue dwarf lobelia, used as an edging and carpet plant for summer bedding, is *L. crinus*. It is a native of S. Africa.

LOBENGULA (c. 1833-94). Matabel king. Succeeding his father in 1870, he exhibited violent animosity towards Europeans. He accepted the protection of Britain in 1888, but, conceiving himself affronted by the British South Africa Company, revolted five years later. His forces were dispersed in a battle near Bulawayo, and he died Feb. 9, 1894.

LOBITO BAY. Harbour situated a few m. N. of the port of Benguela, Portuguese W. Africa. It is one of the finest harbours on the W. coast of Africa, and the largest vessels can anchor within 30 ft. of the shore. Lobito Bay is the starting point of the Benguela-Beira rly.

LOBSTER. Name given to several species of decapod (ten-footed) crustaceans. With pincer-like limbs on the thorax, they are distinguished from the crab-like forms by the possession of a large cylindrical tail. The name is usually restricted to *Astacus gammarus*, the common lobster of the markets, and to

A. americanus. In this species the carapace is almost cylindrical, and is bluish black in colour, the familiar red hue being the result of boiling. Good specimens weigh from 8 lb. to 11 lb. See Arthropoda; Crawfish.

LOB WORM or **LUG WORM** (*Arenicola marina*). Species of marine worm, largely used for bait. It resembles a dark brown or greenish earthworm with thirteen pairs of branched red gills along the sides of its segmented body. It is common in the muddy sand between tide marks, where its burrows may be recognized by the heaps of casts. See illus. p. 92.

LOCAL GOVERNMENT. Term used in the United Kingdom and elsewhere for the system by which local areas are allowed to manage certain of their own affairs. The chief areas of local government are counties, cities, boroughs of various kinds—in Scotland burghs—urban and rural districts, and parishes. In Great Britain in 1834 the system of local government by elected representatives was introduced into the boroughs, and in 1888 into the counties. In 1894 urban and rural councils, also elected bodies, were created. On April 1, 1930, wide changes took place as the result of the Local Government Act of 1929, the functions of all poor law authorities being transferred to the co. and bor. councils.

Lobster. Specimen of the common variety, *Astacus gammarus*

The Local Government Board was a department of state established in 1871 to look after the administration of the poor law and the work of local authorities generally. In 1919 it became the ministry of health. There was a local government board for Scotland, now the department of health.

LOCAL OPTION. Term meaning that a locality, town, or county, or other

area, is given the power to decide what course it shall take on a given question, specifically in regard to questions affecting the sale of intoxicating liquor.

By an Act passed in 1913 Scotland has local option. In each area the electors can decide whether or not intoxicating liquor shall be sold. A poll can be held if one-tenth of the electors ask for it.

LOCARNO. Town of Switzerland, in the canton of Ticino. It stands at the N. end of Lago Maggiore, 13 m. by rly. S.W. of Bellinzona, and was taken by the Swiss from Milan in 1803. The old castle of the Visconti is now a law court and prison. On a hill stands the pilgrimage church of the Madonna del Sasso, founded in 1569. The treaty of Locarno, known as the European Security Pact, was signed here, Oct. 16, 1925. Pop. 5,541.

LOCHABER. Mountainous district of Inverness-shire, Scotland. In the neighbourhood of Lochs Linnhe, Leven, and Eil, it is the centre of a £6,000,000 hydro-electric power scheme. The Lochaber axe, formerly a weapon of the Highlanders and Irish, is a form of bill with a hook at the back.

LOCHEE. District of Dundee. It has a station on the L.N.E.R. The title of Baron Lochee of Gowrie was borne by Edmund Robertson (1845-1911). He was civil lord of the admiralty, 1892-95; and secretary to the admiralty, 1905-8.

LOCHGELLY. Burgh of Fifeshire, Scotland. It stands near Loch Gelly, 7 m. N.E. of Dunfermline, with a station on the L.N.E.R. It is a coal-mining centre. Pop. 10,666.

LOCHMABEN. Burgh of Dumfriesshire, Scotland. It stands on the Annan, 8 m. from Dumfries, with a station on the L.M.S. Rly. In two of the neighbouring lochs vendace, a rare fish, is found. Lochmaben Castle, now a ruin, belonged to the Bruces, and the town has associations with Robert Bruce. Pop. 989.

LOCHY. Loch or lake of Inverness-shire, Scotland. Part of the Caledonian Canal system, it is drained by the river Lochy to Loch Linnhe. It has salmon and trout fisheries.

LOCK. Enclosure in a navigable waterway provided with water-tight entrance gates at each end, by means of which boats are enabled to pass from one water level to another. To transfer a boat from high to low level the gates at the lower end are closed, and water is admitted through sluices until it has risen within the lock to the higher level. The gates at the upper end are then opened, the boat enters and they are again closed. Water is then discharged through another set of sluices until it has fallen in the lock to the lower level, when the gates at the lower end are opened and the boat is free to pass out. By reversing the process a boat may be lifted from low to high water level.

Locks vary greatly in size, from those for small craft on upper reaches of rivers, to locks which accommodate the largest ocean-going vessels, such as those on the Panama canal.

LOCK. Device commonly comprising a sliding bolt shot by a key for securing a box-lid, door, or other contrivance. The simplest modern form is the common spring lock, usually fitted with wards or wheels. In the Chubb lock spring-pressed tumblers are lifted by a key to permit the shooting of the bolt. Combination locks used for securing safes have two or more disks, each with a notch in its periphery, mounted upon a spindle turned by a knob or handle. On turning the spindle according to a given plan or combination the peripheral notches in the disks are brought into register with each other. The mechanism which has obstructed the bolt then falls into the registering notches, and the bolt is free.

Revolving plugs, as in the Yale lock, comprise a series of spring-pressed pins raised to permit the rotation of a barrel carrying a cam for shooting the bolt, by a flat key having a serrated edge.

LOCKE, JOHN (1632-1704). English philosopher. Born at Wrington, Somerset, Aug. 29, 1632, and educated at Westminster and Christ Church, Oxford, he was a tutor at Christ Church, and there studied medicine and meteorology, also practising as a physician. In 1666 he became private secretary to the earl of Shaftesbury, with whose career he was associated for nearly 15 years, being for three of them secretary of the board of trade. In 1690 appeared his *Essay Concerning Human Understanding*, to the fourth edition of which, in 1700, he added the famous chapter on the association of ideas. He died Oct. 28, 1704.

As a philosopher, Locke's chief argument is that all knowledge is limited by the extent of our experience. In his *Two Treatises on Government* he states the case for the ultimate sovereignty of the people. His *Letters Concerning Toleration* are arguments for liberty of thought. His other writings include *Thoughts Concerning Education*, 1693; and *The Reasonableness of Christianity*. He also wrote on monetary subjects.

LOCKE, WILLIAM JOHN (1863-1930). British novelist and dramatist. Born in Barbados, March 20, 1863, he was educated at St. John's College, Cambridge. Originally an architect, he wrote many highly successful romantic novels. They include *The Morals of Marcus Ordeyne*, *The Beloved Vagabond*, *The Joyous Adventures of Aristide Pujol*, *Stella Maris*, *Jaffery*, *The Rough Road*, *The Great Pandolfo*, and *The Old Bridge*. A

volume of short stories, *The Town of Tombarel*, appeared a few weeks before his death, which took place in Paris, May 16, 1930.

W. J. Locke,
British novelist
Russell

Locke left a novel in MS. form, *The Shorn Lamb*. His plays include *The Morals of Marcus* and *The Beloved Vagabond*, adapted from his novels, and *The Man from the Sea*.

LOCKERBIE. Burgh of Dumfriesshire, Scotland. It is 10 m. from Dumfries, with a station on the L.M.S. Rly. There is an old border tower used as the police station. Cattle and sheep fairs are held. Pop. 2,500.

LOCKER-LAMPSON, FREDERICK (1821-95). British poet and parodist. He was born, May 29, 1821, at Greenwich Hospital, where his father, E. H. Locker, was civil commissioner, and died at Rowfant, Sussex, May 30, 1895. His *London Lyrics*, 1857, and *London Rhymes*, 1882, prove him a poet of crowds, of the assembly and the hospital, the opera and the slum. The Rowfant Library, 1886, records his work as a collector. His son-in-law, Augustine Birrell, edited his autobiographical reminiscences in 1896, and wrote a sketch of his life in 1920.

Two of Locker-Lampson's sons, Godfrey and Oliver, have made their mark in Parliament. Godfrey, privy councillor, was under-secretary for foreign affairs 1925-29. Oliver served in Russia during the Great War and was awarded the D.S.O.

LOCKHART, JOHN GIBSON (1794-1854).

Scottish author and editor. Born July 14, 1794, at the manse of Cambusnethan, and educated at Glasgow High School, Glasgow University, and Balliol College, Oxford, he became a member of the Scottish bar. In 1818 he met Sir Walter Scott, and two years later married Scott's elder daughter, Sophia. Editor of the *Quarterly Review* 1825-1853, he died Nov. 25, 1854. Lockhart's title to fame is his *Life of his father-in-law*, published in 1837-38.

LOCKHART, WILLIAM EWART (1846-1900). Scottish painter. Born at Annan, Dumfriesshire, Feb. 18, 1846, in 1878 he became a member of the Royal Scottish Academy. His success as a portrait painter was considerable, and his subject pictures, many based on travels in Spain, were widely praised. He died in London, Feb. 9, 1900.

LOCKJAW or **TETANUS** (Gr. *teincin*, to stretch). Acute infectious disease caused by the *Bacillus tetani*. This micro-organism and its spores are very widely distributed in the soil of gardens and fields. Infection may occur through a wound in the hand, and in civil life the disease is frequently found among gardeners. The injection of a preventive dose of the anti-tetanic serum into all who had been wounded proved the means of saving many thousands of lives during the Great War.

LOCKWOOD, WILLIAM (b. 1868). English cricketer. Born March 25, 1868, he played first for Nottinghamshire, and then for Surrey, for which county he did good work, especially as a bowler. In 1891, playing against Warwick at the Oval, he captured four wickets with successive balls, and in 1899 and 1900 he made well over 1,000 runs and secured more than 100 wickets. He played for England against Australia in 1893, 1899, and 1902.

LOCKYER, SIR JOSEPH NORMAN (1836-1920). British astronomer. Born May 17, 1836, at Rugby, he became a clerk at the War Office in 1857, and devoted his leisure time to astronomy. Between 1870 and 1905 he led eight eclipse expeditions on behalf of the British government. In 1913 he became director of the Hill Observatory (now the Norman Lockyer Observatory) at Salcombe Regis, near Sidmouth. Knighted in 1897, Lockyer was president of the British Association in 1903-4, and died at Sidmouth, Aug. 16, 1920. It was in 1868 that Lockyer first made the discovery with which his name is always associated, a method of observing the prominences of the sun independently of the occurrence of an eclipse. He carried out many spectroscopic researches into the chemistry of the sun.

Norman Lockyer,
British astronomer
Russell

Locomotive. 1. Blenkinsop's Leeds locomotive, the first engine commercially used, 1812. 2. The Rocket, built by Stephenson, 1825. 3. Stephenson's North Star, 1837. 4. L.M.S. Rly. locomotive, built in 1847, which, after reconstruction, was still running in 1930. 5. Three-cylinder express locomotive of the Royal Scot class; its total weight is 127 tons 12 cwt., with boiler pressure of 250 lbs. per square inch. See p. 883

No. 5 by courtesy of the L.M.S. Railway

LOCOMOTIVE. Modern railway locomotives may be arranged in three groups: steam, internal combustion engine, and electric. Most locomotives now in use still belong to the first group, and are essentially similar to those built by the Stephenson, having the square firebox or furnace, long fire tubes, simple engines, and the steam blast in the chimney. Modern improvements have been directed to raising the steam pressure, lengthening the boiler, "compounding" the engines, that is, using the steam twice over in separate cylinders, pre-heating the feed water and superheating the steam. Others are the substitution of powdered coal, with mechanical stoking, or oil fuel, for lump coal, and, finally of water tube boilers for the old fire tube system.

The steam pressure of Stephenson's Rocket when it made its trials was 50 lbs. to the sq. inch. To-day pressures of 250 lbs. are common; a pressure of 850 lbs. with water tube boilers is in use in Germany, and pressures of 400 lbs. to 500 lbs. in the United States; while in Britain the L. and N.E. Rly. have a Yarrow type water tube boiler locomotive working at 450 lbs. The Rocket with its tender weighed about seven tons and drew a load of under 20 tons. A modern American locomotive weighs from 200 tons to 300 tons and draws a load of from 3,000 to 3,750 tons.

The Diesel type of oil engine is the form of internal combustion engine which is being used with more or less success on locomotives, though difficulties have yet to be overcome in its application.

Electric locomotives are of two classes. One consists of an electric motor, with its control apparatus, fixed in a special carriage and connected with the axle or axles of the carriage. The necessary current is picked up either from a rail on the track or from a wire overhead; in some electrically driven trains the power units are housed in one end of a passenger coach.

In the other class of locomotive the electric current is generated in the carriage itself, a Diesel oil engine being chiefly used for this purpose. An attempt is also being made to combine steam and electricity in the same locomotive, using water tube boilers and steam turbines, with powdered coal or oil-fired boilers. See illus. p. 882.

LOCOMOTOR ATAXIA or **TABES DORSALIS.** Disease due to changes in and degeneration of the nerve tissues and cells in the spinal cord. The real cause is syphilis, but the precipitating cause may be worry, physical stress or strain, or exposure to cold and wet. The disease is more common in men than in women. The symptoms may not appear until 20 or 30 years after the original infection. After the disease has persisted for a variable period, which may extend to several years, the patient becomes paralysed, and death usually occurs from pneumonia or tuberculosis.

LOCUST. Large species of short-horned grasshopper (Acridiidae). In hot climates locusts multiply at an alarming rate; and the nymphs, or immature locusts, which cannot fly, march steadily across country, devouring every green thing. In recent years tremendous damage has been

caused by locust plagues in the Southern Sudan, Kenya, and Palestine. In 1930 a wall of zinc sheeting was erected as a barrier along 20 m. from Beersheba to the coast. Pits are dug into which the locusts are driven, and aircraft and flame-throwers have been employed in fighting the pest. Much is done by collecting and destroying the eggs.

Locust Bean. A name for the pod of the carob tree. See Carob.

LODDON. River in the S. of England. It rises near Old Basingstoke, Hampshire, and flows 31 m. N.E. through S.E. Berkshire to the Thames at Wargrave.

Locomotive. Modern type of electric locomotive on Metropolitan Rly. Top, electric locomotive on L.N.E.R.

LODGE, HENRY CABOT (1850-1924). American statesman. Born at Boston, May 12, 1850, and educated at Harvard, he became a barrister in 1876. Sent in 1880 to the House of Representatives of Massachusetts, in 1887 he was elected a member of Congress. Eight years later he became a senator, being re-elected in 1899, 1905, 1911, and 1917, and becoming Republican leader in the Senate. He wrote *Lives of Washington, Hamilton, and Webster*; *One Hundred Years of Peace, 1913*, and edited the *Life and Letters of George Cabot*. He died Nov. 9, 1924.

LODGE, SIR OLIVER JOSEPH (h. 1851). British scientist. Born June 12, 1851, at Penkhill, Staffs, he was educated at Newport Grammar School and University College, London, where he was made assistant professor of applied mathematics in 1879. Professor of physics in University College, Liverpool, 1880-1900, he was principal of the university of Birmingham, 1900-20. In 1913 he was president of the British Association. He was made a knight in 1902, and his many other honours include the F.R.S.

Lodge's great work was done in examining the nature of ether and in wireless telegraphy. His scientific works include *Modern Views of Electricity*, 1889, rev. ed. 1907; *Life and Matter*, 1905; *Man and the Universe*, 1908; *Modern Problems*, 1912; *Ether and Reality*, 1925; *Relativity*, 1925; and *Science and Human Progress*, 1927.

Lodge devoted much time to the study of psychical research, and was president of the society, 1901-04. He wrote *Raymond, or Life and Death*, 1916, Raymond being his son, killed in the Great War, and *Why I Believe in Personal Immortality*, 1928.

LODGE, THOMAS (c. 1558-1625). English dramatist. The second son of Sir Thomas Lodge (d. 1584), lord mayor of London, he passed from Merchant Taylors' School to Trinity College, Oxford, and was a student at Lincoln's Inn. From his *Rosalynde*, a euphuistic romance, founded on the 14th century tale of Gaimyn, Shakespeare drew the plot of *As You Like It*. He collaborated with Robert Greene in *The Looking-Glass for London and England*, in which the

Locust. Specimen of migratory locust, *Schistocerca peregrina*

Biblical story of Nineveh is applied to the English capital, and composed a satire, *A Fig for Momus*, directed against critics.

LODGER. In English law, a tenant of a room or rooms, furnished or unfurnished, in the house of another person. The latter retains general control over the house as its master, while granting exclusive possession of the part to his tenant.

The Representation of the People Act, 1867, conferred the lodger franchise upon occupiers of lodgings in boroughs of the yearly value of £10 if let unfurnished and without attendance, and this franchise was extended to lodgers in the counties by the Act of 1884. The Franchise Act of 1918 reduced the qualifying period to six months. See Reform Acts.

LODI. City of Italy, in the prov. of Milan. It stands on the river Adda, 20 m. by rly. S.E. of Milan. Its fine cathedral dates from the 12th century. Pop. 20,000.

At the bridge of Lodi, on May 10, 1796, Napoleon defeated the Austrians, and marched to Milan. It was at Lodi that Napoleon was first called Le Petit Caporal.

LODY, CARL (d. 1914). German spy. A lieutenant in the German naval reserve, he constantly visited British ports before the Great War under the guise of a guide. After the outbreak of the war he was in London and at Rosyth. He was responsible for the sinking of the British cruiser *Pathfinder* by forwarding a telegram. From London he moved to Liverpool and Killarney, where he was arrested. Lody was shot in the Tower, Nov. 6, 1914, the first German spy executed in Great Britain during the war.

LODZ. Town of Poland. It is in the government, and 30 m. N.W., of Piotrkow, 75 m. S.W. of Warsaw, on the Lodka, and the headquarters of the textile industries of Poland. Other industries are brewing, distilling, the making of bricks steam boilers, and machinery. Pop. 597,000.

In the Great War an assault was made by the Germans on the town on Nov. 27-28, 1914, but was repulsed with heavy losses to them. About Dec. 2-3 a determined effort was made to take it by storm from Zgierz, but the attackers were driven back by fierce Russian counter-attacks. As, however, the German pressure increased, it was decided to evacuate the town, and this was effected on the night of Dec. 5 without loss.

LOEFFLER, FRIEDRICH (1852-1915). German bacteriologist. Born at Frankfurt-on-Oder, June 24, 1852, he was educated at Würzburg and Berlin universities. In 1882 he announced the discovery of the bacillus of glanders, and in 1884 the bacillus of diphtheria, his most notable discovery. With other investigators he carried out a series of researches into foot and mouth disease and malaria. He died April 8, 1915.

LOESS (Ger.). Fine-textured siliceous and calcareous earth, in some instances transported by the aid of water, in others by wind. A large part of N. China is covered by loess deposits. Large deposits are also found in Central U.S.A. and Central Europe. Included in the latter are the famous Black Earth Lands of S.W. Russia. Pron. lō-ess.

LOFODEN ISLANDS. Two groups of islands off the N.W. coast of Norway, to which they belong. Andø, Langø, and Hindø are sometimes known as the Vesteraalen Islands, and Moskenäsö, Flakstadö, and E. and W. Vaagö, Lofotodden, Vaerö, etc., as the Lofoden Islands proper. Between Lofotodden and Vaerö is the Maelström. The islands are mountainous and deeply indented. Dried fish is exported. Total area, 1,565 sq. m. Pop. 47,000.

LOFTUS or **LOFTHOUSE.** Urban dist. of Yorkshire (N.R.). It is 11 m. from Whithy, on the L.N.E.R. There are iron works and stone quarries. Pop. 9,012.

LOFTUS, MARIE CECILIA (b. 1876). British actress, popularly known as Cissie Loftus. Born in Glasgow. Oct. 22, 1876, she first appeared on the stage at Belfast in 1892, and in 1893 came to London, achieving great success by her impersonations of actors and actresses. In 1900 she toured in America, and in 1902 played at The Lyceum, London. In 1903 she rejoined Sothern's company in the U.S.A., but returned to England in 1915.

LOG. Apparatus used to measure the speed of a ship through the water. The early form consisted of a triangular piece of wood known as a chip. This was attached to a line knotted in spaces of 50 feet and thrown into the water, the speed being estimated by the number of knots paid out on the line when a sandglass, of the same proportion to an hour that 50 feet is to a mile, had emptied. The modern device spins, the rope rotating pointers on a dial or dials.

The speed of the vessel is entered in a hook called the log hook, in which are also recorded wind direction, weather, misdemeanours on the part of the crew, and other nautical data. The use of the log is first known from the writings of Purchas in 1607. See Knot.

Loganberry. Leaves, fruit, and (inset) flower of the shrub

LOGANBERRY. Hardy fruit-bearing shrub of the natural order Rosaceae. The berries are brownish red, and the plant is a hybrid between blackberry and raspberry. James H. Logan, its producer, died at Oakland, California, Aug. 3, 1928.

LOGGIA. Open gallery embodied in the side of a building so as to form a shelter. In combination with column and open arch it is a characteristic feature of Italian architecture, medieval and modern, and is frequently employed by the designers of country houses. A verandah is a form of loggia. See Architecture.

LOGIA (Gr. sayings). Name given to several fragmentary "Sayings of Jesus," on 3rd cent. papyri, found in Egypt by B. P. Grenfell and A. S. Hunt in 1897 and 1903. Whether authentic or not, they preserve an early tradition.

LOGIC (Gr. gathering, reasoning). Science of the laws of thought. As a systematic study, logic began in Athens in the 5th century B.C., and the Greek logicians had in mathematics a standard of exact knowledge which they could contrast with the belief or opinion imparted by the orator. But regarding logic as an inquiry into the nature of knowledge, we cannot study it without also studying metaphysics, an inquiry into the general nature of what is known.

Aristotelian logic laid down a certain type of reasoning, called syllogistic, the deduction of a conclusion from given premises. Modern logic concerns itself firstly with a study of the method of the different sciences, and must pass from a consideration of method, which is its primary task, to a consideration of the ultimate nature of reality, and the relation of mind to the rest of reality, inquiries which are properly called metaphysical. See Aristotle; Metaphysics.

LOGONE. River and native state of Africa. The river rises in Cameroons (q.v.) and forms the boundary between Cameroons and French Equatorial Africa.

Formerly a vassal state of Bornu, the state of Logone now forms part of Cameroons. The native capital is at Birni Logone. The administrative centre is Küsseri.

LOGWOOD OR **CAMPEACHY WOOD** (Haematoxylon campechianum). Evergreen tree of the order Leguminosae. A native of Central America and W. Indies, its

leaves are divided into three or four pairs of egg-shaped leaflets, and the yellow flowers are produced in long sprays. The fruit is a thin pod. The heart-wood is brownish-red in colour, hard and heavy. Cut into chips, it furnishes, in combination with indigo and other materials, a fine black dye.

Logwood. Foliage and flowers of the American evergreen tree

LOHENGRIN (i.e. Garin of Lorraine). In medieval German romance, one of the heroes of the Grail cycle. The son of Parsifal and a knight of the Holy Grail, he was conveyed by a swan through the air to rescue Elsa, daughter of the duke of Brabant. Overcoming her enemy, he married Elsa, who was not to inquire of him as to his origin. She persisted in doing so, and when he was persuaded to tell her, the swan carried him away again to the Grail. Wagner took this legend as theme for his opera, Lohengrin, 1848.

LOHR, MARIE (b. 1890). British actress. Born in Sydney, July 28, 1890, she appeared on the stage in that city when quite a child. In 1901 she made her first appearance in London and acted with Sir H. Beerhohn Tree and Sir John Hare. From 1918 to 1925 Miss Lohr was manager of the Gaiety Theatre, London, producing L'Aiglon and other plays.

LOIRE. Longest river of France. It rises in the Cévennes, and flows some 610 m. to the Atlantic at St. Nazaire. It is subject to sudden floods. On its banks are Orléans, Blois, Tours, Angers, and Nantes. For small vessels the Loire is at times navigable for a great part of its course, but for safety there are a number of canals, some of which are cut parallel to the river, which they rejoin.

Loki. In Scandinavian mythology, giant of a race that reigned before the gods, the personification of fire as a destructive agent.

LOLLARDS. Name given in England in the 14th and 15th centuries to the followers of John Wycliffe (q.v.). It is derived from the Dutch lollen, to sing in an undertone, the name Lollard having been applied to the members of an association for burying the dead, founded at Antwerp about 1300. The Lollards attacked ecclesiastical endowments, the hierarchy, clerical celibacy, the Mass, and prayers for the dead; charged the clergy with immorality, and denounced war and capital punishment. Generally the Lollards were a poor and an unlettered people, and though repressed after 1401 by Church and State, they prepared the way to some extent for the Reformation. Part of Lambeth Palace is called the Lollards' Tower. See Lambeth.

LOMBARD, PETER (c. 1100-60). Italian schoolman. Born at Novara, Lombardy, he was educated at Bologna and Reims, and in 1159 became bishop of Paris. His theological

manual, *Libri quatuor sententiarum* (Four Books of Sentences), collated from the Scriptures and the works of the early fathers, served for a long time as the basis of all theological literature in Europe. A Commentary on the Psalms and Commentaries upon all the Pauline epistles are attributed to him. He died in Paris, July 20, 1160.

LOMBARDS. Ancient people of Europe. The Lombards or Langobardi, whose name perhaps means the men of the long axes, were Teutonic tribes who lived on the lower Elbe in the 1st century of the Christian era, burst into N. Italy, 568, and became masters of the plain of the Po, making Pavia their capital. The region they acquired received the name of Lombardy. They extended their conquests over half Italy as far as the southern duchy of Benevento. From the middle of the 7th till the middle of the 8th century Lombard dukes and kings were a perpetual menace to the papacy. Pepin began their subjugation, which was completed in 774 by his son, Charlemagne.

LOMBARD STREET. London thoroughfare running from the Bank of England to Gracechurch Street, across which it is continued by Fenchurch Street. It derives its name from the Lombards who settled here as money lenders about the 12th century. Some of the great British and foreign banks have their offices here.

LOMBARDY. Territorial division of N. Italy. It borders on the Swiss and Austrian frontiers, and embraces the provs. of Bergamo, Brescia, Como, Cremona, Mantua, Milan, Pavia, and Sondrio. Except in the N. the surface is virtually a fertile and well-cultivated plain. The division is well watered by the rivers Po, Adda, Oglio, Ticino, etc., and is well canalised and irrigated. The beautiful lakes of Como and Iseo are wholly within Lombardy. The climate is very hot in summer and cold in winter. Silk is manufactured, and the mulberry tree cultivated, while rice, maize, flax, hemp, wine, fruit, and nuts are grown. The chief town is Milan. Lombardy was named after the Lombards (q.v.), and incorporated in the new kingdom of Italy 1861. Its area is 9,190 sq. m. Pop. 5,400,263.

LOMBARDY POPLAR (*Populus italica* or *pyramidalis*). Tall-growing tree much used for ornamental purposes. It is of hybrid origin, one of the parents being the black Italian poplar (*P. nigra*), and attains a height of from 100 to 150 ft.

LOMBOK. Island of the Dutch E. Indies. A mountainous volcanic island of the Sunda group, it culminates in a peak 12,379 ft. high. The fertile valleys yield rice, maize, tobacco, sugar cane, and indigo. The chief towns are Mataram and Ampanam. Dutch control dates from 1894. Its area is 3,060 sq. m. Pop. about 470,000.

LOMBROSO, CESARE (1836-1909). Italian criminologist. Born Nov. 18, 1836, he became an army surgeon, 1859, professor of mental diseases at Pavia University, 1862, and professor of forensic medicine and psychiatry at Turin. In 1875 he published his monumental work *L'uomo delinquente* (The Criminal), in which he promulgated the theory that there is a definite criminal type which can be distinguished from the normal type both anatomically and psychologically. He also wrote

Lombardy Poplar in winter, showing vertical direction of branch growth

London. Plan of the central district from S. Paul's Cathedral (top right) to Piccadilly Circus, showing the churches, public buildings, theatres, etc.

The Man of Genius (Eng. trans. 1891), Crime, its causes and remedies (Eng. trans. 1911). He died Oct. 19, 1909.

LOME. Seaport of French Togoland. Under the German administration it was the capital of the country. Lome was captured by a British force on Aug. 7, 1914. Pop. 9,400. The name is also that of a district with 119,000 inhabitants. See Togoland.

LOMOND. Scotland's largest loch. It covers 27 sq. m. and has a length (between Ardlui and Balloch) of 23 m. and a breadth of 5 m. It lies between Stirlingshire and Dumbartonshire, amid fine scenery. It receives the Endrick, Luss, Arklet, and other streams, and its waters pass by the Leven and the Clyde to the sea. On the E. side is Ben Lomond (q.v.). In 1930 the property of the duke of Montrose here was offered for sale.

LONDON. Capital, chief seaport and airport of England, capital of the British Empire, and the largest city in the world. It borders the Thames from Kew to Barking. Greater London covers 700 sq. m. and its population in 1930 was estimated at over 8,000,000. The administrative county covers 116 sq. m. The postal area covers 240 sq. m.

Till the 19th century London meant the historic square mile which is still called the city of London. Greater London is the result of the linking of surrounding villages and towns with the centre for common purposes. It includes the ancient city, the county of London, and parts of Kent, Surrey, Middlesex, Essex, and Herts which lie outside the administrative county. The total rateable value is put at £78,000,000. A great and growing industrial area, and the most important retail centre in the country, London is also the world's chief financial centre.

The city, which was granted its first charter in 1079, and has a history dating back to A.D. 64, is governed by a lord mayor 25 aldermen, and a common council of 206; it has its own police force of 1,100 and controls most of the markets. The county, created in 1888, and embracing 28 bors., set up in 1899 (one of which became the city of Westminster), is, in regard to its common interests, under the control of the London County Council which administers an extensive tramway service, the London fire brigade of 2,000, the elementary and many secondary schools and polytechnics, and the asylums and poor law institutions. The Thames below Teddington is under the control of the Port of London Authority. The Metropolitan water board provides an annual supply of 1,722,600,000 gallons apart from that derived from private wells. The board serves an area of 574 sq. m., and the net water rental is about £4,700,000. The Metropolitan Police under the Home Office, numbers 20,000 with an auxiliary reserve of a like

number. Ecclesiastically London has been a diocese since A.D. 604 and has more than 1,500 churches and chapels.

Among the chief buildings are Westminster Abbey, S. Paul's Southwark, and the Westminster (Roman Catholic) cathedrals; the Tower, Buckingham, S. James's, Hampton Court, Kensington, Lambeth and Fulham palaces; Marlborough House, Houses of Parliament, Bank of England, Guildhall, Mansion House, Royal Exchange, Monument; British, London, and United Services Museums and an extensive group of museums at S. Kensington; Imperial Institute; National, National Portrait, and Tate Galleries; Hertford House (Wallace Collection), Burlington House, General Post Office, Chelsea and Greenwich Hospitals for service pensioners, halls of the livery companies, Inns of Court, the ancient city churches, Charterhouse, Law Courts, Old Bailey, Admiralty War Office, and other Government buildings in Whitehall, and the London County Hall. Notable recent additions are Australia House (q.v.), Canada House and India House.

Places of amusement include the Crystal and Alexandra Palaces, Covent Garden Opera House, Albert and Queen's Halls, and numerous theatres, cinemas, and concert halls. There are many free libraries. In the W. vast new stores and palatial hotels and flats and in the E. imposing new business premises have been built in recent years. In addition to Hyde, Regent's, S. James's, and the Green parks, Kensington Gardens, Epping Forest, and Burnham Beeches, there are more than 100 parks, commons, and open spaces. In Regent's Park are the Zoological Gardens; at Kew the Botanical Gardens and meteorological observatory, at Greenwich is the astronomical observatory. There are about 200

London County. Plan showing the disposition of its 28 component boroughs, created in 1899

hospitals and asylums and allied institutions. The chief markets are Covent Garden, Smithfield, Leadenhall, Billingsgate, Spitalfields, Shadwell, Caledonian, and Borough. The educational establishments are numerous. Several old public schools have migrated to the country, but Westminster, St. Paul's (now at Hammersmith), and Merchant Taylors' remain.

All the great rly. lines have terminal stations in London. Within the area are over 700 m. of passenger lines, mainly electric, including the Underground and Tube systems, carrying 600,000,000 passengers a year, between 5,000 and 6,000 motor buses, carrying over 1,900,000,000; 356 m. of tramways, which carry over 900,000,000; large numbers of taxi-cabs; and many fleets of motor coaches which compete with the railways for long-distance traffic. The airport of Croydon, reconstructed and reopened in 1928, is the finest in the world. See Waddon.

LONDON. City and port of Ontario. In Middlesex co., it stands on the Thames, 119 m. from Toronto. It is served by the C.N. and C.P. and other rlys. Agricultural implements, machinery, chemicals, furniture, leather, etc., are made, and there are petroleum refineries and railway works. Electric power is obtained from Niagara. Pop. 67,000

H.M.S. London, name-ship of a class of cruisers. She was completed in 1929
S. Cribb: Southsea

LONDON. Name-ship of a class of cruisers. Begun in 1926 and completed in 1929, she displaces 10,000 tons, or with a full load 14,000 tons. Her principal armament is 8-8 in. guns and her extreme length is 633 ft. She can steam 32-25 knots and is built to burn oil fuel. The other ships of this class are Devonshire, Shropshire, and Sussex.

LONDON, DECLARATION OF. International agreement about naval prize law. It was agreed to in 1909 by an international naval conference held in London, on the invitation of the British government. It consisted of 71 articles, in which was embodied international law relating to naval warfare, as then understood by international lawyers in most countries. When the Great War broke out, in 1914, the declaration had not been ratified by the powers and it broke down.

LONDON, PORT OF. Name given to the lock area of London and adjacent parts of the Thames under the Port of London Authority. It extends between Havengore Creek, Essex, and Teddington. The docks are:

Victoria and Albert .. .	1,020 acres
Tilbury .. .	716 "
Surrey Commercial .. .	380 "
W. India .. .	241 "
Millwall .. .	231 "
King George V .. .	186 "
London .. .	100 "
E. India .. .	68 "
S. Katherine's .. .	231 "

The authority consists of a chairman, a vice-chairman, and 28 members, chosen by the L.C.C., Board of Trade, City Corporation, Trinity House, Admiralty, and the traders using the port, the trade of which in 1930 was valued at £700,000,000. The water area of the docks is 720 acres with 45 miles of quays. In 1929-30 the authority made great improvements in its docks at Tilbury. The offices are in a fine building in Trinity Square, E.C.

London Bridge. Left, old London Bridge; it had 19 arches, wooden houses along each side, a chapel, and fortified gates at each end. Right, the present bridge, designed by Rennie and opened in 1831

LONDON, TREATY OF. Name given to several treaties signed in the English metropolis. One, signed Jan. 14, 1814, established the kingdom of the Netherlands, with the prince of Orange as king. Another, in 1839, declared Belgium neutral. This was the treaty violated by Germany in 1914. The term treaty of London is given to the secret agreement signed April 28, 1915, between Great Britain, France, and Russia on the one hand, and Italy on the other. See London Naval Treaty.

LONDON, JACK (1876-1916). American novelist. Born at San Francisco, Jan. 12, 1876, he had an adventurous and roving life, chiefly in America. He died in California, Nov. 22, 1916.

Of his books of adventure the best known are *A Daughter of the Snows*, 1902; *The People of the Abyss*, 1903; *The Call of the Wild*, 1903; *The Sea Wolf*, 1904; *The Moon Face*, 1906; *White Fang*, 1907; *Burning Daylight*, 1910; *Martin Eden*, 1910; *The Mutiny of the Elsinore*, 1914; *The Valley of the Moon*, 1914; and *The Night-Born*, 1916.

LONDON BRIDGE. One of the Thames bridges in London. Designed by John Rennie (d. 1821), it extends from Adelaide Place and King William Street, E.C., to High Street, Southwark, S.E. William IV opened the bridge, Aug. 1, 1831. Built of granite, it is 928 ft. long and 63 ft. wide. London Bridge Southern Rly. station is on the S. side and Adelaide House on the N.

Its immediate predecessor, also of stone, was built on the site of a wooden bridge. Completed in 1209, old London Bridge stood E. of the existing structure. On fortified gates at each end heads of traitors were exposed on spikes. The wooden houses on each side were removed in 1758. Between the 13th and 14th piers from the city side was a drawbridge. In the centre was a chapel to S. Thomas of Canterbury.

LONDON COUNTY COUNCIL. Administrative body set up in 1888 to manage the affairs of the newly created county of London. It consists of a chairman, 20 aldermen and 124 councillors. The term of office for aldermen is 6 years; for councillors, 3 years. The Offices are at the County Hall, Westminster Bridge, S.E.1, and the Old County Hall, Spring Gardens, S.W.1.

The council spends over £20,000,000 a year and has a net debt of over £73,000,000. It looks after tramways, drainage, housing, etc., but not after the supply of gas, water, and

electricity. Since 1902 it has been responsible for both elementary and secondary education within the county, and the estimate for this for 1929-30 was £12,250,955. The council has not quite the same authority within the city of London as it has in other parts of the county. The members of the council are divided into progressives, municipal reformers or moderates, and labour, and the elections are usually fought on party lines.

LONDONDERRY. County of Northern Ireland. With a coastline on the N., it has an area of 816 sq. m. The chief rivers are the Roe, Bann, Foyle, Moyola, and Faughan. The surface is level near the coast, rising to

London County Hall, Westminster. River front of the building

considerable heights in the S., where are the Sperrin Mts. (1,200 ft.). Londonderry, or Derry, is the chief town; other places include Coleraine, Limavady, Dungiven, Moneymore, and Magherafelt, and the watering places of Port Stewart, Castlerock, and Downhill. The county took the prefix

Londonderry. Map of the county on the north coast of Ulster

of London when, in 1609, much of the land was made over to the corporation of London. Pop. 94,534.

LONDONDERRY. City, county borough, and seaport of co. Londonderry, Northern Ireland, also the county town. Known also as Derry, it stands on a hill near where the river Foyle falls into Lough Foyle, 95 m. from Belfast, on the G.N. Rly. of Ireland. The city is still surrounded by walls with gates. S. Columba's, the Protestant cathedral, dates from the 17th century. The Roman Catholic cathedral of S. Eugenius is modern. Foyle College dates from 1617. The chief industries are flour-milling, distilling, tanning, bacon curing, and linen manufacture. The hishopric is known as Derry and Raphoe. Pop. 45,159.

Londonderry. Guildhall and Ship Quay Gate

The siege of Londonderry was an enterprise of James II and the Irish Jacobites in 1689. James began siege operations on April 19. In mid-June a relieving fleet entered Lough Foyle with provisions, but they waited six weeks outside the harbour. Ordered at last to attack, the ships broke the boom, June 30, and raised the siege, which had lasted 15 weeks. Its hero was George Walker, a clergyman.

LONDONDERRY, MARQUESS OF. British title borne by the family of Vane-Tempest-Stewart. There was an earl of Londonderry in the 17th century, but the title had twice become extinct when in 1789 Robert Stewart, M.P. (1739-1821), of Mount Stewart, co. Down, was made Baron Londonderry, in 1796 earl of Londonderry, and in 1816 marquess. His son was prominent under the courtesy title of Viscount Castlereagh. Castlereagh's half-brother, Charles William, the 3rd marquess (1778-1854), was a soldier and a diplomat. He married the heiress of the two families of Vane and Tempest, and obtained through her rich estates in Durham.

Charles Stewart Vane-Tempest-Stewart (1852-1915) became the 6th marquess in 1884. He was successively lord-lieutenant of Ireland, postmaster-general, and president of the board of education. He was also lord president of the council, 1903-05. Charles, the 7th marquess (b. 1878), was M.P. for Maidstone 1906-15, and in 1921 under-secretary for air. He was minister of education, Northern Ireland, 1921-26, and first commissioner of works, 1928-29, in the Baldwin ministry. The family seats are Wynyard Park, Durham, and Mount Stewart, co. Down.

LONDON GAZETTE, THE. Official organ of the British Government and the appointed medium for all official documents. It is published on Tuesdays and Fridays, similar publications for Ireland and Scotland being The Irish Free State Gazette, published in Dublin; The Belfast Gazette; and The Edinburgh Gazette.

LONDON MUSEUM. Institution formed to show the history of the English metropolis. It was founded in 1911 to commemorate the coronation of George V. King George, in addition to being a contributor, made over a set of apartments at Kensington Palace as a temporary home for the nucleus of the collection, and formally opened it in person, March 21, 1912. Lancaster House, presented to the nation in 1912 by Sir W. H. Lever (later Lord Leverhulme), was taken over by the government in 1913, and the museum was reopened there in 1914. The exhibits are arranged in chronological order.

LONDON NAVAL TREATY. Treaty signed in London, April 22, 1930, by the British Empire, U.S.A., Japan, France, and Italy in connexion with naval disarmament. It was concerned exclusively with naval material; personnel not entering into the negotiations. By it a stated number of capital ships were to be scrapped or disarmed without replacement. Britain agreed to four battleships and one battle-cruiser, the U.S.A. to three battleships, and Japan to one battle-cruiser to be scrapped or modified.

Other reductions were in connexion with tonnages of other vessels permitted up to Dec. 31, 1936; for example, Britain being allowed 146,800 tons for cruisers with guns above 6.1 in., the U.S.A. of similar craft up to 180,000 tons, and so on. Under the treaty Japan was allowed 105,500 tons in destroyers, as against Britain's 150,000 tons. On the major provisions the five powers were unanimous, but Italy and France disagreed on the question of their naval tonnage. See Cruiser; Five-Power Naval Treaty; Navy.

LONDON PRIDE. (*Saxifraga umbrosa*.) Perennial evergreen herb of the natural order Saxifragaceae. It is a native of Spain, Portugal, Corsica, and Ireland. The leathery, broad, oval leaves grow in a rosette, from which the branched, leafless flowering stem arises. The small flowers have reddish sepals and white petals dotted with red. London Pride is also called None-so-pretty and S. Patrick's cabbage.

London Pride, spray of flowers

LONDON REGIMENT. Unit of the British army. It consists of two regular battalions of the city of London regiment (Royal Fusiliers) and a number of territorial ones which were united together in 1907.

London Regiment. Above, badge of London Scottish; below, of London Rifle Brigade

Of these the 5th is the London Rifle Brigade, the 13th the Kensingtons, the 14th the London Scottish, the 16th the Queen's Westminster, the 18th the London Irish Rifles, and the 28th the Artists' Rifles. These and also the other battalions of the regiment have a fine record of service in the Great War. The London Scottish, formed in 1859, was known until 1907 as the London Scottish Rifle Volunteers.

LONDON UNIVERSITY. British educational body. It was founded in 1836 for the purpose of examining and conferring degrees only. It was unsectarian. In 1858 its degrees, which had previously been confined to members of colleges affiliated to it, were thrown open to all. From that time dates their great popularity. In 1808 the university began to send a member to Parliament. In 1900 it was reconstituted, and again in 1929. London university now consists of incorporated colleges and departments, schools of the university, and institutions having recognized teachers. In addition there is a general organization which has its headquarters at South Kensington, S.W.7.

London University arms

The incorporated colleges are University, King's, and King's College for Women. The departments include the Goldsmiths' College at New Cross, and the Bartlett School of Architecture. The schools of the university, a feature dating from the reorganization of 1900, include the Imperial College of Science and Technology, the School of Oriental Studies, East London College, London School of Economics and South-Eastern Agricultural College, and three colleges for women—Bedford, Royal Holloway, and Westfield. In addition there are a number of theological colleges, the medical schools attached to the great London hospitals, and other institutions. A site for new buildings has been acquired in Bloomsbury.

LONG. Loch of Scotland. An arm of the firth of Clyde, it extends for 17 m. N.N.E. between Argyllshire and Dumbartonshire. Its extreme breadth is about 2 m.

LONG, WALTER HUME LONG, 1ST VISCOUNT (1854-1924). British statesman. Born July 13, 1854, in 1880 he was elected Conservative member for N. Wiltshire. From 1885 he represented the Devizes division of Wiltshire; from 1892 the West Derby division of Liverpool; from 1900 South Bristol; from 1906 South Dublin; from 1910 the Strand; and from 1918-1921 the St. George's division of Westminster. Long was made parliamentary secretary to the local government board in 1886; he was president of the board of agriculture 1895-1900, and of the local government board 1900-5, then becoming chief secretary for Ireland. From 1916-18 Long was at the colonial office, and in 1919 he became first lord of the admiralty. He resigned in Feb., 1921, and was created a viscount. He died Sept. 26, 1924.

LONG ASHTON. Village of Somerset. It stands on the Avon, just outside Bristol, on the G.W. Rly. Here the university of Bristol has an agricultural research station.

LONGBENTON OR BENTON. Urban district of Northumberland. It is 4 m. N.E. of Newcastle, on the L.N.E.R. There are collieries and stone quarries. Pop. 13,750.

LONGBOW. Military weapon from the time of Edward II until the introduction of firearms. The national weapon of the English, it was made generally of yew or ash. See Archery; Bow.

LONGCHAMPS OR LONGCHAMP. French racecourse and review ground. It is in the Bois de Boulogne, to the west of Paris. Near by are the remains of the abbey of Longchamps.

LONG EATON. Urban dist. and market town of Derbyshire. It is 7 m. from Nottingham and 7 m. from Derby, on the L.M.S. Rly. The chief industries are the manufacture of lace and wagons. Market day, Sat. Pop. 22,144.

Little Eaton is a village, 2½ m. from Derby, on the L.M.S. Rly.

LONGFELLOW, HENRY WANSWORTH (1807-82) American poet. Born at Falmouth, now Portland, Maine, Feb. 27, 1807, he spent some time in travel in Europe. In 1829 he was made professor of foreign languages at Bowdoin, and in 1836 he became professor of modern languages and literature at Harvard. He retired in 1854. He died at Cambridge, Mass., March 24, 1882.

Longfellow's work was many-sided and voluminous. It included the writing of textbooks, and was marked throughout by a deep sense of his mission as a teacher. His lyrical gift is remembered best by such poems as Hymn to Night, A Psalm of Life, The Wreck of the Hesperus, The Village Blacksmith, Excelsior, etc. His skill in narrative verse is

Henry W. Longfellow. American poet

seen in *The Courtship of Miles Standish*. Of his longer works, the more notable are *Evangeline* (see illus. p. 673); and the *Song of Hiawatha*, an epic of the red man. His dramatic works include *The Spanish Student*. The *Golden Legend* is the best part of the long dramatic poem *Christus: a Mystery*. His translations include a metrical version of the *Divina Commedia*.

LONGFORD. County of the Irish Free State, in the prov. of Leinster. Wholly inland, its area is 421 sq. m. The surface is level, except in the N.W. There is much bog land. The chief rivers are the Shannon, on the W. boundary, Inny, and Camlin. It has many lakes, including Lough Ree, on the border, and Gowna. Horses and cattle are reared, and there are dairy farms. Longford is the county town. Granard and Ballymahon are other towns. The county is served by the G.S. Rlys. Longford was formerly known as Annaly. Under Henry II it was occupied by the English and was for a time part of Meath, then of Westmeath. Pop. 39,847

Longford. Map of the inland county of Leinster

LONGFORD. Urban dist. of co. Longford, Irish Free State, also the county town. It stands on the Camlin, 76 m. from Dublin, on the G.S. Rlys. The Roman Catholic cathedral of S. Mel is a fine modern building. The industries include trade in agricultural produce, tanneries, and corn mills. Longford is the seat of the bishop of Ardagh. Pop. 3,685.

Earl of Longford is an Irish title borne since 1785 by the family of Pakenham. The earl's seat is Pakenham Hall, co. Westmeath, and his eldest son is known as Lord Silchester.

LONGFORD. Village of Wiltshire. On the Avon, 3½ m. S.E. of Salisbury, it contains a castle, seat of the earl of Radnor, built in 1591 and since much enlarged. It contains a magnificent collection of pictures.

LONGHORN. Breed of British cattle, distinguished by the great length of the widely branching, drooping horns. Before the development of the shorthorn, this was the principal British breed. Its great value is for the production of cheese, as its milk is richer in curd than that of most dairy breeds. Apart from its great horns, it closely resembles the shorthorn in general build and colour. A white line down the back is another distinguishing point. See Cattle.

LONGICORN or **LONGHORNED BEETLE.** Beetles of the family Cerambycidae. Representatives are found all over the world; it receives its name from its very long antennae, which, in the male, often exceed the length of the body. Beetles of this family are brightly coloured. The larvae cause great damage to fruit and timber trees, feeding on the wood.

LONG ISLAND. Island of U.S.A., forming the S.E. end of New York State. Separated from the New York mainland and Connecticut by Long Island Sound, it is 118 m. long by 13 m. to 23 m., and covers 1,682 sq. m. At its W. extremity are the borough of Brooklyn and Long Island City—a separate city until 1898, when it became part of the borough of Queens, New York City. Coney Island is a popular summer resort, and Sheephead Bay has a racecourse. On Aug. 27, 1776, the British defeated the Americans in the battle of Long Island.

Longitude. Distance of any place on the earth's surface E. or W. of a given meridian. See Latitude.

LONGLEAT. Seat of the marquess of Bath, 3 m. from Warminster in Wiltshire. The house was begun in 1667 at the cost of Sir John Thynne and after designs by John of Padua. It was completed about 1680, and later Wren added something to it. In the 19th century it was improved by Wyatt. Built in the Italian style, it has a collection of portraits by Holbein, Reynolds, Lely, Kneller, Van Dyck, and others.

LONG PARLIAMENT. Name given to the English Parliament which met on Nov. 3, 1640, sat almost continuously until 1653, and was revived in 1659. It secured the expulsion of bishops from the House of Lords, and from 1642 to 1649 conducted the Civil War. In December, 1649, some of its members, 143 Presbyterians, were forcibly excluded, but the remainder, called in derision the Rump, continued in session. They set up the court for the trial of the king, abolished the House of Lords, and carried on the Government until April, 1653, when Cromwell turned them out. In May, 1659, the Rump was restored. On March 16, 1660, the Parliament passed an Act declaring itself dissolved. From 1640 to 1653 its speaker was William Lenthall, while Pym, Hampden, Cromwell, and Hyde were prominent members of it. See Cromwell, Oliver.

LONGPORT. Type of English porcelain. Earthenware was manufactured at Longport, near Burslem, Staffordshire, 1773. In 1793 Davenport produced a porcelain with hard, transparent body. His shapes and decorative treatment were good, and he produced many important royal table services.

LONG PRIMER.

Name of a size of printing type. Known also as 10 point, it is a size larger than bourgeois and a size smaller than small pica, or about 7½ lines to an inch. Great primer, or 18 point, is four sizes larger.

This line is set in long primer.

LONGREACH. Town of Queensland. It is 248 m. W. of Rockhampton on the Barcoo River. Its artesian bore makes it the chief stock-watering centre of the surrounding district. Pop. 2,500.

Longicorn. Specimen of *Leptoderia fimbriata*

LONG SERVICE MEDAL. Name of a decoration given to men of the navy, army, and air force and also to members of the

auxiliary forces. It bears the inscription "For long service and good conduct," and to qualify for it a man must have served for at least 18 years. The medal was instituted in 1830. See Medal.

Long Service Medal. Reverse of naval medal

LONGSHIPS. Number of rocks off Land's End, Cornwall. On one stands Longships lighthouse, with an occulting light visible for 16 m.

Longleat, Wiltshire. South front of the mansion of the marquess of Bath

LONGWOOD. Name of the residence at St. Helena where Napoleon passed the last years of his life. It obtained its name from the Longwood Plains situated in the N.E. of the island. See Napoleon.

LONGWY. Town of France. It is 40 m. N.N.W. of Metz, on the Belgian frontier, and consists of a walled upper town on a steep rock, and a lower industrial one. Commanding the approach of the Chiers valley from Luxemburg, it is on a strategic railway which the Germans seized at the outbreak of the Great War, and possessed a fort, one of a chain designed for the protection of the N.E. frontier of France. After a bombardment of some days it capitulated to the German crown prince, Aug. 28, 1914. Pop. 12,101.

LONSDALE, EARL OF. British title borne with a short interval since 1784 by the Lowthers. The family dates back to the time of Edward I or earlier, but the existing branch is descended from Sir Christopher Lowther (d. 1617). Sir James Lowther (1736-1802), a baronet, inherited the great wealth of Viscount Lonsdale and of other Lowthers. He was made an earl in 1784, but the earldom died with him. A kinsman, Sir William Lowther, Bart., became Viscount Lowther, and was made an earl in 1807. He built Lowther Castle (q.v.), Penrith, the chief seat of the family. In 1882 Hugh Cecil (b. 1857) became the 5th earl, and won a reputation as a patron of sport.

5th Earl of Lonsdale, British sportsman Russell

LONSDALE, FREDERICK (b. 1881). British dramatist. Born Feb. 5, 1881, he made his name as a dramatist with *The King of Cadonia*. His other successful plays include *The Best People*; *Maid of the Mountains*; *Spring Cleaning*; *The Last of Mrs. Cheyne*; *The High Road*; and *Canaries Sometimes Sing*.

LOO. Card game. Three card loo may be played by several persons. Three cards, one at a time, are dealt to each player. An extra hand,

termed a miss, is also dealt, which the eldest player may exchange for his own, but if he looks at the miss he must take it or be looted. So long as the miss remains on the table any player may take it in his turn. Each dealer puts a certain stake into the pool. The card left at the top of the pack is turned for trumps.

Each player in turn either decides to play his own cards, take the miss, or drop out. The eldest hand then leads a card, and the next player must head the trick, if possible, either by a higher card or trump. Each player's card is left in front of him as played: the winners taking a third of the pool for each trick and those players who have not won a trick are looted, having to pay a certain stake into the next pool.

LOOE. Seaport, watering place, urban district, and market town of Cornwall. It stands on Looe Bay, 16 m. from Plymouth, on the G.W. Rly., and is divided by the river into East Looe and West Looe. The buildings include the parish church of S. Martin, with a Norman doorway, the restored chapel of S. Nicholas, and the old town hall. Market day, last Mon. in month. Pop. 2,890.

LOOFAH (*Luffa aegyptiaca*). Climbing herb of the order Cucurbitaceae. A native of Africa, it has long stems that climb by means of tendrils. The fruit is long, like a cucumber, but stouter. The flesh is permeated by a network of tough fibres, and when the flesh is macerated this is left intact and forms the bath loofah, which is used as a sponge.

Loofah. Leaf, flower, and fruit

LOOM. Apparatus for weaving cloth. In its simplest form the horizontal loom provides for tethering a bar carrying the lengthwise warp threads to a stake in the ground. A bar at the farther end is secured to the weaver, who has thus a straight set of warp threads through which to cross and interlace the weft threads. A comb-like implement serves to beat up the weft threads closely together after being interlaced. A device called a heddle enables alternate warp threads to be raised, so forming a shed or opening between the raised and the unraised groups, through which the weft thread can readily be passed.

Later the apparatus was improved to include a frame, a warp beam, and a cloth beam on which to roll the woven fabric. The weft was contained in a spool within a shuttle. In 1733 John Kay of Bury invented his fly-shuttle. The weaver was then enabled to throw his shuttle by jerking a cord instead of passing it through more laboriously by hand. Robert Kay, in 1760, invented the drop-box loom, enabling a second, third, or fourth colour or kind of weft to be used at will. Cartwright patented his power loom in 1785-87. Later, Jacquard invented his arrangement for permitting an individual set of warp threads to be lifted at one time automatically. See Weaving.

LOOS. Village of France, in the dept. of Pas-de-Calais, 3 m. N.W. of Lens. Before the Great War it was a busy mining centre. Situated in a slight hollow, it is overlooked on the S.E. by Hill 70, and on the N. by a long ridge extending toward La Bassée.

BATTLE OF LOOS. This was an offensive undertaken by the British and French armies in 1915. At dawn on Sept. 25 the 8th division of the 3rd British corps advanced against Bridoux and carried some trenches, but the force was later withdrawn. After attacks elsewhere the

position about noon was that the British had broken deep into the German front from Haines southwards and driven a large salient into it. Meantime strong German reserves had arrived on the scene. The corresponding French attack gained ground about Souchez, but the village itself was not carried.

On Sept. 26 the British were counter-attacked by the Germans, who reached and held the western edge of the Quarries, and the British 24th division, attempting an advance on Hulluch, were beaten back with heavy losses. On this day the French fought their way through Souchez. On the following day the Germans renewed the offensive, recovered Fosse 8 and forced their way into the Hohenzollern Redoubt. Heavy fighting also took place on Hill 70, but by the evening the battle had come to a standstill. On Sept. 29 the British repelled two heavy attacks on the redoubt. For some days the battle fluctuated, until on Oct. 8 the British Guards more than held their own against a great German attack N. of Loos. After a determined but costly British attack from the Hohenzollern Redoubt southwards on Oct. 13, trench warfare supervened. The net result of the battle was the gain of a salient driven into the German front N. of Lens. The British losses exceeded 60,000 and those of the French were very heavy.

LOOSESTRIFE. Name applied to several plants, but belonging properly to *Lysimachia*, once thought to have the power of taming wild beasts. The common loosestrife (*L. vulgaris*) is an erect perennial herb of the order Primulaceae, a native of Europe, N. Africa, and N. Asia. It has a creeping root-stock and broad, lance-shaped leaves; the yellow flowers grow in clusters at the top of the stem. The purple loosestrife is *Lythrum salicaria*, belonging to the order Lythraceae.

Loosestrife. Flower spray of purple loosestrife

LOPE DE VEGA (1562-1635). Spanish poet and dramatist, whose full name was Lope Felix de Vega Carpio. He was born in Madrid, Nov. 25, 1562. As a soldier he took part in the Armada expedition against England, belonging to the same regiment as Cervantes. In 1614 he took holy orders, became a member of the order of S. Francis, and was a familiar of the Inquisition. He amassed honours and wealth and enjoyed universal popularity. He died at Madrid, Aug. 27, 1635.

Lope de Vega, Spanish poet

Lope de Vega wrote nearly 2,000 plays, religious dramas, and interludes, of which 430 plays and 50 autos, or religious dramas, are extant. Chief founder of the national drama of Spain, his best-known plays include *La Carbonera*, *Bella Aurora*, *Noche de San Juan*, and *Por el Puente de Juna*. His other works embrace epics, poems, and prose romances, including a long continuation of Ariosto's *Orlando Furioso*.

LOQUAT (*Photinia japonica*). Japan quince or medlar. An evergreen shrub or small tree of the order Rosaceae, it is a native

of Japan and S. China. Its large, ohlong, wrinkled leaves are downy on the underside. The white flowers are in drooping sprays, and the orange-red, downy fruit hangs in clusters. Its flavour is much like that of a sharp apple, but the fruit is not edible until about May.

LORAINÉ, ROBERT (b. 1876). British actor and airman. Born at New Brighton, Jan. 14, 1876, he made his first stage appearance in the provinces in 1889, settling in London in 1894. He played many popular parts in London, and toured in America, achieving great success as John Tanner in *Man and Superman*. Two outstanding performances were that of *Cyrano de Bergerac* in 1919, and in Strindberg's *The Father* in 1927. Early interested in aviation, in 1910 he was the first to fly the Irish Sea, and during the Great War served in the R.A.F., gaining the D.S.O.

LORCA. Town of Spain. It stands on the river Sangonera, 41 m. by rly S.W. of Murcia. The old section of the city, largely Moorish in character, is crowded on the slope of a hill; the modern part, with broad streets and fine squares, lies on the plain. Gunpowder, chemicals, porcelain, woollens, and leather are manufactured; there is trade in agricultural produce and cattle. In the vicinity are silver and lead mines. Lorca figured prominently in the wars of the Moors. In 1802 it suffered severely through the hursting of its irrigation reservoir. Pop. 74,696.

LORD. Originally, master of a household, hence generally master, ruler, nobleman, or man of high official rank. It is applied to peers of the realm (lords temporal and spiritual), and may be substituted for the legal or courtesy titles marquess, earl, viscount, or baron. By courtesy it is prefixed to the Christian and surnames of younger sons of dukes and marquesses. The equivalent feminine titles are lady, countess, viscountess, etc. See Baron; Marquess.

LORD CHAMBERLAIN. Chief officer of the British royal household and the second dignitary of the court. The symbols of his

office are a white staff and a key. He is in charge of all the household above stairs, and appoints the royal physicians and tradesmen. All state ceremonies are in his care. With some exceptions he licenses the London and metropolitan theatres, and those at Windsor and Brighton, and at other places when visited by the sovereign. In 1624 the lord chamberlain replaced the master of the revels as licenser of plays. See Censorship; Chamberlain; Royal Household.

Lord Chamberlain in court uniform

LORD CHANCELLOR. Highest judicial functionary of Great Britain. He is a cabinet minister, a privy councillor, and relinquishes office on a change of government. He is keeper of the great seal, issues the royal commissions for the opening and proroguing of parliament and for giving assents to bills, and reads the king's speech when the sovereign is not present. The chancellor appoints all justices of the peace, certain of the high court and all county court judges, and issues all writs. He is president or speaker of the House of Lords, his seat being known as the woolsack. He receives a salary of £10,000 per annum, and is entitled to a pension of half that amount on relinquishing office. When out of office he is ex-officio a judge of the House of Lords. Scotland had a lord high chancellor until 1707, and Ireland until 1922. See Chancellor; Chancery.

LORD CHIEF JUSTICE. Name given to the judge who in England presides over the king's bench division of the high court of justice. In the legal hierarchy he ranks next to the lord chancellor. See King's Bench.

LORD GREAT CHAMBERLAIN. The sixth great officer of state in England. He has charge of the palace of Westminster and of the arrangements when the sovereign opens parliament and is in evidence at a coronation. The office is hereditary. For the reign of George V it fell to the marquess of Lincolnshire. On his death, in 1928, without sons, it was decided that his son-in-law, Viscount Lewisisham, should discharge the duties.

LORD - LIEUTENANT. Official representing the sovereign. There is one for every county of the United Kingdom, usually a nobleman with estates therein. He is appointed by the sovereign. He is usually *custos rotulorum*, or keeper of the records, for the county, and recommends the names of persons for appointment as magistrates. He is also president of the county association of the territorial force. The lord-lieutenant of Ireland, an office abolished in 1922, was the head of the executive government.

LORD MAYOR. Title of the chief magistrate of the city of London and of other English cities. The lord mayor of London is elected at Michaelmas, and sworn into office on Nov. 8. He is addressed as the right honourable, and is usually made a baronet on retirement. The mayor's court, a survival of the courts of record, was absorbed into the city of London court in 1920. Other English cities in which the mayor is known as the lord mayor are York, Birmingham, Bradford, Bristol, Hull, Leeds, Leicester, Liverpool, Manchester, Newcastle-upon-Tyne, Norwich, Nottingham, Portsmouth, Sheffield, and Stoke. The day of the formal installation of the lord mayor of London (Nov. 9), when he proceeds in state to and from the law courts to receive the sovereign's assent to his election, is known as Lord Mayor's Day. The first lord mayor's show was held in 1215. The corresponding title in Scotland is lord provost. See Mayor; Provost.

The robes of the Lord Mayor of London

election, is known as Lord Mayor's Day. The first lord mayor's show was held in 1215. The corresponding title in Scotland is lord provost. See Mayor; Provost.

LORD PRESIDENT. In Great Britain one of the great officers of state, in full the lord president of the council. Since 1680 the office has been a permanent one, held by a member of the party in power, who is usually a leading member of the Cabinet. At one time a number of duties were attached to the office, but with the establishment of new departments of state these have been reduced. The office is now usually held in conjunction with another, or, as in the Labour Ministry of 1929, by the leader of the Government in the House of Lords. The salary is £5,000.

LORD PRIVY SEAL. In the United Kingdom, a high officer of state. Probably as early as Norman times the English kings had their privy seal as well as the great seal, and for this also there was a keeper. In 1834 legislation altered the method of affixing the seal, and the work came to an end. The office, however, still remains. Its holder ranks as the fifth great officer of state. It is held by a politician of cabinet rank, sometimes with another office. See Chancellor.

LORDS, House of. Term first used in 1544 to describe those councillors, hereditary and other, whom the crown was accustomed to summon by special writ to Parliament. Later it was applied to the great council chamber of the palace of Westminster in which they sat. The House of Lords was thus originally the king's council in Parliament, and its members sat in Parliament solely in virtue of a special summons from the crown.

Edward I established the custom of also summoning to Parliament, besides the representatives of shires, boroughs, and lower clergy, a number of great tenants-in-chief of the crown, such as the archbishops, earls, and bishops, and some barons and abbots selected by the crown. These constituted the House of Lords when Parliament was divided into two chambers.

With the dissolution of the monasteries the abbots disappeared, and in the reign of Charles I the crown was finally denied the right of either omitting to summon a peer who had once been summoned before, or of refusing to summon the successor to a peerage. The only means left to the crown of influencing the composition of its council in Parliament was the creation of peers, and an attempt to limit this prerogative by the Peerage Bill of 1719 was frustrated. There were 44 temporal peers in 1529, and about 60 at the end of Elizabeth's reign. In 1707 16 Scottish peers were added, in 1800 28 Irish ones, while year by year new creations increased the membership of the House. In 1707 it numbered 178, but in 1893 it had grown to 567. In 1930 the total was about 760, including two archbishops and 24 bishops.

The House of Lords still remains the supreme court of appeal, but the Parliament Act of 1911 has restricted its legislative powers.

LORD'S CRICKET GROUND. Headquarters of the Marylebone C.C. and of cricket generally. It is in St. John's Wood, London, N.W. Its founder, Thomas Lord (1757-1832), a native of Thirsk, was groundsmen at the White Conduit Club, London, 1780, later had charge of a cricket ground for the earl of Winchester, and in 1787 started a ground of his own on the site of what is now Dorset Square. In 1811 he moved the turf to a new site close to the Regent's Canal, whence, in 1814, he transferred it to its present position.

LORD'S PRAYER. Prayer given by Christ to His disciples on the Mount (Matt. 6, 9-13; Luke 11, 2-4). Different versions are given by the two evangelists and in the Book of Common Prayer. The Teaching of the Twelve Apostles, which is attributed to the 1st century A.D., directed that the prayer should be said three times a day by all Christians. The Doxology ("For thine is the kingdom," etc.), a liturgical addition, is Jewish in origin.

LORD STEWARD. Officer of the royal household. He is the first great officer of the court. He has authority over all the royal officers and servants except those of the chamber, the chapel, and the stable. Since 1924 the office has been of a non-political character. Many of the steward's duties are actually carried out by a permanent official called the master of the household. This official should be distinguished from the lord high steward. This is an ancient office now only revived for a coronation or the trial of a peer.

LOREBURN, ROBERT THRESHIE REID, EARL (1846-1923). British politician. Born April 3, 1846, he was educated at Cheltenham

and Balliol College, Oxford. He was called to the bar in 1871, and became a Q.C. in 1882, having in 1880 been chosen M.P. for Hereford.

House of Lords. Interior of the chamber, looking towards the thrones. Left, government benches; right, opposition

He represented Dumfriesshire continuously from 1886 until 1905. In 1894 he was made solicitor-general, and in the same year attorney-general. In 1898 he represented his country in the dispute over the boundary of Venezuela. In 1905, when the Liberals returned to power, he was made lord chancellor and a peer. He retired in 1912. In 1911 he was made an earl, and he died Nov. 30, 1923.

LORELEI. Rocky eminence on the right bank of the Rhine, near St Goar, noted for its remarkable echo. According to the legend, it is haunted by a siren who lures boatmen to their doom. A railway tunnel pierces it.

LORETO. City of Italy. On the slopes of a hill, 3 m. from the Adriatic, and 15 m. by rly. S. of Ancona, it is one of the leading places of pilgrimage for Catholics, who are attracted to the Santa Casa or Holy House, in which it is said the Virgin Mary lived when at Nazareth. According to legend it was carried by angels to Dalmatia, and thence to its present site. It is a small, stone building, encased by a marble screen, designed by Bramante. A Renaissance church was built over it. Pop. 7,100.

LORETTO SCHOOL. Scottish public school. It is situated at Loretto, about 6 m. from Edinburgh, and owes its origin to H. H. Almond, headmaster from 1861 to 1903. He held unconventional ideas about the food, clothing, and exercise of boys, and at Loretto the boys habitually wore shorts and loose flannel shirts. The school has classical and science sides, and accommodates about 210 boys.

LORIENT. Town, seaport, and naval station of France. Near the junction of the Scorff and Blavet, 30 m. W.N.W. of Vannes, it has state docks, shipbuilding yards, and magazines. Guns and naval armour are made. There is also a commercial harbour. Lorient is a fishing centre for oysters and sardines. It long flourished as a station of the French East India Co., whence its name of l'Orient. In 1770 the dockyards were taken over by the government. Pop. 46,314.

LORIMER, JOHN HENRY (b. 1856). Scottish painter. Born at Edinburgh, he studied at the R.S.A. schools, and under Carolus-Duran in Paris. Lorimer was elected an associate of the R.S.A. in 1882, and a member in 1900. He began as a painter of portraits and flowers, but later took up figure work.

LORIMER, SIR ROBERT STODART (1864-1929). Scottish architect. Born Nov. 4, 1864, he was educated at Edinburgh University and became an architect. In 1911 he was knighted; in 1920 he was made A.R.A., and in 1921 was elected to the Scottish Academy. His work was mainly domestic architecture, but he was

responsible for the Scottish national war memorial on Edinburgh (q.v.) Castle Rock, and the new chapel for the Knights of the Thistle in S. Giles' Cathedral. He died Sept. 13, 1929.

LORIQUET. Popular name for certain genera of small parrots. Allied to the lories, they are found in the E. Indies and Australasia, except New Zealand. One of the largest is Swainson's loriquet, which is 6½ ins. long in body, with a tail of almost equal length. Its general colour is green, with a purple head and blue underparts, the under-wing coverts being red. It has a red beak with a yellow tip, lives mainly on honey, and generally congregates in large flocks in the forests. See Lory.

Lorquet. Scaly-breasted variety
Trichoglossus chlorolepidotus

LORIS. Name applied to a group of small lemurs found in tropical Asia. They have usually little or no tail, while the index finger of the hand is extremely small and feeble. They are nocturnal in habit, and move with such slowness and stealth as to be called the slow lemurs. The eyes are round and very conspicuous. One species, the slender loris, is remarkable for its extremely slim limbs.

LORNE. District of Argyllshire, Scotland, between Loch Awe and the coast. The marquess of Lorne is one of the titles of the duke of Argyll (q.v.), being borne as a courtesy title by his eldest son. The firth of Lorne is a strait separating Lorne from the island of Mull.

LORRAINE. District of France. Between Luxembourg on the N. and Alsace on the S., it covers about 2,400 sq. m. The old duchy of Lorraine was larger than the present district, as it included Nancy and the country round. Its chief rivers are the Moselle and Saar.

At first there were two Lorraines, Upper and Lower, but soon Lower Lorraine became known as Brabant, and the name was confined to Upper Lorraine, the country of the Moselle. From about 1050 this Lorraine was ruled by powerful dukes, nominally vassals of the German kings. In 1542 Duke Anthony made Lorraine independent of Germany. The French, however, obtained an increasingly firm hold upon Lorraine, and in 1736 secured the duchy for Stanislaus, the exiled king of Poland. In 1766, when Stanislaus died, Lorraine became part of France and remained so until 1871. By the treaty of peace it was reduced in size. Nancy, hitherto the capital, was kept by France, but most of Lorraine was transferred to the conqueror and with Alsace became the imperial province of Alsace-Lorraine (q.v.). France recovered it in 1919.

LORY. Family of beautifully coloured parrots, found only in Australasia. There are about ten species, and all of them have rather long tails. The long tongue is provided with a brush with which it gathers the nectar on which the birds largely feed. They also eat fruit, and usually congregate in small flocks. Lorries readily learn to talk, and for this reason are in demand as pets. See Loriquet.

LOS ANGELES. City of California, U.S.A. It stands on the Los Angeles river, about 18 m. from its mouth, and is served by the Atchison, Topoka, and Santa Fé and other rlys. It is the seat of the university of Southern California. Los Angeles is the leading business and

industrial centre of Southern California. The district is largely devoted to fruit-growing. An extensive export trade is carried on in oranges, lemons, grapes, figs, and other fruit, cattle and oil also being shipped, and the city is the centre of an important mining district, petroleum being

obtained from wells within the city. Los Angeles is also the centre of the American cinematographic industry. Pop. 1,343,923. See Cinematograph; Hollywood.

LOSSIEMOUTH. Burgh, seaport, and watering place of Elginshire (Moray), Scotland. Standing at the mouth of the Lossie, 5 m. from Elgin, on the L.N.E.R., it has a harbour and some fishing and shipping, and good golf links. The burgh was founded in the 19th century from the three villages of Lossiemouth, Branderburgh, and Stotfield. Near are Kinnedar Castle and Spynie Palace. J. Ramsay MacDonald (q.v.) was born here. Pop. 4,166.

LOST TRIBES, THE. Term used for the N. branch of the Hebrew race, which disappeared about 140 years before the dispersion of the Jews. This disappearance has in modern times become a matter of anxiety, especially to those who look for a restoration of the Jewish kingdom, in which the ten tribes ought to be represented, as well as Judah and Benjamin, to which the present Jews mainly belong. About 1644 Antonio de Montezinos (Aaron Levi) announced that some Israelite tribes existed in America. In 1649 John Sadler suggested in his Rights of the Kingdom that the English were of Israelitish origin. The suggestion was developed by Richard Brothers (1757-1824) in many volumes, and was adopted by John Wilson (1840), Edward Hine (1871), and many subsequent writers.

LOSTWITHIEL. Borough and market town of Cornwall

Los Angeles City Hall; at the top of the tower is a beacon for the guidance of aviators. See below

It stands on the Fowey, 23 m. N.E. of Truro, on the G.W.Rly. The chief buildings are the church of S. Bartholomew and the duchy house, a 14th century building. Its 14th century bridge gave the town its strategic importance in the days before railways. In the Middle Ages markets and fairs were held at Lostwithiel, and it became an important place under the earls of Cornwall. In Sept., 1644, the parliamentary forces under the earl of Essex surrendered to the royalists at Lostwithiel, with the exception of Essex and the horsemen who escaped. Market day, alternate Tues. Pop. 1,288.

LOT. Son of Haran and nephew of Abraham. He accompanied Abraham from Mesopotamia to Canaan, but later was assigned the Jordan valley as his country, making his home at Sodom. He was visited by mysterious messengers at Sodom, who rescued him and his family from the destruction of the city by fire. The story of Lot's wife has been connected with the fantastically shaped masses of rock-salt found S.W. of the Dead Sea.

LOTHIAN. Dist. of Scotland which stretched originally from the Cheviot Hills to the Forth, including the counties of Berwick, Roxburgh, Haddington, Edinburgh, Linlithgow, and probably Selkirk. It was included

in the 7th century in the English kingdom of Northumbria. At present the Lothians include the three shires of Haddington or East Lothian, Edinburgh or Midlothian, and Linlithgow or West Lothian. See Scotland.

The Scottish titles of earl and marquess of Lothian are borne by the family of Kerr, Mark, the first earl, belonged to the noted border family of Ker of Cessford. William Kerr, the 3rd earl, took part in public life in England, dying in 1675. His son Robert, the 4th earl (1636-1703), was made a marquess for his services to William III in 1701. In 1930 Philip Henry Kerr (b. 1882), known as a writer and politician, became the 11th marquess. The family seat is Newbattle Abbey, near Edinburgh.

Lothian Regiment is an alternative name for the Royal Scots (q.v.), who are recruited mainly in Edinburgh and the Lothians.

LOTI, PIERRE (1850-1923). Pen name of the French novelist, Louis Marie Julien Viand. Born at Rocbefort, Jan. 14, 1850, at the age of seventeen he entered the French navy, becoming captain in 1906. He published his first story, Aziyadé, in 1879. In 1880 came Barahu, reprinted in 1882 as Le Mariage de Loti, the story of an Englishman and a Tahitian girl, which won him instant popularity. Other books include Le Roman d'un Spahi, 1881; Mon Frère Yves, 1883; Le Pêcheur d'Islande, 1886; Madame Chrysanthème, 1887; Les Desenchantées, 1906. He died June 10, 1923.

Pierre Loti
French novelist

LOTTERY. In English law, a distribution of prizes by lot or chance. In Tudor and Stuart times lotteries were popular in England.

The law on the subject of lotteries is involved and obscure, but certain points are clear. The test to be applied is whether the competition is "a scheme by which men risk money, and, if successful, gain money by chance." The sale of a newspaper containing an entrance coupon is the sale of a ticket, and where there are several equally suitable solutions, of which only one is adjudged successful, the element of chance is the deciding one, and the contest is a lottery. Raffles and sweepstakes, however innocent, are lotteries in the strict legal sense; and art unions are only protected by special statutes in their distribution of prizes. In certain countries it is still lawful to raise money by state lotteries. See Betting; Sweepstake.

LOTUS. Genus of herbs and sub-shrubs of the order Leguminosae, world-wide in distribution. Five species are recognized as British. The bird's-foot trefoil (*Lotus corniculatus*), known locally as lady's slipper, is abundant in every pasture and waste. The clusters of bright yellow, pea-like flowers are succeeded by slender, curved pods which resemble the toes of a bird. The lotus of the lotus-eaters is supposed to be the jujube-tree, a species of Rhamnaceae. The sacred lotus of the Egyptians was a water-lily, while the tamara or sacred lotus of India, China, and Tibet is the *Nelumbium speciosum*. Unlike other water-lilies, neither the leaves nor the flowers of the latter float on the surface, but are raised on long stalks above the water.

Lotus. Flowers and circular leaves of the sacred lotus of India and China

LOTUS EATERS (Gr. Lotophagi). In Greek mythology, a people whom Odysseus came across in his wanderings. They were accustomed to eat of a fruit called the lotus, which caused those who did so to lose all desire to return to their native country. It has been identified with various plants, more particularly with the jubebe. The legend is the subject of Tennyson's poem *The Lotus Eaters*.

LOUBET, ÉMILE (1838-1929). French statesman. Born at Marsanne, Drôme dept., Dec 31, 1838, he studied law in Paris. Ad-

mitted to the bar, he began practice at Montélimar, and became mayor of that town. In 1876 he was elected to the Chamber of Deputies and in 1885 to the Senate. In 1887-88 he was minister of public works, and in 1892 was prime minister. In 1895 he was chosen president of the Senate, and from 1899-1906 was president of the republic. He died Dec. 20, 1929.

LOUD SPEAKER. Development of the loud-speaking telephone, used in conjunction with broadcast receiving apparatus. It is employed also to amplify speech, music, etc.,

Loud Speaker. 1. Horn type of apparatus, developed from the telephone receiver, and now largely displaced by other types. 2. Cone type, with large conical diaphragm. 3. Electro-dynamic or moving-coil loud speaker

at concerts or public meetings, and in connexion with the sound reproduction of talking pictures. The earliest type consisted essentially of a horn attached to the ear-piece of a telephone receiver. Unless a horn of considerable length is used, the lower notes are not faithfully reproduced. In the cone type of instrument the movement of a reed or a pivoted armature attracted by the electro-magnet is communicated to a large shallow cone-shaped diaphragm of paper or parchment, and thus to the air.

The dynamic or moving-coil loud speaker employs a floating cone, loosely attached at its mouth, and bearing at its apex a coil wound on a paper collar. The cone-coil is free to move in the field of a powerful electro-magnet as the current in the latter's coil is varied by incoming impulses, and so the cone itself is made to vibrate.

LOUGHBOROUGH. Borough and market town of Leicestershire. It stands on the Soar, 10 m. from Leicester and 110 from London, on the L.M.S. and L.N.E. Rlys. The old church of All Saints has a fine tower. In Queen's Park is a war memorial tower with a carillon of 47 bells. The industries are the making of hosiery and electrical apparatus; dyeing and bell-founding are also carried on. Market days, Thurs. and Sat. Pop. 25,874.

LOUGHREA. Town of co. Galway, Irish Free State. It stands on Lough Rea, 18 m. S.W. of Ballinasloe and 118 from Dublin, on

the G.S. Rlys. The chief building is the cathedral of the diocese of Clonfert. Pop. 2,805.

LOUGHTON. Urban district and parish of Essex. It is on the L.N.E.R., 11½ m. from Liverpool Street, on the borders of Epping Forest. The Public (or Lopping) Hall was erected in 1883. Loughton Hall, 1879, stands on the site of a Tudor mansion. Pop. 5,749.

LOUIS or **LOUIS D'OR.** French gold coin. It was minted by Louis XIII in 1640, and continued in use till after the Revolution. It was worth about 16s., and half and double louis were also coined. The name is also given colloquially to the 20-franc piece or napoleon.

LOUIS. Name of four German kings and Roman emperors, also known by the German form of the name, Ludwig. Louis I, the only surviving son of Charlemagne, became emperor on his father's death in 814. He reigned until his death, June 20, 840.

Louis II was a grandson of Louis I, being a son of the emperor Lothair. He became emperor in 855 and spent most of his time in Italy. He died Aug. 12, 875. Louis III, a grandson of Louis II, was crowned emperor in 901. In 905 he was deposed and blinded.

Louis IV was a son of the duke of Bavaria, a title which he inherited. In 1314 he was chosen emperor by a faction, another faction choosing Frederick, a Hapsburg prince. He

defeated his rival, and in 1328 was crowned emperor in Rome. He reigned until Oct. 11, 1347, when he was killed while hunting.

LOUIS. Name of 18 kings of France. The emperor Louis I ranks as the first, as France as well as Germany was in his empire. Louis II was the son of the emperor Charles the Bald. He ruled over the West Franks, as the French were then called, from 877 to April, 879. Louis III, a son of Louis II, reigned with his brother Carloman over the Franks from 879 to Aug., 882.

Louis IV was king from 936 to 954. A son of Charles III, he spent his boyhood in England and was called outremere, or beyond the sea. Louis V, the last of the Carolingian kings, only reigned from 986 to 987.

Louis VI, a son of Philip I, was king from 1108 to 1137. He was succeeded by his son Louis VII, who married Eleanor, the heiress of Aquitaine. Later he divorced her, and she married Henry, who became king of England as Henry II. Louis died Sept. 18, 1180.

Louis VIII became king in 1223, but before then he had invaded England as a rival to John. After John's death he was defeated and left the country. His eldest son and successor was S. Louis.

LOUIS IX (1214-70). King of France, known as Saint Louis. Born at Poissy, April 25, 1214, he was the son of Louis VIII and Blanche of Castile. His father died in 1226, and his mother, acting as regent, did much to curtail the power of the nobles. In 1242 Louis forced Henry III of England to renounce his claims to Normandy, Anjou, Maine, and Poitou, and in 1248 directed the seventh crusade, during which he was taken prisoner. Returning to France in 1254, he made preparations for another crusade, the objective of which was Tunis. But when besieging that city in 1270 he fell a victim to the plague, and died Aug. 25. A man of great personal piety, he was canonised in 1297.

Louis X reigned only from 1314 to June 5, 1316. He succeeded his father Philip IV and was followed by his brother Philip V. A weak prince, he was controlled by his uncle, Charles of Valois, and was powerless against the turbulent nobles.

LOUIS XI (1423-83). King of France. The son of Charles VII, he was born at Bourges, July 23, 1423. The story of his reign is that of the consolidation of modern France. Having embittered the last years of his father's life by his continual intrigues, he succeeded in 1461. Pitiless taxation brought about a general revolt in 1465, which resulted in the remission of certain burdens. Louis was made prisoner by his powerful rival, Charles, duke of Burgundy, while on a visit to that ruler in 1468, and only escaped execution by dint of many promises. He died Aug. 30, 1483.

LOUIS XII (1462-1515). King of France. A son of Charles, duke of Orleans, the poet, he was descended from Charles V, but did not become heir to the throne for some years. He married Jeanne, a daughter of Louis XI, and as duke of Orleans was an active personage during the reigns of that king and of Charles VIII. In April, 1498, he became king on the failure of direct heirs to Charles VIII. Asserting his right as heir to the Two Sicilies and as grandson of Valentina Visconti to Milan, Louis invaded Italy in 1499 with Ferdinand of Spain, a project which led to a prolonged rivalry between France and Spain. He secured the adherence of a province of doubtful loyalty by his marriage with Anne of Brittany, the widow of his predecessor, divorcing his first wife for this purpose. Louis took as his third wife, Mary, sister of Henry VIII, but survived the wedding by only three months, dying Jan. 1, 1515. In 1506 he had

Louis, kings of France. Left to right, Louis XI, 1461-83; Louis XII, 1498-1515; Louis XIII, 1610-43; Louis XIV, 1643-1715; Louis XV, 1715-74; Louis XVI, 1774-92; Louis XVII, titular king, 1793-95; Louis XVIII, reigned de facto, 1814-24

received by public acclamation the title of father of his people, proof that despite military misfortunes he was appreciated by his subjects.

LOUIS XIII (1601-43). King of France. The son of Henry IV and Mary de' Medici, he was born Sept. 27, 1601, and came to the throne on the murder of his father in 1610. His mother acted as regent until 1617, when Louis himself took control of affairs and sent her from the capital. The result of this and other factors was civil war, which continued until Richelieu became chief minister. He remained in power until his death in 1642. Louis, except on one occasion, being content to leave home and foreign policy in his hands. The king died May 14, 1643. He left two sons, Louis XIV and Philip, duke of Orleans.

LOUIS XIV (1638-1715). King of France. A son of Louis XIII and Anne of Austria, he was born Sept. 5, 1638, and became king on his father's death in May, 1643. In 1660 he really began to rule, in the same year marrying Maria Theresa, a Spanish princess. Louis reigned for 72 years, one of the most glorious periods in the history of France. For much of it her armies were invincible, but it was more notable for its art and literature, while the influence of the court on manners and taste can hardly be exaggerated. Of all the national activities, Louis was the centre. His hand was in almost every move of European politics; he also found time to build palaces, to encourage literature and art, and to take his fill of pleasure. He carried on a series of wars, the main object of which was to make him the dictator of Europe. By 1678 he had achieved a great measure of success, but afterwards he was less fortunate, and his last peace treaty (1713) was a deep humiliation to France.

After the death of Maria Theresa, in 1683, Louis married his mistress, Madame de Maintenon. His earlier mistresses included Mademoiselle de la Vallière and Madame de Montespan. His son Louis, and his grandson, the duke of Burgundy, died before him, leaving his great-grandson, afterwards Louis XV, his heir. Louis died Sept. 1, 1715.

LOUIS XV (1710-74). King of France. Son of Louis, duke of Burgundy, he was the great-grandson of Louis XIV, to whose throne he became heir in 1712. Born Feb. 15, 1710, his mother was a princess of Savoy. In Sept., 1715, he became king and in 1723 was declared of age, but the conduct of affairs was not in his hands until 1743, and then only partially. His long reign was one of misfortune for France. He had a succession of mistresses, of whom Madame de Pompadour and Madame du Barry are the best known, while stories are told of his seraglio in the Parc aux Cerfs. He married in 1725 Marie Leeczynska, daughter of Stanislaus, the deposed king of Poland. He died May 10, 1774.

LOUIS XVI (1754-93). King of France. Born at Versailles, Aug. 23, 1754, the son of Louis, the dauphin, and a grandson of Louis XV, he became heir to the throne in 1765 and in May, 1774, became king. For fifteen years he ruled, while the condition of the country grew steadily worse, and then, in 1789, came the revolution. In June, 1791, he fled to Varennes, but he was brought back to Paris, where he took an oath to reign as a constitutional king. In Sept., 1792, the kingly office was abolished. Louis Capet, as he was called, was tried, found guilty, and on Jan. 21, 1793, was guillotined, and his wife, Marie Antoinette, a Hapsburg princess, whom he had married in 1770, shared his fate. Their elder son died before his parents, a son and daughter remained—the titular Louis XVII,

and Marie Thérèse, who survived the horrors to which she was submitted, and died in 1851.

Louis XVII was imprisoned in the Temple, and his death was announced in June, 1795. See French Revolution.

LOUIS XVIII (1755-1824). King of France. Grandson of Louis XV and brother of Louis XVI, he was born at Versailles, Nov. 17, 1755. He remained in Paris until the flight of Louis XVI when, more fortunate than his brother, he succeeded in making his way to Coblenz. Here he figured as the head of the Royalists, declared himself regent after the execution of Louis, and on the death of the dauphin, in 1795, proclaimed himself king as Louis XVIII. In 1807 Louis went to England, where he remained until the victory of the Allied armies in 1814 opened the way to Paris. He entered his capital May 2, but was obliged to take flight on Napoleon's escape from Elba. Again, after Waterloo, he returned to Paris, July 8, 1815, and reigned until his death, Sept. 16, 1824.

LOUIS. Name of three kings of Bavaria. Louis I (1786-1868), born Aug. 25, 1786, succeeded his father Maximilian as king in 1825. At first he proved an enlightened ruler, but he became less so as the years advanced. In 1846 he formed a connexion with the dancer Lola Montez, who used her influence especially against the dominant Catholic party. This was followed by the unrest of 1848, and the king's abdication on March 20.

Louis lived until Feb. 28, 1868.

Louis II (1845-86) was the eldest son of King Maximilian II, and became king in 1861. In June, 1886, after a reign passed in eccentricities and extravagance, he was declared incapable of ruling. His uncle Luitpold became regent on June 10, and on June 13 the king and his doctor were drowned in the lake of Starnberg.

Louis III (1845-1921) was a son of Prince Luitpold and a grandson of King Louis I. On the death of his father, Dec. 12, 1912, he succeeded him as regent of Bavaria, King Otto being insane. Proclaimed king Nov. 3, 1913, he abdicated Nov. 9, 1918, and died Oct. 17, 1921. See Bavaria.

LOUISBURG. Town and seaport of Cape Breton, Canada. It is 40 m. from Sydney by railway and has a good harbour.

In 1713 France gave up Nova Scotia to Great Britain, but retained Cape Breton. Here the French built a strong fortress called, after their king, Louisburg. This was attacked and taken by British colonists in 1747, but was restored to France in 1748. In 1758 it was again taken, and in 1763 became British.

LOUISE (b. 1848) British princess, known also as the duchess of Argyll. The sixth child and fourth daughter of Queen Victoria and Prince Albert, she was born March 18, 1848, and baptized Louise Caroline Alberta. She was educated privately, and on March 21, 1871, was married to the marquess of Lorne, afterwards 9th duke of Argyll. She accompanied him to Canada when he was governor-general. The princess, who had no children, was left a widow in 1914.

Another Princess Louise, eldest daughter of Edward VII, now known as the Princess Royal, married the 1st duke of Fife (q.v.).

LOUISIANA. State of the U.S.A. It has an area of 48,500 sq. m. The coast region is swampy. The N and N.E. portions of the state are upland, whence the surface gradually slopes to the S. The state contains immense forests. Agriculture is an important industry, maize, rice, cotton, and cane sugar are the chief crops cultivated. Besides the waterways, transport facilities are provided by nearly 9,000 miles of rly. There are a state and other universities. Baton Rouge is the capital, but New Orleans is the largest city. The latter is a favourite winter resort and is noted for the annual Mardi Gras, a popular attraction. There is a fine deep water harbour at Lake Charles, opened in 1926.

Louisiana was part of a French colony called by that name in honour of Louis XIV. It became a French possession in 1682, and was later handed over to the Mississippi Co. In 1763 it was ceded to Spain, but was regained by France in 1800. In 1803 it was sold to the United States for £3,000,000. Pop. 1,950,000.

LOUIS PHILIPPE (1773-1850) King of the French. The eldest son of Louis Philippe, duke of Orleans, known as Philippe Egalité, he was born Oct. 6, 1773.

Like his father, he professed revolutionary principles, repudiated his titles, and became a colonel in the revolutionary army, fighting at Valmy and Jemappes. After his father's execution he became head of the Orleans branch of the Bourbons. The government having ordered his arrest, he spent many years wandering about Europe. At Palermo, in 1809, he married a daughter of Ferdinand, king of the Two Sicilies. Reinstated in 1814, he was driven from France by the hostility of Louis XVIII, and lived at Twickenham until 1827.

His opportunity came with the revolution of 1830. He accepted the throne, and by steering a middle course between democracy and privilege, and by various more or less doubtful expedients, managed to keep it until the revolution of 1848, when he fled to England. He died at Claremont, Surrey, Aug. 26, 1850. His eldest son, Louis, duke of Orleans, had died in 1842, leaving a son, known as the count of Paris, who inherited his grandfather's claims.

LOUIS STYLE. Term applied to four styles of French furniture, and named after Louis XIII, XIV, XV, and XVI. Louis Treize chairs were small, rectangular in contour, with slight wood frames concealed by well-padded velvets, tapestries, and embroideries. Louis Quatorze (XIV) was a heavy classic style, but florid; the furniture being

overloaded with carvings, rich inlays, and heavy, carved metal mountings.

Louis Quinze (XV) is the florid rococo style. Wood was heavily carved, or covered with moulded composition. Most of this was gilded, or painted in delicate tints. Couches and chairs had sweeping, curved backs. Louis Seize (XVI) is a more chaste version of the Renaissance, presenting rectangular panels with simple mouldings and fluted columns. See Chair; Furniture.

Louis Philippe, King of the French

Louis Style. Commode with overlaid marquetry of mahogany, and mounted with chased ormolu; period, Louis XV Jones Bequest, S. Kensington Museum

LOUISVILLE. City of Kentucky, U.S.A. Situated below Cincinnati, 130 m. by river and 110 m. by rail from that city, it is a river port on the Ohio. Here obstructed by rapids, which give it the name "Falls City." The university is the chief of a large number of educational institutions. The city is a great railway junction and a leading centre of the tobacco industry, and among its other activities are slaughtering and meat packing, petroleum refining, and the manufacture of machinery, leather, and timber goods. It became a city in 1828. Pop. 305,935.

LOURDES. Town of France, in the dept. of Hautes-Pyrénées. It lies 12 m. by railway S.S.W. of Tarbes. The town relies almost entirely on the constant stream of pilgrims to the grotto of Our Lady of Lourdes. The basilica, 1876, and the church of the Rosary, 1889, are close by the shrine, as also is the Hospice de Notre Dame des Douleurs. The pilgrimage arose from the alleged

Lourdes. The Basilica, in front of which is the Chapel of the Rosary

appearances of the Virgin Mary to a peasant girl named Bernadette Soubirous (1844-79) in 1859. Pop. 8,736.

LOURENÇO MARQUES or **LORENZO MARQUES.** City of Mozambique. On the harbour of Delagoa Bay, it is the capital of the province and the terminus of the most direct and shortest railway route to the Transvaal, from which country it derives the bulk of its transport trade. Pop. 37,301. See Delagoa Bay.

LOUSE. Name applied to a group of small, parasitic wingless insects. The mouth parts are developed into a hooked tube, with which they bore into the skin and suck the blood of their hosts. The eggs are deposited on the hairs, hatch out in a few days, and reproduce their species in about a fortnight. There are at least forty species, parasitic on various hosts. The plural form is lice.

LOUSEWORT (*Pedicularis sylvatica*). Perennial herb of the order Scrophulariaceae, native of Europe. It has a short root-stock and branching leafy stems a few inches high. The narrow oblong leaves are deeply cut into segments from the sides. The tubular two-lipped flowers are rose-coloured. It is a parasite upon the roots of other plants. The marsh lousewort (*P. palustris*), grows in bogs. It is an annual with more erect stems and the leaf-segments rounded.

LOUTH. County of the Irish Free State. In the prov. of Leinster, it has an area of 316 sq. m. The coastline on the Irish Sea is broken by Carlingford Lough, Dundalk Bay, and the estuary of the Boyne. The chief rivers are the Lagan, Glyde, and Dee. The Boyne flows along the S. boundary. The surface is flat, except in the N.E., where are the Carlingford Mts., and the S.W. The chief industries are agriculture and fishing including the culture of oysters. The principal towns are Dundalk, the county town Drogheda and Ardee. Carlingford and Greenore are watering places. Louth, from which the county takes its name, is a decayed town 5½ m. from Dundalk. Pop. 62,739.

LOUTH. Borough and market town of Lincolnshire. It stands on the Ludd, 31 m. from Lincoln on the L.N.E.R. A canal connects it with the Humber. The large and beautiful perpendicular church of S. James is

notable for its spire. Louth is the trading centre for an agricultural district. Its industries include brewing and malting. Market days Wed. and Fri. Pop. 9,544.

LOUVAIN (Flemish. Leuven). Town of Belgium. It lies on the river Dyle, 19 m. by railway E.N.E. of Brussels, and is an important railway junction. The chief industries are brewing, lace-making, and printing.

Louvain suffered severely in the Great War, and was awarded the Croix de Guerre. After the entry of the German troops on Aug. 19, 1914, a large part of the town was burnt or otherwise damaged. The roof and interior of the collegiate church of S. Pierre were seriously injured, and the library of the university, founded in 1426, together with its priceless treasures, was burnt. The magnificent hôtel de ville escaped. In 1923 the new university library, the gift of the U.S.A., was opened. Pop. 40,000.

LOUVOIS, FRANÇOIS MICHEL LE TELLIER, MARQUIS DE (1641-91). French statesman. Born in Paris, Jan. 18, 1641, he was trained for public life, and soon attracted the attention of Louis XIV. In 1666 he became minister of war, and rapidly brought the French army to a high state of efficiency. This was proved when war broke out in 1672, and during the next 18 years Louvois was one of the directors of the policy of France, both military and civil. He died July 16, 1691.

LOUVRE, THE Old palace of the kings of France, in Paris. It now contains a great museum of art and antiquities. Situated on the right bank of the Seine, the building, with its courts, occupies an area of about 34,432 sq. yds.

Louth. Map of the maritime county of Leinster

Louvain. Hôtel de Ville, a remarkable 15th cent. building

Napoleon filled the galleries with a priceless collection of works of art obtained from foreign capitals, and although much of this loot was subsequently restored, the collection remains one of the finest in the world. Its sculpture includes the Winged Victory of Samothrace and the Venus of Milo, and among the world-famous pictures here are Leonardo's Virgin of the Rocks, the Mona Lisa, and other Italian masterpieces, and an unrivalled collection of the French school. The Salle Rubens, filled with the series of allegorical paintings executed for Catherine de' Medici, the Salle Van Dyck; the Salon Carré, which contains the greatest masterpieces of various schools; and the Grande Galerie are among the more famous of the Louvre's many galleries.

LOVAGE (*Ligusticum scoticum*) Perennial herb of the order Umbelliferae, a native of N. Europe, N. Asia, and N. America. It has a stout branched root-stock and large, much divided leaves. The branches bear umbels of small white or pink flowers. The root is aromatic, and the leaves are used as a potherb.

LOVAT, BARON. Scottish title borne by the family of Fraser, with an interval, since about 1458. Hugh Fraser, who was made a lord of parliament, took the title of Lord Lovat, or Lord Fraser of Lovat, this being the name of his seat in Inverness-shire. The title passed from one descendant to another until it came to Simon Fraser, the Jacobite, who was captured after Culloden and executed in 1747.

The title became extinct in 1815. In 1837 a kinsman, Thomas Alexander Fraser, a

Simon Fraser, Lord Lovat. Portrait by Hogarth. Nat. Port. Gallery

Louvre. The palace from the west, showing the two great projecting wings built under Napoleon III. In the foreground is the Place du Carrousel

descendant of the 2nd baron, was created Baron Lovat, and in 1887 his descendant, Simon Joseph (b. 1871), became the 14th baron. In South Africa he served with The Lovat Scouts, a force raised by himself. The family seat is Beaufort Castle, Beauly, and the estates are mainly in Inverness-shire.

LOVE BIRD. Name popularly given to a small parrot of the genus *Agapornis*. There are about nine species, all natives of Central and S. Africa. They fly in flocks, feed on berries and seeds, and take possession of the nests of other birds instead of building for themselves. Their handsome appearance and pretty ways make them favourites for the aviary, but they are apt to prove very delicate. The rosy-faced love bird is the hardiest.

LOVE-IN-A-MIST (*Nigella damascena*). Annual herb of the order Ranunculaceae, a native of S. Europe. The alternate leaves are divided into thread-like segments, and the large blue or white flowers are surrounded by moss-like bracts. It is also called devil-in-the-bush and fennel-flower.

LOVELACE, RICHARD (1618-58). English poet. He was the eldest son of Sir William Lovelace of Woolwich. For presenting to the

Long Parliament the Kentish petition on behalf of the king, he was imprisoned in the Gatehouse, Westminster, where he wrote his

Richard Lovelace.
English poet

LOVE-LIES-BLEEDING (*Amarantus caudatus*). Annual herb of the order *Amarantaceae*. A native of India. It has alternate, undivided leaves, and minute dark purple flowers, densely clustered in long drooping spikes, like catkins.

LOVER, SAMUEL (1797-1868). Irish novelist and song writer. Born in Dublin, Feb. 24, 1797, he was by turns miniaturist, song writer, novelist, and dramatist. He was associated with Dickens in the establishment of *Bentley's Miscellany*, 1837. He gave recitals, called *Irish Evenings*, in London and in Canada and the U.S.A., 1846-48. Lover died at St. Helier, Jersey, July 6, 1868. Among his ballads are *Rory O'More*, *The Low-backed Car*, *The Angel's Whisper*, *The Four-Leaved Shamrock*, *Molly Bawn*, and *Widow Machreeo*. He wrote music for his songs. His humorous story *Handy Andy* appeared in 1842.

LOVING CUP. Large cup filled with wine or punch, and passed from hand to hand at state banquets, civic feasts, and university gatherings to pledge health. The custom of drinking from one cup was observed at the ancient Jewish paschal supper. See *Eucharist*.

Loving Cup presented by Samuel Pepys to the Clothworkers' Company of London

LOWE, SIR HUDSON (1769-1844). British soldier. He was born at Galway, July 28, 1769, joined the army in 1787, and served with distinction against the French, especially during the Egyptian campaign of 1801. In 1815 he was appointed custodian of Napoleon at St. Helena. He died Jan. 10, 1844.

LOWELL. City of Massachusetts, U.S.A. At the junction of the Merrimac and Concord rivers, 26 m. N.W. of Boston, it is well served by rlys. and obtains power chiefly from the Merrimac. Cotton and woollen goods are largely produced, besides machinery, tools, and foundry and machine-shop products. Pop. 110,296.

LOWELL, JAMES RUSSELL (1819-91). American poet, essayist, and diplomat. He was born at Elmwood, Cambridge, Massachusetts, Feb. 22, 1819, of Puritan descent. He became editor of *The Pennsylvania Freeman*, in which, influenced by his wife, Maria White, he took the side of the abolitionists; lectured on poetry at the Lowell Institute, Boston, 1854-55; was professor of belles-lettres at Harvard, 1855-77; edited

J. R. Lowell,
American writer

The Atlantic Monthly, 1857-61; and, with C. E. Norton, *The North American Review*, 1864-72. He was U.S. minister in Madrid,

1877-80 and in London, 1880-85. He died at Elmwood, Aug. 12, 1891.

Lowell's first volume, *A Year's Life and Other Poems*, appeared in 1841; his last, *Heartsease and Rue*, in 1888. A number of poems in Yankee dialect which began in *The Boston Courier* in 1846, inspired by opposition to the Mexican war, were published as *The Biglow Papers* in 1848. His prose works include *My Study Windows*, 1871; and *Among My Books*, 1870-76.

LOWELL, PERCIVAL (1855-1916). American astronomer. Born March 13, 1855, in Boston, he was educated there and at Harvard. After some years in Japan and Korea he devoted his energies to the erection of the Lowell Observatory at Flagstaff, Arizona, and the prosecution of researches there. In 1902 he was made non-resident professor of astronomy at the Massachusetts institute of technology, and devoted himself especially to researches on planetary markings. He wrote *Mars and Its Canals*, 1906; and *Mars as the Abode of Life*, 1908. He died Nov. 13, 1916. See *Mars*.

LOWESTOFT. Borough, seaport, and watering place of Suffolk. It stands at the mouth of the Waveney, 16 m. by rail from Great Yarmouth and 118 m. from London, on the L.N.E. and L.M.S. Rlys. The chief church is St. Margaret's, a Perpendicular building. Public parks and open spaces include Belvedere Park, the Denes, and the Sparrow's Nest. The narrow streets leading down to the sea are called the scores. There are an inner and an outer harbour, with good accommodation for shipping, and a large fish market. Lowestoft is a fishing centre, and boat-building and sail-making are carried on. A naval base during the Great War, Lowestoft was bombarded by the Germans in 1916. Pop. 46,150.

Lowestoft ware is the name of a hard paste china made at Lowestoft 1775-1802. It has a good body and an Oriental character, with decorations in blue and white. Polychrome was afterwards used for scenery and figure painting. An earlier soft-paste porcelain and an earthenware were made at Lowestoft from 1756.

Lowestoft. Specimens of the china-ware formerly made at Lowestoft. From Herbert Allen collection, Victoria and Albert Museum

LOWTHER CASTLE. Seat of the earl of Lonsdale (q.v.). It stands above the village of Lowther, 4 m. from Penrith. The present castle is in the baronial style of the 14th cent.; the N. front is 420 ft. long and the S. front 280 ft. It has a central tower, grand staircase, and magnificent reception rooms, with fine paintings, beautiful and spacious gardens, and a large park through which the river Lowther flows. St. Michael's Church in the village contains memorials of the Lowthers.

Lowther Castle, Penrith. Front and main gateway of the seat of the earl of Lonsdale

LOWTHER HILLS or **LEADHILLS**. Range of hills in Scotland, on the borders of Lanarkshire and Dumfriesshire. Green Lowther (2,403 ft.) and Lowther Hill (2,377 ft.) are the loftiest summits.

LOYAL REGIMENT. Regiment of the British Army. Known until Dec., 1920, as the Loyal North Lancashire Regiment, its official title is The Loyal Regiment (North Lancashire). The 1st battalion was raised in Scotland in 1740, and had no connexion with Lancashire until 1782. The 47th regiment of the line, it was sent to Nova Scotia about 1758, and fought with Wolfe. The old 81st,

Loyal Regiment badge

now the 2nd battalion, made a name at the battle of Maida in 1806. Both the 47th and 81st took part in the Peninsular War. The regiment served with distinction in the Great War. The regimental depot is at Preston.

LOYALTY. Group of French islands in the Pacific Ocean. They form one of the dependencies of New Caledonia. Area, 800 sq. m. Pop. 11,200.

LOYOLA, IGNATIUS (1491-1556). Spanish divine and founder of the Society of Jesus. Inigo Lopez de Recalde, as he was called in Spanish, was born Dec. 24, 1491, at the family castle of Loyola, in the Basque prov. of Guipuzcoa, Spain. He became a page at the court of Ferdinand and Isabella, and then an officer in the army. In 1521, while recovering from wounds and illness, the reading of some religious books led to his conversion and renunciation of the world.

Ignatius Loyola,
Spanish divine
After Rubens

After a period of ruthless asceticism, in the course of which he wrote the *Spiritual Exercises*, he spent some years in study. In 1534 Loyola and six companions dedicated themselves to the service of suffering Christians and the conversion of unbelievers, at the same time vowing absolute obedience to the pope. Loyola was ordained priest in 1537, and in 1540 Pope Paul III accepted the services of the company and authorised the foundation of the order, of which, in 1541, Ignatius was elected the first general. He died at Rome, July 31, 1556. Loyola was canonised in 1622. Pron. Lō-yō-lā. See *Jesuits*.

LOZENGE. In heraldry, a diamond-shaped charge. A lozenge may be pierced; if the hole is circular, the charge is called a *rustre*; if the hole is square, it is described as *square-pierced*; if lozenge-pierced, showing a narrow band, it is called a *mascle*, and is supposed to represent a link of chain armour. The word is also used for a small tablet.

LÜBECK. City and seaport of Germany, also a free state of which it is the capital. The city stands on the Trave about 10 m. from its mouth, 40 m. from Hamburg, and 178 from Berlin, on the Elbe-Trave canal. There is a channel from Lübeck Bay on the Baltic to Lübeck, which is an important trading port. Among the chief objects of trade are wine, timber, and tar. It is an important rly. junction and industrial centre. Pop. 120,788.

Lübeck has preserved its mediæval aspect more than most N. German cities. It is dominated by a number of lofty spires, and contains many fine old houses with gabled brick fronts. The cathedral, founded in 1173, has an altar-piece by Memling. St. Mary's Church, built 1276-1310, has lofty twin spires and a Dance of Death. The Rathaus is of the 13th-16th centuries. The Hospital of the Holy Ghost, an almshouse dating from 1286,

has an early Gothic chapel. The house of the Shipmen's Guild dates from the 16th century.

The territory of the republic extends up the Trave valley from its mouth for about 18 m., having part of Oldenburg on the N., Holstein W. and S., and part of Mecklenburg-Strelitz E. It includes a number of detached portions. The only towns are Lübeck and Travemünde. A new constitution was adopted in 1925. The senate of 11 members is the executive. The area is 115 sq. m. Pop. 127,971.

LUCAN (A.D. 39-65). Roman poet whose full name was Marcus Annaeus Lucanus. He was born at Corduba in Spain, a nephew of Seneca. Owing to the latter's high position at the court of Nero, Lucan started his career under the best auspices, and first attracted notice by a panegyric of the emperor. Later he incurred the jealousy of Nero, and with others he formed a conspiracy to assassinate the emperor. This conspiracy was discovered, and Lucan was compelled to commit suicide at the age of 26. His *Pharsalia*, an epic dealing with the fall of the Roman republic, abounds with passages of brilliant rhetoric.

LUCAS, EDWARD VERNALL (b. 1868). British writer. He joined the staff of *Punch* in 1902; and wrote in conjunction with C. L. Graves *Wisdom While You Wait*, 1903, and a number of similar skits. His works include *Highways and Byways in Sussex*, 1904; *A Wanderer in Holland*, 1905; *A Wanderer in London*, 1906; *Over Bemerton's*, 1908; *A Wanderer in Rome*, 1926, and many others. His biography of Charles Lamb, 1905, new edition, 1921, and his edition of the *Works and Letters of Charles and Mary Lamb* are standard works, while *The Open Road*, 1899, started a new fashion in anthologies.

LUCAS, JOHN SKYMOOR (1849-1923). British painter. Born in London, Dec. 21, 1849, he was apprenticed to a wood carver and sculptor, and his earliest artistic efforts were in this medium, but in 1870 he entered the Royal Academy schools, and henceforth devoted himself to painting. He first exhibited at the R.A. in 1872, was elected A.R.A. in 1886, and R.A. in 1898. Engravings after his historical paintings are popular. He died May 8, 1923.

LUCCA. City of Italy. It stands on the river Serchio, 15 m. by rly. N.E. of Pisa. The 11th cent. cathedral is rich in sculptures, paintings, stained glass, etc.; there are many old and interesting churches and several fine palaces. The old ducal palace, now used as a town hall, contains a picture gallery. There are remains of a Roman amphitheatre. Silk and other textiles are manufactured. A few miles up the valley are the famous hot baths. Lucca was a republic from 1369 to 1797, when it was taken by the French. Pop. 80,565.

LUCE BAY. Bay in the S. of Wigtownshire, Scotland. It runs 16 m. inland and measures 18 m. across the entrance from the Mull of Galloway to Burrow Head.

LUCERNE OR ALFALEA (*Medicago sativa*). Species of medick (q.v.). It is a deep-rooted perennial leguminous plant, with racemes of purple flowers. When sown by itself, or with a corn crop, preferably the former, it stands for several years, and is tolerant of thin, calcareous soils. It is most valued for fattening stock, being cut in the green state and given to cattle.

LUCERNE. City of Switzerland, capital of the canton of Lucerne. It stands on the N.W. arm of Lake Lucerne, where the river Reuss leaves it, 25 m. S.S.W. of Zürich, at an alt. of 1,500 ft. Dominated by the Rigi and Pilatus amid lovely scenery, Lucerne is one of the chief tourist centres of Switzerland. It is the starting point of the St. Gotthard Rly. The principal church, S. Leodogar or Ledger, was part of a Benedictine monastery rebuilt about 1633-35. The town hall, in part early

16th cent., contains the cantonal museum. In the Glacier Garden is the Lion of Lucerne. The city is said to be named after its old water tower, once a lighthouse (lucerna). Pop. 46,150.

The lake of Lucerne is 23 m. long and covers 44 sq. m.

LUCIAN (c. A.D. 120-180). Greek satirist. He was born at Samosata, on the Euphrates, in Syria. He became a travelling rhetorician, giving lectures and teaching in various cities in Asia Minor, Greece, Italy, and Gaul. Towards the end of his life he received an official appointment in Egypt, where he died.

A septic by temperament, Lucian tilted against old faiths, philosophies, and conventions in the most audacious manner. His varied writings, grave as well as gay, afford a valuable picture of the manners of his age. His *True History*, which was written to travesty the artificial romances of the period, anticipates such works as *Gulliver's Travels*, *Rabelais' Voyage of Pantagruel*, and *Cyrano de Bergerac's Journey to the Moon*.

LUCIFER (Lat. light-bringer). Name given to the planet Venus as the morning star; in mythology, the son of Aurora. In the O.T. (Isa. 14, 12) it is found as the translation of a Heb. word, *helel*, which means literally "shining one," a term used as an epithet of the king of Babylon. A misinterpretation of this passage in connexion with Luke 10, 18, Rev. 9, 1-11, led to the identification of Lucifer with Satan.

LUCKNOW. City of India, formerly capital of Oudh, now of the Lucknow division of the United Provinces of Agra and Oudh. Most of the city lies along the right bank of the Gunt. From a distance its minarets appear magnificent.

Lucknow. 1. Ruins of the Residency, destroyed in the Mutiny. 2. Left, Mausoleum of Asaf-ud-daula; right, Huseinabad mosque

or Agra. Among modern institutions is the university, founded in 1920.

Lucknow is an important rly. centre. Native industries include the making of articles in silver, gold, ivory, silk, muslin, and glass. There are railway workshops. Pop. 240,566.

Lucerne. Lake bridge at the point where the Reuss leaves the lake

and the small garrison. The place was at once besieged by mutineers.

On Nov. 16 Sir Colin Campbell relieved the

Alm Bagh, and the residency, Nov. 16, but his force was not sufficient to dislodge the rebels, so he took away the garrison, with its women and children. Campbell regained Lucknow in 1858.

LUCRETIA. In Roman legend, wife of Lucius Tarquinius Collatinus. Inflamed by her beauty, Sextus Tarquinius, son of King Tarquinius Superbus, forced her to yield to his desires. On the following day Lucretia stabbed herself, whereupon Junius Brutus, cousin of Tarquinius, seized the dagger and raised it as a standard of revolt.

LUCRETIVS (c. 98-55 B.C.). Roman poet and philosopher, whose full name was Titus Lucretius Carus. He was a contemporary of Cicero and Caesar, but hardly anything is known of his life, although his great philosophical poem in six books, *De Rerum Natura* (*On Nature*), ranks as one of the world's masterpieces. It is an attempt to express the author's system of Epicurean philosophy and thus to afford his fellow men a rational explanation of life and matter destined to free them from the terrors and cruelties springing from superstition and ignorance, especially, in his view, from belief in divine intervention. Though Lucretius was not a scientist in the modern sense, many of the theories he propounds anticipate the discoveries of modern times.

LUCULLUS, LUCIUS LICINIUS (c. 110-57 B.C.). Roman soldier and epicure. In the third Mithradatic War, which began in 74, he was in chief command for some eight years, and succeeded in driving Mithradates out of his kingdom of Pontus. In 69 he defeated Tigranes, king of Armenia, and overran Mesopotamian Armenia, but soon retired and devoted his days to the gratification of his luxurious tastes by means of the vast wealth amassed in Asia. He was, however, a generous patron of art and letters, and collected a fine library. His gardens on the Pincian Mt. and his villas at Tusculum and Neapolis were famous. Known as an epicure, his banquets became proverbial.

LUCY, SIR HENRY WILLIAM (1845-1924). British journalist. Born at Crosby, he began his journalistic career as chief reporter of *The Shrewsbury Chronicle*, and later became the best known parliamentary press writer in England. His chief work was done for *The Daily News*, his connexion with which began in 1873, and *Punch*, of which he was Toby, M.P., from 1881 until his retirement in 1916. In addition to a parliamentary handbook, he was the author of *Memories of Eight Parliaments*, 1908; *Sixty Years in the Wilderness*, 1909-12; *Nearby Jordan*, 1916; and *The Diary of a Journalist*, 1921. He was also successful as a lecturer. He was knighted in 1909, and died Feb. 20, 1924.

LUDDITES. Name given to bands of rioters who appeared in the midland counties of England in 1811. Industrial distress was acute, and bodies of unemployed went about breaking machinery, which they regarded as the cause of their misfortunes, especially in Nottinghamshire and Leicestershire. The riots continued in 1812, and broke out again in 1816, extending into Lancashire, Yorkshire, and other parts of the country. By accident the rioters became known as Luddites, from Ned Ludd, a boy living in a Leicestershire village.

E. von Ludendorff, German soldier

LUDENDORFF, ERNST VON (b. 1865). German soldier. Born April 9, 1865, in the prov. of Posen, he entered the infantry in 1882, and in 1898 joined the general staff, acting as lecturer in the military academy, Berlin,

1906-8, and working, 1904-13, in the operations section which planned the violation of Belgian neutrality. On the German mobilisation he was a major-general and joined the staff of Bülow's 2nd army. He took part in the attack on Liège, receiving the surrender of the citadel. On Aug. 22, 1914, he was sent as Hindenburg's chief of staff to the Russian front, where he was mainly responsible for the victory of Tannenberg and for the successes of 1915. On Aug. 29, 1916, with Hindenburg, he was placed in virtually supreme command of the German forces. He reorganized the German army and planned the strategy which conquered Rumania, while he held the French front defensively. He devised new methods of attack in 1917, employed gas-shells on a great scale, and supported the assault of picked shock troops by trench-mortars, field guns and machine guns. He planned the German offensives of 1918, but these failed and the successes of the Allies followed, and Ludendorff was dismissed on Oct. 26, 1918.

He wrote *My War Memories*, 1919; *The General Staff and Its Problems*, 1920; *Warfare and Politics*, 1922. See Aisne; Marne; consult also *My Married Life with Ludendorff*, by Margarette Ludendorff, 1930.

LUDGATE. Gate of old London. It stood on the W side of the wall, near the Old Bailey. According to tradition it was built by King Lud, but its name is derived by modern authorities from a Saxon word meaning postern. Ludgate Hill extends E. from Ludgate Circus (1864), where it is crossed by a viaduct of the Southern Rly., to S. Paul's Churchyard. In 1928 Ludgate Hill station (Southern Rly.) was closed. In 1930 a system of controlling traffic by means of coloured lights was introduced at Ludgate Circus, a very busy centre at the foot of the Hill.

LUDLOW. Borough and market town of Shropshire. It stands on the Teme, where it is joined by the Corve, 27 m. from Shrewsbury, and is served by a joint line of the G.W. and L.M.S. Rlys. The church of S. Lawrence, Decorated and Perpendicular, has a fine tower. The castle ruins include the Norman keep, the great hall, Mortimer's Tower, and a Norman chapel. Broad Gate, one of the town gates, still stands. Of the old houses the most notable is an inn, The Feathers. Market days, Mon. and Sat. Pop. 5,677.

Ludlow, Shropshire. Ruins of the castle from the north-west

division of the Silurian rocks in Great Britain. Typically developed near Ludlow, they consist mainly of shales, passing gradually into the Old Red Sandstone. See Silurian.

LUDLOW, EDMUND (c. 1617-98). English politician and author. Born of a Wiltshire family, he joined the parliamentary army when the Civil War broke out. In 1646 he entered Parliament, succeeding his father, Sir Henry Ludlow, as M.P. for Wiltshire. He was a member of the court that tried Charles, and signed the death warrant. A member of

the council of state, he went to Ireland in 1651, and after Ireton's death was for about a year in command there. Becoming an opponent of Cromwell, he retired from public life, but returned to it in 1659. At the Restoration Ludlow escaped to Switzerland, and at Vevey passed most of the rest of his life. His *Memoirs* are valuable for the history of the time.

LUDWIG, EMIL (h. 1881). German writer. Born at Breslau, Jan. 25, 1881, he was educated there and at Heidelberg. His first writings were plays, among them a trilogy, *The Renaissance*, and later he wrote novels and essays. His reputation was made by his biographies, the characters being analysed and presented to the world by a fresh and fearless mind. These lives include Goethe, 1920; Napoleon, 1925; William II, 1925; Bismarck, 1926; and Beethoven, 1929.

LUDWIGSHAFEN. Town of Bavaria. Founded by Louis I (Ludwig), king of Bavaria, in 1843, it stands on the Rhine opposite Mannheim, with which it is connected by bridges and ferries. It has a good harbour and a large river trade, chiefly in timber, coal, and agricultural products. Its chemical factories, which make soda, dyes, fertilisers, etc., have a world-wide reputation. Other industries are the making of flour and beer, sawmilling and ironfounding. In the Great War it was an important aircraft centre, and was bombed by the Allies. Pop. 101,869.

Ludgate Hill, surmounted by S. Paul's. Centre, S. Martin's, a Wren church

LUGARD, FREDERICK DEALTRY LUGARD, 1ST BARON (h. 1858). British administrator. Born Jan. 22, 1858, he became a soldier. In 1888 he led an expedition against the slave-traders on Lake Nyasa. The British East Africa Co. made him administrator of Uganda, and in 1897 the British Government appointed him a commissioner in W. Africa, where he raised and commanded the W. African Frontier Force. In 1900 he was made high commissioner for Northern Nigeria and, after serving as governor of Hong Kong, 1907-12, he became governor of both Northern and Southern Nigeria in 1912, and after their union was the first governor-general, resigning in 1919. Lugard, who was knighted in 1901 and created a baron in 1928, married the writer and traveller, Flora Shaw (d. 1929), who was formerly head of The Times colonial department. She undertook special commissions for that paper in Australia and Canada, and wrote *A Tropical Dependency*, 1905.

Lord Lugard, British administrator

LUGG or LUG. River of England and Wales. It rises in Radnorshire and flows through Herefordshire to the Wye, which it enters 5 m. below Hereford. Leominster is on its bank.

LUGGER. Craft carrying lug sails. Luggers may be one, two, or three masted.

Sometimes they are also fitted with top sails. Owing to their extreme handiness luggers are much used, and they were a favourite craft of the old-time Channel smugglers.

LUKE.

One of the four Evangelists. He is believed to have been a physician of Antioch, one of the early members of the Church of Antioch, and author of the Third Gospel and of the Acts of the Apostles. A follower of Paul and his companion in his missionary journeys, he is said to have died or to have been martyred in Bithynia at the age of 74. According to tradition he was a painter, and he is regarded as patron saint of the fine arts. His festival is held on Oct. 18.

Lugger of the type used by fishermen round the British coast

LUKE, THE GOSPEL OF. The traditional view which ascribes the authorship to Luke, the companion of S. Paul and the beloved physician, is accepted by the majority of modern scholars, mainly on the ground that it is the only theory which satisfactorily explains the critical data of Acts. Luke, as he tells us in the preface, obtained his information from eye-witnesses of the facts, and from written accounts. The Gospel, however, is not merely a compilation from earlier sources and it bears in a marked degree the impress of the writer's own personality. It shows clearly the universal scope of Christ's teaching.

LUKE BURGAS. Town of Greece, in Thrace. On the Karagach, about 35 m. S.E. of Adrianople, it is a commercial centre. It was the scene of a Bulgarian victory over the Turks in the first Balkan War, Oct. 28-Nov. 2, 1912. Pop. about 10,000.

Lugano. View of the north end of the lake, near Porlezza

LULLY or LULLI, JEAN BAPTISTE (1633-87). French composer. By birth an Italian, Lully entered the service of Louis XIV as a violinist. He was made conductor of the king's orchestra, given charge of the opera, and made music master to the royal family. He composed, in 1672, *Les Fêtes de l'Amour et de Bacchus*, which marks the beginning of French opera, following up this with about 20 operas. He died March 22, 1687.

LULLY, RAYMOND (1235-1315). Spanish philosopher and missionary. Also known as Ramon Lull, he was born in Majorca. In 1265 he resolved to devote himself to the conversion of the Saracens. Believing that the truth of Christianity could be demonstrated by reason, he devised the so-called Lullian method for the solution of all problems. He also acquired proficiency in Oriental languages, for the study of which he established chairs at Paris, Oxford, and Salamanca. After journeys in Asia and Africa, on the occasion of a third missionary visit to Tunis, he was stoned and died of his wounds on June 30, 1315.

LULWORTH. Two villages of Dorset. West Lulworth is 8 m. from Wareham, and near is Lulworth Cove, a bay about 500 yds. across almost enclosed by hills. Three miles away is East Lulworth, where stood the 16th

century Lulworth Castle, burned down in 1929. Pop., W. Lulworth, 797; E. Lulworth, 300.

LUMBAGO (Lat. lumbus, loin). Painful inflammation of the muscles of the loins and their tendons, due to inflammatory changes in the fibrous tissue or fascia which surrounds the muscles. The affection may follow a strain in lifting heavy weights, while exposure to cold and wet is a frequent exciting cause. Rest of the muscles is the most important part of the treatment. The back should be protected from cold by covering with flannel, and the application of blisters frequently gives relief.

LUMPSUCKER (Cyclopterus lumpus). Family of short, thick fishes found around the coasts of the Northern seas. One species is common in British waters. On the under side these fishes have an adhesive disk by which they attach themselves to rocks. They are usually about a foot in length. The males have bright red and yellow sides. They watch over the eggs during the breeding season.

LUNACY (Lat. luna, the moon). Term equivalent to insanity. It is derived from the fact that it was formerly believed that the insane were influenced by the moon, or were moonstruck. The lunacy laws deal with the care of the insane.

A lunacy commissioner is an official appointed and removable by the lord chancellor. There are ten in England, seven of whom, three medical and four legal, are salaried, while the other three are unpaid. In Scotland one paid and two unpaid commissioners constitute the board of lunacy. They visit and examine all lunatic asylums, public and private, grant licences to proper persons to open houses for the reception of the insane, and secure the care and treatment of the patients therein.

In Great Britain there are the following types of mental hospitals, as asylums are now known. Public asylums are large county or borough institutions, maintained out of the rates. They are mainly for pauper patients. Registered hospitals for mental diseases are managed by committees, and are maintained by payments from the patients, subscriptions, and endowments. Private asylums are specially licensed institutions which admit mainly well-to-do patients. See Insanity.

LUNDY (Old Norse, grove island). Island off the N.W. coast of Devonshire, 12 m. N.N.W. of Hartland Point. Almost entirely surrounded by cliffs, the island possesses many antiquaries, including the remains of Marisco Castle. From granite quarried here part of the Thames Embankment was constructed. There are two lighthouses. Owned from 1836-1916 by the family of Heaven, Lundy was purchased by Augustus Langham Christie in 1917, and later passed to M. C. Harman. It was long the headquarters of the family of Marisco, famous for their piracies. Its area is about 1,150 acres. Lundy island is 3 m. long and about 1 m. wide.

LUNDY'S LANE. Roadway in Canada, $1\frac{1}{2}$ m. from Niagara Falls. It is famous for an engagement, July 25, 1814, between the British and the Americans. The battle was indecisive, but the Americans abandoned the invasion of Canada.

LUNE. River of England. It rises in the S.E. of Westmorland and flows S. and S.W. through Lancashire to Lancaster Bay. It is 45 m. long. On its banks stands Lancaster.

LUNenburg. Town and seaport of Nova Scotia, Canada. It is 70 m. from Halifax, on the C.N.R. The chief industry is fishing. Pop. 2,792.

LUNETTE (Fr. little moon). Term in architecture denoting a round or oval window in a ceiling, flat or domed. The term is also applied to a picture enclosed by an architectural circular or oval frame in the ceiling of a building.

In military engineering the word is applied to a defensive position having four faces. The two centre ones form an obtuse salient towards the front and the side ones are arranged to afford fire to the flanks.

LUNG. Organ of respiration. In man the two lungs occupy almost the whole of the thorax. Each lung is conical in shape, and is free except at its root, where it is attached to the bronchus or air passage, and where the blood vessels pass between it and the heart. Except at its root it is covered with a delicate serous membrane, the pleura. The left lung is divided into two lobes. The right lung is larger, though rather shorter, and is divided into three lobes. The lobes are subdivided into a large number of small parts known as lobules, each of which consists of a number of minute air sacs. The bronchus, on entering the lung, divides up into a number of smaller branches, which again divide and subdivide, and eventually terminate in the air sacs, which also contain the ultimate ramifications of the blood vessels.

The function of the lungs is to bring about the gaseous interchange with the atmosphere, the oxygen in the inhaled air being taken up by the minute vessels in the air sacs, whilst the carbon dioxide passes out of the blood plasma and is exhaled from the lung. See Phthisis; Pleurisy; Pneumonia; Respiration.

LUNGS OF OAK OR **THREE LUNGWORT** (*Stictia pulmonacea*). Large lichen. It grows chiefly upon the bark of old trees, particularly the oak. It is brownish, and the margins are deeply lobed. The depressions and net-like markings of the under surface suggested a resemblance to the lungs, and it was formerly used as a remedy for pulmonary troubles. Its real value is to the dyer, to whom it is one of the Crotches, and applied to the dyeing of yarn and woollen goods.

LUNGWORT OR **JERUSALEM COWSLIP** (*Pulmonaria angustifolia*). Perennial herb of the order Boraginaceae, native of Europe.

It has a stout creeping root-stock, and lance-shaped leaves which are often spotted with pale green. The funnel-shaped flowers are at first pink, then turn blue, and are clustered at the ends of the bristly branches. The garden plant of the same folk-name is *P. officinalis*, with broader leaves, always spotted, and pale purple flowers.

Lungwort. Leaves and flower clusters

LUNN, LOUISE KIRKBY (1873-1930). British singer. Born in Manchester, Nov. 8, 1873, she gained a scholarship at the Royal College of Music, London, and while a student there made, in 1893, a successful debut in Schumann's *Genoveva*. This opened a big career

for her, and she sang in opera and, in addition, on the concert platform both in England and America during the next 25 years, touring at one time with the Carl Rosa Company. She died Feb. 17, 1930.

LUPERCALIA.

Ancient Roman festival. It was held in honour of the god Lupercus, on Feb. 15. It was originally pastoral and centred round the idea of the fruitfulness of the earth and of nature.

LUPIN. Genus of leguminous plants (*Lupinus*), cultivated for their flowers. They are hardy and half-hardy annuals and perennials, natives of America and S. Europe, ranging in height from 6 ins. to 5 ft., and bearing white, yellow, pink, or blue flowers.

LUPUS (Lat. wolf).

Term applied to several distinct forms of disease of the skin, of which two may be noted.

Lupus vulgaris, generally spoken of simply as lupus, is due to infection with the bacillus of tuberculosis. It usually attacks the nose, cheek, and ears, and begins with the formation of a little yellow spot, which slowly spreads over the surrounding area. Ulceration of the tissues may occur. Treatment consists in building up the general constitution of the patient and removing the affected tissue. Treatment by the Finsen light process and X-ray treatment have proved valuable.

Lupus erythematosus is an inflammatory disease of the skin, the exact cause of which is unknown. It usually begins with the appearance of flat red spots. The bridge of the nose and the cheeks are the areas most often affected. Quinine, salicin, and arsenic have proved useful medicines in treatment of the disease.

LURCHER. Cross between a greyhound and a sheepdog. This breed possesses wonderfully keen sight and scent, and is quick to perceive and obey the slightest sign of its master. It is a born poacher.

LURGAN. Urban dist. of co. Armagh, Northern Ireland. It is 29 m. from Belfast, on the G.N. of I. Rly. The chief industry is the manufacture of linen; another is that of tobacco. Near is Lough Neagh. The barony of Lurgan, dating from 1839, is held by the Brownlows, and Lurgan Castle, a fine modern building, is Lord Lurgan's seat. Pop. 12,553

Lupin. Flower spikes of *Lupinus roseus*

Lumpsucker. Specimen of the species found on British coasts

Lung. Front and back views of the organ. 1. Right auricle. 2. Internal jugular veins. 3. Right ventricle. 4. Pulmonary arteries. 5. Pulmonary veins. 6. Left ventricle. 7. Aorta. 8. Trachea. 9. Upper lobe; 10, middle lobe; 11, lower lobe, right lung

LUSITANIA. Cunard liner, torpedoed and sunk by a German submarine off the Old Head of Kinsale, May 7, 1915. She was one of the world's largest liners, her tonnage being 31,500 gross. Two torpedoes were fired at the ship, which sank within 20 mins. of being first struck. She was on her way from the U.S.A., and had on board 1,255 passengers and 651 crew. Of these 1,198, including 124 Americans, were either drowned or killed. The name Lusitania comes from the Iberian tribe Lusitani and was given to the part of Spain in which they lived.

Lusitania. The Cunard liner lying at anchor

LUSTRUM. Religious ceremony for the purification of the people of ancient Rome. It was conducted by one of the censors just before the expiration of his term of office. This term became fixed at five years, and by a natural transition the word lustrum came to be applied to that period of time.

LUTE. Stringed instrument of Eastern origin, the lute was in vogue from the earliest times to the 18th century. The body is usually pear-shaped, built up with staves of wood like a cask, and often highly decorated. It has a long neck and finger-board with frets. They were of many sizes, e.g. treble, small mean, great mean, counter tenor, tenor, and bass. A larger type of lute, known as the theorbo or arch-lute, had some extra, deep strings, tuned to some of the principal scale notes. The tuning of these bass strings had to be altered when the music changed its key, and the lute family thus had an important influence on musical form, it being the custom, for the sake of convenience, to write all the movements of a suite in the same key.

Lute, inlaid with ebony and ivory, French 17th cent. Victoria and Albert Museum

LUTECIUM. Rare earth metal. Its symbol is Lu; atomic weight 175; atomic number 71. In 1907 Urbain succeeded in separating ytterbium into two elements, which he named neoytterbium and lutecium respectively. The designation ytterbium has been retained for the former. See Ytterbium.

LUTHER, MARTIN (1483-1546). German reformer. He was born at Eisleben, Germany, Nov. 10, 1483, and took his master's degree at the university of Erfurt in 1505. He entered a monastery at Erfurt in that year, was ordained priest in 1507, and in 1508 was transferred to the university of Wittenberg, where he taught and preached with great

Martin Luther, German reformer. Portrait by Holbein et Windsor Castle

power. The ecclesiastical crisis of his life was precipitated by the appearance in Wittenberg in 1517 of a friar, John Tetzel, selling indulgences under the papal authority. Luther publicly protested against the practice by posting up on the church door his 95 theses, and their appearance marks the actual beginning of the Reformation. When,

in 1520, a papal bull condemned his views he publicly burned it in Wittenberg.

Luther was summoned to the diet at Worms in 1521. Faced by both imperial and papal power, he would retract nothing, and he left the city in 1522 under warning of outlawry. Carried off secretly to the castle of the Wartburg in the Thuringian Forest, he remained there in safety for a year, writing his great German translation of the Bible and many hymns. He

then returned to the battle of the Reformation and the task of organizing the German Protestant Church. His work was disastrously complicated by the outbreak of the Peasants' War. Luther, who never was really a democrat, urged the princes to put down the rising with relentless severity, and thus lost popular sympathy for the Protestant cause. His later life was engrossed with ecclesiastical and theological discussion. He died Feb. 18, 1546. See Reformation; consult also Luther and the Reformation, J. Mackinnon, 4 vols., 1925-30

LUTHERANISM. Form of religious faith based on the teaching of Martin Luther. It was organized by the reformer after his breach with Rome and soon had attracted to it a large body of adherents.

The two characteristic features of Lutheran church worship are the place given to preaching and the congregational singing of hymns. Theologically, the fundamental standard of the Lutheran Church is the Confession of Augsburg of 1530.

After its formation period, Lutheranism suffered from a period of theological strife and sank into a moribund orthodoxy. It was largely delivered from this by the movement known as pietism, beginning in the latter part of the 17th and continuing up to the middle of the 18th century. Under Frederick William III, king of Prussia, efforts were made to reorganize the Church in Germany with a view to a union between the Lutheran and the Calvinistic Confessions, both of which had their adherents.

Various unions were realized in the smaller German states, and in Prussia, in 1817, one was accomplished under the name of the Evangelical United Church, which is now the one Lutheran Church for all Germany. This has a semi-Presbyterian constitution, with the supreme supervision resting in the hands of a general superintendent and consistory.

Two tendencies may be noted in modern Lutheranism: one, to increase the power of the synods; the other, to vest in a single official the spiritual control of the Church.

Lutheranism has now about 60,000,000 adherents throughout the world. About 40,000,000 of these are in Germany, and others are in the three Scandinavian countries—Denmark, Norway, and Sweden—where it is the state religion. It is also strong in the United States and Canada, where it has over 2,500,000 communicants. In 1923 the first world convention of all the Lutheran churches was held at Eisenach.

LUTON. Borough and market town of Bedfordshire. It stands near the source of the Lea, 30 m. from London, on the L.M.S. and L.N.E. Rlys. St. Mary's Church is a large and beautiful cruciform building with several interesting features, including a hexagonal baptistry. Part of it is Early English. The town has engineering works, and makes motor cars. It is a centre of the hat industry. Market day, Mon. Pop. 63,830.

LUTTERWORTH. Market town of Leicestershire. On the Swift, 7 m. from Rugby and 90 m. from London, on the L.M.S. and L.N.E. Rlys., it is chiefly famous for its associations with John Wycliffe, who was rector here, 1374-84. There is a monument to his memory. Market day, Thurs. Pop. 2,092. See Wycliffe, John.

LUTYENS, SIR EDWIN LANDSEER (b. 1869). British architect. Born in London, March 29, 1869, he became both architect and artist, his work winning for him an associateship of the R.A. in 1913 and full membership in 1920. In 1918 he was knighted. In 1912 he was appointed to advise the government of India about the site of the new Delhi, being also the architect for some of the buildings. He was responsible also for the design of the cenotaph in Whitehall, London. See Cenotaph; Delhi.

Sir E. L. Lutyens, British architect Russell

LÜTZEN. Town of Prussian Saxony, S.E. of Merseburg. Pop. 4,469. It is famous for two great battles fought in its vicinity. On Nov. 16, 1632, Gustavus Adolphus, king of Sweden, defeated the Imperialists under Wallenstein, but was himself killed. On May 2, 1813, Napoleon defeated the Prussians and Russians. The second battle is sometimes called the battle of Gross Görschen, after a village near which it was fought.

Luxembourg, Paris. South front of the palace. The east wing houses a famous collection of modern art

LUXEMBOURG. French palace, situated on the left bank of the Seine in Paris. It was designed in 1615 by Jacques de Brosse, for Marie de' Medici. The queen adorned the palace in the costliest manner, but after her death it was neglected. In 1836 the palace was almost entirely remodelled by A. de Gisors. The Musée du Luxembourg, famous for its collection of modern works of art, is on the E. side of the building. The Luxembourg Gardens, originally laid out by Jacques de Brosse, are extensive and beautiful.

LUXEMBURG. Grand duchy of Europe. It comprises the S. portion of the Ardennes Highlands, draining to the Moselle, which

Luxembourg. Great viaduct, built in 1861 across the Pétrusse valley

forms its S.E. frontier. Belgium lies to the N. and W., France to the S., and Germany to the E. Its area is 999 sq. m. Mining and metallurgical industries are important. Oats and potatoes are the main crops. Luxembourg (pop. 55,000) standing on the Alzette, is the capital. Pop. 285,524.

Luxembourg originated in a county, created in the 11th century. In 1444 the duchy, as the county had been since 1354, became part of Burgundy and passed to the emperor Charles V. It was a possession of his descendants

from 1555 to 1713, when it passed to Austria. The French conquered it in 1795.

In 1815 Luxembourg was made a grand duchy and united with the new kingdom of the Netherlands. This union lasted until King William died in 1890. Luxembourg was not inherited by his daughter Wilhelmina, but passed to another branch of the house of Nassau. From 1815 to 1867 the grand duchy was a member of the German Confederation. In 1867 it was declared neutral and independent. In 1919 Charlotte became grand duchess, and in 1922 the country entered into an economic union with Belgium. It is governed by a small cabinet and a chamber of deputies. It was occupied by the Germans, 1914-18.

LUXEMBURG, Rosa (1871-1919). Polish socialist. Born May 5, 1871, in Poland, of Jewish parents, she studied in Germany and became a lecturer on economics in Warsaw. Her opinions got her into trouble with the authorities, and she avoided banishment by escaping to Berlin. There she became a lecturer on economics, and was associated with the socialist movement, for which she spoke much. In 1919, with Karl Liebknecht, she organized the Spartacist rising, and was killed during a riot in Berlin, Jan. 15, 1919.

LUXOR (Arab. el-Kusur, the palaces). Town of upper Egypt. On the E. bank of the Nile, 418 m. by rail from Cairo, it is a winter resort for invalids, and the tourist centre for visitors to the Theban plain. Pop. 13,000.

Luxor, with the adjacent Karnak, comprises the ancient city of Thebes. The Luxor temple, 852 ft. long, comprises a court with double rows of clustered papyrus-columns on three sides. Before the original fan Ramesses II erected a court, now encumbered in one corner by a

97; and Madagascar, 1897-99. He was again in Madagascar, 1900-2, and served in Algeria, 1903-11. He was made resident commissary-general in Morocco, 1912. In 1916 he became minister of war. From 1917 to 1928 Lyantey was resident general in Morocco where he did a great work in bringing peace and prosperity to the country. He was appointed a marshal of France in Feb., 1921.

LYCANTHROPY (Gr. lykos, wolf; an thropos, man). Term for the power popularly attributed in some countries to certain persons of turning themselves into wolves. In Great Britain in former times such persons were commonly known as werewolves.

LYCEUM. Gymnasium sacred to Apollo Lycius. Just outside the city of Athens on the S.E. side, it was famous as the place where Aristotle and his successors taught their philosophy. Hence the name was applied in later ages to the school in which Aristotelian philosophy was taught, and is now used for various educational institutions.

The Lyceum Club is a London club for women. It was founded in 1904 by Constance Smedley (Mrs. Maxwell Armfield). The club house is at 138, Piccadilly, W.

The Lyceum Theatre is a London playhouse in Wellington Street, Strand. The third to occupy the site, the present building opened in 1834 with opera. But the house is chiefly associated with Henry Irving, who was its manager from 1878-1902, and in conjunction with Ellen Terry made it famous by his Shakespearean

productions. The theatre was entirely reconstructed in 1902, and the new building, with the old facade preserved, was opened in 1904. Since 1907 The Lyceum has been the chief home of melodrama in London.

LYCH GATE (A.S. lie, body). Roofed gate at the entrance to a churchyard. At a funeral the coffin here awaits the officiating clergyman. A number of churchyards in England retain their old lych gates.

LYCURGUS (fl. c. 800 B.C.). Reputed founder of the constitution of Sparta. No really authentic facts are known about him, but the tradition was that, after acting as regent for his young nephew King Charilaus, he left Sparta and travelled extensively. On his return he was called upon by the citizens to rescue the state from the confusion into which it had fallen. This he did with signal success, left the country never to return, and was worshipped as a god.

Another Lycurgus (c. 396-323 B.C.) was an Athenian statesman and orator. With Demosthenes and Hyperides he belonged to the national party at Athens which opposed all encroachments on the part of Macedonia. For twelve years he administered Athenian public finance with conspicuous success.

LYDD, Borough of Kent. It is 3½ m. from New Romney, and 71 m. from London, on the Southern Rly. It is attached to the Cinque Port of New Romney. The church of All Saints is a beautiful Early English and Per-

pendicular building. Near the town is Dungeness. Lydd was originally on the coast, but the sea has receded. Pop. 2,256.

The name lyddite is taken from here, that explosive having been tested on the artillery and rifle ranges outside the town.

LYDFORD OR LIDFORD. Parish of Devonshire. It stands on the Lyd, 7 m. from Tavistock, with a station on the Southern Rly. also used by the G.W. Rly. After the Norman Conquest a castle was built here, Lydford became one of the stannary towns, the castle containing the stannary prison. Therein, too, were held the Dartmoor forest courts, at which summary justice is said to have been the rule. Lydford gorge is a beautiful ravine near. Pop. 2,232.

LYDGATE, JOHN (c. 1370-1451). English poet. Born at Lydgate, Suffolk, he joined the Benedictine order at Bury St. Edmunds, being ordained deacon in 1393 and priest in 1397. He was a poet at the royal court, and later prior of a house in Essex. He was buried at Bury St. Edmunds.

Lydgate wrote poems, songs, fables, and allegories. The Troy Book, first printed in 1513, he translated from the Italian Historia Trojana of Guido delle Colonne; The Story of Thebes, first printed c. 1500, is an abbreviation of Statius' Thebais; The Falls of Princes, first printed 1494, is a translation, through the French, of Boccaccio's De Casibus Illustrium Virorum; The Temple of Glass is an allegory written in imitation of Chaucer's House of Fame.

LYDIA. Ancient country of Asia Minor. It was bounded N. by Mysia, E. by Phrygia, S. by Caria, S. and W. by the Aegean. In Homeric times it was known as Maeonia, but this name disappeared when, about 700 B.C., Gyges seized the throne. His dynasty lasted 150 years, during which period Lydia became a prosperous state. It reached its zenith with Croesus, under whom the Lydian empire extended from the Aegean Sea to the river Hnlys, and the Greek cities of Asia Minor were tributary. In 546 B.C. the country passed under the dominion of Cyrus. After the overthrow of the Persian empire by Alexander, Lydia became an independent kingdom again in 334 B.C., but later became subject to the kings of Syria, and then to those of Pergamum. In 133 it became part of the Roman empire. In the province of Asia. After the Persian conquest the national spirit of Lydia was lost, and the name of the Lydians became synonymous for luxurious effeminacy.

LYE. Name given to a solution of alkaline salts (usually caustic soda or potash) employed for cleansing purposes. Originally the term was applied to the liquid obtained on lixiviating wood-ashes, which was also known as soap-lye because it was used in the manufacture of soap. Lye is used in petroleum refining, tanning, in the textile industry, and for the removal of grease, etc.

LYE. District of Worcestershire, forming with Wollescote the urban dist. of Lye and Wollescote. A mile from Stourbridge, it has manufactures of iron goods. Around are collieries. Pop. 12,025.

LYELL, SIR CHARLES (1797-1875). British geologist. Born Nov. 14, 1797, at Kinnordy, Angus, he graduated B.A. at Oxford, and, after studying law, was called to the bar. Having become interested in science, he devoted himself to the study of geology. He travelled widely in Europe in 1824, and again in 1828-30. His Principles of Geology, 1830-33, won for him the title of the father of modern geology.

Lyceum Theatre, London. The old facade, preserved in the reconstruction of 1902-04

Luxor, Egypt. Colonnades in the court of Amenhotep III, who began the building of this great temple about 1400 B.C.

7th cent. tomb-mosque. Standing colossi of the king, in red and black granite, are placed between some of the columns, and seated figures of himself and his queen flank the portal to the colonnade. The pylon is sculptured with reliefs of the Hittite campaign and with the poetical narrative of the Kadesh battle. The temple walls bear reliefs of royal and religious scenes. In front of the pylon stood six colossal statues of Ramesses II, of which three are preserved. See Egypt; Karnak.

Lwow. Alternative name for the Polish town of Lemberg (q.v.)

LYALL, EDNA (1857-1903). Pseudonym of Ada Ellen Bayly, British novelist. Born at Brighton, March 25, 1857, she became an active social and religious worker. Among her novels are Won by Waiting, 1879; Donovan, the book which first made her name, 1882; In the Golden Days, 1885; Doreen, the hero of which is Michael Davitt, 1894; Wayfaring Men, 1897; and The Hinderers, 1902. She died Feb. 8, 1903.

LYAUTEY, LOUIS HUBERT (b. 1854). French soldier and administrator. Born at Naney, Nov. 17, 1854, he joined the French army as a lieutenant of chasseurs à pied in 1875. He was on active service in Algeria, 1880-82; Tongking, 1894-

L. H. Lyantey, French soldier

Sir Charles Lyell, British geologist

It demonstrated that the forces which produced geological conditions of the past were still going on. Lyell occupied the chair of geology in King's College, London, 1831-33, was twice president of the Geological Society, and president of the British Association. Knighted in 1848, and created a baronet in 1864, he died Feb. 22, 1875.

LYLY OR **LILLY**, JOHN (c. 1554-1606). English story writer and dramatist. A native of Kent, he settled in London about 1577. He became a familiar figure at court, where he supervised the court entertainments, 1578-98. He was M.P. for Hindon, 1589; Aylesbury, 1593 and 1601; and Appleby, 1597. He died Nov. 30, 1606.

Lyly is chiefly remembered as the author of *Euphues*, a work which gave the word euphuism to the English language. In two parts—*Euphues: The Anatomy of Wit*, 1579; and *Euphues and His England*, 1580—this work is composed in a style marked by erudite allusion, forced simile, and excessive antithesis, and vividly reflects the fashions of the time.

LYME REGIS. Borough and watering place of Dorset. On Lyme Bay, 23 m. from Dorchester and 150 m. from London, and on the Southern Rly., it is beautifully placed, with a fine expanse of sand for bathing. The church of S. Michael and All Angels is a fine Perpendicular building with a Norman tower. The curved pier, called the Cobb, is an interesting relic of the past. In 1685 the duke of Monmouth landed here. The name Lyme Regis was given to the place because about 1300 it became the property of the king. Pop. 2,883.

LYMINGTON. Borough, seaport, and market town of Hampshire. It stands near the mouth of the Lymington river, 18 m. from Southampton and 98 m. from London, on the Southern Rly. From here steamers go regularly to the Isle of Wight. It is a yachting centre. Market day, Sat. Pop. 4,600.

LYMM. Urban dist. of Cheshire. It is 5 m. from Warrington, on the L.M.S. Rly. and is mainly a residential suburb of Manchester. There is an old market cross. Pop. 5,288.

LYMPH (Lat. *lympa*, water). Fluid which exudes through the thin walls of the minute blood vessels and comes into intimate contact with the tissues, to which it conveys nutriment. The lymph also gathers up from the tissues the waste products of their activity and eventually re-enters the blood stream by the thoracic duct. Lymphatic glands are bodies through which the lymph vessels pass. Their function is to form some of the white corpuscles of the blood, and they also act in a sense as filters by which bacteria and their toxins may be separated. See *Blood*.

LYMPNE. Village of Kent. It is 2½ m. W. of Hythe, and is an important air port, much of the continental traffic to England passing by here. Lympe Castle, partly modern, includes remains of a 15th century building, and a central tower, of earlier date, said to have been built by Lanfranc. The parish church is a fine building. In the neighbourhood are remains of a Roman station. Pron. Lím. Pop. 592.

LYNCH LAW. Popular term for rough justice administered by a self-appointed tribunal of members of a community, acting in the absence of, or in defiance of, legally constituted authority. The name is variously explained, but generally traced to Charles Lynch, an 18th century farmer in Virginia, U.S.A., who appointed himself a hanging judge in the revolutionary interest. The

practice is now chiefly associated with the southern states of the American union, especially in connexion with crimes committed by coloured people against whites. See *Lydford*.

LYNDHURST. Parish of Hampshire. In the New Forest, 9 m. from Southampton, it is a centre for visitors to the forest. The church of S. Michael, containing a fresco of The Ten Virgins by Lord Leighton, is modern. There is a station on the Southern Rly. at Lyndhurst Road. Pop. 2,562

Lord Lyndhurst, British lawyer

Yarmouth in 1818, and afterwards represented Ashburton and Cambridge University. He first made a name by his defence of one of the Luddites (q.v.). In 1819 he was made solicitor-general in the Tory ministry, and in 1824 became attorney-general. In 1827 he was made lord chancellor and a peer. He held that office until 1830, and again 1834-35 and 1841-46. From 1830-34 he was chief baron of the exchequer. Lyndhurst died in London, Oct. 12, 1863.

LYNTON. Urban dist. and watering place of Devonshire. It stands on a cliff, 400 ft. above Lymouth, which is by the sea, a cliff rly. going from one to the other. It is 17 m. from Barnstaple, on the Southern Rly. From here coaches and motors go to places of beauty in the neighbourhood, such as Watcombe and the Valley of Rocks. Pop. 2,649.

LYNX (Lat.). Genus of the cat family, distinguished by its heavy build, short tail, tufted ears, and bearded cheeks. It occurs in many parts of Europe, in Tibet, and in North America. The northern lynx is found in Russia and Scandinavia, and rarely in Central Europe. It is a forest animal, and measures about a yard without the tail, which is about eight inches long. The thick and rather long fur varies from grey to fawn, and in summer is spotted with black. In disposition very savage, it preys on birds

Lynx. Specimen of European species

and mammals. The Mediterranean lynx, found from Spain to Turkey, is a lighter animal. The Canadian lynx ranges in colour from dark grey to almost white, and is found in the forests. See *Caracal*.

One of the constellations is known as the Lynx. Situated between the Great Bear and Cancer, it is very faint, and contains several well-known double stars. See *Constellation*.

Lynx was the name of a British destroyer, sunk in the North Sea by a mine, Aug. 9, 1915. She was a comparatively new boat, of the K class, displacing 950 tons, and was oil driven, having a speed of 31 knots.

LYON. Old Scottish form of lion, used now in heraldry. The heraldic office for Scotland is called the Lyon Court, and its head is the Lyon king of arms, an office dating back

to 1371. The lord Lyon is assisted by three heralds, Rothesay, Marchmont, and Albany, and by three pursuivants: Falkland, Unicorn, and Carrick. All arms or alterations thereon in Scotland must be entered in the Lyon court, where pedigrees are also recorded.

LYONESSE. Name of a legendary country. It was believed to have lain off the coast of Cornwall, and to have disappeared under the sea; according to another legend it included Cornwall. Cornish and Breton folklore is full of references to this lost land, which also serves as the scene of events described in the Arthurian legends. See *Arthur*.

LYONS. City of France. It lies at the confluence of the Rhône and Saône, 317 m. by rly. from Paris. An important rly. and financial centre, a busy river port with a large shipping trade, the seat of an archbishop and of a university, it is the centre of the French silk industry.

Among noteworthy buildings are the cathedral of S. Jean, dating from the 12th-15th cent., with a fine choir, the chapel of S. Louis, and notable stained glass; the churches of Notre Dame de Fourvière, S. Martin d'Ainay, and S. Nizier; the hôtel de ville, the prefecture, and the Arts Palace,

Lyons, France. View from the left bank of the Saône, showing colonnade of the law courts and church of Notre Dame de Fourvière on the hill

formerly a Benedictine convent, now containing collections of art, antiquities, and science. Artificial silk is a growing industry. Other industries include engineering, brick-making, brewing, distilling, printing, and the manufacture of paper, hardware, pottery, glass, leather, and chemicals. The Lyons commercial fair, held twice yearly, was founded in 1916. Pop. 570,840.

A very old city, as Lugdunum it was the capital of Roman Gaul. Later it became the capital of Burgundy, and its archbishop wielded temporal power until 1273.

LYONS, EDMUND LYONS, 1st BARON (1790-1858). British sailor. Born at Burton, Hants, Nov. 29, 1790, he went to sea in 1803. In 1828 he was sent to the Mediterranean, and in 1835 was appointed minister plenipotentiary at Athens. Transferred to Berne, 1849, and in 1851 to Stockholm, he was recalled in 1853 and sent to the Mediterranean as second in command of the fleet dispatched on the outbreak of the Crimean War. In 1855 he succeeded to the command of the fleet. He was created a baron in 1856, and died Nov. 24, 1858.

His son, Richard Bickerton Pemell Lyons, entered the diplomatic service in 1839, passed some years at Dresden, Florence, and Rome, and in 1858 was appointed ambassador to Washington. In 1865 he was transferred to Constantinople, and two years later to Paris, where he tried to avert the war of 1870. He represented Britain while the Third Republic was being established. He had been made an earl in 1887, but his titles became extinct on his death, Dec. 5, 1887.

LYONS, SIR JOSEPH (d. 1917). British business man. Born in London, he was educated at a Jewish school. With two friends Isidore and Montagu Gluckstein, he began

to cater for exhibitions and the like, and in 1894 the firm of J Lyons & Co. opened its first tearoom. Others followed, and before Sir Joseph died it was the largest business of its kind in the United Kingdom, with branches all over London and in many parts of the country. He was knighted in 1911, and died June 22, 1917.

LYRE. Musical stringed instrument, used in ancient and medieval times. It consisted of a hollow box or resonator

Lyre. Restoration of lyre discovered at Ur (about 3500 B.C.). It is decorated with mosaic and a bull's head in gold. Above, diagram of Greek lyre: A, resonator; B, horns or uprights; C, crossbar

Courtesy of Joint Expedition to Ur

LYRE BIRD. Genus of birds (*Menura*) found in the forests of Australia. In the males the two outer feathers of the tail are curved in the form of the frame of a lyre, while the intermediate ones are slender and provided with few barbs, suggesting the strings. The several species vary in the colour of their plumage; all of them spend most of their time on the ground, in the denser parts of the bush, where they feed upon snails, insects and worms.

LYS. River of France and Belgium. It rises in N.E. France, between Boulogne and Lille, and flows mainly E., joining the Scheldt at Ghent. The middle section of the valley is a densely peopled area. There are steel works in the French section of the valley, while the towns lower down are centres of the linen industry. The Ypres canal joins the Yser with the Lys at Comines. The Lys is 120 m. long, and was prominent throughout the Great War. See Flanders; Ypres.

LYSANDER (d. 395 B.C.). Spartan general and statesman. He rose to fame during the latter period of the Peloponnesian War (q.v.). As commander of the Spartan fleet, off the coast of Asia Minor, he ingratiated himself with Cyrus the Younger, and received from him considerable subsidies for the Spartans, which proved a potent factor in their triumph. In 405 B.C. his fleet defeated that of the Athenians at the decisive battle of Aegospotami. In the following year he took Athens, destroyed the famous Long Walls, and established the rule of the Thirty Tyrants. He was killed in 395.

Lyre Bird. Male specimen of the Australian bird

LYTHAM ST. ANNE'S. Borough and watering place of Lancashire. It stands at the mouth of the Ribble estuary, 6 m from Blackpool, on the L.M.S. Rly. Baths and golf links are among the many attractions. By a charter granted in 1922 the urban districts of Lytham and St. Anne's-on-Sea were incorporated into one borough. Pop 25,977.

LYTTELTON. Seaport of the district of Canterbury, New Zealand. It has a fine natural harbour, 10 m. by 2 m., encircled by steep hills tunnelled to give access by rly. to Christchurch, 7 m. distant. It exports frozen meat, wool, and grain. Pop. 3,800.

LYTTELTON, GEORGE **LYTTELTON, 1st BARON** (1709-73). British politician. The eldest son of Sir Thomas Lyttelton, Bart. of Hagley, he entered the House of Commons in 1735 as M.P. for Okehampton, and was made a peer in 1756. He died Aug. 22, 1773. His son, Thomas (1744-79), who succeeded him, was known as the bad Lord Lyttelton, in contradistinction to his father, the good Lord Lyttelton. On his death the barony became extinct, but it was revived in 1794 in favour of his uncle William Henry (1724-1808) who was succeeded by his two sons in turn.

George William, the 4th Baron (1817-76), succeeded his father in 1837. In 1846 he was made under-secretary for the colonies, but his main interests were outside politics. He joined in founding the Anglican settlement of Canterbury in New Zealand, a fact commemorated by the name of the borough of Lyttelton. From 1869-74 he was chief commissioner of endowed schools. He died April 19, 1876. Lyttelton married the younger daughter of Sir Stephen Glynne, whose elder daughter was the wife of W. E. Gladstone. Of their eight sons, one became Viscount Cobham, and others achieved distinction in various ways.

LYTTELTON, ALFRED (1857-1913). British politician and athlete. Born Feb. 7, 1857, the youngest son of the 4th Lord Lyttelton, he was called to the bar. In 1895 he was returned to Parliament as Unionist M.P. for Warwick and Leamington. He had acted as chairman of the Transvaal Concessions Commission in South Africa, and on his return in 1903 he succeeded Chamberlain as colonial secretary. In 1906 he lost his seat at Warwick, but was returned for St. George's, Hanover Square, which he represented until his death, July 5, 1913.

Lyttelton was a supreme athlete, being master of almost every ball game. At Eton and Cambridge he captained the cricket eleven, and he played for England, keeping wicket against Australia. He played association football also for England, raquets and football for Cambridge, and from 1882-95 was the amateur champion at tennis. He was twice married, first to Miss Laura Tennant, and secondly to Miss Edith Balfour, created G.B.E. in 1929, who wrote his Life, 1917.

LYTTELTON, EDWARD (b. 1855). British schoolmaster. Born in London, July 23, 1855, the seventh son of the 4th Lord Lyttelton, he was a fine cricketer, and captained the Cambridge eleven. He began his teaching career, in 1880, at Wellington College. In 1882 he went to Eton, and in 1890 was made headmaster of Haileybury, where he remained until 1905, when he was chosen head of Eton. He resigned in 1916, and from 1918-20 was rector of Sidestrand, Norfolk.

LYTTELTON, SIR NEVILLE GERALD (b. 1845). British soldier. Born Oct. 28, 1845, third son of the 4th Lord Lyttelton, he entered

the Rifle Brigade in 1865. He Fenian rebellion in Canada, Egyptian campaign, 1882, and expedition, 1898, in which he commanded the 2nd 4th division. He was commander in S. Africa, 1902-4, chief of staff 1904-8, and commander Ireland, 1904-12. He was knighted Lyttelton wrote *Eighty Years; Politics, Games, 1927*

LYTTON, EDWARD GEORGE **BULWER-LYTTON, 1st BARON** (1803-1907). Novelist, dramatist, and statesman. Born in London, May 25, 1803, the third son of General Bulwer, of Wood Dalling, Norfolk, his mother was a Lytton of Knebworth, Herts. He was Liberal M.P. for St. Ives, Huntingdonshire, 1831, and Lincoln 1832-41. He sat for Hertfordshire as a Conservative, 1852-66, and was colonial secretary 1858-59, displaying much administrative insight and ability. Made a baronet in 1828 created a baron in 1866. In 1827 he had an unhappy marriage with Rosina Doy (1802-82), herself a novelist, by whom one son, Edward Robert (1831-91) and one daughter, (1828-48). He died Jan. 18, 1873.

Of Lytton's many novels, which were tremendously contemporary vogue, notable are *Pelham*, 1828; *Paul Clifford*, 1830; *Eugene Aram*, 1832; *The Last of Pompeii*, 1834; *Rienzi*, 1835; *The Barons*, 1843; *Harold*, 1848; *The Rivals*, 1849. Of his plays, *The Lady of Lyons*, 1838; *Richelieu*, 1839; and *Money*, 1840, are still occasionally revived.

LYTTON, EDWARD ROBERT **EARL OF** (1831-91). British diplomat and poet. Born in London, Nov. 8, 1831, son of the 1st Baron Lytton, he was his diplomatic secretary from 1849 as private to his uncle, Sir Bulwer, British minister in Washington. He occupied positions of ambassador in Paris, The Hague, Athens, Lisbon, Madrid. In 1874 he was appointed ambassador to Lisbon, and in 1876 was appointed viceroy of India. On his resignation in 1880 he created an earl. From 1887-91 he was ambassador in Paris, where he died Nov. 24, 1891.

1st Earl of Lytton, British diplomatist

Known as an author by the pseudonym Owen Meredith, he wrote *Clytemnestra*, 1855; *The Wanderer*, 1856; *Lucile*, a tale in verse, 1860; *Glenarvon*, the *Metamorphoses*, 1885; *King Poppy*, 1886. His son, Victor, the 2nd earl (b. 1876), was a politician. In 1916 he became civil lord of the admiralty, and in 1917 additional secretary, returning to his position in 1919. He was under-secretary for India, 1920-2, governor of Bengal, 1921, and viceroy and acting governor-general of India in 1925. He wrote the *Life of the Lord Lytton*, 1913. His eldest son, Victor Knebworth, won a reputation as an author. The 2nd earl's sister, Lady Lytton (1869-1923), a strong advocate of women's rights, was four times imprisoned during the suffrage agitation, also attracting much attention. After release she wrote *Prisons and Prisoners*, 1904.

M. Thirteenth letter of the English and Latin alphabets. *M* always has the same sound, as in *mat*, *stem*. In words beginning with *mn*, derived from the Greek, as *mnemonics*, it is mute. As a symbol in Roman notation *M*=1,000, *M*=1,000,000, and as a contraction=Medicine in *M.D.*; Member in *M.P.*, member of Parliament. See Alphabet; Phonetics.

MAARTENS, MAARTEN. Pen-name of the Anglo-Dutch novelist, Joost Marius Willem van der Poorten Schwartz (1858-1915). Born at Amsterdam, Aug. 15, 1858, he began, in 1889, the publication of a series of novels in English, giving a graphic and realistic picture of peasant and bourgeois life in contemporary Holland. His principal works were *The Sin of Joost Avelingh*, 1890; *Gods' Fool*, 1892; *The Greater Glory*, 1894; *Dorothea*, 1904; *The Woman's Victory*, 1906; *The New Religion*, 1907; *Brothers All*, 1909; *Harmen Pils, Peasant*, 1910. He died Aug. 5, 1915.

MAAT, Egyptian goddess. Linked with Ra and Thoth, she personified physical and moral law, and as the goddess of truth was identified with the Greek Themis. Without temples or offerings, she presided in the judgement hall of Osiris when souls were weighed. Judicial officials were allegorically called priests of Maat.

MABINOGION, THE. Collection of ancient Welsh tales. They were first published in an English translation by Lady Charlotte Guest in 1838. The tales comprise eleven prose pieces from *The Red Book of Hergest*, and *Talesin*, which is largely in verse. They were edited by Prof. R. Williams, 1902.

MABLETHORPE. Urban district with Sutton and watering place of Lincolnshire. Situated 13 m. from Louth, on the L.N.E. Rly., it has good sands and bathing. Pop. 6,500.

MABUSE, JAN GOSSAERT DE (c. 1472-1532). Flemish painter. Born at Maubeuge, or Mabuse, in Hainault, he probably studied under Quinten Massys. He was employed by Philip of Burgundy, and visited Rome with him in 1508, where he studied Leonardo and Michelangelo. The chief works of his early pre-Italian period are *The Adoration of the Kings*, in the National Gallery, London, *Christ in Gethsemane*, and portraits of Philip the Fair and Joanna of Castile, at Brussels. Of his later works, the most important include a *Madonna and Child* at Brussels, *Virgin with the Grapes* in Berlin, about 1509, *S. Luke drawing the Madonna*. He died Oct. 1, 1532.

MCADAM, JOHN LOUDON (1756-1836) Scottish engineer. Born at Ayr, Sept. 21, 1756, he experimented in the making of roads, and came to the conclusion that they should be constructed of successive layers of granite or greenstone, broken into small lumps. In 1815, becoming surveyor-general of the Bristol roads, he employed the method he had invented, which in time was generally adopted. He received £10,000 from Parliament, was appointed surveyor-general of metropolitan roads in 1827, and died Nov. 26, 1836.

J. L. Macadam,
Scottish engineer

MACAO, Portuguese colony at S. extremity of the Canton River delta, China, 40 m. S.W. of Hong Kong. The area, including the islands of Taipa and Coloane, is about 10 sq. m. The Portuguese settled here in 1557, and paid tribute to China until 1849, when payment was refused and the Chinese authorities were expelled. In 1887 China formally acknowledged Portuguese sovereignty. The harbour has long been silting up, but dredging opera-

tions have been undertaken. Pop. 157,175, of whom over 152,000 are Chinese.

MACAQUE. Group of monkeys found in S. Asia, and including one species which occurs in N. Africa

Macaque. Specimens of *M. sinica*, the bonnet monkey of India and Ceylon
W. S. Berridge, F.Z.S.

and on the rock of Gibraltar. All are of stout build, with longish muzzles and large callosities on the buttocks. The tail may be long or short, or absent. They live in troops in the forests, where they lead a very active life, and feed upon almost anything eatable that they can find. See Monkey.

MACARONI (Ital. *maccheroni*). Farina-coous food. Made from a hard wheat, rich in gluten, the flour is kneaded into a paste, which is placed in a cylinder perforated at the bottom. A heavy plate presses the dough through the perforations in tubes or strips according to the arrangement of the holes. The macaroni is then cut into lengths and hung over rods to dry.

Macaroni. Lengths of macaroni hanging over rods to dry in the sun

It becomes soft when boiled and swells a good deal, but retains its shape. Macaroni keeps for any length of time and is a nutritious article of food. Formerly only made in Italy, where it forms a staple article of food, it is now also manufactured in France and other countries. See Spaghetti; Vermicelli.

MACARONI. Clique of English exquisites of the 18th century. They were so called from their introducing that Italian dish into England. Having imbibed Continental tastes and fashions while on the grand tour, a group of young men formed the Macaroni Club. They were conspicuous for their affectations and fantastic costumes.

Macaronic verse is the term given to a ludicrous kind of verse written partly in Latin and partly in vernacular words with Latin terminations. An example in French literature is the huresque ceremony of admission of Molière's *Malade imaginaire* to the degree of doctor of medicine.

MACARTNEY, GEORGE MACARTNEY, 1ST EARL (1737-1806). British diplomatist and administrator. Born May 14, 1737, he was sent to Russia in 1764 to conclude a commercial treaty, and succeeded so well that in 1767 he was offered the embassy at St. Petersburg, which he declined. He was chief secretary for Ireland, 1769-72, and afterwards governor of the Carribee Islands, and of Madras. Created an earl in 1792, he was the first British ambassador to Peking. He left there in 1794 and in 1796 was made governor of Cape Colony. He died May 31, 1806.

MACASSAR. Town and seaport of the Dutch East Indies, on the island of Celebes. It is situated on Macassar Strait in the S.W. of the island. Pop. 53,669. See Celebes.

MACASSAR OIL. This vegetable oil is used in pharmacy and perfumery, and manufactured at Macassar. The oil is obtained from the fruit of the *Stadtmannea sideroxylon* or *Schleichera trijuga*. Its once extensive use for the hair brought into use the antimalassar.

MACAULAY, THOMAS BABINGTON, LORD (1800-1859). British historian. Born at Rothley Temple, Leicestershire, Oct. 25, 1800, he entered Trinity College, Cambridge, in 1818, gaining a fellowship in 1824. The publication of his essay on *Milton* in *The Edinburgh Review* began his connexion with the great Whig journal, which continued for some twenty years. In 1830 he entered Parliament as member for Calne, in 1833 he was member for Leeds, and in 1834 he accepted the position of legal adviser to the supreme council of India. Macaulay's four years' stay in India is reflected in his essays on Clive and Warren Hastings, and it was when abroad that he wrote most of the popular *Lays of Ancient Rome*, published in 1843. In 1839 he was elected member for Edinburgh, and became successively secretary for war and paymaster-general of the forces.

Lord Macaulay,
British historian
After Sir Francis Grant

In 1848 appeared the first two volumes of his popular *History of England* from the Accession of James I. The second two volumes appeared in 1855, and the fifth posthumously in 1861. His intention was to bring the history down to his own time, but he failed to get farther than the closing years of the reign of William III. Rejected for Edinburgh at the general election of 1847, Macaulay was elected again in 1852, and in 1857 he was raised to the peerage. He died in London unmarried, Dec. 28, 1859.

MACAULAY, ROSE. British novelist. Her stories of modern English life are marked with lively humour and frequently with a happy satiric touch. Her novels and other writings include *Abbots Verney*, 1906; *The Furnace*, 1907; *The Secret River*, 1909; *The Valley Captives*, 1911; *Views and Vagabonds*, 1912; *The Two Blind Countries*, 1914; *What Not*, 1918; *Potterism*, 1920; *Dangerous Ages*, 1921; *Told by an Idiot*, 1923; *Crewe Train*, 1926; and *Keeping up Appearances*, 1928.

MACAW. Name given to various genera of South American parrots, noted for their gorgeous plumage. Some of them are nearly 3 ft. long including the tail; and the prevailing colours are red, blue, and yellow. There are about 14 species, found from Mexico to Paraguay. They feed in flocks upon fruit and nuts, and utter deafening cries.

Macaw, a South American parrot

MACAW TREE (*Acrocomia sclerocarpa*) Tree of the order Palmae, native of South America. It attains a height of about 40 ft., with a spreading head of large leaves divided into slender leaflets, which when young are eaten as a vegetable. The hard shells of the nuts are made into various ornaments, and from the kernels a thick yellow oil is pressed.

MACBETH (d. 1057). King of Scotland. Nephew of Malcolm II. and ruler of Moray, he married Gruoch, granddaughter of the king of Alghar, and became King Duncan's commander-in-chief. He slew Duncan in 1040, succeeded him on the throne, was defeated by

Siward, earl of Northumbria, in 1054, and was slain by Duncán's son, Malcolm III, called Canmore, at Lumphannan, Aug. 15, 1057. He is known through Shakespeare's tragedy, *Macbeth*.

MACCABEES. Later name of the Hasmonaeans or Asmonaeans, an illustrious Jewish family. In the latter part of the 2nd century B.C. they overthrew Syro-Hellenic tyranny and established a race of priest-kings. Their story begins with Mattathias, an aged priest, who, when ordered to offer sacrifice to the pagan deities at Modin near Jerusalem, killed the Syrian commissioner, slew a Jew who was about to obey the order, and, with his five sons, fled to the mountains. The race ended with Mariamne, by whose marriage with Herod (q.v.) the dynasty passed to the Herodians.

MACCABEES, Book of. Four noted books of the O.T. Apocrypha. Of these 1 and 2 Maccabees are valuable historical works. 1 Maccabees covers the period of Jewish history from the accession of Antiochus Epiphanes to the death of Simon (175-135 B.C.). 2 Maccabees covers part of the same ground (174-161 B.C.), but is of less historical value. 3 Maccabees is of the nature of an historical romance. 4 Maccabees is philosophical, in the Stoic sense, rather than historical. See Apocrypha.

M'CARTHY, JUSTIN (1830-1912). Irish author and politician. Born in Cork, Nov. 22, 1830, he became a reporter on the Cork Examiner and in 1853 joined the staff of The Northern Daily Post at Liverpool. He was editor of The Morning Star, 1864-68, and spent three years in the U.S.A. Writer on The Daily News, 1872-97, he was M.P. for co. Longford, 1879-85; Derry City, 1886-92; N. Longford, 1892-1900; and chairman of the Irish Parliamentary Party, Nov., 1890-Jan., 1896. He died April 24, 1912.

His writings include *Lives of Sir Robert Peel*, 1891; *Leo XIII*, 1896; and *Gladstone*, 1898; *A History of Our Own Times*, 1879-97 and 1905; *Reign of Queen Anne*, 1902; *Portraits of the 'Sixties*, 1903; and several novels.

His son, Justin Huntly McCarthy (b. 1860), wrote several plays, including *My Friend the Prince* 1897; and *If I Were King*, 1901; and some novels. He sat in the House of Commons as a Nationalist, 1884-92.

MCCARTHY, LILLIAN British actress. Daughter of J. McCarthy, F.R.A.S., she first appeared on the stage in 1895 as a member of A. E. Drinkwater's company, and later acted with Ben Greet; William Greet; Wilson Barrett; Beerbohm Tree; Granville Barker; and Matheson Lang. The Little Theatre was under her management in 1911, and in 1919 she became manager of the Kingsway Theatre. In 1920 she married Sir F. W. Keeble.

MACCLESFIELD. Borough and market town of Cheshire. It stands on the river Bollin, 18 m. from Manchester and 166 m. from London, on the L.M.S. and the L.N.E. Railways. The buildings include S. Michael's church, the town hall and the grammar school, which the lines from the 16th century. The chief industry is the silk manufacture. Its earlier history was the manufacture of buttons, the Great Hall in the 16th century. The first town hall was built about 1750. The wild and statesman district on the Derbyshire border is latter period of Forest Forest. Market days, Tues. As commander c.p. 33,846.

MACK, SIR FRANCIS LEOPOLD with Cyrus the Younger, British Arctic explorer. Born in London, Aug. 8, 1819, he entered the navy which proved a potent factor in the Arctic expedition. In 405 B.C. his fleet sailed to the Arctic expedition. Athenians at the decisive battle of Salamis, sent for the potami. In the following year, in 482 B.C. he commanded the famous Long Expedition. He established the rule of the Thirty Tyrants. He was killed in 395.

on which he discovered proofs of Franklin's death. Returning in 1859, he was knighted. Rear-admiral in 1871 and vice-admiral in 1877, he was in command of the North American and West Indian stations (1879-82), and became admiral in 1884. McClintock died Nov. 17, 1907.

Sir F. L. McClintock,
British explorer

Melville Sound and Banks Strait it communicates with Beaufort Sea.

McCLURE, SIR ROBERT JOHN LE MESURIER (1807-73). British Arctic explorer. Born at Wexford, Ireland, Jan. 28, 1807, he entered the navy in 1824, and served in the Arctic expedition of the Terror, 1836-37. In 1848 he accompanied Sir James Ross's expedition in search of Sir John Franklin, and in 1850 commanded the Investigator on an Arctic voyage undertaken by way of Bering Strait. He explored Banks Land, spent two years (1851-53) on the ice, was rescued by the Resolute, and returned to England in 1854. He was knighted and promoted captain upon his return, and was voted £10,000 by the House of Commons for having discovered a North-West Passage. He died Oct. 17, 1873.

Sir R. J. McClure,
British Arctic explorer

MACCORMACK, JOHN (b. 1884). Irish singer. Born at Athlone, June 14, 1884, he studied at Milan under Sabatini, and won the gold medal at the National Irish Festival in 1902. He made a highly successful London debut at Covent Garden, Oct. 15, 1907, and repeated his success in Italy, Australia, and the U.S.A. In 1919 he was naturalised as an American citizen.

MCCUDDEN, JAMES BYFORD (d. 1918). British airman. He went to France in the first days of the Great War and gained the military medal in Sept., 1916, when he destroyed an enemy machine and forced two others to land. On Feb. 15, 1917, he won the military cross, earning the bar to it during Aug.-Sept. In the following November he received the D.S.O., and the bar to that decoration for destroying enemy machines. In March, 1918, he was awarded the V.C. Up to March 31, 1918, McCudden, who had reached the rank of major, had accounted for 54 enemy aeroplanes, of which 42 had been definitely destroyed. He was killed July 8, 1918.

MACCUNN, HAMISH (1868-1916). British composer. Born at Greenock, March 22, 1868, he was professor of harmony at the Royal Academy of Music, London, 1888-94. His overture, *Land of the Mountain and the Flood*, performed at the Crystal Palace in 1887, brought him into notice, and he followed it up with a succession of works, the chief being the cantatas *Lord Ullin's Daughter* and *The Lay of the Last Minstrel*, and the operas *Jeanie Deans* and *Diarmid*. He died Aug. 2, 1916.

MCCURDY, CHARLES ALBERT (b. 1870). British politician. Born March 13, 1870, he became a harrister in 1896, and was Liberal M.P. for Northampton, 1910-23. In 1919 he was made parliamentary secretary to the ministry of food, having given much attention to the subject of rationing, and in 1920 he succeeded J. R. Clynes as food controller. On the abolition of this office in 1921 he became joint parliamentary secretary to the treasury and chief whip for the Liberal section of the

coalition, resigning in Oct., 1922. He retired from Parliament in 1923, and from 1922-27 was chairman of United Newspapers Ltd.

MACDONALD, ÉTIENNE JACQUES JOSEPH ALEXANDRE (1765-1840). French soldier.

Born at Sedan, Nov. 17, 1765, he belonged to a Jacobite family exiled in the cause of James II. He entered an Irish regiment in the service of France, but in 1789 left this to join the revolutionary army. By 1796 he was commanding a division. In 1797 he was made governor of Rome. In 1809 Macdonald was given a command in Italy. For his share in the victory of Wagram he was made a marshal and created duke of Taranto. He served in Spain, was prominent in Napoleon's concluding battles, and in 1814 went over to the Bourbons. He died Sept. 7, 1840.

Macdonald,
Duke of Taranto.
French soldier
After David

MACDONALD, FLORA (1722-90). Jacobite heroine. In 1746 she assisted in the escape of Prince Charles Edward after Culloden, for which she was arrested.

Released under the Act of Indemnity in 1747, in 1750 she married Allan MacDonald of Kingsburgh, emigrating with him to N. Carolina in 1773. During the War of American Independence, Allan was made brigadier-general in the British forces, and Flora accompanied him on service until he was taken prisoner. By his advice she returned to Scotland, 1779. She died at Kingsburgh, March 5, 1790. See Charles Edward.

MACDONALD, GEORGE (1824-1905). Scottish novelist and poet. Born at Huntly, Aberdeenshire, Dec. 10, 1824, he became a

George MacDonald,
Scottish writer
Elliott & Fry

Congregational minister at Arundel, 1850-53, when he resigned and settled at Manchester. Later he came to London and devoted himself to literature, frequently, however, occupying pulpits as a lay preacher. MacDonald died at Ashted, Surrey, Sept. 18, 1905.

A voluminous writer, the first of his works to attract general notice was *Phantastes*, a Faerie Romance in prose, 1858. His poetical output filled two large volumes, 1893. His story books for children include *Ranald Bannerman's Boyhood*, 1871, *The Baek of the North Wind*, 1871, and *The Princess and the Goblins*, 1872. Of his novels, some are of a spiritual and mystical character, such as *David Elginbrod*, 1862; others, such as *Alec Forbes of Howglen*, 1865, are notable for their presentation of Scottish life and character.

MACDONALD, SIR

HECTOR ARCHIBALD (1853-

1903). Scottish soldier.

Born at Rootfield, Urquhart, April 13, 1853, in 1870

he enlisted in the Gordon

Highlanders, so distinguish-

ing himself in the second

Afghan War that he was

recommended for a com-

mission. In 1883 he joined

the Egyptian constabulary,

was subsequently

Sir Hector MacDonald,
Scottish soldier
Lafayette

transferred to the Egyptian army, and became noted for his skill in training native troops. In May, 1902, he was given the command of the troops in Ceylon. After a visit to England, on his way back to Ceylon he shot himself in Paris, March 25, 1903.

MacDONALD, JAMES RAMSAY (b. 1866). British politician. Born at Lossiemouth, Oct. 12, 1866, he became a schoolmaster and then a journalist.

In London he became associated with the socialist movement, edited *The Socialist Review*, and stood several times for Parliament, but without success. From 1901-04 he was a member of the London County Council, and from 1900-12 was secretary of the Labour Party. In 1906 Macdonald entered the House of Commons as M.P. for Leicester, W., and from 1911-14 was leader of the party there. In 1906-09 he had been chairman of the Independent Labour party. In 1918 he was defeated at Leicester, and remained out of Parliament until 1922, when he found a seat at Aberavon.

Recognized as the party's ablest parliamentarian, he was made its leader when it became the official opposition, and in 1924 he was called upon to form a ministry. For nearly a year he was prime minister, the first Labour politician to hold that office, and secretary for foreign affairs. His government was defeated at the general election, Oct., 1924, and he resigned. From 1924-29 he was again leader of the opposition. In June, 1929, after the election, he formed the second Labour Ministry, and became prime minister for the second time. At this time he represented the Seaham division of Durham.

Macdonald has travelled very widely and written a number of books on socialism and other questions. In 1896 he married Margaret Ethel, a daughter of Dr. J. H. Gladstone. She died in 1911, leaving two sons and three daughters. One of the sons, Malcolm, was elected M.P. for the Bassetlaw division in 1929.

MACDONALD, SIR JOHN ALEXANDER (1815-91). Canadian statesman. Born in Glasgow, Jan. 11, 1815, he was a child of five when his father emigrated to Canada and settled at Kingston, Ontario. There in 1836 he was called to the bar. In 1844 he became a member of the Canadian legislature, being attached to the Conservative party. Attorney-general of Upper Canada, 1854-57, he then became prime minister of the two Canadas. When

Sir John Macdonald,
Canadian statesman

in 1867 the federation was accomplished he was knighted and became the first prime minister of the new union. From 1867 to 1874 and again from 1878 to 1891 Sir John was prime minister, and his government was responsible for the introduction of a national system of protection. On his death, May 29, 1891, his widow was made a baroness.

MACDONELL, JAMES (1842-79). Scottish journalist. Born at Dyce, Aberdeenshire, April 21, 1842, he began to contribute to *The Aberdeen Free Press* in 1860, joined the staff of *The Edinburgh Daily Review*, 1861; was editor of *The Northern Daily Express*, Newcastle, 1862-65; a member of *The Daily Telegraph* staff, 1865-75, serving as special correspondent in France, 1870-71; and was

a leader writer on *The Times*, 1875-79. He made a special study of constitutional problems and French politics, and was one of the most notable journalists of his time. He died in London, March 2, 1879.

MACDUFF. Burgh and seaport of Banffshire. It stands at the mouth of the Deveron, on the L.N.E. Rly., 50 m. from Aberdeen. Across the Deveron is Banff a bridge connecting the two. The herring fishery is the chief industry. Macduff was a village named Doune before the land was bought by the earl of Fife in the 18th century. He renamed it Macduff, his family name. Pop. 3,707.

MACDUFF. Thane or earl of Fife. A semi-legendary figure of the 11th century, he is mentioned by early Scottish historians as having conspired with Malcolm Canmore to overthrow the usurper Macbeth. Threatened by Macbeth, he fled to England, but the tale that his wife and children were massacred has no foundation in fact, although it was utilised by Shakespeare for dramatic purposes.

MACE (Fr. Masse). Heavy-headed staff or club, formerly much used in close combat, particularly by ecclesiastics, to whom the sword was a forbidden weapon. It is now a symbol of authority, e.g. the mayoral mace. The mace of the House of Commons is the emblem of the Speaker's authority as the servant of the House, and is removed from its place on the table when the Speaker leaves the chair and the House goes into committee.

Mace of the House of Commons. The staff was made in 1649, and the head, with royal initials and symbols, was added at the Restoration

MACE. Fleishy, inner covering, or aril, of the nutmeg, which, dried in the sun, is used as a spice. When fresh it is a bright red, but on drying it fades to a brown. It is very aromatic, and contains both an essential and a fixed oil. See Nutmeg.

MACE, JEM (1831-1910). British pugilist. He was born at Beeston, Norfolk, April 8, 1831. He acquired fame by beating Bob Brettell in 1860 and then challenged the holder of the championship, Sam Hurst, whom he defeated June 18, 1861. Mace was now champion of the ring, a title he held intermittently until his retirement in 1871. He died Nov. 30, 1910.

MACE DONIA. Country of Europe, now part of Greece. It was bounded S. by Thessaly and the Aegean Sea, E. by Thrace, and W. by Illyria. The chief towns were Edessa, Pella, Pydna, Philippi, Potidaea, and Thessalonica, the two first being in succession the capital. Macedonia was famous for its salt, gold, and silver mines, and for its vineyards.

Not until the reign of Philip II (359-336 B.C.) did Macedonia become important, reaching the climax of its greatness under his successor, Alexander the Great. At his death (323) the Macedonian empire included Macedonia, Greece, Thrace, Asia Minor, Syria, Egypt, Babylonia, Assyria, part of modern Persia, Afghanistan, Baluchistan, and Central Asia. Under the Diadochi, or successors of Alexander, these possessions were contested among various claimants. In 278 Antigonus Gonatas established himself firmly on the throne, but in 146 Macedonia became a Roman province. In the 15th century it came into the power of the Turks. See Greece.

McEVoy, AMBROSE (1878-1927). British painter. Son of Capt. C. A. McEvoy, he studied at the Slade School, and soon attracted attention by his genre subjects and landscapes. He began portraiture in 1915, and examples of

his work are to be seen in the Tate, the Luxembourg and other galleries. He was elected A.R.A. in 1924, and died Jan. 4, 1927.

MACGILL, PATRICK (b. 1890). Irish poet and novelist. He was born in Donegal, and worked as farm servant and navy. After having published a volume of verse, *Gleanings from a Navy's Scrap Book*, he received an appointment in the library at Windsor. In the Great War he was attached to the London Irish, and saw much service on the western front. His books inspired by the war included *Red Horizon*, 1916; *The Story of Loos*, 1916; *The Great Push*, 1916; *Soldier Songs*, 1917; and *The Brown Brethren*, 1917. Later novels include *Glenmornan*, 1918; *The Diggers*, 1919; *Sid Puddiefoot*, 1926; and *Una Cassidy*, 1928.

McGill University, Montreal. Part of the medical building
Courtesy of Canadian Pacific Rly

MCGILL UNIVERSITY. Canadian university. It owes its origin to property left by James McGill of Montreal, when he died in

1813. In 1821 a charter was obtained for the proposed university. Benefactors have included Sir W. Macdonald and Lord Strathcona.

The university consists of McGill, the original college in Montreal, the Royal Victoria College, which is the women's department, and Macdonald College. McGill has large libraries, laboratories, an observatory, a farm, hospitals, and a medical museum. It is specially famed for its teaching of engineering and medicine. Four theological colleges in Montreal are connected with the university, which has residential facilities for both men and women. It is under a board of governors, who unite with members of the staff to form the corporation. The Montreal buildings, which form a fine group on the campus, were seriously damaged by fire in 1907.

MACGILLYCUDDY'S REEKS. Group of mts. in co. Kerry, Irish Free State. They lie to the W. of Killarney, and include Carraunohill (Carraunahill), 3,414 ft., and other high peaks. In the basin between the Reeks and the Mangerton group are the famous lakes of Killarney.

MACGREGOR, JOHN (1825-92). Scottish traveller, known as Rob Roy. Born Jan. 24, 1825, he became a barrister, but his time was mainly passed in travel, a notable feat being a journey in his canoe, Rob Roy, over the waterways of Europe, this being something of a pioneer undertaking. He travelled also in America, and in other continents. Macgregor was interested in work among boys, being associated with Lord Shaftesbury in his philanthropic work. He died July 16, 1892. His writings include *A Thousand Miles in a Rob Roy Canoe*, 1866.

MACHAERODUS (Gr. machaira, sword, odous, tooth). Extinct genus of cats. They were remarkable for their enormous upper canine teeth, 8 to 10 ins. in length. Fossil remains are found in Pleistocene strata in Europe and America, and show the machaerodus to have been about the size of a tiger. See illustration p. 906.

MACHIAVELLI OR MACCHIAVELLI, NICCOLÒ DI BERNARDO DEI (1469-1527). Italian author and statesman. He was born at Florence, May 3, 1469. In 1498, four years

Niccolò Machiavelli, Italian writer. From a portrait formerly in the possession of the Ricci family.

after the expulsion of the Medici and the foundation of the Florentine Republic, he became secretary to the Ten, a chancery combining the duties of war office and ministry for home affairs, which he held until the Medici returned in 1512. He was then cast into prison, accused of complicity in an attempt to restore the republic, but soon after set free. Retiring to his villa near San Casciano, seven miles from Florence, he wrote *Il Principe* (The Prince), and his *Discorsi* (Discourses on the First Decade of Titus Livius). He wrote also several comedies, including *La Mandragola*, a picture of the men and society of his time, and perhaps the finest comedy of the Italian stage. He died June 22, 1527.

Machiavelli's fame rests upon *The Prince* and the *Discourses*, related books concerning respectively principalities and republics. He regarded the state as the supreme end, and all means to preserve it as justified, morality having nothing to do with the matter.

MACHICOLATION. Term used in fortification. In medieval fortresses it was the provision of an overhanging parapet with holes through which molten lead, stones and the like could be dropped upon the attacking forces. It is sometimes used in modern times for loopholes constructed in fortifications for downward fire, and also for ornamentation in imitation of the original machicolation.

MACHINE GUN. Firearm which discharges rifle bullets or small shell with great rapidity, its essential feature being the acceleration of the operations of loading, firing, and ejection. Dealing first with hand-operated weapons, the mitrailleuse, adopted by France in 1869, consisted of 25 barrels grouped around a common axis within a casing. The cartridges were contained in a plate with 25 holes, and were fired in succession by turning a handle. The Gatling, invented about 1862 and adopted in the British Army in 1871, had six to ten barrels revolving about a central axis, and was operated by turning a crank. The Nordenfält, adopted by Gt. Britain in 1880, had four or more barrels side by side, and was worked by moving a lever. The Gardner gun had one or two barrels, loaded from a hopper and fired by operating a winch handle. It was adopted in 1882.

The Maxim automatic machine gun was adopted for the British army in 1889. It is operated by the recoil of its barrel against the action of springs. The Vickers is another weapon of this type, lighter in construction. The Madsen is a light machine gun of the recoil type, similar in appearance to an ordinary rifle. Weighing about 19 lbs., it is used in the Danish, Norwegian, and Swedish armies. The Hotchkiss and the Lewis gun, introduced into the British service in 1915, belong to the gas-engine type, in which a portion of the propellant gases passes through a small opening in the barrel before the projectile leaves the muzzle, and thus actuates a piston in a cylinder connected to the breech mechanism. Both are capable of being fired

from the shoulder, and may be supported by a rest forming part of the weapon. The Hotchkiss ammunition is fed from a belt, while that for the Lewis gun is contained in a circular hopper. Automatic machine guns continue to fire as long as the trigger is kept depressed and ammunition is available. See Gatling; Hotchkiss; Lewis Gun; Maxim.

The Machine Gun Corps was raised in Oct., 1915. It was divided into four branches: infantry, cavalry, heavy, and motor. Officers underwent a course of instruction at a machine-gun training centre, of which a number were established in England and France. The corps was disbanded in 1921, when it was announced that each battalion of infantry would have a separate machine gun platoon.

Machine gun guards was the name given to two British military units in the Great War. In March, 1917, an administrative unit called Machine Gun Guards was formed, and in May, 1918, another organization, the official designation of which was the 6th or the Machine Gun Regiment of Foot Guards, was established. They were disbanded after the war.

Machaerodus. Reconstruction of the prehistoric genns of cats. See p. 905

of which was the 6th or the Machine Gun Regiment of Foot Guards, was established. They were disbanded after the war.

MACHPELAH. Locality in Hebron, Palestine. Here, in a cave on the hill side, is the traditional burial place of Abraham and other Jewish patriarchs (Gen. 23). Above the cave rises the Mahomedan mosque of El Khalil (the friend, i.e. Abraham). The summit commands a fine view. See Abraham; Hebron.

MACHYNLETH. Urban dist. and market town of Montgomeryshire, Wales. It stands on the Dovey, 21 m. from Aberystwith, being a junction on the G.W. Rly. There are manufactures of flannels and other woollen goods. Market day, Wed. Pop. 1,870.

MACKAIL, JOHN WILLIAM (b. 1859) British scholar and poet. Educated at Balliol College, Oxford, he entered the board of education, and was professor of poetry at Oxford, 1906-11. In 1888 he married Margaret, only daughter of Sir Edward Burne-Jones. His works include *Select Epigrams* from the Greek Anthology, 1890; *Latin Literature*, 1895, one of the most brilliant critical manuals of its kind in any language; the standard *Life of William Morris*, 1899; a notable translation in verse of Homer's *Odyssey*, 1903-10; *Lectures on Greek Poetry*, 1910; *Lectures on Poetry*, 1911; *Shakespeare after 300 Years*, 1916; *Life of George Wyndham*, 1925; *Studies of English Poets*, 1926; and *J. L. Strachan Davidson: a Memoir*, 1926.

His son, Denis Mackail (b. 1892), won fame as a novelist. His books include *Bill the Bachelor*, 1922; *Greenery Street*, 1925; *The Flower Show*, 1927; *Tales from Greenery Street*, 1928; and *How Amusing*, 1929.

MACKAY. Port of Queensland. It stands on the Pioneer river, 625 m. N.W. of Brisbane. The exports include sugar, timber, coffee, copper, and gold. Pop. 8,750.

McKENNA, REGINALD (b. 1863). British politician. Born July 6, 1863, he practised as a barrister for a few years, but in 1895 was returned to Parliament for N. Monmouthshire, and forsook the law for politics. After ten years in opposition he joined the new Liberal government in 1905 as financial secretary to the treasury. In 1907 he entered the Cabinet as president of the board of education, and in 1908 was transferred to the ad-

ministry as first lord. He remained there until 1911, when he was made home secretary, and in 1915, when the Coalition government was formed, he became chancellor of the exchequer. In Dec., 1916, McKenna left office with Asquith, and lost his seat at the general election of 1918. He wrote *Post-War Banking Policy*, 1928. In 1919 he became chairman of the Midland Bank and abandoned political life. He introduced the duties bearing his name.

McKENNA, STEPHEN (b. 1888). British novelist. Born Feb. 27, 1888, he published his first novel, *The Reluctant Lover*, in 1912. He made a great success with *Sonia*, 1917, which was followed by *Sonia Married*, 1919; *Lady Lilith*, 1920; *An Affair of Honour*, 1925; *The Oldest God*, 1926; *The Secretary of State*, 1927; *The Shadow of Guy Denver*, 1928; and *The Datchley Inheritance*, 1929.

MACKENNA, SIR BERTRAM (b. 1863). Australian sculptor. Born at Melbourne, he was a son of J. S. Mackennal, a Scottish

Sir B. Mackennal, Australian sculptor. Russell

sculptor who had emigrated to Australia. After studying in Europe he was engaged, 1889-91, on the decoration of the Government House of Victoria. His *Circe*, produced in 1893, and exhibited at the Salon and the R.A., won him public recognition; and among later works of importance were statues of Queen Victoria for Lahore, Blackburn, and Australia, the coinage designs for King George V, the national memorial to Gainsborough, and much small decorative sculpture in the manner of Alfred Gilbert. He was knighted in 1921.

MACKENSEN, AUGUST VON (b. 1849) German soldier. Born at Haus-Leipnitz, Saxony, Dec. 6, 1849, he entered the army in 1869, and from 1908 to 1914 was general of cavalry and commander of the 17th Army Corps. Becoming at the outbreak of war one of Hindenburg's lieutenants, he was first prominent in the second attack on Warsaw. As generalissimo of all the Austro-German forces in the S., Mackensen carried out the great drive in 1915 against the Russians in Galicia and the Carpathians. He then advanced into Poland. He was made a field-marshal, and in Oct.-Nov. of the same year overran Serbia.

August von Mackensen, German soldier

After Rumania's entry into the war he was put in command of the composite army which invaded the Dobruja in Aug.-Sept., 1916. Having subdued that area, he subjugated Rumania, and remained in that country until the armistice of Nov. 11, 1918.

MACKENZIE. River of Canada. It issues from passes in the Rocky Mountains. At the Athabaska it enters Athabaska Lake, which it leaves as the Slave river, and after 20 m. is joined by its great tributary, the Peace. Entering the Great Slave Lake, it emerges thence as the Mackenzie, and is navigable onwards to its outlet, at Mackenzie Bay, a distance of 1,120 m. The total length is 2,300 m. See Athabaska; Peace; Slave.

MACKENZIE, SIR ALEXANDER (c. 1755-1820). British explorer. Born at Inverness about 1755, he entered the service of the North-West Fur Company of Canada in 1779, and in 1789 was dispatched from Chipewyan Settlement, Lake Athabaska, on an expedition to explore the unknown north-west, in the course of which he discovered the outlet of the river which bears his name, and penetrated to the Arctic Sea. In 1792 he set out to reach the Pacific, and after nine months succeeded and

Reginald McKenna, British politician. Russell

returned to Chipewyan. In 1801 he published an account of his explorations, entitled *Voyages on the River St. Lawrence and through the Continent of North America*. Knighted in 1802, he died March 11, 1820.

MACKENZIE, SIR ALEXANDER CAMPBELL (b. 1847). British musician. Born in Edinburgh, Aug. 22, 1847, he was the most distinguished of a family of Scottish musicians extending over four generations. He was principal of the Royal Academy of Music from 1888 to 1924. For several years he conducted the concerts of the Philharmonic Society in London, and in 1903 made a tour through Canada. He was knighted in 1895. His most successful works are national in character, like *The Cotta's Saturday Night* and the Scottish Rhapsodies. He published *A Musician's Narrative*, 1927.

MACKENZIE, COMPTON (b. 1883). British novelist. Born at West Hartlepool, Jan. 17, 1883, a son of Edward Compton, the actor, he made a hit with his novel, *Carnival*, in 1912; *Sinister Street*, 1913, enjoyed even greater vogue. Other novels include *Guy and Pauline*, 1915; *Sylvia Scarlett*, 1918; *Poor Relations*, 1919; *Rich Relatives*, 1921; *Coral*, 1925; *Vestal Fire*, 1927; and *Gallipoli Memories*, 1929. During the Great War he was director of the Aegean intelligence service, 1917.

MACKENZIE, SIR MORELL (1837-92). British surgeon. Born at Leytonstone, Essex, July 7, 1837, he took a medical degree and won a prize from the College of Surgeons for a treatise on diseases of the larynx. He then devoted himself to this branch of the profession and became a successful surgeon. In 1887 he attended the crown prince of Germany, afterwards the emperor Frederick III, writing a book, *Frederick the Noble*, 1888, which raised much discussion. He was knighted in 1887, and died Feb. 3, 1892.

MACKENZIE, WILLIAM LYON (1795-1861). Canadian politician. Born near Dundee, March 12, 1795, he emigrated in 1820 to Canada. In 1824 he started a paper, *The Colonial Advocate*, in order to focus the discontent felt in Upper Canada, at the arbitrary acts of a small controlling clique, and in 1836 began to advocate republican doctrines, founding a new paper, *The Constitution*. He was soon in touch with the rebels in Lower Canada, and in Nov., 1837, he set up a provisional government. Collecting a force, he marched towards Toronto, but this rising was soon crushed, and its leader fled to the U.S.A. In 1849 he returned to Canada, re-entered the legislature in 1851, and continued in political life until 1858. He died Aug. 29, 1861.

MACKEREL. Fish of the family *Scorpaenidae*, distinguished by their rounded bodies, very small scales, and the form of the dorsal fins. They are found in most parts of the world, three species occurring in Europe. The common mackerel varies in length from 14-18 ins., and is readily recognized by its bluish green back, barred with black, and its silvery underside. The mackerel fishery is conducted in seine and drift nets, and the catch which is obtained is often enormous.

McKINLEY, WILLIAM (1843-1901). President of the U.S.A. Born at Niles, Ohio, Jan. 29, 1843, of Scottish-Irish descent, he fought in the Civil War, and after being called to the bar settled for the rest of his life at Canton, Ohio. Republican member of Con-

gress 1877-91, as chairman of the Ways and Means Committee (1890) he passed the protectionist tariff known as the McKinley Act.

William McKinley, American president

Having twice served as governor of Ohio, he was a successful candidate for the presidency in 1896. The chief events of his term were the war with Spain, the annexation of Hawaii, and the settlement of the control of Samoa. Re-elected in 1900, he was shot by an anarchist, at Buffalo, and died Sept. 14, 1901.

MACKINTOSH, SIR JAMES (1765-1832). British philosopher. Born Oct. 24, 1765, he removed to London, and was called to the bar in 1795. In 1791 he had published a justification of the French revolution, *Vindiciae Gallicae*, in reply to Burke, for which the National Assembly gave him the title of a French citizen. From 1804-11 he held important positions in Bombay. On returning to England he entered the House of Commons. He was also appointed professor of law and general politics at the East India College, Haileybury. He wrote *Dissertation on Ethical Philosophy*. He died May 30, 1832.

MACKLIN, CHARLES (c. 1697-1797). Irish actor and dramatist, whose real name was McLaughlin. He made his first appearance at Drury Lane in 1733. He was the original Colonel Bluff in Fielding's *Intriguing Chambermaid*, and took the part of Squire Badger in the same author's *Don Quixote* in England. He acted at The Haymarket and Covent Garden, also in Dublin, and achieved enormous success as Shylock. His *Peachum*, *Polonius*, and *Iago* were among his other impersonations. He retired Jan. 25, 1789, and died July 11, 1797.

MACLAREN, ARCHIBALD CAMPBELL (b. 1871). English cricketer. Born at Manchester, Dec. 1, 1871, he made his name as a cricketer at Harrow, being in the eleven 1887-90. In 1890 he began to play for Lancashire, and in 1894 was made captain. He was a member of the team that went to Australia in 1894-95, and captain of those that went in 1897-98 and 1901-2. In 1922-3 he captained M.C.C. team to Australia and New Zealand. In England he played against Australia in 1896, 1899, 1902, 1905, and 1909.

MACLAREN, IAN (1850-1907). Pseudonym of John Watson, Scottish author and divine. Born at Manningtree, Essex, Nov. 3, 1850, he studied for the ministry of the Free Church of Scotland at Edinburgh. In 1874 he obtained his first charge in Edinburgh: from 1875-77 he was minister at Logiealmond; and from 1877-80 at S. Matthew's, Glasgow. In 1880 he became minister of Sefton Park Presbyterian Church, Liverpool. He died May 6, 1907.

In 1894 Watson published *Beside the Bonnie Brier Bush*, a book which brought him great fame as a delineator of Scottish character. This was followed by *The Days of Auld Lang Syne*, 1895, and *Kate Carnegie*, 1896. The *Mind of the Master* appeared in 1896.

MACLEAN, SIR HARRY AUBREY DE (1848-1920). British soldier. Born June 15, 1848, he entered the army and was gazetted to the 69th Foot. When stationed in Gibraltar in 1876 he crossed to Morocco, was introduced to the sultan Mulai Hassan, and entered his service, becoming instructor to the Moroccan

army and principal counsellor of the sultan. Adopting Moorish habits and customs, he remained loyal in his British sympathies, and in 1901 was knighted. In 1907 he was captured by Raisuli, and remained a prisoner until ransomed for £20,000 seven months later. He died at Tangier, Feb. 4, 1920.

Sir Harry Maclean, British soldier
Downey

MACLEOD, NORMAN (1812-72). Scottish divine. He was born at Campbelltown, Argyllshire, June 3, 1812. Minister at Loudoun, Argyllshire, 1838-43, Dalkeith, 1843-45, and the Barony Church, Glasgow, 1851-72, he became chaplain to Queen Victoria in Scotland in 1857. His energies were devoted largely to the furtherance of foreign missions. Editor of *Good Words*, 1860-72, he was the author of numerous sermons, travel sketches, and stories. He died June 16, 1872, in Glasgow.

MACLISE, DANIEL (1806-70). British painter. Born at Cork, Jan. 25, 1806, he early attracted attention by a pencil drawing of Sir Walter Scott in a bookshop at Cork, 1825, now in the Victoria and Albert Museum. He practised portraits, mostly in pencil, until able to proceed to London, where he entered the R.A. schools in 1828. He was elected A.R.A. 1835, and R.A. 1840. MacLise was one of six artists chosen to paint decorations for the House of Lords. Among his pictures are *Malvolio* and the Countess, 1840, and *The Play Scene in Hamlet*, 1842, both in the Tate Gallery. He died April 25, 1870.

Daniel MacLise, British painter
After E. M. Ward, R.A.

MACMAHON, MARIE EDMÉ PATRICE MAURICE (1808-93). French soldier and politician. Born at Sully in Loiret, June 13, 1808, he belonged to a family exiled from Ireland for its loyalty to James II. From 1864-70 he was governor-general of Algeria. In the Franco-Prussian War he held a high command, but was defeated at Wörth. He then led a new force to Sedan, only, however, to be taken prisoner. Released at the peace, he crushed a communist rising, and May, 1873, was elected president of the republic. Suspected of favouring a Bourbon restoration, he resigned office in 1879. He died Oct. 17, 1893.

MACMILLAN, DANIEL (1813-57). British publisher. Born at Upper Corrie, Arran, Sept. 13, 1813, he set up in business in 1843 with his brother, Alexander (1818-96), as a bookseller in London, shortly afterwards returning to Cambridge, where he had previously been employed. There, in 1843, he began publishing books of a religious and scientific nature. Success indeed him to extend his field, and in 1855 he published *Westward Ho!* followed two years later by *Tom Brown's School-days*. He died June 27, 1857.

Ian MacLaren, British author and divine

The London business of Macmillan & Co. was founded in Henrietta Street, Covent Garden, London, in 1858. The present building in St. Martin's St., W.C.2, was occupied in 1897.

William L. Mackenzie, Canadian politician

Mackerel. Specimen of the fish which forms a staple article of food
Osley Graham

McNEILL, JAMES (b. 1869). Irish politician. Born at Glenarm, Antrim, Aug. 27, 1869, in 1890 he entered the Indian civil service, in which he had a distinguished career until his retirement in 1921. In 1922 he was chosen chairman of the Dublin county council and a member of the committee appointed to draft a constitution for the Free State. When this came into being, McNeill was appointed its high commissioner in London. He held this office until 1927, when he was chosen to succeed T. M. Healy as governor-general.

James McNeill
Irish politician
Lafayette: Dublin

McNEILL, JOHN (b. 1854). British evangelist. Born July 7, 1854, at Hounston, Renfrewshire, he was ordained to the McCrex-Roxburgh Free Church, Edinburgh, in 1886, and was minister of Regent Square Presbyterian Church, London, 1889-92. He acted as an evangelist with D. L. Moody at Aberdeen, in 1892, and for 16 years conducted successful missions. He was minister of Christ Church, Westminster Bridge Road, London, in 1908, and in 1910 became minister of Free S. George's Presbyterian Church, Liverpool.

MACON. Town of France. Capital of the dept. of Saône-et-Loire, it is on the Saône, 45 m. from Lyons. It is a centre of the wine trade, and gives its name to a Burgundy wine. Pop. 17,600.

MACREADY, SIR CECIL FREDERICK NEVIL (b. 1862). British soldier and administrator. Born May 7, 1862, in 1881 he entered the Gordon Highlanders, and in 1882 served in Egypt. He went through the South African War, and was afterwards assistant adjutant-general in Cape Colony. From 1910-14 he was director of personal services at the War Office. In 1912 he was knighted, and made baronet, 1923. In August, 1914, he went to France as adjutant-general, remaining there until 1916, when he was made adjutant-general in London and a member of the army council. In 1918 he was selected as commissioner of the metropolitan police, and in 1920-22 was commander-in-chief in Ireland.

MACREADY, WILLIAM CHARLES (1793-1873). British actor. Born in London, March 3, 1793, the son of an Irish actor-manager, he first appeared in Birmingham in 1810 as Romeo. In 1816 he played at Covent Garden, and rose to front rank in 1819 and 1820 with performances which included Richard III and Hamlet. By 1837 he had become the leading English actor, and he was manager at Covent Garden, 1837-39. At the Haymarket, 1839-41, he scored great successes in the title rôle of Lytton's Richelieu, and as Alfred Evelyn in Lytton's Money. He was manager of Drury Lane, 1841-43, and died April 27, 1873.

W. G. Macready.
British actor

MACRINUS, MARCUS OPILIUS SEVERUS (164-218). Roman emperor 217-218. He instigated the murder of Caracalla, and ascended the throne. After his disastrous Parthian campaign the soldiery proclaimed Elagabalus emperor. Macrinus was defeated and killed.

MACROOM. Urban dist. of co. Cork, Irish Free State. It stands on the river Sullane, 24 m. by rly. from Cork. There is a castle, built probably in the 12th century. It has a trade in grain and dairy produce. Pop. 2,413.

MacWHIRTER, JOHN (1839-1911). Scottish painter. Born at Slatford, near Edinburgh, March 27, 1839, he entered the school of design in Edinburgh, and in 1854 exhibited

his first picture at the R.S.A. Elected A.R.S.A. in 1864, he first exhibited at the R.A. in 1865. He became A.R.A. in 1879 and R.A. in 1893. His paintings include scenes in the Scottish Highlands and the Italian Alps. He died Jan. 28, 1911.

MADAGASCAR. Island in the Indian ocean belonging to France. It lies off the E. coast of Africa, the Mozambique Channel separating it from the mainland, about 250 m. away. The area is estimated at 241,094 sq. m. Antananarivo (q.v.) is the capital and Tamatave the chief port. The island is mountainous, and there are many extinct volcanoes. The coastline is largely unbroken. The climate is tropical. Of the numerous Malagasy races the most important are the Hovas. Pop., including the Mayotte and Comoro Islands, 3,621,342.

The main occupations of the natives are cattle breeding and agriculture. The crops include rice, sugar, coffee, manioc, cocoa, cotton, tobacco, and rubber. The forests contain valuable timber. Among the minerals are gold, copper, lead, iron, graphite, mica, and phosphates. In 1928 large deposits of coal were found. There are several meat preserving factories. The chief exports are graphite, manioc, tanning bark, rice, hides, raffia fibre, and mica. There are some 430 m. of rly., and wireless stations at Antananarivo and elsewhere.

Madagascar was discovered in 1500 by a Portuguese navigator. In 1890 the protectorate of France was recognized by Great Britain. In 1896 Madagascar was declared a French colony, and by 1899 French authority was finally established.

MADDEN, SIR CHARLES EDWARD (b. 1863). British sailor. He joined the navy in 1875, in 1907 he was appointed captain of the Dreadnought and chief of the staff, Home Fleet, and in 1910-11 junior sea lord. In April, 1911, he was promoted rear-admiral, and successively commanded the first division Home Fleet, the third cruiser squadron, and the second cruiser squadron. He was appointed chief of the staff to Admiral Jellicoe, Aug. 4, 1914. In 1917 he was appointed second in command of the Grand Fleet, and in 1919-22 was commander-in-chief Atlantic and Home Fleets. Knighted in 1916, he was created a baronet in 1919 and awarded £10,000. From 1927-30 he was first sea lord of the Admiralty.

Sir Charles Madden,
British sailor
Nita Martin

MADEIRA. Group of Portuguese islands in the Atlantic off the coast of N.W. Africa. They consist of Madeira, Porto Santo, the only other permanently inhabited island, and the Desertas, three rocky islets to the S.E., and have a total area of 314 sq. m.

The principal island, Madeira, is mountainous and mild in climate, being a favourite health resort. Guavas, mangoes, coffee, oranges, lemons, bananas, and figs are grown and exported, while the wine of the island is famous. The capital and chief port is Funchal (q.v.). Madeira was discovered in the 14th cent., and was first settled in 1419. It was occupied by the British in 1807-14. Pop. 179,002.

MADELEINE, LA. Church in Paris dedicated to S. Mary Magdalene. It stands at the beginning of the Grands Boulevards, facing the Rue Royale. Modelled on the temple of Jupiter at Athens, it was completed in 1843. It is surrounded by a Corinthian colonnade, and has a Grecian façade raised high above the boulevards and approached by 28 steps. The interior contains some beautiful sculptures. La Madeleine is famous for its music.

MADELEY. Market town of Shropshire. On the Severn, 7 in. N.E. of Much Wenlock, on the G.W. and L.M.S. Rlys. it has iron-works and coal and ironstone mines. Market day, Sat. Pop. 7,398.

MADISON, JAMES (1751-1836). President of the U.S.A. Born at Port Conway, Virginia, March 16, 1751, he was delegate to the Revolutionary Convention, 1776; the Continental Congress, 1780-83; and the Philadelphia Convention of 1787, summoned to draw up a constitution. Madison was chiefly responsible for the Virginia plan, which with William Paterson's New Jersey plan, and Charles Pinckney's plan, formed the basis of the final compromise, and for his services became known as the Father of the constitution. Later, with two collaborators, he wrote a series of essays published in book form as The Federalist. Democratic president in 1808, and re-elected in 1812, he died at Montpelier, Virginia, June 28, 1836.

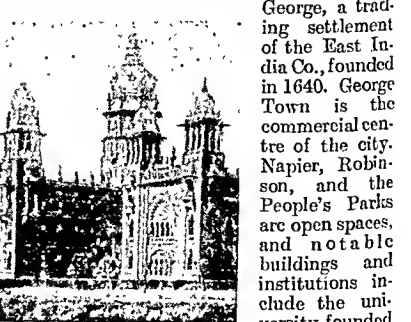

MADONNA (Ital. my lady). Word specifically applied to any representation of the Virgin in Christian art. The Madonna was the dominating theme in painting until the end of the 17th century, and Italian artists excelled in the treatment of this subject, the Madonnas of Raphael, Leonardo da Vinci, Bernardino Luini, Titian, Botticelli, and Giorgione being famous. Murillo's Spanish Madonnas rival the Italian in gracious beauty.

MADRAS. City of India, capital of the Madras Presidency. It is situated on the Coromandel coast, and its artificial harbour has helped to make it the chief port of the Deccan. The city grew up round Fort St. George, a trading settlement of the East India Co., founded in 1640. George Town is the commercial centre of the city. Napier, Robinson, and the People's Parks are open spaces, and notable buildings and institutions include the university, founded in 1857, the general post office, and the observatory, which sets the time for India and Ceylon. Madras has railway communication with Calcutta,

up a constitution. Madison was chiefly responsible for the Virginia plan, which with William Paterson's New Jersey plan, and Charles Pinckney's plan, formed the basis of the final compromise, and for his services became known as the Father of the constitution. Later, with two collaborators, he wrote a series of essays published in book form as The Federalist. Democratic president in 1808, and re-elected in 1812, he died at Montpelier, Virginia, June 28, 1836.

James Madison,
American president

Madras. Law Courts, built in 1892 in Hindu-Saracenic style

Bombay, Calicut, and Tuticorin. Its export list includes cotton, hides, indigo, tea, and other natural products. Pop. 526,911.

PRESIDENCY OF MADRAS. This section of British India is a province which occupies the major portion of the Deccan peninsula, and

Madras. Gateway of the Siva Temple at Conjeeveram, Madras Presidency
F. Deaville Walker

comprises part of the Malabar coast on the W., the whole of the Coromandel coast on the E., and a considerable area in the plateau S. of Hyderabad and Mysore. Madras city is the seat of the government. Ootacamund is the summer capital, and other towns include Calicut, Coimbatore, Madura, and Trichinopoly. The Madras and S. Mah-ratta Rly. and the S. Indian Rly. connect the capital with the large centres of population in and beyond the province. The area is 142,260 sq. m. Pop. 42,318,985

MADRID. Capital of Spain. It stands at an elevation of 2,400 ft., surrounded by an extensive, arid plain, 41 m. N.N.E. of Toledo. The Manzanares river, waterless during summer, is spanned by several bridges. Madrid is the centre of the country's railway system. It has a very variable climate, being exposed to icy winds and scorching sun.

Almost surrounded by public parks and gardens, Madrid has many wide streets, large squares, avenues, and promenades. The chief square, Puerta del Sol, is in the centre of the city and is the focus of activity. From it radiate several imposing streets, one of the finest being the Calle de Alcalá, which traverses the magnificent boulevard, del Prado, flanked by handsome squares, public buildings, including the Prado Museum, the famous gallery of painting and sculpture, and by botanical and other gardens. The chief park, the Retiro, lies to the E. of this district of museums, picture galleries, academies, libraries, government offices, banks, theatres, etc. The royal palace, a massive six-storied building, faces the Plaza de Armas, with the Armoury, a world-renowned collection of arms and armour. Another important street, running W. from the Puerta del Sol, is the Calle Mayor. The National Museum, in the Paseo de Recoletos, contains one of the most important libraries in Europe. The university, transferred from Alcalá de Henares to Madrid, 1836-37, has a valuable collection of books and manuscripts. Pop. 816,928.

MADRIGAL. Musical composition with secular words, in contrapuntal style. It is used for voices in three or more parts, without separate instrumental accompaniment. In England the madrigal reached its climax in the Elizabethan and early Stuart periods, and was associated with the names of Byrd, Morley, Weelkes, Este, Ford, Wilbye, Dowland, Benet, Hilton, and Orlando Gibbons.

MADURA. Island of the Dutch East Indies. It lies to the N.E. of Java, being separated from it by the Strait of Madura.

The Madurese are Malay fishers and cattle rearers. Area, 1,700 sq. m. Pop. 1,743,818.

MADURA. District and town of India, in Madras Presidency. The district is situated in the middle of the S. portion of the Deccan: to the W. are the Western Ghats. It is drained by the Vaigai and Periyar rivers. The chief crops are cereals, rice, and cotton. Its area is 4,916 sq. m.

The town lies on the Vaigai. The capital of the ancient Pandyan kingdom, it is an historic town and religious centre. The great temple of Sundareswara, with a hall of a thousand pillars, is the chief building. Pop. 138,894. See India; Madras.

Madura. Great temple of Siva: it contains nine gopuras or pyramids, each profusely carved

MAEANDER (mod. Mender). In ancient geography, river of Asia Minor. Rising near Celacnae (Dineir) in Phrygia, it flows W. with a sinuous course that has become proverbial, and after being joined by the Lycus (Churuk Su), traverses Caria, and discharges into the Icarian Sea. Meander is used literally and figuratively for a winding course.

MAECENAS, GAIUS CILNIUS (d. 8 B.C.). Roman patron of letters. Born between 73 and 63 B.C., of an old Etruscan family, he was a man of great wealth and high culture, and became the intimate friend and adviser of the emperor Augustus. His name has become a popular synonym for a generous patron of art and literature.

MAENAD (Gr. mad woman). In Greek mythology, one of the alternative names for the Bacchantes, or frenzied female companions of the god Bacchus or Dionysus.

MAES, NICHOLAS (1632-93). A Dutch painter. Born at Dordrecht, he was a pupil of Rembrandt. He painted life-size figure subjects, such as The Card Players in the National Gallery, and then turned his attention to smaller genre and portraits. From

Madrid. 1. Calle de Alcalá, with the church of Calatrava. 2. Puerta del Sol, the chief square and centre of the city. 3. Royal Palace

1655-67 he produced his best work in this direction, such as The Dutch Housewife, The Idle Servant, and A Man's Portrait, all of these being in the National Gallery, London. He died at Amsterdam.

MAESTEG. Urban dist. of Glamorgan-shire, Wales. It stands on the Llyfnu river, 8 m. from Bridgend, and is served by the G.W. Rly. The chief industries are iron works and coal mines. It owes its existence to the development of the coalfields. Pop. 29,929.

MAESTRICHT OR **MAASTRICHT.** Town of the Netherlands. It lies on the Meuse, close to the Belgian frontier, 19 m. by rly. S.S.W. of Hasselt. The rly. station is in the suburb of Wyk, on the opposite bank of the river. The church of S. Servatius is said to be a 6th century foundation. The 11th century church of Our Lady has been extensively restored. The Stadhuis, completed in 1664, with a clock-tower, stands in the Groote Markt. Maestricht was the site of a Roman crossing of the Meuse. It has a considerable trade along the river, and some manufactures. Pop. 59,825.

MAESTRICHTIAN GROUP. Group of rocks belonging to the Upper Cretaceous system, occurring typically at Maestricht. Consisting of soft yellowish limestone, the rocks contain numerous remains of corals and hryzoa.

MAETERLINCK, MAURICE (h. 1862). Belgian poet, dramatist, and mystic. He was born at Ghent, Aug. 29, 1862, studied law and practised it for a time in his native city. In 1889 he published the first of his many works, a volume of verse entitled Serres Chaudes (Hothouses). Of his plays the most famous is L'Oiseau Bleu, popular in Britain as the Blue Bird. He produced translations from Ford, Emerson, Novalis, and J. Van Ruysbroeck, and many volumes of prose, including: Le Trésor des Humbles, 1896; La Sagesse et la Destinée, 1898; La Vie des Achilles, 1901; Le Double Jardin, 1904; L'Intelligence des Fleurs, 1907; La Mort, 1913; and La Vie des Termittes, 1926. Most of his more important works have been translated into English. In 1911 Maeterlinck was awarded the Nobel prize for literature. Maeterlinck's plays depend rather on mood than on movement, suggestion of the event rather than its presentation. They are attempts to clothe mystical conceptions in concrete form.

Maurice Maeterlinck
Belgian poet
Elliott & Fry

MAFERING. Town in British Bechuanaland. It is 870 m. from Cape Town, and here are the headquarters of the Bechuanaland administration. It was the starting point of the Jameson Raid, 1896. Pop. 2,297. A mile away is the native town on the Molopo river. Mafeking was besieged during the South African War by Cronje at the head of a large force, and was defended by Baden-Powell from Oct. 13, 1899, to May 17, 1900, when the town was relieved by Col. Mahon and Col. Plumer, who had joined forces. See Baden-Powell, Baron; South African War.

MAFIA. Name of a Sicilian secret society. Its origins are traced to the ill-disciplined forces of gendarmerie instituted in Sicily by Ferdinand IV, and in general objects the body was similar to the Camorra. When the society was an organized whole, its members, known as Mafiosi, were sworn to defy all established forms of justice. Reaching its highest pitch about 1860-70, the Mafia carried on robbery, smuggling, and murder; strongest in and around Palermo, it showed itself also in Italy, and attempts at suppression were made in 1874-75. The society was broken up in 1928 by Mussolini and Cesare Mori, prefect of Palermo. See Camorra; Vendetta.

MAGADI. Lake, mainly in Tanganyika Territory, but with its N. shore in Kenya Colony. It contains enormous deposits of carbonate of soda. See Alkali

MAGDALA OR MAKDALA. Fortress of Abyssinia. It stands 120 m. from Gondar and 250 from Jibuti on the Gulf of Aden, on a plateau over 9,000 ft. high. This plateau was fortified by the emperor Theodore. In 1860, having seized the British consul and other foreigners, he carried them off to Magdala and refused to release them. An expedition was fitted out under Sir Robert Napier, and on April 13, 1868, the fortress was taken and utterly destroyed. Napier was created Lord Napier of Magdala. The fortress was afterwards rebuilt.

MAGDALEN COLLEGE. College of Oxford University. It was founded in 1458 by William of Waynflete, bishop of Winchester, and was dedicated to S. Mary Magdalen. It stands at the E. end of the High Street, and has a deer park and extensive grounds along the Cherwell, including Addison's Walk. The range of buildings includes the tower, on the top of which a Latin hymn is sung at sunrise on May Day; the chapel is famous for the beauty of the choral services. There is a school for boys on the same foundation.

Magdalen College, Oxford, and the bridge over the Cherwell

Another Magdalen College School, an offshoot of this, is at Brackley. Pron. Maudlen. See Oxford.

Magdalene College, Cambridge, was founded in 1542. It is famous for its association with Pepys, and has the MS. of his famous diary.

MAGDALENIAN. Late period of the upper palaeolithic age in Europe. In it the climate was cold, the reindeer, bison, and horse flourished, and the mammoth became extinct. The Crömagnon race, ousting the Solutrian, became modified, and prehistoric art reached its zenith. Named from La Madeleine, Dordogne, the 'stations' extend from Kent's cavern to Russia. See Azilian.

MAGDEBURG. City of Germany, capital of Prussian Saxony. A centre of trade and industry and an important rly. junction, it lies 90 m. S.W. of Berlin on the left bank of the Elbe, here flowing in three streams and forming two islands, one of which contains the citadel. Magdeburg is one of the chief seats of the sugar-refining industry, to supply which much beet is grown in the district. The town has great iron foundries and engineering establishments. Shipbuilding is also carried on. The most interesting building is the cathedral built in the 13th century in the Romanesque and Early Gothic styles. In it are the tombs

of Otto I and his wife, Edith of England, and a monument to Archbishop Ernest. It has two fine western towers. Pop. 297,020.

MAGDEBURG HEMISPHERES. Device invented by Otto von Guericke of Magdeburg, about 1650, for illustrating atmospheric pressure. It comprises a pair of hemispherical metal cups, having edges which fit accurately one in the other. To one is fitted a cock. The edges are coated with grease and pressed together, and after exhausting the air from the interior of the hemispheres they can be parted only with difficulty.

MAGELLAN, FERDINAND (c. 1480-1521). Portuguese navigator, whose real name was Fernao do Magalhães. In 1504 he went to India with Dom Francisco d'Almeida, the first viceroy. After expeditions to Malacca, Java, and the Spice Islands, he returned to Portugal in 1512, and served in a campaign in Morocco, in which he was lamed for life. He entered the Spanish service in 1517, and two years later embarked with a fleet of five vessels to find a western route to the Spice Islands. In October, 1520, he discovered the strait which bears his name. The first to enter the Pacific, which he named, he reached the Ladrões, March 6, 1521, and visited the Philippine Islands, but in a fray with the natives of Matan Magellan was killed, April 27, 1521. After his death his fleet doubled the Cape of Good Hope and returned to Seville, having thus completed the first voyage round the world.

Ferdinand Magellan, Portuguese seaman

The Strait of Magellan is a passage connecting the Atlantic with the Pacific, near the S. extremity of S. America. Its extreme length is 365 m., while its width varies from 2½ m. to 17 m.

MAGERSFONTEIN, BATTLE OF. Fought between the British and the Boers, Dec. 11, 1899. A British force about 10,000 strong, under Lord Methuen, was advancing to the relief of Kimberley. In front was a semicircle of hills held by the Boers. On Dec. 10 the force moved out to the attack. The men were moving in close order, when the Boers suddenly opened fire, and it was impossible to secure a general advance. At nightfall the Boer guns began to play again, and Lord Methuen withdrew his army to the Modder. The British lost nearly 1,000 men. See South African War.

MAGGIORE. Lake of N. Italy and S. Switzerland. The ancient Lacus Verbanus, it is 38 m. in length, and from ½ m. to 5½ m. in breadth; its maximum depth is 1,200 ft., and its area is 82 sq. m., while its surface alt. is 640 ft. It is fed by the Maggia, the Tosa (Toce), and the Ticino (Tessin), which traverses it. Lofty mountains enclose the N. part, while to the S. the hills, covered with vineyards, slope gradually to the plain. Lake Maggiore is noted for its beautiful scenery. Opposite Pallanza are the Borromean Islands (q.v.).

MAGI. Caste of learned priests in ancient Persia. An aboriginal Median tribe, they became predominant through their development of central Asian shamanism, practising exposure of the dead and next-of-kin marriage.

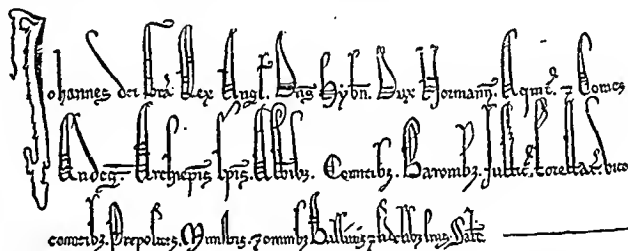

After their Aryan subjugation they acquired control of the Zoroastrian worship, contributing thereto its dualistic principle. They maintained their supremacy throughout the Sassanian empire, ultimately declining into unhonoured jugglers, whence the English word magic. The Magi of the Nativity story (Matt. 2) are popularly associated with much unhistoric tradition.

MAGIC. Practice of attempting or pretending to control events by non-rational processes. It is based on a belief that man may secure the mastery of nature and the supernatural by means of appropriate rites, manual or oral.

When magic is countenanced by the community at large, its professed exponents are held in esteem so long as they are thought to be working for the general good. But there often arises a suspicion, if not a certainty, that magical powers are being exercised for private ends, and this aspect of them leads to their being regarded as antisocial and condemned as illicit. Hence the distinction between white and black magic, the one beneficent, the other baleful.

At the beginning of our era magical arts came into conflict with Christian teaching. They comprised a farrago of beliefs affected by neoplatonism and other philosophical speculations. Introduced into W. Europe through Byzantine and Saracenic channels, they developed new methods during the Middle Ages, and made use of a mystic apparatus of wands, rings, mirrors, diagrams, symbols, and meaningless phrases, deemed by their exponents to be endowed with a potency which attained their ends. See Divination; Fetishism; Taboo; Voodoo; Witchcraft.

MAGIC LANTERN. Optical instrument for the projection of pictures, etc., on to screen. The body is of box form, of wood or metal, or wood lined with asbestos and metal to protect the woodwork from the intense heat of the electric arc or limelight, or other illuminant used. The optical part of the instrument consists of two sets of lenses, the condenser and the objective.

Magna Carta. Facsimiles of three lines of the preamble. See article, p. 911

MAGISTRATE (Lat. magistratus). Official of Roman origin, mainly concerned with administering the law. The order of magisterial rank was dictator, consul, praetor, master of horse, censor, aedile, quaestor.

In modern usage the word magistrate is applied to a large number of people, who are publicly vested with authority to administer the law. Justices of the peace in England are chiefly unpaid magistrates appointed by the crown on the advice of the lord chancellor, and are divided into county magistrates and borough magistrates. Paid magistrates are known as stipendiary magistrates, and are appointed on the petition of the council of a municipal borough to the home secretary. A stipendiary magistrate must usually be a barrister of seven years' standing, and can act alone, whereas two unpaid justices at least must act. In London all the police magistrates are stipendiaries, and the lord mayor and any

Magdeburg, Germany. View across the Elbe from the citadel, looking towards the twin-towered cathedral

alderman, sitting at the Mansion House or Guildhall, have all the powers of a stipendiary See Justice of the Peace

MAGNA CARTA (Lat. great charter). Document signed by King John of England in 1215, to secure the nation's liberties. John had overridden or sought to override all law, and in Jan., 1215, the barons demanded the confirmation of the old charter issued by Henry I, promising to observe "the good laws of Edward the Confessor." The barons were largely guided by the archbishop of Canterbury, Stephen Langton, and the king was compelled to set his seal to the Great Charter on June 15, 1215, at Runnymede. See illus. p. 910.

MAGNESIA. Oxide of magnesium, MgO . The name is also applied to the carbonate known commercially as magnesia alba. The oxide is a white, light, amorphous powder used in the manufacture of firebricks, crucibles, etc. It is also used in medicine.

MAGNESITE. Mineral which consists of magnesium carbonate. Closely resembling calcite, it has a vitreous lustre, and varies in colour from white or light yellow to brown. It is found in veins in magnesium rocks in Moravia, Styria, Silesia, Norway, and the U.S.A. Magnesite is used in the preparation of magnesia, Epsom salts, in paint and paper manufacture, and for firebricks.

MAGNESIUM. Metallic element, symbol Mg, atomic weight 24.32, atomic number 12, specific gravity 1.75. It is a white metal which burns with an intensely white light when a ribbon or wire of it is ignited in the air. On a large scale magnesium is obtained by heating a mixture of magnesium and sodium chlorides with metallic sodium in an iron crucible. The metal is hard, malleable, and ductile, and is used in photography in ribbon or powder form on account of its brilliant white light. It is also used in fireworks and in signalling. On burning in air magnesium forms magnesium oxide, known as magnesia (q.v.).

Magnesium carbonate occurs native as magnesite, or combined with calcium carbonate as dolomite. Magnesium sulphate or Epsom salts occurs native as kieserite and epsomite, and in many mineral springs. Citrate of magnesia is a mixture of sodium bicarbonate, tartaric acid, Epsom salts, and sugar. Magnesium forms the chief constituent of many silicates, e.g. as augite hornblende, olivine, meerschauum.

MAGNET. Any substance which has the power of attracting iron, steel, nickel, and certain other substances. A magnet may be natural, as a lodestone, or artificial, and either permanently or temporarily magnetic. The permanent magnet is a bar of hard steel or horseshoe shape magnetised by contact with another permanent magnet or by being placed inside a coil through which a strong electric current is passed. Electro-magnets are made of very pure soft iron or mild steel, and are excited by current flowing through a coil or coils of insulated copper wire wound on them. The attractive force of a magnet depends on the amount of current

Magnet attached to a crane and used for lifting scrap iron
Courtesy of General Electric Co., Ltd.

flowing through its coils, multiplied by the number of turns in the coils

In polarised magnets, which are used in telegraphy and telephony, the poles of a permanent magnet are provided with coils similar to those of an ordinary electro-magnet. Current passed through the coils reinforces or acts against the permanent magnetism, according to the particular direction in which it circulates See Telephone.

MAGNETISM.

Science of magnets and magnetic forces. The earliest magnets known were natural magnets, pieces of a certain iron ore called lodestone, found, among other places, at Magnesia, in Thessaly, whence the name. These possessed the property of attracting small pieces of iron, and when freely suspended they pointed N. and S. In a straight bar magnet the magnetic power of attraction is concentrated in the two ends, known as poles, and the centre of the magnet possesses no such power. If a bar magnet is broken in two, each part is a magnet with two poles. If a light steel strip is magnetised and suspended on a pivot so that it can turn about its centre in a horizontal plane, it will point approximately N. and S., and is, in fact, a crude form of the mariner's compass. If two such needles are placed close together, it will be found that the two N. poles repel each other, and that the two S. poles likewise repel each other, but that the N. pole of either magnet attracts the S. of the other. The interposition of a screen of wood, paper, etc. has no appreciable effect on the magnetic force.

Magnetism. Diagram showing the magnetic lines of force round the N. and S. poles of a bar magnet

If a magnet is dipped into iron filings, they will cling in masses round the poles. Each tiny piece of iron becomes a magnet, and all the S. poles of the filings are turned towards the N. pole of the magnet and vice versa. If a sheet of stiff paper is laid over a magnet and covered with iron filings, the filings arrange themselves in well-marked curved lines, which spread out from the poles in all directions. These are the "lines of force." The sphere of influence of a magnet is called a magnetic field. See Dynamo; Electricity; Permeability; Reluctance.

TERRESTRIAL MAGNETISM. Study of the earth's magnetic properties. The fact that the earth exerts some power on a magnet and causes it to point approximately N. and S. has been known from the earliest times. The magnetic poles do not coincide with the geographical poles, and their positions are undergoing steady as well as fluctuating changes. The magnetic intensity of the earth varies not only owing to sun-spot influence, but in a number of other ways. There is a diurnal variation, greater in summer than in winter, and it is greater than usual during a period of sun-spot activity, and also greater during hours of daylight than at night. There is also a seasonal change, local changes probably due to hidden masses of magnetic ores, as well as a small change due to the moon. One of the most remarkable evidences of terrestrial magnetism is that afforded by the magnetic storms which upset telegraphic transmission.

MAGNETITE. Important ore of iron. It is an oxide of the metal, its composition being, when pure, 72.4 parts of iron and 27.6 oxygen, though it is often contaminated with sulphur and phosphorus, and frequently contains silicon and titanium. In colour it is iron black, has a metallic lustre, and is strongly attracted by the magnet. Small pieces are often found to

Magneto. Production of high-tension currents for sparking plugs. A, horseshoe magnet; B, pole pieces; D, armature; E, contact breaker; F, condenser; G, earth switch; H, slip ring; K, carbon brush; L, M, platinum points; N, contact breaker cover

have polarity. Masses of magnetite having polarity constituted the lodestone of the ancients. See Iron.

MAGNETO. In full, magneto-electric machine. Machine for producing an electric spark. It is usually employed to ignite the charges in the cylinders of internal combustion engines. The magneto depends upon the principles that when a coil of wire is rotated between the poles of a magnet an electric current passes through the wire, and that if the current in this wire is suddenly broken, a current is induced in a second wire in the neighbourhood. In a modern magneto the two wires, primary and secondary as they are called, are wound on a soft iron core, which increases the induced current, and rotated between the poles of a horseshoe magnet. By a contact breaker, the current is interrupted at regular intervals in the primary wire, inducing a current in the secondary wire, which is connected to a sparking plug where the current sparks or arcs across the small gap between the electrodes. In the inductor type of magneto the armature is stationary, while the magnetic field revolves. See Dynamo; Electricity.

MAGNIFICAT (Lat. doth magnify) First word of the Latin version, and so the title of a canticle or hymn. "My soul doth magnify the Lord," in the Book of Common Prayer. It is the Song of the Blessed Virgin Mary in S. Luke 1, 46-55.

MAGNOLIA. Genus of hardy and half-hardy flowering trees and shrubs of the order Magnoliaceae. Some are natives of subtropical regions of Asia, other species being found in the U.S.A., whence they were introduced in 1688. *Magnolia virginiana* of N. America is the laurel magnolia or heaver tree. Among the two dozen species are varieties which range in height from 2 ft. to 80 ft. The large tulip-shaped flowers are of every shade from white, through pink, to purple, and there are also kinds with yellow flowers. The perfume is exquisite. The hardy kinds prefer a shady spot in a deep, rich, loamy soil.

Magnolia. Flower and leaves

MAGPIE. Genus of birds belonging to the crow family. The plumage of the common magpie is velvet-black, with green and blue reflections, with the exception of the scapulars and underparts, which are white. The tail is long and graduated, and the feet and beak

are black. It was formerly very common in Great Britain, but its numbers have been much reduced by the persecution of game-keepers. It is a very animated bird, and feeds mainly on worms, snails, and insects. The nest of the magpie is a very large structure of sticks and mud, domed above, with a hole at the side for entrance. See Crow; Jay.

MAGPIE MOTH (*Ab-raxas grossulariata*). Species of moth which destroys the leaves of bush fruit-trees. The caterpillars are pale in colour, with black spots, and appear in early summer. They may be destroyed by the employment of a mixture of lime and soot, after a heavy rain has fallen, when the foliage is wet. A liberal spraying of soap and water through a syringe is a preventive, if not a remedy. The moth is a little over one inch in length, pale buff in colour, with black spots.

MAGYAR. Dominant people of the Hungarian or Magyarian kingdom. Returned in 1910 as 10,050,000, or one-half the population of the old Hungarian kingdom, they form the bulk of the population of the new state, estimated at 7,600,000. Pron. Maw-jyar.

Magyar music, as it is called, is the national music of Hungary. It derives its most striking characteristics from Oriental and Gypsy sources. The chief Magyar dance forms include the Csárdás, with slow and quick movements alternated; the Kör-tánc or society dance; and the Kanasztánc, a dance of the peasantry.

The term *Magyaria* is used to designate the heart of the former Hungarian kingdom, where the bulk of the people were Magyars. Since the dismemberment of Austria-Hungary most of *Magyaria* is contained within the new Hungary. See Hungary.

MAHÁBALIPUR. Temple site of India, in Madras, commonly known as the Seven Pagodas. It is on the coast about 30 m. S. of Madras City. According to tradition, five of these reputed temples are beneath the waves; the two on the shore are Vishnu and Saiva shrines. They date presumably from the 7th century, and are said to be due to Mahābali, a ruler who had them made for the accommodation of the gods who visited him.

MAHAFFY, SIR JOHN PENTLAND (1839-1919). Irish scholar. Born in Switzerland, Feb. 26, 1839, he became a fellow of Trinity College, Dublin, in 1864. He filled a succession of offices in the university, and from 1869-1900 he was professor of ancient history. Senior fellow in 1899, he was made vice-provost in 1913 and provost in 1914. In 1864 he was ordained. Mahaffy, who was knighted in 1918, was president of the Royal Irish Academy. He was also a cricketer, a marksman, and a musician. His writings are chiefly, but not solely, on ancient history, as *Greek Life and Thought*, 1887. He died April 30, 1919.

MAHAN, ALFRED THAYER (1840-1914). American naval historian. He was born at West Point, New York, graduated at the naval academy, and served as a lieutenant in the navy. He was engaged in blockade duty during the Civil War. In 1883 he was appointed professor of naval history at the Naval Academy, Annapolis, Md. He died at New York, N. Y., Jan. 10, 1914.

MAGDEBURG, GERMANY. View across the Elbe from the citadel, looking towards the twin-towered cathedral.

Magpie. Specimen of the common British magpie

active service in 1896. He died Dec. 1, 1914.

In 1890 he published *The Influence of Sea Power on History, 1660-1783*, which made him famous, and followed this with *The Influence of Sea Power upon the French Revolution and Empire, 1892*. In 1897 appeared his biographical study, *Nelson, the Embodiment of the Sea Power of Great Britain*; and in 1911 his *Naval Strategy*.

MAHARAJA. Indian title meaning great king. It is applied to certain powerful rajahs and other persons of high rank. The high priests of the Vallabhacharis, a Hindu sect, call themselves maharajas. The feminine is maharani. See Raja.

MAHATMA. In theosophy, name applied to certain men of saintly lives supposed to have acquired supernatural powers through purity of soul and devotion to mankind. One of the powers ascribed to them was that of projecting their astral bodies through space.

MAHDI. Name of the Messiah expected by the Mohammedans. The mahdi must be a descendant of the prophet; he must be proclaimed mahdi against his will at Mecca at a time when there is strife after the death of a caliph; and his advent shall coincide with that of Anti-Christ, after whom Jesus will descend in Syria and the reign of righteousness be inaugurated. There have been many pretenders to the title from the time of the first generation after Mahomet. The most notable of recent mahdis is Mahomed Ahmed (1848-85). During 1880-84 he proclaimed a mission to free Egypt from foreign yoke, and acquired an ascendancy over the Sudanese tribes. This led to Gordon's expedition to Khartoum in 1884, the year in which the mahdi died. See Gordon, C. G.

MAH-JONGG. Chinese game played with dominoes made of ivory and bamboo. There are usually four players at a table, each acting for himself. The dominoes, which number 136, are arranged in three suits, and there are four sets of each. One consists of three honours, red, white, and green; another represents the four winds, north, south, east, and west. The third consists of three sets of nine dominoes named characters, circles, and bamboos. The object of each player is to obtain the highest scoring hand, which is called mah-jongg.

Mahabalipur India. Monolithic Rath or temple carved in granite

belonging properly to *Swietenia mahagoni*. This is distinguished as Spanish mahogany, a tall tree of the order *Meliaceae*, native of Central America and the W. Indies. It has a massive buttressed trunk, glossy leaves divided into paired oval leaflets, and small reddish-yellow flowers in clusters. The timber is used for furniture, cabinet-making, etc. Naturally, the wood is brownish-pink in colour, the red of new furniture being attained by staining.

Alfred T. Mahan, American sailor

MAHOGANY. Term loosely applied to the timber of various trees, but belonging properly to *Swietenia mahagoni*. This is distinguished as Spanish mahogany, a tall tree of the order *Meliaceae*, native of Central America and the W. Indies. It has a massive buttressed trunk, glossy leaves divided into paired oval leaflets, and small reddish-yellow flowers in clusters. The timber is used for furniture, cabinet-making, etc. Naturally, the wood is brownish-pink in colour, the red of new furniture being attained by staining. After many years in the manufactured state it acquires a fine brown tint. Among the spurious mahoganies are *Ratonia apetala* (bastard mahogany) of tropical America; *Khaya*

senegalensis (African or Senegal M.) of W. Africa; *Soyimida febrifuga* (E. Indian M. or Redwood) of S. India; and *Cedrela toona* (Indian M. and cedarwood), also of S. India.

MAHOMEDAN ART AND ARCHITECTURE. Term embracing the whole material outcome of the Islamic civilization. In each of the great regions which passed under Mahomedan domination local forms were utilised, but all bear the unifying impress due to the solidarity of Islam. There are five main schools of art: Syro-Egyptian, Moorish, Persian, Ottoman, and Indian.

The decorative art of Islam rests ultimately upon its architectural achievement. The history of mosque architecture is traceable from its beginnings in those of Amr and Ibn Tulun at Cairo, and those at Damascus, Kairwan, and Cordova, to the constructions of Kaik Bey at Cairo, and the greater mosques of Ispahan and Samarkand, Konia and Brusa, Istanbul, and Mogul India. Among the distinctive elements of Moslem architecture are the arching, which may be pointed, stilted and round, horseshoe, scalloped, or clover-leafed; slender shafting, suggestive of the ancestral tent-posts; open trelliswork, cupolas, and stalactite pendants.

Stone decoration relied mostly upon the treatment of flat surfaces with polygonal and arabesque design, or inscriptions of Koranic texts. Stone filigree work reached its zenith in India. When secular buildings ignored the Koranic prohibition of images, as in the lion-fountain of the Alhambra, the result lacked the spontaneity of untrammelled sculpture. Where stone was lacking stucco lent itself readily to Moslem decoration, which reached remarkable levels in the Alcazar and the Alhambra. Marble mosaic, borrowed from Byzantine craftsmen, was similarly moslemised.

The 12th century witnessed an astonishing outburst of decorative art as applied to metal. Both in Mesopotamia and in Persia methods of inlaying metal on metal, at first silver on bronze or iron, were skillfully practised. Damascus was especially addicted to gold inlay. Through the craftsmen attracted to Venice, Saracenic metalwork exerted definite influences upon the W. Simultaneous movements eastward led to such Indian developments as *Biddery waro* (q.v.).

Nomadic art was at its best in the departments of weaving and leatherwork. Plain tapestry weaving became associated with knotwork in wool and silk. The art became specifically Moslem when utilised for the coverings of mosque floors. The individual "prayer-rug," with its mihrab-niche, is well known. The genetic relationship of Mahomedan pottery to weaving is best seen in the glazed tiles which became another of Islam's contributions to mural decoration. They reached their zenith in the tiled walls of Istanbul, where they simulated silk carpet designs with remarkable fidelity. Saracenic pottery was also important for ritual and domestic utensils, in part because it gave to W. Christendom its medieval and Renaissance ceramic industries. Of equal interest are enamelled glass, and carved rock-crystal vessels from Egypt. In the domain of painting, beautiful work was achieved in the illumination of copies of the Koran for the greater mosques. See Agra; Alcazar; Alhambra; Arabesque; Byzantine Art; Cairo; Damascening; Damascus; Kum; consult also *A History of Fine Art in India and Ceylon*, V. A. Smith, 1911; *Moslem Architecture*, G. T. Rivoira, Eng. trans. G. M. Rushforth, 1918.

MAHOMEDANISM. Religion founded by Mahomet. When Mahomet arrived at Medina in 622 he hoped to win over the Jewish colonists of the neighbourhood, but these expectations were disappointed, with the result that the whole practice of Islam is based at once on imitation of and antipathy to the

Jews Hebrew ritual consisted of prayers, alms, fasting, the Sabbath, and pilgrimage. All these Mahomet took over with some modifications. The five daily prayers are not enjoined in the Korán, but they were universally observed almost from the first. In contrast to the Jewish trumpets and the Christian bell, the Moslems were called to prayer by the voice of the muezzin (crier).

In place of the Jewish fast of the day of atonement, the Moslems were enjoined to fast during the ninth month of the year (Ramadán), from sunrise to sunset. This fast is strictly observed, drinking water and even smoking being forbidden. For the Sabbath Mahomet substituted Friday, on which day there is a sermon in all the principal mosques at the midday service, in addition to the usual prayers. Otherwise the day does not differ from another, and work goes on as usual. The great pilgrimage to Mecca takes place in the twelfth month of the year, but, as was the case with the Passover among the Jews, may, if necessary, be made at another time. Moslems prevented from making the pilgrimage are expected to send a substitute or give alms, and on the same day on which the sacrifices are offered near Mecca sheep are slaughtered in all the large towns of the Moslem world.

Mahomet was the first ruler who united the warring clans of Arabia into one nation. Within ten years of his death the Arabs had subdued Persia, Syria, and Egypt. Within a hundred years their empire extended from Spain to China.

Under the Ommiad (Ammiad or Umoiyad) dynasty, whose capital was Damascus, 660-750, Mahomedanism decayed as a religion but grew as a power, until it had spread from the Atlantic to the borders of China. The court, however, with the single exception of Omar II, was quite irreligious. Its members were surrounded by Christians, drank wine, and otherwise made themselves abhorred by the pious, until they were swept away by the Abbassides, 750-1258. By the change of dynasty Mahomedanism became heir to the learning and speculation, as well as to the fanaticism, of Persia.

The number of Mahomedans in the world is estimated at 210,000,000, of whom 160,000,000 are in Asia. Over 60,000,000 of these are natives of India. See Arabia; Caliphate; Koran, etc.

MAHOMET (c. 570-632). Prophet of Islám and founder of the religion that bears his name. Born in Mecca about 570, he belonged to a family of position there. Wealth came to him through his marriage with a rich widow, and he was evidently a person of some importance. When he was forty years old he believed he had received by revelation a mission to reform the world. He gathered a few adherents and began to attack the idolatrous religion of the Arabs. This made him unpopular, and in 622 he fled to Medina. There he was made welcome, and from that time his doctrines made headway. His followers increased in number and in power, and in 630 he returned to Mecca as a conqueror, and was recognized as prophet by all Arabia. He died in 632.

The secret of Mahomet's success lay in his urbanity. He became all things to all men, and combated them with their own weapons. He never refused an invitation, never departed from the severe simplicity of the Arab life, and shared in all the dangers and hardships of his followers. His name is also spelled Mohammed.

The best source for the life of Mahomet would be the Korán, composed by himself, were not its language and allusions so cryptic as to be unintelligible without the aid of the later biographies. Next to the Korán comes the contemporary poetry of his adherents, especially his court poet, Hassan ibn Thabit, and one of his enemies.

MAIDA VALE. London thoroughfare and district. The thoroughfare is that part of Edgware Road which runs from the Regent's Canal to Kilburn. The east side is in the bor of Marylebone, the west in that of Paddington.

Maiden. Blade of the Scottish instrument of execution

The name commemorates Maida, a town in Italy where, on July 3, 1806, the British under Sir John Stuart defeated the French.

MAIDEN. Instrument of execution formerly used in Scotland, and occasionally in England. In design not unlike the guillotine, it was first used in 1561. The specimen of the blade which is here illustrated is preserved in the museum of the Society of Antiquaries, situated in Edinburgh. See Guillotine.

MAIDEN CASTLE. Prehistoric earthwork near Dorchester, Dorset. Begun in neolithic times, the whole hill, 432 ft. high, and embracing 160 acres, was enclosed in the Bronze Age. There are three ramparts on the N. and four on the S. The entrance is guarded by trenches for enfilade defence.

MAIDENHAIR FERN (*Adiantum*). Herb of the order Polypodiaceae. Natives of tropical and temperate climates, they have delicate, much divided fronds. *Adiantum capillus-veneris*, the common maidenhair fern, is a native of Britain, but now rare, and *A. pedatum* is common in the U.S.A.

MAIDENHAIR TREE (*Ginkgo biloba*). Tall tree of the natural order Ginkgoaceae. A native of China, it has broad, fan-shaped leaves, cloven at the summit and with notched margins. The male flowers, borne on a separate tree from that which bears the female flowers and fruit, form a sort of catkin. The seed is in a hard shell enclosed in a fleshy, edible wrap; the fruit is rather like a plum.

Maidenhair Tree. Stem of foliage

MAIDENHEAD. Market town and borough of Berkshire. It stands on the right bank of the Thames, 24 m. from London, on the G.W. Rly. The industries include brewing, but the town is chiefly known as a boating centre. The stone bridge across the Thames dates from 1772. Market day, Wed. Pop. 16,741.

MAID OF HONOUR. Unmarried lady in personal attendance on a queen. In the British royal household the maids of honour are in the lord chamberlain's department, and are in waiting two or three weeks at a time. Usually daughters or granddaughters of peers, and styled honourable, they take precedence between daughters of barons and wives of knights of the garter. A kind of cheese-cake popular at Richmond, Surrey, is known as a maid of honour. See Royal Household.

MAIDSTONE. Borough and market town of Kent, also the county town. It stands on the Medway, 41 m. from London, and is served by the Southern Rly. All Saints' Church is a fine Perpendicular building. Adjoining are the ruins of the 14th century college. The old palace of the archbishops still stands, and the 16th century Chillington manor house contains a museum and art gallery. There is an old tithe barn. Maidstone is in the middle of the hop fields. It has manufactures of

agricultural implements, paper, cement, rope, beer, toffee, etc., also maling and engineering works. In 1921 the town adopted Montauban. In 1928 the town council bought the Mote, an estate of 500 acres, from Viscount Bearsted. Market days, Tues and Thurs. Pop 40,710.

MAIMING. Term used in English law for the deprivation of a part of a person's body necessary for fighting.

The word is more used in connexion with injuries to animals. Under the Malicious Damage Act of 1861 it is a felony to maim any cattle, horses, or other domestic animal. There have been some remarkable epidemics of cattle and horse maiming in the United Kingdom, the most notorious being the Great Wyrley outrages in Staffordshire.

MAIN. River of Germany, a tributary of the Rhine. It rises in the Fichtelgebirge on the edge of the Bohemian plateau, and flows generally W. to join the Rhine at Mainz, after a course of 300 m. The Ludwig Canal joins its tributary the Regnitz to the Altmühl, a Danube tributary, to provide boat communication between Rotterdam, Mainz, Ratisbon, and Vienna. River navigation extends for 240 m. from Mainz. Important towns in the basin of the Main are Frankfurt, Mainz, Nuremberg, Würzburg, and Asebauffenburg. In the Middle Ages the lower valley formed part of an historic route N.E. from Mainz to Cassel.

MAINE. State of U.S.A. With an area of 33,040 sq. m., it is situated in the extreme N.E. of the country, and borders on Canada. The coastline is much indented and there are many good harbours. Augusta is the capital.

The state is mountainous in the N. It is studded with many lakes and drained by numerous rivers; their waters are utilised for providing power. In the N. much land is covered with forests, lumbering being a valuable industry. The soil produces oats, potatoes, and hay. Granite is worked, and the fisheries are considerable. It has 2,750 m. of railway line, which are connected with the Canadian system. The state university is at Orono. Pop. 795,000.

The Maine is the name of a U.S. battleship blown up in Havana harbour, Feb. 15, 1898, with a loss of 250 officers and men. The incident led to war between the U.S.A. and Spain. See Spanish-American War.

MAINTENANCE. Word used in English law. A maintenance order is the order which a wife can obtain from a police court compelling her husband to support her and her children. The amount of the order will vary with the husband's income, and any income earned by the wife will also be taken into account. The usual practice is to order the husband to pay such an amount as will give the wife for herself a third of their joint income. The maximum amount that can be ordered for the wife is £2 a week. If there are any children of the marriage the husband may be ordered to pay an additional sum not exceeding 10s. a week in respect of each child under 16.

Maidstone. Church of All Saints and old houses from the Medway

An order obtained by a wife legally separated from her husband, compelling him to give her financial aid, is also called maintenance. See Affiliation; Marriage; Separation.

MAINTENON, FRANÇOISE D'AUBIGNÉ, MARQUISE DE (1635-1719). Second wife of Louis XIV. Born Nov. 27, 1635, she married Scarron in 1651 and was thus introduced to intellectual circles. Scarron died in 1660, and in 1669 she was engaged by Madame de Montespan to educate the children she had borne to Louis XIV. She soon attracted the royal attention, and in 1678 Louis created her a marquise. Her intelligence established her high in Louis' favour. Mme. de Montespan was discarded in 1680, and the new mistress ruled supreme. In 1685 the king married her, and henceforth she exercised almost unlimited power over him. She died April 15, 1719.

Mme. de Maintenon, wife of Louis XIV. After P. Mignard

Montespan was discarded in 1680, and the new mistress ruled supreme. In 1685 the king married her, and henceforth she exercised almost unlimited power over him. She died April 15, 1719.

MAINZ OR MAYENCE. City of Germany, in the republic of Hesse. It lies on the left bank of the Rhine, opposite its confluence with the Main, 22 m. W.S.W. of Frankfurt. A busy river port and important rly. junction, it trades in wine, grain, and timber, and produces leather goods, furniture, and chemicals. The cathedral is one of the noblest Romanesque churches of Germany; it has extensive Gothic additions. Of various dates, some parts perhaps belonging to the 10th century, it has six towers and a fine series of tombs of the electors, mostly of the 16th century. The former palace of the electors, a Renaissance building, chiefly of the 17th century, contains a museum of Roman and German antiquities, and a collection illustrating the work of Gutenberg. In the citadel, which occupies the site of the Roman camp, stands the Eigelstein, a tower said to have been built by the Romans as a memorial to Drusus. Pop. 108,537.

Mainz. House in which Gutenberg is said to have set up his press

The bishopric of Mainz was made an archbishopric under S. Boniface in 747. His successors were primates of Germany, and from 1356 to 1802 were electors. In 1803 the archbishopric was abolished; its lands were secularised and divided among various princes. The city was assigned to Hesse in 1814.

Mainz was the name of a German light cruiser. She was sunk by a torpedo from the British destroyer Laertes during the engagement in the Heligoland Bight, Aug. 28, 1914.

MAISONNEUVE, PAUL DE CHOMEDY, SEUR DE (d. 1676). French administrator. He was born in Champagne, entered the French army, and after serving in Holland, in 1641 led a religious expedition to Quebec. On May 14, 1642, he founded the town of Ville-Marie de Montreal, of which he was governor until 1665. Maisonneuve is now the name of a suburb of Montreal.

MAITLAND. Name of two towns in New South Wales. East Maitland is on the right bank of the Hunter river, 120 m. by rly. N. of Sydney, and is a junction on the main line to Queensland. Pop. 9,000.

West Maitland is 2 m. from East Maitland, and is connected with it by tram and rail. It has brick and pottery works. Pop. 7,770.

MAIZE (*Zea mays*) Stout annual grass, probably of Mexican origin. As a cultivated plant it is found under the names of Indian corn, Turkey wheat, Guinea wheat, or mealies in most of the warmer countries of the world. It grows to a height of 5 ft. or 6 ft., and has long, broad, strap-shaped alternate leaves with sheathing bases. The stem is terminated by a many-branched plume of male two-flowered spikelets. The female spikes, with single-flowered spikelets, are produced from the leaf-sheaths, and after pollination develop into the large, thick "cobs," with numerous seeds packed round a woody core. Maize is not grown extensively in Britain, because it cannot be germinated as a rule before June, and the climate prevents the ripening of the grain, and necessitates its use as fodder. As compared with wheat, the grain contains somewhat less albuminous matter, and is slightly richer in carbohydrates. It is, next to rice, the most important of all the cereal foods. In India the roasted cobs are eaten.

Maize. Left, male flower and leaves; right, cob

MAJESTIC. British battleship torpedoed by the German submarine U 23 off Cape Helles, Gallipoli, May 27, 1915. She was 412 ft. long, 75 ft. in beam, and displaced 14,900 tons. Majestic is also the name of a White Star liner of 56,000 tons, formerly the N. German liner Bismarck. Her length is 915 ft., average speed 25 knots.

MAJOLICA. Name given to two kinds of ware. One is an Italian enamelled ware covered with an opaque tin-enamel glaze which formed the surface for a painted design, and the other is a ware covered with a semi-fluid paste of white or cream colour on which designs were scratched with a point.

MAJOR. In the British army, an officer next in rank above a captain and below a lieutenant-colonel. The equivalent rank in the navy is a lieutenant of eight years' seniority, and in the R.A.F. a squadron leader. His badge of rank is a crown.

Major. Badge of rank on sleeve

MAJOR (Ital. maggiore, greater). Term in music referring to intervals of seconds, thirds, sixths, and sevenths, reckoned in the ordinary scale of their lower notes. Thus:

are major intervals because the notes D, E, A, and B occur in the scale of their lower note (C). The fourth and fifth from the key-note are termed perfect instead of major.

MAJORCA (Sp. Mallorca). Island in the Mediterranean Sea, belonging to Spain. Situated 115 m. S.S.E. of Barcelona, it is the largest of the Balearic Isles, with an area of 1,325 sq. m.

The coast is indented with many bays and harbours and the surface is mountainous. The soil is fertile and the climate usually temperate. The island produces wine, oil, cereals, figs, oranges, and other fruits in

abundance. There are many mineral and saline springs. Stalactite caves abound. The most typical industry is the making of glazed pottery, especially majolica. Palma is the capital. The island was peopled by Moors when conquered by Jaime of Aragon, towards the close of the 13th century, and in 1343 it was taken over by Aragon. Pop. 270,197.

MAJOR-GENERAL. Title of rank in the British army. He is an officer of the lowest grade of general officer, ranking above a colonel-commandant (formerly brigadier-general) and below a lieutenant-general. The equivalent rank in the navy is rear-admiral, and in the R.A.F. air vice-marshal. The distinguishing badge is a crossed sword and baton, with a star above, worn on the shoulder straps. During the Great War the number of major-generals was greatly increased, the rank being held not only by divisional commanders, but by general officers on the staff and those appointed for special duties. See General.

Major-General, badge on shoulder strap

MAJORIAN. Roman emperor of the West, A.D. 457-461, whose full name was Julius Valerius Majorianus. He was a sound ruler, being the author of measures for the relief of his subjects from the taxation by which they were sorely oppressed. He also passed laws for the protection of ancient monuments, then much used for building material.

MAJUBA HILL. Eminence in Natal, at the N.E. end of the Drakensberg range. Its height is 7,000 feet. During the war between the British and the Boers in 1880-81, Sir G. Colley, in command of the former, reached and occupied the hill on Feb. 27, 1881. Next morning, however, the tired men were attacked by the Boers, who, after some desultory firing got to the summit and drove down the British. Colley was killed and about half his force lost.

Majuba Hill. Monuments to the fallen erected on the battlefield

MALABAR COAST. Name applied to the southern half of the W. coast strip of the Deccan, India. It is in Madras, the S. continuation of the Konkan coast of Bombay.

Malabar, a division of Madras Province, forms the portion of the Malabar coast, N. of Cochin, S.W. of Coorg, and S. of S. Kanara. Rice is the main food grain, other crops including coconuts and rubber. It has one rly., the main line from Madras to Calicut. Area 5,794 sq. m. Pop. 3,098,871.

MALACCA. Detached portion of the Straits Settlements. It extends for 42 m., with a breadth of from 8 to 25 m., along the strait of Malacca, about 110 m. N. of Singapore. It has a pop. of 188,828 and an area of 720 sq. m. Its capital, Malacca (pop. 21,200), is situated on the Malacca river, 120 m. N.W. of Singapore, with which it has rly. connexion. It was captured by the Portuguese in 1511, by the Dutch in 1641, and by the British in 1795. It became a British possession in 1825.

Malacca was formerly an independent country of south-east Asia consisting of a long, narrow strip of land stretching S. from Siam. See Malaya; Straits Settlements.

Malacca Bean (*Semecarpus anacardium*). Alternative name for the evergreen known as marking nut tree (q.v.).

MALACHI. Minor prophet. Generally accepted as the author of the last book of the O.T., it is possible that he was a contemporary of Ezra and Nehemiah. The writer deplors the degeneracy of the priesthood and the general falling-off in religious observance and urges repentance. He deals with the prosperity of the ungodly, and foretells the coming of another Elijah (John the Baptist) to prepare the way for the Messiah.

MALACHITE. In mineralogy, the name given to a basic carbonate of copper. Bright green in colour, it is found in great masses in the Ural Mts., Tirol, France, etc. Malachite, though a source of copper, has long been prized as a gem.

MÁLAGA. Seaport and watering place of Spain. The ancient Malaca, it stands at the mouth of the Guadalmedina river, 65 m. N.E. of Gibraltar. Dominated by a ruined Moorish citadel, and the 13th century castle of Gibralfaro, the old town is crowded, but the modern part is well built, and stretches into the surrounding country, cultivated with vineyards and gardens. The Paseo de la Alameda is one of the finest thoroughfares. The harbour is deep and has several moles. The river is either a dry watercourse or a swollen torrent. Málaga is noted for its wine, which is largely exported. Pop. 159,479.

MALAKAND. Pass in the N.W. Frontier Province, India. It leads from the valley of the Kabul river to that of the Swat. In 1897 the Swats made an attack on the British post here, and this led to the Malakand expedition of that year.

MALARIA (mala aria, bad air). Term for a group of fevers caused in man by parasites which inhabit the red blood corpuscles. Laveran's discoveries in 1880, and Sir Patrick Manson's hypothesis in 1894, suggested a new field of research, and led to the discovery by Sir Ronald Ross, in 1898, that the parasite is transmitted by the bite of an anopheline mosquito. The geographical distribution of malaria is therefore largely governed by the conditions favourable to the development of large numbers of mosquitoes capable of carrying the germ, and, as a general rule, the disease is most prevalent in the region of the equator.

It is now definitely known that malaria is caused by the entry into the blood of man of any of the following parasites: *Plasmodium malariae*, *Plasmodium vivax*, or *Laverania malariae*. The character of the fever is dependent on the type of parasite inhabiting the blood of its victim, each parasite having a life history and periodicity which is responsible for a distinctive type of fever.

Generally an acute attack of fever is preceded by pains in the head, back, and joints, followed by giddiness and sickness. The definite attack may be divided into three stages. The cold stage, followed shortly by violent shivering and chattering of the teeth; the hot stage, wherein the shivering ceases and the patient becomes burning hot and dry; and the sweating stage, characterised by profuse sweating and a sense of relief. In the interval between the attacks the parasites develop in the red blood corpuscles, and Ross

estimates that 150,000,000 parasites are necessary to produce fever. Although numerous drugs have been tried, quinine still holds its own as the one specific remedy.

Briefly, prophylaxis may be carried out by eliminating the breeding-places of mosquitoes and their larvae by draining swamps, gutters, etc.; the use of larvicides; oiling collections of water with paraffin or crude petroleum; screening wells, cisterns, etc., with wire gauze; the introduction of fish, especially "millions," into ponds, etc.; also by the use of mosquito nets as protection against bites.

MALAYA. British battleship. Built in England, at the charge of the Federated Malay States, she was presented by the latter to the British navy in Feb., 1916. Of the Queen Elizabeth class, she was present at the battle of Jutland. See Queen Elizabeth.

MALAYA. Term applied politically to the southern and greater portion of the Malay Peninsula. It consists of three distinct areas, all included in the British Empire. (1) The Straits Settlements is a crown colony consisting of Singapore, Penang, which includes Province Wellesley and Dindings, and Malacca. (See Straits Settlements.)

(2) The Federated Malay States, a British protectorate, includes four states, Negri Sembilan, Pahang, Perak, and Selangor. Their area is 27,500 sq. m., Pahang, with 14,000 sq. m., being the largest. The government is in the hands of a high commissioner, who is assisted by a federal council. Pop. 1,324,900.

(3) The five states of Johore, Kedah, Kelantan, Perlis, and Trengganu. Of these Johore is under a sultan, who accepted British protection by treaty in 1914. The four other states came under British protection in 1909. They had previously been under that of Siam. Of these unfederated Malay States Kedah covers 3,648 sq. m. and has a pop of 340,000. Alor Star, on the Kedah river, is the capital. Perlis has an area of 316 sq. m. and a pop. of 40,100. Kelantan has an area of 5,710 sq. m. and a pop. of 310,000. Kota Bharu is the capital. Trengganu covers 5,500 sq. m. and has a pop. of 153,000. Kuala Trengganu is the capital.

The Malay Peninsula extends from the isthmus of Kra to Singapore. Its length is 700 m. It includes the British possessions in Malaya and part of Siam. Rubber is the main product; a great deal of rice is also grown. The inhabitants are chiefly Malays, who are also found in the islands lying near the peninsula, which are sometimes called the Malay archipelago.

MALDEN. District of Surrey. It is 3 m. from Kingston, and is served by the Southern Ry. About 1½ m. to the N. is New Malden; both have become residential suburbs of

London. The Maldens are in the urban dist. of Malden and Coombe. Pop. 14,503.

MALDIVE ISLANDS. Group of coral islands in the Indian Ocean, administered by Ceylon. They lie S.W. of Cape Comorin and W. of Ceylon and abound in coconut palms. Malé is the chief island. The people are expert sailors. Pop. 70,000.

MALDON. Borough, seaport, and market town of Essex. It stands on the Chelmer where it enters the Blackwater estuary, 44 m. from London, on the L.N.E.R. Among the industries are brewing. The buildings include All Saints' Church, with a triangular tower and hexagonal spire, and a 15th century town hall. Near are the remains of Beleigh Abbey. Market day. Tues. Pop. 6,581.

MALDON. Town of Victoria, Australia. It is about 90 m. N.W. of Melbourne, and is an important road centre in a fertile farming district. Pop. 3,100.

MALE FERN (*Nephrodium filixmas*). Fern of the order Polypodiaceae. A native of the temperate regions of the N. hemisphere, and of India and Africa, it has a solid woody root-stock, formed of the bases of decayed fronds. The lance-shaped fronds may be three or four feet long, the leaflets or pinnae tapering to a point and deeply cut into lobes. The name indicates its robust habit.

MALESHERBES, CHRÉTIEN GUILLAUME DE LAMOIGNON DE (1721-94). French statesman and advocate. Born in Paris, Dec. 6, 1721, he succeeded his father as president of the Cour des Aides in 1750, in which capacity he addressed himself to the abolition of official abuses. In 1771 his condemnation of legal abuses ended in his being banished to his estates. On the trial of Louis* by the Convention, he undertook to defend him. For this he was marked down by the revolutionists, and was guillotined in Paris, April 22, 1794.

Málaga, Spain. The cathedral, begun in 1528, and still unfinished

Malaya. Map of the southern part of the Malay peninsula, including the Straits Settlements, the Federated Malay States, and the British Protectorate

His fearless devotion to duty has become almost proverbial. Pron. Malzayrb.

MALIBRAN, MARIA FÉLICITÉ (1808-36). French opera singer. Born in Paris on March 24, 1808, she was a daughter of the singer Manuel Garcia (q.v.), and made her first appearance in The Barber of Seville, in London 1825. Gifted with powers of acting as well as a fine voice, she was one of the great opera singers of her day. She died Sept. 23, 1836.

MALICE. Term used in English law. It may mean either actual ill-will formed against another in the mind of the person charged with malice; or the doing of some kind of deliberate act so injurious to another that the law will imply evil intent. In libel, the deliberate act of writing causes the law to presume malice; but not so in slander.

Malicious damage is a legal term meaning damage done to property wilfully and purposely, as distinct from an act done in ignorance or by accident.

Malicious prosecution is a term used in English law for the preferring of a criminal prosecution, or the presentation of a bankrupt petition, maliciously and without reasonable cause. See Libel; Slander.

MALINES OR **MECHLIN** (Flemish, Meechelen). Town of Belgium. It is 13 m. by rly. N.N.E. of Brussels, on the river Dyle, and is a busy rly junction with several manufactures. Formerly it was famous for its lace. It is best known as the ecclesiastical capital, the archbishop being the primate of the Roman Catholic Church in Belgium.

The cathedral of S. Rombold is a noble Gothic building, built about 1300-12, and remodelled during the 14th-16th centuries. The interior contains an altar-piece by Van Dyck. Among the many churches are those of S. John, 15th century, and Notre Dame, founded 1255 and rebuilt in the 16th century, both containing paintings by Rubens. On the Grande Place, with characteristic Flemish gabled houses, stands the Cloth Hall, completed 1326. The town was bombarded during the Great War, and considerable damage was done. Pop. 60,440.

Between 1921 and 1925 conversations took place at Malines between a group of Anglicans, led by Lord Halifax, and some Roman Catholics, including Cardinal Mercier. The question of reunion was discussed, and in 1928 a report, The Conversations at Malines, was published.

MALINGERING. Feigning or deliberately creating sickness, or exaggerating symptoms, for the purpose of exciting compassion, avoiding an irksome duty such as military service, or obtaining compensation or pension.

Malingers may be divided into three groups: first, those in whom there is no organic lesion of any sort, the symptoms being entirely assumed. In the second class, real injuries are deliberately produced, e.g. ulcers of the skin are created by the application of some caustic, as nitric or carbolic acid, and kept open by irritation. In the third class, old-standing diseases or effects of injury are represented as due to a recent cause.

MALL, THE. London thoroughfare. It runs along the N. side of St. James's Park between Charing Cross and the Queen Victoria Memorial in front of Buckingham Palace. It has on the N. the gardens of Carlton House Terrace, the Duke of York's Steps leading to Waterloo Place, and the gardens of Marlborough House, St. James's Palace, and Lancaster House (London Museum).

MALLARD. Common wild duck of Great Britain and the N. hemisphere, from which most domesticated breeds are derived. In

the male the head and neck are glossy green, the breast chestnut, the underparts greyish white, and the wings reflect a metallic violet hue. The beak is greenish yellow, the legs and feet red. The female is smaller and has mottled brown and buff plumage. The mallard breeds in most retired districts in Great Britain that possess water, but great numbers are winter migrants. It feeds upon plants, worms, and insects. See Duck.

MALLARMÉ, STÉPHANE (1842-98). French poet. Born in Paris on March 18, 1842, from 1862-92 he taught English at various schools and colleges in France. From 1862 onwards he published poems, translated E. A. Poe's The Raven, 1875, issued his L'Après-midi d'un Faune in 1876, and collected poems in 1887. The recognized

leader of the Symbolists, Mallarmé exercised great influence on the rising generation of French poets. After his retirement from teaching in 1892 he published Vers et Prose, 1893, and Divagations, 1897, and died at Valvins, near Fontainebleau, Sept. 9, 1898. In 1920 his Vers de Circonstance appeared.

MALLEE SCRUB (*Eucalyptus dumosa*). Species of eucalyptus, a native of Australia. The root forms a flat disk about 3 ft.

across and 8 or 10 ins thick. From its underside numerous rootlets descend until they reach moisture, often to a great depth. From the upper side there are many slender stems 14 or 15 ft. long, bearing dense clusters of leaves at the summits. The scrub extends over many miles of the dry plains, but the rootlets yield a supply of drinkable fluid. See illus. below.

MALLING. District in Kent. West Malling, or Town Malling, is 5 m. W. of Maidstone, on the Pilgrims' Way (q.v.), with a station on the Southern Rly. It has ruins of a Benedictine nunnery founded by Bishop Gundulf in 1090. Near is St. Leonard's Tower, also built by Gundulf, about 1070. The village of E. Malling, ½ m. to the E., has an old church and a fruit growing research station. A parish in Sussex, ¾ m. from Lewes, is called S. Malling. Pop. of W. Malling, 4,766

Mallard or wild duck. It breeds freely in captivity
W. S. Berridge, F.Z.S.

Malines. Grande Place, Town Hall and Cathedral of S. Rombold

The Mall, London. View from the Admiralty Arch looking towards Buckingham Palace

MALLOW (*Malva*). Genus of herbs of the order Malvaceae, natives of Europe, temperate Asia, and N. Africa. They have large lobed or divided leaves, and showy rose, purple, or white flowers. The fruit is a ring of

large seeds, each in a leathery shell. The common mallow (*M. sylvestris*) has a stem two or three ft. in height, with lobed leaves and blue-purple flowers. Musk mallow (*M. moschata*) has the leaves divided into slender segments and pale rosy flowers. Marsh mallow (q.v.) belongs to a separate genus.

MALLOW. Urban dist and watering place of co. Cork, Irish Free State. It stands on the Blackwater, 21 m. from Cork, on the G.S. Rlys. There are ruins of a castle once belonging to the Desmonds. The town is the centre for an agricultural district and for salmon fishing. Mallow was the scene of considerable disorder in 1920-21. It was seriously damaged by fire in Sept., 1920, as the result of British reprisals for the shooting of a sergeant. Pop. 4,562

MALMÉDY. Town and district of Belgium, formerly in Rhenish Prussia. The town is 25 m. S. of Aix-la-Chapelle on the river Warthe. It has a population of 5,000, mostly Walloons, chiefly employed in tanneries and paper mills. The dist. covers 318 sq. m. with a pop. of 37,000, 9,500 Walloons. The staple industry is dairy farming. With the adjoining dist. of Eupen (q.v.), Malmédy was given to Prussia in 1814. By the treaty of Versailles 1919, Germany renounced in favour of Belgium all rights and title over the two districts, in which a plebiscite was permitted, and Malmédy was reunited to Belgium. See Belgium

MALMESBURY. Borough and market town of Wiltshire. It stands on the Avon, 17 m. from Swindon on the G.W. Rly. The church of S. Mary and S. Aldhelm was part of the church of the Benedictine abbey. It is mainly of the 12th century, and is noted for its beautiful Norman porch. In 1927 extensive restoration work was begun on the abbey. There is a market cross of the 16th century in the market place. The town has a trade in agricultural produce, brewing, and tanning. Malmesbury grew up round the abbey, and was long known for its manufacture of cloth. Market day, last Wed. in month. Pop. 2,405

MALMESBURY, JAMES HARRIS, 1st EARL OF (1746-1820). British diplomatist. Born at Salisbury, April 21, 1746, he began a long diplomatic career in 1768 at Madrid; was minister at Berlin, 1772-76, at St. Petersburg, 1777-83, and at The Hague, 1783-88. In 1788 he was made a baron and in 1800 an earl. He died Nov. 21, 1820, and was succeeded by his son James Edward.

James, the third earl (1807-89), entered the House of Commons as M.P. for Wilton in 1841, but in the same year he became a peer. Attached to the Tory party, he was foreign minister in the short ministries of 1852 and 1858-59. From 1866 to 1868 he was lord privy seal, as he was from 1874-76. He edited the Diaries and Correspondence of his grandfather, the 1st earl, in 1844, published a volume of the 1st earl's letters in 1870 and his own Memoirs of an Ex-Minister in 1884. He died May 17, 1889, and was succeeded by his nephew Edward James (1842-99). In 1899 James Edward (b. 1872), the latter's son, became the 5th earl. The family seat is Heron Court, Hants, and the earl's eldest son is Viscount FitzHarris.

MALMÖ. Seaport of Sweden. It stands on the Sound, opposite Copenhagen, 16 m. away, with which it is connected by rail and ferry. The town hall dates from 1546 and the church of S. Peter partly from the 14th century.

Mallee Scrub, variety of Eucalyptus

The harbour is capacious and well equipped. Trade is carried on in timber, matches, cement, and agricultural produce. Pop. 118,535.

MALMSEY. Name given to a white or red wine, originally grown in Crete or other Greek islands. It is a sweet, luscious, white

wine of high alcoholic content, and is now chiefly produced in the Azores, Canaries, Madeira, Sicily, and Sardinia.

MALORY, SIR THOMAS (fl. 1469). English romance writer. According to

Bale, he was a Welshman, but Prof. Kittridge showed, in *Who was Sir Thomas Malory?*, that he was a knight of Newbold Revell in Warwickshire. His *Morte d'Arthur* is the most important English prose written before the age of Elizabeth, a compilation and free translation from Robert de Boron, Lucan de Gast, Hélie de Boron, Walter Map, Chretien de Troyes, and others of the old Arthurian romances, less connected form. Finished in 1469, it was first printed by Caxton in 1485.

MALPAS. Parish of Cheshire. It is 13 m. S.E. of Chester, on the L.M.S. Rly. The chief building is the Perpendicular parish church, with beautiful decorations and memorials. Pop. 1,098. There is a Malpas in Cornwall, on the Fal. 2 m. from Truro.

MALPIGHI, MARCELLO (1628-94). Italian anatomist. Born March 10, 1628, near Bologna, he graduated as M.D. and lectured there. He discovered by means of the microscope capillary circulation, blood corpuscles, and important facts relating to the skin, the kidney, and the spleen and he was admittedly the father of microscopic anatomy. He used the microscope also in botanical research, and his *Anatomia Plantarum* was published by the Royal Society. He wrote many treatises, the chief being *On the Lungs*. He died Nov. 30, 1694. Pron. Malpeeghee.

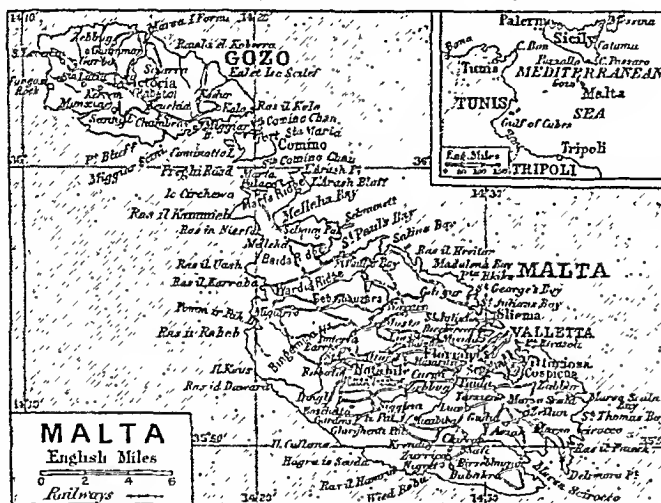

MALPLAQUET, BATTLE OF. Allied victory over the French in the War of the Spanish Succession, Sept. 11, 1709. Malplaquet is a French village in the dept. of Nord. 10 m. S. of Mons. The duke of Marlborough and Prince Eugene were in command of the allied British and imperial troops, and the French army was commanded by Marshal Villars. On either side over 90,000 men were engaged. The battle began with an attack by the Prussians and Austrians. It was resisted stubbornly, but eventually the French were forced back. Eugene and Marlborough at the head of their troops made an irresistible assault on the centre and right, and the Allies began a general advance before which the whole French force retired. The Allies lost 20,000 men and the French 12,000.

MALT. Raw material of the brewer and distiller. It is produced by causing the seed-grains of various cereals, principally barley, to germinate, whereby enzymes or ferments are secreted and developed, converting the albumen of the grains into diastase and the starch into sugar. When the growth has been stopped, the malt is screened to remove the rootlets, which contain about 43 p.c. of digestible carbohydrates and albuminoids. Under the name of malt-culms or malt-combs these are given as a nourishing food to milk-cows and other cattle.

Malting is the name given to the process of converting barley into malt. See Barley; Enzyme; Fermentation.

MALTA. Island of the Mediterranean, belonging to Great Britain. The ancient Melita, it lies about 60 m. S. of Pozzallo on the S. shore of Sicily, and 180 m. from the nearest point on the African coast. It is a naval base and coaling station, being the headquarters of the Mediterranean fleet, and is one of the most important ports of call in the world.

Valletta is the capital and chief port. A rly. connects Valletta with Citta Vecchia or Notabile, the old capital. Area 95 sq. m. Pop. 230,618.

Malta. Map of the islands forming a British dominion in the Mediterranean. Inset, map showing position of the islands in relation to Sicily and Africa.

The surface is a succession of hills and valleys, trending S.W. to N.E. The coastline, except on the S., is much indented. The climate is mild and healthy in winter, but warm in summer. The chief products are wheat, barley, potatoes, onions, and other vegetables, grapes and other fruit, and cotton. The principal pursuit is agriculture, and horses, mules, asses, sheep, and goats are reared. Malta is specially noted for its honey and lace, while the fisheries are important.

After being held successively by the Phoenicians, Greeks, Romans, and Moors, Malta was a dependency of Sicily from 1090 until 1530, when it passed to the Knights of S. John. They ruled it until 1798, when it was taken by Napoleon. From 1798 to 1800 it was blockaded by the British, aided by Maltese, who asked for and were granted the protection of Great Britain by the treaty of Paris in 1814. It then became a British possession. Since 1921 Malta has been self-governing, the neighbouring islands of Gozo and Comino being joined with it for administrative purposes. English and Italian are the official languages.

Normally Malta is ruled by a governor, a ministry, and an elected legislature, which

deal with all local affairs. Certain matters, such as immigration and coinage, are reserved for the Imperial authorities.

In 1930 there was considerable unrest owing to the action of the Pope in threatening with excommunication anyone working or voting for the government party at the election which was arranged to follow the dissolution in April. This action was deemed to be against Lord Strickland, the premier, himself a Roman Catholic. The election was not held; instead, the British government, upholding Lord Strickland, ordered a temporary suspension of the constitution, the existing ministry to remain in office in a consultative capacity.

MALTA FEVER, UNDULANT OR MEDITERRANEAN FEVER. Chronic fever due to infection by a micro-organism, conveyed most often by goats' milk. It is endemic in the coasts and islands of the Mediterranean, in the Punjab, E. and S. Africa, China, and the tropical parts of N. and S. America. Treatment consists

in good nursing and relieving the symptoms. No known drug appears to have any destructive action upon the parasite. The disease is best avoided by refraining from the use of goat's milk, and since 1906, when this was forbidden to the troops, the disease has been virtually stamped out among them.

MALTESE TERRIER. Ancient breed of lap-dog. Superficially it resembles a toy Skye-terrier, but in fact it is not a terrier. In colour it is pure white, occasionally marked with fawn. The face and sides are clothed with long silky hair. The tail is very short, but, carrying an extensive plume of hairs, appears large, and is usually curved over the back. The dog displays remarkable intelligence, alertness, and good temper.

MALTHUS, THOMAS ROBERT (1766-1834). British economist. Born near Dorking, Surrey, Feb. 17, 1766, and educated by private tutors, he became a fellow of Jesus College, Cambridge. His *Essay on Population* was published in 1798 by way of reply to Godwin's *Enquirer*, 1797, and met with fierce criticism. In 1799 Malthus made a tour through Scandinavia and Russia in search of information, and in 1802 visited France. The new edition of his *Essay*, 1803, was virtually re-written, and in it he fully recognized the prudential check on population which in the first edition had only been implied. In 1805 he was appointed professor of political economy at the East India College, Haileybury. He wrote *Political Economy*, 1820, and other works, and died Dec. 23, 1834.

His theory, known as Malthusianism, was that an increase in population, unless preceded or accompanied by a corresponding increase in the means of subsistence, must of necessity lead to misery among the people, or to increased mortality, if not to both evils. This conclusion was based on the assumption that whereas population increased by geometrical progression, the food supply could increase only by arithmetical progression. It proved disconcerting and unpopular because it was misunderstood. See *Population*.

MALTON. Market town and urban dist. of Yorkshire (N.R.). It stands on the Derwent. 21 m. from York, on the L.N.E.R. It consists of Old and New Malton, while across the Derwent is the suburb of Norton, which is in the East Riding. Old Malton church is part of a

T. R. Malthus, British economist.

12th century priory church. The chief industries are tanning, brewing and milling, and the making of agricultural implements. Malton is also a centre for horse breeding. Near is Castle Howard. Recent discoveries show that Malton was a large Roman station. Market days, Sat. and Tues. Pop. 4,438.

MALTOSE. Sugar prepared by the action of malt upon starch. It was at first mistaken for dextrose, but its true nature was pointed out by A. P. Dubrunfaut, who gave it the name maltose. Maltose crystallises in fine needles, and when boiled with dilute sulphuric acid is decomposed into grape sugar.

MALVERN. Name used for Great Malvern, an inland watering place and urban dist. of Worcestershire, and also for a number of other places on the Malvern Hills.

Malvern, Worcestershire. The cruciform Priory Church from the N.E.

by the L.M.S. and G.W.R. Its chief building is the beautiful priory church, and there are remains of a refectory. Pop. 17,809.

Malvern College is an English public school at Malvern. It was opened in 1865 and has accommodation for about 500 boys.

The Malvern Hills extend about 9 m. between Worcestershire and Herefordshire. Worcester Beacon and Hereford Beacon are both nearly 1,400 ft. high. The district called Malvern Chase was disafforested in the 17th century. To preserve various beauty spots here the Malvern Hills Act was passed in 1924.

MAMELUKES (Arab. slaves). Military class of foreign origin in medieval and modern Egypt, to which they gave a number of sultans.

The Mamelukes, consisting of slaves trained as body guards, became an invaluable fighting force; their leaders were taken from their own ranks, and in 1250 their commander, Kutuz, overturned the government and made himself sultan of Egypt. Ten years later another Mameluke captain, Beibars, seized the sultanate. From this time the Mamelukes were masters of Egypt, and successive Mameluke sultans ruled until the conquest by the Ottoman Turks in 1517. The series is divided into two groups, the Turkish (1250-1390) and the Circassian (1390-1517).

MAMETZ. Village and wood of France, in the dept. of Somme, 5 m. E. of Albert. Both were prominent in the Great War. The village, occupying a commanding position, was captured

July 1, 1916, and the wood of 200 acres on July 10-12, 1916. Both were abandoned in the German offensive of March, 1918, and recovered by the Allies in the autumn.

MAMMAL (Lat. mamma, a breast). The highest class of vertebrate animals, those which suckle their young, usually regarded as standing at the head of the animal world. Except in the lowest group, the young are produced by a more or less prolonged period of gestation, during which organic connexion exists between the foetus and the mother; and for a further period the young mammal is dependent on the milk of its mother for its food. Mammals are distinguished from the birds in the structure of the skull, and from fishes, reptiles, and batrachians by having warm blood. They all breathe air by means of lungs, and none of them passes through stages of metamorphosis in its life history. All are viviparous except the three egg-laying monotremes of Australasia. In size mammals range from the pygmy shrew to the whale.

Mammals are divided by zoologists into three sub-classes, known as Prototheria, Metatheria, and Eutheria. The Prototheria (primitive mammals) comprise the three species of egg-laying mammals (monotremes) found in Australasia. The Metatheria comprise the marsupial or pouched mammals, of which the kangaroo is a well-known example. The Eutheria comprise all the rest of the Mammalia, and are usually divided into nine orders: 1. Edentata (sloths, ant-eaters, and armadillos); 2. Cetacea (whales, dolphins, and porpoises); 3. Sirenia (manatees and dugongs); 4. Ungulata (hoofed mammals); 5. Rodentia (gnawing mammals); 6. Carnivora (flesh-eating mammals); 7. Insectivora (insect-eating mammals); 8. Chiroptera (Bats); 9. Primates (lemurs, monkeys, man).

Mammals first appear in the Jurassic period, the earliest being mostly Marsupials or Insectivora. Certain reptiles, the Theromorphs, occurring in earlier formations, the Permian and Triassic beds, have many mammalian features which appear to connect them with the monotremes. See Animal; Zoology; and the articles on the various animals.

MAMMEE APPLE (*Mammea americana*). Large tree of the natural order Guttiferae. It is a native of tropical America. The large seeds are used medicinally, and a resin obtained from the bark is used to rid the feet of chigoes. It derives its name from the Haitian name of the fruit, mammy.

MAMMON (Aram. mamona, riches). Phoenician term for gain. In the N.T. it implies love of money and deceitful wealth (Matt. 6, 24; Luke 16, 9 & 13). The Book of Enoch, 62, 10, has the expression mammon of unrighteousness, a modern equivalent of which is filthy lucre.

MAMMOTH (*Elephas primigenius*). Extinct animal. An inhabitant of central Europe in

Mammoth. Mounted specimen of Siberian mammoth, preserved in the Arctic ice, now in Leningrad Zool. Mus.

glacial and post-glacial periods, when the North Sea was covered by forest land, its remains have also been found throughout Asia and in N. America, whither it probably migrated. It does not seem to have greatly exceeded the modern African elephant in size. Generally closely resembling the Indian elephant, the mammoth had long and slender tusks which curled upwards and outwards, and was covered with long hair and a thick, woolly under-fur. See *Brontosaurus*; *Diplocodus*; *Elephant*; *Mastodon*.

MAMMOTH CAVE. Limestone cavern in Kentucky, U.S.A., about 85 m. by rly. S. by W. of Louisville. It consists of numerous

chambers, at varying levels, connected by passages or avenues, domes, grottoes, and galleries, and contains several streams or lakes linking up with the Green river, which passes by. The main cave is from 40 ft. to 300 ft. wide, reaches a height of 125 ft., and extends for 4 m. Lucy's Dome, the loftiest of the vertical shafts, is 300 ft. high. Many of the avenues are covered by a remarkable variety of crystals, and in the chambers stalagmites and stalactites abound. The fauna consists largely of blind fish and several insect species.

Mammoth Cave, Kentucky. One of the great limestone chambers. Courtesy of Amer. Mus. Nat. Hist.

MAMORÉ. River of Bolivia. It rises in the Cochabamba Mts. and the main stream, here called the Rio Grande, follows a circuitous course round the E. end of the range, and finally flows N.N.W. to unite with the Beni to form the Madeira, an affluent of the Amazon. Its chief tributary, the Guaporé, forms the N.W. boundary of Bolivia.

MAMRE. Perhaps originally the name of an Auerite, who seems to have given it to a plain where Abraham bought the Cave of Machpelah as a burying place for Sarah, and was afterwards buried in it himself. See Abraham; Machpelah.

MAN. In the animal kingdom man belongs to the sub-order Anthropoidea, of the order of Primates. With the anthropoid apes, nearest relatives of the human species, he is plantigrade, walking on the flat of the foot, and like them also his body is adapted to an upright posture. In the main, however, the anthropoids—tree-living, climbing animals—use all four limbs for progression, whereas man, a land-living form, uses only his lower limbs for this purpose, his hands thus being set free to be the servants of his brain. In man the thumb is opposable and adapted for grasping; in the other primates the great toe is an opposable digit, and usually the thumb also. The brain chamber in an average Englishman measures about 90 cubic ins.; that of an average male gorilla about 32 cubic ins. In the pattern of its convolutions the brain of man is more complex. Apart from these physical differences, it is in his power of articulate utterance and his mental attributes that man is especially distinguished from the gorilla, the chimpanzee, and the orang.

In 1912 fossil bones were found at Pittdown in Sussex, which raised a problem similar to that of Pithecanthropus found in Java. In this case only the greater part of a skull, less than half of a lower jaw, and three teeth were found, in a stratum apparently of about the same geological date as that yielding the Javanese remains. The jaw alone might have been assigned to an anthropoid, but the skull is distinctly human. The name *Eoanthropus* was given to this form of being.

Another discovery of an extinct type or species of human is known as Neanderthal man. The type specimen was discovered in 1857 in the Neanderthal cave, near Düsseldorf. Further discoveries have been made of this type in Belgium, France, Spain, Germany, and Croatia, the remains all in cave-strata or

deposits which are attributed to the later half of the Pleistocene period.

A human skull, with some limb bones, discovered in 1921 at the Broken Hill Mine in Rhodesia can serve as progenitor of the living Australoid type. *Homo rhodesiensis* probably inhabited Africa at the time when Neanderthal man was living in Europe.

In November, 1928, fossil human remains were discovered near Peking. Parts of two jaws, adult and child, with parts of brain cases, were found. In Dec., 1929, the larger part of a skull was discovered. Named *Sinanthropus Pekinensis*, this type is referred to the early or mid-Pleistocene period. In its characteristics the skull approaches to the anthropoids, but has peculiarities which have caused it to be regarded as human and near the direct line of modern man's ancestry.

There is evidence to show that men of the modern type were spread over Europe in mid-Pleistocene times. Of the early transitional stages which led on to the modern type, and of the period at which such "missing links" flourished, we have no knowledge. To account for such forms as have been discovered we must postulate a family tree of the kind shown in the illustration. There it will be seen that *Pithecanthropus*, *Eoanthropus*, and Neanderthal man are represented as collateral descendants from a common stock.

ORIGIN OF MAN. Although modern man is easily distinguished from all other animals, there was a time—of comparatively recent date in a geological sense—when it would have been difficult for even the most skilled anatomist to draw a sharp line between human and anthropoid types. In 1894 a thigh bone, skull cap, and three teeth were found in Java in a Pliocene stratum. The thigh bone, human in shape, gives assurance that *Pithecanthropus erectus*, as the type is named, walked in the human manner. The skull cap has anthropoid characters, yet the brain space is large, and the brain must have been rather human than anthropoid in form. The teeth, too, resemble human teeth. Neither human nor ape, it is the representative of a great missing group which we may name "humanoids." See *Anthropology*, and chart p. 98.

MAN. Isle or island in the Irish Sea. Part of the British Empire, it has a government and constitution distinct from that of the United Kingdom, although the imperial parliament exercises certain powers over it. It is 27 m. from the W. coast of England, and about the same from both Scotland and Ireland: with a length of 33 m., it has an area of 221 sq. m. Belonging to it is a small island on the S., the Calf of Man. Pop. 49,270.

Douglas is the capital and the largest town. Other places are Castletown, the old capital, Peel, and Ramsey, while Port Erin, Port St. Mary, Kirkmichael, and Laxey are small places on the coast. During the Great War there were internment camps at Knoekaloe and Douglas. The island is known for its breed of tailless cats. The coat of arms is three legs, taken, it is said, from a pillar cross at Maughhold in the N. of the island. The highest point

is Snaefell (2,054 ft.). A rly. system of about 50 m. links up the principal towns, and there are electric tramways radiating from Douglas. There is regular steamboat communication with Liverpool, Fleetwood, Barrow, Glasgow, Dublin, Belfast, and other places.

The island is governed by a lieutenant-governor appointed by the crown, a council consisting of the bishop, deemsters, and other high officials, and a House of Keys, an elected body of 24. These two bodies form the court of Tynwald, which is the executive as well as the legislative authority. The island revenue comes mainly from the customs duties, and of it £10,000 a year is paid to the imperial exchequer. There are courts of justice. In 1928 the king presented to the island crown property consisting of Castle Rushen, Peel Castle, and Tynwald Hill. See *Keys*, *House of*.

MANAOS. City and river port of Brazil, the capital of the state of Amazonas. It stands on the Rio Negro, 10 m. from its entry into the Amazon and 1,000 m. from the Atlantic. It has a good harbour, is a regular port of call for liners, and is connected by cable with Pará. Formerly known as Barra do Rio Negro, it is a handsome town, with fine parks and public buildings. Steamer connexion is maintained with Europe and the U.S.A. Rubber, cocoa, nuts, etc., are exported. Pop. 75,704.

MANASSEH. (1) Elder son of Joseph (Gen. 41), over whom his younger brother Ephraim took precedence. His descendants, a tribe which settled on both sides of the Jordan, were noted as warriors, e.g. Gideon and Jephthah.

Manchester. 1. The Cathedral, dating from the 15th century, with Bishop Fraser's chapel. 2. John Rylands Library. 3. City Hall, opened in 1877

(2) King of Judah, son and successor to Hezekiah. He reigned c. 697-642 B.C., restored idolatry, persecuted the prophets, and was carried captive to Babylon. An apocryphal Prayer of Manasseh occurs in some MSS. of the Septuagint (2 Kings 21: 2 Chron. 33).

MANATEE. Aquatic mammal. It is about 8 ft. in length, and resembles a bulky and heavy seal; but there are no external hind

Isle of Man. Map of the self-governing island in the Irish Sea, part of the British dominions

limbs, the body ending in a broad flattened tail, and the fore limbs forming paddles. The head is blunt, and the great upper lip is divided. The eyes are comparatively small; the skin is thick and wrinkled; and the body is covered with fine hairs. Manatees feed upon aquatic vegetation. See *Dugong*.

MANCHE. Department of France. It takes its name from La Manche, a French name for the English Channel. It is on the channel and includes the Cotentin peninsula. St. Lô is the capital, but

Cherbourg is the most important place. Pop. 431,367

MANCHESTER. City and inland seaport of Lancashire. It stands on the river Irwell, at its confluence with the Irk and Medlock, 187 m. N.W. of London and 31 m. E. of Liverpool. Its suburbs include Ardwick, Gorton, Hulme, Rusholme, and Withington, while Salford, although a distinct municipality, is separated only by the river. It is served by the L.M.S. and the L.N.E. Rylys., the chief stations being Central and Victoria, and by a network of suburban lines, some of which have been electrified. It is also served by the Manchester Ship Canal and the canal system of England. The city covers about 34 sq. m. Pop. 730,000.

Standing in the midst of a district containing 4,000,000 people, Manchester is a great distributing centre. It is also the headquarters of the cotton manufacture, and its other industries include engineering and

chemical works. It is the newspaper centre for the north of England, and its chief journal, *The Manchester Guardian*, has a world-wide reputation. It is known for its keen interest in politics and economics, being the Mecca of free trade, and has also developed a lively interest

12th century priory church. The chief industries are tanning, brewing and milling, and the making of agricultural implements. Malton is also a centre for horse breeding. Near is Castle Howard. Recent discoveries show that Malton was a large Roman station. Market days, Sat. and Tues. Pop. 4,438.

MALTOSÉ. Sugar prepared by the action of malt upon starch. It was at first mistaken for dextrose, but its true nature was pointed out by A. P. Dubrunfaut, who gave it the name maltose. Maltose crystallises in fine needles, and when boiled with dilute sulphuric acid is decomposed into grape sugar.

MALVERN. Name used for Great Malvern, an inland watering place and urban dist. of Worcestershire, and also for a number of other places on the Malvern Hills.

Malvern, Worcestershire. The cruciform Priory Church from the N.E.

These include Little Malvern, Malvern Link, Malvern Wells, West Malvern, and North Malvern. Great Malvern, 128 m. from London and 9 m. from Worcester, has a station maintained jointly by the L.M.S. and G.W.R. Its chief building is the beautiful priory church, and there are remains of a refectory. Pop. 17,809.

Malvern College is an English public school at Malvern. It was opened in 1865 and has accommodation for about 500 boys.

The Malvern Hills extend about 9 m. between Worcestershire and Herefordshire. Worcester Beacon and Hereford Beacon are both nearly 1,400 ft. high. The district called Malvern Chase was disafforested in the 17th century. To preserve various beauty spots here the Malvern Hills Act was passed in 1924.

MAMELUKES (Arab. slaves). Military class of foreign origin in medieval and modern Egypt, to which they gave a number of sultans.

The Mamelukes, consisting of slaves trained as body guards, became an invaluable fighting force; their leaders were taken from their own ranks, and in 1250 their commander, Kutuz, overturned the government and made himself sultan of Egypt. Ten years later another Mameluke captain, Beibars, seized the sultanate. From this time the Mamelukes were masters of Egypt, and successive Mameluke sultans ruled until the conquest by the Ottoman Turks in 1517. The series is divided into two groups, the Turkish (1250-1390) and the Circassian (1390-1517).

MAMETZ. Village and wood of France, in the dept. of Somme, 5 m. E. of Albert. Both were prominent in the Great War. The village, occupying a commanding position, was captured July 1, 1916, and the wood of 200 acres on July 10-12, 1916. Both were abandoned in the German offensive of March, 1918, and recovered by the Allies in the autumn.

Mammoth. Mounted specimen of Siberian mammoth, preserved in the Arctic ice, now in Leningrad Zool. Mus.

MAMMAL (Lat. mamma, a breast) The highest class of vertebrate animals, those which suckle their young, usually regarded as standing at the head of the animal world. Except in the lowest group, the young are produced by a more or less prolonged period of gestation, during which organic connexion exists between the foetus and the mother; and for a further period the young mammal is dependent on the milk of its mother for its food. Mammals are distinguished from the birds in the structure of the skull, and from fishes, reptiles, and batrachians by having warm blood. They all breathe air by means of lungs, and none of them passes through stages of metamorphosis in its life history. All are viviparous except the three egg-laying monotremes of Australasia. In size mammals range from the pygmy shrew to the whale.

Mammals are divided by zoologists into three sub-classes, known as Prototheria, Metatheria, and Eutheria. The Prototheria (primitive mammals) comprise the three species of egg-laying mammals (monotremes) found in Australasia. The Metatheria comprise the marsupial or pouched mammals, of which the kangaroo is a well-known example. The Eutheria comprise all the rest of the Mammalia, and are usually divided into nine orders: 1. Edentata (sloths, ant-eaters, and armadillos); 2. Cetacea (whales, dolphins, and porpoises); 3. Sirenia (manatees and dugongs); 4. Ungulata (hoofed mammals); 5. Rodentia (gnawing mammals); 6. Carnivora (flesh-eating mammals); 7. Insectivora (insect-eating mammals); 8. Chiroptera (Bats); 9. Primates (lemurs, monkeys, man).

Mammals first appear in the Jurassic period, the earliest being mostly Marsupials or Insectivora. Certain reptiles, the Theromorphs, occurring in earlier formations, the Permian and Triassic beds, have many mammalian features which appear to connect them with the monotremes. See Animal; Zoology; and the articles on the various animals.

MAMMEE APPLE (*Mammea americana*). Large tree of the natural order Guttiferae. It is a native of tropical America. The large seeds are used medicinally, and a resin obtained from the bark is used to rid the feet of chigoes. It derives its name from the Haitian name of the fruit, mamey.

MAMMON (Aram. mamona, riches). Phoenician term for gain. In the N.T. it implies love of money and deceitful wealth (Matt. 6, 24; Luke 16, 9 & 13). The Book of Enoch, 62, 10, has the expression mammon of unrighteousness, a modern equivalent of which is filthy lucre.

MAMMOTH (*Elephas primigenius*). Extinct animal. An inhabitant of central Europe in glacial and post-glacial periods, when the North Sea was covered by forest land, its remains have also been found throughout Asia and in N. America, whither it probably migrated. It does not seem to have greatly exceeded the modern African elephant in size. Generally closely resembling the Indian elephant, the mammoth had long and slender tusks which curled upwards and outwards, and was covered with long hair and a thick, woolly under-fur. See *Brontosaurus*; *Diplo-*

doeus; *Elephant*; *Mastodon*.

MAMMOTH CAVE. Limestone cavern in Kentucky, U.S.A., about 85 m. by rly. S. by W. of Louisville. It consists of numerous chambers, at varying levels, connected by passages or avenues, domes, grottoes, and galleries, and contains several streams or lakes linking up with the Green river, which passes by. The main cave is from 40 ft. to 300 ft. wide, reaches a height of 125 ft., and extends for 4 m. Lucy's Dome, the loftiest of the vertical shafts, is 300 ft. high. Many of the avenues are covered by a remarkable variety of crystals, and in the chambers stalagmites and stalactites abound. The fauna consists largely of blind fish and several insect species.

Mammoth Cave, Kentucky. One of the great limestone chambers. Courtesy of Amer. Mus. Nat. Hist.

MAMORÉ. River of Bolivia. It rises in the Cochabamba Mts. and the main stream, here called the Rio Grande, follows a circuitous course round the E. end of the range, and finally flows N.N.W. to unite with the Beni to form the Madeira, an affluent of the Amazon. Its chief tributary, the Guaporé, forms the N.W. boundary of Bolivia.

MAMRE. Perhaps originally the name of an Amorite, who seems to have given it to a plain where Abraham bought the Cave of Machpelah as a burying place for Sarah, and was afterwards buried in it himself. See Abraham; Machpelah.

MAN. In the animal kingdom man belongs to the sub-order Anthropoidea, of the order of Primates. With the anthropoid apes, nearest relatives of the human species, he is plantigrade, walking on the flat of the foot, and like them also his body is adapted to an upright posture. In the main, however, the anthropoids—tree-living, climbing animals—use all four limbs for progression, whereas man, a land-living form, uses only his lower limbs for this purpose, his hands thus being set free to be the servants of his brain. In man the thumb is opposable and adapted for grasping; in the other primates the great toe is an opposable digit, and usually the thumb also. The brain chamber in an average Englishman measures about 90 cubic ins.; that of an average male gorilla about 32 cubic ins. In the pattern of its convolutions the brain of man is more complex. Apart from these physical differences, it is in his power of articulate utterance and his mental attributes that man is especially distinguished from the gorilla, the chimpanzee, and the orang.

In 1912 fossil bones were found at Piltdown in Sussex, which raised a problem similar to that of Pithecanthropus found in Java. In this case only the greater part of a skull, less than half of a lower jaw, and three teeth were found, in a stratum apparently of about the same geological date as that yielding the Javanese remains. The jaw alone might have been assigned to an anthropoid, but the skull is distinctly human. The name Eoanthropus was given to this form of being.

Another discovery of an extinct type or species of human is known as Neanderthal man. The type specimen was discovered in 1857 in the Neanderthal cave, near Düsseldorf. Further discoveries have been made of this type in Belgium, France, Spain, Germany, and Croatia, the remains all in cave-strata or

1357 and 1371, is in French, and the earliest English text is a faulty adaptation of it. The author states that he was born at St. Albans, and that he had travelled very widely in the East. The real author, however, appears to have been a Liège professor of medicine, Jehan de Bourgogne. The first part of the Travels is a guide to the Holy Land for the use of pilgrims, plagiarised from a German traveller, William of Boldensele, and from others. The second part, which describes more distant travels in Asia, is taken from Odoric of Pordenone and others.

MANDOLINE. Musical stringed instrument with pear-shaped body and short neck. It is of the lute class, but has pairs of strings tuned in unison. In the larger Milanese mandoline, with five or six pairs of strings, the tuning is similar to that of the lute; but the much commoner Neapolitan mandoline has four pairs of strings, tuned in fifths like the violin. They are played with a plectrum, the special effect being produced by a tremulous movement of the hand, which keeps the strings in continuous vibration.

Mandoline of Neapolitan type, with four pairs of strings

MANDRAKE (*Mandragora vernalis*) on **DEVIL'S APPLES.** Perennial herb of the order Solanaceae. A native of the Mediterranean region, it has a thick, fleshy root and large, oblong, lance-shaped leaves. The flowers are white or bluish, with network veining. The forking of the root often produces a resemblance to the human figure, and this from very early times surrounded the plant with superstitious beliefs. Its possession was said to bring good fortune in all the affairs of life.

Mandrake. Foliage, flowers, and root. Inset, fruit

MANDRILL (*Papio maimon*). Large species of baboon, found on the W. coast of Africa. The muzzle somewhat suggests the snout of a pig, and the nose is a brilliant vermilion, with bright blue and deeply ridged swellings on either side. The skin of the hinder part is shaded with purple, and the great callosities on the buttocks are bright red. The fur is olive brown, with a dark crest on the head and a yellowish beard on the chin. The canine teeth are of great size. In its native state the mandrill goes about in troops, and is said to live largely on insects. See Drill.

Mandrill. Specimen of the brilliantly coloured West African baboon
W. S. Berridge, F.Z.S.

MANET, ÉDOUARD (1832-83). French painter. Born in Paris, Jan. 25 1832, he became in 1863 the leading spirit in the École de Batignolles, which included Degas, Monet, Sisley, and Pissarro. His influence on Monet led to the discovery of Impressionism, and he was one of the first to demonstrate the principles of open-air illumination. In 1863 he exhibited *Déjeuner sur l'Herbe*, and in 1864 *Olympia*, now in the Louvre. Another important picture by him is *Music at the Tuileries*, 1867, in the National Gallery, London. He died in Paris, April 30, 1883.

MANETHO. Egyptian priest and writer. Born at Sebenytus (Semenud), in the Nile delta, he became chief priest and keeper of the sacred records at Heliopolis in the reigns of Ptolemies Soter and Philadelphus (323-247 B.C.). He was the author of *Aegyptiaca*, a history of Egypt from the earliest times to Alexander the Great. Especially valuable is the chronological list of Egyptian kings and dynasties. See Egypt.

MANGABEY (*Cercopithecus*). Group of monkeys found in W. Africa, and usually distinguished by the presence of white or flesh-coloured eyelids. They are nearly related to the maeaque (q.v.), but are of more slender build and have a shorter muzzle. They are long-tailed, and the general colour of most of the species is blackish.

MANGANES. Metallic element, symbol Mn; atomic weight 54.93; atomic number 25; specific gravity 7.13 to 8.8; melting point 1,893° C. Normally, when pure it is hard; greyish white with a reddish tinge; it is brittle, and tarnishes in the atmosphere. The chief ores are pyrolusite, the oxide; rhodonite or manganese spar; wad or bog manganese; triplite, a phosphate with iron and lime; and manganite, a variety of the latter. Several ores are used directly in the preparation of glass; for the manufacture of amber colours; in the colouring of pottery, tiles, and bricks; and, since they yield oxygen freely, for bleaching textile and other materials. Manganese ores are widely distributed. The greatest deposits are those of the Caucasus in Russia, and those of Minas Graes, Brazil.

There are six oxides, the most important being the dioxide or black oxide of manganese, MnO_2 . Of manganese salts, the manganate and permanganate of sodium or potassium form well-known disinfecting liquids. Some manganese alloys are of great importance, especially in the manufacture of steel (e.g. spiegeleisen and ferromanganese), while the metal is also used in the preparation of manganese bronze and brass.

MANGE. Inflammation of the skin in cattle, dogs, cats, and other animals, caused by the burrowing of itch mites in the epidermis. There are two forms: sarcoptic scabies, produced by mites of the genus *Sarcoptes*; and follicular mange due to a mite of another family, inhabiting the follicle from which the hair springs and the sebaceous follicles, particularly around the nose. As the trouble is highly contagious the patient should be isolated and its bed burned.

MANGIN, CHARLES MARIE EMMANUEL (1866-1925). French soldier. Born at Sarrebourg, Meurthe, July 6, 1866, he entered the army in Aug., 1885. He saw active service in Senegal, in the Sudan, 1889-99, and in Morocco. In the first battle of the Marne he led the 5th infantry division. During the Verdun operations he recaptured Douaumont and Vaux. Criticised for his conduct in

the offensive of April, 1917, he was exonerated after a searching inquiry. On June 11, 1918, he conducted the counter-attack which arrested the German offensive on Compiègne; and from July 18 to Aug. 2 took a leading part in the counter-offensive which forced the Germans to retire on the Marne and the Aisne. On Aug. 20 he drove the enemy to the Oise and the Ailette. Having commanded the French army on the Rhine in 1919, Mangin died May 12, 1925. See Marne.

C. M. E. Mangin, French soldier

MANGO (*Mangifera indica*). Evergreen tree of the order Anacardiaceae. A native of the East Indies, it attains a height of about 60 ft., and its leaves are oblong lance-shaped. The pea-green flowers, streaked with yellow, form dense clusters, and are succeeded by bunches of kidney-shaped fruits, three to six inches in length and nearly half as broad, with tough green skin and yellow pulp, enclosing a fibrous-coated seed. The fruit of the best cultivated kinds is very delicate. It is also made into chutney and preserves.

Mangold Wurzel (Ger. beet-root). Cultivated variety of the sea beet, principally used for feeding stock. See Beet.

Mango. Specimen of the East Indian tree in fruit

MANGOSTEEN (*Garcinia mangostana*). Small evergreen tree of the order Guttiferae. A native of the Moluccas, it has elliptic, leathery leaves and rose-like red flowers with waxy petals, succeeded by fruits the size of an orange with leathery, dark-purple rind, enclosing a white or rosy pulp with an agreeable and delicate flavour. An infusion of the dried rind makes an astringent drink used in dysentery.

Mangotsfield. District of Gloucestershire. It is 5½ m. N.E. of Bristol on the L.M.S. Rly. and in a coal-mining district. Pop. 10,720.

MANGROVE. Genus of trees of the order Rhizophoraceae. Natives of tropical coast swamps, they have thick, leathery leaves and large flowers. The fruits are inversely pear-shaped, and the seed germinates while the fruit is still on the tree. The seedlings grow in this position until they have stems several feet in length, with roots at the lower end and a leaf bud at top, when they drop into the mud and continue their growth. The fruits of the common mangrove are edible, and their fermented juice provides a kind of wine. The bark is used for tanning and dyeing; also as a fever medicine.

The white mangrove, or *Courida*, is a small evergreen tree of the order Myoporaceae.

Mangrove. Trunk and roots of *Rhizophora mangle*

MANHATTAN. Island at the mouth of the Hudson river, U.S.A. It is $13\frac{1}{2}$ m. long, has an extreme breadth of $2\frac{1}{2}$ m., and is bounded N by the Harlem Ship Canal, and E. and S.E. by the Harlem and East rivers. It contains the financial and commercial quarters of New York City, of which the central and N. portions comprise the principal residential district. Several fine bridges connect with Long Island and other parts of New York, one of them being called the Manhattan Bridge, while tunnels and ferries provide communication across the Hudson river. See New York.

MANI, MANES OR MANICHAEUS (215-276) Persian religious reformer. He formulated a system to supplant Zoroastrianism (q.v.), proclaiming himself a messenger of the true God. At the instigation of the priests he was crucified, his body being flayed, stuffed with hay, and nailed to the city gate that was later named after him. Of his writings only fragments remain.

MANIA. Disease of the mind characterised mainly by loss of control. The condition is often associated with periods of depression, and many alienists prefer to speak of manic-depressive insanity rather than to regard mania by itself as a distinct form. The cause is not known, but hereditary influences play a part. Sleeplessness is often an early symptom. Complete recovery may occur, but the condition may become chronic. Ultimately the patient may die either from exhaustion or from an intercurrent disease such as pneumonia or tuberculosis.

MANICHAEISM. Religious system of W. Asia, founded by Mani (q.v.) in the 3rd century A.D. Mystical and dualistic, and aiming at an explanation of the problem of human existence, it consisted of a fusion of Parsee metaphysics, Buddhist morals, Babylonian mythology, and certain elements of Gnosticism and Christianity. Followers were divided into the elect, bound to an ascetic rule, and the hearers. The elect went direct to paradise, the hearers to a kind of Purgatory, and non-Manichaeans to Satan. The system spread to India, Turkistan, Syria, Palestine and Egypt.

MANIFEST. A document containing a description of the cargo of a ship and particulars of destination. Every vessel carrying goods must have a manifest, to be delivered to the Customs officers at the port of arrival.

MANIFOLD. River of Staffordshire. A tributary of the Dove, which it joins near Ashbourne, it is noted for its sinks or swallets. It disappears down these and comes to the surface again in the grounds of Ilam Hall, 4 m. distant.

MANILA. Capital and chief port of the Philippine Islands. It stands on the W. coast of Luzon Island and is divided by the Pasig river, the old walled city lying to the S. and the modern suburbs to the N. The former contains the 16th century cathedral, archbishop's palace, university, government buildings, convents, hospitals, colleges and schools, and the observatory. The chief manufactures are cigars, sugar, or tobacco, Manila both were produced, and textiles. It is the centre of the Great Indian Archipelago.

The village, occupying a commanding position, was captured by the Americans on July 1, 1916, and the wood was destroyed in 1599; on July 10-12, 1916. Both were destroyed. In the German offensive of March, 1917, 3,000 recovered by the Allies in the autumn, 500.

Manila, capital of the Philippine Islands. The 16th cent. Cathedral

Manila, a remarkable subject to earth-

MANILA BAY. Large inlet of the China Sea in S.W. Luzon, Philippine Islands. It forms one of the finest harbours in the Far East.

A battle was fought here during the Spanish-American War, May 1, 1898, when Commodore Dewey (q.v.) destroyed the Spanish fleet under Admiral Montojo.

MANILA HEMP OR ABACA. Fibre obtained from *Musa textilis*, a plant of the banana family. A native of the Philippine Islands, it is grown in many tropical countries. The outer fibre is very strong and makes excellent ropes. The old ropes, unravelled and picked, are made into Manila paper. The fine inner fibres are worked into dress fabrics by the natives, and in Europe are manufactured into veils, handkerchiefs, and clothing. As a binding medium for builders' plaster, Manila hemp is stronger than animal hair.

MANIPLE (Lat. manipulus). Eucharistic vestment carried on the left wrist of the celebrant. It is a strip of silk or other material about 3 ft. long, sometimes with a fringe, needlework, and gold embroidery, and with ends fastened. It is said to symbolise penance and sorrow.

MANIPUR. Native state of India, in Assam, on the Burmese border. During the Indian Mutiny its raja rendered service to the British. In 1891 the raja was deposed by the hill tribes under the Senaputty (commander-in-chief), and the commissioner and the resident were killed. A punitive expedition was sent out, the Senaputty was hanged, and Chura Chund, a child of the ruling family, declared raja, a British officer being appointed to administer the state until his majority. The state is now administered by a durbar consisting of a president (lent by the Assam government) and six members. The present ruler is a maharaja, who is entitled to a salute of 11 guns. The capital is Manipur or Imphal. Area, 8,456 sq. m. Pop 384,016.

Manitoba. Lake of Canada. In the prov. of Manitoba, it abounds in fish, has a length of 122 m., and an area of 1,820 sq. m.

MANITOBA. Prov. of the Dominion of Canada. Its area is 251,832 sq. m., of which 27,055 are water. It lies between Ontario and Saskatchewan, and is watered by many rivers, including the Red river and the Nelson. There are three great lakes: Winnipeg, Winnipegosis and Manitoba. Winnipeg is the capital. The affairs of the prov. are controlled by a lieutenant-governor and a legislative assembly of 55 members. It is represented by 6 members in the Senate and 17 in the Dominion Parliament at Ottawa.

Manitoba is a grain-producing area, the chief crops being wheat, barley, and oats. Horses, cattle, and pigs are reared, while cheese and butter are made.

There is a certain amount of fishing in the lakes and rivers. Coal is mined, and iron and gold are found. The prov. has 4,293 m. of rly. and all the transcontinental lines cross it. Before its entry into the Dominion, in 1870, Manitoba was known as the Red River settlement, a region inhabited only by fur traders and administered by the Hudson Bay Company until 1869.

The pop., estimated at 639,056 in 1926, is mixed, but the bulk of the inhabitants are of British descent.

The university of Manitoba was founded at Winnipeg in 1877, and has a library, laboratories, etc. In 1898 the government of the prov. made it a grant of 150,000 acres. See Canada.

Manitow. A N. American Indian name for a deity, spirit, or any supernatural being.

MANLIUS, MARCUS. Roman hero. He received the surname of Capitolinus from the fact that in 390 B.C. he frustrated an attempt of the Gauls to take the Capitol. Later, as champion of the plebeians, he incurred the hostility of the patricians, was charged with treason, and thrown from the Tarpeian Rock.

Manly. Suburb of Sydney, New South Wales. It is beautifully situated on a peninsula, and its beach is noted for its surf bathing.

MANN, TOM (b. 1856). British Socialist. Born at Foleshill, Warwickshire, April 15, 1856, he worked on a farm from 9 till 11, as a miner till 14, joined the Amalgamated Society of Engineers in 1881, and from that time became closely associated with the trade union and Socialist movements. He was first secretary of the London Reform Union and of the National Democratic League. A prominent leader in the London dock strike of 1889, he was active in labour propaganda in Australia in 1906. His writings include *A Socialist's View of Religion*; *Russia in 1921*; *Tom Mann's Memoirs*; *What I Saw in China, 1927*; and various pamphlets on socialism.

Tom Mann, British Socialist

MANNA. Edible coagulated saccharine juice which exudes from various trees or shrubs, including the manna ash, species of tamarisk, and the spiny camel's thorn (*Alhagi maurorum*) of the East. The food of the Israelites in the wilderness (Ex. 16, etc.) was probably the exudation from the *Tamarix mannifera*.

MANNA ASH (*Fraxinus ornus*). Tree of the order Oleaceae, native of S. Europe. It has opposite, toothed, lance-shaped leaflets, and small, greenish-white flowers in large clusters. It is grown in S. Italy for the production of commercial manna, used as a mild laxative. The manna is light, porous, and yellow in colour, and is a valuable food.

Manna. Flower spray of *Alhagi maurorum*

MANNERS, JOHN HARTLEY (1870-1928). American dramatist. Born Aug. 10, 1870, he became an actor in 1898, and continued on the stage for seven years. His plays included *A Queen's Messenger*, 1899; *The Money Moon*, 1912; and *Peg o' My Heart*, 1914. He died in New York, Dec. 19, 1928.

Mannheim, Germany. Bridge over the Neckar and the northern part of the town

MANNHEIM. Town of Germany, in Baden. It is near the junction of the Rhine and Neckar, and the chief centre of trade on the upper Rhine. The manufactures include ironfounding, machinery, glass, earthenware, woollen goods, tobacco, and chemicals. The palace, a huge building containing collections of antiquities and paintings, was built by the elector palatine Charles Philip, and enlarged by his successor, Charles Theodore, who also

built the theatre, 1776-79, but removed the court to Munich in 1778. Schiller's early plays were produced here. There is a Kauflhaus (merchants' hall). Pop. 247,480.

MANNING, HENRY EDWARD (1808-92). English cardinal. Born at Totteridge, July 15, 1808, son of a London merchant, he was educated at Harrow and Balliol College, Oxford.

In 1832 he was made fellow of Merton and was ordained. In 1834 he became rector of Lavington, Sussex, and married Caroline Sargent, sister-in-law of Samuel Wilberforce. In 1851 he went over to the Church of Rome, and, now a widower, studied in Rome and was ordained. In 1857 he founded the London congregation of the Oblates of S. Charles at Bayswater, and on Cardinal Wiseman's death in 1865 he became archbishop of Westminster. He was made a cardinal in 1875, and died Jan. 14, 1892. He is buried in Westminster Cathedral. Manning was a supporter of the temperance movement. He wrote a number of books, including *The Temporal Mission of the Holy Ghost*, 1865, and *The Eternal Priesthood*, 1883. Consult *Lives*, A. W. Hutton, 1892; F. A. Gasquet, 1895; E. S. Purcell, 1896; F. de Pressensé, 1897; and Shane Leslie, 1921.

H. E. Manning,
English cardinal

MANNINGTREE. Town of Essex. It is 8 m from Colchester on the L.N.E.R. There is a trade in wheat and malt, while malting is the chief industry. Pop. 870.

MANNIS, SIR AUGUST FREDERICK (1825-1907). British musical conductor. Born at Stolzenberg, near Stettin, March 12, 1825, he settled in London in 1854 as assistant conductor at the Crystal Palace. Conductor there from 1855-1901, by his encouragement of British composers he exercised a powerful influence on musical progress in England. Having become a naturalised British subject, he was knighted in 1903, and died March 1, 1907.

MANOEL. Name of two kings of Portugal. Manoel I, king from 1495 to 1521, is known as the Fortunate. He sent out Vasco da Gama and other explorers.

Manoel II was born in Lisbon, Nov. 15, 1889, the second son of King Carlos I, his mother being a member of the Orleans family. He succeeded to the throne Feb. 1, 1908, on the murder of his father and elder brother. In 1910, when the republic was established, he fled to England. In 1913 he married Augusta, princess of Hohenzollern-Sigmaringen.

Man-of-War Bird. Popular name for the frigate bird (q.v.), and also given to the albatross.

MANOMETER. Instrument for measuring the pressure or density of a gas. The simplest form is the barometer, which measures atmospheric pressures. Another form is typified in the steam gauge.

MANOR. Name given in England from the 11th century to a territorial unit. Originally, apparently, of the nature of a feudal lordship, it consisted of a lord's demesne and of lands from whose holders he could exact certain fees.

In Norman times the manors varied much in size and in other ways, but certain features appear to have been common to all. Each had a lord and tenants called villeins, who owed him certain duties. There was a poorer class of tenants called cotters, or bondars. A feature of the manor was the manorial courts. These were mainly occupied with civil business concerned with the manorial holdings, and from the records which they kept comes the term copyhold. A steward presided over the

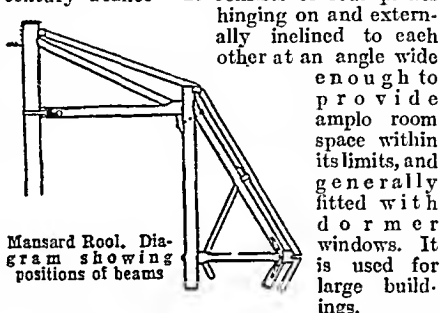

counts, a bailiff managed the lord's own property, and a reeve was chosen by the tenants to look after their interests. Courts, copyholds, and other vestiges of the system survived into the 20th century.

The manor house was the residence of the lord of the manor. The hall was the most important chamber, and in addition to this were the solar, i.e. the lord's private chamber, the kitchen, servery or general service room, larder, and buttery.

MANOR PARK. Residential district of Greater London, Essex. It is between Forest Gate and Ilford, on the L.N.E.R. Here are Manor Park and the City of London cemeteries. There is also a district called Manor Park in the borough of Lewisham.

MANS OR LE MANS. Town of France, capital of the dept. of Sarthe. It lies on the river Sarthe 131 m. by rly. S.W. of Paris, and is an important rly. centre. There is an extensive agricultural trade. The Gothic cathedral of S. Julien contains fine stained glass. The church of Notre Dame de la Couture is noted for its richly ornamented portal. Pop. 72,867.

MANSARD. Type of roof named after François Mansart and much used in 17th century France. It consists of four planes

Mansard Roof. Diagram showing positions of beams

hinging on and externally inclined to each other at an angle wide enough to provide ample room space within its limits, and generally fitted with dormer windows. It is used for large buildings.

MANSART, JULES HARDOUIN (1646-1708). French architect. He was a nephew and pupil of François Mansart (1598-1666), the architect of the château of Blois and other famous buildings. He was employed by Louis XIV to build the palace of Versailles.

MANSE (medieval Lat. mansa, dwelling). General name for the dwelling house of a Scottish minister; also applied to the dwelling house of a minister of any Free Church in England and the U.S.A.

MANSFIELD. Mun. bor. and market town of Nottinghamshire. It stands on the Maun, 13 m. from Nottingham, with stations on the L.M.S. and L.N.E. Rlys. Its grammar school was founded in the 16th century. The centre of a large colliery district, with a technical school for mining students, Mansfield has manufactures of hosiery, boots, machinery, textile fabrics, etc. Market days Mon. and Thurs. Pop. 45,000.

MANSFIELD, KATHERINE (1888-1923). British authoress. Born Oct. 14, 1888, daughter of Sir H. Beauchamp of Wellington, N. Zealand, she published her first book in 1911. In 1913 she married J. Middleton Murry, the critic, and in 1920 made a reputation with *Bliss* and *Other Stories*. She died Jan. 9, 1923. In 1924 appeared *Something Childish*, and in 1928 her *Letters* (2 vols.), edited by her husband.

MANSFIELD, WILLIAM MURRAY, EARL OF (1705-93). British judge. A son of the 5th Lord Stormont, he was born at Seone, near Perth, March 2, 1705, and educated at Westminster and Christ Church, Oxford. Called to the bar in 1730, he entered parliament, was solicitor-general, 1743; attorney-general, 1754; and lord chief justice, 1756-88. Made a baron in 1760 and earl in 1776, he was one of the most eloquent Tory leaders in the House of Lords. His decisions on commercial law were im-

portant, and he gave the famous decision that slaves were free when they landed in England.

Owing to his support of the Roman Catholic relief bill in 1778, his house in Bloomsbury was burnt by the Gordon rioters in 1780. He died March 20, 1793. The title is still held by his descendants. The eldest son is called Lord Seone, and his seat is Seone Palace. See Ken Wood.

Earl of Mansfield.
English judge
After Reynolds

MANSFIELD, RICHARD (1857-1907). British actor. He was born May 24, 1857, and went in 1882 to the U.S.A., where he appeared successfully as Shylock, Henry V, Brutus, and Cyrano de Bergerac. In England his most successful performances were as Dr. Jekyll and Mr. Hyde at the Lyceum, 1888, and as Richard III at The Globe. He died in New London, Connecticut, Aug. 30, 1907.

MANSFIELD WOODHOUSE. Urban dist. of Nottinghamshire. It is 2 m. from Mansfield, on the L.M.S. Rly. and is in a coal-mining district. Pop. 15,000.

MANSHIP, PAUL (b. 1885). American sculptor. Born at Minnesota, Dec. 25, 1885, he studied art in Philadelphia. There and later in Rome he won medals and prizes, and his work soon became known. His pieces include the Morgan Memorial in the Metropolitan Museum of Art, New York, and *Dancer and Gazelles* in the Luxembourg.

MANSION HOUSE. The official residence of the lord mayor of London. It stands opposite the Bank of England. Designed by George Dance the elder, it was built 1739-53. The material is Portland stone. The principal apartment is the Egyptian Hall, where banquets and other functions are held. The city police court is on the first floor. Extensive reconstruction was planned in 1930. There is also a Mansion House in York.

Mansion House, London. Front façade of the lord mayor's official residence

MANSLAUGHTER. Term used in English law. It means unlawfully to slay another without malice aforethought. Manslaughter may be almost an accident, or very nearly a murder, or any homicide between those two. Manslaughter is a felony; and its maximum punishment is penal servitude for life.

MANSON, SIR PATRICK (1844-1922). British physician. Born Oct. 3, 1844, at Fingask, Aberdeenshire, he graduated at Aberdeen University, specialised in parasitology, and became medical adviser to the colonial office. He suggested that the malarial parasite was carried by the mosquito, and the destruction, following his suggestion, of this insect resulted in freeing large areas from malaria. He published *Goulstonian Lectures*, 1896; and *Tropical Diseases*, 1898. Manson, who was F.R.S., was knighted in 1903, and died on April 9, 1922. See Malaria.

MANSTON. Camp of the R.A.F. in Kent. Between Margate and Ramsgate, it was opened in 1920. There is a school of technical training here. Headquarters of No. 23 group, it can accommodate about 2 000 men.

MANSURAH or **EL MANSURA.** City of Lower Egypt. It is a flourishing commercial town and the centre of a large cotton-growing district. Pop. 63 676

MANTEGNA, ANDREA (1431-1506). Italian painter. Born at Vicenza, he began life as a shepherd, but was adopted by Squarcione, and came under the influence of Donatello. He did notable work for the churches of Padua, Verona, and Mantua. His great series of nine pictures, *The Triumph of Julius Caesar*, now in Hampton Court, was executed 1484-90. In 1488, at the request of the pope, he decorated the Belvedere chapel in the Vatican. He painted the *Madonna della Vittoria* now in the Louvre, and died Sept. 13, 1506. Mantegna was one of the greatest Italian painters, and his influence was immense.

Mantilla as worn by Spanish ladies

Mantilla (Sp. little mantle). Veil of black or white lace. It is the national head dress of Spanish women, and is also worn in Portugal.

MANTIS. Genus of orthopterous (straight-winged) insects, forming the family Mantidae, found in S. Europe and the tropics. Large and powerful, long in the body and armed with forelegs specially adapted for seizing insects, they

vary greatly in form and colour, many of them being curiously like the leaves and flowers among which they lurk. The name praying mantis (*M. religiosa*) has been given to the common European species on account of its habit of resting with its forelegs raised

MANTLING. Term used in heraldry. It includes the robe of estate placed behind a shield of arms, the silken capes and scarves or fancy scrolls pendent from the helm or crest, and by extension the ribbons and knotted cords placed as external decorations. See Heraldry.

MANTRAP. Device for catching trespassers. A common form had a pair of metal jaws secured horizontally, when set, by a catch, which was released when a member connected to it was stepped upon. Their use is now illegal, except in the grounds of dwelling houses between sunset and sunrise.

Mantrap. Specimen in the London Museum, shown closed

MANTUA. City of Italy, capital of the prov. of Mantua. It stands on the Mincio, 100 m. by rly. E. S. E. of Milan. The cathedral, founded in the 12th century, is dedicated to S. Peter and Paul. The

city's finest church is that of S. Andrea. In it Mantegna (q.v.) is buried. The ducal palace has 500 rooms, and mural decorations by Giulio Romano. The 14th century castle of the

Gonzagas, with frescoes by Mantegna, houses the archives. There are museums, an observatory and botanical gardens, and a fine academy of arts and sciences. The industries include the making of paper and dolls. Mantua was the birthplace of Virgil. Pop. 44,200.

MANU (Skt. man). In Hindu mythology, the father of mankind. In the Indian story of the flood his life is said to have been saved by a fish, supposed to be an incarnation of Brahma, which dragged him in a ship on to the Himalayas. Here he formed a woman from various substances, and by her became the progenitor of the human race. According to tradition he was the originator of the Laws of Manu, which, though regarded as uninspired, are considered binding upon Brahmans. The Laws, probably based on an older work, date from about the Christian era.

MANURE. Material added to soil to increase its fertility. It is used to promote the growth of crops by supplying plant food, and by generally improving the soil as a medium for plant growth. The oldest is farmyard manure. As a rule, one ton of farmyard manure contains 9-14 lb. of nitrogen, 4-5 lb. of phosphoric oxide, and 9-15 lb. of potash. If it could be obtained in indefinite quantities farmers would ask for little else, but the amount is strictly limited. For many years, therefore, chemists have been confronted with the necessity of finding substitutes. These include sodium nitrate from Chile and calcium nitrate, made artificially in large quantities in Norway. Ammonium sulphate is nearly as effective as sodium nitrate. Phosphatic and potassic fertilisers are also used. See Fertiliser.

MANUSCRIPT (Lat. manu scriptus, written by hand). In the wider sense, anything written; in the narrower sense, a text written, before the general adoption of printing, on papyrus, parchment, or paper. It is commonly abbreviated to MS., plural MSS. The name chartae is reserved for shorter documents, chiefly of an official or business character, dating from the Middle Ages. The name codex (trunk of a tree), applied to old MSS. generally, was originally given to wooden tablets with a coating of wax, fastened together for writing upon. The science dealing with documents and MSS. in general is called Palaeography. Modern discoveries of ancient MSS. have thrown considerable light on history and made notable addition to literature

Pagination was not adopted till the 15th century, the test of the completeness of a MS. being the number of pages on each side of the string, which was placed in the centre.

MANUTIUS, ALDUS (1450-1515). Latinised name of the Italian scholar-printer, Aldo Manuzio or Manucci. He studied at Rome and Ferrara, and about 1490 founded a press at Venice. Here were printed the editions of the Greek, Latin, and Italian classics known as the Aldine editions (q.v.). The Greek books issued by him were the first of their kind. He died at Venice, Feb. 3, 1515, and was succeeded by his son Paulus (1512-74) and the latter's son Aldus (1547-97).

MANZONI, ALESSANDRO (1785-1873). Italian novelist, dramatist, and poet. Born at Milan, March 7, 1785, he became a leader of the romantic school. His novel of 17th century Milan life under Spanish rule, *I Promessi Sposi* (*The Betrothed*), 1825-27, which stands at the head of Italian fiction, established a world-wide reputation and created a school of Italian historical novelists. He wrote many patriotic lyrics, and died at Milan, May 23, 1873.

MAORI (Polynesian aboriginal). People of Polynesian stock in New Zealand. Numbering (1929) 66,271, divided into about 20 clans, and mostly in N. island, they are tall, muscular, olive-brown, with straight or wavy hair, and oval faces of Caucasoid mien. They preserve traditions of the arrival from Rarotonga, about 1350, of their tribal ancestors in a fleet of six double canoes or single outriggers. The newcomers found an indigenous population, partly Papuanian, being absorbed into earlier Polynesian immigrations. Now nominally Christian, the Maoris are often eager for education. They send four members to the house of representatives.

MAORI WARS. These were British campaigns against the Maoris. When, in 1840, Great

Maori. Left, Maori woman carrying her child on her back. Right, an old chief

Britain assumed the sovereignty of New Zealand she guaranteed the Maoris possession of their lands and fisheries. Friction, however, between natives and colonists resulted in the first Maori War, 1845-48, which was closed by the definite settlement of the boundaries. The second war, due to racial hatred, was waged in a desultory fashion between 1860-70. Despite their bad leadership and ignorance of European tactics the Maoris fought stubbornly. The war increased in bitterness between 1863-64, and several severe engagements took place. Exhausted and broken-spirited they finally submitted, and by 1871 all trouble had ended

MAP. A representation of the earth or some portion of it on a plane surface. Most of the earliest maps were based on the seaways, and the Mediterranean was earliest mapped with any great degree of accuracy. To the ancient Egyptians and Greeks we owe the earliest efforts at measurements of the earth's surface and the conception of the network of parallels and meridians which are an everyday feature of modern maps. Eratosthenes (284-204 B.C.) was the first to measure the length of a degree, and Ptolemy the first to insist upon a complete network. As soon as the map of the world was known in outline, attention was given to small areas. The first stage in accurate map-making, or cartography, is the precise measurement of latitude and longitude. The next stage is when the positions of inland landmarks are determined in relation to the coasts. The more modern maps include representation of the heights.

Since a map is flat, and the earth's surface is curved, it is not possible to make a map in which there is not some distortion, and various methods are adopted to reduce the inevitable distortion to a minimum. These include Mercator's, a cylindrical projection; conical, perspective, orthographic, equidistant, stereographic, and gnomonic, or central, projection; and contour.

In contour maps level ground is contourless. The closer the contours the steeper the slope. V-shapes on the contours pointing uphill indicate valleys; pointing downhill, ridges

MAPLE (*Acer*). Genus of trees of the order Aceraceae. Natives of Europe, Asia, and N. America, they have opposite, undivided

Mantua. Vegetable market and the tower and dome of S. Andrea

city's finest church is that of S. Andrea. In it Mantegna (q.v.) is buried. The ducal palace has 500 rooms, and mural decorations by Giulio Romano. The 14th century castle of the

leaves and greenish or red flowers, succeeded by a pair of conspicuous "keys," each consisting of a seed and a wing. They produce useful timber, and the sap is rich in sugar. Several of the American species are tapped for the sap, from which maple sugar is made. The species chiefly yielding sugar are *A. saccharinum* and *A. rubrum*.

MAPLE, SIR JOHN BLUNDELL (1845-1903). British man of business. He was born March 1, 1845. His father kept a furniture shop in London. His son joined him, and built up the business until Maple's, in Tottenham Court Road, became a household word for furniture and kindred goods. Conservative M.P. for Dulwich in 1887, Maple was knighted in 1892, made a baronet in 1897, and died, Nov. 24, 1903. He rebuilt University College Hospital, London.

MAQUI (*Aristotelia macqui*). Evergreen shrub of the order Tiliaceae. A native of Chile, it has oblong, toothed leaves and small greenish flowers, followed by small acid berries from which is made a wine used as a cure for malignant fever. The wood is employed for making musical instruments, and the tough bark yields strings.

MAR, EARL OF. Scottish title held by the families of Goodeve-Erskine and Erskine. The first creation, of 1404, is linked with the barony of Garioch; the other, created in 1565 and linked with the barony of Erskine, 1429, is joined with the earldom of Kellie, 1619. The name Mar is derived from a district in Aberdeenshire. The eldest son of the earl of Mar is known as Lord Garioch, and of the earl of Mar and Kellie as Lord Erskine.

MARABOU (*Leptoptilus crumeniformis*). Species of stork found in Central Africa. Large and ugly, with almost bare head and a pendulous pouch in front of the throat, it is allied to the adjutant (q.v.) stork.

MARACAIBO. Seaport of Venezuela and capital of the state of Zulia. The centre of an oil-producing region, its exports include coffee, cocoa, sugar, rubber, dye-woods, timber, hides, ores, and quinine. Pop. 74,700. The gulf of Maracaibo is a large opening of the Caribbean Sea. In N.W. Venezuela it is connected on the S. with Lake Maracaibo. Also known as the gulf of Venezuela, its length is 75 m. and its extreme width about 150 m. Connected with the gulf by a strait is a lagoon also called Maracaibo.

MARACHESTI. Town of Rumania, in Moldavia. It is 12 m. N. of Focsani, and is a junction of the rly. serving the Sereth valley. The battle of Marachesti was fought between the Rumanians and Russians on the one side and the Austro-Germans on the other, Aug. 12-29, 1917. It was the greatest battle

fought by the Rumanians in the Great War, and it ended in the complete defeat of the Austro-Germans. The Rumanians bore the brunt of the fighting.

MARAH (Heb. bitterness). Place in the wilderness of Shur, where the Israelites found the water bitter, Ex 15, 23; Num. 33.

MARASCHINO. A liqueur, so called from a kind of cherry. A product of Dalmatia, it is distilled from cherry-pulp, to which honey or sugar is added, and contains about 35 p.c. of alcohol. Pron. Marras-keeno.

MARAT, JEAN PAUL (1744-93). French revolutionist. Born at Boudry, Neuchâtel, May 24, 1744, he studied medicine and practised in London, where he published his *Philosophical Essay on Man*, 1773, and *The*

Chains of Slavery, 1774. Returning to Paris and devoting himself to politics, he published in 1789 the first number of *L'Ami du Peuple*, a paper which preached an extremist policy that brought Marat to grief more than once. He took refuge in London 1791-92, and on his return to Paris was elected to the Convention. For attacking the Girondins he was sent before the revolutionary tribunal. Marat was acquitted and the Girondins fell, May 31, 1793. Six weeks later he was assassinated in his bath by Charlotte Corday, July 13, 1793. See Corday, Charlotte.

MARATHA OR MAHRATTA. People in W. and central India. Besides its stricter caste usage, the name also denotes loosely the castes and tribes—such as Kunbis—speaking the 39 dialects of Marathi, which forms the S. group of Indo-Aryan languages. Their number about 18,798,000. The medieval Maharashtra kingdom occupied a triangle from Nagpur to Daman and Karwar. The Maratha power established at Poona by Sivaji, 1657, fell to pieces after his death in 1680. There are a number of Maratha units in the Indian army, and in 1921 the title of royal was conferred on the 11th Marathas in recognition of its services during the Great War.

MARATHA WARS. There were campaigns between the British and the Maratha people of India in 1778-82, 1803, 1816-18, and 1843. The second war is notable for the generalship of Wellesley, later duke of Wellington, who, at Assaye, Sept. 23, 1803, defeated the chieftain Sindia against great odds.

MARATHON, BATTLE OF. Fought 490 B.C. between the Greeks and the Persians, on the plain of Marathon, on the N.E. coast of Attica, about 22 m. from Athens. The Greek forces numbered 9,000 Athenians and 1,000 Plataeans under Callimachus and Miltiades, and the Persian army was five or six times their strength, under Datis and Artaphernes, the generals of Darius. Most of the Persians succeeded in re-embarking in their ships, but some 6,000 lay dead on the field, as compared with the Greek loss of 192 killed. The actual direction of the battle seems to have been in the hands of Miltiades.

MARATHON RACE. Long distance running race. It is named from the battle of Marathon, the result of which was announced at Athens by a courier, sometimes called Pheidippides, who fell dead on his arrival. The race, properly of 26 m. 385 yards, is

one of the events at the modern Olympic games. It has been won by S. Louis (Greece), 1896; M. Theato (France), 1900; Hicks (U.S.A.), 1904; J. J. Hayes (U.S.A.), 1908; K. K. McArthur (S. Africa), 1912; H. Kohlenstein (Finland), 1920. In 1928, at Amsterdam, the race was won by a French Algerian, El Ouafi, in 2 h. 32 m. 57 s.

MARAZION OR MARKET JEW. Seaport of Cornwall. It stands on Mount's Bay, 3 m. from Penzance, on the G.W.R. At low tide it is connected by a causeway with St. Michael's Mount, about $\frac{1}{2}$ m. distant. Fishing is the chief industry. Pop. 1,114.

MARBLE. Variety of crystalline limestone of granular structure. The marbles of commerce do not all come within this definition, many non-crystalline limestones capable of taking a polish being called marbles. Pure marble is snow-white. Black varieties, due to the presence of bituminous matter, are quarried in Ireland and in Derbyshire, where is also found the famous rosewood marble. Parian marble, quarried in Paros, was extensively used for sculpture by the Greeks. Modern statuary work is usually made from marble quarried at Carrara (q.v.), in Italy. Pentelic marble, from Attica, supplied the stone for the Parthenon. Connemara marble is a beautiful green in colour.

MARBLE ARCH. London monument. Modelled by George Nash to serve as an entrance to Buckingham Palace, it was erected there in 1828. Taken down in 1850, it was re-erected in 1851 at the N.E. end of Hyde Park, replacing a brick gateway. Chantrey's statue of George IV, now at the N.E. corner of Trafalgar Square, was intended for the top of the arch, which now stands away from the park.

MARCELLUS, MARCUS CLAUDIUS (43-23 B.C.). Nephew and adopted son of Augustus Caesar. Destined to be the successor of Augustus, whose daughter Julia he married, his early death was deeply mourned.

MARCH. Market town and urban dist. of Cambridgeshire. It is 30 m. from Cambridge on the L.N.E.R., and has engineering and machinery works. In 1929 the L.N.E.R. opened a large marshalling yard here. Market day, Wed. Pop. 8,959.

Marble Arch, London. North side of the arch, with the gates of Hyde Park in the background.

MARCH, EARL OF. Title borne in England and Scotland by nobles who had charge of the marches. In England the family of Mortimer provided earls of March from 1328 to 1425. In 1425 the estates passed to Richard duke of York.

The Scottish earldom was long associated with the family of Dunbar, but was forfeited in 1434. In 1619 the 3rd duke of Lennox was made earl of March, and in 1675 Charles Lennox, a natural son of Charles II, was made duke of Lennox and earl of March. The title is now used as a courtesy one by the eldest son of the duke of Richmond, a descendant of Lennox. Another earldom of March was created in 1697 for William Douglas, a younger son of the 1st duke of Queensberry, but both titles became extinct on his death in 1810.

Maple. Common field maple in full leaf.

Jean Paul Marat, French revolutionist. Musée Carnavalet, Paris.

Marabou. Specimen of the Central African stork.

MARCH, ROGER MORTIMER, EARL OF (c. 1287-1330). Son of the 7th baron Mortimer, he formed a liaison in France with Edward II's queen, Isabella. With Isabella's aid he invaded England and Edward II was dethroned and murdered; but in Oct., 1330, Edward III surprised and captured Mortimer in Nottingham Castle, and the usurper was hanged at Tyburn, Nov. 29, 1330.

MARCHAND, JEAN BAPTISTE (b. 1863) French soldier. He was born at Thoisse, Aisne, Nov. 22, 1863, and entered the army in 1883. He explored extensively in Africa, 1888-99, and in Sept., 1898, refused to comply with Kitchener's request to withdraw from Fashoda till he was ordered to do so by the French government. He won distinction in command of a brigade during the Great War, 1915-17, and was promoted general of division.

J. B. Marchand,
French soldier

MARCHES (Fr. *marche*, border). Term applied to territory about the frontiers of adjoining countries, and especially to the borderland of England and Wales and of England and Scotland. The German equivalent is mark. Till 1536 the marches of Wales were held by English barons known as lords marchers. The word is also applied in Scotland to the borders of burghs and estates.

MARCONI, GUGLIELMO, MARCHESE (b. 1874) Italian scientist and inventor. Born near Bologna, Italy, April 25, 1874, of an Italian father and an Irish mother, he was educated at Leghorn and Bologna universities, and early became interested in the discoveries by Hertz regarding wave transmission. In 1896 he submitted his inventions to the British Government, in 1897 the Marconi Wireless Telegraph Company was founded, and in 1899 signals were transmitted across the English Channel. In Dec., 1901, communication was established between Cornwall and Newfoundland, and a rapid advance was made in methods of communication with ships at sea and in many other directions. In 1924 Marconi invented the beam system, whereby wireless rays can be concentrated into a beam instead of being diffused. Marconi received innumerable honours, sharing the Nobel prize for physics, 1909, receiving the G.C.V.O., 1914, becoming a senator of the kingdom of Italy, 1915, and a marquess in 1929. Wireless messages are called Marconigrams. See Wireless Telegraphy.

Guglielmo Marconi,
Italian scientist

MARCUS AURELIUS (121-180). Roman emperor, 161-180. Marcus Annus Verus, who, as the adopted son of the emperor Antoninus Pius, bears the name of Marcus Aurelius Antoninus, represents the ideal of the highest pre-Christian conception of character. Unlike Antoninus Pius, he did not enjoy peace. In the East the Parthians fell upon his borders. Across the Rhine and the Danube, Germans and Dacians rose in revolt, and Italy itself was smitten with pestilence. His campaigns were conducted conscientiously, successfully, and with an unflinching magnanimity; but his victories were won at

the cost of concessions which admitted large numbers of barbarians to Roman territory: and twice he persecuted the Christians.

Marduk, Chief Babylonian god.
From a relief in the Brit. Mus.

Marduk, High-est Babylonian deity. He is the Biblical Bel and Merodach, and the god of Nebuchadrezzar (Daniel 9).

MAREE. Loch or lake of Scotland. In the co. of Ross and Cromarty, it is about 21 m. W. of Dingwall. Fringed with lofty mountains, it is 13½ m. long, has a breadth varying from ½ m. to 2 m., and covers 11 sq. m.

MARENGO. Village of N. Italy. S. of the Po, 5 m. E. of Alessandria, it is famous as the scene of Napoleon's great victory over the Austrians, June 14, 1800. After seven hours' fighting the Austrians under Count Melas seemed certain of victory. The French, under Desaix, were falling back. Then Napoleon appeared, and largely through the brilliant work of Kellermann's cavalry the Austrians broke and fled, losing about 7,000 in killed and wounded and 3,000 prisoners, out of a total force of some 30,000 men. The French lost about 7,000 killed.

MARE'S TAIL (*Hippuris vulgaris*) Aquatic perennial herb of the natural order Haloragaceae. It is a native of temperate and cold regions of the N. hemisphere. It has a stout rootstock which creeps in lakes and ponds, sending up slender, many-jointed stems, closely invested with whorls of slender leaves. The minute flowers are green, with red anthers, but without petals.

Mare's-tail. Stems and leaves of the aquatic plant

MARGAM. Coal mining centre of Glamorganshire, Wales. It is 4 m. S.E. of Aberavon. Near is Margam Abbey, long the residence of the Talbot family. Margam church, dedicated to the Virgin Mary, was originally the church of a 12th century abbey. Formerly an urban dist., Margam was amalgamated with Aberavon in 1921 to form the borough of Port Talbot (q.v.).

MARGARET (c. 1045-93). Scottish saint and queen. The daughter of Edward, a son of Edmund Ironside, her father was in exile when she was born. He died young, and the princess, having returned to England with her brother Edgar Atheling, took refuge with the king of Scots. About 1067 she was married at Dunfermline to Malcolm III. In 1093 her husband and eldest son were killed in battle with the English, and soon after the queen died in Edinburgh. Three of her sons, Edgar, Alexander I, and David I, became kings of Scotland. She was canonised in 1250.

MARGARET (1430-82). Queen of Henry VI of England. Born March 23, 1430, the

daughter of René of Anjou she was married to Henry VI of England at Titchfield Abbey in 1445. During the madness which attacked her husband, 1453-55, Margaret did her utmost to thwart Richard of York. War broke out, and after a series of defeats she died in France April 25, 1482. See Roses, Wars of.

MARGARET (1283-90). Queen of Scotland. Daughter of Eric II of Norway, and Margaret, daughter of Alexander III of Scotland, she was nominally queen of Scots from 1286-90, when, a marriage having been arranged between her and the future English king, Edward II, she was sent from Norway to Scotland, but died on arriving at Orkney.

MARGARET (1489-1541). Queen of Scotland. Eldest daughter of Henry VII of England, she was born Nov. 29, 1489. In 1503 she was married to James IV of Scotland, who was killed at Flodden in 1513, when Margaret became regent for her child James V. In 1514 she married Archibald Douglas, earl of Angus, and in 1527 Lord Methven. She died at Methven Castle, Oct. 18, 1541.

MARGARET (1553-1615). Queen of France, known as Marguerite of Valois and La Reine Margot of romance. The daughter of Henry II and Catherine de' Medici, she was born May 14, 1553. In 1572 she was married to Henry of Navarre, afterwards Henry IV. She died in Paris, March 27, 1615. She wrote poems and some Memoirs.

MARGARET (1492-1549). French princess. The daughter of Charles of Orleans and the elder sister of Francis I, she was born at Angoulême, April 11, 1492. She married in 1509 Charles, duke of Alençon, and after his death, Henry, king of Navarre. She died Sept. 21, 1549, leaving a daughter, Jeanne, who became the mother of Henry IV. Margaret was the author of *The Heptameron*.

MARGARINE. Name of a butter substitute. It is made of a great variety of animal and vegetable oils and fats and, when exposed for sale, must be labelled with the name, and the wrapper of all packages sold must bear the word margarine. The first butter substitute was the invention of a French chemist named Mège-Mouries. In this fresh beef fat was digested with a weak alkaline solution in the presence of pepsin. The resulting mixture, oiled and pressed, was sold in Paris as oleo-margarine. Mège-Mouries improved his process by churning the fat with cow's milk. Milk is used in the modern process of manufacture to impart butter flavour and to emulsify the fats.

MARGATE. Mun. bor., watering place, and seaport of Kent. In the isle of Thanet, it is 74 m. from London on the S.R. Chiefly

Margate, The harbour, with the tower of Holy Trinity church beyond
Dixon Scott

known as a pleasure resort, it has a jetty, pier, good sands, park, a fine esplanade, and remarkably bracing air. The chief industry, apart from providing for visitors, is fishing. The east end is known as Cliftonville. The town has electric tramway and motor-bus services, which connect it with Ramsgate and other places in Thanet. During the Great War, damage estimated at £275,000 was done by German aircraft. Pop. 46,475.

MARGAY. Small tiger cat of Central and S. America. Its fur is usually bright brown or grey, thickly spotted with black. It lives in forests and preys on birds and small mammals.

Margay Specimen of the South American tiger cat.
W. S. Berridge, F.Z.S.

MARGUERITE. Name given by florists to several plants of the order Compositae. It is more generally applied in gardens to *chrysanthemum frutescens*, which came from the Canary Islands and bears white or yellow flowers.

MARGUERITE, PAUL (1860-1918). French novelist. The son of General J. A. Marguerite, he was born in Algeria, and became a clerk in the ministry of instruction. After publishing several novels he collaborated with his brother Victor (b. 1866) in *Le Pariétaire*, 1896; *Le Carnaval de Nice*, 1897; and *Une Époque*, four volumes of striking stories of the Franco-Prussian War. Other joint works were *Femmes nouvelles*, 1899; *Quelques idées*, 1905; *Sur le vif*, 1906; and *Nos tréteaux*, 1911. Paul Marguerite's later works, written alone, included *La flamme*, 1909; *La maison brûle*, 1913; and *Jouir*, 1918. He died at Hossegor, Landes, Dec. 30, 1918.

Marguerite. Flowers of the daisy.

MARIA THERESA (1717-80). Ruler of the Holy Roman Empire. Born in Vienna, May 13, 1717, a daughter of the emperor Charles VI, she married Francis of Lorraine in 1736. In 1740, Charles VI died, leaving, by pragmatic sanction, Maria Theresa as his heiress, but Charles Albert of Bavaria procured his own election as emperor. Frederick the Great seized Silesia, and Europe was plunged in the war of the Austrian Succession. Before this was ended, in 1748, Charles Albert died.

Maria Theresa, Ruler of the Holy Roman Empire.
From the portrait by M. de Maitens

and Francis of Lorraine was elected emperor as Francis I, but Maria Theresa had to submit to the loss of Silesia. Her minister, Kaunitz, reconstructed the system of European alliances to crush Frederick, who opened the Seven Years' War. In 1765 Maria Theresa's son Joseph II succeeded his father as emperor, and under pressure from him the empress was accessory to the first partition of Poland in 1772. She died Nov. 29, 1780. Her children included the emperors Joseph II and Leopold II.

MARIE ANTOINETTE (1755-93). Queen of France. Daughter of the empress Maria Theresa and Francis I, she was born at Vienna, Nov. 2, 1755. In 1770 she married the dauphin, afterwards Louis XVI. Her lack of education, disregard of etiquette and devotion to Austria made her position at the French court difficult, and when her husband succeeded to the throne in 1774 the grossest libels were circulated about her.

The result of this campaign was that when the Revolution came it was she, rather than the dull and decorous king, who was blamed for the misgovernment of centuries.

The Tuileries was invaded by the mob, June 20, 1792. Louis XVI was treated with cold contempt; upon Marie Antoinette the crowd heaped such hideous abuse that her hair turned white in the night. Two months later the Tuileries was again stormed, the Swiss guards were killed at their posts, and the royal couple were sent as prisoners to the Temple. Louis was executed Jan. 21, 1793; Marie Antoinette's son was taken from her in July; in August she was moved to the Conciergerie; on Oct. 14, 1793, before the revolutionary tribunal, she was accused of treason. Sentence of death was passed at 4.30 a.m. Oct. 16, and at 11 o'clock she ascended the scaffold. See French Revolution.

Marie Antoinette.
Queen of France
After Greuze

MARIE DE' MEDICI (1573-1642). Queen regent of France. A daughter of Francis I, grand duke of Tuscany, in 1600 she married Henry IV of France. Henry was murdered in 1610 and Marie became regent for their son Louis XIII. An ambitious and unscrupulous woman, she was exiled to Blois 1617-19. When liberated she made an enemy of her former counsellor, Cardinal Richelieu, and in 1631 fled the country, dying, it is said, in a hayloft at Cologne, July 3, 1642.

Marie de' Medici,
Queen of France
From a medal

MARIE LOUISE (1791-1847). Empress of the French. A daughter of Francis I of Austria, she was married in Paris to Napoleon in 1810, and a son, the duke of Reichstadt, was born to them in 1811. She acted as regent during Napoleon's absence in 1814, but proved herself utterly incapable. After Napoleon's abdication she returned to Austria, and at the congress of Vienna the duchies of Parma, Guastalla, and Piacenza were settled upon her. In Parma she came under the influence of count von Neipperg, to whom she bore several children, and whom she married in 1822. She died at Vienna, Dec. 18, 1847.

Marie Louise,
Empress of the French
After Prud'hon

MARIETTE, FRANÇOIS AUGUSTE FERDINAND (1821-81). French Egyptologist. Born at Boulogne, Feb. 11, 1821, he discovered the Serapeum (q.v.), 1851; and the so-called temple of the Sphinx, Gizeh, 1853. He was first director of the national museum at Cairo, and directed excavations at Dendera, Edfu, Karnak, Abydos, and Tanis (see Mastaba). He wrote *Monuments of Upper Egypt and Outlines of Ancient Egyptian History*. He was made pasha, 1879, and died at Bulak, Jan. 19, 1881.

MARIGOLD (*Calendula officinalis*). Annual herb of the order Compositae, native of S. Europe. It has oblong leaves, and large orange-rayed flowers, which are produced plentifully from spring to autumn. The so-called African marigold (*Tagetes erecta*) and its smaller congener, the French marigold (*Tagetes patula*), both garden

Marigold. Flowers of African marigold

annuals, are natives of Mexico. In colour, the flowers of the first are citron-yellow, of the second more tawny. The marsh marigold (q.v.) belongs to a different order, Ranunculaceae.

MARINES, ROYAL. Soldiers raised and trained for service on board ship. From 1664 regiments were raised as required for service with the fleet, but in 1755 a permanent corps was formed. In 1802 the king granted them the title of Royal Marines; in 1804 artillerymen were added to the corps; and after the Crimean War the title Royal Marine Light Infantry was granted. In 1859 the corps was divided into two branches, the Royal Marine Artillery (R.M.A.) and the Royal Marine Light Infantry (R.M.L.I.). In 1923 R.M.A. and R.M.L.I. were amalgamated and incorporated as the Royal Marines. The king is colonel-in-chief. A Royal Marine Police Force was formed in 1922. The motto is *Per mare, per terram*. The record of the corps is a very distinguished one.

Royal Marines.
Cap Badge

The U.S.A. has a marine corps similar in its functions to the British. The French marines are used as colonial troops and do not serve on board ship. The German marines were mainly used for coast defence.

MARIOLATRY. Protestant term for the veneration of the Blessed Virgin Mary, as practised by the Roman Catholic Church. Strictly speaking, the term is incorrect. The supreme worship (latreia) is restricted to God alone. R.C. theologians ascribe to the B.V.M. only the highest veneration (hyperdulia), while a lesser reverence (dulia) is paid to the saints generally. In the liturgical prayers of the missal and breviary are to be found only petitions that the faithful may be aided by her intercession with God. But the popular devotions go much farther. At the Reformation the invocation of the B.V.M. was abandoned by Protestants as unwarranted by Holy Scripture. See *Angelus*; *Ave Maria*; *Mary: Rosary*.

MARIONETTE. Little figure generally made of wood, manipulated on a miniature stage by wires or strings. The name is thought to have been originally a diminutive of Marie. Small figures with limbs moved by mechanical means were used by the ancient Egyptians and were known to the Greeks and Romans. In medieval Italy they were familiar as fantoccini and burattini. They had their heyday in France from the end of the 16th century to the end of the 18th.

MARIS, JACOB (1837-99). Dutch painter. Born at The Hague, he came under the influence of the Barbizon school (q.v.), and exhibited at the Paris Salon, 1862-72. He painted Dutch landscape, river scenes, and coast scenery, remarkable for delicate rendering of atmospheric effects combined with a strong sense of design. He died Aug. 17, 1899.

Matthew Maris (1835-1917), Dutch painter, was a brother of Jacob Maris. He developed a mystic, emotional, and irresistibly attractive style. For several years he lived as a recluse in London, where he died Aug. 22, 1917.

Another brother, Willem Maris (1844-1910), painted chiefly pastoral landscapes, executed with freshness and vigour.

MARISCHAL, EARL. In Scotland, a high office of state with duties similar to those of the earl marshal in England. From the 12th century the post was hereditary in the family of Keith, but ceased to exist after the attainder in 1716 of the 10th earl marischal.

George Keith became the 10th earl in 1712. He served under Marlborough, but engaged in the Jacobite rising of 1715, and escaped to the Continent, whereupon he was attainted and his estates were forfeited. In 1719 he headed an

abortive Spanish attempt to invade Scotland. He continued to intrigue against the government, but took no part in the rebellion of 1745.

George Keith,
10th Earl Marischal
After P. Costanzi

Marischal College is one of the two colleges forming Aberdeen University. It was founded in 1593 by George Keith, 5th earl marischal, but of the original building hardly a fragment remains except the stone inscribed "They haif said; quhat say thay; lat thame say." See illus. p. 5.

MARITSA. River of the Balkans, the ancient Hebrus. It rises in the Rhodope Mts., in Bulgaria, is 300 m. long, and navigable for small boats to Adrianople.

MARIUS, GAIUS (157-85 B.C.). Roman general and statesman. Born at Cereatae, near Arpinum, of humble parentage, he served

Gaius Marius,
Roman general
From a bust

under the younger Scipio Africanus in Spain, in Africa against Jugurtha, crushed the Cimbri and Teutones, and, hailed as saviour of the state, was elected consul for the sixth time in 100. In the Social War (90-88) Marius rendered further services to the state; but when war broke out with Mithradates, he was passed over in favour of the patrician Sulla, whom he attempted to deprive of the command. For a time a refugee, he returned and, with the aid of Cinna, entered Rome, took a terrible revenge on the patricians, and was elected consul for the seventh time. He lived to enjoy his consulship for only 18 days. See Sulla.

Marjoram. Flower-head
of *Origanum vulgare*

are gathered and dried, and purposes in cookery.

MARK. German coin. Virtually the equivalent of the English shilling. currency was re-established on a gold basis in 1924 the unit was the Reichsmark, which was coined in gold and silver, the gold coins being for 20 and 10 marks and the silver ones for 1, 2, 3 and 5 marks. Notes for 10 marks and over were issued and made legal tender.

In 1663 a Scottish mark was issued and valued at 13s. An old English weight was also called a mark; it was about a quarter of a pound.

MARK (Lat. Marcus). Jewish convert to Christi-

anity in the Apostolic age and writer of the second Gospel. He was apparently a Levite of Cyprus, cousin to Barnabas, and attended S. Paul and S. Barnabas on their first missionary journey, but turned back at Perga. He is said to have received from S. Peter the facts embodied in the second Gospel. His festival is April 25, and his symbol is a winged lion.

MARK, THE GOSPEL OF. Earliest of the three synoptic Gospels and the main source of the other two. It lays emphasis on the works rather than on the preaching of Jesus. Hence many of the miracles are related at greater length and with more vivid detail than in the other Gospels. Generally ascribed to 64-70, it may have been composed about a decade earlier. Many modern scholars hold that the present Gospel was preceded by an earlier and briefer edition, and that the last 12 verses replace the original ending, now lost.

MARK ANTONY OR MARCUS ANTONIUS (c. 83-30 B.C.). Roman statesman and orator. He was related through his mother to Julius Caesar. In spite of his dissipation, his talents and daring were soon recognized by Julius Caesar by whom he was rapidly advanced and with whom in 44 he was named as colleague in the consulship. After the murder of Caesar he and Caesar's adopted son Octavian secured their appointment, with a third and subordinate colleague, M. Lepidus, as triumvirs for the restoration of the commonwealth. At Philippi in 42 they crushed Brutus and Cassius, the leaders of the republican party, and divided the Roman world between them, Octavian taking the West and Antony the East. Later Antony became enslaved by the Egyptian queen, Cleopatra (q.v.). In 31 Antony and Octavian joined battle for the mastery. The victory fell to Octavian's fleet, under the command of Agrippa, in the sea-fight of Actium, and Antony fled to Egypt with Cleopatra. His death by his own hand in the following year left Octavian predominant in the Roman world.

Mark Antony,
Roman statesman
From a bust

MARKET (Lat. mercatus, trade). Place where goods are sold. In the Middle Ages the right to hold a market was one of the most

valuable privileges a king or lord could grant to his subjects. In time every town of importance had its market, held on certain days and under certain conditions; hence the phrase market town. Medieval markets were held in an open square in the centre of the town, therefore called the market place.

To-day markets form an important source of revenue, sometimes to individuals, but more usually to municipalities. The power to establish them or buy them was conferred on town councils and other bodies by an Act of 1875. A more modern

use of the word is for all dealings in a certain class of goods, e.g. the wool market, or the cotton market; while the term money market covers all transactions in instruments of credit.

MARKET CROSS. Stone structure surmounted by a cross, standing in a market place. Originally it was a plain cross-shaft upon a stepped pedestal, used for sermons and proclamations. Shelter for wayfarers was afterwards provided, and this developed into a poly-

gonal structure with arched openings, groined vaulting, and other enrichments.

MARKET BOSWORTH. Parish of Leicestershire, on the L.M.S. Rly. It has a grammar school at which Dr. Johnson was an usher. Bosworth Field, 2 m. to the S., was the scene of the battle in which Richard III was killed, Aug. 22, 1485. Pop. 886.

MARKET DEEPING. Parish of Lincolnshire. It stands on the Welland, 8 m. from Peterborough. In the fen country, it is surrounded by reclaimed land. Pop. 888.

MARKET DRAYTON. Market town and urban dist. of Shropshire, known also as Drayton-in-Hales. It stands on the Tern, 18 m. from Shrewsbury. The G.W.R. has a junction here with a branch of the L.M.S. S. Mary's Church dates from the 12th century, and at the old grammar school Robert Clive was educated. The town is an agricultural centre. Market day, Wed. Pop. 4,710.

MARKET HARBOROUGH. Market town and urban dist. of Leicestershire. It stands on the Welland, 16 m. from Leicester, and is served by the L.M.S. and L.N.E. Rlys. and the Union canal. The church of S. Dionysius is a fine medieval building, and the old grammar school is an interesting survival. There are manufactures of patent foods, corsets, etc. Market day, Tues. Pop. 8,918.

MARKET RASEN. Market town and urban dist. of Lincolnshire. It stands on the Rasen, 13 m. from Lincoln, on the L.N.E.R. Race meetings are held twice yearly. Market day, Tues. Pop. 2,177.

MARKET WEIGHTON. Market town of Yorkshire (E.R.). It is 19 m. from York, on the L.N.E.R. It is connected with the Humber by a canal, and is an agricultural centre. Market day, Wed. Pop. 1,717.

MARKHAM, SIR CLEMENTS ROBERT (1830-1916). British traveller and geographer. Born at Stillingfleet, July 20, 1830, he was educated at Westminster, and was in the navy from 1844-52. In 1850 he went with the expedition for the relief of Sir John Franklin. His travels in Peru, 1852-54, led him to introduce quinine yielding cinchona trees in India.

Sir C. Markham,
British traveller
Russell

Appointed to the India Office, 1867-77, he accompanied the expedition to Abyssinia, 1867-68. He was knighted in 1896, and died Jan. 30, 1916. He wrote Franklin's Footsteps, 1862; Travels in Peru and India, 1862; Richard Hakluyt, 1896; and The Lands of Silence, 1921.

MARKHOR (Capra falconeri). Species of wild goat, found in Kashmir and Afghanistan. It has massive horns, twisted either closely like a screw, or open like a corkscrew. A fine specimen stands about three and a half feet high at the withers. The chin-beard often reaches nearly to the knees, and the colour varies from greyish brown to nearly white.

Markhor. Specimen of the wild
goat found in Afghanistan
W. S. Berridge, F.Z.S.

MARKIEVICZ, CONSTANCE GEORGINE COUNTESS (1884-1927). Irish politician. Daughter of Sir Henry Gore-Booth, she married, in 1900, a Polish count, Casimir Markiewicz. She became identified with the extreme section of Irish politics and took a leading part in James Larkin's industrial movement in 1913. For her share in the Irish

Mark. Reverse and
obverse sides of the
German silver coin;
slightly reduced

rebellion of April, 1916, she was sentenced to death, a sentence afterwards commuted to a term of penal servitude. In 1918 she was elected M.P. for S. Patrick's, Dublin, the first woman to be returned to the British Parliament, but she never took her seat. She died July 15, 1927.

MARKINCH. Burgh of Fifeshire, Scotland. It is 33 m. from Edinburgh, on the L.N.E.R. In a coal-mining area, its industries include paper making. Pop. 1,610.

MARKING NUT TREE (*Scmecarpus anacardiaceae*). Evergreen tree of the order Anacardiaceae. A native of the East Indies, it is also called the kidney bean of Malacca. It has alternate, ohlong, leathery leaves, and small, greenish-yellow flowers in terminal clusters. The nut or bean is enclosed in a hard shell attached to a pear-shaped, fleshy, yellow receptacle, which is roasted and eaten. The unripe fruit yields a kind of ink. Mixed with quicklime, the juice forms an indelible stain for marking cotton or linen.

MARKINO, Yoshio (b. 1874). Japanese artist and author. Born Dec. 25, 1874, he settled in the U.S.A. in 1893. In 1897 he came to London. He published *A Japanese Artist in London, 1910*; *My Recollections and Reflections, 1913*; and illustrated in colour a number of travel books.

MARL. Mixture of calcium carbonate, clays, and sands. The word is loosely applied to a large number of friable clays of widely differing composition, and though most contain calcium carbonate, many so-called marls are almost entirely deficient in it. Blue or shell marl, consisting largely of shells of molluscs, contains 40 to 50 p.c. of carbonate of lime. Marls are used in agriculture as fertilisers.

MARLBOROUGH. Mun. bor. and market town of Wiltshire. It stands on the Kennet, 11 m. from Swindon, and is served by the G.W. and L.M.S. Rlys. The Castle Inn is a famous old coaching inn. There is a 16th century grammar school as well as the modern public school. Marlborough was a settlement of the Britons and probably of the Romans. Market day, Sat. Pop. 4,198.

Marlborough Downs is the name given to a range of chalk hills lying to the W. of the town. Marlborough College is an English public school. Founded in 1843 for the sons of the clergy, it stands in large grounds at Marlborough, and was thrown open to the sons of laymen in 1853. It has an army department.

Marlborough. District of S. Island, New Zealand. Its area is 4,225 sq. m. It exports wool, timber, and hides. Pop. 18,317.

MARLBOROUGH, DUKE OF. British title borne since 1702 by the family of Churchill. From 1626 to 1679 there was an earldom of Marlborough held by the family of Ley. In 1689 the title was revived for John Churchill, who, in 1702, was made a duke. His titles passed to his eldest daughter, Henrietta, wife of the 2nd earl of Godolphin, and then to Charles Spencer, 5th earl of Sunderland, the son of Marlborough's second daughter. From him the later dukes are descended. The family name is Spencer-Churchill.

Charles Richard John, born Nov. 13, 1871, succeeded as 9th duke in 1892. He was assistant military secretary to Lord Roberts in S. Africa, 1900; paymaster-general 1899-1902; colonial under-secretary 1903-5; parliamentary secretary to the board of trade 1917-18. In 1895 he married Consuelo Vanderbilt. He was divorced Nov., 1920, and in June, 1921, married Gladys Deacon of Boston, U.S.A. The duke's eldest son is called the marquess of Blandford.

MARLBOROUGH, JOHN CHURCHILL, 1st DUKE OF (1650-1722). English soldier. He was born of a Dorset family, at Ashe, near Axminster, in June, 1650. He entered the house-

hold of James, duke of York, as a page, became an ensign in the Guards, saw service at Tangier, and in 1678 married Sarah Jennings.

Duke of Marlborough,
English soldier
After Sir Godfrey Kneller

He held high command in the army of James II, but deserted him for William of Orange, who, on accepting the English crown, created Lord Churchill, as he then was, earl of Marlborough. Created a duke and made head of the British and Dutch forces in 1702, he won the overwhelming victory over the French and Bavarians at Blenheim, Aug. 13, 1704. At Ramillies, on May 23, 1706, he struck another crushing blow, and there followed the brilliant victories over the French at Oudenarde in 1708, and at Malplaquet in 1709. Charged in 1711 with misappropriating public moneys, he was deprived of all his offices and retired abroad. He was recalled in 1714; but, broken by a stroke of apoplexy in 1716, he died on June 16, 1722, and was buried in Westminster Abbey. See Blenheim; Malplaquet.

Marlborough was one of the greatest masters of the art of war known to history. As a diplomatist he was hardly less supreme than as a soldier. That he was also grasping, avaricious, and capable of intrigue with the exiled James II it is hardly possible to dispute.

MARLBOROUGH, SARAH JENNINGS, DUCHESS OF (1660-1744). English courtier. Daughter of Richard Jennings, of Sandridge, Hertfordshire, she was

born on June 5, 1660. As maid-in-waiting to the duchess of York, she became intimate with the young princess Anne. In 1678 she married John Churchill, afterwards 1st duke of Marlborough. On Anne's accession in 1702 the duchess received high favours and exerted almost unlimited influence in favour of the Whigs till her dismissal from court in 1710. She then used her biting wit against Anne and the Tories, and in later life wrote a vindication of her husband and her own conduct. She died, Oct. 18, 1744, leaving, it is said, a fortune of three millions.

Sarah Jennings,
Duchess of Marl-
borough
After Lely

MARLBOROUGH HOUSE. London royal residence. Standing in a garden of four acres between Pall Mall and the Mall, it is of red brick, and was built by Wren in 1709-10 for the first duke of Marlborough. It was the residence, after his marriage to Princess Charlotte, of Prince Leopold, 1817-31; of Queen Adelaide, 1837-49; Edward VII, when prince of Wales, 1863-1901; and

Marlborough House, London, one of the royal residences. The main front, overlooking the Mall

George V, when prince of Wales, 1901-10. The house then became the residence of the queen-mother Alexandra, and after her death was prepared for the Prince of Wales.

MARLOW OR GREAT MARLOW. Market town and urban district of Buckinghamshire. It is on the N. bank of the Thames, 32 m. from London, on the G.W.R., and is a popular boating centre, with paper, beer, and chair manufactures. There is a 17th century grammar school. A tablet marks the house in which Shelley lived and wrote. Market day, Mon. Pop. 5,146. Little Marlow is a village on the river, 2 m. from Great Marlow.

MARLOWE, CHRISTOPHER (1564-93). English poet and dramatist. Born at Canterbury, son of a shoemaker and parish clerk, he was educated at the King's School in the cathedral city, and Benet (Corpus Christi) College, Cambridge. He adopted free thought, and shortly after a warrant had been issued for his arrest on some unknown charge he was killed in a brawl at a Deptford inn.

His first tragedy, *Tamurlaine the Great*, 1588, introduced a pliant, passionate, and resonant form of blank verse which gave a lasting impulse to English romantic drama. The *Tragical History of Doctor Faustus*, containing some of the finest poetry in the language, was produced a year later, being followed by *The Jew of Malta*, *Edward the Second*, *The Massacre at Paris*, and the unfinished *Tragedy of Dido*. As a poet Marlowe also lives in his pastoral lyric, *Come, live with me and be my love*. Consult Marlowe and his Circle, F. S. Boas, 1929.

Marmalade. Name given to a preserve of Seville oranges or other fruit. Originally it was a kind of quince jam.

MARMALADE TREE (*Lucuma mammosa*). Tree of the order Sapotaceae, native of S. America. It has large leathery leaves and small solitary, whitish flowers. The fruit is more or less oval, 4 or 5 ins. long, with a rough, rusty brown skin, and a single seed embedded in a luscious, edible pulp with a flavour akin to that of quince marmalade.

MARMARA OR MARMORA, SEA OF. The ancient Propontis. It separates S.E. Europe from Asia Minor. It is connected with the Black Sea by the Bosphorus, and with the Aegean by the Dardanelles. With an area of 4,500 sq. m., it is 175 m. in length, and at its broadest is about 50 m. wide. It derives its name from its island, Marmara, which is famous for marble. The control of the sea was placed by the treaty of Sévres, 1920, under a commission of the Allied powers. See Dardanelles; Gallipoli; Turkey.

MARMONT, AUGUSTE FRÉDÉRIC LOUIS VIESSE DE (1774-1852). French soldier. Born July 20, 1774, he entered the revolutionary

Marshal Marmont,
French soldier
After P. Guérin

army in 1791. He held commands at Marengo and Ulm, and was governor of Dalmatia 1805-9. In 1810 he took command in Spain, where, after capturing Ciudad Rodrigo, he was beaten at Salamanca. He appeared next in Napoleon's lost battles of 1814. He was honoured by the restored Bourbons, whom he served after 1814, and in whose cause he became an exile in 1820. He died March 22, 1852. His *Memoirs* were published in 1856.

MARMOSET (*Hapalidae*). Family of very small monkeys, found only in Central and S. America. In general form nearly approaching the lemurs, they are somewhat squirrel-like in appearance, are covered with

thick fur, and have non-prehensile tails, often bushy. Many species have tufts or fringes on the ears. The toes and fingers have claws instead of nails, except in the case of the great toes. Marmosets live in the trees and climb about like squirrels. Their food consists mainly of insects and fruit.

Marmoset. Small monkey native of S. America. W. S. Berridge, F.Z.S.

several species. All live upon seeds, roots, and leaves, move about in the daytime, and live in burrows, usually in large colonies.

MARNE. River of France. It rises in the Langres plateau, and flows through Champagne to join the Seine at Charonton. Over 200 of its 326 m. are navigable, and it forms part of the Marne-Rhine canal navigation, while the Haute Marne canal joins it to the Saône. It gives its name to a dept. of France famous for champagne. The capital is Châlons-sur-Marne. It covers 3,167 sq. m.

BATTLES OF THE MARNE. Of the three battles, the first, which took place Sept. 6-10, 1914, was a victory for the Allies. After their retreat from Mons and Charleroi the British and French decided to make a stand on the line of the Marne, and on Sept. 4 orders were given for a general attack on the pursuing German armies.

The main battle began on Sept. 6, though the 6th French army attacked the day before. On the British right the 5th French army forced the Germans N. after prolonged fighting, and on the 7th pressed Bülow hard and pushed back his right six miles. On Sept. 8 a fierce engagement raged on the Ourcq, where each side strove to outflank the other without success. On this day Foch's centre and right were forced back, and all but broken, but his coolness and good generalship retrieved the position. On Sept. 9 the flank battle on the Ourcq was fiercely maintained, as fresh German troops of Kluck's army assailed the 6th French army. The British were thrusting N. into the gap between Kluck and Bülow, and Kluck was now in danger of being enveloped on both flanks and crushed.

At the critical moment the German staff lost heart and Kluck began to retreat, while Bülow's right quickly followed. Early in the day the British advanced 4 m. N. of the Marne, threatening Kluck's rear and Bülow's right flank. Fighting continued in St. Gond marshes and elsewhere, and on Sept. 10 the

Allied advance was accelerated. The Allies had won a decisive victory and Paris was saved. The British took 2,000 prisoners and the French 38,000 with 160 guns, though the latter suffered heavy losses. A memorial just outside Meaux commemorates the battle.

The second battle, July 15-17 1918 began with an offensive by the Germans, with the capture of Épernay and Châlons as their objectives. Their victory in the third battle of the Aisne (q.v.) had given them a huge salient, and they desired to extend it and, if possible, break through to Paris. On July 15 the Germans attacked, but were severely checked both W. and E. On the 17th the 7th German army, to facilitate the retirement of the German troops S. of the Marne, made a furious effort to recover the heights dominating the Marne, but failed. Completely checked, the Germans broke off the battle, finding themselves with a long flank from Soissons to Château-Thierry. This was the last great German offensive.

In the third battle, July 18-Aug. 4, 1918, Foch, the Allied generalissimo, delivered his great counter-offensive. Early on July 18, supported by a large force of tanks, French and American divisions under Mangin delivered a sudden attack on the exposed German flank between the Aisne and Château-Thierry. They captured 20,000 prisoners and 400 guns, and forced the crown prince's army across the Marne. See Foch.

Marmot. Specimen of the Alpine species, *Arctomys marmotta*. W. S. Berridge, F.Z.S.

MAROCCHETTI, CARLO, BARON (1805-68) Italian sculptor. Born at Turin he studied art in Paris, where his Young Girl playing with a Dog, 1829, attracted attention. He executed the relief of the battle of Jemappes on the Arc de Triomphe, made some successful statues, that of Emmanuel Philibert at Turin, 1833, being one of the best, and after the revolution of 1848 came to London. Two of his best known works in England are the statue of Richard I at Westminster, and the Inkerman memorial in S. Paul's. He was responsible for the Cawnpore memorial. He died June 4, 1868. See Cawnpore.

MAROON. Name given to certain negro inhabitants of Jamaica. It is an adaptation of the Span. cimarron, applied by the Spaniards

MAROT CLÉMENT (1496-1544). French poet. Born at Cahors, he was educated at Paris, studying law, but gave his time to verse making. In 1526 he was arrested for heresy and in 1535 took refuge in Italy, but soon abjured his heretical opinions and returned. He died an exile at Turin. His popular translation of the Psalms, condemned by the Sorbonne was one of the reasons for his flight. Marot was one of the first to break away from the conventional poetic forms of his time.

MARPLE. Urban dist. of Cheshire. On the river Goyt, on the borders of Derbyshire, it is 12 m. from Manchester, of which it is practically a residential suburb, having stations on the L.N.E. and Cheshire Lines Ryss. The industry is cotton manufacture. Pop. 6,608.

MARPRELATE, MARTIN. Name given to the controversy between the Puritans and the Church of England in 1588-90. It was started by a series of seven secretly printed tracts, signed Martin Marprelate, Gentleman; Martin Junior; and Martin Senior. Martin appears to have been a scholar of Oxford, a theologian, and a man of means—possibly Job Throckmorton. The tracts attacked abuses in church and state, and the character of certain bishops.

MARQUESAS. Group of French volcanic islands in the Pacific Ocean, N. of the Low or Paumotu Archipelago. Nukahiva and Ilivaoa are the largest. Copra and pearl shell are the chief products. They have been French since 1842. Their area is 480 sq. m. Pop. 2,255.

MARQUESS OR MARQUIS. Title of nobility in the British peerage the title rank between duke and earl; it was introduced in 1385 by Richard II, who made Robert de Vere marquess of Dublin. A marquess is most honourable, and his wife is a marchioness. The eldest son of a duke who is also a marquess takes his father's second title by courtesy. The sons of a marquess are styled lord and his daughters lady before the Christian name. See Peerage.

Marquess. Coronet of an English marquess.

MARQUETRY (Fr. marqueteur, to inlay) Mosaic of ornamental woods, metals, or ivory, inlaid in furniture and smaller articles in Venice, in the 15th century, caskets were

Marne. Map showing how the German advance was arrested by the French and British armies, and the line forced back beyond Reims after the first battle.

to runaway slaves who escaped to the mountains (cima, mountain-top). On the expulsion of the Spaniards from Jamaica in 1658 their slaves took to the hilly interior, and were long a source of trouble to the British.

inlaid with geometrical shapes of wood and ivory, and the Italian "intarsia" work of the 16th century was at first geometrical, and later developed into pictorial design. The English furniture makers of the 18th century

employed marquetry freely. At first it was executed with woods of natural hues. Later, stained woods were employed. *See* Bureau; Inlaying; Louis Style; Mosaic.

MARRAKESH. City of Morocco, one of the country's capitals. It is surrounded by walls and contains several notable mosques, especially the Kutubia. Outside the walls is the palace of the sultan, an immense building. Sometimes called Morocco, the town is an important trading centre. Pop. 150,000. *See* Morocco.

Marrakesh. The Kutubia mosque

stems, 3 or 4 ft. high, bear long, stiff leaves which are rolled up from the side. The flowers are grouped in a long, rounded panicle.

MARRIAGE (Lat. maritus, husband). Union of man and woman sanctioned by the community.

Various considerations early led to the formulation of rules binding men to find their wives either within their own social group, hence called endogamous, or outside it, thus giving rise to the principle of exogamy. An early form of exogamy was marriage by capture, a custom which survives to-day in certain countries. In some Australian tribes the captive is stunned; she may be abducted on horseback, with pretended pursuit; there may be realistic fights among the relatives, as in the New Hebrides.

MARRIAGE LAW. In England, marriage in a church of the establishment must be preceded by publication of banns unless the parties have obtained a marriage licence. The special licence of the archbishop of Canterbury is necessary where the marriage service is to be performed in a building other than a church, or not within the authorised hours, which are 8 a.m. to 3 p.m. Marriage, without publication of banns, may take place in church under the authority of a bishop's licence, but one of the parties must have had his or her usual place of abode in the parish for fifteen days before the granting of the licence. If either of the parties is under 21 years, and has not previously been married, the consent of the parent or guardian must be obtained. Immediately after the marriage the clergyman must enter the particulars in duplicate in two registers, and the record is signed by him, and by the parties and by two witnesses. By the Marriage Act of 1929 the marriage of persons under 16 is illegal.

Marriage may also take place in Nonconformist churches and in other places of worship which are registered for solemnising marriages.

CIVIL MARRIAGE. Marriages can also be conducted at the registrar's office, this being a civil ceremony only. A certificate or a licence is required. For a certificate notice must be given to the superintendent registrar of the district in which the parties live, or to two registrars if they live in separate districts. They must have resided for seven days in the district. The certificate will be issued 21 days after the notice has been given.

In the case of marriage by licence, only one of the parties need give notice to the superintendent registrar, and the licence will be issued after 24 hours have expired. In this case the party giving notice must have lived for 15 days in the district. A certificate costs a few shillings only; a licence about £2 10s.

In Scotland there are regular and irregular marriages. A regular marriage is one celebrated by a minister before two witnesses, after banns or notice to the registrar of marriages. Any acknowledgment of marriage, even without witnesses, will constitute an irregular marriage, which is just as valid as a regular one, provided that one of the parties has his or her usual place of residence in Scotland, or has resided there for at least 21 days before the marriage. It may be registered on application to a sheriff, who gives a warrant to the registrar. *See* Banns; Divorce.

MARROW. Soft tissue found in bone. Red marrow occupies that part of the bone which is made up of spongy tissue. It is very vascular, and contains certain cells, known as erythroblasts, from which the red corpuscles of the blood are developed. Yellow marrow consists chiefly of fat cells, and fills the medullary cavity in the shaft of long bones.

MARROW CONTROVERSY. Dispute in the Church of Scotland. Arising in 1718, it led finally to the formation of the Secession Church. It was named after The Marrow of Modern Divinity, 1644, by Edward Fisher, an English Calvinist, and was caused by the republication of this work in 1718. *See* Presbyterianism; Scotland, Church of.

MARRYAT, FREDERICK (1792-1848). British novelist and sailor. Born at Westminster, July 10, 1792, in 1806 he entered the navy and saw a great deal of service, both in European and American waters. He turned his experiences to good account in his numerous stories of nautical life. He began with *Frank Mildmay*, 1829; followed by *Newton Forster*, 1832; *Peter Simple*, 1834; *Jacob Faithful*, 1834; *Mr. Midshipman Easy*, 1836; and *Snarley Yow, or The Dog Fiend*, 1837. His later books include *Masterman Ready*, 1841; *The Settlers in Canada*, 1844; and *The Children of the New Forest*, 1847. He died Aug. 9, 1848.

His daughter, Florence Marryat (1838-99), was born at Brighton, July 9, 1838. She wrote about 70 novels. There is no *Death*, 1891; *The Risen Dead*, 1893; and *The Spirit World*, 1894, embody the results of some of her researches in spiritualism. She died Oct. 27, 1899.

MARS. In classical mythology, the Italian god of war and agriculture. He was extensively worshipped by the Romans, who claimed him as the father of their founder Romulus. The Campus Martius or field of Mars, where stood an altar to the god was the place of exercise for the youth. *See* Arès.

MARS. First of the superior planets. Its mean distance from the sun is 141,384,000 m., and its orbit is extremely eccentric. The mean diameter of the planet is 4,230 m.; its year 1.88 of our years, or 687 days; and the Martian day 24 hours, 37 minutes, 23 secs. The mass of Mars is a little more than one-tenth that of the earth (0.105), and its mean density as compared with the earth is 0.71. The tilt of Mars, or the angle between the

Mars. Photographs taken by Dr. Hale at Mount Wilson Observatory, California, showing the planet's changing appearance on a night in October, 1909

plane of the planet's equator and the plane of its orbit is 24° 52', and it has an analogous division of seasons to the earth, though they are longer. Mars has two small moons.

The planet's atmosphere is in quantity much less than that of the earth. It has clouds, which are said to lie over the so-called desert regions. Seasonal changes occur in the markings on the planet, and the darker appearance of some regions has been attributed to the presence of vegetation. In 1877 Schiaparelli discovered what he called channels, but what others called canals, extending from the darker patches on Mars over the lighter ones. P. Lowell mapped out the "canals" into an elaborate system of triangulation, which included several hundred straight lines. Some were hundreds, some thousands of miles long. *See* Astronomy; Planet.

MARSALA. Seaport of Sicily. On the W. coast, 19 m. by rly. S. of Trapani, it is the centre of a wine-producing district, and exports a large quantity of Marsala, a white, sweet, strong wine resembling sherry. It is built on the site of the ancient Lilybæum, a Carthaginian stronghold captured by the Romans, 241 B.C. Pop. 72,575.

MARSDEN. Urban dist. and market town of Yorkshire (W.R.). On the Colne 7 m. W.S.W. of Huddersfield, on the L.M.S. Rly., it has manufactures of woollens, cottons, and silks. Market day, Sat. Pop. 5,901

MARSEILLAISE, LA. National hymn of France. It was written in 1792 at Strasbourg by an officer of engineers, C. J. Rouget de Lisle, and received its name from the fact

of its having been sung by a party of revolutionaries from Marseilles on their entry into Paris, and again during the attack on the Tuileries. It was prohibited under the Bourbon and Bonaparte régimes.

MARSEILLES (Fr. Marseille). City and seaport of France. It lies on the Gulf of the Lion, 42 m. by rly. W.N.W. of Toulon. Built on a ridge of hills, the city stands with the Vieux Port, or Old Harbour, stretching almost up to its principal streets. The old city still has narrow and steep streets, but Marseilles, despite its antiquity, is chiefly modern. The town is finely laid out, with broad and handsome boulevards, such as the Cannebière and the Rue Noailles. The modern cathedral, 1852-93, is a Byzantine basilica, with cupola towers, its interior ornamented with marbles and mosaics. The church of Notre Dame de la Garde, on a hill S. of the Vieux Port, is frequented by pilgrims; that of S. Victor dates chiefly from the 13th century. The Préfecture, 1867, the Palais de Justice, 1862, and

Marseilles. 1. Cathedral, built 1852-93. 2. Vieux Port or Old Harbour, which stretches up into the centre of the city

the 17th century Hôtel de Ville are among the chief public buildings. The Palais de Longchamp, a Renaissance building, erected 1862-69, contains a fine arts museum and a museum of natural history. Behind are zoological gardens, in which is the end of the Canal de Marseille, connecting with the river Durance. The city has faculties forming part of the university of Aix-Marseille.

The Vieux Port connects with the Bassin de la Joliette by a canal. The Marseilles-Rhône canal, opened in 1926, connects Geneva and Lyons with the Mediterranean, by means of a canalised Rhône and a canal to the harbour at Marseilles. The port has passenger and commercial traffic with most parts of the world. Its importance was greatly increased by the opening of the Suez Canal; the trade with French Colonies in N. Africa is of special importance. Its industries include soap making, shipbuilding, flour milling, printing, the making of chemicals, paper, bricks, and tiles.

MARSHAL (old High Ger. *mara*, war horse; *scale*, servant). Title of various high military and civil officers. In England and Scotland the marshal had important duties and became a great officer of state. In France the marshal, associated with the constable, originally had high military command. The dignity was revived by Napoleon, and again during the Great War, when it was given to Foch and others. See Earl Marshal; Field Marshal; Marischal, Earl.

MARSHALL ISLANDS. Archipelago of the N. Pacific Ocean, in Micronesia, E. of the Carolines. They are composed of the Ratak and the Ralik groups. Phosphate and copra are exported. The chief island and seat of government is Jaluit. Formerly belonging to Germany, they were seized by the Japanese early in the Great War, and are now administered under mandate by Japan. The area is 158 sq. m. Pop. 9,314 natives.

MARSHALL, SIR WILLIAM RAINE (b. 1865). British soldier. Born Oct. 29, 1865, he served on the N.W. frontier of India, 1897-98, and in 1899-1902 took part in the S. African War. When the Great War broke out Marshall was commanding a battalion in India. In 1915 he commanded the 87th brigade in Gallipoli, being soon promoted to a division. In Sept., 1916, he commanded one of the two corps in the Mesopotamia forces during the advance to Bagdad, and on Maude's death, Nov. 18, 1917, was given the supreme command. He finished the campaign with credit and success. In 1917 he was knighted. From 1920 to 1923 he was head of the Southern Command, India. He wrote *Memories of Four Fronts*, 1929.

MARSHALL HALL, SIR EDWARD (1858-1927). British lawyer. Born at Brighton, Sept. 16, 1858, he became a barrister in 1883, and began to practise on the south-eastern circuit. He made a particular reputation in criminal cases, and from about 1900 he was the foremost advocate of this kind at the bar. In 1898 he took silk, and in 1917 he was knighted. Marshall Hall was Unionist M.P. for Southport, 1900-06, and for East Toxteth division of Liverpool, 1910-16. He died Feb. 24, 1927. Consult *Life*, E. Marjoribanks, 1929.

Marshalling. In heraldry, the art of grouping and blending insignia so as to form an heraldic record. See *Heraldry*.

MARSHAL OF THE AIR. Highest rank in the British Royal Air Force. It is equivalent to field marshal in the army and admiral of the fleet in the navy. See *Air Force*, Royal.

MARSHALSEA. Old London prison. It stood opposite Maypole Alley, in Borough High Street, Southwark. Mentioned in the 14th century, in Elizabethan times it was the second of the London prisons, and in the 18th century the county gaol for felons, an admiralty gaol for pirates, and a debtors' prison. It was pulled down about 1780, and rebuilt in 1811 on ground adjoining S. George's Churchyard, and this structure was the one made famous by Dickens in *Little Dorrit*. It remained in use until the court was abolished in Dec., 1849, and was demolished in 1887, with the exception of a turret.

Marshalsea. Part of the north side of the old London prison. Left, buildings of the original prison; right, the court house, which was a later addition. From a print of 1773

MARSH CYPRESS (*Taxodium distichum*). Tall coniferous tree of the order Pinaceae. A native of N. America, it is also

Marsh Cypress, showing the knee-roots sent up to obtain oxygen

known as the bald or black cypress. The leaves are slender and yew-like, and are shed in autumn; the cones globular, of thick, shield-shaped scales. It grows in swamps, and its roots send up above the surface "knee-roots" for the purpose of supplying the roots with oxygen. These growths, which are hollow, may be more than 3 ft. in height. Correlated with them the trunk has a hollow space, into which the oxygen is conducted.

MARSH GAS, METHANE, OR FIRE-DAMP. Colourless, odourless gas. Burning with a luminous flame, and found in the free state in nature, its chemical formula is CH_4 . It is the lowest of the paraffin series of hydrocarbons and is the only one with but a single atom of carbon in the molecule. Also known as methyl hydride, it is given off by decaying vegetable matter in stagnant pools and marshes, and, when ignited, forms the will-o'-the-wisp. Large quantities, fire-damp, are formed in coal measures by slow decomposition of the coal. Marsh gas is a constituent of coal gas. See *Gas*.

Marsh Mallow, a plant that thrives near the sea

MARSH MALLOW (*Althaea officinalis*). Perennial herb of the order Malvaceae. A native of Europe, Asia, and N. Africa, it has roundish or oval thick leaves with toothed edges, and large rosy flowers. The whole

plant is downy. It grows in marshes near the sea. The hollyhock is a Chinese species.

MARSH MARIGOLD (*Caltha palustris*). Perennial herb of the order Ranunculaceae. A native of Europe, Asia, and N. America, it is also known as king-cup. It has a stout, creeping root-stock and large, kidney-shaped leaves. The flowers are exaggerated buttercups of golden yellow sepals, the petals being absent. The unopened buds are pickled and eaten as a substitute for capers.

Marsh Marigold or King-cup. Flowers and leaves

MARSTON, JOHN (c. 1575-1634). English satirist and dramatist. He wrote a number of satires, several tragedies and comedies, and became involved in the famous stago quarrel with Jonson and Dekker. He ceased writing for the stage after 1607, held the living of Christchurch, Hampshire, 1616-31, and died in London, June 25, 1634.

Marston's first work, an amatory poem, *The Metamorphosis of Pigmalion's Image*, and his series of satires, *The Scourge of Villanies*, were both published in 1598. His best plays are *The Malcontent* and *The Dutch Courtesan*. What You Will satirises pedantry. Marston collaborated with Ben Jonson and Chapman in *Eastward Hoe*. His plays were edited by A. H. Bullen in 1887.

MARSTON MOOR, BATTLE OF. Fought July 2, 1644, during the English Civil War. The Scottish army had entered England and united with the parliamentary force in the north. Newcastle, the king's general, fell back on York, and that city was besieged. A royalist force under Rupert was sent to its relief. The Scots and their allies awaited the enemy on Marston Moor, between York and Knaresborough. Rupert, however, avoided them, and, entering York, urged Newcastle to fight. The parliamentarians were already in retreat, but when pursued they turned and attacked. A decisive victory was mainly due to Cromwell's *Ironsides*. See *Civil War*.

MARSUPIAL (Lat. *marsupium*, a pouch). Lowest order but one of the mammalia. They are provided with pouches in which the later stages of the development of the young take place, and are distinguished by the details of their embryology. The young are born after a short gestation. The mother places them in the abdominal pouch, which contains the teats. Here they are attached by their lips, which at this stage resemble a cylindrical sucker, and the milk is injected into their throats by muscular contraction on the part of the mother. In a few species the pouch is absent, the young being concealed by the long hair as they cling to the teats.

Marsupials are found chiefly in Australasia, the geographical isolation of which has protected them, and where they constitute the great bulk of the mammalian fauna; but they are represented in America by the opossums and a ratlike animal known as the yapook or water opossum. Carnivorous marsupials include the Tasmanian wolf, the dasyure, the bandicoots, the banded anteater, and American opossum. Herbivorous marsupials include the kangaroo and wallaby, the phalanger, the kangaroo rat, the wombat, and the koala. They vary in size. See under names of marsupials quoted.

MARTELLO TOWER. Type of building erected for coast defence. About 40 ft. high and frequently surrounded by a moat, martello towers are of solid masonry and contain rooms for a garrison of about 30. The only entrance is some 20 ft. above the ground, reached by a

ladder or drawbridge. A platform on the top served for the guns, which were protected by a parapet. Although erected at enormous cost at the time of Napoleon's threatened invasion, the towers were never used. They are now mostly deserted, or serve as coastguard stations. *See* Eastbourne.

Martello Towers on the coast at Hythe, Kent. Top, sectional diagram of internal arrangement

MARTEN

(*Mustela*). Genus of carnivorous mammals belonging to the weasel tribe. They differ from the weasels, stoats, and polecats in their larger size, longer limbs, tree-climbing habits, and in details of dentition. They have fine and valuable fur of reddish-brown colour, and a long and bushy tail. There are several species, of which only the pine marten occurs in Great Britain. This species has chocolate-brown fur, with orange chest and throat, and the edges of the ears are white. A fine specimen will measure 20 ins. in length. Formerly fairly common, persecution has now made it rare. It

Marten. Specimen of the pine marten, *M. martes*

occurs in pine woods in N. Wales, the Lake District, the Scottish Highlands, and in the N. of Ireland, and ravages the covert and the poultry yard. It is savage in disposition.

MARTHA. New Testament character. In Luke 10 and John 11-12 she is represented as the sister of Lazarus and Mary, at whose house Jesus stayed when in Bethany. Martha was gently reproved by Christ for her over-anxious spirit of hospitality.

MARTIAL (c. 43-c. 104). Roman writer. Marcus Valerius Martialis was born at Bilbilis in Spain, and came to Rome in 66. His life was that of a parasite, as is evidenced by his fulsome flattery of his patrons, especially of the sinister emperor Domitian. The great majority of his writings are epigrams, which afford valuable information on every aspect of the life of the period.

Martial, Roman epigrammatist
From a bust

MARTIAL LAW. Term employed to indicate the suspension of the administration of normal civil law and its replacement by military authority, when such a change is rendered desirable by special circumstances, of which war and rebellion are the most usual examples. Prior to a district being placed under martial law a proclamation is published by the executive, after which the military authority specifies what, if any, special regulations will be applied, and issues orders regarding such restriction of personal and public liberty as is thought necessary. Under martial law the ordinary civil courts may be maintained co-existent with, or entirely replaced by, military tribunals. *See* Court Martial.

MARTIN. Name given to various members of the swallow tribe. Two species occur in Great Britain, the house martin and the sand martin. The former (*Chelidon urbiea*) is a familiar summer visitant. The plumage of the upper parts is black with violet reflections, and of the lower parts pure white. Its mud nest is fixed to a wall, generally under the eaves of a house. The sand martin (*Cotile riparia*) arrives in spring before the house martin, and is fairly common. It is mouse-coloured above with white below, and has a short tail. It nests in burrows in sand pits and banks of clay.

Sand Martin at the entrance to its nest
W. S. Lerridge, F.Z.S.

MARTIN (c. 316-c. 400). Saint and bishop. A native of Pannonia, he placed himself under S. Hilary of Poitiers, and after labouring as a missionary in Pannonia and being persecuted by the Arians, he founded a monastery near Poitiers, about 360, and there remained till appointed bishop of Tours in 371.

MARTIN, SIR GEORGE CLEMENT (1844-1916). British organist. Born at Lambourne, Berkshire, Sept. 11, 1844, he was appointed master of song at the choir school, S. Paul's Cathedral, in 1874, and on the retirement of Stainer in 1888 became organist to the cathedral. Elected teacher of the organ at the Royal College of Music in 1883, he was appointed to a similar post at the Royal Academy of Music in 1895, and was knighted in 1897. Martin wrote much church music. He died Feb. 23, 1916.

MARTIN, SIR THEODORE (1816-1909). British poet and biographer. Born at Edinburgh, Sept. 16, 1816, he became a solicitor there, and from 1846 in London, where he built up a large parliamentary practice. His first notable literary effort was the still popular *Bon Gaultier Ballads*, 1845, written in collaboration with Prof. Aytoun. Martin's fame as a translator, however, rests chiefly on his translations of Horace, 1882. He also translated Catullus, Heine, and Dante. In 1866, at the request of Queen Victoria, he undertook the biography of the Prince Consort, which was published in five volumes from 1875 to 1880, in which year he was made a K.C.B. Queen Victoria as I Knew Her, written for private circulation, was not published till 1908. He died Aug. 8, 1909.

MARTINEAU, JAMES (1805-1900). British theologian and philosopher. Born April 21, 1805, he was descended from a Huguenot family long settled in Norwich. Harriet Martineau was his elder sister. He went to schools in Norwich and Bristol, and later studied for the Unitarian ministry at York. In 1828 he became minister of a church in Dublin, and in 1832 took charge of one in Liverpool. In 1837 he became minister of a chapel in Little Portland St., London. Martineau also held posts in Manchester New College, both in Manchester and after its removal to London. In 1840 he was appointed professor of mental and moral philosophy, an office which he retained until he became principal in 1869. He retired from the ministry in 1872 and from the college in 1885. He died Jan. 11, 1900.

A prominent Unitarian, an impressive preacher, and essentially an ethical teacher, he

James Martineau,
British theologian
and philosopher

based his intuitionist philosophy on conceptions of God, freedom, and immortality, and won fame as a force countering the sensationalism and materialism of the utilitarians.

Martineau's sister, Harriet Martineau (1802-76), was known as a writer. She began with *Illustrations of Political Economy*, 1832, and later, after a visit to America, wrote *Society in America*. In her *History of the Peace* she embodied the views of the philosophic radicals. Her other works include an *Autobiography*. She died June 27, 1876.

MARTINI, FRIEDRICH (1832-97). Austrian inventor. Born at Mehadia, Hungary, he entered the Austrian army served in the engineers in the Italian campaign of 1859, and then settled as a civil engineer at Frauenfeld, Switzerland. Adapting his invention of a block action breech mechanism to the 7-groove, .45-in. calibre rifle of Henry, he offered the model to the British government, which adopted it in 1871 under the name of Martini-Henry rifle. *See* Rifle.

MARTINI, SIMONE (1283-1344). Italian painter, commonly but wrongly known as Simone Memmi. Born at Siena, the earliest known example of his work is the fresco of *The Enthroned Virgin and Child in the Palazzo Pubblico* at Siena painted in 1315. In 1339 he went to Avignon, where he executed frescoes, and where he met Petrarch and painted the portrait of Laura. He died at Avignon, 1344. Of his other works, the most notable are *The Annunciation in the Uffizi Gallery*, *Christ Carrying His Cross*, *Louvre*, *The Crucifixion*, *Deposition*, and *Annunciation*, *Antwerp*.

MARTINIQUE. French island in the West Indies. One of the largest of the Windward Islands, it lies between the British islands of Dominica and Santa Lucia and covers 385 sq. m. One of its volcanoes is Mt. Pelée (4,500 ft.), the scene of a disastrous eruption in 1902. The chief harbour is Fort-de-France, and the chief towns are Lamentin and Gros Marne. Pop. 234,695.

MARTINMAS. Feast of S. Martin, Nov. 11. It is a quarter day in Scotland. At Martinmas hiring fairs for servants are held in some parts of England, and the Martinmas or Martlemas ox, or Mart, was killed to be salted for winter. In Germany, goose was a Martinmas dish. The spell of fine weather sometimes occurring at Martinmas is called S. Martin's summer.

Martlet or **MERLOT.** Common charge in heraldry. It is represented as a bird without legs. It is also used as a mark of eadency (q.v.).

MARTYR (Gr. a witness). Person, especially a Christian, who suffers death in testimony to his faith. One who suffers but does not lose his life is usually known as a confessor. The first Christian martyr was Stephen.

Apparently martyrs only were at first regarded as saints. Their tombs were held in high honour. When it became possible to erect special buildings for Christian worship, they were usually built over the tombs of martyrs, and the actual tomb was often converted into an altar, or the remains of the martyr were re-interred under the altar. This practice is alluded to in Rev. 6, 9.

In the Roman Catholic Church a list of martyrs, with notices of their life and death, designed for devotional uses is known as a *martyrology*.

MARVELL, ANDREW (1621-78). English poet. He was born March 31, 1621, and educated at Hull Grammar School and Trinity College, Cambridge. After four years' continental travel he became in turn tutor, at Nun Appleton, the scene of his lyrical poems, to

Andrew Marvell,
English poet

Mary, daughter of Lord Fairfax and afterwards duchess of Buckingham, and to William Dutton, a nephew of Cromwell, at Windsor. In 1657 he was appointed Milton's colleague in the Latin secretaryship. From Jan., 1669, until his death he was M.P. for Hull. He died in London, Aug. 16, 1678. A complete edition of Marvell's works did not appear until 1776. His poems, especially those on gardens and country life, display an exquisite feeling for nature and language.

MARVEL OF PERU, OR BELLEDE NUIT (Mirabilis jalapa). Perennial herb of the order Nyctaginaceae, native of tropical America. It has tubercous roots, and the leaves are large, smooth, and without teeth. The handsome, fragrant flowers are in crowded cymes at the end of the branches, and are white, yellow, red, or variegated in colour. The corolla is five-lobed, with a long, slender tube. The flowers open in the evening, and fade next day. The fruits are nut-like. The plant is grown in Britain as an ornamental herb.

MARWICK HEAD. Headland of Mainland, one of the Orkney Islands. Here is the Kitchener Memorial Tower, unveiled in 1925, marking the place nearest to where he died.

MARX, HEINRICH KARL (1818-83). German economist and Socialist. Born at Trèves, May 5 1818, of Jewish origin, he was educated at the universities of Bonn and Berlin. He became in 1842 editor of *The Rhenish Gazette*, a journal whose advanced views led to its suppression by the authorities. From 1843-45 he was in Paris, engaged in literary work, and formed his life-long friendship with Engels (q.v.). Expelled from Paris as a dangerous person, he settled at Brussels, where with Engels, he drew up, in 1847, the manifesto of the Communist Party which may be regarded as the foundation of modern socialism. In 1848 Marx returned to Germany to take part in the revolutionary outbreaks of that year in the Rhine country, but all the movements ended in failure, and in 1849 he migrated to London, where he spent the rest of his life. In 1867 appeared the first volume of Marx's work, *Capital*, and two further volumes appeared after his death in London, March 14, 1883.

Marx was a leading exponent of what is known as the materialist conception of history, i.e. he believed that the basis of historical development is to be found above all in economic considerations. There is, he held, nothing in common between the employer and the employed, and the latter must aim at the overthrow of capitalism.

MARY (Heb. Miriam). Saint and virgin, the mother of Jesus Christ, usually called the Blessed Virgin Mary. Sister of Mary, wife of Alphaeus, she was espoused to Joseph, a carpenter, of Nazareth. Being told by the angel Gabriel that she should become the virgin mother of the Son of God, she replied: Behold the handmaid of the Lord; be it unto me according to thy word. She went with Joseph to Bethlehem, and there gave birth to Jesus Christ. According to tradition Mary died at Jerusalem, and her tomb was found vacant. See Annunciation; Assumption; Jesus Christ.

MARY (b. 1867). Queen consort of King George V. Born at Kensington Palace, May 26, 1867, she was the eldest child and only daughter of the duke of Teck and his wife.

Her majesty Queen Mary, from a photograph taken about 1923
Hornby

Mary, a daughter of the duke of Cambridge and a granddaughter of George III. The princess was baptized Victoria Mary Augusta Louise Olga Pauline Claudine Agnes, and was known in the home circle, which included three brothers, as May. The family lived mainly at Kensington until 1883, after which they made their home at White Lodge, Richmond.

In 1891 the princess Mary was betrothed to the duke of Clarence. He died, however, Jan. 14, 1892. On May 3, 1893, the engagement of the princess and his brother, the duke of York, was announced, and the marriage was celebrated, July 6, 1893, in the chapel of St. James's Palace. The duke and duchess made York House their London home and York Cottage their Norfolk one. Six children were born to them between 1894 and 1905, of whom one, John, died in 1919. On May 6, 1910, George became king, and on June 22, 1911, Mary was crowned with him. See George V.

MARY I (1516-58). Queen of England. Daughter of Henry VIII and Catherine of Aragon, she was born at Greenwich, Feb. 18, 1516. She remained faithful to the Roman Catholic religion and lived in retirement, chiefly at Hunsdon and Kenninghall, until the death of Edward VI on July 6, 1553. Despite the efforts of the duke of Northumberland to secure the succession for Lady Jane Grey Mary was proclaimed queen July 19.

Her reign was inaugurated by a series of Acts of Parliament declaring her legitimacy, restoring the Latin Mass and the celibacy of the clergy, and abolishing the title of supreme head of the Church which Henry had assumed. New bishops were consecrated, and by Dec., 1554, the reconciliation with Rome was virtually complete. Mary married Philip II of Spain, July, 1554, and the final blow in an unhappy life was the loss of Calais. Shortly afterwards Mary died, Nov. 17, 1558.

MARY II (1662-94). Queen of England. The elder daughter of James, duke of York, afterwards James II, and Anne Hyde, she was born in London, April 30, 1662. She was married in Nov., 1677, to William, prince of Orange, and went to live in Holland. In 1689 she followed William to England, and the pair were proclaimed king and queen. On Dec. 28, 1694, Mary died of smallpox. She was childless.

Mary II
Queen of England
After Wissing

MARY (1542-87). Queen of Scots. Born at Linlithgow, Dec. 8, 1542, five days before the death of her father, James V, she then

became queen of Scotland. She was brought up at the French court under the charge of the Guises, the kinsfolk of her mother, Mary of Lorraine. In 1558 she was married to the dauphin Francis, who succeeded to the French throne in 1559, but died next year.

In 1561 Mary returned from France to a Scotland dominated by John Knox. She married her cousin Henry Stuart Lord Darnley. July 29, 1565. Finding Darnley a broken reed, she gave all her confidence to her secretary, David Rizzio. The nobles made ready use of Darnley's jealousy; and on March 9, 1566, Darnley and his fellow-conspirators murdered the secretary in Holyrood Palace. Mary never forgave her husband, although there was a formal reconciliation after the birth, June 19, 1566, of her child, who afterwards became James VI. On Feb. 9, 1567, when Darnley was lying ill at a house called Kirk o' Field, near Edinburgh, the house was blown up.

On April 24, Bothwell, one of Darnley's murderers, captured the queen after a formal show of resistance, and on May 15, after he had divorced his wife, Mary married him. The nobles rose in arms. At Carberry Hill, June 15, Bothwell escaped and fled the country, while Mary surrendered to the lords, by whom she was imprisoned in Loch Leven Castle and compelled to abdicate in favour of James VI on July 24, 1567. On May 2, 1568, Mary escaped from Loch Leven. Her few followers were defeated at Langside on May 13 by the forces of the regent Moray, and Mary made her way to England. There she was a prisoner for 18 years. At length she was brought to trial, was found guilty on Oct. 25, 1586, and parliament demanded her execution. Elizabeth, after efforts at evasion, sealed the death warrant, and on Feb. 8, 1587, Mary was beheaded at Fotheringhay. See Holyrood.

MARY (b. 1897). British princess. Only daughter of King George V and Queen Mary, she was born at York Cottage, Sandringham. April 25, 1897, and christened Victoria Alexandra Alice Mary. Educated mainly at home, the princess went through a course of training in nursing at the Hospital for Sick Children, London. On Feb. 28, 1922, she married Viscount Lascelles, afterwards earl of Harewood (q.v.). Sons were born Feb. 7, 1923, and Aug. 21, 1924.

MARYBOROUGH. Co. town of Leix (Queen's County), Irish Free State. It stands on a tributary of the Barrow, 51 m. from Dublin, with a station on the Gt. Southern Rlys. The industries are connected with agriculture. Pop. 3,374.

There are two Maryboroughs in Australia. One is a mining town of Victoria, 118 m. from Melbourne. The other is a seaport of Queensland.

MARYLAND. State of the U.S.A., one of the thirteen original states. The area is 12,325 sq. m., and it is divided into two parts by Chesapeake Bay. In the S. it has a coastline on the Atlantic, but farther N. Delaware divides it from the sea. Another boundary

Queen of England
After Holbein

Princess Mary,
Countess of Harewood
Spearhead

is the estuary of the Potomac. In the E. the surface is low and marshy, but to the W. it is hilly. Wheat, maize, potatoes, fruit, and tobacco are cultivated. The capital is Annapolis, but Baltimore (q.v.) is much the largest place. The colony of Maryland, named after Henrietta Maria, the queen of Charles I was founded in 1634. Pop 1 616,000.

MARYLEBONE. Borough of the eo. of London. It includes the district of St. John's Wood; the greater part of Regent's Park; Cavendish, Portman, Manchester, and other squares; Harley Street; Lord's cricket ground; Lisson Grove; a terminus of the L.N.E. Ry.; and the Baker Street station on the Met. Ry. The name of the borough is a corruption of S. Mary's-le-bourne. The parish church of S. Mary contains an altar-piece of the Holy Family by Benjamin West. A new town hall was opened in 1916. Two members are returned to parliament. Pop. 104,222.

The Marylebone Cricket Club is regarded as the governing body of the game and known as the M.C.C. It dates from 1787, when some members of the White Conduit club began to play on Lord's ground in Dorset Square, and called themselves the Marylebone club. In 1788 the club revised the rules of cricket, and since then it has been the controlling body. See Cricket; Lord's Cricket Ground.

MARY MAGDALENE. Name of the woman mentioned with others in the N.T. as being healed of evil spirits and ministering to Christ of her substance. She was present at the Crucifixion, and it was to her that Jesus is said to have first appeared after the Resurrection. The name is generally understood as indicating that she was a native of Magdala, the modern El Mejdel, on the W. shore of the Sea of Galilee. Tradition identified Mary of Magdala with the unnamed penitent of S. Luke who anointed Christ with the spikenard.

MARYPORT. Seaport, market town, and urban dist. of Cumberland. It stands at the mouth of the river Ellen, 28 m. from Carlisle, with a station on the L.M.S. Ry. The principal buildings include the churches of S. Mary and Christ Church. There is a shipping trade, for which there is good accommodation. Originally known as Ellenfoot, the town was renamed Maryport in 1750 because Mary Queen of Scots landed here in 1568. Market day, Fri. Pop. 11,100.

MASACCIO (1401-c. 1428). Florentine painter. Born at Castel San Giovanni di Valdarno, Dec. 21, 1401, he was named Tommaso Guidi, but is invariably known by his nickname Masaccio, meaning loutish Tom. In 1417, commissioned to decorate a chapel for Cardinal San Clemente, he painted a Crucifixion and scenes from the lives of SS. Catherine and Clement. Between 1423 and 1428 he painted 12 frescoes in the Brancacci Chapel in the Carmine, representing scenes from the Bible. He died in Rome about 1428. His Madonna and Child with Angels is in the National Gallery, London.

T. G. Masaryk,
President of
Czechoslovakia

MASARYK, THOMAS GARRIGUE (b 1850). First president of the republic of Czechoslovakia. He was born Mar. 7, 1850, at Hodonin, Moravia, his father being a Moravian coachman, and his mother of mixed Slovakian-German descent. Employed by a Vienna locksmith, and then as a blacksmith in Moravia, he was enabled to continue his studies at Brno, at Vienna, where he graduated, and at Leipzig. In 1882 he became professor at Prague University. In 1891 he was elected a member of the Austrian Reichsrath;

but after two years he resigned, to be again elected in 1907.

Shortly after the Great War broke out Masaryk escaped from Austria, and worked unceasingly for his country. In 1915 he was appointed professor of Slavic studies in King's College, London; and later was one of those mainly instrumental in winning recognition from the Allies for Czechoslovakia. When the Czechoslovak republic was formed, Masaryk was called to be president. His position was confirmed on May 27, 1920, and in 1930 he was still in office.

MASCAGNI, PIETRO (b. 1863). Italian composer. Born at Leghorn, Dec. 7, 1863, the son of a baker, he studied music there and at Milan, producing compositions when only 16. In 1890 Mascagni leapt suddenly into fame by the production at Rome of the opera *Cavalleria Rusticana*. In 1895 he was made director of the Conservatoire at Pesaro, and after a tour in the U.S.A. he became a teacher in Rome. His other operas include *L'Amico Fritz*, 1891; *Iris*, 1898; *Edward and Parisina*, 1913

Pietro Mascagni,
Italian composer

MASEFIELD, JOHN EDWARD (b. 1878). British poet and dramatist. Born at Ledbury, June 1, 1878, he was the son of a solicitor. His *Salt-water Ballads* were published in 1902.

A *Mainsail Haul* 1905, and his edition of *Dampier's Voyages* in 1906. Many of his earlier poems, as seen in the volumes of 1902-5, and in the *Ballads and Poems*, 1910, were marked by the bold rhythms of the Kipling school. In 1911 came the first of his long narrative poems, *The Everlasting Mercy*. It was followed by similar works, unequal but vivid in style: *The Widow in the Bye-Street*, 1912; *The Daffodil Fields* 1913; and *Dauber*, 1913. *Reynard the Fox*, 1919, and *Right Royal*, 1920, are animated pictures of the sporting life of the English shire.

Masefield's plays include *The Tragedy of Nan*, a dialect play, 1909; *Pompey the Great*, 1910; *Philip the King*, 1914; *The Faithful*, 1915; *Good Friday*, 1916; *The Trial of Jesus*, 1925; and *Tristan and Isolde*, 1927.

In June, 1928, his play *The Coming of Christ* was performed on the chancel steps of Canterbury Cathedral. Among his novels are *Captain Margaret*, 1908; *Multitude and Solitude*, 1909; *Lost Endeavour*, 1910; *Sard Harker*, 1924; *Odtaa*, 1926; *The Hawbucks*, 1929; and a collection of sea stories, *A Tarpaulin Muster*, 1907. Among his other writings are a study of *Shakespeare*, 1911; *The Old Front Line* 1917; and *Gallipoli*. In 1930 he succeeded R. Bridges (q.v.) as poet laureate.

MASHAM. Urban dist. and market town of Yorkshire (N.R.). It stands on the Ure, 8 m. from Ripon, on the L.N.E.R. The church of S. Mary the Virgin is partly Norman. There is a trade in agricultural produce. Market day, Wed. Pop. 2,047.

MASHONALAND. District of S. Africa, now part of S. Rhodesia (q.v.). It is named after the Mashonas. Lying to the N.E. of Matabeleland, it is a mountainous area, but is rich in minerals, and contains excellent pasture land. Salisbury is the chief town; others are Hartley, Gatooma, Umtali, and Victoria. Mashonaland was included in the grant made in 1889 to the British South Africa Co., and in June, 1890, a force was sent to take possession of it. In 1893 the inroads of the warlike Matabele, long the enemies of the more peaceful Mashonas, led to the Matabele War. In June, 1896, the Mashonas rebelled, and for over a year the rising continued, but in the end it was put down.

MASK (Fr. masque, vizor). Covering for the face, assumed either to conceal the features or to represent a character. The hideous masks ceremonially used by many savage peoples are intended to ward off demons, to express totemistic ideas, and to terrify enemies. In the presentation of the Greek drama every actor wore a mask suited to the character he personified (see illus. p. 437). They were made of bronze or copper, enamelled or painted, and added power to the voice.

In sculpture the word mask is used for a representation of the human face in gargoyles, on tiles fixed at the end of cornices and caves, or in the keystone of an arch, and for a cast of a face taken after death. For protective purposes masks have been developed into various forms, e.g. the inhalers used by firemen, miners, and divers when working in smoke or vitiated air or under water, and the gas masks worn by troops. See illus. below; also p. 642.

MASK. Lough or lake of the Irish Free State. It forms part of the boundary between counties Galway and Mayo and contains about 20 islands. Its length is 12 m., while its breadth varies from 2 to 4 m.

MASKELYNE, JOHN NEVIL (1839-1917). British entertainer and illusionist. Born at Cheltenham, Dec. 22, 1839, he was apprenticed to a watchmaker, but studied conjuring in his spare moments, and began entertaining at the age of 16. In 1865 he entered into partnership with Cooke, exposed the mysteries of the Davenport spiritualistic quacks, and in 1873 moved to London. The partners took the Egyptian Hall, Piccadilly, London, moving to St. George's Hall in 1905. Maskelyne died May 18, 1917. The firm of Maskelyne and Cooke became later Maskelyne and Devant. After the retirement of David Devant it was known simply as Maskelyne's.

MASKELYNE, NEVIL (1732-1811). British astronomer. Born Oct. 6, 1732, he early took an interest in astronomy. In 1761 he observed the transit of Venus from St. Helena on behalf of the Royal Society. He was appointed astronomer royal 1765, and founded the *Nautical Almanac* the following year. He also compiled a valuable catalogue of fundamental stars, and introduced the important innovation of the systematic publication of results of Greenwich observatory. Maskelyne, who took orders, was rector of Shroavardine, 1775-82, and of North Runciton, Norfolk, 1782-1811. He died Feb. 9, 1811.

MASON, ALFRED EDWARD WOODLEY (b. 1865). British novelist. Born May 7, 1865, his name was made with *The Courtship of Morrice Buckler*, 1896, followed by *Miranda of the Balcony*, 1899; *Clementina*, 1901; *The*

John Masefield,
British poet

Mask. 1 and 2. Japanese theatrical masks of carved and lacquered wood. 3. Dancing mask, Puget Sound. 4. Modern carnival mask. See above

Four Feathers, 1902; The Truants, 1904; At the Villa Rose, 1910; The Summons, 1920; The House of the Arrow, 1924; No Other Tiger, 1927; The Prisoner in the Opal, 1929; and The Dean's Elbow, 1930. With Andrew Lang he wrote Parson Kelly. At The Villa Rose and Miranda have been dramatised; while The Witness for the Defence was written for the stage and then turned into a novel. Mason was Liberal M.P. for Coventry from 1906 until 1910.

A. E. W. Mason,
British novelist
Russell

MASON, GEORGE HEMINO (1818-72). British painter. Born at Stoke-upon-Trent, March 11, 1818, he settled in Rome in 1845, where he painted portraits. Many of his pictures are scenes in the Campagna, such as Ploughing in the Campagna, and In the Salt Marshes, 1856. In 1858 he returned to England. Of his English period, the chief pictures are Wind on the Wold, The Cast Shoe, both in the Tate Gallery, The End of the Day, and The Harvest Moon. He exhibited at the R.A., 1857-72, was elected A.R.A., 1869, and died Oct. 22, 1872.

MASON, SIR JOSIAH (1795-1881). British manufacturer and philanthropist. Born Feb. 23, 1795, the son of an artisan at Kidderminster, he became a manufacturer of hardware, soon devoting himself mainly to the making of pens, which bore the name of James Perry, the London stationer who placed them on the market. Mason became interested in other industries in Birmingham. In 1872 he was knighted, and he died June 16, 1881. He founded Mason College, Birmingham, and an orphanage at Erdington.

MASPERO, GASTON CAMILLE CHARLES (1846-1916). French Egyptologist. Born in Paris, June 23, 1846, he became professor of Egyptology there in 1873. He succeeded A. Mariette as director-general of excavations in Egypt, 1881-86, signalling this appointment by recovering the royal mummies at Deir el-Bahri, 1881. His translated works include Egyptian Archaeology, 5th ed. 1902; The Ancient Peoples of the Classic East, 1894-1900; and Art in Egypt, 1912. He died in Paris, June 30, 1916.

MASQUE (Fr. mask). Theatrical entertainment of an allegorical nature, usually written for a particular occasion, and distinguished chiefly by the splendour of the spectacular effects provided by machinist, scene painter, and costumer, to embellish the poetical conceits of the author. As a fashionable amusement in England the masque, introduced, it is said, from Italy in 1512, had its greatest vogue in the time of James I and Charles I. Ben Jonson was the author of many masques, pageants, and court entertainments. The most beautiful example is Milton's Comus, presented at Ludlow in 1634.

MASS (Lat. missa, dismissed.) Roman Catholic name for the Eucharist. It is regarded as a service of adoration, praise, and thanksgiving, as a sacrifice of propitiation for sin, and as a means of grace. The doctrine of the Mass implies that Christ, in the integrity of His Person, human and divine, in or under the form of a wheat cake and a cup of wine, is sacrificed by a priest as a propitiation of God and in expiation of sin. The twelve Masses include High Mass, celebrated with incense, music, the assistance of deacon, subdeacon, etc., usually on Sundays and great feasts; Low Mass, said by the priest without music; and the Requiem Mass, which is said for the dead. See Communion, Holy; Eucharist; Transubstantiation.

MASSACHUSETTS. State of the U.S.A., one of the 13 original states of the Union. Its area is 8,266 sq. m., in which is included the islands of Nantucket and Martha's Vineyard. The Cape Cod peninsula is a curiously shaped extension. Massachusetts Bay is a broad inlet on the E. coast. The surface rises from the low coastal plain to heights of over 3,500 ft. The state has a number of lakes, its water area being 220 sq. m. Hay, potatoes, and maize are the chief crops. Tobacco is grown, and much land is under fruit, including cranberries. The fisheries are important. Boston is the capital. Harvard is in the state, as are many places associated with New England's early days. Pop. 4,290,000.

MASSAGE. Method of curing various muscular, nervous, and vascular maladies by rubbing, stroking, kneading, and otherwise treating the muscles with the hand. The four principal actions in massage are termed pétrissage, effleurage, friction, and tapotement. Pétrissage or kneading is done by pressing the palm of the hand into the muscles, and grasping, kneading, rolling, and squeezing them by the thumb and fingers. Effleurage, or stroking, should be done with the palm of the hand, which at the end of a stroke should glide back to the starting point. Friction is a circular movement done with the finger tips or palm of the hand. Tapotement is done by the hands swinging from the wrists, and this movement should be light, sharp, springy, and very rapid.

Another division of the movements in massage is associated with the Swede, Peter Henry Ling. He divided them into three: active, passive, and resistive. Passive movements are done by the operator, active movements by the patient himself. Resistive movements are done while the patient resists, or by the patient while resistance is supplied by the operator. These movements increase circulation.

The National Hospital, Queen's Square, London, W.C., gives a recognized certificate. Students from other hospitals and schools must satisfy the examiners of the Incorporated Society of Trained Masseuses.

MASSAWA OR MASSOWAH. Town on a coral island in the Red Sea. It is off the coast of the Italian colony of Eritrea, of which it is the chief port, and is joined to the coast by a causeway and connected with Asmara by rly. It is the centre of a pearl-fishing industry. There is a wireless station. Pop. 12,275.

MASSÉNA, ANDRÉ (1758-1817). French soldier. Born at Nice, May 6, 1758, he served first in the Sardinian army. Joining the forces of the French Republic, he gained rapid promotion and became a general in Dec., 1793. Appointed a marshal in 1804, he rendered brilliant services in the Wagram campaign of 1809, and was created Duke of Rivoli and prince of Essling by Napoleon. In 1810 he was given the command against Wellington in the Peninsular War. On May 6, 1811, he was defeated at Fuentes d'Onoro, and was superseded. On Napoleon's abdication, April, 1814, Masséna gave his adherence to the restored Bourbons. He died April 4, 1817.

André Masséna,
French soldier

MASSNET, JULES ÉMILE FRÉDÉRIC (1842-1912). French composer. Born May 12, 1842, he studied at the Paris Conservatoire, and became professor of composition, his talents winning for him also membership of the Academy and the Legion of Honour. His first opera was produced in 1867, and for the next forty years he turned out a succession of operas, oratorios, overtures, orchestral suites,

etc. The most successful of his operas are Le Cid, Manon, Thaïs, and Le Roi de Lahore.

He died Aug. 14, 1912.

J. E. F. Massenet,
French composer

MASSEY, WILLIAM FERGUSON (1856-1925). New Zealand statesman. Born at Limavady, co. Derry, Ireland, March 26, 1856, he went in 1870 to New Zealand, where he took up farming. He was elected to parliament in 1894, becoming leader of the opposition in 1903. In 1912 he became prime

minister and minister of lands and labour. He was a member of the Imperial war cabinet, 1917-18, represented New Zealand at the peace conference in Paris, 1919, and attended the Empire conference which was held in 1921. He died May 10, 1925.

MASSICOT. Native lead·monoxide, PbO. It is brownish yellow in colour, is found massive, and is also known as lead ochre. Massicot is more usually prepared by heating lead or white lead in the air to a temperature below the fusing point of the oxide. It is largely used in the manufacture of red lead or minimum. See Lead; Litharge.

MASSILLON, JEAN BAPTISTE (1663-1742). French prelate. Born at Hyères, June 24, 1663, the son of a notary, he became an Oratorian in 1681. He was bishop of Clermont from 1717 until his death, Sept. 18, 1742. Regarded as the greatest preacher of France, his character was as above suspicion as it was uncompromising. Unpopular at court, he pronounced the funeral oration over Louis XIV, and preached 10 Lenten sermons (Le Petit Carême) before Louis XV in 1718, urging upon that monarch the need of morality and just government.

MASSINGER, PHILIP (1583-1640). English dramatist. Born at Salisbury in Nov., 1583, he lived by his pen in London from 1606 till his death, March, 1640. A voluminous

writer, and collaborator with Fletcher, Field and Dekker, he is now known to have been part author of plays usually attributed to Beaumont and Fletcher. Fifteen of the plays which he wrote independently are extant. A master of plot and also of construction, his plays held the stage till the final quarter of the 19th century. Of his works, The Bondman, The Maid of Honour, The Emperor of the East, and Believe As You List, are replete with contemporary political allusions. His masterpiece is A New Way to Pay Old Debts.

Philip Massinger,
English dramatist

MASSINGHAM, HENRY WILLIAM (1860-1924). British journalist. Born at Old Catton, Norwich, he was for a time on the staff of The Norfolk News and The Daily Press, Norwich. In London he was editor of the National Press Agency, succeeded T. P. O'Connor as editor of The Star, and was editor of The Daily Chronicle, 1895-99. He was London editor of The Manchester Guardian, 1899-1901, parliamentary representative of The Daily News, 1901-7, and editor of The Nation until his death, Aug. 27, 1924.

MASSON, DAVID (1822-1907). Scottish essayist and biographer. Born at Aberdeen, Dec. 2, 1822, he edited The Banner, an Aberdeen weekly paper, 1841-42, and in 1844-47 was on the literary staff of W. and R. Chambers. He was professor of English literature, University College, London, 1852-65, and of rhetoric and English literature at

Edinburgh University, 1865-95. He became historiographer royal for Scotland in 1893. He died at Edinburgh, Oct. 6, 1907.

Masson's numerous works include a monumental life of John Milton, 6 vols., 1859-80. Notable also are his British Novelists and Their Styles, 1859; Life of Drummond of Hawthornden, 1873; and Life of De Quincey, 1878. He was the first editor of Macmillan's Magazine, 1859-67.

MASSYS, QUINTEN, OR MATSYS, QUENTIN (1466-1530). Dutch painter. Born at Antwerp or at Louvain, the main early influence was that of Dierick Bouts. The chief pictures of his early period are Madonna and Child (Brussels), S. Christopher, and Virgin at Prayer (Antwerp). The Crucifixion in the National Gallery, London, is one of many Calvary pictures. Of his later works, The Magdalen and Madonna Enthroned are noteworthy. He painted genre pictures in a satirical vein, e.g. a Money-changer and his Wife, 1518, in the Louvre.

MAST. In sailing vessels, the spar set upright from the keel-plate, on which sail is set. Built-up masts comprise two or more sections, the upper of which may be lowered when reducing the amount of sail. From the deck upwards the sections are termed the lower mast, topmast, top-gallant mast, and royal mast. Pole masts are usually constructed in a single piece. Metal masts are frequently hollow, internal bracing being provided to give the necessary strength. Where a ship has more than one mast a distinctive name is given to each, e.g. foremast, mainmast, and mizzen or mizzenmast. There are also mooring masts for airships. See Aerodrome; Airship, illus. p. 39; Mooring Mast; Ship.

MASTABA (Arab. bench). Early form of Egyptian tomb. Rectangular and flat-roofed, with sloping sides, it was faced at first with sun-dried brick, and afterwards with limestone. Representing the earliest elaboration under the Old Kingdom of the pre-dynastic pit-tomb, mastabas are best preserved at Dabshur and Sakkara.

MASTER (Lat. magister, master). Term for a man exercising control, authority, or headship, especially one empowered to direct or teach. The eldest son of certain Scottish viscounts and barons is known as master, e.g. Master of Falkland, Viscount Falkland's heir. The British royal household has its master of the household, master of the horse, master of the ceremonies, and master of the king's music. The commander of a merchant ship is the master, originally master-mariner or sailing-master, by courtesy called captain. In the British Navy the head of the police aboard a warship is called the master-at-arms. The term "old masters" is applied to the great painters from the 13th to the 17th centuries approximately, and also to their works. Master is the title of a university degree.

Master is the title of various legal officials in England. The master of the faculties is superintendent of the court of faculties, a tribunal belonging to the archbishop. Masters of the supreme court are officials with duties partly judicial, partly administrative. There are also masters in the chancery division, that title having been substituted in 1897 for the former title of chief clerk. The Master of the Rolls now presides over the court of appeal, and ranks after the lord chief justice. He has charge of the public records, and is chairman of the Historical Manuscripts Commission.

The legal relation of master and servant is created where one person hires the services of another, either generally or for a fixed period, in such a way that the servant is bound to obey all reasonable commands of the master; and, moreover, can be told, not only what work to do, but how to do it.

MASTERTON. Town of North Island, New Zealand, 67 m. N. of Wellington by rly. It is the centre of one of the finest sheep-rearing areas in the world. Pop. 5,781.

MASTIC. Variety of gum resin, used in the East as a chewing gum. It is a product of the mastic or lentisk tree, and is extensively used in the manufacture of varnishes for map making, and in dentistry as a tooth stopping. The lentisk plant is indigenous to the Mediterranean coast region, and various plants yielding a similar substance are found in S. Africa, India, and S. America.

MASTIFF. Large type of dog, now mainly kept as a watchdog. The chief breeds are the Asiatic, of which the Tihetan is the best known type, the English, and the Bordeaux. The modern English mastiff is a large and powerful animal, possessing a keen scent, with something of the bulldog about its head, due to crossing with that breed. Its temper is variable, but it is usually docile with those whom it knows. The mastiff usually stands about 30 ins. high at the shoulder.

MASTODON. Fossil elephant. The mastodon, so called from the conical tubercles or projections on its teeth, was of a more primitive type than the mammoth, and its remains are more widely scattered. The animal lived in the Miocene age and died out during the Pleistocene. The American mastodon strongly resembled the modern Indian elephant both in general size and in shape of tusks. The animal was covered with a thick, woolly brown hair much like the mammoth. See Elephant; Mammoth.

Mastodon. Skeleton of American mastodon found in Northern Yukon.

Natural History Museum, New York

MASTOID PROCESS. Bony protuberance immediately behind the lower part of the ear. The interior contains a number of hollow spaces, lined with mucous membrane, which communicate with the tympanic cavity of the ear. Suppuration in the ear may spread to the interior of the mastoid bone, producing the condition known as mastoiditis. See Ear.

MASULIPATAM. Port of India, in Madras. In the Kistna dist., it lies N. of the Kistna delta, at the end of a branch rly. from Bezvada. Printed cottons, canopies, prayer cloths, etc., are manufactured, but this industry, like that of carpet weaving, is decadent. An English settlement was founded here in 1611. From 1686-90 it was held by the Dutch, and in 1750 was given to the French by the nizam of Hyderabad. In 1758 Clive sent a force against it, and under Col. Forde it was taken in April, its capture having im-

portant results in extending the British power in India. Pop. 43,940.

MASURIAN LAKES. Network of lakes, marshes, and watercourses in the district inhabited by the Masurians, a Polish people in the S.W. of East Prussia. Important fighting took place in this region between the Russians and Germans in the Great War. What is often described as the first battle took place Sept. 5-15, 1914, when Hindenburg immediately after Tannenberg, attempted to crush Rennenkampf's retreating army. The second battle was fought between the Germans and the Russians in Feb., 1915.

MASURIUM (Ma). Substance believed to be a chemical element with the atomic number 43. It was discovered, together with rhenium, in the mineral columbite by Noddack and Tacke, in 1925. See Rhenium.

MATABELELAND. District of S. Africa, now part of S. Rhodesia. Named after the Matabele, it stretches from the Transvaal to Mashonaland, is rich in minerals, and has much fertile land. The chief towns are Bulawayo, Gwelo, and Selukwe.

Matabeleland was included in the grant made to the British S. Africa Co in 1889. The first settlements made were in Mashonaland, and against them the Matabele directed their raids. In reply Bulawayo was entered, Lobengula fled, and the Matabele were crushed, their country becoming part of the territory under the chartered company. In March, 1896, the Matabele rose in rebellion, seizing the opportunity offered by the Jameson Raid. The struggle was ended after a meeting between Rhodes and the chiefs of the tribe in the Matopopo Hills in Sept. The country then settled down as part of Rhodesia. See Rhodesia.

MATADOR (Sp. killer). Highest rank among professional bull-fighters. In the last stage of the fight the matador is the man who actually kills the bull. See Bull-Fighting.

MATANZAS. City and seaport of Cuba. It lies at the head of Matanzas Bay, on the N. coast, 55 m. by rly. E. of Havana. It has a well-sheltered but partly silted harbour. Matanzas has petroleum and sugar refineries, distilleries, rly. workshops, and manufactures of leather, hoots and shoes, and cord, and its chief exports are sugar, rum, and molasses. The city, which dates from 1693, consists of three portions separated by the rivers San Juan and Yumuri. Among its larger buildings are the Government building, theatre, casino, and lyceum. Pop. 66,767.

MATCH. Word applied to a small piece of wood, waxed thread, or other material, tipped with a substance which can be ignited by friction. All matches which can be struck on any rough surface have as their basic ingredients one substance rich in oxygen and another which easily combines with oxygen, the reaction taking place with the evolution of heat on the application of friction. Potassium

Matabele warrior

Matador in the costume of the bull-ring

chlorate, and phosphorus are examples. Sesquisulphide of phosphorus is now extensively used. In the safety match the phosphorus is separated from the composition of the match and transferred to the friction surface on the box.

MATCH DUTY In 1916 a duty was placed on matches. This varies according to the size of the boxes or containers. The amount received from the duty in 1929 was £1,880,623.

Matchlock. A piece of smouldering match was carried on the barrel to ignite the match on the serpentine when a shot was about to be fired

MATCHLOCK. Hand gun in which the charge is fired by the application of a smouldering match to the touch-hole by a mechanical device actuated by moving a lever. The matchlock was invented about 1460. In its earliest form it consisted of a serpentine (a curved lever) pivoted in a hole in the stock, which carried the burning match. It was so balanced that the match was held away from the touch-hole until the end of the lever under the stock was pressed, when the glowing match was pushed into the flashpan and the charge fired. See Flint; Gun; Musket.

MATE. Literally a companion or equal. In the British navy the rank of mate was held until 1861 by officers immediately junior to lieutenants, but in that year the rank of sub-lieutenant was substituted for it. In 1913 the title was again revived. In the merchant service a mate is relatively a much more important officer, the first mate, or first officer, of a ship ranking next after the captain.

MATÉ OR PARAGUAY TEA. Dried and powdered leaves of *Ilex paraguayensis*, a tree allied to the holly, infused and sweetened with sugar. It is sucked up through a special tube which strains off the leaf-particles, is aromatic and somewhat bitter, and has refreshing and restorative effects. Large quantities of maté are consumed in Argentina and Brazil. The tree is allied to the holly. See *Ilex*.

MATERIALISM. Theory that regards matter as the prime cause of everything, even of mental processes such as thought and consciousness. According to the materialists, all knowledge has its origin in sensation, merely consisting of transformed sensations: intellectual life is nothing but the result of mechanical combinations and interactions of matter. The soul itself is only a phenomenon of the brain; when the latter perishes, the soul perishes with it. Everything takes place according to certain, fixed unalterable laws.

Cotton Mather, American divine

MATHER, COTTON (1663-1728). American divine. Member of a famous Puritan family, and grandson on his mother's side of John Cotton, he was born at Boston, Mass., Feb. 12, 1663, and educated at Harvard. He took his

B.A. degree at the age of 15, and becoming with his father, Increase Mather, co-pastor of the North Church in 1684, remained associated with it until his death, Feb. 13, 1728. Eminent both as preacher and pastor, he published some 400 works, and left voluminous MSS., including a treatise on medicine and a Scripture commentary in six large volumes.

MATHER, INCREASE (1639-1723). American divine. Born at Dorchester, Massachusetts, June 21, 1639, he was the youngest son of Richard Mather (1596-1669), who, suspended for nonconformity, left Lancashire for New England in 1635. Increase became a preacher in Devonshire and Guernsey, but refusing to conform at the Restoration, went to Boston, where he was ordained pastor of the North Church, June 6, 1664. He retained this office until his death, Aug. 23, 1723, and was also president of Harvard, 1685-1701. He secured an enlarged charter for Massachusetts from William III.

MATHEW, THEOBALD (1790-1856). Irish temperance advocate. Born at Thomastown, near Cashel, Oct. 10, 1790, he was ordained in 1814, and given charge of a little chapel in a poor part of Cork. For 24 years he laboured to secure education and the means of civilization for the poverty-stricken people, and in 1838 began to exercise his remarkable magnetic influence in the cause of total abstinence. Father Mathew visited London in 1843 and America in 1849, drawing crowds of converts to total abstinence everywhere. He died at Queenstown, Dec. 8, 1856.

MATHEWS, CHARLES (1776-1835). British comedian. Born in London, June 28, 1776, he was engaged by the Theatre Royal, Dublin, in 1794, coming to London in 1803. Among the parts which he played was that of Sir Pretful Plagiary in *The Critic*, a performance which Leigh Hunt regarded as perfect. Mathews' greatest success, however, was in the rôle of entertainer, in which capacity he became immensely popular on both sides of the Atlantic. He died at Plymouth, June 28, 1835.

Maté. Gourds for holding the liquid tea, and bombillas through which it is sipped. Top, left, the leaves of the plant

MATILDA OR MAUD (1102-67). Queen of England and empress. Daughter of Henry I of England, she married the emperor Henry V in 1114. On the death of her husband in 1125 she returned to England and, being the only surviving child of Henry, was proclaimed heiress to the throne. In 1128 she married Geoffrey of Anjou, and with his aid defeated her rival Stephen at Lincoln, 1141, and was crowned in London, but finding it impossible to make her claim effective, Matilda returned to Normandy, leaving her son, who afterwards became king as Henry II, to contest his claim to the crown. She died Sept. 10, 1167. See Stephen.

MATINS OR MATTINS. Ancient name for early morning prayers. The existing service is formed from the ancient services for matins, lauds, and prime. The hour of matins has varied, early custom favouring 6 or 7 a.m.

MATLOCK. Urban district of Derbyshire. Divided into Matlock Bridge, by the river, and Matlock Bank, on the hillside, it stands on the Derwent, 17 m. from Derby, with a station on the L.M.S. Rly. The chief

industries are the making and bleaching of cotton, corn and paper mills. Matlock Bath, a mile to the S., is famous for its medicinal waters, discovered 1698. It has a separate station on the L.M.S. Rly. The Matlocks are famous for their beautiful surroundings. These include High Tor and other rocks along the Derwent. Pop. 10,545.

Matoppos Hills, Matabeland. Grave of Cecil Rhodes; in the background is the memorial to the British who fell fighting against the Matabele, Dec. 4, 1893

MATOPPO HILLS. Range of hills in S. Rhodesia about 18 m. S.E. of Bulawayo. The district covers about 1,040 sq. m. It contains the graves of Cecil Rhodes and Sir Starr Jameson, as well as the Matoppos Dam, built to irrigate the surrounding country. The cemetery here was consecrated by Rhodes to those who deserved well of their country.

MATRICULATION (Lat. *matriçula*, public register). Process of admission to the membership of a university or college. The formal enrolment is usually preceded by an examination varying in severity. The matriculation examination of London University is the best known. It is taken by a large number of candidates who do not intend to proceed with university studies, because success therein is advantageous to those entering certain professions. At Oxford the equivalent examination is known as *responsions*, or popularly as *snalls*. At Cambridge it is known as the previous examination, or *little-go*.

Charles Mathews, British comedian

MATRON (Lat. *matrona*, married woman). Term of Roman origin, used at first for a married woman of unblemished character. This idea has persisted, but the word now refers chiefly to a woman who is the head of a hospital or orphanage, and to one who has charge of the domestic arrangements of a school or college.

Matronalia was the name given in ancient Rome to a festival celebrated by married women in honour of Juno on March 1.

MATTAWA. Town and river of Ontario, Canada. The river is 50 m. long and flows into the Ottawa river at the town, which is on the C.P.R., and is a centre for lumberers, trappers, and sportsmen. Near deposits of mica have been located. Pop. 1,462.

MATTEI, TIRO (1841-1914). Italian pianist and composer. Born May 24, 1841, at Campobasso, near Naples, he studied music in Rome. After teaching there, he settled in London in 1863, devoting himself to conducting, piano-playing, and composing. He made tours in Europe, and later returned to Italy, where he was pianist to the king. His works include operas, *Maria di Gand* among them, ballets, and songs. He died March 30, 1914.

MATTER (Lat. *materia*). In philosophy, the quality possessed by all sensible things; more particularly, the material or substance

of anything as opposed to its form. Aristotle first accentuated this distinction. In later philosophy, matter denotes the visible, palpable material existing in space; more definitely, the persistent, imperishable foundation or substratum of the world, and all that is in it, as opposed to its changeable phenomena.

In physics, matter is defined as the stuff or substance of which the visible, sensible universe is composed. It was early recognized that there are three states of matter, the solid, the liquid, and the gaseous. Water, for example, can assume all three forms, and the particular state in which any material substance is found is rather an accident of prevailing conditions of temperature and pressure than an essential property.

According to the atomic theory matter consists of an enormous number of atoms. In the solid state these atoms are bound closely together by their mutual attractions, so that one part of the solid cannot move without communicating its motion to the rest; in the liquid state the atoms are not so tightly bound together, and are more easily separated; in the gaseous state the atoms have so completely lost their bonds that they tend to separate as far as possible from one another, and consequently a gas will always expand as far as its boundaries permit. All material substances are compounded of a limited number of elements. The smallest portion of a compound which can have a separate existence is the molecule.

RECENT THEORIES. In 1924 Louis de Broglie put forward his wave theory, which asserted that with every material particle there is associated a vibratory system, or group of waves, the energy of the vibration being equal to the intrinsic energy of the particle. Thus matter consisted of waves of which the centres of energy were the electrons and protons. E. Schrödinger (1926) suggested that the atom itself consisted of a spherical group of waves fluctuating in electric density, and that electrons sent out by the atom were smaller groups of waves. See Atom; Chemistry; Electron; Element; Molecule; Relativity.

MATTERHORN. Alpine peak, on the frontier of Italy and Switzerland. It is 6 m. S.W. of Zermatt. Its height is 14,782 ft. It was first

climbed, July 14, 1865 by Lord Francis Douglas, Rev. C. Hudson, D. Hadow, and E. Whymper. All save Whymper and two of the guides were killed. See Alps.

MATTHEW. Saint and apostle, also called Levi. A Jewish tax-collector for Herod the Tetrarch, he was sitting at the receipt of custom near Capernaum when called by Jesus. The First Gospel traditionally embodies his teaching. He is said to have remained in Jerusalem for 15 years and to have suffered martyrdom at the hands of the Ethiopians.

MATTHEW, GOSPEL OF. Ascribed by tradition to Matthew the Apostle as early as the time of Papias (A.D. 135), this gospel is a compilation based on two main sources—Mark and the Logia, with some additional material, especially in the opening and closing chapters. It was evidently written for a Jewish audience. The arrangement and order of the narrative are artificial. The writer groups similar incidents together—giving us chapters of miracles, chapters of parables, and chapters of teaching. Its earliest possible date is 60-70, but many place it ten years later.

MAUBEUGE. Town of N.E. France. It is on the Sambre, close to the Belgian frontier. Hardware and metal goods are manufactured. It was the capital of Hainault, but became French in 1678. Maubeuge was one of the most important junctions in N. France during the Great War, as five rly. lines meet here, connecting the French and Belgian coalfields. It surrendered to the Germans, Sept. 7, 1914, and was reoccupied Nov. 9, 1918. Pop. 22,843.

MAUCHLINE. Town of Ayrshire, Scotland. It is 9 m. S.E. of Kilmarnock on the L.M.S. Rly. It was noted for its wooden snuff-boxes and other small wooden ware. Mauchline is the scene of Burns's Jolly Beggars and Holy Fair, and 1 m. to the N. is Mossiel, the farm at which he lived from 1784 to 1788. Pop. 2,357.

MAUD (b. 1869). Queen of Norway. The youngest of the three daughters of Edward VII. of Great Britain, she was born Nov. 26, 1869. On July 22, 1896, she was married to Prince Charles of Denmark, who in 1905 was chosen king of Norway, taking the name of Haakon VII. Their son Olaf was born July 2, 1903. In 1929 he married Princess Martha of Sweden.

MAUDE, CYRIL (b. 1862) British actor. Born in London, April 24, 1862, his first appearance on the stage was in America as the servant in East Lynne, 1884. On Feb. 18, 1886, he appeared at The Criterion, London, as Mr. Pilkie in A Great Divorce Case. He joined Charles Wyndham at The Criterion in 1890, and Comyns Carr at The Comedy in 1893, where he remained until 1896, when he went into partnership with Frederick Harrison at the Hay-

Cyril Maude,
British actor
Lafayette

market Theatre. This association lasted until 1905, and Maude achieved many successes. In 1906 he opened The Playhouse and was its sole manager until 1915. In 1927 he published his reminiscences. He married as his first wife Winifred Emery (q.v.).

MAUDE, SIR FREDERICK STANLEY (1864-1917). British soldier. The son of Sir F. Maude, V.C., he was born June 24, 1864. He served in the Sudan in 1884 and in S. Africa 1899-1902. When the Great War broke out, Maude was on the staff of the 5th division, with which he went to France. In Oct., 1914, he was appointed to command the 14th brigade. He then commanded the 13th division, with which he went in 1915 to Gallipoli, to Egypt, and finally to Mesopotamia. In Aug., 1916, he was selected, after the failure to relieve Kut, for the chief command in that area. He reorganized the forces there, and in Dec., 1916, began his advance. The Turks were driven from Kut, and a successful campaign ended in Maude's entry into Bagdad in March, 1917. After a pause came another forward move, marked by a victory at Ramadie. Again in Bagdad, Maude was struck down suddenly by cholera, and on Nov. 18, 1917, he died.

Sir Stanley Maude,
British soldier
Swaine

MAUD'HUY. LOUIS ERNEST DE (1857-1921). French soldier. Born at Metz, Feb. 17, 1857, he entered the army as a lieutenant of

light infantry. When the Great War broke out, Maud'huy was in command of the 80th brigade at St. Mihiel, and took part in several battles, including the first battle of the Marne. In 1916 he was fighting at Verdun in command of the 15th army corps, and in 1917 was in action in the Chemin des Dames battles. In Nov., 1918, he was appointed governor of Metz. He died July 16, 1921.

MAUGHAM, WILLIAM SOMERSET (b. 1874). British dramatist and novelist. He qualified as a doctor, but took to literature, after achieving a great success in 1897 with his first novel, *Liza of Lambeth*, a study of slum life. Mrs. Craddock, 1902; *The Magician*, 1908; *The Moon and Sixpence*, 1919; *The Painted Veil*, 1925; *The Casuarina Tree*, 1926; and *Ashenden*, 1928, were other notable books. His plays include *A Man of Honour*, 1903; *Lady Frederick*, 1907; *The Land of Promise*, 1914; *Home and Beauty*, 1919; *East of Suez*, 1922; *Our Betters*, 1923; *The Letter*, 1927; *The Constant Wife*, 1927; and *The Sacred Flame*, 1929.

W. S. Maugham,
British dramatist
Russell

Maunche, or Manehe. In heraldry, a charge, often greatly formalised, representing an ancient hanging sleeve. See Heraldry.

Maunche, an
heraldic charge

MAUNDY (Lat. mandatum, commandment). Name given to the ceremony of washing the feet of the poor on the Thursday before Easter, to the dole then made, and formerly to the Last Supper. In England the Maundy usage is now confined to gifts of money at Westminster Abbey to as many old men and women as there are years in the sovereign's age, one penny for each year, together with money in lieu of the clothes formerly given. The Yeomen of the Guard carry the doles, which are distributed by the lord high almoner.

MAUNOURY, MICHEL JOSEPH (1847-1923). French soldier. He was born at Maintenon, Dec. 17, 1847, took part in the Franco-Prussian War, was a colonel in 1897, and ten years later became director of the École Supérieure de Guerre. A general since 1901, he had retired from the army before the outbreak of the Great War, but was recalled by General Joffre and placed in command of the French 6th army, the new force which suddenly fell upon the left of von Kluck in the first battle of the Marne, Sept., 1914. In 1915 he was appointed military governor of Paris. He died Mar. 28, 1923.

M. J. Maunoury,
French soldier

MAUPASSANT, HENRI RENÉ ALBERT GUY DE (1859-93). French novelist. Born at Miromesnil, Normandy, Aug. 5, 1859, he was early influenced by Flaubert and was one of the young authors who gathered about Zola at Médan, first attracting attention by *La Boule de Suif*, which he contributed to a volume of stories, *Soirées de Médan*, the joint result of their intercourse. He was then a

Guy de Maupassant,
French novelist

young man of robust health and a great athlete. But he broke down prematurely, in 1892, was

Matterhorn, a celebrated Alpine
peak, 14,782 ft. high

suddenly seized with insanity, and died in an asylum, July 6, 1893.

Maupassant wrote a number of novels, but his best work is to be found in his short stories, e.g. the collections entitled *La Maison Tellier*, *Mademoiselle Fifi*, and *M. Parent*.

MAURETANIA. British liner. Owned by the Cunard line, and of 31,938 tons displacement, she is one of the largest liners in the world. A sister ship to the *Lusitania*, and launched Sept. 29, 1906, her length is 762 ft., breadth 88 ft., and her speed 25 knots. During the war the *Mauretania* was used as a transport. In July, 1928, she created a new world's record (12½ days) for a double voyage across the Atlantic. Her record for the single run, Europe to U.S.A., was later beaten by the *Bremen* (q.v.) and the *Europa* (q.v.).

MAURICE (1567-1625). Prince of Orange. The second son of William the Silent, he was born Nov. 13, 1567. It is as a soldier that Maurice is best known. He led the Dutch in their war against the Spaniards, gaining victory after victory until the truce in 1609. He died April 23, 1625.

MAURICE, SIR FREDERICK BARTON (b. 1871). British soldier. The eldest son of Sir J. F. Maurice, he was born Jan. 19, 1871, and entered the army in 1892. He served in the Tirah, 1897-98; and in S. Africa. He went to France in Aug., 1914, and was chief staff officer of the 3rd division in the retreat from Mons. In Dec., 1915, he was made director of military operations, but in May, 1918, after he had questioned in the press some statements about the strength of the army in the field made by Lloyd George, he was placed on retired pay. He then acted as military correspondent for London newspapers. His works include *Forty Days* in 1914, 1919; *The Last Four Months*, 1919; and *The Life of Lord Rawlinson*, 1928.

MAURICE, JOHN FREDERICK DENISON (1805-72). British divine and social reformer. The son of a Unitarian minister, he was born near Lowestoft, Aug. 29, 1805, and was ordained in 1834, and in 1837 became chaplain of Guy's Hospital, London. He was appointed professor of English literature and history at King's College, London, in 1840, and professor of theology there in 1846. His theological opinions, which were in advance of his age, led to his resignation in 1853, and he became principal of the Working Men's College, London, which he had helped to found. In 1866 he became professor of moral philosophy at Cambridge. He died April 1, 1872. Maurice was a colleague of Charles Kingsley in the Christian Socialist movement.

His son, Sir John Frederick Maurice (1841-1912) was professor of military history at the staff college, Camberley, 1885-92.

MAURISTS. Reformed congregation of the Benedictine Order named from S. Maurus, a monk associated with S. Benedict. It originated about 1618, when the abbey of S. Maur-sur-Loire was founded near Saumur. A hundred years later there were six provinces in France, including 180 houses, the headquarters being at the abbey of S. Germain-des-Près, Paris. The congregation was suppressed in 1792, and the abbey of S. Maur destroyed.

MAURITANIA OR MAURETANIA. Roman province of North-West Africa. Its area corresponded broadly with that of Morocco and W. Algeria, and it was bounded E. by the province of Numidia. The Romans became acquainted with the country during the war with Jugurtha, 106 B.C., and it was formed into a province by Claudius.

The name Mauritania is now given to a French colony in West Africa. Bounded N. by the Spanish territory of Rio de Oro, S. by the French colony of Senegal, and E. by the French Sudan, it was formed into a protectorate in 1903, and became a colony in 1921. Its area is about 347,000 sq. m. The chief products are gum, dates, and cotton. Pop. 296,516.

MAURITIUS OR ÎLE DE FRANCE. Island in the Indian Ocean. British crown colony. Situated about 500 m. E. of Madagascar, it covers 720 sq. m. Surrounded by coral reefs, it is a rugged, hilly mass of volcanic origin, with valleys of great fertility. It exports sugar, rum, aloe fibre, coconut oil, copra, and vanilla. Port Louis, the capital, has the only good harbour. There are 144 m. of rlys. Cable communication is maintained with Zanzibar, Australia, Madagascar, and Durban.

Mauritius was discovered by the Portuguese about 1507. The Dutch occupied it in 1598, naming it in honour of Prince Maurice of Orange-Nassau. They left it in 1710, and five years later the French began settling it; they renamed it Île de France. The British conquered it in 1810, and it was ceded to Great Britain by the treaty of Paris in 1814. Renamed Mauritius and made a crown colony, it is administered by a governor, assisted by an executive council. Among its dependencies are the islands Rodrigues and Diego Garcia. Pop. about 404,000.

MAUROIS, ANDRÉ (b. 1885). French writer. Born at Elbeuf, he was educated at Rouen. His publications include *Silences* du Colonel Bramble, 1918; *Discours du Docteur O'Grady*, 1920; *Ariel*, or the Life of Shelley, 1923; *Maple*, 1926; *The Life of Disraeli*, 1927; *Essay on Dickens*, 1927; *Don Juan*, or the Life of Byron, 1930.

MAUSER RIFLE. Rifle used for both military and sporting purposes, invented by Paul Mauser, a German mechanic. The German government equipped their army with the weapon in 1872, and have retained it ever since, while it is also the standard equipment of other armies. It is a bolt action rifle with a magazine, filled from chargers. It is extremely durable, very accurate, and has a long life of barrel. See Rifle.

MAUSOLEUM. Name applied to a tomb or cenotaph of unusual size and importance. It was first used of the tomb of King Mausolus of Caria, Asia Minor, erected at Halicarnassus, 353 B.C., of which some of the sculptures are in the British Museum. This monument, accounted one of the seven wonders of the world, was 111 ft. in circumference and 140 ft. high, and was crowned by colossal statues of Mausolus and his wife, Artemisia, perhaps designed by Scopas. Other classic mauso-

leums were those of Augustus in the Campus Martius, Rome, and of Hadrian, Rome.

MAWSON, SIR DOUGLAS (b. 1882). British explorer. Born at Bradford, Yorkshire, he went in his youth to Australia, where he graduated at Sydney University in 1901, became demonstrator in chemistry, 1902, lecturer in Adelaide University, 1905, and professor of geology and mineralogy, 1920. On the scientific staff of Sir Ernest Shackleton's Antarctic expedition of 1908, he helped to locate the S. Magnetic Pole in Victoria Land. He discovered and explored King George V Land, and in 1929, in the *Discovery* (q.v.), set out on another Antarctic tour. Knighted in 1914, he published *The Home of the Blizzard* in 1915.

Sir D. Mawson, British explorer Thomson

MAX, ADOLPHE (b. 1869). Belgian administrator. He began his career as a journalist, and then became a lawyer. At the outbreak of the Great War he was hurgmaster of Brussels, and in that capacity he proposed to defend Brussels against the German advance. During the early part of the German occupation he publicly urged resistance to the Germans' demands, and on the non-payment by Brussels of the fine of £8,000,000 was taken to Germany, where he remained until the end of the war. On Nov. 17, 1918, he was reinstated.

MAXENTIUS, MARCUS AURELIUS VALERIUS. Roman emperor, A.D. 306-312, a son of Maximian, the colleague of Diocletian. His tenure of imperial power, which he had seized with the help of the praetorian guard, came to an end when he was defeated by Constantine and drowned in his flight, Oct. 27, 312.

MAXIM, SIR HIRAM STEVENS (1840-1916). Anglo-American inventor. He was born at Saugerville, Maine, U.S.A.; Feb. 5, 1840. His inventive faculty was developed early, and demonstrated in improvements in lamps used for electric lighting purposes, and in gas generating plants, steam and vacuum pumps, engine governors, steam pumping engines, etc. His name is best known in connexion with the Maxim gun. He was also interested in aeronautics. Maxim became a naturalised British subject, was knighted in 1901, and died Nov. 24, 1916.

Sir Hiram Maxim, Anglo-American inventor Russell

Mausoleum. Reconstruction of the tomb of Mausolus at Halicarnassus. From model by A. J. Stevenson, British Museum, by permission of the Trustees

which has his name. It was adopted by the British army in 1889. The Maxim gun is water-cooled and operates by the recoil of the

J. F. D. Maurice, British divine

barrel and breech block, the cartridges being fed in canvas or steel strip belts. The breech block is connected to the barrel by suitable levers so that the reciprocating motion enables it to eject the spent case, cock the hammer, feed in a new round, and then fire the latter, the ammunition belt being automatically fed through the breech casing. The rate of fire approximates to 600 per minute. See Machine Gun.

Maxim Gun. Sectional diagram showing principal parts of mechanism: A. Barrel. B. Water Jacket. C. Handles. D. Trigger. E. Foresight. F. Back-sight. J. Feed block for ammunition belt. K. Attachment for deflecting gases. L. Tube for expulsion of spent cartridges. M. Striker. N. Cam and lever of operating striker. O. Extractor for empty cartridges. P. Clip for removing new cartridge from belt.

MAXIMIANUS I, MARCUS AURELIUS VALERIUS (d. 310). Roman emperor, A.D. 286-305. A Pannonian

Maximianus I, Roman emperor
From a medallion

of humble origin, he was chosen by Diocletian as colleague with the western half of the empire as his portion, and when in 293 the empire was divided into four parts, Maximianus had charge of Italy and Africa. When Diocletian abdicated in 305 he compelled Maximianus to do the same. In 306 the elevation of his son Maxentius to the rank of Augustus induced him to resume the crown. He committed suicide in 310.

Maximianus II, Roman emperor, A.D. 305-311, is better known as Galerius (q.v.).

MAXIMILIAN (1867-1929). Prince of Baden. Born July 10, 1867, he entered the Prussian army and took an active part in the public life of Baden, but was little known in the politics of Germany until, on Oct. 3, 1918, he succeeded Count Hertling as imperial chancellor. His first action was to appeal to President Wilson, through Switzerland, to initiate peace negotiations, and he conducted the difficult questions relating to the armistice and the abdication of the Kaiser. He remained in office until the republican government was fully established. In 1923 an English translation of his Memoirs was published. He died at Constance, Nov. 6, 1929.

Maximilian, Prince of Baden

MAXIMILIAN I (1459-1519). German king and Roman emperor. Son of the emperor Frederick III, he was born in Vienna, March 22, 1459. He married in 1477 Mary, daughter and heiress of Charles the Bold, duke of Burgundy, and the death of Charles threw on him the duty of defending his wife's lands against the king of France. In 1486 he was chosen king of the Romans, and in 1493 he became emperor.

Maximilian's reign of 26 years was full of incident. He warred against France and Italy, but without any great success. The Swiss won from him their independence after a short war in 1499. In Germany he set up an imperial court of justice, the Reichskammergericht, and also an aulic council, organized the Landsknechte and improved the fighting forces in other ways. Under him Tirol was added to the family lands, and he arranged the marriages which brought Hungary and Bohemia to the Hapsburgs. He died Jan. 12, 1519.

Maximilian II (1527-76), the eldest son of Ferdinand I, succeeded in 1564, and reigned until his death, Oct. 12, 1576.

MAXIMILIAN (1832-67). Emperor of Mexico, 1863-67. He was born July 6, 1832, a younger son of the archduke Francis Charles

and brother of the emperor Francis Joseph of Austria. In 1857 he married Charlotte, daughter of Leopold I, king of the Belgians.

In 1863 he was proclaimed emperor of Mexico by the French in that country, and on May 29, 1864, he landed at Vera Cruz. In 1866 he lost the support of the French force, and in May of the following year he was betrayed to his enemies and on June 19, 1867, was shot. The empress Charlotte went out of her mind, dying Jan. 19, 1927.

MAXIMINUS, GAIUS JULIUS VERUS. Roman emperor, A.D. 235-38. By birth a Thracian peasant, he rose to high command in the army. He was proclaimed emperor by the legions of the Rhine, and the murder of Alexander Severus within a month afterwards made his way clear to the throne. Maximinus gained some successes against the Germans, but soon alienated his subjects by his tyranny and cruelty, which caused a revolt in Africa. He was murdered by his own soldiers.

Gaius Maximinus, Roman emperor
From a medallion

MAXIMUS, MAGNUS CLEMENS. Roman emperor, A.D. 333-38. Born in Spain, he was proclaimed emperor by the troops in Britain, crossed over to Gaul, and defeated Gratian, his rule beyond the Alps being recognized by both Theodosius and Valentinian II. He invaded Italy, 387, but was taken prisoner and put to death at Aquileia by order of Theodosius.

Another Roman emperor, Petronius Maximus, murdered Valentinian III and married his widow in 455, but was himself killed in the same year.

MAX MÜLLER, FRIEDRICH (1823-1900). Anglo-German philologist, Sanskrit scholar, and orientalist. Only son of the poet Wilhelm Müller, he was born at Dessau, Dec. 6, 1823, came to England, and was commissioned by the East India Company to edit the Rigveda. He became professor of modern languages at Oxford, 1854, and professor of comparative philology, 1866. He died at Oxford, Oct. 28, 1900. His lectures on the Science of Language, 1861-64, introduced the English public to the latest results of the study of comparative philology and religion.

Maximilian, Emperor of Mexico

MAXWELL, WILLIAM BABBINGTON (b. 1876). British novelist. The son of John Maxwell, publisher, by his wife, M. E. Braddon, his novels are distinguished by skilful character drawing, sound construction, and careful attention to detail. They include *The Ragged Messenger*, 1904;

Vivien, 1905; *The Guarded Flame*, 1906; *Mrs Thompson*, 1911; *In Cotton Wool*, 1912; *The Devil's Garden*, 1913; *A Man and his Lesson*, 1919; *Elaine at the Gates*, 1924; *The Case of Bevan Yorke*, 1927; and *Himself and Mr. Raikes*, 1929.

MAXWELLTOWN. District of Kirkeudbrightshire, Scotland. On the Nith, just opposite Dumfries, it has a station on the L.M.S. Rly. and has bridge connexion with Dumfries. The chief industry is the manufacture of tweeds. Until 1810 the place was known as Bridgend, but it was then renamed, the district round having been a stronghold of the Maxwells. In 1929 Maxwelltown was amalgamated with Dumfries.

MAY, PHIL (1864-1903). British caricaturist. Born at Leeds, April 22, 1864, he came to London about 1882 and drew cartoons for *Society and St. Stephen's Review*. He then went to Australia and worked for *The Sydney Bulletin*. He returned to London about 1890, and worked for *The St. Stephen's Review*, *Pick-me-Up*, *Pall Mall Budget*, *The Graphic*, and *Punch*, on the staff of which paper he succeeded to the place formerly held by George du Maurier. His publications include *The Parson and the Painter*, 1891; *Guttersnipes*, 1896; and *Phil May's Annual*. He died August 5, 1903.

Phil May, British caricaturist
Elliott & Fry

MAYA. American Indian stock. It comprises about 20 tribes in middle America. The modern Maya are directly descended from a people who at the Spanish conquest possessed an advanced civilization, which reached levels of architectural and sculptural achievement unsurpassed elsewhere in pre-Columbian America. The starting point of Maya civilization is still undetermined. The oldest dated monument yet identified in the Maya region, found in 1916 at Uaxactun in N. Guatemala, approximates to A.D. 50. In the same neighbourhood Tikal has yielded the date 214, together with monuments in an earlier style and Copan is traced back to 250.

From these centres, with temples raised upon terraced pyramidal platforms, the movement spread to

Maya. 1. Reconstruction of a temple pyramid at Tikal. 2. Stone relief from Menché city. 1. American Museum of Natural History; 2. British Museum

Quirigua and thence into Yucatan, which was reached early in the 5th century. By 600 the southern cities were already in decay, and were unknown to the early Spanish historians, who left detailed accounts of the great northern cities, notably Uxmal, Chichen Itza, and Mayapan, which was abandoned in 1442. These sources are supplemented by the digests of chronicles in the Mayan language, and by three pre-Columbian codices.

After Maya art lost its impulse in the primal centres of development its principles spread westward into S. Mexico, where it was adopted by the Zapotec people, and onward into the Anahuac tableland. Here it apparently owed its dissemination to the Toltec, from whom it was afterwards absorbed by the Aztec communities. The religious rites, less sanguinary than the Aztec, included sacrificial offerings by professional priests to deities deemed to control the means of subsistence. See Aztec; Mexico; Yucatan.

MAYBOLE. Burgh of Ayrshire, Scotland. It is 9 m S.W. of Ayr on the L.M.S. Rly. The chief industry is the making of agricultural implements. Maybole became important as the capital of Carrick. It had a castle in which the earls of Carrick lived. Later it passed to the family of Kennedy. Pop. 4,889.

MAYBRICK CASE. Trial of Mrs Maybrick for the murder of her husband in April, 1889. Mrs. Maybrick was 26 at the time, her husband being twice her age. Early in 1889 she formed a liaison with a young cotton broker in Liverpool, and shortly afterwards she and her husband had a violent quarrel. Within six weeks Mr. Maybrick was dead, and in that time incriminating correspondence had been intercepted between Mrs. Maybrick and her lover. The widow was charged with the willful murder of her husband by arsenic poisoning. She was defended by Sir Charles Russell was found guilty, sentenced to death, but was reprieved, mainly on the grounds of the conflict of the medical evidence. She was not released until 1904.

MAYFAIR. District of W. London. N. of Piccadilly (q.v.) and covered by fashionable streets and squares, it derives its name from a fair held during May in the Brook Field, near Chesterfield House. Brook Field was named after the Tybourne, which flowed through it. Sunderland House is on the site of Mayfair or Curzon Chapel, 1730-1899. In Curzon Street, Beaconsfield died in 1881. In 1928 the ground landlords allowed Bruton Street to be used for business purposes.

MAYFIELD. Village of Sussex. It is 11 m. from Tunbridge Wells, on the Southern Rly. The archbishop of Canterbury had a palace here, of which there are some remains, now partly incorporated in a convent. Pop. 2,880

MAYFLOWER. THE. Sailing vessel in which the Pilgrim Fathers (q.v.) left Plymouth, England, Sept. 6, 1620, and reached the shores of Massachusetts, Dec. 21, 1620. A square-rigged brigantine, double-decked, broad in beam, with upper works rising high in the stern, the Mayflower had been used in the whaling service. In her cabin, off Cape Cod, Nov. 2, 1620, was signed by the pilgrims the famous agreement drawn up by William Brewster. See Jordans.

May Fly. Popular name for the common English species of ephemera (q.v.).

MAYNOOTH. Village of co. Kildare, Irish Free State. Situated 15 m. N.W. of Dublin, on the G.S. Rlys., it contains the ruins of a castle, formerly the seat of the Fitzgeralds. Near is Carton, the seat of the present head of that family, the duke of Leinster. Maynooth is chiefly famous for its R.C. college, founded by the Irish parliament in 1795, the chief Irish college for the education of priests. The building, by A. W. Pugin, is in the Gothic style. Pop. 846.

MAYO. County of the Irish Free State, in the prov. of Connaught. Area, 2,158 sq. m.

It has a long irregular coastline on the Atlantic, penetrated by Killala, Blacksod, and Clew Bays, Killary Harbour, and Broad Haven. The peninsula of Mulllet juts out in the N.W. Achill, Clare, Inishurk, and other islands belong to it.

The county is drained by the Moy, Owenmore, and other rivers; it contains longhills Mask, Conn, Carra, and Beltra. The surface is fairly level in the E., but mountainous in the W. Mayo is served by the G.S. Rlys. Castlebar is the county town; other places are Ballina, Westport, and Newport. Killala was once the seat of a bishop. Pop. 172,690

MAYOR (Lat. major, greater). Name given, in England, Ireland, Canada, Australia, the U.S.A., and elsewhere, to the chief officer of a municipality. In England the title appeared about 1100 for the chief official of London, and was soon in fairly general use in the chartered towns. The mayor is elected annually by the town council to preside over its meetings and act as the official head of the town. He is the chief magistrate, and is styled his worship. The corresponding Scottish official is the provost. See Borough; Burgomaster; Lord Mayor; Provost.

MAYPOLE. Tall pole formerly set up on village greens, or in the open spaces of towns in England, to form the centre of the festivities associated with the coming of May. It was garlanded with leaves and flowers, and long coloured ribbons attached to the top were held by dancers, who plaited and unplaited them in the course of their evolutions. In some places the maypole was a permanent fixture. The London maypole, demolished by the Commonwealth, was replaced on the Restoration by a pole 134 feet in height. It stood in the Strand near Somerset House, and was removed to Wanstead, Essex, in 1717.

MAYWEED (*Matriaria inodora*). Annual or biennial herb of the order Compositae. a native of Europe and N. and W. Asia. The narrow leaves are twice divided into threadlike segments. The daisy-like flower-head is white with a yellow centre, and is 2 ins. across.

MAZARIN, JULES (1602-61). French statesman and cardinal. Born at Piscina, July 14, 1602, he entered the papal service, and was sent to France on a diplomatic mission. There Richelieu took him into the French service, and dying, named him as his own successor in 1642. On the death of Louis XIII in 1643,

Mazarin, who had received the cardinal's hat in 1641, retained the confidence of the regent, Anne of Austria. Under his régime the Thirty

Mayo, Irish Free State. Map of the north-western county of Connaught

Years' War was ended in 1648. The contest between France and Spain continued, but was suspended by the internal struggles of France known as the War of the Fronde, which ended in the complete triumph of Mazarin. The war with Spain was now renewed, with the alliance of Cromwell, and was brought to a successful termination in 1659. He died March 9, 1661.

Jules Mazarin, French statesman

MAZE. Modern term for a garden labyrinth or puzzle garden. There is a notable example at Hampton Court, laid out in the time of William III. Mazes were common in southern England in former times. See Labyrinth.

MAZEPPA-KOLEDINSKI, IVAN STEPANOVICH (1644-1709). Cossack soldier. Of a noble Polish family, he was educated by the Jesuits. He was discovered in a liaison with a noble lady, whose husband bound him naked to a wild horse, which, it is said, fled with him to the Ukraine. Then he joined the Cossacks and in time became their leader or hetman. He won the favour of Peter the Great; but in 1708 he deserted Peter and took 7,000 men to the assistance of Charles XII. He was at the battle of Poltava, 1709, after which he went to Turkey, and died, perhaps by suicide, at Bender, Sept. 22, 1709. The story of Mazeppa has been treated by Byron, Victor Hugo, Bulgarin, and Gottschalk.

MAZURKA or **MASUREK**. National Polish dance in triple time. Originating in Mazovia, Central Poland, in the 16th century, the dance was adopted in Russia after the subjugation of Poland, and became popular in Germany in the middle of the 18th century, and in France and England later. Characteristics of the early Mazurka tunes were the monotony of the bass and accents on the third beats.

MAZZINI, GIUSEPPE (1805-72). Italian patriot. Born at Genoa, June 22, 1805, he was educated for the law. He joined the Carbonari (q.v.) in 1827, and being arrested on suspicion in 1830, was sentenced to exile. Proceeding to Marseilles, he organized a small

Mayflower. Model of the famous Pilgrim ship of 1620

Mayweed. White and gold flower-heads

band of conspirators, who spread the doctrines of the secret society, Giovine Italia (Young Italy), already founded by Mazzini. When, alarmed at his secret politics, the French government banished him in 1832, Mazzini moved to Geneva, and in 1837 to London, where he made many friendships. The revolution of 1848 recalled him to Italy, but after its failure he returned to London. He was again in Italy in 1859, where he continued his plots and conspiracies. In the pursuit of one of these he was arrested in 1870, but was soon released and allowed to settle in Lugano. He was at Pisa, under the name of Brown, when he died, March 10, 1872.

As Mazzini spent nearly his whole life in writing, his works are many, but *Il Dovero dell' Uomo*, 1858 (Eng. trans. *The Duties of Man*, 1862), is the best and most characteristic of his essays. Byron e Goethe, 1847, gave an index to his views on literature, while a number of essays and reviews which he contributed to British magazines contained most of his historical work.

MEADOW GRASS (Poa). Genus of grasses of the order Gramineae, more particularly *P. pratensis* and *P. trivialis*. The first is a native of the N. temperate and cold regions, the second of Europe, N. Asia, and N. Africa. They are perennials with creeping root-stocks, which send out runners in the first-named species. They have flat pale-green leaves and pyramidal panicles of flowers. *P. nemoralis* grows in copses and woods.

MEADOW RUE (*Thalictrum flavum*) Perennial herb of the order Ranunculaceae. A native of Europe and N. Asia, it has a creeping root-stock and furrowed stems three or four feet high. The leaves are divided into many three-lobed leaflets. The small yellow flowers are massed in a large pyramidal cluster. There are no petals and the sepals are small, but the flower clusters are made attractive by the numerous stamens.

MEADOW SAFFRON (*Colchicum autumnale*). Tuberos-rooted perennial of the order Liliaceae, native of Europe. It has pale purple, crocus-like flowers which appear in autumn; the long slender lance-shaped leaves appear in spring. From the dried corms and the seeds the drug colchicum is prepared.

MEADOW SWEET (*Spiraea ulmaria*). Perennial herb of the order Rosaceae, a native of Europe, N. Asia, and Asia Minor. It has a short root-stock, from which arise the handsome leaves, a couple of feet long, broken into toothed leaflets and lobes, white and downy on the underside. The flowers are small, creamy-white, in dense clusters, and very fragrant. The plant delights in wet meadows and water-sides.

Meadow Sweet. Flowers and buds of the fragrant herb

Meare. Village of Somerset. About 3 m. from Glastonbury, it is known for its lake village. Pop. 1,011.

MEARNS. Alternative name for the Scottish county of Kincardine. A continuation of Strathmore is known as the Howe or hollow of the Mearns. See Kincardineshire.

MEASLES or **RUBEOLA**. Acute contagious disease of microbial origin. The specific organism has not yet been isolated. The disease is most frequent in childhood, and the interval from actual infection to the commencement of symptoms is from seven to eighteen days, most often fourteen days. The disease usually starts apparently as a feverish cold. Headache, nausea, and vomiting may be the first symptoms. About the fourth day little red spots appear on the face. The skin of the chest and abdomen exhibits a mottled, blotchy appearance. Possible complications are laryngitis, bronchitis, bronchio-pneumonia, and inflammation of the middle ear. The patient must be kept in bed in a warm, well-ventilated room and have good nursing.

MEATH. County of the Irish Free State, in the prov. of Leinster. Area, 905 sq. m. It has a coastline of about 10 m. on the Irish Sea. Largely level, there are hills in the west. The chief rivers are the Boyne and its tributary, the Blackwater. Oats and potatoes are grown; cattle, sheep, and pigs are reared. It is served by the G.S. Rlys. Trim is the county town; other places are Navan, Kells, Oldestale, and

Meath, Irish Free State. Map of the Leinster county

Athboy. Meath was the name of one of the kingdoms of Ireland, this including Meath, Westmeath, Longford, and parts of other counties. The kings disappeared in the 12th century. There is both a Roman Catholic and a Protestant diocese of Meath. Pop. 62,969.

MEATH, EARL OF. Irish title borne since 1627 by the family of Brabazon. In 1616 Sir Edward Brabazon, an Irish M.P., was made an Irish peer as Lord Ardee, and his son William, the 2nd baron, was made an earl. His descendants succeeded until the earldom came to John, the 10th earl, who in 1831 was made a peer of the United Kingdom as Baron Chaworth. Reginald, who became the 12th earl in 1887, was known as a promoter of Empire Day (q.v.) and as a philanthropist. He died Oct. 11, 1929.

MECCA, **MAKKAH**, or **BAKKAH**. City of Arabia, capital of Hejaz. It lies in a narrow valley, surrounded with hills, about 70 m. E. of Jeddah. As the birthplace of Mahomet it is the chief Holy City of the Moslems. El Haram, the great mosque, has within it the sacred Ka'aba (see illus. p. 806). Mecca was once an important centre of trade, but latterly its main commercial enterprise has been supplying pilgrims with souvenirs. Although non-Moslems are forbidden to enter the Holy City, it has been visited by several Christian observers, such as Sir R. Burton.

During the Great War Hussein Ibn Ali, the grand shérif, revolted against the Turks, and captured Mecca in 1916. In Oct., 1924,

Mecca fell to the Wahabis, as the result of the victory of the sultan of Nejd, who in Jan., 1926, proclaimed himself king of Hejaz and Nejd in Mecca. Pop. 85,000. See Hejaz: Holy Carpet; Hussein; Ka'aba: Mahomedanism; Mahomet; Nejd.

MECHNIKOV, **ILIYA** (1845-1916). Russian biologist. Born May 15, 1845, at Ivanovka, near Kharkov, Russia, he became professor of zoology at Odessa in 1870. After further research at Messina and Teneriffe, he gained world-wide reputation by his investigation into the function of the white blood corpuscles. In 1887 he settled in Paris, working at the Pasteur Institute, of which he became assistant director. Here he investigated many obscure diseases, including cancer and plague, and collaborated with Ehrlich (q.v.) in combating syphilis. He was best known by his theory of longevity (1909), in which he attributed old age to intestinal putrefaction, and advocated the sour milk treatment. Mechnikov died June 16, 1916.

Iliya Mechnikov, Russian biologist

MECKLENBURG-SCHWERIN. Republic of Germany. Until 1918 it was a grand duchy, the ruler having been a grand duke since 1815, and a duke since 1701. The state covers 5,066 sq. m., and lies on the N. German plain with a coastline along Mecklenburg Bay. The chief crops are rye, barley, sugar beets, and potatoes. The Baltic seaport Rostock is the largest town, and Schwerin is the capital. Pop. 674,045.

MECKLENBURG-STRELITZ. Republic of Germany. It is entirely inland, and adjoins on the W. the parent state of Mecklenburg-Schwerin, which it resembles in physical and economic character. Its area is 1,131 sq. m. The capital is Neu-Strelitz. Pop. 110,269.

MEDAL. Piece of metal in the form of a coin, usually bearing a device or inscription and given to commemorate an event. Medals are issued to sailors, soldiers, and airmen in time of war, and there are other medals for bravery in time of peace.

Among the most interesting British medals are those officially issued to the fighting services. Elizabeth originated the idea, as far as England is concerned, of awarding medals to those who served in battle. She gave a very beautiful oval piece to certain naval officers who fought the Armada. The army, as distinct from the navy, received its first medallion award from Charles I. But on both these occasions the recipients were a select few, and Dunbar was the first encounter in which the rank and file were all decorated. The first medal to depend from a ribbon of prescribed colour was struck for Culloden, and the earliest piece with which bars were issued as added honours was the officers' gold Peninsular medal.

Every campaign since Waterloo in which British forces have been in action has been the subject of a medal, and every man taking part in the encounters has received an award.

The series of awards from Waterloo to the Great War presents an imposing array, but the various pieces are of unequal merit. The Queen's Sudan medal of 1896, with victory on the obverse, is considered the finest piece in the series.

Medals specially struck in connexion with the Great War were: the naval medal to commemorate the victories off Heligoland Bight and the Dogger Bank, 1914-15; British War Medal, 1919; Victory Medal, 1919; Territorial War Medal, 1920; also the 1914 Star, popularly known as the Mons Star; and the 1914-15 Star. See Albert Medal; Distinguished Service Medal; etc.

MEDEA. In Greek mythology, the daughter of Aëtes, king of Colchis. When Jason came to Colchis in search of the Golden Fleece, Medea fell in love with him, and by her magic arts assisted him to obtain possession of the prize. She returned with Jason to Iolcus as his wife. There it was found that Pelias the king had murdered his half-brother Aeson, Jason's father. In revenge, Medea persuaded the daughters of Pelias to cut their father in pieces. Expelled from Iolcus for this deed, Medea and Jason went to Corinth, where Jason deserted her. See Argonauts; Jason.

MEDIA. Ancient country of W. Asia, S. and S.W. of the Caspian Sea, in what is now Persia. The capital was Ecbatana, the modern Hamadan. Shortly after 700 B.C. the Medes threw off the Assyrian yoke and became a great nation. In 549 Cyrus of Persia, who acknowledged the sovereignty of Astyages, son of Cyaxares, rebelled, and by 500 was ruler of a combined empire of Medes and Persians. With the overthrow of the Persians by Alexander the Great after the battle of Arbela in 331, Media became part of Alexander's empire. After his death in 323 it formed part of the kingdom of the Seleucidae, until in 147 it was conquered by the Parthians.

MEDICI. Ruling family in Florence. Giovanni Medici, a banker, was the real founder of the greatness of the family, in

Medici. Members of the famous Florentine family. Left to right: Cosimo the elder; Cosimo (d. 1574); Giuliano (by Botticelli); Lorenzo (by Titian)

which the headship of Florence became hereditary. His wealth and position passed to his son Cosimo (1389-1464), famous as a patron of art and learning. Cosimo's grandson was Lorenzo (1448-92), called the Magnificent, one of the outstanding figures of the Renaissance.

In 1530 Alexander de' Medici was made duke of Florence, and in 1569 his son Cosimo became grand duke of Tuscany. This position remained in the family until 1737.

Two members of the family became popes, one as Leo X and the other as Clement VII. Two daughters of the house married kings of France, Catherine (q.v.) being the wife of Henry II and the mother of his three successors, and Marie the second wife of Henry IV.

MEDICINE. Science of the treatment of disease. The earliest group of scientific medical documents is the Hippocratic Collection, put together about 300 B.C. The basis of the collection is that doctrine of the humours which lasted till the 18th century. Celsus, at the beginning of the 1st century A.D., gives a very exact account of surgical practice, and has an accurate though limited knowledge of anatomy. In the 2nd century A.D. the most notable figure was Galen of Pergamum. He dissected the animal body, felt the pulse, differentiated forms of lung disease, and studied the use of drugs. Then came the Dark Ages, when medical science was kept alive by the Arabian doctors.

Among the earliest medical writers of the

16th century to free themselves from Arabian tradition was Fraeacstor, who placed the theory of infection on a sound basis, and Paracelsus, who introduced chemical conceptions into medicine. It was, however, the anatomists, especially Vesalius, who did most to create the new era in medicine. The researches of Michael Servetus, Hieronymus Fabricius, and others culminated in the immortal work of William Harvey, whose discovery of the circulation of the blood was published in 1628.

The earliest years of the 18th century saw clinical teaching placed on a recognized footing by Hermann Boerhaave. Among his most famous pupils were Albert von Haller, perhaps the most learned of all physicians, and Sir John Pringle, the pioneer of antiseptics. With these men may be mentioned the great English clinicians, William Heberden, John Huxham, who did valuable work in epidemiology, and Edward Jenner, whose name will always be associated with vaccination. But all these names pale before the brilliance of John Hunter, the founder of experimental and surgical pathology. Later, Charles Darwin, by placing the doctrine of evolution on an observational basis, gave a new meaning to all forms of biological research, while Louis Pasteur, and after him Robert Koch and Joseph Lister, by their demonstration of the germinal origin of certain pathological processes at one step elucidated a vast number of phenomena which were previously inexplicable. The work of Pasteur also led to the field of tropical medicine and hygiene, in which Patrick Manson, followed by Ronald Ross, made discoveries that are freeing the world from the scourge of malaria and other mosquito-borne diseases. Among recent developments in the treatment of disease are the administration of extracts from ductless glands, the controlled action of light, and psychotherapy.

MEDICINE HAT.

Town of Alberta, Canada. It stands on the S. Saskatchewan river, 165 m. S.E. of Calgary, and is served by the C.P.R. It is the

trading centre for a large district. Pop. 9,536.

MEDICINE MAN. Practitioner of the healing art and cognate mysteries in primitive culture. Carrying their mysteries in a medicine bag, and wearing a distinctive dress, medicine men profess to control physical and psychical phenomena by various means, including incantation, dancing, drums, rattles, horns, sacrifice, appeal, amulets, ventriloquism, sleight of hand, and suggestion. See Exorcism; Magic.

MEDICK (*Medicago falcata*). Perennial herb of the order Leguminosae. A native of Europe, including the E. counties of England,

India, and N. Asia, it attains a height of 6 ins. to 2 ft., and has leaves of three variable leaflets. The yellow, occasionally violet, flowers are clustered in short sprays, and the seed-pod is sickle-shaped. The black medick, or nonsuch (*M. lupulina*), is a trailing biennial with its yellow flowers in an oval head, and smooth, kidney-shaped pods, black when ripe. Purple medick (*M. sativa*), a plant of the Mediterranean region, is largely grown as a green fodder plant, and has become naturalised here and there.

Medick. Sprays of *medicago maculata*

Lucerne (q.v.), or purple medick (*M. sativa*), a plant of the Mediterranean region, is largely grown as a green fodder plant, and has become naturalised here and there.

MEDINA. City of Arabia, in the Hejaz. It lies about 240 m. N.W. of Mecca, and is connected by the Hejaz Rly. with the Palestine, Syrian, and Bagdad rlys. It is the second holy city of the Moslems, because it contains Mahomet's tomb, which stands in a mosque of great magnificence. The residence of Mahomet after his flight from Mecca, 622, it was the residence of the earliest caliphs. It has a considerable trade. Its port on the Red Sea is Yenbo, 125 m. to the S.W. The population is 30,000, but this number is greatly exceeded during the Pilgrimage season.

MEDINA. Name of a stream in the Isle of Wight. The title of earl of Medina is borne by the eldest son of the marquess of Milford Haven, on whom it was bestowed in 1917.

MEDITERRANEAN SEA (Lat. media middle; terra, land). Sea that washes the shores of Europe, Asia, and Africa. On the W. it communicates with the Atlantic by the narrow strait of Gibraltar, and on the N.E. the Dardanelles, the Sea of Marmara, and the Bosphorus connect it with the Black Sea. It is, thus almost landlocked. Its basin is some 1,145,000 sq. m. The N. shores are deeply indented, but the African coast is little broken. Its waters evaporate very rapidly, for immediately to the S. is the rainless Sahara. The Nile is the only great river which feeds the sea directly. The sea is almost tideless. See Europe; map; Dardanelles.

MEDLAR (*Mespilus germanica*). Hardy tree of the order Rosaceae. It is a native of Greece, Persia, and Asia Minor. and is found wild in

Medlar. Fruit and leaves of this European tree

Britain occasionally. As a wild tree it has spiny branches, but in orchards the spines disappear. The fruit has a sub-acid flavour, and is used for flavouring and for making jellies. The fruit should be stored in a cool room to "blet" until it is brown

and almost on the verge of decomposition.

MEDMENHAM. Village of Buckinghamshire, 3 m. S.W. of Marlow. A Cistercian abbey was founded here about 1200. On the site a residence was built, and there, in the 18th century, Sir Francis Dashwood established a mock order of Franciscans notorious as the Hell Fire Club. Pop. 400.

MEDOC. District of France, W. of the Gironde estuary. The chief subdivision of the Gironde viticultural region, it produces little white wine, but yields some of the most famous varieties of red Bordeaux. Vineyards in the parishes of Pauillac, Margaux, St. Julien, etc., give the Medoc wines their specific names.

MEDUM or **MEXDUM.** Ancient necropolis on the left bank of the Nile, 40 m. upstream from Cairo, Upper Egypt. Among other tombs, it contains the oldest true pyramid, originally a seven-staged mastaba. Pron. Maydooom.

Medusa. Roman copy of a Greek original of the end of the 5th cent. B.C. in the Glyptothek, Munich

MEDUSA. In Greek mythology one of the three gorgons. They could turn into stone anyone who looked at them. Medusa, the only mortal among them, was killed by Perseus, who cut off her head while looking at her reflection in a mirror. See Gorgons.

MEDUSA. Name applied to certain species of jelly fish. They are marine animals, and vary in size from microscopic forms to bells, or parachutes. See Jelly Fish

MEDWAY. River of England. It rises in three headstreams in Sussex and Surrey, in the Weald, and flows generally N.E. through Kent to the mouth of the Thames, which it enters by a wide estuary. Tonbridge, Maidstone, Rochester, and Chatham are on its banks. Sheerness stands at the E. entrance to the estuary. Its length is 70 m., including the estuary. See Aylesford; Chatham.

Medway is the name of a submarine depot ship laid down in 1927, and sent to China.

MEE, ARTHUR (b 1875). English journalist and author. Born at Stapleford, Notts, July 21, 1875, when 20 he was acting as editor of *The Nottingham Evening News*. He moved to London, edited *Black and White*, 1901-3, and contributed daily to *St. James's Gazette* for over three years. Literary editor of *The Daily Mail*, 1903-5, he produced the *Harmsworth Self-Educator*, 1906, and various other works, notably *The Children's Encyclopedia*, 1908. Among his books are *Little Treasure Island*, 1920, and *Arthur Mee's Hero Book*, 1921.

MEER, JAN VAN DER (1628-91). Dutch painter. Born at Haarlem, he was a pupil of Jacob de Wet, visited Italy when young with Lieven van der Schuur, and painted landscapes with cattle and figures. He died at Haarlem.

Meerkat, a carnivorous mammal related to the mongoose
W. S. Berridge, F.Z.S.

MEERKAT

(Dutch, sea cat) OR SURICATE (Rhyzaca). Carnivorous mammal related to the mongoose

and civet. It is about 14 ins. in length, including the tail, and its soft fur is of a greyish colour. It has a sharp nose and very long claws. It is common in Cape Colony, where it lives in burrows in the sand.

MEERUT. Town of India, in the United Provinces. An old city, midway between the Ganges and Jumna, it had lapsed into a ruinous condition until it became a garrison and military headquarters. The mutiny broke out here in 1857. It is the capital of a district and a division of the United Provinces. The Jama Masjid dates from 1019. Pop. 122,609.

MEGALITHIC (Gr. megas, great; lithos, stone). Term denoting a homogeneous class of primitive stone monuments, their builders, and their associated culture. These monuments are ultimately due to a single originating impulse. The first impetus to massive stone architecture was given by the invention of metal-working, even when stone tools continued in general use, as in the pyramids of Egypt. Knowledge of these great achievements was disseminated slowly by migration and trade. See Archaeology; Dolmen; Menhir; Stone Age; Stone Monuments.

MEGALOSAURUS.

Extinct fossil reptile found in the Jurassic and Cretaceous deposits of Europe, part of Asia and N. America. It was a large carnivorous dinosaur, from 15 ft. to 20 ft. in length, possessing formidable teeth, a long, heavy tail, and large hind legs, the toes of which were provided with strong claws. See Dinosaur.

MEGAPHONE. Appliance for magnifying or collecting sound. One form is a speaking-trumpet, used largely at sea, for enabling the voice to be heard at a distance. It consists of a hollow cone of papier mâché,

fibre, etc., fitted at the smaller end with a mouthpiece. Another is a hearing-trumpet for use by deaf persons, or to enable ordinary sounds to be heard at a distance.

MEGARA. City of ancient Greece. It lay opposite the island of Salamis, 1 m. from the sea and about 30 m. from Corinth. Capital of the district of Megaris, it early became important, and founded the colonies of Chalcidion, Byzantium, and the Sicilian Megara. Megara was a member of the Athenian alliance until the pro-Athenian democratic government gave place to an oligarchy in 441. During the Peloponnesian war Megara took the side of Sparta.

MEGATHERIUM. Large extinct mammal whose fossil remains are found in Pleistocene deposits of S. America. One of the edentata, allied to the anteaters and sloths, it was about 20 ft. in length, and fed upon small twigs and leaves of trees. See Fossil.

MEGIDDO. Place in Palestine, in the plain of Esdraelon. Siseria was defeated near; Solomon restored the fortifications, and it was the scene of the deaths of Ahaziah and Josiah. It was captured by the British, Sept. 19, 1918. Viscount Allenby took his title from it. See Armageddon; Palestine.

MEHEMET ALI (1769-1849). Pasha of Egypt. Born at Kavala of an Albanian family, he obtained recognition in 1805 as pasha of Egypt. He reformed the navy and army, established factories, and introduced cotton growing. In 1824 the sultan called upon Mehmet for help against the Greeks, promising him Syria as a reward. The promise, however, was not fulfilled, so Mehmet seized Syria by force, and secured a good part of the rest of Asia Minor. By British intervention a compromise was arranged, by which Mehmet was made hereditary pasha of Egypt and governor of the Sudan. He died Aug. 2, 1849.

MEIGHEN, ARTHUR (b. 1874). Canadian politician. Born June 16, 1874, he became a barrister, and began to practise at Portage la Prairie, as member for which he entered the Dominion House of Commons in 1908. A Conservative in politics, he became solicitor-general in 1913. In Aug., 1917, Meighen entered Borden's coalition cabinet as secretary of state and minister of mines. Later he was minister of the interior, and in July, 1920, succeeded Sir Robert Borden as premier. Defeated in 1921, he resigned, but was again premier, July-Sept. 1926.

Megalosaurus. Prehistoric monster reptile of Europe and India
From reconstruction in the Natural History Museum, S. Kensington

first important work was *The Little Messenger*, 1836. In 1855 his picture *La Rixe* won him fame. His chief pictures include *The Cavalry Charge*. The *Amused Cavalier*, *Soldiers Gambling*, and *Cuirassiers*. He painted a few portraits (Salon). 1877, Col. Félix Massue, 1807, Wallace Coll. The latter Collection has a good many examples of his work, such as *A Sentinel: time of Louis XIII*, 1851; *The Guard Room*, 1857;

The Lost Game, 1858; *Napoleon I and his Staff*, 1868. He died Jan. 31, 1891.

MEISTERSINGER OR **MASTERSINGER.** Member of guilds of musicians and poets, founded in Germany from the 14th to 16th centuries. The earlier Minnesingers (q.v.) were connected with the courts, but on the decline of feudalism the cultivation of the art of singing passed to the burgher class. Heinrich von Meissen, called *Frauenlob*, founded the first company of Meistersingers at Mainz in 1311. At Ulm the Meistersingers survived till 1839.

MEKONG. River of S.E. Asia. It rises in the Tibetan plateau, and flows S. through China and Indo-China. It forms for part of its course the boundary between Siam and Indo-China, and, entering Cambodia and Cochin China, empties itself in the China Sea. Its length is 2,800 m.

Megatherium. Giant ground sloth of the Pleistocene age
Amer. Mus. Nat. Hist.

MELAMPUS. In Greek legend, the first prophet and physician among mankind. Having the power of divination and an understanding of the language of birds and beasts, he eventually became king of a third of Argos. Melampus is said to have learnt the art of medicine from Apollo.

MELANCHOLIA. Disease of the mind characterised by marked depression. Melancholia may be exhibited alone, but sometimes it is associated

with periods of mania (q.v.), forming one phase of the disease known as manic-depressive insanity. It may also be exhibited in other forms of insanity. The cause of the condition is not known. Delusions are frequent, and often of a religious character. There is considerable risk of suicide.

MELANCHTHON, PHILIP (1497-1560). German reformer. His name was Schwarzert, i.e. black earth, which was rendered into Greek as Melanchthon. He was born at Bretten, in the Palatinate, Feb. 16, 1497. After teaching philosophy and Greek at Tübingen, in 1518 he was appointed professor of Greek at Wittenberg, where he came into close contact with Luther, became a Protestant, and three years later published his *Commonplaces of Theological Matters*. The Augsburg Confession was drawn up by him in 1530, and he became recognized as the leading scholar of the German Reformation. On the death of Luther in 1546 he became the dominant spirit in the movement, and remained so until his death at Wittenberg, April 19, 1560. See Luther; Reformation.

Philip Melanchthon, German reformer

MELANESIA (Gr. melas, black; nēsos, island). Collective name of a number of groups of islands in the Pacific Ocean. They lie between the equator and the Tropic of Capricorn, and between Papua and the Fiji Islands. The groups include the Solomon, Admiralty, Loyalty, Bismarek, Santa Cruz, and New Hebrides. They were politically apportioned among Great Britain, France, and Germany, but the German

J. L. E. Meissonier, French painter

possessions were captured early in the Great War, and are now administered by Australia and New Zealand.

MELBA, DAME NELLIE (h. 1859). Professional name of the vocalist, Helen Porter Armstrong. Born May 19, 1859, at Burnley, Melbourne, Australia, she studied in Paris and became a professional singer, taking the name of Melba as a tribute to Melbourne. She first appeared in opera in Brussels in 1887, and her career after this was one of marked success, especially in London, Paris, and New York. In 1918 she was created D.B.E. Her book *Melodies and Memories* appeared in 1925.

Dame Nellie Melba,
Australian singer
Soprano

MELBOURNE. Market town of Derbyshire, 7 m. S.E. of Derby on the L.M.S. Rly. It has a Norman church. Melbourne Hall has Dutch gardens. Thread, boots, and silk are manufactured, and there are market gardens. Market day, Sat. Pop. 3,467.

MELBOURNE. Capital of Victoria, Australia. It is situated at the N. of Port Phillip, on the river Yarra, which flows into Hobson's Bay, an inlet of Port Phillip. The city proper covers about 8,000 acres, and there are extensive suburbs

Melbourne. General Post Office.
Above, left, Parliament House;
right, Collins St., looking west

ecclesiastical buildings include S. Patrick's R.C. cathedral and the Anglican cathedral of S. Paul. Apart from the shipping, there are foundries, flour and woollen mills, boot and clothing factories, potteries, soap works, tan yards, and wool-washing works; and gold, meat, wool, etc., are exported.

First occupied by whites in 1835, Melbourne was in 1837 named after Lord Melbourne. It was made an episcopal see in 1849. When the goldfields were opened in 1851, and what was then Port Phillip province became the colony of Victoria, Melbourne was made its capital. In 1901 it became the temporary capital of the Commonwealth. At the end of 1928 the pop. (including suburbs) was estimated at 1,000,000. See Australia; Port Phillip; Victoria.

MELBOURNE, WILLIAM LAMB, 2ND VISCOUNT (1779-1848). British politician. A son of Peniston Lamb, created Viscount Melbourne in 1781, he was born March 15, 1779. In 1806 he entered Parliament as Whig M.P. for Leominster. In 1812 he lost his seat, but from 1816 to 1829, when he succeeded to the peerage, he represented several constituencies. In 1830 Melbourne became home secretary under Earl Grey,

Lord Melbourne,
British politician
After Lawrence

and four years later succeeded him as prime minister. He resigned a few months later, but again became premier in April, 1835. In 1838 he resigned, but returned at the instance of the young queen, to whom he acted as instructor and guide. He finally left office in Aug., 1841. He died Nov. 24, 1848.

His brother Frederick, British ambassador in Vienna, 1831-41, succeeded to his title, but on his death in 1853 it became extinct. Consult Lord Melbourne, Bertram Newman, 1930.

MELCHETT, ALFRED MOND, 1ST BARON (h. 1868). British politician. Born at Farnworth, Lancs, Oct. 23, 1868, a son of Ludwig Mond, the scientist, he became a barrister, being also a member of the firm of Brunner, Mond & Co. In 1906 he was elected Liberal M.P. for Chester, and in 1910 for Swansea, being created a baronet in the latter year. In 1916 Mond joined the coalition government as first commissioner of works. He was minis-

Lord Melchett,
British politician
Russell

ter of health, 1921-22, and in 1924 was elected M.P. for Carmarthen. In 1926 Mond joined the Conservative party. As head of Imperial Chemical Industries he became one of the leading industrialists in the country.

MELCHIZEDEK. Priest-king of Salem. He is counted as Priest of the Most High God, and Abraham received his blessing and paid him tithes after one of his victories. (Gen. 14). As a priest-king with high prerogatives, Melchizedek is regarded in Ps. 110 and Heb. 5 and 7 as a type of the Messiah.

Melcombe Regis. District of Dorsetshire, within the borough of Weymouth (q.v.).

MELEAGER.

In Greek legend, a famous hero and hunter. The goddess Artemis, offended by his father Oeneus, sent a monstrous boar to ravage the land of Actolia. All the heroes were invited to assist in the killing of the boar, and among them came the famous huntress Atalanta. The boar was finally killed by Meleager, who gave the skin and head to Atalanta, as she had given the animal the first wound. See Atalanta; Calydon.

Meleager with his hound and
the head of the boar
From a statue in the Vatican

MELILLA. Seaport of Morocco. On the N.E. coast, it is within the Spanish zone, and forms the main port of entry into the Rif country. It lies on the E. side of the mountainous promontory of Tres Forcas. Extensive harbour works have been under-

taken by the Spanish, and narrow-gauge railways link it to Seluan (Zeluán) and Taferit, and to the lead mines at Afra Minas. Fighting took place in the Melilla zone in July, 1921, the tribesmen inflicting a serious defeat on the Spanish troops. Pop. 61,230.

MELILOT (*Melilotus officinalis* and *M. alba*). Herbs of the order Leguminosae, natives of Europe and Asia. The leaves are divided into three narrow, oblong, toothed leaflets. The flowers in appearance are like those of furze, but only a quarter of an inch long, drooping, in an erect one-sided spray.

Melinite. Name under which trinitrophenol (q.v.) is used in France.

MELKART (king of the city). Phoenician deity. He was especially worshipped in Tyre, where Hiram I, about 950 B.C., erected the great temple mentioned by Herodotus. Identified with Heracles, Melkart—whose name in Greek was Melicertes—was in part a sun-god, in part the patron of mariners.

MELKSHAM. Urban dist. and market town of Wiltshire. It stands on the Avon 6 m. from Chippenham and 98 m. from London, and is served by the G.W. Rly. The church has a little Norman work and a fine Perpendicular chapel. Market day, alternate Tues. Pop. 3,596

MELLON, ANDREW WILLIAM (h. 1855). American financier. Born at Pittsburg, March 24, 1855, he entered the banking house of Thomas Mellon and Sons. Later he became president of the Mellon National Bank. In 1921 he resigned to become secretary of the treasury under Harding, a post he retained under Coolidge and Hoover. He was responsible for making arrangements about the debts owing to the United States by several European nations and for measures to reduce the internal debt. Mellon has enormous interests in the industries of Pennsylvania.

MELLS. A village of Somerset, 3½ m. from Frome. Mells Park was long the seat of the Horner family. In 1927-28 excavations resulted in unearthing a Roman camp here, and Roman remains were found. Pop. 830.

MELOCACTUS. Genus of perennial succulent plants of the order Cactaceae. Natives of Mexico, Brazil, and the W. Indies. They have globular, ribbed stems, with a short central cylindrical extension upwards which is clothed with woolly hairs and soft spines. The ridges of the swollen base bear stouter spines in clusters at regular intervals. The rosy, tubular flowers are produced at the summit of the short column. The Turk's cap (*M. communis*), is the best known species.

MELODRAMA (Gr. *melos*, song; *drama*, action). Strictly, a stage play in which appropriate music, vocal and instrumental, is introduced to heighten emotional or dramatic effect. In its original form it is said to have been first perfected in France as a natural and orderly development of opera, differing essentially from that higher form of dramatic art in that the music was accessory to, and the songs were interpolations in, spoken dialogue, whereas in opera the story is told exclusively in recitative and aria. Music gradually became more and more subordinate to sensational incident and sentimental appeal. Modern melodrama is a highly ingenious composite of sensational drama derived from tragedy and of domestic drama derived from the comedy of life.

MELON (*Cucumis melo*). Plant of the order Cucurbitaceae, grown for its fruit, which has a sweet and delicately flavoured

Melon. Specimen
of the fruit

pulp. It is a trailing plant, and, a native of Asia, was introduced into Britain about 1570. It is cultivated in frames and hothouses, in the same manner as the cucumber. The water melon (illus. p. 670) is grown in most warm countries. Its botanical name is *Citrullus vulgaris*. See Cucumber; Gourd.

MELROSE. Burgh of Roxburghshire. It stands on the Tweed, 37 m. from Edinburgh on the L.N.E.R. An ancient town pleasantly situated at the base of the Eildon Hills, Melrose is chiefly noted for the abbey founded in 1136 by David I, once the most magnificent building in Scotland, and now a splendid ruin. In 1918 it was presented to the nation by the duke of Buccleuch. Melrose has a hydropathic establishment, and in the market place is a market cross dating from 1642. Pop. 2,155.

Melrose Abbey. Ruins of the splendid building founded in 1136 by David I

MELTHAM. Urban dist. and town of Yorkshire (W.R.) It is 5 m. S.W. of Huddersfield on the L.M.S. Rly., and has cotton, woollen, and thread industries. Pop. 5,058.

MELTON MOWBRAY. Market town and urban dist. of Leicestershire. It is 14 m. from Leicester and 102 from London. Served by the L.M.S. and L.N.E. Rlys., Melton Mowbray stands where the little rivers Eye and Wreak join. The chief building is the beautiful church of S. Mary, with a fine central tower, partly Early English. The town is famous for its pork pies and cheese, and is also a hunting centre, being in the Quorn country. Market day, Tues. Pop. 10,010.

MELVILLE OR MELVILL. ANDREW (1543-1622). Scottish reformer. He was born at Baldovie, Forfarshire, Aug. 1, 1545. In 1568 Beza procured for him the appointment of professor of humanity at Geneva, where he remained until 1574, when he returned to Scotland and became principal of Glasgow College, and later of S. Mary's College, St. Andrews. He was a strong Presbyterian, and his outspoken utterances more than once brought him into trouble. In 1597 he was deprived of the rectorship of St. Andrews, and was imprisoned for five years in the Tower. On his release, in 1611, he went to France, and became professor at Sedan, where he died.

MELVILLE, HERMAN (1819-91). American author. Born in New York City, Aug. 1, 1819, of Scottish descent, he passed some years at sea, meeting with many adventures before he returned to Boston in 1844. In 1846 he published the first of his books, *Typee*; a *Peep at Polynesian Life*, a fascinating narrative of life in the Pacific. His later books included *Omoo*, 1847, and *A Voyage Thither*, 1849; *Redburn*, *His First Voyage*, 1849; *White Jacket*, or *The World in a Man-of-War*, regarded generally as the best of his works, 1850; and *Moby Dick*, or *the White Whale*, 1851. He died in New York, Sept. 27, 1891.

MELVILLE ISLAND. Island of British N. America in the Arctic Ocean, between Bathurst and Prince Patrick islands. Its maximum length is 210 m., and its width about 130 m. It was discovered by Parry, who wintered here, 1819-20.

Melville Bay is an opening of Baffin Bay on the coast of Greenland. Melville Peninsula is a projection from the Canadian mainland. Its length is 265 m., and average breadth 110 m.

Melville Sound is a large opening of the Arctic Ocean situated between Melville Island on the N. and Victoria Island on the S. Its length is 240 m., and width 140 m. It communicates with Beaufort Sea. See Canada.

MEMEL. Town, seaport, and territory of Lithuania, also known as Klaipeda. It stands on the Baltic, at the N. end-of the Kurisches Haff. The people are mainly occupied in shipping timber and grain and exporting fish. There is some shipbuilding. Pop. 36,600.

Memel was founded by the Teutonic Order in 1252, and later became part of Prussia, and so of the German Empire. By the treaty of Versailles the town and the surrounding territory were detached from Germany, and in 1923 were given to Lithuania, on the condition that Poland had the right to use the port. The territory has an area of 1,026 sq. m. and has 145,000 inhabitants.

MEMLING OR MEMLING. HANS (c. 1430-94). Flemish painter. He was apprenticed to a painter in Cologne or Mainz before going to Bruges about 1465. He became painter in Bruges in 1467, Nicolas Spinelli (triptych (Chatsworth)). In 1479 he painted *The Adoration of the Kings in S. John's Hospital, Bruges*, and in 1480 the large *Christ the Light of the World* (Munich). The altar-piece, *S. Christopher* (Bruges Museum), was painted in 1484. In 1489 he completed the shrine of S. Ursula at Bruges. He died at Bruges, Aug. 11, 1494.

Hans Memling
Supposed self-portrait
of the Flemish artist,
at Frankfurt

MEMNON. In Greek mythology, son of Tithonus and Eos (Dawn). He came to help the Trojans against the Greeks in the last period of the war. Antilochus, son of Nestor, fell before him, but he was killed by Achilles.

MEMPHIS. Ancient capital of Lower Egypt. On the left bank of the Nile, 14 m. S. of Cairo, it was founded by Menes, the first historical king of ancient Egypt. The Greek form of the Egyptian Mennofer, good house, denoting originally Pepi I's Vith dynasty pyramid, the name appears in Hebrew as Moph (Hosea) and Noph (Isaiah). Before the time of Menes there had been a city here called White Wall. Under the kings of various dynasties it was embellished with pyramids and palaces, and in spite of foreign invasions and other vicissitudes it remained an important place until the rise of Alexandria, although it was not constantly the country's capital. The existing monuments include the colossal statues of Rameses II. The ruins were mostly employed for building Cairo. Petrie excavated the Ptolemaic temple, Apries' palace, XXVth dynasty, and many workshops and dwellings.

Memphis is also the name of a city in the United States, a prosperous river port. Pop. 162,000.

Menai Bridge. Urban dist. of Anglesey. It is on Menai Strait, N.E. of the suspension bridge. Pop. 1,767.

MENAI STRAIT. Channel between Carnarvonshire and Anglesey, Wales, 14 m. long and from one-eighth to 2 m. in breadth. The Menai suspension bridge (see illus. p. 301) which carries the turnpike road, was constructed by Telford and opened in 1826. It is 1,710 ft. in length and 100 ft.

above high-water mark. The Britannia tubular bridge was erected by Stephenson, and opened in 1850. It is 1,841 ft. long and 104 ft. above high-water mark, and is traversed by the L.M.S. Rly.

MENANDER (342-291 B.C.). Athenian comic poet, chief representative of the New Comedy. He is said to have written 105 comedies. Until the 20th cent. only fragments of his works were known, but papyrus finds in Egypt brought to light more than 1,000 lines from four plays, from which an idea of his style and plots can be formed. Menander was especially strong in moral maxims. Terence, called by Caesar the "half Menander," adapted four of his comedies from Menander.

MENDELISM. Laws of heredity based on the discoveries of Mendel. An Austrian monk, Gregor Johann Mendel (1822-84) was born near Odrau in Austrian Silesia, and in 1843 became an inmate of an Augustinian monastery at Brunn. From 1860 he was abbot, while for about 15 years he taught natural history in the school at Brunn. He carried out experiments in the monastery garden by which he showed that the laws of inheritance are not haphazard.

Gregor Mendel,
Austrian scientist

Some of the characters passed on to progeny are what Mendel called dominant, and appear in hybrids, while others are recessive and, although not evident in hybrids, become so in their progeny, among which quite definite proportions can be predicted to possess the dominant or the recessive character. This he demonstrated in peas, and it has been found true for other plants and animals, and in human beings with regard to such characters as the colour of the eyes and hair, and in the inheritance of diseases such as haemophilia. Mendel's laws lacked general recognition until 1900. See Heredity.

MENDELSSOHN-BARTHOLDY, JAKOB LUDWIG FELIX (1809-47). German composer. Born at Hamburg, Feb. 3, 1809, at the age of 10 he played the piano at a public concert in Berlin. Two years later he became known as a prolific composer of sonatas for piano and violin, songs, and symphonies. In 1825 he wrote a two-act opera, *Camacho's Wedding*, and in Aug., 1826, completed the overture to *A Midsummer Night's Dream*, which immediately established the 18-year-old

J. L. F. Mendelssohn-Bartholdy,
German composer

genius as one of the principal composers of his age. In 1829 he visited London, and afterwards made a tour of Scotland, which inspired him to write the *Hebrides Overture* and *Scotch Symphony*. From 1833 he occupied various official positions as conductor and musical director at Düsseldorf, Leipzig,

Menai Strait, showing, left, the suspension bridge, and, right, the Britannia tubular bridge, which cross the channel

and Berlin. In 1843 he founded the Leipzig Conservatoire, of which he was the first director. On Aug. 26, 1846, he produced Elijah at the Birmingham Festival. He died at Leipzig, Nov. 4, 1847.

MENDES. Grecised name of an ancient city near Tmai el-Amidid. S.E. of Mansura, Lower Egypt. In the IInd dynasty it was already the seat of worship of the sacred ram. The cult, suppressed by the Persian invaders, was revived by Ptolemy II Philadelphus, 309-246 B.C. Some stone tombs in which the rams were interred are extant.

MENDÈS, CATULLE ABRAHAM (1841-1909) French poet, novelist, and playwright. Of Jewish origin, he was born at Bordeaux on May 22, 1841, and founded the *Revue Fantaisiste* in 1859, an early rallying-point of the Parnassian movement. Among his early books of poems were *Philomèle*, 1863, and *Odelette Guérière*, 1870. He published novels and volumes of short stories, also plays and operettas. From 1893 dramatic critic of *Le Journal*, he was accidentally killed, Feb. 8 1909.

MENDIP HILLS. Plateau of S.W. England, between the valleys of the Parret and Salisbury Avon in Somerset. Composed of carboniferous limestone, its hills contain swallow holes, caverns, lead mines, and coal. The highest point is Black Down, 1,068 ft.

MENDOZA, DANIEL (1764-1836) Jewish pugilist. Born in Aldgate, London, his first big fight was when he beat Sam Martin, the Bath butcher, at Barnet, April 17, 1787. A very quick and clever fighter, he twice defeated Richard Humphries and William Warr, but was beaten by John Jackson at Hornchurch, April 15, 1795. Mendoza's last appearance in the ring was in July 1820, when he was defeated by Tom Owen. He wrote *The Art of Boxing*, 1789. Mendoza died in London, Sept. 3, 1836.

Menelaus,
Spartan king

MENELAUS. In Greek legend king of Sparta, brother of Agamemnon, and husband of Helen. At the Spartan court Paris, son of Priam king of Troy, was hospitably received, but during the absence of Menelaus in Crete he carried off Helen, from which resulted the Trojan War. At the capture of Troy, Menelaus regained possession of Helen. See Helen.

MENELEK (1844-1913). Emperor of Abyssinia. Born at Choa, Aug. 18, 1844, he was the descendant of a long line of Ethiopian kings. Italian operations on the coast of the Red Sea in 1885 threatened Abyssinian independence, and the treaty of Uccialli signed by Menelek in 1889 was interpreted as giving Italy a protectorate over Abyssinia. But on March 1, 1896, the Italians under General Baratieri suffered a disastrous defeat at Adowa. Eritrea was given to Italy, and Menelek was left in peace to develop his country. He ended the whole an English slavery, and encouraged Addis Ababa, Dec. 12, 1913.

Menelek II,
Abyssinian emperor

MENHIR (Celt., long unshewn pillar-stone with the largest in Europe is the once 67 ft. high, weighing 342 tons, near Carnac, Morbihan. There are many in France, besides 4,600 in rows or circles, and they are scattered over Dartmoor, Cornwall, and the upland of Wales.

Sometimes perforated, they occasion much local folklore. Many stand near neolithic sepulchres. In Britain, Scandinavia, and elsewhere they often bear cup and ring markings, ogams, and Christian devices. They occur along the megalithic track in N. Africa, Syria, India, and the Pacific. See Carnae; Dolmen.

MENIÈRE'S DISEASE. Disease characterised by sudden attacks of intense giddiness associated with noises in the ears, jerking of the eyeballs, and other symptoms. Due to disease of the labyrinth of the ear, it was first described in 1861 by the French doctor, E. A. Ménière. Quinine sometimes affords relief.

MENIN (Flemish, Meenen). Town of Belgium. On the Franco-Belgian frontier, it lies on the Lys, 6½ m. by rly. W.S.W. of Courtrai. Before the Great War Menin was a prosperous centre of the Flemish spinning, lace-making, and tobacco industries, but its position near the fighting line led to severe damage; the Ypres-Menin road especially was the scene

Menin Gate at Ypres, rebuilt and unveiled in 1927 as a memorial to British soldiers who fell here. Above, the devastated road from Menin to Ypres

of much heavy fighting throughout the war. In July, 1927, Lord Plumer unveiled a war memorial on the Menin Road at Ypres. Called the Menin Gate, this is a magnificent arch erected in honour of the men who fought here, 1914-18. Pop. 18,769.

MENINGITIS. Inflammation of the meninges, the membranous coverings of the brain. Simple acute meningitis may be due to injury of the brain, or abscess or extension of a septic inflammation from the ear, and may also arise in the course of acute infectious diseases, such as small-pox. Tuberculous meningitis is most often met with in children. Cerebro-spinal fever is a form caused by infection by a micro-organism. Syphilis is another cause. The death rate in cases of meningitis is high, and if recovery occurs there may be permanent paralysis of groups of muscles, or impairment of mental faculties. Treatment is mainly symptomatic.

MENPES, MORTIMER (b. 1859). Anglo-Australian painter and etcher. Born in Australia, he came to England, and studied in London, afterwards travelling in nearly all parts of the world. Besides producing much original work, he perfected a process, known by his name, for reproducing oil paintings, founded the Menpes Press, instituted fruit as at Pangbourne, and wrote a number of including entertaining reminiscences of J. M. Whistler, his friend and confidant. Menpes did much to revive the art of etching in colour.

MENSTRUATION. Periodic discharge of mucus and blood which occurs in women. The cause and object of this function are not fully understood. In Great Britain, men-

struation appears between the ages of 11 and 15, but in certain races, usually in warmer climates, it tends to appear earlier. The cessation of menstruation is termed the climacteric or menopause. Disorders in this function include amenorrhoea, or abnormal absence of the flow; menorrhagia, or excessive flow; and dysmenorrhoea, or painful menstruation. A doctor should be consulted as to suitable treatment.

MENTANA. Village of Italy. It is 12 m. N.E. of Rome, near the site of the ancient Nomentum. In the locality Garibaldi and his patriots were defeated by the papal and French troops, Nov. 3, 1867. Pop. 2,937.

MENTEITH, LAKE OF. Lake in the S.W. of Perthshire, Scotland. It is 17 m. W.N.W. of Stirling, and is 1½ m. long and 1 m. broad. It contains three islands, on one of which, Inchmahome, are the remains of a priory.

MENTHOL. Crystalline constituent of peppermint oil, which deposits from the oil on long keeping or on cooling to a low temperature. It is also known as peppermint camphor. The oil of the Japanese peppermint (*Mentha arvensis*, or *piperascens*) contains such a large proportion of menthol that it is solid at ordinary temperatures. Menthol is employed in medicine as a local anaesthetic, especially in neuralgia. See Peppermint.

MENTMORE. Village of Buckinghamshire. It is 3½ m. S.W. of Leighton Buzzard, near Cheddington Junction, on the L.M.S. Railway. Here is Lord Rosebery's seat.

MENTONE. Health resort of France. It is on the coast of the Riviera, 14 m. N.E. of Nice. The neighbourhood is noted for its orange and lemon groves, mild climate and charming surroundings. Since 1861, when the prince of Monaco sold his rights, it has been French. Olive oil and perfumes are exported. Pop. 22,604.

Mentone. Popular health resort of the French Riviera

MENTOR. In Greek mythology, the faithful and prudent friend to whom Odysseus, when he left home for the Trojan War, entrusted the care of his affairs and the education of Telemachus. The name Mentor has become synonymous with a wise counsellor.

MEPHISTOPHELES. In German legend, the familiar spirit attendant upon Faust. He is summoned, with terrible incantations, by the doctor, as recorded in the old History of Dr. Faustus. Frequently misunderstood as being Satan himself, he is properly a subordinate demon. The name, perhaps of Hebrew origin, is found in *The Merry Wives of Windsor* in the form Mephostophilus. See Faust.

MEQUINEZ OR MEKNES. City of Morocco, in the French zone. It is 34 m. W.S.W. of Fez, and lies in a fertile valley with the forested slopes of the Middle Atlas to the S.E. It is a summer residence of the Sultan. Pop. 29,930.

MERANO. Inland health resort of N. Italy, in the Trentino. The German name is Meran. It is 15 m. N.W. of Bolzano (Bozen). In the neighbourhood is the half-ruined castle,

the old residence of the counts of Tirol. The district is noted for its orchards and vineyards. Pop. 19,721

MERCANTILE MARINE, THE. Name given to shipping employed in commerce. It includes all vessels carrying foods and passengers. Those engaged in it are described as members of the merchant service.

The strength of the British mercantile marine service on June 30, 1929, was 20,166,331 tons. The number of seamen employed in trading vessels on March 31, 1928, was 200,113, of whom 52,441 were lascars and 15,291 foreigners.

For merchant shipping there are special laws the chief being the Merchant Shipping Act of 1894. The controlling authority is the Board of Trade, which has surveyors at all the principal ports, and their business it is to see that all ships are seaworthy. The Board has also a consultative branch at 28, Great Smith St., Westminster, S.W. (Consult My Own Lawyer, 1930.)

In April, 1928, King George created a new office, Master of the Merchant Navy and Fisheries, and appointed the Prince of Wales to be its first holder.

In Dec., 1928, Queen Mary unveiled a memorial on Tower Hill, London E.C., to 12,649 officers and men of the merchant service and fishing fleets who lost their lives in the Great War. The memorial was designed by Sir Edwin Lutyens.

MERCATOR, GERARDUS (1512-94). Flemish geographer. His real name was Gerhard Kremer. Born at Rupelmonde, March 5, 1512, he devoted himself to mathematics and geography. His survey of Flanders was made 1537-40, his Map of the World in 1538, and in 1541 he constructed his terrestrial globe. In 1568 he produced the first maps on his system of projection with parallels and meridians at right angles. Other maps followed, and in 1585 the first portion of his atlas was produced. He died Dec. 2, 1594.

MERCER. Person whose business consists in retailing silks, velvets, and other rich stuffs. The Mercers' Company is the premier livery company of the city of London. It governs St. Paul's School, Hammersmith, and the Mercers' School, Holborn; and in addition to administering many charities is trustee of the estates of Sir Richard Whittington and Dean Collet. At the dissolution of the monasteries the company purchased the site of the hospital of St. Thomas of Acon, in Cheapside, and in 1519 erected a chapel and hall upon it. This hall and much other property was burnt in 1666. The hall was rebuilt in 1672 and 1879. With valuable portraits and other relics, the Company possesses in the Legh Cup a fine example of English medieval plate.

MERCER, JONX (1791-1866). English dye chemist. Born at Dean, near Blackburn, Feb. 21, 1791, he was apprenticed in 1809 at the Oakenshaw Print Works, where he studied dyeing. He made many important discoveries connected with dyeing and calico printing, and is chiefly known for the invention of mercerisation, a process by which cotton is given a silky lustre or sheen resembling silk. Elected F.R.S. in 1852, Mercer died Nov. 30, 1866.

MERCHANT. Person whose business is the purchase and sale of commodities.

Merchant Adventurers was the name of an English regulated company for the conduct

of foreign commerce. Its growth coincided with the great development of the English cloth trade in the 14th century. Its members were the leading merchants from all parts of England, and their foreign trading centre was fixed at Bruges by Edward III in 1344.

MERCHANT TAYLORS' COMPANY. Seventh in order of precedence of the twelve great livery companies of the city of London. It received the first of its numerous charters from Edward III in 1327. The site of the present hall in Threadneedle Street, E.C., was acquired in 1331, and the hall was rebuilt after the fire of 1866.

The company founded in 1561 the Merchant Taylors' School, in Suffolk Lane, Upper Thames Street. This was removed to Charterhouse Sq., E.C., in 1873-75. It is now a day school for about 500 boys, and its governors from the first have been members of the company. In 1930 it was decided to move the school from London to a site in Hertfordshire.

The Merchant Taylors' School at Great Crosby, Liverpool, was founded in 1618 by a London merchant tailor, and until 1910 was controlled by the Merchant Taylors' Company.

MERCIA. One of the kingdoms of England in Anglo-Saxon times. At first it only included Derby, Stafford, Warwick, Nottingham, and Leicester, but gradually it came to embrace the whole district between the Thames and the Humber, except East Anglia, and including London. Lichfield and Tamworth were its chief towns, and Repton, near Derby, was an important place. The kingdom came into existence about 582. At first subject to Northumbria, in the 7th century, under Penda, it became independent, and other kingdoms were brought under its authority. It was conquered by Egbert in 825.

MERCIER, DESIRÉ JOSEPH (1851-1926). Belgian primate. Born at Braine-l'Alleud, Belgium, he became a priest, taught philosophy at a seminary in Malines, 1877-82, and in the latter year was appointed to the chair in Aquinas' philosophy founded at Rome by Leo XIII. Consecrated archbishop of Malines and primate of Belgium in 1906, he was made a cardinal in 1907. In 1894 Mercier founded, and edited till 1906, the *Revue Néoscholastique*. Mercier's pastoral letter of Christmas, 1914, urging the Belgian people to continue their allegiance to King Albert, resulted in his being imprisoned in the episcopal residence. He published his *War Memories* in 1920, and died Jan. 23, 1926.

Mercury. In Roman mythology the god of trade. The Romans identified him with the Greek Hermes. See Caduceus; Hermes.

MERCURY. Nearest planet to the sun, around which it revolves at a mean distance of 36,000,000 m. in a period of 88 days. The orbit is extremely eccentric. The mass of the planet is one-eighth that of the earth, its density about three-fifths, and its diameter, according to See, 2,702 miles. Its orbit is subject to considerable perturbations, which has suggested the theory that there exists another planet between Mercury and the sun. Such a planet has not been found, and it has been suggested that the theory of relativity might account for these irregularities. Mercury can be seen under favourable conditions a short while after sunset or before sunrise.

MERCURY OR QUICKSILVER. Metallic element, chemical symbol, Hg; atomic weight, 200.61; atomic number, 80; specific gravity at normal temperature, 13.59; melting point, -39.5° C. It is slightly volatile at normal temperature, and boils at 357° C. (674.6° F.). It is a poor conductor of heat and electricity. It has a remarkable power of dissolving, or combining with, other metals to form an amalgam (q.v.).

Mercury occurs native, usually in the form of fine globules scattered through the body of a mercurial ore, but not infrequently in pockets in large quantities. The ores of the metal comprise born quicksilver or calomel, a chloride; coccinite, the iodide; tiemannite, the selenide; coloradoite, a telluride; onofrite, from San Onofre, Mexico; mercuric fahl ore, and some amalgams of silver and gold. The metal is obtained almost entirely from cinnabar (q.v.), a sulphide. Mercury is used in the recovery of gold and silver by the amalgamation process, in the preparation of barometers (q.v.) and thermometers, for coating the backs of mirrors, and for the preparation of amalgams. The metal is largely used in medicine, while it enters into a number of important compounds.

MERCY, SISTERS OF. Religious order of women who devote themselves to active work among the poor and sick. They differ from nuns in not being enclosed within their convents. All sisters of mercy take the threefold vow of poverty, chastity, and obedience; some annually, and others for life. In the Church of Rome the term is usually restricted to a congregation founded at Dublin in 1831.

Sister of Mercy

MEREDITH, GEORGE (1828-1909). British poet and novelist. Born Feb. 12, 1828, at 73, High Street, Portsmouth, his father was Augustus Armstrong Meredith, a naval officer. He was articled to a London solicitor of literary tastes, but before he was 21 he had turned to letters, his first poem, *Chillianwallah*, appearing in *Chambers's Journal*, July 7, 1849. On August 9, 1849, he married Mary Ellen, daughter of Thomas Love Peacock, the novelist. In 1851 he published *Poems*, which included that masterpiece *Love in the Valley*.

The Ordeal of Richard Feverel, 1859, won the author new friends, and in 1861 he published *Evan Harrington*. *Modern Love* and *Other Poems*, 1862, gave abundant fulfilment of the rich promise of the earlier *Poems*. Meredith, who had now become literary adviser to the house of Chapman and Hall, married in 1864 Marie Vulliamy, three years after the death

George Meredith, British novelist

of his first wife. In the same year he published *Emilia* in England, later to be renamed *Sandra Belloni*. *Rhoda Fleming* followed in 1865. In 1863 he settled at Flint Cottage, Box Hill, his home for the rest of his life. In 1871 came the splendid romance *The Adventures of Harry Richmond*; in 1876 *Beauchamp's Career*; and in 1879 *The Egoist*. After *Poems* and *Lyrics of the Joy of Earth*, 1893, including some of the finest of his nature poetry, there came *Diana of the Crossways*, 1885. Later books were *Ballads*

Mercantile Marine Standard cap badge

Merchant Taylors' Company arms

Mercers' Company arms

and Poems of Tragio Life, 1887; A Reading of Earth, 1888, One of our Conquerors, 1891; Lord Ormont and his Aminta 1894; and The Amazing Marriage, 1895. In 1905 Meredith received the Order of Merit. On May 18, 1909, he died at Box Hill. Consult George Meredith, S. M. Ellis, 1919; and Life, J. B. Priestley, 1926.

MERGANSE (Lat. mergus, diver; anser, goose). Genus of marine diving ducks, including about six species. Three species occur regularly in the British Islands; of these the goosander (q.v.) is the largest.

The red-breasted merganser (*M. serrator*) is distinguished by the crested head and the pale chestnut colour of the lower neck and breast. It is a resident of the N. coasts of Scotland and of the Orkneys, Shetlands, Ireland, and Hebrides, and in winter visits the coasts farther S. It is usually found in flocks, and feeds on small fishes, crustaceans, and molluscs.

Merganser. Hooded species of marine duck

The hooded merganser (*M. cucullatus*) is a rare visitor to British coasts.

MERIDEN. Village of Warwickshire. It is 5½ m. from Coventry and is regarded as the centre of England. There are remains of a cross erected to mark the exact spot. An obelisk was unveiled in 1921 in memory of the cyclists who fell in the Great War. Pop. 848.

MERIDIAN (Lat. meridiēs, midday). In astronomy, the great circle of the heavens passing through zenith of any place and the N. and S. poles of the celestial sphere. A terrestrial meridian is the line of intersection

Gazul, 1825; and Guzla, 1827, which he published as translations respectively of the plays of a Spanish actress and some Illyrian folksongs. He is at his best in his shorter tales, some of which (e.g. Colomha, Carmen, Mateo Falcone, L'Enlèvement de la Redoute) are masterpieces. He died at Cannes, Sept. 23, 1870. Pron. May-ree-may.

MERINO. Spanish name for a widely distributed breed of sheep famous for its fine white wool. In the textile trade the word is applied specifically to the wool of this animal, which is bred as a wool-sheep, and only secondarily for its mutton. Merino is also the name of a dress fabric made wholly or in part from merino wool, and woven to show a twill back and face.

MERIONETHSHIRE. County of N. Wales. Its area is 660 sq. m., and it has a coast-line of 38 m. on Cardigan Bay. The county presents a variety of picturesque scenery, with rugged mountains, beautiful valleys, and waterfalls. Among lofty summits are Aran Mawddwy and Cader Idris. The county has many lakes, including Bala and Tal-y-llyn; the principal rivers the Dee, Mawddach, and Dovey. The Great Western and L.M.S. Rlys serve the county. Dolgelley is the county town; other places are Festiniog, Barmouth, Towyn, and Harlech. Pop. 45,087.

MERIT, ORDER OF. British order for distinguished service in all callings. It was founded by Edward VII. June 26, 1902. Its members are divided into two classes, civil and military, and are distinguished by the letters

Order of Merit, British badge (military)

O.M. The badge is a cross pattée formée of red and blue, having in its centre on a blue medallion, surrounded by a laurel wreath, the words For Merit, and on the reverse the royal and imperial cypher. Crossed swords are added for the naval and military members. Membership is limited to 24, but the order confers no precedence.

Other countries have an order of merit, such as the Indian order of merit founded in 1837 and the Prussian order of

merit, both given for services in time of war.

MERITORIOUS SERVICE MEDAL. British decoration awarded to men of the army, navy, and air force. It was instituted for army sergeants in 1845 and for marines in 1849. It was revived in 1884, when it was extended to all soldiers above the rank of corporal. In 1916 it was thrown open to the lower ranks of the army, navy, and R.A.F. The ribbon for the army is crimson with a narrow edging and narrow central stripe of white; for the navy, crimson with three white stripes; and for the R.A.F. a ribbon with narrow white edges, a

Meritorious Service Medal

white central stripe, a band of deep blue between the left edge and the centre, and a crimson band between the centre and right edge. Since 1928 it has been granted only to recipients of the Meritorious Service annuity.

MERLIN (Welsh, Myrddin). Legendary wizard and prophet, celebrated in Welsh, Breton, and Scottish tradition. Of demon origin, he lived, it was said, in the 6th and 6th centuries at the courts of Vortigern and Arthur. See Arthur.

MERLIN (Falco tadsalon). Smallest of the British falcons. It is greyish blue on its upper parts, the male being pale yellow spotted with brown on the under parts; and the female brownish above and yellowish white beneath. Ranging from Yorkshire to the Shetlands, and found in the wilder parts of Ireland, the merlin lives among the mountains and moors. It preys upon small birds.

Merlin, small British falcon inhabiting the moors

MERMAID. Fabled creature of the sea or of lakes, with the head, arms, and upper part of the body like a woman, and the lower like a fish. With variations the mermaid is found in the legendary lore of many nations.

MERMAID TAVERN. This was formerly in Cheapside, destroyed in the Great Fire, 1666. In this tavern, which dated from 1529, Sir Walter Raleigh is alleged to have instituted The Mermaid Club, famous as the supposed meeting-place of Shakespeare, Jonson, Beaumont, Fletcher, Carew, and other wits.

MERODACH-BALADAN. Name of three kings of Babylon, two being comparatively unimportant. The second was a Chaldean chief who, while Sargon II was preoccupied with Samaria, captured Babylon, and reigned 721-710 B.C. Being overthrown he retired to the Sealand; on reappearing in 703, he was defeated by Sennacherib.

MEROË. Ancient Nubian city. Near the right Nile bank 28 m. N.E. of Shendi, it gives its name to the so-called island bounded by the Blue Nile and the Atbara.

The city was founded on an earlier site after 650 B.C. by Aspetut from Napata. During this early period a sun-temple and a temple of Amon were erected, and Egyptian culture was dominant. A "middle" period, inaugurated about 300 B.C., was characterised by Hellenistic influence, such as royal baths, frescoed chambers, cremation, and by a non-Egyptian native art, notably a decorated biscuit-ware of exquisite fineness. After a brief Roman occupation there followed, 10 B.C., a "late" period of artistic decline, lasting until A.D. 700. See Egypt.

MEROM, WATERS OF. Ancient name for Lake Huleh, an expansion of the Jordan farther N. than the Sea of Galilee. It measures rather more than 4 m. by 3 m. A battle between Joshua and the Canaanites took place near.

MERRIMAC OR MERRIMACK. River of U.S.A. Rising in New Hampshire, it flows S. into Massachusetts, and thence E. to the Atlantic, which it enters near Newburyport. It is 180 m. long, and is navigable to Haverhill. It provides water power for Manchester, Lowell, and other large towns.

Merodach-Baladan II, king of Babylon, with a vassal
Berlin Museum

Merionethshire. Map of the county of North Wales

of the earth's surface with a plane passing through the poles. The magnetic meridian at any place on the earth's surface is the horizontal line along which a freely suspended compass needle points when influenced only by the earth's magnetism. See Latitude.

MÉRIMÉE, PROSPER (1803-70). French author. Born in Paris, Sept. 28, 1803, he entered the civil service, and became a senator in 1853. He began his literary career with two clever mystifications, Le Théâtre de Clara

Merrimae was the name of an American battleship. The Confederates fitted her out as the Virginia, and on March 9, 1862, she fought a duel with the Monitor in Hampton Roads.

MERRIMAN, HENRY SETON (1862-1903). Pseudonym of Hugh Stowell Scott, British novelist. He was born at Newcastle-upon-Tyne, May 9, 1862. His first novel, *Young Mistley*, appeared in 1888, though success first came with *The Slave of the Lamp* and *From One Generation to Another*, 1892. Thereafter followed in rapid succession *With Edged Tools*, *The Sowers*, *In Kedar's Tents*, *Roden's Corner*, *The Isle of Unrest*, *Barlasch of the Guard*, and several others. Seton Merriman had the story-telling gift to a high degree. He died Nov. 19, 1903.

MERRIMAN, JOHN XAVIER (1841-1926). South African politician. Born at Street Somerset, March 15, 1841, the son of the bishop of Grahamstown, he became a leading figure in Cape politics. He was a minister of the crown repeatedly between 1875 to 1900, and from 1908-10 was prime minister of Cape Colony. He was a member of the committee which sat at Cape Town in 1896 to investigate the circumstances of the Jameson Raid, and drew up the report. He did not associate himself with the narrow policy of Kruger; nevertheless he came to London in 1901 to advocate the continued independence of the two republics. He died Aug. 2, 1926.

J. X. Merriman,
S. African politician.
Elliott & Fry

MERRIVALE, HENRY EDWARD DUKE, 1st BARON (h. 1855). British lawyer. Called to the bar in 1885, he soon acquired a large practice on the western circuit. In 1900 he entered Parliament as Unionist M.P. for Plymouth, lost his seat in 1906, but in 1910 was returned for Exeter. In 1915 he was made attorney-general to the prince of Wales. He was chief secretary for Ireland, 1916-18, when he was appointed a judge of the court of appeal and knighted. In Oct., 1919, he became president of the probate, divorce, and admiralty division, and in 1925 was created a peer, taking the title of Lord Merrivale.

MERRY DEL VAL, RAPHAEL (1865-1930). Roman Catholic prelate. Born in London, Oct. 10, 1865, he became a priest in 1888, papal chamberlain in the Vatican in 1892, and in 1897 prelate to the papal household. Appointed archbishop of Nicosia, 1900, he represented the pope at King Edward VII's coronation. He was papal secretary of state 1903-14, and was created cardinal in 1903. In Oct., 1914, he became secretary of the congregation of the Holy Office. He died Feb. 26, 1930.

R. Merry del Val,
Roman Catholic prelate

MERSEA. Island of Essex. It lies between the estuaries of the Colne and the Blackwater, 8 m. from Colchester, its railway station. It is nearly 5 m. long and 2 m. wide, and is connected with the mainland by a causeway. West Mersea is a popular pleasure resort and an urban district. Pop. 2,000. East Mersea is smaller. The island is the scene of Baring Gould's novel *Melchah*.

MERSEY. English river. Formed by the union of the Goyt and the Etherow, in Derbyshire, it enters the Irish Sea by an estuary 16 m. long after a course of 70 m. From the right it receives the Tame and the Irwell, and on the left its chief tributaries are the Bollin and the Weaver. Warrington lies on the

right bank, and important towns along the estuary are Runcorn, Liverpool, Birkenhead, and Wallasey. At Eastham, on the estuary, is the entrance to the Manchester Ship Canal, and beneath the bed of the river, extending from Birkenhead to Liverpool, is the Mersey Railway Tunnel, opened in 1886. In 1925 work was begun on a new tunnel under the river. The Mersey Docks and Harbour Board controls the docks and harbours of the Mersey.

Mersey was the name of one of the British monitors sent in Oct., 1914, to shell the German defences on the Belgian coast. Later she was employed in E. Africa.

MERSEY, JOHN CHARLES BIGHAM, 1st VISCOUNT (1840-1929). British lawyer. Born Aug. 3, 1840, the son of a Liverpool merchant, he became a barrister in 1870. Q.C. in 1883, and a bencher in 1886. He was a judge of the high court, 1897-1909, serving also as president of the railway and canal commission, 1904-9, and as chief justice in bankruptcy, 1904-10. In 1909 he was made president of the probate, divorce, and admiralty division, but in 1910 he retired with a barony. In 1916 he was raised to the rank of viscount. Lord Mersey was the commissioner appointed to inquire into the wreck of the *Titanic*, 1912, and into the destruction of the *Falaba* and the *Lusitania*, 1915. He died Sept. 3, 1929.

1st Viscount Mersey,
British lawyer.
Russell

MERTHYR TYDFIL. Co. borough and market town of Glamorganshire, Wales. It stands on the Taff, 24 m. from Cardiff, and is served by the G.W. and L.N.S. Rlys. and by a canal. The grounds of Cyfarthfa Castle are public property, and the castle itself is now a school, museum, and art gallery. Merthyr has large iron and steel works, these and the mines being the principal industries. Market day, Sat. Pop. 80,161.

MERTON. Urban district, with Morden, of S.W. London. It is in the co. of Surrey, with a station, Merton Park, on the Southern Rly. An Augustinian priory founded in 1115 was dissolved in 1538. A great council was held at Merton Priory in 1236, when the statutes of Merton were passed. The property of the crown from 1538-1610, the priory in 1724 was converted into a calico-printing factory, and part of the materials of the building were used for the modern house called Merton Abbey. Merton Place was the residence of Nelson. The parish church of S. Mary dates from 1120. There are several old charities and the Nelson Hospital, extended as a memorial to Merton men who fell in the Great War. Pop. 24,829.

MERTON COLLEGE. One of the colleges of the university of Oxford. It was founded in 1264 by Walter de Merton at Malden, Surrey, not being removed to Oxford until 1274. The buildings, which are in Merton Street, are among the oldest in Oxford. The large chapel, once a parish church, contains some beautiful work.

MÉRYON, CHARLES (1821-68). French etcher. Born in Paris, the son of an English physician and a French dancer, it was not until 1846 that he adopted the artistic profession and settled in Paris. Colour-blindness preventing him from being a painter, he devoted himself to engraving and etching, and produced the series of etchings of Paris streets which afterwards made him famous. He also produced many portraits. Méryon died in the asylum at Charenton.

MESDAG, HENDRIK WILLEM (1831-1915). Dutch painter. Born at Groningen, Feb. 23, 1831, he studied under Sir L. Alma-Tadema

in Brussels. Afterwards he devoted himself to marine painting. He lived at The Hague, but spent his time at Scheveningen and other seaside resorts, where the sea and its ships occupied his hush. He died July 10, 1915.

MESHED, MESHEH, OR MASHHAD. Town of Persia. In the N.E. of the country, it is regarded as a holy city by the Shiah Mahomedans, because it contains the tomb of the Imam Reza. Situated in a fertile plain, it has trade in carpets, silks, and shawls, and a sword-making industry. It derives much of its prosperity from the pilgrimages to the Imam's mausoleum, visited each year by upwards of 150,000 Shites. Pop. 85,000.

MESMERISM. Name given to a method of producing a trance or sleep first practised by Franz Mesmer (1733-1815), a German physician. Mesmer believed that an occult force pervaded the universe, and was one which, properly controlled, had a great effect on the nervous system of human beings. His consulting-rooms were always dimly lighted, hung with mirrors, and filled with the scent of burning chemicals. Mesmer himself dressing as a magician. The way he produced his effects was copied by swindlers and tricksters of all kinds, with the result that mesmerism fell into disrepute until scientifically studied towards the end of the 19th century. See Hypnotism; Magic.

F. A. Mesmer
German physician

MESOPOTAMIA. Greek translation of the Semitic name for the district between the Euphrates and the Tigris, now known by the name of its southern part, Iraq. The word means between the rivers. The early history of Mesopotamia is, broadly, the history of Assyria and Babylonia, which eventually fell to Persia. In A.D. 636 the Persians were decisively beaten by the Arabs, who in the next year annexed Mesopotamia, and ruled it for 400 years. The Seljuks overran the land in the 11th century. After the death of Jenghiz Khan in 1227 another Mongol wave broke in, and with the capture of Bagdad (Baghdad) in 1258 came the end of the caliphs. In 1516 the Turkish sultans assumed the title of caliph, and from then until 1915 Mesopotamia was under Turkish rule. See Iraq.

THE CAMPAIGN IN MESOPOTAMIA. When in the autumn of 1914 it became evident that Turkey would join the Central Powers, a force from India under Sir A. A. Barrett occupied Basra on Nov. 21, 1914. This prevented the Turkish forces centred on Bagdad from gaining access to the sea. In Jan., 1915, Kurna was captured, and in the same month Sir John Nixon assumed control of the expeditionary force. Then followed a brilliant series of land and river operations, in which the Turks were driven back both on the Upper Euphrates and the Tigris. Amara surrendered on May 31, the battle of Nasiriyah (An Nasiriya) was won on July 24, and Townshend captured Kut-el-Amara on Sept. 28. Ctesiphon was reached on Nov. 23, then followed Townshend's retreat to Kut and its subsequent siege.

Sir Stanley Maude was appointed to the supreme command in Aug., 1916, and after much heavy fighting captured Bagdad on March 11, 1917. After his untimely death at Bagdad, Maude was succeeded by his able lieutenant, Sir W. Marshall, who continued the advance with energy. The British extended their gains on the Tigris, Euphrates, and Diyala, gaining victories at Ramadi, Sept. 20, 1917, and at Khan Bagdadi, March 27, 1918. On both occasions nearly the whole enemy force was captured. The activity of Allenby in Palestine, coupled with the disappearance

Mesopotamia. Map of the country between the Tigris and the Euphrates, which includes Iraq, showing railways and battle-ground of 1914-18

of Russia in the N., was now diverting enemy initiative from the centre to the flank. To counter this the British established a series of posts in Persia and threw out communications to the Caspian. The campaign was brought to a brilliant close by the capture of Mosul in Nov., 1918.

The Mesopotamia Commission was a British committee appointed in Aug., 1916, to inquire into the British campaign in Mesopotamia, 1914-16. Its report strongly censured the Indian government. See Baghdad; Basra; Iraq; Kut; Maude, F. S.; Townshend, C. F. S.

MESOZOIC ERA. In geology, one of the main divisions of time. It came between the Palaeozoic and the Kainozoic eras, and is divided into three periods, the Triassic, Jurassic, and Cretaceous. See Geology.

MESSAGER, ANDRÉ CHARLES PROSPER (1853-1929). French composer. Born Dec. 30, 1853, for a time he was an organist in Paris. His first comic opera, *La Fauvette du Temple*, 1885, was followed by *La Béarnaise*. Other successes were *La Basoche*, *Les P'tites Michus*, and especially *Véronique*, produced in Paris in 1898, and afterwards in England and America, also the ballets *Séaromouche* and *Les Deux Pigeons*. Messenger was artistic director of Covent Garden Theatre, 1901-7, and director of the Grand Opera, Paris, 1907-19. He married Hope Temple, the composer of many ballads. He died Feb. 24, 1929.

André Messenger, French composer
H. Manuel

MESSALINA, VALERIA (d. A.D. 48). Wife of the Roman emperor Claudius. She dominated her weak husband, and, with his freedmen Pallas and Narcissus, virtually ruled the empire. Matters came to a crisis when,

having become enamoured of Gaius Silius, she openly married him. Claudius, having been convinced that the pair were plotting against him, ordered Messalina to be put to death.

MESSIAH (Heb. Mashiach, one anointed). Title for an expected leader of the Jews, who should deliver the nation from its enemies and secure its permanent triumph and peace. It is equivalent to the Greek word Christ. The Messianic idea is implicit in early prophecy, and took definite shape in those of Isaiah and Micah during the period of Assyrian aggression. Its fully developed form dates from about the period of the Exile. Prophecies of the period indicate that the Messiah should be at once a prince, prophet, and captain.

MESSINA. City and seaport of Sicily. It stands on the strait of Messina, 70 m. from Syracuse, and has a magnificent harbour. It was a handsome and prosperous city until 1908, when (Dec. 28) it was destroyed by an earthquake which laid most of the buildings in ruins. These included the cathedral, dating from the 12th century, the church of S. Gregory, and the city hall. Rebuilding work was begun after 1910, and by 1930 had made good progress. The university was

refounded in 1924, and the city hall rebuilt to include the undestroyed portion. The library was not seriously damaged. The city has a trade in the products of the island. Pop. 188,000.

The Strait of Messina, which separates Italy from Sicily, is about 20 m. long, and varies in width from 2 to 15 miles. It is associated with the legend of Scylla and Charybdis.

MESSINES. Village and ridge of Belgium, in W. Flanders. The former is 6 m. S. of Ypres, on the southern spur of the ridge, which runs from the village N.W. to Wytschaete. Held by the Allies in Oct., 1914, the village was seized by the Germans on Nov. 1, after a gallant 48 hours' stand by the British cavalry corps. The scene of a gallant charge by the London Scottish on Oct. 31, its ruins dominated the British positions to the west until the battle of June, 1917. In this engagement, in which mining was employed, the ridge was finally carried by New Zealand troops.

The ridge was held by the British until 1918, when on April 12, during the second great German offensive, the British troops were compelled to fall back. The ridge was retaken on Sept. 30, 1918, by Plumer's 2nd army during the battle of Flanders. See Ypres.

MESTIZO (Sp. from Lat. mixtus, mixed). Half-breed, especially the offspring and their descendants, of a Spaniard or Portuguese and an American Indian. The feminine is mestiza.

MESTROVIĆ, IVAN (b. 1883). Yugoslav sculptor. Born of Croat parents at Otavice in N. Dalmatia, he was apprenticed in 1901 to a worker in marble at Split (Spalato), but soon went to Vienna to enter the Academy of Arts, and from 1902 exhibited at the Vienna Sezession, where a collective exhibition of his work was held in 1907. In 1911 his work was shown in Rome, and in London in 1915 and 1917. His marble torso *Strahinić Ban* was presented by the Serbian Government to the Victoria and Albert Museum, London, in 1915.

METABOLISM. Term embracing all the chemical changes which occur in living tissues.

It is divided into anabolism, the building up of tissues from simpler substances, and katabolism, the breaking down of tissues into simpler bodies. In the ordinary healthy individual who is not gaining weight, anabolism and katabolism just balance each other. In the growing child anabolism exceeds katabolism, and in wasting diseases or old age katabolism is in excess. See Anabolism; Life.

METAL. One of the two classes into which all elements are divided. The other class is made up of non-metals. A broad classification of the metals divides them into two groups, noble and base, the former consisting of such

metals as resist, by their hardness and other properties, the wear and tear of frequent handling, and the corrosive influence of the atmosphere, of water, and of other common solvents. To this class belong gold, iridium, osmium, palladium, platinum, rhodium, ruthenium, and silver. Only a comparatively few of the known metals have important commercial uses. The chemical symbols and atomic weights of the metals are given in the list of elements on page 554.

The physical properties characteristic of metals are represented by their density or weight; their appearance—colour, lustre, fracture; their fusibility, malleability, ductility, tenacity, and elasticity; their hardness, conductivity for heat and electricity (see Conduction); their behaviour in certain solvents, including water and air. They differ very widely in regard to all these properties. Very small proportions of foreign substances in a metal may greatly modify its physical properties. Thus tiny percentages of chromium, manganese, molybdenum, nickel,

tantalum, tungsten, or vanadium, may greatly increase the valuable properties of steel. Three metals are distinctly magnetic, iron, nickel, and cobalt; iron converted into steel will retain the magnetism. See Alloy; Metallurgy, and under names of the various metals.

METALLURGY. Term denoting the art of extracting metals from their ores and refining or adapting them for use in manufactures, and the science on which the modern practice of the art is based. It starts where mining finishes, and ends where the manufacture of metalliferous commodities begins.

Metallurgy is one of the fundamental industries of mankind. The first metal used by man was doubtless native gold, employed for ornament long before the most elementary methods of working metals had been devised. Copper was the first metal to be worked and turned to practical use. Even in historical times the Indians of N. America are known to have taken pieces of native copper from the region of Lake Superior and fashioned them directly into weapons and utensils. The Bronze Age (q.v.) is supposed to have begun in Europe and in Egypt about 2000 B.C. An alloy of copper and tin, bronze may have been made before tin had been isolated as a metal, by melting together ores of copper and of tin, or crude copper with ore of tin.

At the beginning of the Christian era the Greeks and Romans were well acquainted with gold, silver, iron, copper, tin, and lead, and had reached a high degree of manipulative skill in the preparation of objects in those metals. A period of 1,400 years elapsed without any new metal being announced, or any important improvement in the art of extraction. In the 14th century antimony is mentioned, and iron first began to be smelted in Europe. With smelting the modern Iron Age may be said to have commenced, and from that time onward the history of metallurgy is largely that of iron and steel (q.v.). The last two hundred years have witnessed the isolation of numerous new metals and many improvements in the methods of metal extraction. Some of these new metals remain rare and have no industrial importance; others, among them sodium, potassium, manganese, platinum, chromium, tungsten, vanadium, aluminium, and nickel, have all become of great industrial importance.

The processes and appliances used in the practice of the art of metallurgy are numerous and varied. The former are commonly classified as dry, wet, or electrolytic processes, according as the metal is extracted by (1) smelting, volatilisation, or amalgamation; (2) by leaching or dissolving the metal out of its ore by chemical reagents; and (3) by deposition from a solution in an electrolytic bath. There is still practised, to a limited extent, a purely mechanical process, as where gold is directly extracted from gold-bearing sands or gravels by simple washing with water. See Alloy; Amalgam; Assaying; Electro-metallurgy; Furnace; Metal; Mineralogy; Mining, and under names of metals and alloys.

METAMORPHOSIS. Term in zoology for changes in structure through which many animals pass in their life history. The insect's egg hatches as a larva or caterpillar, which feeds till it is full grown, and then passes through a pupal or chrysalis stage, from which it emerges as an imago or perfect insect. The Crustacea and many of the Mollusca first appear in forms very different from their parents, while in some of the animals grouped in the class Vermes the life history is much more involved. Among the fishes the eel in its infancy is so unlike the adult that it was long supposed to be quite another animal. See Insect; Larva.

METAPHYSICS. Science which investigates the nature of being. Aristotle included

it in the theoretic or first of his three kinds of philosophy. The first problem of metaphysics would seem to be: are there any facts which we can assert about everything that is beyond the bare formal fact that it is? This raises many of the most fundamental problems of philosophy, for it is in itself nothing less than the fundamental question, whether there is a principle of unity in the universe at all. According to the answer given, the different systems of metaphysics may be described as monism, dualism, or pluralism. Again, between the theories that give the monistic answer we can distinguish according to what they conceive as the fundamental facts about everything that is. Thus, materialists, pantheists, and idealists are all monists.

Perhaps the natural, unreflective view would assume two entirely different kinds of thing in the universe, the mental and the physical or material, and would tend to consider them as entirely different, with nothing in common. But mind and matter have a much closer connexion than mere co-existence in the same universe. There is the close connexion between the mind and the body of the same individual person, where, so far as we can see, the two things affect or act on each other. Mind and matter come into contact once more in what in the widest sense we call knowledge. The nature of the relation between the knowing mind and the known object, and what it means to its two terms, is one of the chief subjects of discussion for modern metaphysics.

Another fact that appears to be universal throughout reality is the relation which we call causation. We accept readily the statement that every event has a cause. The metaphysician has to consider what the true nature of this relation is, and whether it is really universal. Again, he would have to consider the true nature of space and time, and whether there is any form of existence which has nothing to do with either of these, or whether everything has a place in time or space, or in both. See Relativity; consult also Problems of Philosophy, B. A. W. Russell, rev. ed. 1919.
